The chroniclers explain this toponym by the linking of a Berber word with an Arabic one; there was on the beach a sacred spring (*tīṭ*) covered by the sea at high tide, from which the mythical founder of the *ribāṭ* there drank to break his fast (*fiṭr*). This last word, however, comes more likely from Berber *anfṭār*, a vessel used for measuring turns of water allocation. The presence of springs on this Atlantic coastal plain, which normally lacks them, favoured an early human settlement, and there are traces, connected with some Punic tombs, showing that this littoral has been inhabited since Antiquity. Ṭīṭ was, however, most famous for its *ribāṭ*, founded by the Ṣūfī family of the Banū Amghār, which had a role beyond its immediate vicinity all through mediaeval times. Originating from the Gudāla, a section of the Ṣanhādja [*q.vv.*], the Banū Amghār settled in this region at some unknown date but certainly before the conquest of their Almoravid cousins. The chroniclers list their miracles and their merits but give little information on the small urban settlement of Ṭīṭ or on the function of its fortified *ribāṭ*.

The most important historical source on Ṭīṭ is late, and somewhat suspect from its hagiographical nature, the *K. Bahdjat al-nādhirīn wa-uns al-ʿārifīn* of ʿAbd al-ʿAẓīm al-Zammūrī, written *ca.* 900/1494-5 (and not in the 8th/14th century, as is sometimes said), so far unpublished. The author gives a series of decrees, the oldest from the prince Tamīm b. Zīrī b. Yaʿlā of the Banū Ifran from Rabīʿ I 409/July-August 1018. The series of letters, Almoravid, Almohad and Marīnid, confirm the fiscal and spiritual privileges granted by the central power to the *ribāṭ* of Ṭīṭ, but there are false dates and doubtful facts which render them suspect. ʿAbd al-ʿAẓīm adopts a current procedure and asserts that the Banū Amghār, of Idrīsid origin, had become Berberised through contacts and marriage alliances with the Ṣanhādja, the founder, Ismāʿīl b. Amghār having left Medina in the 4th/10th century and settled at Ṭīṭ, with his descendant Abū ʿAbd Allāh Muḥammad making the *ribāṭ* renowned. The *sharīfī* genealogy of the Banū Amghār was strongly denounced by Ibn al-Ḳāḍī [*q.v.*] at the opening of the 11th/17th century, but in the 6th/12th century the family's role in religious life and its reputation for sainthood was incontestable; it seems to have been involved also with the teaching of Mālikī *fiḳh*.

Situated as it was on a rich, cereal-growing plain, the *ribāṭ* of Ṭīṭ was occupied by the Portuguese at the beginning of the 16th century and made tributary, but the small town there seems to have profited by the situation to become involved in trade exchanges. In order to frustrate the Portuguese, the Moroccan ruler in Fās decided to dismantle Ṭīṭ and the population was transferred to the plain of Sāʾis, whilst the family of the famous ʿAbd al-Raḥmān al-Madjdhūb settled at Miknās. The abandoned town fell into ruins, even if the *ribāṭ* managed to carry on a modest religious life. Sultan Sīdī Muḥammad b. ʿAbd Allāh tried unsuccessfully to revive the port. The village there acquired a certain vitality in the 19th century thanks to the efforts of the *ḳāʾid* of Dukhāla, Muḥammad al-ʿArūsī. The name Ṭīṭ was forgotten, and the modern village there bears the name of its presumed founder, Mawlāy ʿAbd Allāh.

The ruins of Ṭīṭ were excavated by H. Basset and H. Terrasse. The area uncovered is quite large, that of a small town. The strong fortifications of the *ribāṭ* were meant to defend it from attack by sea. The hypothesis of struggles with the Barghawāṭa [*q.v.*] could explain the defensive system; the kingdom of these last does not seem to have gone beyond the Umm al-Rabīʿ and hardly anything is known of their maritime activities. The walls of Ṭīṭ, of cement on a stone base, much resemble other Almohad fortresses. Of its two mosques, a sole minaret remains, that of the more recent mosque stemming from the 7th/13th century and including the *zāwiya* of Mawlāy ʿAbd Allāh. One of the most important *mawsims* in Morocco celebrates each summer the founder of Ṭīṭ. As an ensemble of buildings created by a family and not by a ruling dynasty, Ṭīṭ is a unique exception in Morocco's urban history.

(Halima Ferhat)

TĪṬṬĀWĪN, the Berber name for Tétouan, the Tetteguin of Leo Africanus, *Description*, tr. Épaulard, i, 267, a town on the Mediterranean coast of northern Morocco. It lies on the flanks of the Djabal al-Darsa, part of the Rīf [*q.v.*] chain at the mouth of the Martil river (the Wād Rās and Wād Madjaksa of the mediaeval texts).

The region was Romanised, and the *oppidum* of Tamuda (mentioned by Pliny, and later the seat of a bishop, *Tamudensis episcopus*) is 8 km/5 miles from the modern town. Tīṭṭāwīn's history before the 15th century is only imperfectly known, with few sources and uncertain chronology. Its actual Berber name ("the springs", a quarter of the town still being known as al-ʿUyūn) is first mentioned at the death of Idrīs II in 213/828, probably with reference to a simple fortified place rather than a true city. Its military and strategic function is confirmed by al-Bakrī, who mentions its *kaṣaba*, and in al-Idrīsī's geography (ii, 531), who calls it a *ḥiṣn* but not a *madīna*. Between the 4th/10th and 7th/13th centuries, the region had an important economic and urban growth, thanks to its connections with al-Andalus, but Tīṭṭāwīn itself stagnated and is hardly mentioned, unlike the remarkable fortunes of Sabta [*q.v.*] some 34 km/16 miles away. Not till 685/1286 does the name of Tīṭṭāwīn appear again in the chronicles, when the Marīnid sultan Yūsuf b. Yaʿkūb al-Nāṣir "founded" the fortress (*kaṣaba*) of Tīṭṭāwīn plus a mosque; whether this was a true foundation or simply a restoration, is unclear. In 708/1308 Abū Thābit ʿAmr b. Yūsuf set up there a fortified camp, Afrāg [*q.v.*], against the Naṣrids of Granada, who had occupied Sabta. The 8th-9th/14th-15th centuries are obscure, but after Sabta fell into Portuguese hands, Tīṭṭāwīn seems once again to have played a military role, although the Portuguese chronicler Azurara states that the Portuguese of Ceuta in 1437 dismantled its new fortifications, and the abandoned town apparently remained deserted till 889-90/1484-5.

Around the time of the fall of Granada, the ruler of Shafshāwan [*q.v.*], the Sharīf ʿAlī b. Rāshid al-ʿAlamī, welcomed Andalusī refugees and let them partly restore the place, with a further, more important restoration in 898/1493 by one of the last defenders of Granada, ʿAlī b. Manẓarī, considered in oral tradition as the true founder of the town; his family retained power there for several generations. The cordial relations with the ruler of Shafshāwan were crowned by the marriage of Ibn Rāshid's successor with the famous Sayyida al-Ḥurra. With some breaks, she led Tīṭṭāwīn from 931/1525 to 948/1541, organising corsair raids against the Portuguese whilst nevertheless developing relations with the Iberian powers. These activities and the town's richness attracted envoys from Lisbon, Madrid and Fās, who negotiated with her. But the victory of the Saʿdians in Morocco ended the rule of the Manẓarī family, which gave way to the Naḳsīs, feudatories of the new dynasty. The history of Tīṭṭāwīn is indeed narrowly linked with its great families, those of Manẓarī, Naḳsīs, ʿAshʿāsh and Riffī, who built many public edifices, and who, whilst still linked with the central power in Morocco, maintained a considerable degree of autonomy.

From the 11th/17th century into the next one, the town enjoyed great prosperity, and most of its great buildings date from this period. As a commercial centre, it had linen, cotton and silk production, gold and silver work, tanning, the manufacture of slippers, pottery, and arms, sending these wares to other regions of Morocco and exporting part of them. A rich bourgeoisie built impressive houses and invested in agriculture outside the town walls.

But signs of crisis appeared at the end of the 18th century. European envoys abandoned Tīṭṭāwīn for Tangier, and the founding of the port of al-Suwayra/Mogador adversely affected it. The revolt in the town of 1821-2 showed up the division between the threatened world of commerce and the ruinous financial demands of the Moroccan central government. External events, like the bombardment of Tangier in 1844, aggravated this trend, culminating in the war of 1859-60 between Morocco and Spain, the War of Tétouan or of Africa, with Spain occupying the town early in 1860 after its victory for 27 months, till 2 May 1862. The disaster revealed the feebleness of Morocco's social cohesion and its military power, whilst within Tétouan, Muslims who felt threatened vented their rage on the local Jews, accused of connivance with the enemy, so that the Jewish community left the town for Tangier, Gibraltar or Orania (although at a later date, many Jews returned to the town and in 1925 they formed one-sixth of the population). The Muslim traders left a ruined town to carry on their trade in the Atlantic ports, whilst the traditional artisanal activities decayed under competition from European imports. The silk industry, previously a great feature of the local economy, fell into oblivion. After the establishment of the French and Spanish protectorates over Morocco, Tétouan in 1913 became the capital of "Spanish Morocco", with a *khalīfa* of the Sultan of Morocco at the side of the Spanish authorities. After Moroccan independence, the town lost this status as part of the increased state centralisation.

Tīṭṭāwīn represents a special case amongst Moroccan towns. Moriscos expelled from Spain rebuilt the town and profoundly affected its culture, seen in patronyms, jewelry, embroidery, cuisine and vocabulary, so that the town appeared as a happy synthesis of Andalusī and Maghribī traditions. Jews, installed there after the fall of Granada, made up one-tenth of the population till the War of Tétouan. After the French occupation of Algiers, refugees from Oran and Tlemcen settled there, bringing in Turkish influences which are discernible in the minor arts. Yet despite the richness of its past Tétouan is now undergoing a serious economic and social crisis, marginalised by its site and the poverty of its agricultural hinterland, and badly affected by smuggling activity. The proximity of Ceuta and Gibraltar, with their special statuses, encourages this traffic. However, the present University of Tétouan is endeavouring to recover the proud Moroccan-Andalusī heritage of the town's past, and there are in the town numerous valuable libraries, private and public.

TĪTŪ MĪR or **MIYĀN**, Sayyid Mīr Nithār ʿAlī (1782-1831), anti-colonial Islamic activist and leader of peasant uprisings in Bengal.

Born into a noble family in Chandpur, Bashirhat subdivision in the district of 24 Parganah in West Bengal, Tītū Mīr studied Arabic, Persian and various Islamic subjects in a local *madrasa*. He was also a renowned wrestler in his time. He entered the service of local Hindu *zamīndārs* (landlords), but was subsequently imprisoned for defying feudal power (Colvin report, Bengal Judicial [Criminal] Consultation of 3 April 1832). In 1822, while accompanying a member of the royal family of Dihlī on the Ḥadjdj, he met Sayyid Aḥmad Brēlwī [*q.v.*] in Mecca, who initiated him into the *Ṭarīḳa-yi Muḥammadiyya*, a religious school of thought influenced by Ibn Taymiyya and Muḥammad b. ʿAbd al-Wahhāb. Returning to Bengal in 1827, Tītū Mīr called for a revival of the original teaching of Islam stripped of influences from local culture and religious practices (*al-bidʿa wa 'l-shirk wa 'l-tawassul*). He inspired the peasants to rise up against the oppression of the *zamīndārs*, both Hindu and Muslim, and colonial indigo planters, and also garnered support from armed resistance groups of *faḳīrs* (e.g. Miskīn Shāh) and even some Hindus (e.g. Zamīndār Manōhar Rāy of Bhusna). Alarmed by his growing influence, a number of *zamīndārs* led by Krishna Dēv Rāy imposed ruinous taxes to punish and humiliate those who wore the Islamic beard or constructed new *masdjids*. After failing to achieve justice through legal means, Tītū Mīr gravitated towards armed resistance, eventually leading to confrontation. His idea of erecting a fort of bamboo made him a popular hero, but the fort was demolished by the artillery of the East India Company, and Tītū Mīr, together with a large number of his followers, perished on 19 November 1831. A pioneer of the Bengali egalitarian *ʿulamāʾ*, Tītū Mīr called for a kind of class struggle (completely misunderstood by Karl Marx in his *Notes on Indian history*, Moscow n.d., 152) based on Islamic ideology (sometimes referred to as the *Mawlawī Movement*), which was continued by his disciples Munshī Muḥammad Yāsīn and Munshī Fayḍ al-Dīn Mukhtār, leaders such as Ḥādjdjī Sharīʿat Allāh and his son Dūdū Miyān in the 19th century [see FARĀʾIḌIYYA], and most recently by Mawlānā Bhasani (d. 1976).

(Muhammad Yusuf Siddiq)

TIYŪL, TUYŪL (T.?), a term denoting a grant of money or land in pre-modern Persian lands. The word is not attested before the 9th/15th century [see SOYŪRGHĀL]. Doerfer suggests that it is a misspelling of the Čaghatay Turkish word *yatul*, "land, domain" (ii, 667-9, no. 1014). Minorsky distinguished the *tiyūl* from the *soyūrghāl*, as being a temporary grant of the right to collect government taxes while the latter was a hereditary grant (*A soyūrghāl of Qāsim b. Jahāngīr Aq-Qoyunlu (903/1498)*, in *BSOS*, ix [1938], 960; see also *EI*[1], art. *Tiyūl*). The term appears to have been in use under the Ḳarā Ḳoyunlu. Abū Bakr Ṭihrānī states that Djahānshāh summoned the *amīrs* and the holders of *tiyūls* (*tiyūldārān*) from the provinces in 871/1466-7 to take part in his expedition against Baghdād (*Kitāb-i Diyārbakriyya*, ii, ed. Necati Lugal and Faruk Sümer, Ankara 1964, 371). After Djahānshāh's death in 872/1467-8, those of the army leaders who had remained in their *ulkās* and *tiyūlāt* left them and joined Abū Saʿīd b. Ḳarā Yūsuf (*ibid.*, 517). In the latter case, if not in the former, it would seem that the *tiyūl* was a district or province.

In the Ṣafawid period, references to *tiyūl* are frequent, though the exact nature of the grant and the terms on which it was given varied. In the early years of Ṭahmāsp's reign (930-84/1524-76) it occurs in conjunction with the term *ulkā*, a district or region held by a tribal group. It is not clear from the textual references whether the two terms were synonymous, though the presumption is that the *tiyūl* was probably a grant of the right to collect taxes in the *ulkā* of the holder or a grant of immunities within the *ulkā*. Ḥasan Rūmlū records that in 931/1524-5 the *tiyūls* which belonged to the Ustadjlū *amīrs* were cut off (*ḳaṭʿ gardānīdand*) (*Aḥsan al-tawārīkh*, ed. and tr. C.N. Seddon, Calcutta 1931, Persian text, 189), and that because of this they began to oppose the shah in the following year (*ibid.*, 191). Ḳāḍī Aḥmad Ḳumī states that Ṭahmāsp, in the sixth year of his reign (936/1529-30), gave an *ulkā* and *tiyūl* to each of the Ustadjlū *amīrs* who had been in Gīlān and had come to his court (*Khulāṣat al-tawārīkh*, ed. Iḥsān Ishrāḳī, Tehran AHS 1359/1980, i, 195); and he records that, having received permission in 938/1531-2 to return to their *ulkās*, they set out for the places (*maḥāll*) where they held *tiyūls* and *iḳṭāʿs* (*ibid.*, 218). In 977/1569, because of the tyranny committed by some of the *amīrs*, Ṭahmāsp ordered changes to be made in their *tiyūls*, and Ḳāḍī Aḥmad mentions some of the changes made in their *ulkās* also (*ibid.*, 563).

As the structure of the Ṣafawid empire changed, the great *amīrs* were given provinces rather than *ulkās* as *tiyūls*. The term *tiyūl* thus appears to have been used in a somewhat similar sense to the Saldjūḳ "provincial" *iḳṭāʿ* [*q.v.*] and virtually to have superseded the term *iḳṭāʿ*, though references are occasionally found in the sources to *iḳṭāʿs* (e.g. Iskandar Beg, *Tārīkh-i ʿĀlamārā-yi ʿabbāsī*, Tehran AHS 1334/1956, i, 322, 352, ii, 1060, and Iskandar Beg and Muḥammad Yūsuf, *Dhayl-i tārīkh-i ʿālamārā-yi ʿabbāsī*, ed. Suhayl Khʷānsārī, Tehran AHS 1317/1938-9, 286).

Tiyūls were granted on state (*dīwānī*) land and crown lands (*khāliṣadjāt*) and also on private property and, less commonly, on *wakfī* land. Prior to the 19th century,

the holder of a *tiyūl* (the *tiyūldār*) was usually an *amīr* or a tribal or military leader. In return for the grant of a *tiyūl* he was expected to provide a military force on demand. In some cases, the number of men to be provided was stipulated in the document granting the *tiyūl* (*tiyūl-nāmača*) [see KHARĀDJ. iv, Iran. at Vol. IV, 1044a-1045b, and see Lambton, *Landlord and peasant*, 124-5). Immunity from the entry and interference of government officials in the district or region on which the *tiyūl* was granted was frequently given in the document granting the *tiyūl*. In effect, the *tiyūldār* often thus had full administrative control of the district where his *tiyūl* was held. Consequently, in practice, if not in theory, the *tiyūl* came to be regarded as a grant of land. On the death of the ruler, the *tiyūl* fell in, unless confirmed by his successor. In the case of a powerful *tiyūldār*, the holder usually retained possession, with or without the payment of a fee. Certain dues were paid by the *tiyūldār* on the grant of his *tiyūl* and sometimes annually (see *Landlord and peasant*, 124-5). Practice, however, varied. In the event of the *tiyūldār* dying, his heir or heirs were frequently able to secure the regrant of the late holder's *tiyūl* in their favour. As in the case of the earlier *iḳṭāʿ*, there was a tendency for *tiyūls* to become hereditary and to be assimilated to private property.

It is difficult to arrive at reliable figures for the extent of land held as *tiyūl*. It varied at different times and in different provinces. Under Nādir Shāh there was apparently an attempt to resume *tiyūls* and *soyūrghāls* or, at least, to exert stricter control over them. He ordered all the *tiyūlāt* and *mawḳūfāt* of Fārs to be resumed in 1151/1738-9, but it is unlikely that this order was fully implemented (Fasāʾī, *Fārs-nāma-yi nāṣirī*, lith., Tehran 1984-6, i, 181; Lambton, *Landlord and peasant*, 129). Under the Ḳādjārs, large areas of the country were alienated from the control of the central government as *tiyūls* whether given as grants to collect the taxes of a given district, or given to government officials in lieu of salary (*ibid.*, 139-40). H.C. Rawlinson calculated that about one-fifth of the whole revenue of Persia was thus alienated in the form of *tiyūl* from the crown towards the middle of the 19th century (*Notes on a journey from Tabríz through Persian Kurdistán to the ruins of Takhti Soleïmán*, in *JRGS*, x [1841], 5 n.). One of the first actions of the National Assembly after the grant of the Constitution was to abolish the *tiyūl* (*Landlord and peasant*, 179).

TĪZNĪT, a town of southwestern Morocco (lat. 29° 43' N., long. 9° 44' W., altitude 224 m/735 feet above sea level), in a Tashelḥīt [*q.v.*] Berber-speaking area. It is today on the highroad RP 30 that passes by Agadir [*q.v.*] and runs roughly parallel to the coast towards the Western Sahara. Its position in the plain of the Sūs [see AL-SŪS AL-AḲṢĀ], between the Atlantic Ocean 15 km/9 miles to its west, the High Atlas to the north (90 km/56 miles) and the Anti-Atlas to the south and east, has given it a role of a crossroads town.

Before the 19th century, nothing is known of it apart from a legend that its foundation was due to a certain prostitute, who became thereafter a saint; oral tradition recounts that her dog found the first spring, *Iʿin aḳdīm* ("the ancient spring") of Tīznīt. Tīznīt was besieged by the Sharīf [see SHURAFĀʾ] Hāshim u-ʿAlī (murdered in 1825), and because of its constant opposition to the hegemony of Tāzerwālt [*q.v.*], it was fortified in 1883. The expedition of the sultan Mawlāy al-Ḥasan I [*q.v.*] in 1886 strengthened the position of the *Makhzan* [*q.v.*] in the region. The town now attracted many Jews from the so-called *Bilād al-Sībā*. It probably had *ca.* 1,000 inhabitants in 1882, according to Erckmann, *Le Maroc moderne*, 56; by 1936 the population had reached 4,662, including 357 Jews and 132 Europeans.

Chased from the Sahara at the beginning of the 20th century, Shaykh Māʾ al-ʿAynayn [*q.v.*] took refuge at Tīznīt in 1909. His son Aḥmad al-Hība [*q.v.* in Suppl.] succeeded in mobilising the surrounding tribes and launched a *djihād* against the forces of the French Protectorate. When he proclaimed himself sultan in 1912, al-Hība made Tīznīt his capital until he was defeated near Marrākush. From that time until the decolonalisation of the Spanish Western Sahara took place in 1975, Tīznīt remained a small town from which the Spanish enclave of Ifni [*q.v.*] was supervised. In 1982 it had 23,000 inhabitants, with increasing importance as the chef-lieu of the province of the Sūs.

(ABDERRAHMANE LAKHSASSI)

TOBOL, the name of a river in Western Siberia from which *Tobolïḳ*, the ethnonym of a subgrouping of the Siberian Tatars derives, as does also the name of the Russian city Tobol'sk built (1587) near Sibir, the capital of the Sibir Khānate [see SĪBĪR]. The Tobol Tatars, together with the *Tümenli*, constitute one of the principal subgroupings of the Siberian Tatars along with the Tara, Baraba, Tomsk and Bukharlïḳ groupings. The Tobolïḳ presently number about 50,000 and live interspersed among Russian, Siberian Bukhārān and Ḳazan Tatar settlements along the Irtïsh river, from Tara to Tobol'sk and on the Tobol. They descend from the Ḳïpčaḳ Turkic and Turkicised population of the eastern regions of the *ulus* of Djoči (the White and Blue Hordes of the territories of Orda and Shiban) which in the late 15th century formed the Khānate of Sibir. These Tatars mixed, to varying degrees, with the local Ugric (Khantï/Ostyak) tribes that had been brought under Tatar rule. Some of their tribal components are reflected in the names of administrative units: Ḳurdaḳ, Ishtek (a Turkic term for Ugric groups, cf. Ostyak, the Ḳazaḳs often refer to the Siberian Tatars as *Üshtek*, Tomilov, *Étničeskaya ist.*, 32), Toghus in the Uvat district (who are also called *Sas Ḳalḳï* "swamp people"), Yasḳalbï, Nanga and Tsavaltsïḳ. Included among them are also descendants of Bukhārān merchants who settled in the region (15th-16th centuries) as are also the linguistically more closely related Volga Tatars. The language of the latter serves as their literary tongue. They are Sunnī Muslims, and Islam has served as one of their primary sources of identity. They are

largely engaged in agriculture, fishing and hunting.

ṬŌḌAR MAL, Hindu finance minister to the Mughal emperor Akbar (d. 998/1589).

Of the Khatri caste, probably a native of the Pandjāb, he rose early under Akbar (acceded 964/1556). In 971/1563-4 he was appointed to serve under Muẓaffar Khān, and to organise the revenue administration and soon afterwards he received the title of *rādjā*. In 981/1573-4, after the conquest of Gudjarāt, Ṭōḍar Mal was assigned the task of settling its revenues. He was then sent to serve with the armies operating in Bihār and Bengal, where he worked hard to suppress the rebellion that broke out in 988/1580-1. He was appointed *Dīwān* of the Empire in 990/1582-3 and occupied this office till his death. In 993/1585 he was promoted to the high *manṣab* [*q.v.*] or rank of 4,000. As *Dīwān* he introduced important financial reforms, obtaining in later tradition a high reputation as the architect of Akbar's revenue reforms, although much spade work had been done by his predecessors Muẓaffar Khān and Shāh Manṣūr. Contemporaries saw him as loyal, competent and harsh. His memorandum on revenue administration, 990/1582, preserved in B.L. ms. Add. 27,247, fols. 331b-332b, bears out this assessment. The formulation of the *dastūrs* or cash revenue rates, for different localities for each crop, was largely the work of Shāh Manṣūr, but Ṭōḍar Mal certainly gave the arrangements their final form. According to later tradition, he made Persian the official language of accounts at all levels.

Ṭōḍar Mal left behind palatial buildings in Jhusi near Allāhābād. He was personally an orthodox Hindu, and was, on this account, regarded as narrow-minded (*muta'aṣṣib*) at Akbar's court; but Akbar never wavered in his appreciation of his loyal service, and grieved at his death.

TOGHA TEMÜR (d. 754/1353), last Mongol Īl-Khān [*q.v.*] of Persia. He was descended from Čingiz Khān's younger brother Djoči Khasar. His father Suday had received permission from the Īl-Khān Abū Sa'īd to enter Khurāsān, but died in 733/1332-3, and Togha Temür settled in Sarakhs. In the winter of 736/1335-6, following Abū Sa'īd's death, he was raised up as sovereign by the *amīrs* of Khurāsān, led by Abū Sa'īd's governor of the province, Shaykh 'Alī b. 'Alī Ḳūshčī, in opposition to the successive puppet *khāns* enthroned in 'Irāḳ. In 738/1337-8, he advanced into north-western Persia at the instigation of certain *amīrs* there, only to be defeated near Tabrīz by Shaykh Ḥasan-i Buzurg, the founder of the Djalāyirid [*q.v.*] dynasty, and his *khān* Muḥammad, and forced to retreat. When a similar invitation came in Radjab 739/January-February 1339, this time from Ḥasan-i Buzurg himself, Togha Temür again moved westwards and was courted in the vicinity of Sulṭāniyya by representatives of all the competing factions. But his ambitions were foiled by a stratagem on the part of Ḥasan-i Buzurg's rival, the Čūbānid [*q.v.*] Shaykh Ḥasan-i Küčük, which produced a league against Togha Temür, and he was obliged to withdraw yet again.

Togha Temür was largely successful in overcoming recalcitrant Mongol *amīrs* within Khurāsān. Following his first abortive westward advance, he was for a time a prisoner of Arghūn Shāh and 'Alī-yi Mīkā'īl, who had earlier deserted him on the march and who now put to death his principal supporter Shaykh 'Alī. But subsequently they rallied to Togha Temür and enthroned him a second time in Nīshāpūr. Within a short time, however, Togha Temür was confronted by a more formidable threat to his authority in the shape of the Sarbadārids [*q.v.*], who greatly reduced his sway in Khurāsān and against whom he struggled almost until his death. He sent against them an army under his brother Shaykh 'Alī Ke'ün, who was routed and killed near Bayhaḳ (Ḥāfiẓ-i Abrū, *Cinq opuscules*, 23-4), probably in 742/1341-2. From 752/1351-2 the Sarbadār leader Yaḥyā Karāwī reversed his predecessor's policy and submitted to Togha Temür, but only as a prelude to a treacherous attack on his camp in the course of negotiations, in 754/1353. Togha Temür, unprepared and unguarded, was cut down and his troops dispersed.

Togha Temür did not receive any permanent recognition outside Khurāsān and Māzandarān, although coins were episodically minted in his name elsewhere. According to Faryūmadī (320), Mu'izz al-Dīn Ḥusayn, the Kart [*q.v.*] ruler of Harāt, submitted to him; but Ḥāfiẓ-i Abrū (*Cinq opuscules*, 32) claims that the two men were merely on friendly terms. Despite the restricted size of his kingdom and the upheavals that characterised his reign, Faryūmadī (327) nevertheless credits Togha Temür with all the kingly qualities and worthiness to occupy the throne of Čingiz Khān, and comments on his justice. He was the last Čingizid to reign as Īl-Khān, although his son Luḳmān, who escaped from the Sarbadārid attack in 754/1353, was later set up as client ruler in Astarābād by Tīmūr.

ṬOGHRÏL (T.), a designation in Old Turkish for a bird of prey, described by Maḥmūd al-Kāshgharī

as larger than a *sonkur*; a possibility is the Crested Goshawk, *Astur trivirgatus*. It was certainly used for hunting purposes [see for this, BAYZARA].

Its chief importance, however, in early Turkish history and culture, from Uyghur times onwards, was as a frequent personal name. In Islamic times, its most notable holder was Ṭoghrïl Beg [*q.v.*], co-founder with his brothers Čaghrï Beg [*q.v.*] and Bighu (whose names are also those of avian raptors) of the fortunes of the Great Saldjūḳs [*q.v.*]. It remained common in Saldjūḳ onomastic and in that of the early Ottomans, e.g. the Er-toghrïl of the 8th/14th century and a son of Bāyezīd I at the end of that century; but thereafter it fell out of use. The Turkish word may have given Magyar *turul* "a kind of falcon or eagle".

ṬOGHRÏL (I) BEG, ABŪ ṬĀLIB MUḤAMMAD B. MĪKĀʾĪL (b. towards the end of the 10th century A.D., d. 455/1063), leading figure of the Saldjūḳ family and, with his brother Čaghrï Beg Dāwūd [*q.v.*], founder of the Great Saldjūḳ Sultanate in Persia and ʿIrāḳ.

Ṭoghrïl and Čaghrï must have been born when the Oghuz tribe [see GHUZZ] was still in the Central Asian steppes to the north of Khʷārazm and Transoxania, and after their father's death were apparently brought up in the Djand [*q.v.* in Suppl.] region by their grandfather Saldjūḳ b. Duḳāḳ, eponymous founder of the Saldjūḳ line. This part of the Oghuz apparently became at least nominally Muslim around this time, and in the first three decades of the 11th century A.D. the Saldjūḳ family became drawn into the military and political affairs of the Ḳarakhānids [see ILEK-KHĀNS] of Transoxania in the service of such rulers as ʿAlītigin b. Boghra Khān [*q.v.*]. They moved into Khʷārazm in the early 1030s, but in face of the hostility of a rival Oghuz ruler, Shāh Malik of Djand, were compelled in 426/1035 to transfer to Ghaznawid Khurāsān under the leadership of Ṭoghrïl, Čaghrï, Mūsā Yabghu and Ibrāhīm Ināl. In 429/1038 Ṭoghrïl was temporarily in control of Nīshāpūr, making the *khuṭba* in his own name (though perhaps at the side of that of the Ghaznawid sultan Masʿūd b. Maḥmūd) and assuming the title of *al-Malik al-Muʿaẓẓam* "Most Exalted Ruler". The Saldjūḳ take-over of Khurāsān and all the Ghaznawid possessions west of Balkh was sealed by Ṭoghrïl's victory at Dandānḳān [*q.v.* in Suppl.] in 431/1040 (for details of all these events, see SALDJŪḲS. II.).

Exactly what was the relationship at this time between Ṭoghrïl and his brother Čaghrï is not clear, but R.W. Bulliett concluded that they were in fact equal in status, at least at the outset (see his *Numismatic evidence for the relationship between Tughril Beg and Chaghrī Beg*, in D.K. Kouymjian (ed.), *Near Eastern numismatics, iconography, epigraphy and history. Studies in honor of George C. Miles*, Beirut 1974, 289-96). In practice, Čaghrï took over the eastern lands of the new Saldjūḳ state whilst Ṭoghrïl expanded through northern Persia. He reduced the Ziyārids [*q.v.*] of the Caspian provinces to tributary status in 433/1041-2 and acquired control of Rayy, dislodging the Būyid Abū Kālīdjār Fanā-Khusraw b. Madjd al-Dawla from the citadel of Ṭabarak in 434/1042-3, and he started to mint coins there, making it his capital (see G.C. Miles, *The numismatic history of Rayy*, New York 1938, 196-7). Operations were carried out against the Kākūyids [*q.v.*] in Hamadhān, with Ṭoghrïl in 437/1045-6 despatching Ibrāhīm Ināl against its ruler Abū Kālīdjār Garshāsp; this Saldjūḳ commander drove out the Kākūyids and led his bands into Kurdistān and against the Christian Abkhāz of Transcaucasia (440/1048). In 438/1046-7 Ṭoghrïl launched his first attack on Iṣfahān and made the Kākūyid Abū Manṣūr Farāmurz his tributary, returning to the city in 442/1050. It was a measure of the inexperience of the Oghuz bands when faced with the necessity for siege warfare that the siege took a year; Farāmurz only surrendered in early 443/1051 when his supplies ran out. He was given Yazd and Abarḳūh as *iḳṭāʿ*s in compensation for Iṣfahān, which Ṭoghrïl restored and rendered prosperous. He transferred his capital from Rayy to Iṣfahān and made it his chief residence for the remaining twelve years of his life [see IṢFAHĀN. 1.].

The process of overcoming the more powerful Būyid dynasty in western Persia and ʿIrāḳ took longer, and was not completed until 454/1062 in the case of their rule in Fārs [see BUWAYHIDS]. When the three Saldjūḳ leaders had crossed the Oxus in 426/1035 they had styled themselves "clients of the Commander of the Faithful", and Ṭoghrïl had established diplomatic relations with the ʿAbbāsid al-Ḳāʾim [*q.v.*] during his first occupation of Nīshāpūr. Ṭoghrïl had been conducting raids into Ādharbaydjān (successfully) and into eastern Anatolia (unsuccessfully) in 446/1054 when he was invited to intervene in ʿIrāḳ by the caliph's vizier Ibn al-Muslima [*q.v.*], at a period when the Būyid amīrate of ʿIrāḳ had fallen into chaos and when the security of the caliphate seemed threatened by the Turkish soldiery under Arslan Basāsīrī [*q.v.*], who was suspected of pro-Shīʿī, pro-Fāṭimid sympathies. Hence Ṭoghrïl assembled troops at Hamadhān, Dīnawar, Kirmānshāh and Ḥulwān, and in Ramaḍān 447/December 1055 entered Baghdād. It was not, however, until he paid a second visit to Baghdād at the end of 449/beginning of 1058 that the caliph actually received Ṭoghrïl, bestowing on him the *laḳab*s of *Rukn al-Dawla* and *Malik al-Mashriḳ wa 'l-Maghrib* and allowing him to be addressed formally as Sultan (as now begins to appear on his coins), and it was not until the end of 451/beginning of 1060 that the threat to the capital from Basāsīrī was dispelled. Although Ṭoghrïl seems to have exulted in his role of deliverer of the caliphate from the Shīʿī Būyids, al-Ḳāʾim was perceptibly less enthusiastic at exchanging the chaotic but weak Būyid presence in his capital for the strong, potentially restrictive one of the Turkish Saldjūḳs. This coldness was seen in 452/1060 when Ṭoghrïl aspired to marry a daughter of the caliph's; in 448/1056 al-Ḳāʾim had married one of Čaghrï Beg's daughters, but the union of an ʿAbbāsid princess with a rough Turkmen was a different matter. The caliph at first refused, and only yielded under duress two years later, after Ṭoghrïl had threatened to confiscate the caliphal *iḳṭāʿ*s in ʿIrāḳ; even then, Ṭoghrïl did not see his bride until his visit to Baghdād in 455/1063 and the marriage was never consummated (see G. Makdisi, *The marriage of Tughril Beg*, in *IJMES*, i [1970], 259-75). The Great Saldjūḳs were, in fact, always to have an uneasy relationship with the ʿAbbāsids [see e.g. MALIK SHĀH].

Ṭoghrïl died aged around 70 on 8 Ramaḍān 455/4 September 1063. He was childless, and it was assumed that the sons of Čaghrï would succeed to the Great Saldjūḳ Sultanate after him. Before he died, Ṭoghrïl proclaimed as his heir Čaghrï's son Sulaymān, by a wife whom Ṭoghrïl took over just after Čaghrï's death in 452/1060, but a comparative nonentity; hence it

was not difficult for the more able Alp Arslan b. Čaghrī [*q.v.*] to assert his dominion over the whole Saldjūḳ empire. All the subsequent Great Saldjūḳ sultans, and the heads of the existing branch of the family in Kirmān and, later, that in Syria [see SALDJŪḲIDS. III. 3-4], were descendants of Čaghrī.

The achievements of Ṭoghrīl were remarkable for one who started out as an illiterate nomad chief, and he emerges from the sources as a full-scale, lively figure at the side of his more sketchily-described brother Čaghrī. He had survived attempts at seizing power by Ibrāhīm Ināl and other Saldjūḳs holding to a more patrimonial view of power rather than the Perso-Islamic view of it as a monolithic, authoritarian concept, probably because he was viewed by the Turkmen rank-and-file of his following as a supremely successful military leader. Also, he skilfully used the talents of his Persian advisers and administrators, such as the expertise of his vizier the ʿAmīd al-Mulk Kundurī (*q.v.*; see also H. Bowen, *Notes on some early Seljuqid viziers*, in *BSOAS*, xx [1957], 105-10) to embark on constructing the fabric of a typical Perso-Islamic state, a process developed more fully by his two successors Alp Arslan and Malik Shāh. This he was able to do together with, as noted above, generally keeping the allegiance of the Oghuz tribesmen who still essentially made up his military backing; it was fortunate that Ṭoghrīl's reign was one of steady expansion, with raids into rich territories which provided a stream of plunder. Ṭoghrīl was thus to lay the foundations of an empire which was to endure, though with lessening effectiveness, for some ninety years.

Bibliography: In addition to references in the article, see the *Bibls.* to SALDJŪḲIDS. II, III. 1-2, in which articles the political, social, constitutional and religious trends of the early Saldjūḳ period are considered. There is a biography of Ṭoghrīl in Ibn Khallikān, ed. ʿAbbās, v, 63-8, tr. de Slane, iii, 224-9, and a connected narrative of events of the time by C.E. Bosworth in *Camb. hist. Iran*, v, 18-23, 38-49. (C.E. BOSWORTH)

ṬOGHRĪL (II) b. Muḥammad b. Malik Shāh, Rukn al-Dunyā wa 'l-Dīn, brother of the Saldjūḳ sultan in the West, Maḥmūd [*q.v.*], and himself briefly ruler in ʿIrāḳ under the patronage of his uncle Sandjar b. Malik Shāh [*q.v.*], sultan in the East and head of the Saldjūḳ family (ruled 526-9/1132-4).

Born in 503/1109, he received as Atabeg or guardian from his father Sultan Muḥammad the *amīr* Shīrgīr and received as his fief a large part of the province of Djibāl with the towns of Sāwa, Ḳazwīn, Abhar, Zandjān, Ṭālaḳān, etc. On the death of his father (511/1118), the Atabeg Shīrgīr was thrown into prison and his place taken by the *amīr* Kündoghdī, who was on bad terms with Sultan Maḥmūd, Ṭoghrīl's brother. With Kündoghdī he took part in the unfortunate campaign against the Georgians in 551/1121 and was in a serious position when his Atabeg died in the same year and his relations with his brother, never very good, became still worse. In these straits he was easily persuaded by the Mazyadid Arab Dubays b. Ṣadaḳa [see MAZYAD, BANŪ] that it would be easy to seize the province of ʿIrāḳ and get rid of the ʿAbbāsid caliph and the sultan. The enterprise failed, however, and the two sought refuge with Sandjar, who took up their cause and began negotiations on their behalf with Maḥmūd in Rayy (end of 522/1128). Some years later (525/1131), Maḥmūd died and his son Dāwūd was summoned to the throne temporarily until Sandjar had finally decided the succession. The latter declared for Ṭoghrīl, but in the meanwhile another brother, Masʿūd, had claimed the throne and was approaching with considerable forces. In the battle that followed at Dīnawar (526/1132) between Sandjar and Masʿūd, the latter was defeated and sent back to his province of Gandja, while Ṭoghrīl was installed as sultan. Sandjar then departed and left his nephew to enforce his recognition upon his opponents. He was successful in routing Dāwūd's adherents, but the latter himself escaped to Baghdād. Masʿūd was soon in power there, and was able to persuade the caliph to mention him in the *khuṭba* and designate Dāwūd as his successor (527/1132). Ṭoghrīl was not a match for his brother and, after wandering about a great deal, sought refuge with the Bāwandid Ispahbad of Ṭabaristān, where he spent the whole of the winter of 557-8/1132-3. In the following year, fortune was rather more favourable to him and he succeeded in again taking the capital Hamadhān, but, on arriving there, he fell ill and died early in 529/October-November 1134. His widow later married Ildegiz [*q.v.*], who raised Ṭoghrīl's son Arslan to the Saldjūḳ throne (555/1161).

Bibliography: The main primary sources are Bundārī, Ẓahīr al-Dīn Nīshāpūrī, Rāwandī, Ṣadr al-Dīn al-Ḥusaynī, Ibn al-Djawzī and Ibn al-Athīr. Of secondary sources, see C.E. Bosworth, in *Camb. hist. Iran*, v, 12-5. See also SALDJŪḲIDS. III. 2 and its *Bibl.* (M.T. HOUTSMA*)

ṬOGHRĪL (III) b. Arslan b. Ṭoghrīl (II), Rukn al-Dunyā wa 'l-Dīn, last Great Saldjūḳ ruler in the West, reigned 571-90/1175-94.

Born in 564/1168-9, when still a boy he was raised to the throne by the Ildegizid Atabeg Nuṣrat al-Dīn Pahlawān [*q.v.*], after his father had been poisoned to thwart his endeavour to escape the burdensome tutelage of the Atabeg (cf. Houtsma, *Some remarks on the history of the Saldjuks*, in *AO*, iii, 140-1). It was only on the death of Pahlawān in 581 or 582/1186 that Ṭoghrīl, now grown up, who had enjoyed a careful education and was distinguished by physical and intellectual gifts—he composed a number of short Persian poems—showed that he was not at all inclined to do as his father had done, and be content with the mere name of sultan. He was assisted by the fact that Pahlawān's successor, Ḳīzīl Arslan, had quarrelled with the widow of his deceased brother and their two sons, so that he was able to make arrangements with a number of Turkish *amīrs* and seize the Saldjūḳ capital Hamadhān. In order to be more sure of completely disposing of his dangerous opponent, Ḳīzīl Arslan asked the caliph to send him troops from Baghdād while he himself advanced from Ādharbāydjān, but the incapable leader of the Baghdād army, the vizier Ibn Yūnus, attacked Ṭoghrīl at Dāymarg (584/1188) and suffered a terrible defeat from the impetuous bravery of his opponent. Little, however, was won thereby for Ṭoghrīl's cause, for Ḳīzīl Arslan was coming nearer and the caliph was equipping a new army. To add to his troubles, the young sultan quarrelled with his own people and on his return to Hamadhān hanged several of his most prominent supporters. The result was that he could not hold out in his capital, which was very soon taken by Ḳīzīl Arslan; he spent some time ravaging the region of Urmiya, Khōy and Salmās, endeavoured in vain to win the caliph to his side, applied without success to several Muslim princes, including the Ayyūbid Ṣalāḥ al-Dīn, for help, and had finally to surrender to Ḳīzīl Arslan, who imprisoned him in the castle of Kahrān near Tabrīz in 586/1190. Ḳīzīl Arslan then himself occupied the throne of the Saldjūḳs

but, when he was murdered the following year at the instigation of the widow of his brother, Ṭoghri̊l succeeded in escaping and found an asylum with the Banū Kafshūd in Zandjān.

The lack of unity among the sons of Pahlawān, now the rulers of Ādharbāydjān, gave him the opportunity of coming again to Hamadhān and marrying Pahlawān's widow, only, however, to put her to death. He also took Iṣfahān and Rayy and sacked the stronghold of Ṭabarak near the latter town (Yāḳūt, *Muʿdjam*, iii, 507-8), but this brought upon him the enmity of the powerful Khwārazm Shāh Tekish, who only a short time before had taken Rayy. He was not inclined to lose this city, and sent troops there to take it from the Saldjūḳ sultan. The wise course would have been to avoid their superior numbers, but Ṭoghri̊l felt it a point of honour to defend the Saldjūḳ claims on ʿIrāḳ even at the cost of his life, calmly awaited the approach of the enemy in spite of the advice of his friends, then threw himself with a few faithful followers on the foe and was immediately slain (29 Rabīʿ I 590/25 March 1194).

Ṭoghri̊l is praised in the sources for his martial qualities and his scholarly attainments. His death marked the end of the Great Saldjūḳ line and the partition of western Persia between the Ildegizids in the north and the ʿAbbāsid caliph al-Nāṣir [*q.v.*] in the south, whilst eastern Persia fell briefly, before the Mongol onslaught, into the hands of the Khwārazm Shāhs.

(M.T. HOUTSMA-[C.E. BOSWORTH])

ṬOGHRI̊L SHĀH b. Ḳi̊li̊dj Arslan II, Mughīth al-Dīn, minor prince in eastern Anatolia from the family of the Saldjuḳs of Rūm [see SALDJŪḲIDS. III. 5].

When the old king Ḳi̊li̊dj Arslan II [*q.v.*] divided his kingdom among his many sons, Ṭoghri̊l Shāh received the town of Elbistan. In 597/1200-1 his brother Rukn al-Dīn Sulaymān conquered Erzerūm, which he handed over to Ṭoghri̊l Shāh, while he himself took Elbistan. A few years later, Balaban, lord of Khilāṭ (Akhlāṭ), was attacked by the Ayyūbid al-Malik al-Awḥad Ayyūb b. al-Malik al-ʿĀdil. As he was unable to defend himself alone, he appealed to Ṭoghri̊l Shāh for help and they attacked and routed al-Awḥad with their combined forces. Ṭoghri̊l Shāh who also coveted Khilāṭ, then had Balaban treacherously murdered, but when he tried to seize the town he met with a vigorous resistance, so he turned his attention to Malāzgird [*q.v.*]. Here also he was defeated, and there was nothing left for him but to return to Erzerūm. The people of Khilāṭ then turned to al-Awḥad, who occupied the town in 604/1207-8. Ṭoghri̊l Shāh was unable to defend himself against his neighbours, the Georgians; he had to pay tribute to King Giorgi III Lasha in Tiflis, and show himself his vassal in other respects also. Finally, a son of Ṭoghri̊l Shāh adopted Christianity and married the sister of Giorgi, Rusudan, who succeeded him on the throne [see AL-KURDJ]. Ṭoghri̊l Shāh died in 622/1225 and was succeeded by his son Rukn al-Dīn Djahān Shāh, who in 627/1230 was dethroned by his cousin ʿAlāʾ al-Dīn Kayḳubād I [*q.v.*]. According to another, undoubtedly incorrect, story, Ṭoghri̊l Shāh died as early as 610/1213-14 after an unsuccessful attempt to seize the kingdom of his nephew Kaykāwūs I [*q.v.*], being taken prisoner and put to death by him.

(K.V. ZETTERSTÉEN)

TOGHUZGHUZ (Turkic *Toḳuz Oghuz* "the Nine Oghuz"), the name of a Turkic tribal confederation that was used in often chronologically confused Muslim accounts as the general designation of the Uyghurs until the late 5th/11th century.

Chinese sources, in which they are first attested in 630, invariably translate rather than transcribe this name as *Chiu hsing*, the "Nine Surnames", i.e. clans or tribal groupings. The ethnonyms Uyghur and Toḳuz Oghuz were not, strictly speaking, coterminous. The Uyghurs (consisting of ten tribes or clans) were one of the constituent tribal confederations that formed part of the Toḳuz Oghuz and had earlier been components of the T'ieh-lê (**Tegreg* "wagon", i.e. "people of the wagon", cf. Chin. *Kao chü/Kao-ch'e* "the High Carts", an earlier, 5th-6th century designation for the Uyghurs), a tribal confederation that in the 6th century stretched across Eurasia and included the Oghur (the Oghuric form of *Oghuz*) tribes of the Pontic steppes. The other eight tribes were: Buḳu(t), Ḳun/Hun, Bayi̊rḳu, Tongra, Si̊ḳar, Ch'i-pi, A-pu-ssu and Ku-lun-wu-ku (Liu, *Chin. Nachr.*, ii, 392; Pulleyblank, *Remarks*, 35-9; Hamilton, *Toquz Oγuz*). The Shine Usu Inscription, N3 (*ca.* 759) notes the *On* ("ten") *Uyghur, Toḳuz Oghuz* over whom the Uyghur Ḳaghan ruled for 100 years (Orkun, i, 164). Rashīd al-Dīn, ed. Rawshan and Mūsawī, i, 138-40, provides some interesting data on their early history deriving from Uyghur informants and based on their extensive, written accounts. These historical traditions (*ḥawādith*) go back to their pre-imperial period when the Uyghur-Toḳuz Oghuz were living in the Orkhon-Selenge river region of Mongolia, in which Ḳara Ḳorum, the Činggisid capital, was subsequently constructed. According to Rashīd al-Dīn, the "On Uyghūr" and "Toghūz Uyghūr" (*sic*), were living along a system of ten rivers, the On Orghun (the Orkhon and various tributaries) noted as: 'yylshlk, Ötnkr (= * اوتيكر *Ötīkär, cf. Hu-tu-ko = *Uturḳur), Būḳīz (for بوقوت *Būḳūt, *Boḳut*, Chin. Pu-ku, see Hamilton, *Toquz Oγuz*, 26, 42, 45), Ūzḳndr, Tūlār, Tārdār, 'dr (= * ادز *Ädiz), Ūč, Tābīn, Qamlāndjū and Ūtīgān (Ötigän, cf. Old Turk. *Ötükän*, the sacred refugium of the Kök Türks, Mong. *etügeni* "shamanist goddess of the earth"). These names, however, can only partially be matched with the Uyghur clan names known in Chinese and Khotanese sources (Yaghlaḳar, *Uturḳar, Küräbir, Boḳasi̊ḳi̊r/Boḳsi̊ḳi̊t, Avučagh, Ḳasar, Hu-wu-su, Yabutḳar, Ayavïr [Ḳayamur]; for these see Hamilton, *Les Ouïgours*, 3-4, and his *Toquz Oγuz*, 41-9). In their early period, according to Rashīd al-Dīn, these tribes possessed neither "kingship (*pādshāhī*) nor sovereign power (*sarwarī*). At any time, a person from each tribal grouping could become ruler of his own tribe through the use of force (*ba-taghallub*)". Deciding at a congress (*kengäč*) that "for us an absolute monarch whose authority extends to all is necessary", they established a dual rulership with Mängü Bay of the 'yyshlk/'yylshlk (clearly not the Yaghlaḳar, the ruling clan of the

Uyghurs for much of their pre-imperial and imperial periods), who was given the title of *īl īltabar* (Turk, *il el teber*, cf. Bilge Ḳaghan inscription, E, 37 *uyghur elteber*) and another person, of the Üzḳnd(r) who was chosen as *kül irkin* (an old Turkic title held by tribal chiefs, Clauson, *ED*, 225). "They made the two of them the king of the people and tribes. Their clan (*urugh*) ruled for a period of 100 years". In recent times, the ruler was called Īdī Ḳūt, which Rashīd al-Dīn translates as "possessor of fortune" (*khudāwand-i dawlat*), an accurate rendering of the Turkic *Volksetymologie: idi* "master, owner" + *ḳut* "heavenly good fortune". Actually, the term comes from Turk. *idhuḳ* ("heaven-sent") *ḳut*, a title associated with the Basmîl, whom the Uyghurs toppled in 744 to form their Ḳaghanate in Inner Asia and who were associated with the Toḳuz Oghuz.

Chinese sources, before the accession of the Uyghurs to the Ḳaghanate in Mongolia, note the Toḳuz Oghuz as nomads who sold horses to the Middle Kingdom and fashioned armour from horse hides. They were unruly and often rebellious subjects of the Kök Türks, as they had earlier been of the Jou-jan. The Uyghur grouping, located at this time on the Orkhon-Selenge rivers, near the Türk core lands, was the dominant element in the union. The other Toḳuz Oghuz were in the Altai-T'ien-shan region. Their relationship to the ruling house of the Türks is unclear. The Orkhon inscriptions (Kül Tegin, N4, Bilge Ḳaghan, E29) refer to them as "my own people" who had become enemies. The Uyghurs and Ḳarluḳs [*q.vv.*] assisted the Basmîl overthrow of the Türks in 742. Two years later, when the Uyghurs seized the Ḳaghanate, their one-time allies fled. The Muslim authors came to know them during the latter stages of their imperial period (744-840) in Mongolia. Their capital Ordu Balîḳ ("army/royal camp city") or Ḳara Balghasun was established in the traditional nomadic imperial precincts in the Orkhon-Selenge region. Other cities, such as Bay Balîḳ on the Selenge, were constructed as well by Chinese and Soghdian craftsmen. The latter figured prominently in Uyghur diplomacy, cultural, religious and commercial life, introducing religions (most notably Manichaeanism, which became the state religion in 762) and script systems, while China was the principal source for the much-desired goods of the sedentary world. Uyghur involvement in T'ang affairs, often to prop up the dynasty in the face of internal rebellions, became a source of considerable wealth in the form of payment for Uyghur assistance and often unequal exchanges of barely serviceable steppe ponies for hundreds of thousands of pieces of Chinese silk. The Ḳirghîz [*q.v.*], able to take advantage of mounting Uyghur internecine strife, overran Ordu Balîḳ in 840 and ended the empire. The Uyghurs formed a number of smaller, diaspora states in Eastern Turkistan based on the earlier Tokharian and Khotanese Saka city-states, whose populations, over time, were absorbed and Turkicised. One such centre was located in the Tarim Basin, centering on Beshbalîḳ ("Five Cities" = Pandjīkath, Chin. Pei-t'ing). According to the *Ḥudūd al-ʿālam*, tr. Minorsky, 94, Pandjīkath, earlier associated with the Basmîl, was the summer residence of the "king of the Toghuzghuz" and on this basis has been viewed as the centre around which the actual Toḳuz Oghuz tribes clustered. Another centre formed in the Turfan region at Hsi-chou/Kao-ch'ang/Ḳara Khodja/Ḳočo. The winter residence of the Eastern Turkistānī Toḳuz Oghuz located in the Turfan region is identified with the ruins of Idiḳut Shahri ("City of the Idiḳut"), the Čīnāndjkath ("Chinese City") of the Muslim authors. It was also an important commercial and religious centre. Another diaspora kingdom was established at Kan-chou in Kansu [*q.v.*], which by 902 came under the rule of scions of the Yaghlaḳar, the one-time imperial clan.

The earliest references to the Toḳuz Oghuz in the Muslim sources date from the their Orkhon-Selenge imperial period. Al-Yaʿḳūbī reports that the caliph al-Mahdī (158-69/775-85) sent emissaries to the rulers of the eastern lands, including the "khāḳān of the Tughuzghuz", inviting them to submit. He further remarks that Rāfiʿ b. al-Layth [*q.v.*], who led a revolt in the East in 190/806, brought in the "Tughuzghuz" among others to aid his cause (*Taʾrīkh*, ed. Beirut, ii, 398,435). Al-Ṭabarī, iii, 1044, *s.a.* 204/821, reports that they had penetrated Ushrusāna. The father of Aḥmad b. Ṭūlūn, who came as a *ghulām* into ʿAbbāsid service in the early 9th century from the Bukhārā region, is reported by later sources (al-Maḳrīzī, *Khiṭaṭ*, ed. Wiet, i, 313) to have been a Toḳuz Oghuz. Our most important notices stem from the travel account of Tamīm b. Baḥr [*q.v.*] who journeyed to Ḳarā Balghasun *ca.* 821, i.e. in the late imperial period. He entered the country through a system of relay horses sent by the "Khāḳān" that is reminiscent of the Mongol *yam*. He found a land of "villages lying close together and cultivated tracts". Most of the population consisted of fire-worshipping Magians and Manichaeans. The capital itself was "a great town, rich in agriculture and surrounded by *rustāḳ*s full of cultivation... populous and thickly crowded and has markets and various trades. Among its population, the Zindīḳ religion prevails". Much of this is repeated by al-Idrīsī, ed. Bombaci, *et alii*, 510-11, who calls the capital *tntbgh*, perhaps for بيبلغ *Baybalîgh*, بيشبلغ *Beshbalîgh* or خنبلغ *Khanbalîgh*). The ruler also possesses a gold tent which can hold 100 men. He is related to the ruler of China (al-Ṣīn) who "is sending him yearly 500,000 (pieces of) silk". Surrounded by an army of "some 12,000 strong" (apparently a reference to the imperial guard, al-Marwazī, ed. and tr. Minorsky, 18/29, reports that this guard corps, the *shākirī*, number 1,000, along with 400 female servants), "there is no one stronger than they among all the Turkish tribes". The Khāḳān had "seventeen chieftains (*ḳāʾid*) each having 13,000" troops. These form a huge encircling presence around the ruler. The latter was also the sole possessor of the magical rain-stone (Turk. *yat tashî*, Tamīm/Minorsky, Arabic text 278-82/tr. 283-5; see YADA TASH). The later 6th/12th century anonymous *Risālat fī ʾl-aḳālim* (Köprülü Library, N. 1623, fols. 210a-b, see R. Şeşen, *Hilâfet ordusunun menkıbeleri ve Türkler'in faziletleri*, Ankara 1967, 33-35, Arabic text and Turk. tr.) depicts him as a sacral ruler possessing 360 slaves "according to the number of days in the year" who appears only once a year to the populace who prostrate themselves before him.

The pre-eminence of the Toḳuz Oghuz among the Turks is illustrated by Ibn al-Faḳīh (*K. al-Buldān*, 329), who calls them the "Arabs of the Turks". Al-Masʿūdī, in several notices (*Murūdj*, ed. Pellat, §§ 155, 161-2, 190) conflating data from the pre- and post-imperial periods, remarks that they are the "masters of the city of Kūshān (Kao-ch'ang?) and considers them to be the most powerful of the Turkic peoples. "Their king is *Uyghurkhān (* ايغر خان, ms.: اير خان, ار خان) and their religion is the sect (*madhhab*) of Mānī. There are no others of the Turks who adhere to this religion", (cf. Ibn al-Faḳīh, *Buldān*, 329, however, who says that a "majority of the Turks are adherents of the Zanādiḳa", equally an exaggeration). In another reference, unconfirmed elsewhere, al-Masʿūdī reports

that "as long as the king of China is a *sāmānī* of the faith of animal sacrifices, there will be ongoing war between him and the ruler of the Turks, *Uyghurkhān. But when he is a Manichaean, they rule jointly". The *Ḥudūd*, tr. Minorsky, 94-5, clearly referring to their post-840 situation, notes Čīnāndjkath as the capital but comments that the "kings of the whole of Turkistān in the days of old were from the Toghuzghuz" and describes them as warlike, heavily-armed pastoral nomads.

The Uyghur and other Tokuz Oghuz tribes played a crucial role in the Turkicisation of Eastern Turkistan. Maḥmūd al-Kāshgharī (tr. Dankoff, i, 83) makes the interesting comment that the Uyghurs "have a pure Turkic language and also another language which they speak among themselves". The latter tongue was most probably the Iranian and/or Tokharian languages of the settled population of Eastern Turkistan. Under influences stemming from the latter, Manichaeanism was replaced by Buddhism and Nestorian Christianity. Having gradually become sedentarised, the Uyghurs/Tokuz Oghuz became important players in the international caravan trade and culture-bearers throughout the Inner Asian steppes, especially among the Mongolic peoples (the Kitan and later the Mongols themselves).

In 1028-36, the Kan-chou state and neighboring statelets of the Kansu corridor were conquered by the Tanguts. Their descendants are the Buddhist "Yellow Uyghurs" (Sarïgh/Shera Yughurs). The Kao-ch'ang Uyghurs were opponents of the Muslim Karakhānids and their struggles are reflected in the martial poetry recorded by al-Kāshgharī/Dankoff, i, 243, 270, 327. The Karakhānids expanded their borders and Islamic influence into Eastern Turkistān. By the 1130s, however, significant parts of the region came under the control of the Buddhist Kara Khitay, although it is not clear how much actual authority the latter exercised in Turfan. In 1209, the Idikut, Barčuk Tegin, assassinated a representative of the Gürkhān's authority and pledged his allegiance to the newly-created Činggisid empire. The Uyghurs became ubiquitous as officials and bureaucrats in the Mongol state. Their writing system, derived from the Syriac alphabet brought to them by the Soghdians, was adopted by the Mongols (and from them passed on to the Manchus).

TOGO, Islam in the West African Republic of Togo.

The Islamisation of what is now the Republic of Togo dates from the beginning of the 18th century, through the activities of traders and the settlement of Islamised population groups. Islam has been weak there, but has constantly progressed, whilst affecting different regions and groups in a variable manner. On 27 September 1963, what had been previously completely unstructured saw the formation of the Muslim Union of Togo (UMT), breathing into its structure a new dynamic as part of the one-party state of the *Rassemblement du peuple togolais*.

1. Demography and geographical distribution.

The censuses of 1970 and of 1981 (the latest) show that Islam increased in Togo from 11.6% to 12.2% (i.e. some 330,000 persons), behind Christianity (from 26.7 to 28.4%) and animism (now in decline, from 61.7 to 59%). Thus in ten years Islam achieved only a minute advance of 0.6%, and it is uncertain if it has perceptibly increased since then.

The Muslim population is distributed, according to the latest census, amongst the five regions of the country as follows: Central region, 39%; the Kara, 18%; the Plateaux region, 16.8%; the Savannah region, 14%; and the coastal region, 12.2%, this last region being in the first rank for Roman Catholicism (53.1%) and animism (38.2%). In regard to ethnic divisions, a dozen or so groups lead the field: the Hausa, through whom Islam first appeared in Togo, 96%; the Kotokoli, 95.5%; the Tchamba, 95.2%; the Peul, 86%; the Yoruba, 79%; the Mossi, 71.6%; the Nago, 66.9%; the Yanga, 54.3%; the Tchokossi, 41.1%; and the Bassar, 16.2%. The other ethnic groups vary between zero for the Adja and 13.1% for the Ana.

According to Raymond Delval, Togo has three main urban centres of Islam: Lomé, considered its intellectual and spiritual capital, from its mosques, Kur'ān schools, *madrasas* and zongo which play an important role in the diffusion of the faith; Sokodé, the "historic capital" because of the antiquity and numerical importance of its Islam; and Kpalimé, the "centre of regional spreading forth", where the Islamised population enjoys, in this region of agricultural lands rented out, a certain measure of material prosperity.

2. The framework of Islam and its social practices.

Islam in Togo does not have a strong representation of the Ṣūfī orders, and those which exist are not characteristic of its nature. Orders like the Ḳādiriyya, Ṭarabiyya and Aḥmadiyya are virtually non-existent, and the only *ṭarīḳa* really implanted there is that of the Tidjāniyya [*q.v.*], introduced mainly by Hausas, who have given Togolese Islam a special mark. Islam there is thus deeply affected by Hausa, which is the religious language of the land. The religious leaders, who include few *imāms*, theologians or competent directors, hardly bother to explain the basic doctrines of Islam, and the mass of faithful do not even know about their linkage with the Tidjāniyya.

Religious education in the Ḳur'ān schools generally consists of a wearisome repetition of prayers and learning the writing and reading of Arabic. Even though there has been since the 1970s a real effort to send qualified students to universities in Egypt, Morocco, Kuwait, etc., the rarity of teachers and

qualified leaders, much more than the lack of great mosques, bears witness to the superficial character of Islam in Togo, where old social practices and local beliefs, especially in regard to the rites of birth, marriage and funerals, overlap with the faith, resulting in a syncretism which is not always well viewed by orthodox Islam. The tendency is much more to keep the easier aspects of Islam than its constraints on behaviour. Hence one can be a good polygamist performing the worship, Pilgrimage and fasting, whilst Islamic orthodoxy, preaching an exemplary lifestyle and an exigent faith, considers these practices as superficial, especially as the practice of giving alms is generally ignored whilst the Muslim festivals are followed with enthusiasm.

Since they only see Muslims who have reached a certain standard of prosperity through their commercial activities, the Togolese have come to view Islam as assuring, more successfully than others, the social success of its adherents, even though at the same time, the mass of Muslims, being peasants, have a standard of life more or less identical with the rest of the population. Notwithstanding this popular view, many Togolese are not ready to take the step of conversion, as the population figures seem to indicate.

Islam in Togo remains dependent on outside. Teachers coming more and more from the Arab lands and also from neighbouring lands like Nigeria and Ghana will have much to do if their aim is to install orthodox Islam. It will also depend on financial subsidies from countries like Saudi Arabia, Kuwait and Libya for the construction of mosques, Ḳur'ān schools and *madrasas*, as well as the sending of teaching materials. Egypt usually confines its efforts to providing scholarships for students at al-Azhar.

3. The UMT: a reformed or a politicised Islam?

Delval considers that the *Union musulmane du Togo* has become the impulse for a modernising current in Islam, aided by the less important *Association de la Jeunesse Musulmane du Togo*. The UMT aims to combat deviations from Islam, especially maraboutism, reinvigorate Ḳur'ānic teaching, take charge of organising the Pilgrimage to Mecca, and the festivals of the two ʿĪds and to develop links with outside, especially with Libya. But because of internal resistance and external constraints of many kinds, the achievements of this modernisation programme have been very limited after 30 years of the UMT's existence.

Nevertheless, one should acknowledge that, since its formation in 1963, the UMT has successfully organised the previously diffuse Togolese Islam and has made it part of the country's power structure, being since 1969 an annex of the ruling single party. A dominant personality here has been al-Ḥādjdj Fousséni Mama, who has been involved in the various stages of Togolese politics from the 1950s, including minister of the interior in the government of Nicolas Grunitzky 1963-7 and a minister under the President Eyadéma who then assumed power.

Instead of renewing Islam as its statutes proclaim, the UMT has become in practice the mouth-piece of the one-party government, with a pro-establishment attitude aimed at keeping the government in power. The worship led by Fousséni Mama and various *imāms* often includes prayers for the continuance of the government in power. The UMT's internal structure is a reflection of that of the one-party state, just as its links with Libya are in line with the foreign policy of Eyadéma. When democracy was restored in October 1990 but followed by the bloody restoration of authoritarian rule in 1991, the UMT remained silent, probably not having any doctrine or political discourse suitable to the events.

Morever, the Tidjānī way, the majority in Togolese Islam, which, as elsewhere, preaches submission to state authority as much as to God, serves the different religious interests and established political rule by putting the Muslim community outside all political agitation. But this comforting reassurance for the powers that be neglects the fact that, amongst those demonstrating in the streets in October 1990 against the Eyadéma régime, were members of all the religious confessions of the land. Things may also change from the fact that it is in the main towns (Lomé, Kpalimé and Sokodé) that younger people are more mobilised for challenging the ruling power.

4. Summary.

Islam progresses slowly in Togo, where it is numerically the smallest of the three faiths there, touching regions and groups unequally, certain of these being resistant to it. Togolese Islam contains ancient popular beliefs and practices which the modernist current embodied in the UMT wishes to eradicate. Whilst not succeeding here, it has made Islam, including the Tidjānī current which preaches submission to the powers that be, a constituent part of the present régime. Its silence at the time of the democratisation process is thus explicable by its choice of Tidjānī attitudes which younger, more challenging Muslims may in the future contest, involving a possible political radicalisation.

TOḲAT, modern Tkish. Tokat, a town of northern Turkey in the interior of the Pontic region (lat. 40° 20' N., long. 36° 35' E.), now the chef-lieu of an *il* or province of the same name.

It is situated in the north to south-running valley of the Toḳat Suyu, enclosed between two mountains before debouching into the Yeşil Irmak [see yeshil irmaḳ], the Iris of Antiquity, whose upper course also has the name of Tozanlı Su. The *il* is also watered by the Yeşil Irmak's two main affluents, the Kelkit and the Çekerek Çayı. Their valleys separate three mountain ridges, the Canık Dağları in the north, the Yaylacık Dağı in the centre and the Deveci Dağı in the south. From its intermediate position between the Pontic littoral and the Anatolian interior, the region has a transitional climate, with a perceptibly smaller rainfall than the coast (455 mm/18 inches per annum at Toḳat).

The first signs of human settlement in the region, at Maşat Höyük and at Kayapınar Höyüğü, go back to the Chalcolithic period, with several sites then inhabited during the older Bronze Age (3rd millennium B.C.). In the 2nd millennium, Maşat Höyük was an important town on the northern borders of the Hittite kingdom and was called Tapigga. The region passed successively to the Phrygians, Cimmerians, Medes and Persian, to Alexander and his Diadochi before becoming an important part of the kingdom of Pontus, conquered from Mithridates by the Romans in 66 B.C. Towns now multiplied in Polemonic Pontus, including Zela (modern Zila), from where Julius Caesar,

victorious over Mithridates' son Pharnaces in the year 47 B.C., addressed to the Senate his famous message *veni, vidi vici*; Gazioura (Turhal); Sebastopolis of Pontus (Sulusaray); Nea-Caesarea (Niksar); and above all, Comana Pontica, together with Amaseia the main city of Pontus, situated in the main valley 8 km/5 miles north-east of the site of Toḳat, now occupied by a citadel called Dazimon (Ramsay).

The name Toḳat, found in the Arab geographers from the time of Yāḳūt (i, 188), is said by Vivien de St.-Martin (i, 188, repeated in Cuinet, i, 712), to derive from the Armenian form of the name of the Empress Eudoxia, mother of Theodosius; but numerous other etymologies have been proposed (see *Yurt ansiklopedisi*, x, 7077), none convincingly. In any case, it was after the Turkish conquest that the town developed in a side valley at the foot of the citadel, where the *amīr* Dānis̲h̲mend G̲h̲āzī, founded the town's first mosque in 1074 and established the centre of the petty Dānis̲h̲mendid principality, attached to the Sald̲j̲ūḳ sultanate of Rūm in the reign of Ḳilīd̲j̲ Arslan II [see DĀNIS̲H̲MENDIDS]. The Sald̲j̲ūḳ (1175-1304) and Il-K̲h̲ānid periods (1304-35) saw its monuments multiply, of which the most remarkable in the first period were the Gök Medrese (the modern Museum), the mausoleum of Abu 'l-Ḳāsim Ṭūsī, the *zāwiye* of Sünbül Baba and a stone bridge of four arches over the Yeşil Irmak, and in the second one the mausoleum of Nūr al-Dīn S̲h̲entimur. Nīksār [*q.v.*] also has several important monuments from the Dānis̲h̲mend period (the Ulu D̲j̲āmiʿ, the mausoleum of Melik G̲h̲āzī, *medrese* of Yag̲h̲basan) and from the Sald̲j̲ūḳ one (the mausoleums of Ḥād̲j̲d̲j̲ī Čiḳrïḳ and Ḳïrḳ Ḳïzlar).

After being dependent on the *amīrs* of Sivas, Bāyezīd II incorporated Toḳat into the Ottoman empire in 1392. Toḳat now developed perceptibly, with the building in the early 15th century of the mosques of Ḥād̲j̲d̲j̲ī ʿIwaḍ Pas̲h̲a and Ḥamza Bey, the *medrese* of Emīr Ḥiṣār, the mausoleum of K̲h̲orozog̲h̲lu and the *ḥammām* of Yörgüč Pas̲h̲a, so that according to the census of 1455 it had 2,888 families, of which one-third were Christian, divided into 54 quarters, though this development was brutally interrupted in 1471 when the Aḳ Ḳoyunlu ruler Uzun Ḥasan [*q.v.*] pillaged and destroyed the town. But once it was again within the Ottoman boundaries, it developed rapidly out of its ruins all through the 16th and 17th centuries, despite some ups and downs due to revolts or fires. The mosque and baths of ʿAlī Pas̲h̲a were built in 1572 and the Great Mosque rebuilt in 1679, but the main monuments of this period were the covered market (*bedesten*) and some caravanserais which completed the layout of the town, the Voyvoda K̲h̲ānï of 1631 (now called Taşan "of stone") and the K̲h̲orozog̲h̲lu K̲h̲ānï of the 18th century. Toḳat was at that time an important commercial centre, situated as it was on the great west-east caravan route connecting Istanbul with Erzurūm, Tabrīz and Persia, and at the junction of three other routes, the northwestern one connecting with the maritime traffic of Sinop [see SĪNŪB], that going west-south-west to İzmir, and that going south-eastwards to Sivas and Diyārbakïr, Mawṣil and Bag̲h̲dād. The caravan traffic also supplied important manufactures and crafts in the town: silk cloths, coloured linen cloths, leather from hides and copper vessels.

Tavernier in 1632 and then Pitton de Tournefort in 1701 visited the town at the height of its activity, and the latter gave the population as 24,400 families (20,000 Turks, 4,000 Armenians and 400 Greeks). Yet despite its importance, Toḳat was dependent administratively on the Pas̲h̲a of Sivas and had within its own bounds only an *ag̲h̲a* and a *ḳāḍī*.

In the 19th century, the town entered a period of decline, linked with the general decline of manufacturing activity within the Ottoman empire and aggravated by an earthquake in 1825. For long it remained simply the centre of a *ḳaḍā* within the *merkez sand̲j̲aḳ* of the *eyālet*, then *wilāyet*, of Sivas, before being raised in 1883 to be the centre of a new *sand̲j̲aḳ*, with four *ḳaḍās* (Toḳat-Merkez, Erbaʿa, Nīksār and Zīle), 45 *nāḥiyes* and 1,155 villages. According to Cuinet, this *sand̲j̲aḳ* had 202,800 inhabitants, of which 101,200 were Sunnī Muslims, 50,600 S̲h̲īʿī Muslims, 37,879 Armenians, 12,681 Greeks and 400 Jews, whilst the town of Toḳat itself had 29,890 inhabitants, including 17,500 Sunnī Muslims and 10,450 Armenians. The *sand̲j̲aḳ* was enlarged in 1918 by the addition of a fifth *ḳaḍā*, that of Res̲h̲ādiyye in the east, and then raised to the status of a *wilāyet* under the Republic.

The present *il* keeps the same boundaries, with an area of 9,958 km^2 and a population in 1990 of 719,251. The number of component *ilçes* or counties rose to eight by the addition of Artova and Turhal in 1944 and Almus in 1954, then to twelve in 1990 with the four new *ilçes* of Yeşilyurt (formerly Arabacımusa), Başçiftlik, Pazar and Sulusaray (cited by Bazin as an example of gradual rise to urban status). The main economic activity remains agriculture, which employed 75% of the active population in 1990, but this has been modernised, and yields are obtained above the national average, including *inter alia* 250,000 tonnes of corn and 750,000 tonnes of sugar beet, processed in the Turhal refinery founded in 1934. The food industry sector retains the main role in a still limited industrial sphere of activities; it includes the mineral waters of Niksar, bottled and marketed all over Turkey. The warm, sulphurous waters at Çermik, near Sulusaray, supply a modest watering-place. Placed over the middle-sized towns of Turhal (pop. 68,384 in 1990), Zile (46,090), Niksar (35,201) and Erbaa (33,554), Toḳat has strengthened its functions as administrative and commercial centre of the *il* by adding some new manufacturing activities to its traditional one of coloured linen cloths, and its population reached 83,058 in 1990. Whilst stretching out towards the Yeşil Irmak valley to the north, the town has retained an important architectural and urban heritage, with, in addition to the monuments mentioned above, numerous traditional houses of the 19th century which have benefited by some restoration works.

TOḲMAḲ, a town in the modern Kirghizistan Republic (lat. 42° 49' N., long. 75° 15' E.), on the left bank of the Ču river [*q.v.*], near the Ala Tau mountain chain and 60 km/37 miles to the east of Bishkek [see PISHPEK].

It is near the ancient site of Suyāb (Su yek in Chinese sources) where the Turkic tribes of the Western Turkish kaghanate (603-704) (notably the Kaghan's own clan) had their winter quarters and carried on trade with the Chinese. These last destroyed the kaghanate when in 748 the Chinese army marched westwards for its final confrontation with the Arab army at Talas [see ṬARĀZ] and its defeat by Ziyād b. Ṣāliḥ [*q.v.*] in 133/751, opening up the region from the south for the Muslim troops (V.I. Masal'skiy, *Turkestanskiy kray*, St. Petersburg 1913, 279). The town must have been rebuilt some time later, further to the north. Suyāb was also the residence of the Türgesh, and especially of their kaghan Su-lu (d. 738) (W. Barthold, *Hist. of the Semirechyé*, in *Four studies on the history of Central Asia*, i, Leiden 1956, 84-5), who founded the Türgesh kaghanate (704-56) and subsequently moved to Talas, and who was involved in warfare with the Arabs and Chinese.

As well as the "stone women" funerary stelae found at the foot of the Ala Tau, there are some Nestorian Christian cemeteries with Syriac inscriptions from the 11th and 13th-14th centuries, attesting the survival there of Christianity and Manichaeism well after the region's Islamisation (Masal'skiy, 319, 768, and see PISHPEK). The Khāns of Khokand [*q.v.*] built a fortress there in the first third of the 19th century as part of their expansion into the lands of the Kirghiz and Kazakh tribes, said to have been founded in 1832 by Lashker, *koshbegi* [*q.v.*] of Tashkent, at the same time as the fortresses of Merke, Pishpek and Atbashî (Yu.A. Sokolov, *Načalo voennîkh deystvii protiv Kokandskogo khanstva*, Tashkent 1969). In reality, the date of its foundation is uncertain. The Uzbek historian Kh. Ziyaev asserts, *Urta Osië va Sibir XVI-XIX asrlar*, Tashkent 1962, 162, that Pishpek and Tokmak were fortified under Muḥammad ʿUmar Khān, hence before his death in 1822, whilst N.A. Aristov held that neither existed before 1847, since they are unmentioned in the stories of the fighting between the Kirghiz and the Kazakh supporters of the revolt of Kenesarî Kasimov and only appear in the report of 1848 of the Kazakh Abdullah Ačurov (V.M. Ploskikh, *Kirgizî i Kokandsii khanstva*, Frunze 1977, 139). The Russian envoy M.I. Venyukov described Tokmak in 1859 as a fortress with four walls 5 m high and 60-70 m long, able to hold 150-200 soldiers. V. Radlov, *Kratkiy očerk o poezdke v Semirečenskuyu oblast' i na Issîk Kul letom 1869*, in *Izvestiya RGO*, iv, no. 3 [1870], 96, visiting it ten years later, described its strategic position at the mouth of a defile. In the mid-19th century, the local Kirghiz raised cereals to supply the fortresses, providing thereby a stimulus to local food production, and they also had a salt mine. Tokmak was conquered by the Russians in 1860 together with other fortresses forming the line Pishpek—Auliyé-Ata—Čimkent—Tashkent, and with Russian colonisation, a village of some 3,000 people grew up in its vicinity.

With industrialisation in the Soviet period, Tokmak acquired two car repair factories, sugar refineries, mills, glass, packaging and reinforced concrete factories, and a co-operative for producing meat and woollen and felt goods for the yurts (B.S. Čormonov, *Gorod Tokmak*, Frunze 1973). It had 19,000 inhabitants in 1939, 52,000 in 1975 but less than 50,000 in 1990.

TOḲTAMÎSH (in the sources most often thus, but occasionally "Tokhtamîsh" and less frequently "Toghtamîsh;" his coins assign him the *laḳab*s "Nāṣir al-Dīn", "Ghiyāth al-Dīn", and evidently "Djalāl al-Dīn"), *khān* (r. *ca.* 780-97/1378-95) of the Mongol successor state known as the *ulus* of Djöči (Djüčī) or "Golden Horde" [see BATU'IDS]. His reign saw the reunification of the Golden Horde after the internecine struggles that followed the murder of Berdi Beg Khān *ca.* 761/1360. His struggle with his erstwhile patron, Tīmūr [*q.v.*], however, ended in disaster for himself and for Činggisid power in a united Golden Horde: Toktamîsh himself spent the last years of his life as a fugitive as power in the Djöčid *ulus* devolved first upon Činggisid princes supported by Tīmūr, and soon upon powerful tribal chieftains such as Edigü. Činggisid power was restored only in separate khānates that emerged, alongside the Noghay [*q.v.*] tribal confederation that traced its roots to Edigü, as the Golden Horde's successor states.

Toktamîsh was the first Čingissid ruler from the "left hand", i.e. the eastern half, of the Djöčid *ulus*, who managed also to dominate the western parts of the Golden Horde for an extended period. His Činggisid lineage was traced through Tokay Tīmūr, usually counted as the thirteenth son of Djöči b. Čingīz Khān; Toktamîsh, indeed, first appears on the historical scene in Central Asia, in the southeasternmost regions of the Golden Horde, as a rival of Urus Khān, the Činggisid ruler (also a Tokay Tīmūrid) who consolidated his power in the eastern half of the Djöčid *ulus* around 1374-5. Tokay Tīmūrid dominance in the eastern part of the Golden Horde followed that of the descendants of Djöči's eldest son Orda, and preceded the rise there of the descendants of the fifth son, Shībān.

Toktamîsh's full genealogy first appears in the *Muʿizz al-ansāb*, a genealogical compendium compiled for Shāh Rukh in 830/1426-7 (ms. Paris, A.F. pers. 67, fols. 25b-26a; cf. Tiesenhausen, *Sbornik*, ii, 59, 61-2), in this form: Djöči > Tokāy Tīmūr > Ürüng-bāsh > Sārîča > Könček > Kutluk-khʷādja > Toy-khʷādja > Toktamîsh. The view maintained in some studies (e.g. Spuler, *Horde*[2] and BATU'IDS, Grekov and Yakubovskiy) that Toktamîsh's father Toy-khʷādja was a brother of Urus Khān and that both were descendants of Djöči's eldest son Orda, appears to be based upon a misunderstanding of Naṭanzī's garbled genealogy of Urus Khān (Kafalı, though allowing that both were Tokāy Tīmūrids, cites Ötemish Ḥādjdjī in affirming that Toktamîsh was Urus Khān's cousin, but the accessible manuscript

of Ötemis̲h̲ Ḥād̲j̲d̲j̲ī's work does not confirm this, and the corresponding passage from 'Abd al-G̲h̲affār Ḳîrîmī's work might be construed as implying only a more distant kinship; the *Muʿizz al-ansāb* shows Urus K̲h̲ān and Toḳtamîs̲h̲ sharing an ancestor in the fifth generation). The form "Tūlī-k̲h̲ʷād̲j̲a" adopted as the name of Toḳtamîs̲h̲'s father by Bartol'd, *EI*[1] art. *Toḳtamîs̲h̲*, and Spuler is based on one copy of Naṭanzī's work; the form "Tūy-k̲h̲ʷād̲j̲a" is well-established in a wide range of early sources.

The Tīmūrid historical works that are our earliest sources on events in the Das̲h̲t-i Ḳîpčāḳ [*q.v.* in Suppl.] during the latter 14th century, however, say almost nothing of Toḳtamîs̲h̲'s ancestry or the specifics of his Čingisid lineage; his father, Toy-k̲h̲ʷād̲j̲a, is named, among narrative histories, only by Muʿīn al-Dīn Naṭanzī. Naṭanzī is likewise alone in affirming that Toy-k̲h̲ʷād̲j̲a was the governor of Māngḳîs̲h̲lāḳ (on the eastern shores of the Caspian Sea, near the traditional homeland of the Ḳungrāts, the tribe of Toḳtamîs̲h̲'s mother), and that the enmity between Toḳtamîs̲h̲ and Urus K̲h̲ān resulted specifically from Toy-k̲h̲ʷād̲j̲a's execution following an unsuccessful rebellion against Urus K̲h̲ān. Other Timurid sources ignore this prelude and note only Toḳtamîs̲h̲'s arrival at Tīmūr's court, soon after Tīmūr's return from an inconclusive campaign against Ḳamar al-Dīn, the powerful *amīr* of the Dūg̲h̲lāt [*q.v.*] tribe dominant in Mog̲h̲olistān [*q.v.*], most likely in 777/1375-6 (the chronology of Toḳtamîs̲h̲'s repeated flights to Tīmūr remains unclear).

According to the earliest account, that of Niẓām al-Dīn S̲h̲āmī, Tīmūr welcomed Toḳtamîs̲h̲ and installed him as ruler over the region of Utrār [*q.v.*] and Sawrān along the middle Sîr Daryā [*q.v.*]. That region was often a hostile frontier between the D̲j̲öčid and Čag̲h̲atayid realms, and if, as S̲h̲araf al-Dīn 'Alī Yazdī writes, Tīmūr stipulated Sîg̲h̲nāḳ [*q.v.*] as well among the towns given to Toḳtamîs̲h̲, the move was clearly a direct challenge to Urus K̲h̲ān; Sîg̲h̲nāḳ was the traditional residence of the rulers of the "left hand" of the D̲j̲öčid *ulus* and was Urus K̲h̲ān's base before, and possibly even after, he succeeded in establishing his power in the Golden Horde's "capital" Sarāy [*q.v.*]. Once installed in that region, Toḳtamîs̲h̲ was attacked by an army led by Urus K̲h̲ān's son Ḳutlug̲h̲-Bug̲h̲ā, who was killed in the battle even as Toḳtamîs̲h̲ was defeated and forced to seek refuge once more with Tīmūr. Tīmūr re-equipped him and sent him back; this time another son of Urus K̲h̲ān, Toḳtā Ḳîyā, inflicted a humiliating defeat upon him. Toḳtamîs̲h̲ fled alone and escaped with difficulty. S̲h̲āmī's account of this episode suggests Tīmūr's doubts about his protégé's abilities, and the versions in most Tīmūrid sources combine condescension toward the hapless Toḳtamîs̲h̲ with an emphasis upon Tīmūr's solicitude.

After this defeat, according to S̲h̲āmī and the later Tīmūrid sources, Urus K̲h̲ān sent envoys to Tīmūr demanding that he hand over Toḳtamîs̲h̲ and threatening war if he refused; in response Tīmūr, accompanied by Toḳtamîs̲h̲, led his army to Utrār, Urus K̲h̲ān's forces came to Sîg̲h̲nāḳ, and the two armies faced each other for three or four months, each unable to gain advantage during an exceptionally harsh winter (evidently that of 1376-7). After some successes by Tīmūr's commanders broke the stalemate, we are told, Urus K̲h̲ān died; his son Toḳtā Ḳîyā succeeded him but soon died as well. Tīmūr again installed Toḳtamîs̲h̲ as ruler on the Sîr Daryā frontier and returned to Samarḳand, but yet another (apparent) son of Urus K̲h̲ān, Tīmūr Malik, soon challenged Toḳtamîs̲h̲; and after yet another defeat Toḳtamîs̲h̲ had to make his way alone back to Tīmūr.

News came, however, that Tīmūr Malik was alienating his subjects with excessive drinking and lassitude. Tīmūr therefore supplied Toḳtamîs̲h̲ with a large army and several of his commanders, whom he instructed to install Toḳtamîs̲h̲ as ruler in Sîg̲h̲nāḳ; they did so, and evidently aided Toḳtamîs̲h̲ soon thereafter in decisively defeating Tīmūr Malik in the latter's winter quarters at Ḳarātāl. Toḳtamîs̲h̲ sent word of his victory to Tīmūr, and then in the spring began the conquest of the rest of the Golden Horde, seizing Sarāy and preparing to deal with his chief remaining rival in the D̲j̲öčid *ulus*, the chieftain Mamāy (in the Tīmūrid sources "Mamāḳ"), of the Ḳîyāt tribe, based in the Crimea. The only date provided by S̲h̲āmī for these events is the year 780, which began in April of 1378: it was then that Tīmūr sent his army to Sîg̲h̲nāḳ with Toḳtamîs̲h̲, after the death of Urus K̲h̲ān, and S̲h̲āmī's account implies that Toḳtamîs̲h̲'s campaign against Mamāy did not begin until yet another winter had passed, i.e. in the spring of 1379. According to S̲h̲araf al-Dīn 'Alī Yazdī, however, Tīmūr's army installed Toḳtamîs̲h̲ as ruler in Sîg̲h̲nāḳ during the Year of the Snake (which began in March 1377) late in 778 (which ended in early May 1377), evidently placing Toḳtamîs̲h̲'s victory over Tīmūr Malik as well in the late winter or spring of 1377.

Not only the chronology, but the details as well, of Tīmūr's war with Urus K̲h̲ān and his sons, and the establishment of Toḳtamîs̲h̲'s power, are handled somewhat differently even in the various Tīmūrid sources; Naṭanzī, for instance, identifies the D̲j̲öčid ruler finally defeated by Toḳtamîs̲h̲ at Ḳarātāl as "Tīmūr Bek K̲h̲ān b. Muḥammad K̲h̲ān" (*Muntak̲h̲ab*, ed. Aubin, 93-4).

Perhaps the most divergent account, though the only "internal" one, is that of Ötemis̲h̲ Ḥād̲j̲d̲j̲ī in his *Tārīk̲h̲-i Dūst Sulṭān*, compiled *ca.* 1555 for a Čingisid ruler of the K̲h̲ʷārazmian Özbeg "'Arabs̲h̲āhid" dynasty [see K̲H̲ʷĀRAZM], who does mention Toḳtamîs̲h̲'s dependence upon Tīmūr during his struggle with Urus K̲h̲ān, but presents also an apparently independent narrative recounting Toḳtamîs̲h̲'s rise to power. According to this version (Yudin, 115-8, 142-5), Toḳtamîs̲h̲ gathered around himself the young men of the S̲h̲īrīn, Barîn, Arg̲h̲ūn, and Ḳîpčāḳ tribes, which were his hereditary peoples (*els*); this, incidentally, marks the only suggestion we have, aside from the Ḳungrāt connections implied by Naṭanzī, of a particular tribal base for Toḳtamîs̲h̲'s power (Tīmūrid sources often identify the tribal origins of specific commanders in Toḳtamîs̲h̲'s armies, but refer collectively to his people only by the generic designations "Özbeg" or "Toḳmāḳ"). When these tribes appealed to Toḳtamîs̲h̲ that Urus K̲h̲ān was oppressing them because of their ties with him, he arranged to lead the four tribes away from Urus K̲h̲ān during a planned migration to summer pastures. As the plan unfolded, Urus K̲h̲ān realised what was afoot and set off with a small force to pursue the disaffected tribes, but after initial success against Toḳtamîs̲h̲, Urus K̲h̲ān's force was defeated, and the k̲h̲ān himself killed, in a counterattack led by Toḳtamîs̲h̲'s son D̲j̲alāl al-Dīn and by other youths who had been sent off to safety. Following this victory, Toḳtamîs̲h̲ sought support for his campaign against Mamāy; the S̲h̲ībānid Ḳān-bāy agreed but then changed his mind, while another S̲h̲ībānid, 'Arab-og̲h̲lān (called elsewhere "'Arab-s̲h̲āh", ancestor of the K̲h̲ʷārazmian Činggisids whom Ötemis̲h̲ Ḥād̲j̲d̲j̲ī

served, and evidently identical with the ʿArab-s̲h̲āh whose coins bear dates from 775/1374-5 and 779/1377-8), gave complete support to Toḳtamîs̲h̲, who went to Sarāy, made himself *k̲h̲ān* there, and led the campaign that ended with Mamāy's defeat and death.

None of these particulars is reflected in the Tīmūrid sources, which lose interest in Toḳtamîs̲h̲ until his wars with Tīmūr; as a result, we know little of the internal situation in the Golden Horde during much of Toḳtamîs̲h̲'s reign. His consolidation of power served not only to reunite the D̲j̲öčid *ulus* (numismatic evidence has been interpreted as indicating a conscious attempt to unify the Golden Horde economically as well), but also to re-establish control over frontier regions where vassals of the *k̲h̲āns* had become essentially independent; these included not only areas in which his efforts led inevitably to his clash with Tīmūr, but more westerly regions as well, beginning with the Russian principalities. Toḳtamîs̲h̲'s battle with Mamāy evidently came soon after the latter was defeated by the Russians at Kulikovo in September 1380; that victory led the Russians to defy the new *k̲h̲ān*'s demand for submission the following year, and in 1382 Toḳtamîs̲h̲ ravaged Russia, pillaging and destroying Moscow and re-imposing D̲j̲öčid control. Toḳtamîs̲h̲ also sought, it seems, to revive the old pattern of diplomatic and commercial ties between the Golden Horde and Mamlūk Egypt; Mamlūk sources record the arrival of ambassadors from Toḳtamîs̲h̲ in 786 and 787/1384-5, and again in spring 796/1394, in the latter case bearing an invitation from Toḳtamîs̲h̲ to join in a war (already not his first) against Tīmūr.

The reasons for Toḳtamîs̲h̲'s turn against Tīmūr, whom sympathetic sources portray as a quite indulgent patron, are treated in personal terms in the earliest accounts. S̲h̲āmī credits several close companions of Toḳtamîs̲h̲ with counselling loyalty to Tīmūr; but after their death, a group of "Māngḳūt idiots" (i.e. of the Mang̲h̲ît [see MANGÎT] tribe) turned Toḳtamîs̲h̲ from the path of concord and gratitude. Naṭanzī claims that the Dūg̲h̲lāt Ḳamar al-Dīn, fleeing from Mog̲h̲olistān, intrigued with Toḳtamîs̲h̲ against Tīmūr, and K̲h̲ʷāndamīr says plainly that it was Ḳamar al-Dīn who induced Toḳtamîs̲h̲ to rebel against Tīmūr. Ibn ʿArabs̲h̲āh and Ibn Ḥad̲j̲ar al-ʿAsḳalānī even claim that Toḳtamîs̲h̲ broke with Tīmūr in anger over the latter's treatment of Amīr Ḥusayn (Tīmūr's former ally in the Čag̲h̲atāyid realm and eventual victim). It is clear, however, that in his challenges to Tīmūr, Toḳtamîs̲h̲ was pursuing traditional claims and interests of the D̲j̲öčid *k̲h̲āns* in regions—Ād̲h̲arbāyd̲j̲ān, K̲h̲ʷārazm, the middle Sîr Daryā valley—where Tīmūr had already sought to extend his influence. The first such challenge may have been in K̲h̲ʷārazm, which Tīmūr conquered, after several years of tolerating a local dynasty inclined to intrigue and rebellion, in 781/1379; in the same year, however, and indeed through much of the 1380s, coins of Toḳtamîs̲h̲ were struck in K̲h̲ʷārazm, which evidently quickly reverted to the hands of local rulers inclined to prefer D̲j̲öčid suzerainty over that of Tīmūr.

Similarly, soon after Tīmūr installed a compliant ruler in Ād̲h̲arbāyd̲j̲ān in 787/1385, Toḳtamîs̲h̲ invaded the region and ravaged Tabrīz, prompting Tīmūr to lead a campaign into Persia and the Caucasus during 788/1386; Toḳtamîs̲h̲ again led an army into Ād̲h̲arbāyd̲j̲ān in the spring of 789/1387, but his forces were dispersed by those of Tīmūr, who sent him a warning not to repeat such an act. Unable to reassert his claims there, Toḳtamîs̲h̲ moved next in Central Asia, sending armies from K̲h̲ʷārazm and the Sîr Daryā frontier into Transoxania late in 789/1387-8; his forces reached as far as the Amū Daryā, besieging Buk̲h̲ārā and plundering the surrounding countryside, forcing Tīmūr to return to Central Asia. Toḳtamîs̲h̲'s armies retired to the steppe as Tīmūr approached early in 790/1388; later the same year Tīmūr destroyed K̲h̲ʷārazm for its support of Toḳtamîs̲h̲, but as winter came Toḳtamîs̲h̲ led an army from the steppe to challenge Tīmūr along the middle Sîr Daryā. His initial thrust toward Yasî, Sawrān, and Zarnūḳ was repulsed, but once again the armies of the D̲j̲öčid *ulus* and Tīmūr faced each other through the winter along the Sîr Daryā frontier; in the spring of 791/1389 further successes by Tīmūr's forces induced Toḳtamîs̲h̲ to withdraw into the Das̲h̲t-i Ḳîpčāḳ.

Persuaded by his commanders to deal first with Ḳamar al-Dīn and other threats in Mog̲h̲olistān, Tīmūr delayed his punitive expedition against Toḳtamîs̲h̲ until late winter 793/1391; he set off then with his army from Tashkent, rebuffed envoys bringing apologies from Toḳtamîs̲h̲, marched deep into the Das̲h̲t-i Ḳîpčāḳ, left an inscription at Ulugh Tagh (Ulutau) commemorating the purpose of his campaign, and finally, in mid-Rad̲j̲ab 793/mid-June 1391, at Ḳandîrča (Ḳunduzča ?), a site near present-day Orenburg, inflicted a crushing defeat upon Toḳtamîs̲h̲. Tīmūr's forces marched further west, as far as the Volga, then turned back, crossed the Yayîḳ/Ural river, passed by Sawrān, and crossed the Sîr Daryā near Utrār, reaching Samarḳand in Muḥarram 794/December 1391.

In the aftermath of this campaign's decisive battle, Tīmūr showed favour to Toḳtamîs̲h̲'s enemies in the Das̲h̲t-i Ḳîpčāḳ, the Čînggisids Künče Og̲h̲lān and Tīmūr Ḳutlugh (the son of Tīmūr Malik), and the Mang̲h̲ît chieftain Edigü, who had earlier fled from the k̲h̲ān and taken refuge with Tīmūr; he directed them to "win over, gather up, and bring their peoples" (*els*) to him, evidently intending at least the eastern half of the D̲j̲öčid *ulus* to submit to him through these grateful protégés. All of them quickly ignored their patron's wishes and pursued their own power in the D̲j̲öčid *ulus*, and due as much to their activities as to the immediate effects of Tīmūr's expedition, Toḳtamîs̲h̲'s sphere of activity was ironically limited, for several years, to the western parts of the Golden Horde. Even there his prestige suffered from his defeat, but his efforts to reassert control in the west apparently succeeded; one product of this effort was his decree (*yarlîḳ*) to the Polish king Wladislaw II Jagiello noting the setbacks occasioned by the treachery of several conspirators (Edigü among them) who had incited Tīmūr against him and had then evidently abandoned the *k̲h̲ān* in battle, but affirming also that he had succeeded in regaining control and was thus in a position to demand tribute (the *yarlîḳ*, written in Uyg̲h̲ur script, was sent from Tana/Azov in Rad̲j̲ab 795/May 1393).

By the summer of 796/1394, Toḳtamîs̲h̲ felt strong enough to challenge Tīmūr again, this time in the Caucasus; his attacks reached as far as Darband and S̲h̲īrwān; again, news of Tīmūr's approach led Toḳtamîs̲h̲ to withdraw, but in the spring of 797/1395 Tīmūr began a second campaign into the Das̲h̲t-i Ḳîpčāḳ that would prove the final blow to the *k̲h̲ān*'s power. Toḳtamîs̲h̲ was defeated in a battle near the Terek river on 23 D̲j̲umādā II/15 March; Tīmūr's forces pursued him northwards, and soon, his army scattered, Toḳtamîs̲h̲ himself "abandoned *k̲h̲ān*-ship" and fled, to "Būlar" (possibly referring to Bulg̲h̲ār, but more likely to Poland), according to Yazdī, or, according to Mamlūk sources, "to the lands of the

Russians", or to "L.b.ḳā" or "L.b.tā" (no doubt referring to Lithuania [see LIPḲA]) according to Naṭanzī. Meanwhile Tīmūr's army marched deep into the Golden Horde through the summer of 1395, reaching nearly as far as Moscow and then sacking the Horde's major cities, Sarāy and Ḥādjdjī Tarkhān (Astrakhān), during the winter and returning to Persia via Darband in the spring of 798/1396.

Tīmūr's destructive campaign is typically regarded as the death-blow to the Golden Horde's unity and prosperity; it clearly marked the effective end of Toḳtamîsh's rule as *khān* of the Djöčid *ulus*. He lived another ten years as an adventurer, and in his continuing efforts to reclaim his throne he ranged with his followers throughout the territory of the Golden Horde, seeking a suitable arena in which to base his power, and a willing patron to facilitate his return to rule. The notice in Mamlūk sources, for Djumādā II 799/March 1396, that Toḳtamîsh had had gathered an army and was besieging the "Genoese Franks" at Kaffa in the Crimea must reflect one such attempt; no doubt with the same aim he sought refuge in Kiev with the Lithuanian prince Vytautas (Witold), who refused the demands of the new *khān*, Tīmūr Ḳutlugh, to hand over the fugitive Toḳtamîsh and set out against him. According to Russian sources, Tīmūr Ḳutlugh feared Witold's enormous army and was inclined to make peace, but his ally, the *amīr* Edigü, strengthened the *khān*'s resolve; their forces were victorious over Toḳtamîsh and his latest patron in a battle at the Vorskla river in August 1399. As far as the sources reveal, the final ally sought by Toḳtamîsh in a bid to reclaim his throne was none other than Tīmūr, who just weeks before his death in Utrār in Shaʿbān 807/February 1405 received envoys from the fugitive *khān* seeking reconciliation and aid in restoring his rule in the Djöčid *ulus*. According to Yazdī, Tīmūr agreed to assist Toḳtamîsh upon returning from his intended campaign against China; not only the rapprochement between Tīmūr and Toḳtamîsh, but also its aim—opposing Edigü, by then the real ruler of the Djöčid *ulus* through a succession of puppet Čingisids—were mentioned by the Castilian envoy Clavijo.

In all likelihood, Toḳtamîsh did not long outlive Tīmūr. The earlier version of Naṭanzī's work says that Toḳtamîsh died a natural death in the region of "Tūl.s" (var. "Tūlīn", no doubt to be read as referring to Tyumen in western Siberia) in 800/1397-8 (a date precluded by his alliance with Witold and by his final embassy to Tīmūr), but the later version was corrected to state that he was killed by Edigü in 807 (which ended in June 1405), in the same region. The latter account accords reasonably well both with a Russian source affirming that Toḳtamîsh was killed in battle with forces of Shādī Bek Khān, near Tyumen, in 1406 (Edigü was the *de facto* ruler in the Golden Horde during Shādī Bek's reign), and with Ibn ʿArabshāh's claim that Toḳtamîsh was killed in the last of 16 battles he fought against Edigü.

Even before Toḳtamîsh's death, several of his sons were prominent players in the struggle for power in what remained of the Golden Horde, with Djalāl al-Dīn, Djabbār Berdī, Karīm Berdī and Kebek customarily ranked among those who reigned briefly as *khān* during the first quarter of the 15th century; they continued their father's struggle with Edigü, whom another son of Toḳtamîsh, Ḳadîr Berdī, was credited with killing in 822/1419. The struggles between Toḳtamîsh and Edigü, and their sons, ensured a prominent place for Toḳtamîsh as a character in the extensive oral epic tradition that developed around the heroic figure of Edigü/Idige; versions of this epic tale have been preserved among the Noghāys, Bashkirs, Ḳazaḳs, Ḳaraḳalpaḳs and Özbegs.

(D. DEWEESE)

TŌLĀ, a weight used in India (Skr. *tulā*, Hindi *tōlā* "balance, scales") for both gold and silver. In earlier times, 1 *tōlā* = 96 *rattīs*, the *rattī* being the old Indian unit of weight, according to E. Thomas = 1.75

grains. In British India, by a regulation of 1833, the *tōlā* of 180 grains, being also the weight of the rupee [see RŪPIYYA], was established as the unit of the system of weights, with 3,200 *tōlās* = 1 *man* or maund.

(ED.)

TOLUY, the fourth son of the founder of the Mongol empire, Čingiz Khān [*q.v.*] by his chief wife, Börte, and father of the Great Khāns Möngke and Ḳubilay [*q.vv.*], as well as Hülegü (Hūlāgū [*q.v.*]), who established the Īl-Khānid state [*q.v.*] in Persia. The name derives from the Mongolian word for mirror (G. Doerfer, *Türkische und mongolische Elemente in Neupersischen*, Wiesbaden 1963-75, i, 274-6).

Toluy was probably born in the late 1180s (P. Pelliot and L. Hambis, *Histoire des campagnes de Gengis Khan*, Leiden 1951, 375), and was known for his personal bravery and military leadership. He first came into prominence as a commander in the early Mongol campaigns into northern China in the early 1210s. Toluy and his brothers joined their father in the campaign against the Khʷārazm-shāh [*q.v.*] ʿAlāʾ al-Dīn Muḥammad in 615/1219. He accompanied Čingiz in the conquest of Bukhārā, and was subsequently dispatched with part of the army to subdue western Khurāsān, involving the bloody destruction of Nīshāpūr and Marw (Djuwaynī-Boyle, i, 150-2). Toluy thereupon rejoined his father in Afghānistān, and participated in the pursuit of the new Shāh Djalāl al-Dīn, returning in 1223 to the east with Čingiz and the main Mongol army and subsequently participating in the punitive campaign against the Tangut. Čingiz ordered that after his death, Toluy, as youngest son (*otčigin/ottegin*), was to be given his camp, personal property and the original Mongolian homeland, as well as the vast majority of the Mongolian army (Rashīd al-Dīn, *Djāmiʿ al-tawārīkh*, ed. Karīmī, i, 399). After Čingiz's death in 1227, and in accordance with his instructions, Toluy played an important role in the accession of his brother Ögedey [*q.v.*] to the throne in 1229, and joined the latter in the campaign against the Chin emperor in northern China. It was during these operations, apparently in 1332, that Toluy met his death, probably from overdrinking (Djuwaynī-Boyle, ii, 549), although according to both the *Secret history of the Mongols* (§ 272) and Rashīd al-Dīn (in E. Blochet, *Djami el-Tévarikh*, ii, 23-4, 220-1 = J.A. Boyle, *The successors of Genghis Khan*, 38-9, 167-8), he died after having taken on Ögedey's illness, by drinking the water with which the latter had been washed by the shamans. Toluy was posthumously referred to as Ulugh or Yeke Noyan "great commander" in Turkish and Mongolian respectively, and Jui-tsung "wise emperor" in Chinese. His main wife, Sorḳaḳtani Beki, whose wisdom and moderation are lauded in the Persian sources, succeeded over the next few years in laying the groundwork for the rise to power of her son Möngke, who replaced the line of Ögedey as Great Khāns. Toluy is likewise praised for his virtues, but—as with his wife—this is doubtless coloured by the fact that both Djuwaynī and Rashīd al-Dīn were employed by the Īl-Khānid descendants of this couple.

(R. AMITAI)

TONK, a former Native State of British India, when three of its component districts fell within Rādjpūtānā and three in Central India, with its centre in the town of the same name (lat. 26° 10′ N., long 75° 50′ E.). The former Tonk State is now a District of Rādjāsthān in the Indian Union.

Tonk was founded by Amīr Khān (d. 1834 [*q.v.*]), a Pathan from Bunēr who rose, first in the service of the Rohillas [*q.v.*] and then in the army of Djaswant Singh Holkar (1798). He submitted to the British in 1817. During the Sepoy Mutiny, his son Wazīr Muḥammad Khān remained loyal and repulsed attacks on the Tonk fort. His son was deposed by the British in 1867, but Tonk was restored to the family three years later. Nawwābs continued to rule there until the state became part of the first Rādjāsthān Union in April 1948.

(C.E. BOSWORTH)

ṬOP (T.), the term used in Ottoman Turkish military terminology for cannon, with *ṭopdju* denoting a member of the corps of artillerymen and Ṭopkhāne being the name for the central arsenal in Istanbul. The Ṭopkhāne Gate there has given its name, in popular parlance, to the adjacent imperial palace; see ṬOPḲAPÎ SARĀYÎ. The word *tob/top* originally in Turkish denoted "ball", hence cannon-ball; it appears in almost all the Turkic languages and passed into the usage of Persian, the Caucasian and the Balkan languages, etc. See Doerfer, *Türkische Elemente im Neupersischen*, ii, 596-60 no. 948; Clauson, *A dictionary of pre-thirteenth century Turkish*, 434. See for the use of artillery by the Ottomans, BĀRŪD. iv.

(ED.)

ṬOPAL ʿOTHMĀN PASHA, the name of two prominent Ottoman figures.

1. Grand Vizier (1663-1733).

Born in the Peloponnese of a family originally from Konya, ʿOthmān Pasha joined the *odjaḳ* of the *ḳozbekči* (body of officials performing various services on the sultan's behalf), then that of the *pandūl* (*pandūr*, a militia recruited in the Balkans among the free peasants and entrusted with duties of local security). According to von Hammer, he reportedly became *beylerbeyi* at 24 years of age and was sent to Egypt by Muṣṭafā II; taken prisoner in the open sea off the Egyptian coast by a Spanish corsair, he was wounded and taken to Malta. Through the good offices of Vincent Arnaud, commandant of the port, he was freed in exchange for a ransom, made his way to Damietta and then to Istanbul, where he was nicknamed *Ṭopal* ("the lame") on account of his injury. He took part in the Prut expedition in 1711, was subsequently honorary *ḳapîdjî bashî* [*q.v.*], and then appointed leader of the *martolos* [*q.v.*] of Rumelia. During the war for the reconquest of the Peloponnese (1714-15), he performed exploits which earned him promotion to *pasha* with two *tūghs* or "horse-tails [*q.v.*] and governor of the *sandjaḳ* of Tirḥāla. During the war aimed at the reconquest of

Hungary in 1716, he organised the victualling of the troops; he was subsequently entrusted with the task of suppressing revolts in the Peloponnese, was promoted *pa<u>sh</u>a* with three *tū<u>gh</u>s* and appointed *serʿasker* of the Peloponnese (1716-17), a province which he defended successfully against the Venetians. Governor of Bosnia in 1720, then of Rumelia in 1721, he retained this post until 1727, at which date he again became governor of Bosnia and commandant of the post of Ni<u>sh</u>, where he entertained Vincent Arnaud in lavish style.

Re-appointed governor of Rumelia in 1729 and of Bosnia in 1730, he was charged with the task of eliminating the partisans of the rebel Patrona <u>Kh</u>alīl [*q.v.*] who had taken refuge in Rumelia and, in particular, in Albania (May 1731). As governor of Rumelia once again, he was appointed Grand Vizier on 18 Rabīʿ I 1144/10 September 1731. He held this post for only six months, during which he engaged in the suppression of revolts, took measures aimed at stabilising the cost of living and ensuring the victualling of Istanbul; he also gave to Aḥmed Pa<u>sh</u>a Bonneval [*q.v.*] the opportunity of reforming and developing the corps of the *<u>kh</u>umbara<u>dj</u>ī*s [*q.v.*]. Governor of Trebizond, then of Tiflis and finally *serʿasker* of Anatolia, he won a victory over Nādir <u>Sh</u>āh and the Persians who had invaded ʿIrāḳ (19 July 1733). He was then the recipient of honours awarded by the sultan Maḥmūd I, but while resisting a Persian attack in the north of ʿIrāḳ met his death near Kirkūk. ʿO<u>th</u>mān Pa<u>sh</u>a was buried in a *türbe* in the precincts of the Imām Ḳāsim mosque at Kirkūk. To him is owed the construction of a mosque at Tripolitsa in the Peloponnese.

His son Aḥmed Rātib Pa<u>sh</u>a married a daughter of Aḥmed III, ʿĀʾi<u>sh</u>e Sulṭāne, and was the great-grandfather of the Young Turk writer and journalist Nāmiḳ Kemāl [*q.v.*].

A consummate servant of the Ottoman state, Ṭopal ʿO<u>th</u>mān Pa<u>sh</u>a showed in all the various posts which he occupied great conscientiousness, professionalism and eminent qualities, in his administrative functions as well as in his military activities.

2. Governor and statesman (1804-74).

Born in 1219/1804 in a village in the vicinity of Izmir, ʿO<u>th</u>mān Pa<u>sh</u>a was known initially hy the nickname of <u>Sh</u>erīf on account of his father's name, Ḥā<u>dj</u><u>dj</u>ī <u>Sh</u>erīf A<u>gh</u>a, then by that of *Ṭopal* following an accident which constrained him to walk with a limp, and it was under the name of Ṭopal ʿO<u>th</u>mān Pa<u>sh</u>a that he acquired a substantial reputation, especially when he held the post of *wālī* (governor) in Bosnia.

Joining the navy, he served with distinction and successively held the posts of *ḳapudan*, *patrona* and *riyāle* [*q.v.*]. At the time of the conflict between Maḥmūd II and the governor of Egypt Muḥammad ʿAlī, Ṭopal ʿO<u>th</u>mān Bey was serving in the Mediterranean under the command of Aḥmed Fewzī Pa<u>sh</u>a. In July 1839 the new sultan ʿAbd ül-Me<u>dj</u>īd ordered the Ottoman fleet to return to Istanbul, but Aḥmed Fewzī, perturbed by the promotion to senior posts of his political adversaries, concluded a personal agreement with Muḥammad ʿAlī and led the fleet to Alexandria, supported in this action by his officers, including ʿO<u>th</u>mān Bey (July 1839). Following the London Conference which resulted in reconciliation between Istanbul and Cairo, the Ottoman fleet returned to Turkey (December 1840). On returning to Istanbul at the beginning of 1841, ʿO<u>th</u>mān Bey was at first dismissed, but then pardoned and appointed deputy governor of Izmit, which contained one of the Ottoman navy's most important arsenals (1842) where he remained in office until 1849. He subsequently served in administrative posts at Karesi, at Biga and in 1855 in Cyprus. He acquired wide renown in the course of his defence of Belgrade, one of the few strategic points retained by Turkey after the recognition of the political autonomy of Serbia (1856-61).

In January 1861 he was appointed *wālī* of Bosnia and acquired the title of *pa<u>sh</u>a*. In the seven years that he spent as ruler of this province, he introduced numerous reforms and administrative, social and economic measures: reorganisation of the province, now divided into seven *ṣan<u>dj</u>aḳ*s, institution of a council composed of representatives of all faiths (1866), limitation of the influence of the great landowners, and improvement of the lot of the peasants and the labourers, whose trust he gained. He developed public education, in particular with the establishment of secondary schools (*rü<u>sh</u>diyye*) and a School of Law at Bosna Saray (Sarajevo), where he also founded a library and a printing-press, producing the first local newspapers in Turkish and in Serbian as well as academic books. He also worked hard to improve communications between Bosna Saray and the principal towns of the province, in particular the Bosna Saray-Mostar and Trebinje-Duhrovnik roads. Also owed to him are constructions in the capital, for example the palace known by the name of Cengić-villa.

He may have taken as his model Muḥammad ʿAlī, whose reforming activity he had observed in Egypt, as well as that of Midḥat Pa<u>sh</u>a [*q.v.*] in the province of the Danube, of which ʿO<u>th</u>mān Pa<u>sh</u>a was appointed *wālī* in January 1869. But he had made such an impact in Bosnia that the population demanded his return, and in fact the governorship of the province was restored to him without delay and he returned

to Bosna Saray on 9 March 1869 amid popular acclaim. But he had enemies within the central government, who spread the rumour that he was intent on declaring the independence of the province. He was dismissed on 27 May 1869, and he withdrew to his home on the Bosphorus, where he died on 25 July 1874, being buried in the cemetery located behind Ḳāsîm Pas̲h̲a, on the Golden Horn.

A major figure, the skilful developer of Bosnia, Ṭopal ʿOt̲h̲mān Pas̲h̲a exemplifies those reformers of the period of the *Tanẓīmāt* who were committed to the renewal of the Ottoman empire.

(R. MANTRAN)

ṬOPD̲J̲U [see ṬOP].

ṬOPḲAPÎ SARĀYÎ, the name of the great palace complex in Istanbul.

After the conquest of Constantinople on 29 May 1453, Meḥemmed Fātiḥ [*q.v.*] II returned to his new *sarāy* at Edirne within three weeks. In 1454 orders were given for the building of a residential complex on the Third Hill. A high wall made clear that it was for his harem. This *sarāy* was completed, insofar as palaces are ever completed, between 1455 and 1458. Meḥemmed found it unfit to be a majestic centre of government, and in 1459 ordered the building of a new *sarāy* (*sarāy-î d̲j̲edīd-i ʿāmire*, or Yeñisarāy). Late in the 18th century, it became known as Ṭopḳapî Sarāyî after the Cannon Gate at Sarāyburnu, where the Golden Horn (K̲h̲alīd̲j̲) enters the Marmara Sea. The site had been that of the Acropolis and supplied useful spolia (see the map in ISTANBUL, at Vol. IV, 232). It belonged to Hagia Sophia (Aya Sofya), which was now the chief mosque of the city, and there were few inhabitants to be moved. The area was walled in and covered to an extent of 5.9 km^2. Builders were recruited from Syria and Persia as well as from the Ottoman territories in the Balkans. Italian engineers, who had completed the fortress at the Golden Gate, may also have contributed. The only architect whose name is recorded was Murād K̲h̲alīfe, who may have had overall authority.

The two courts planned were completed before 1468. The first was for the government and the second for the sultan, his immediate family and the school of the pages (*ič og̲h̲lans*), founded by Murād II at Edirne. The site was large enough to use for hunting, and trees were shipped from Izmit. The Byzantine walls were repaired, not to keep an enemy out but the animals in. These included deer and foxes, but lions and wolves and such were kept in two menageries. The walls created a new inner space, which was soon filled and became the First Court. The struggle to extend within limited space forms the architectural history of the Sarāy. There were still chapels and buildings round the Hippodrome which had to be taken over by tentmakers, tailors, for stables and for much else. The royal gate would have been that of the Second Court (*Bāb ül-Selām*) which became the Middle Gate (*Orta Ḳapî*) after the building of the Gate of Majesty (*Bāb-î Hümāyūn* [*q.v.*]). Hagia Irene (Aya Iren) became the armoury and subsidiary buildings included the pages' hospital, woodyards, bakeries, and eventually the mint which was rebuilt in 1727.

The *Bāb-î Hümāyūn* lost an upper pavilion in the 19th century, which now distorts its proportions. The surviving stone towers contain stairs and modest barrack rooms for 50 guards. It was the traditional gate of justice, and heads of criminals were hung on it. The Middle Gate was restored by Murād III in the late 16th century, but the twin towers were not altered. In the 18th century broad eaves were added all over the Sarāy, and were painted with rural scenes under flamboyant Ottoman rococo decoration.

Silence was enforced in the Second Court, which had colonnades on all four sides and only two buildings. The Tower of Justice (*ʿAdālet Kulesi*) was built like that of the camp as an observation point for the sultan. The Dīwān Hall (*Dīwān Odasî*, *Ḳubbe Altî* [see ḲUBBE WEZĪRI]) was first built against the wall of the Third Court, but proved too small and moved to its present position to be rebuilt by Süleymān I Ḳānūnī between 1515 and 1529. The three domed halls were for the muniments, the clerks of court and the Council of State itself. It was united with the tower so that the sultan could look down through a grille window unseen. The Dīwān has often been redecorated but remains fundamentally that built by Süleymān; however, after a major restoration in 1820 by Maḥmūd II, the present classical columns were added after 1850. When the Dīwān met, the household sat on benches in the colonnades in kaftans, which were in effect uniforms. Trees were walled round as protection against gazelles and peacocks, and on great occasions the columns were polished and rich brocades were hung. When the Dīwān rose, its members then feasted in the same hall, while the common folk washed and drank at the fountains, of which three survive, and were then served with a modest bowl of stew.

Parallel with the Second Court is that of the kitchens, which were two domed halls, but Bāyezīd II added six more [see MAṬBAK̲H̲. ii]. Cinders from their chimneys caused a fire in the harem in 1574; Sinān [*q.v.*] heightened them and added lead caps which were removed in the early 20th century. The court is long and narrow, stretching from the supply gate and waterworks past store-rooms, cellars and *mesd̲j̲ids* with barracks for the staff facing them. Originally, one cookhouse was set aside for the sultan and another for the Wālide Sulṭān [*q.v.*], and a line of servitors passed trays from hand-to-hand to wherever the meals were served. The kitchens are now the museum of porcelain, in which the Chinese ware is of exceptional importance.

On the right of the Dīwān Hall is the Carriage Gate (*ʿAraba Ḳapîsî*) to the Harem area and beyond that is the barrack of the Halberdiers (*zülüflü*), who were harem porters and cleaned several state rooms. The Barrack Hall is the last one surviving in its 16th-century Ottoman form. It was rebuilt by Dāwūd Ag̲h̲a in 1586 when that built for Süleymān became too small. Behind the barracks are coachhouses and stables of the sultan and the 17th-century mosque of Bes̲h̲īr Ag̲h̲a totally restored.

The Third Court is reached through the Gate of Felicity (*Bāb ul-Saʿādet*) which has been much restored and altered, particularly in the 18th century. Here the sultan received ministers and ambassadors in his

outer throne room or Hall of Petitions (*ʿArḍ Odasî*). Built for Meḥemmed II but rebuilt by ʿAlāʾ al-Dīn for Süleymān by 1527, its wooden colonnade was replaced by marble. Cuerda seca panels of tiles each side of the entry and the fountain date from Süleymān's restoration. The hall was gutted in the fire of 1856. Meḥemmed II built two other royal pavilions in this court. The present Treasury Museum (Fātiḥ Köshkü) now occupies his apartments facing the sea with a series of fine rooms, one of which is domed, and a loggia with a fountain more robust in design than those that followed. The cellars of this kiosk formed the original Treasury Within as opposed to the Treasury Without built by Meḥemmed II next to the Dīwān Hall. With eight domes and formidably strong, this is now the Arms Museum. Opposite the Treasury Museum is Meḥemmed II's formal residence (*Khāṣṣ Odalîlar Ḳoghushî*) which is also strong. Its spacious domed inner court is clad with late Iznik ceramics in large panels of second quality, but the innermost room, once the bedchamber, has panels of unsurpassed design and colour. This now holds the mantle and the standard of the Prophet [see KHIRḲA-YI SHERĪF] and the whole pavilion houses the treasures that Selīm I brought back from Cairo. The complete refurbishment was due to Murād III late in the 16th century.

Beyond it, the *Aghalar Djāmiʿi* is set at an angle so that the *miḥrāb* faces Mecca. It is now the all-important Museum library which incorporates the latticed bay for the harem and the sultan's chamber (*Khünkār maḥfile*). In front of this pavilion is the library built by Aḥmed III in 1719 which is reached by twin flights of stairs over an ornate, repainted drinking fountain. The slim portico is an introduction to French baroque influence that rapidly became a style of its own. The rest of the court was built to house the pages and the white eunuchs (*aḳ aghalar*) who taught them. Buildings gutted in the fire of 1856 include the Small (*Küčük*) and the Large (*Büyük*) Halls (*Oda*) either side of the Gate of Felicity. A great *ḥammām* was restored sumptuously in 1527 and even more richly by Selīm II in 1572, but was demolished and restructured as the Campaign Hall (*Seferli Ḳoghushî*) by Aḥmed I for senior pages who accompanied the sultan when with the army. It is now the Costume Department. Soon after the earthquake of 1509, the original building was monumentally buttressed before it slid down the escarpment. The domed disrobing chamber (*djāmakān*) is a twin to that of the Treasury Within and has survived. The porphyry colonnade of the Campaign Hall meets that of the Treasury Museum with capitals of disputed origin from a pre-Islamic monument of distinction.

Turning left one faces the Hall of the Commissary (*Kilerli Ḳoghushî*), now the directorate of the museum, and across a path is the hall of the treasury students (*Khazīne-yi Hümāyūn Khadameleri Ḳoghushî*), who were the most senior of all. It is now the Gallery of Miniatures. Originally, the halls were spacious and lined with daises shared between some six or more pages and used for both sleeping and study. There were also galleries and washing facilities which could include a small *ḥammām*. The eunuchs slept in the same dormitories, but by the 17th century the three senior halls were run by mature students. When they graduated, the elect served the sultan personally in the royal pavilion before being promoted to the highest offices of the state.

Behind the senior halls is the so-called Fourth Court. In 1852, ʿAbd ül-Medjīd built a large kiosk facing the sea which sits on the foundations of two smaller kiosks of Meḥemmed II. It is typical of the work of the Balyan family, who dominated royal building during most of the 19th century with the pomp and plaster of the École des Beaux Arts' most flamboyant style. The lower gardens await restoration, but the terraces of the hanging gardens are in good repair. The Pavilion Court (*Sofa Awlusu*) was a personal royal garden. Its kiosk has remarkably large windows for its period, all of clear glass. One divan looks out onto the terraced garden and the one opposite looks over the city and the sea. The kiosk was first built in the 17th century and was redecorated in particular by Aḥmed III during the so-called "Tulip period" (*Lāle dewri* [*q.v.*]). Past a giant fountain of the 19th century, steps ascend to the large terrace rebuilt by Süleymān and then by Ibrāhīm I in 1640. The original belvederes were built on Byzantine tower foundations, to be replaced by Süleymān and then by Murād IV. The only original one remaining is the tower of the physicians which was also that of the royal tutors and the soothsayer (*Bash Lāla Köshkü*). However, it has lost its wooden belvedere, with its echoes of Venice.

Murād IV built two unique kiosks to celebrate his victories. Their architect may have been Ḥasan Agha, although Ḳodja Ḳāsîm was court architect at the time. Both pavilions are cruciform in plan, but the first one to be built, the Rewān Köshk of 1634, is the smaller and has been redecorated. The Baghdād Köshkü of 1639 is the grander of the two because of its appointments—the inlay, the noble dome, the lofty head of the fireplace (*odjaḳ*) and the tiles, are of the finest quality, and its proportions give it the claim to be the finest Ottoman room. It is surrounded by a verandah with incomparable views, essential features of the ideal Ottoman kiosk. Ibrāhīm I was responsible for the Sundown Kiosk or meal-taking bower (*Ifṭāriyye Ḳaṣrî*) with the crests of its four corner columns curiously out of alignment with the shafts beneath. Ottoman architects were committed to structural truth. Ibrāhīm also rebuilt the Circumcision Kiosk (*Sünnet Odasî*) to serve as his personal *mesdjid*. The earlier masonry remains as the foundations and undercroft. The varied tiles that match each other on either side and over the door, form a museum of Ottoman ceramics, including the tall blue and white panels that appear to have been copied by those in the Baghdād Köshkü, with romantic *saz* leaves, an image of the Magic Wood, and gazelles and peacocks in the branches.

The pool and fountain with a throne projecting over the water was built for Süleymān I, while the lofty arcade behind is a projection of the pavilion housing the relics of the Prophet (*Khirḳa-yi Saʿādet Rewāḳî*). The wall behind carries the decoration used for the Prophet's Hall in Cairo. It is composed of ribs of marble cut in slithers from columns in the Mamlūk style. Originally, the capitals were gilded and the columns polished.

The sultan entered the harem through a door at the end of the terrace which opened on to the Golden Road. The Carriage Gate (*ʿAraba Ḳapîsî*) in the second court leads to the black eunuchs' mosque (*Ḳara Aghalar Djāmiʿi*) fitted with good woodwork and with one of several late panels depicting Mecca to be found in the Sarāy. The tiles throughout the harem mostly date from the rebuilding under Meḥemmed III after the fire of 1665. They are dull in colour, but designed with a flourish which is novel. The calligraphic tiles are coarse but are in the established tradition. The Court of the Black Eunuchs (*Ḳara Aghalar Tashlîghî*) has a handsome colonnade, behind which is the barracks with large cells each side of a narrow hall and a large fireplace. The ablutions are astonishingly

luxurious. The Princes' School, on the first floor next to them, is tiled but also bedecked with rococo work. The apartment of the Chief Black Eunuch (*Ḳîz Aghalar Dā'iresi*) has a large window from which he could check on everyone who entered or left the harem through the main entrance.

The harem is arranged round two courts. The Wālide court (*Wālide Tashlîghî*) is dominated by a block of apartments which were once assumed to be the lodgings of the four mothers of princes. The other rooms were for the princes who were over six or seven years old, to which in adulthood they would be confined (the *Ḳafes* or "Cage"), although only a few suffered this quasi-imprisonment. It is a warren of service rooms and staircases. The court once had colonnades on all four sides, but these were filled in and converted into rooms because of lack of space and also because of the increasing cost of carrying out extensions over the escarpment. The need for space grew because the sultans abandoned their own pavilions for the harem. The other court (*Djāriyeler Dā'iresi*) is long and narrow, with dormitory space sufficient to lodge 70 girls with difficulty. Kitchens, a *ḥammām* and other service rooms, together with three pretty kiosks, one domed, face the view over the hospital for the girls, mainly dating from the 17th century. The lodgings are claimed to be those of the first three consorts, but the earlier belief that they were for the three senior ladies of the establishment (*ustālar*) has some claim to validity.

The Wālide apartments (*Wālide Sulṭān Dā'iresi*) were rebuilt in 1665 under the supervision of Khadīdje, widow of Ibrāhīm I and mother of Meḥemmed III, and while some panels of older Iznik tiles were re-used, most are full of the panache of the period. The bedchamber and oratory are lit by skylights like a *ḥammām*: an example of the consequences of overcrowding. Above these original rooms, Selīm III built the late-18th and early-19th century apartments of his mother, Mihrishāh Wālide. Ottoman rococo is taken to its limits: in between the flamboyant plasterwork and mirrors are touchingly simple frescoes of pavilions above pools in formal gardens, but beyond, there are vistas of free woodlands and the sea.

The sultans from Aḥmed I onwards built themselves rooms next to the Wālide's apartments which have been vulgarly repainted, but ʿOthmān III built himself a large kiosk supported on piers over what had been the harem garden only just in time for his death in 1757. He added a broad terrace and formal garden. Inside, *trompe l'oeil* was introduced to Istanbul. From the Wālide's apartments, a passage lit by bottle glass leads to the two *ḥammāms* of the Wālide and the sultan. These were completed in 1585 by Dāwūd Agha and refurbished during the 18th century. Beyond these is the Throne Room Within (*Khünkār Ṣofasî*), which is the largest room in the harem. It is attributed to Sinān but is more likely to have been built by Dāwūd. It was used by the harem and by the sultans' male guests, but because the sexes never mixed it was not a true *mābeyn* [*q.v.*]. The gallery above the Ṣofa was added by ʿOthmān III, as was much of the present decoration. The tiles may have been Italian copies of Delftware. The dome and its pendentives have been completely restored, and the work is much more convincing than was the mutilated baked red paint of the 19th century. There are three fountains, and much 19th-century furniture and large vases. The painting on the doors is pretty 18th-century work. One of these leads into a small room which was built by Aḥmed III and which is famous for its panels of bowls of fruit that have given it the name of dining-room. The other door leads into the Hall of the Hearth (*Odjaklî Ṣofasî*) and then into that of the fountain (*Česhmeli Ṣofasî*). Both rooms are dismantled of their hangings and carpets. The hearth is particularly lofty, and the frame of the fountain (*česhme*) is notably so, since it only surmounts one faucet. It is the symbolism here and all over the Sarāy that matters.

Beyond these is the anteroom to the chamber of Murād III which, until the 19th century, divided harem and *selāmlîḳ* [*q.v.*]. The room was distorted in the 17th century when a pavilion was added for the heir to the sultanate. The wall on the corridor side was moved inwards and the tiling dishevelled, including part of a 16th-century Iznik tile arcade of great quality. Murād III's room has been damaged by an extension built by Aḥmed I, which blocked windows and their view and destroyed the throne. The wide recess with its fountain, the great hearth and the inlaid woodwork remain, as does the unique tilescape. The dome and pendentives have been sensitively restored in order to complete the noblest 16th-century room. The hall of the apartment of the heir (*Weli-ʿahd Dā'iresi*) has a unique dome, which had been covered by a false ceiling in the 19th century protecting the early 17th-century paintwork. It is witness to the quality of paintwork once found all over the Sarāy. The inner room has a fine fireplace and the skirting under the raised floor reveals fine tiles. The 20th-century windows are unfortunate. It is unclear when the pavilion was clad in blue and white tiles externally or when the eaves were extended, unless these were done at the same time.

The kiosk looks onto the city and the terrace of the chosen girls (*Iḳbāllar Tashlîghî*) above Murād III's garden with its large pool, and in the undercroft of his hall is a winter pool, rather than a *ḥammām*, served by an immense boiler. ʿAbd ül-Ḥamīd I built the row of apartments over the Golden Road 1774-89. The apartments for the sultan at the far end enlarged an existing kiosk.

The Sarāy Within was surrounded by the Sarāy Without. There were barracks for the Janissary guards in the towers set 150 m apart along the walls. The Procession Kiosk (*Alay Köshkü*) was a royal box from which to watch the guild processions or from which to address crowds. It was built on top of a Byzantine tower and extensively rebuilt by Maḥmūd II. Dilapidated or ruined churches were turned into a menagerie and also into barracks for the soldier-gardeners (*bostāndjîlar* [see BOSTĀNDJÎ]), who were divided into nine companies, one of which tended the profitable market garden, first planted by Meḥemmed II. From the Stable Gate (*Akhîr Ḳapîsî*) there were the stables themselves, the aviary, the fish trap, the Pearl Kiosk (*Indjirli Köshkü*), of which the foundations survive and which must have been the grandest of summer pavilions, quays—now the highway—and the kiosks on and beyond Sarāyburnu. These are all gone, along with the summer *sarāy* and its gardens except for the rebuilt Basketmakers' Kiosk (*Serpetdjiler Köshkü*), elevated on a Byzantine tower and stretch of walls, and attributed to Ḳodja Ḳāsîm Agha, rebuilt as a press office in the 1980s. The intrusion of the railway in the 19th century destroyed a number of lesser buildings. The workshops round the Hippodrome fell gradually into disuse and were built on during the course of the 19th century.

The most important building of them all, the Tile or Glass Pavilion (*Činili* or *Ṣîrdja Sarāyî*), survives in spite of the fire of 1737 that destroyed the wooden

portico, which was then rebuilt in stone. The little palace is not Ottoman in spirit, but is a fine example of the pavilions of the Saldjūḳs in Persia. The glazed brickwork with its inscriptions was either made by potters from Tabrīz on the spot or possibly imported. A central dome lights the interior, along with fine windows, including the seven-sided bow in which the sultans sat in state. Beyond are the modest private rooms glazed with Bursa-style tiles but with a veritable peacock of a fountain installed by Murād III. The lateral recesses were glazed over when the kiosk became the Tile Museum, and this deadens the original play of light. Otherwise, it is astonishing how little damage has been done, although its sports ground has been built over by the Archaeological Museum.

The Sarāy was built as a symbol, but function subdued this aspect stage-by-stage for it to become, as it now is, a catalogue of styles and workmanship extending over 500 years.

ṬOPKHĀNE [see BĀRŪD. vi; ṬOP].

TÖREGENE KHĀTŪN (Tūrākīnā in Muslim sources), Mongol princess and regent. She was the wife of the second Great Khān Ögedey (1229-41 [*q.v.*]), and mother of his eventual successor, Güyük (1246-8), acting as regent for the entire Mongol empire in the interregnum.

According to Rashīd al-Dīn, she was from the Merkit people, and had been married to one of its leaders before being given to Ögedey after the Merkits' defeat *ca.* 1204-5, but the *Yüan Shih* accords her Naiman origins. In accordance with Mongol tradition, she assumed the regency after Ögedey's death until a new Great Khān could be named at a *ḳuriltay* [*q.v.*]. In spite of later efforts by pro-Toluid authors (particularly Rashīd al-Dīn) to besmirch her, Töregene appears to have been—in the words of one modern scholar—"an able and determined ruler". Her primary aim was to prevent the realisation of Ögedey's wish to be succeeded by his grandson Shiremün, the son of Köčü, and instead have her eldest son Güyük elected as Great Khān. Batu [*q.v.*], the Djočid ruler of the Golden Horde, was able to forestall her plan for four-and-a-half years.

Töregene hounded her deceased husband's senior officials. Činḳay and Maḥmūd Yalawač [*q.v.*], the chief minister of the Empire and the administrator of northern China respectively, fled to another son of Ögedey for safety. Maḥmūd's son Masʿūd Beg [*q.v.*], Mongol governor in Central Asia, found it necessary to seek protection with Batu. During Töregene's regency, Baydju, the commander of Mongol forces in Persia, defeated the Saldjūḳ sultan Kay Khusraw II [*q.v.*] at Köse Dāgh [*q.v.*] in 1243, thereby reducing the Saldjūḳ sultanate of Rūm to a Mongol dependency.

Finally, in 1246, in spite of Batu's foot-dragging, Töregene was finally able to convene a *ḳuriltay* with representatives of all branches of the Mongol royal house, and Güyük was acclaimed as ruler. It was at this time that she met the papal envoy John of Plano Carpini, whom she graciously received (C. Dawson (ed.), *The Mongol mission*, London 1955, 61, 65, 82). In spite of the contradictory information conveyed by Rashīd al-Dīn, Töregene seems to have died several months after Güyük's accession.

ṬORGHUD, a Turkish tribe that was prominent in central Anatolia between the 8th-10th/14th-16th centuries.

The origin of the Ṭorghud is obscure. The earliest documentary sources say they were Turks. Nevertheless, their first recorded appearance in Anatolia was in the late 7th/13th century when that region was occupied by the Mongols; thus they may be linked with the Mongol tribe of the same name. According to a legend, the mystic Dedigi Sulṭān of Khurāsān, a descendant of Aḥmad Yasawī (d. 562/1166 [*q.v.*]), sent his brothers Ṭorghud and Bāybūrd from Khurāsān to Anatolia in the early 7th/13th century. They and their nomadic kinsmen apparently first went to the steppe between Aḳ Shehir and Aḳ Sarāy. We know that by the early 8th/14th century, they were in the region of Aḳ Shehir and were known for their horses. Shikārī (10th/16th century) states in his popular chronicle that Ṭorghud and Bāybūrd were Oghuz or Türkmen who were allied with Nūra Ṣūfī (*ca.* 654-60/1256-61), whose son Ḳaramān founded the Ḳaramānid dynasty [see ḲARAMĀN-OGHULLARÎ]. In this way, there began a very close and continuous relationship, often reinforced by marriages, between the Ṭorghud

and Ḳaramānids. Shikārī adds that the Ḳaramānid Meḥmed Beg (660-77/1261-78) gave half of the plain between Ḳonya and Anḳara to Ṭorghud Beg and half to Bāybūrd Beg. Consequently, these two areas eventually became known in the 10th/16th century as Ṭorghud Eli [*q.v.*] and Bāybūrd Eli. He also says that the Ṭorghud assisted the Ḳaramānid ʿAlāʾ al-Dīn Beg (753-83/1352-81) in successful campaigns against the Banū Eretna and the Germiyān.

In any case, the Ṭorghud tribe was a major element, perhaps the most powerful, in the Ḳaramānid state. It helped the Ḳaramānids fight against the Ottomans on several occasions, notably against Murād I (761-91/1360-89) and Murād II (824-48/1421-44, 850-5/1446-51). One of its most outstanding leaders, Pīr Ḥusayn Beg, had the title *malik al-umarāʾ muḳaddam al-ʿasākir* and may have been the *beglerbegi* of the Ḳaramānids. He constructed a number of buildings in and around Ḳonya. He built his own tomb in that city in 835/1432. When Meḥemmed II decided to put an end to the Ḳaramānid state once and for all, in a series of expeditions that ended in 880/1475, he specifically set out to break the power of the Ṭorghud. As a result, many took refuge with the Mamlūks. When Meḥemmed died, some of them joined the Aḳ Ḳoyunlu. Later, in 893-4/1487-8, the Ṭorghud assisted the Mamlūks against the Ottomans. As late as 906/1500, the Ṭorghud revolted against the Ottomans in the name of Ḳaramān. Afterwards, some joined the Ṣafawids. Altogether, the Ṭorghud were difficult to pacify. They maintained their political significance until the Djalālī uprisings [*q.v.* in Suppl.] between the late 10th/16th and early 11th/17th centuries, as a result of which they finally lost their power. By the 19th century, the Ṭorghud were limited to the area between the towns of Turgut and Cihanbeyli west of Tuz Gölü.

ṬORGHUD, according to tradition, one of the military commanders of ʿOthmān I, founder of the Ottoman dynasty, *fl.* in the first third of the 14th century.

He was one of several military leaders in the company of ʿOthmān [*q.v.*], and subsequently his son Orkhān [*q.v.*], who had the title *alp* [*q.v.*]. There is strong evidence, however, that he was not an historical figure but the creation of folk etymology (C. Imber, *The legend of Osman Gazi*, in *The Ottoman emirate (1300-1389)*, ed. Elizabeth Zachariadou, Rethymnon, Crete 1993, 71-2). He first appears at ʿOthmān's conquest of Yār-Ḥiṣār southeast of Nicaea (İznik). He then attacked Angelokoma (İnegöl) to the southwest. These events presumably occurred in 699/1299. Angelokoma fell when reinforcements arrived and its Christian ruler "Aya Nikola" (*sic*) fled. ʿOthmān gave Angelokoma to Ṭorghud Alp. Afterwards this region was called Ṭorghud Eli [*q.v.*], the land of Ṭorghud. ʿOthmān later ordered Orkhān to capture Adranos (Orhoneli), to the west. He sent Ṭorghud Alp and Köse Mīkhāl to conquer it. The fall of Adranos (1317?), combined with that of Yār-Ḥiṣār and Angelokoma, gave the Ottomans control of virtually all the land approaches to Bursa [*q.v.*] and facilitated its conquest in 726/1326.

Ṭorghud Alp was an intimate of the dervishes, especially Geyikli Bābā, who lived near Keshīsh daghî (lit. "Monk mountain", i.e. Mt. Olympos, Uludağ) between Angelokoma and Adranos. Indeed, he seems to have become a *pīr* under his direction. In addition, he introduced Orkhān to his dervish associates.

Babinger's reference to Τουργούτης in Chalkokondyles (*EI*¹, art. *Torghud*, repeated by Faruk Sümer in *İA*, art. *Turgut Alp*) is actually to Ṭorghud Beg, the leader of the Ṭorghud tribe [*q.v.*]. (G. Leiser)

ṬORGHUD ELI, the name of three districts of Anatolia in early Ottoman times.

1. In 699/1299-1300, ʿOthmān I b. Ertoghrul gave his commander Ṭorghud Alp [*q.v.*] the district of Inegöl just to the east of Bursa. The name Ṭorghud Eli appears in the early historians ʿĀshîk-pasha-zāde and Neshrī, but disappears by the 10th/16th century.

2. A place in the Tashlîk Silifke area on the southern coast of Anatolia in Ḳaramānid times.

3. A place in the steppe lands of Aḳ Shehir and Aḳ Sarāy in the hands of the Ṭorghud Bey family during the 9th-10th/15th-16th centuries.

Bibliography: *İA*, art. *Turgut-eli* (F. Sümer). (Ed.)

ṬORGHUD REʾĪS, Turkish corsair, naval commander and governor (b. early 16th century near Muğla, western Anatolia, d. 1565 in Malta; better known as Dragut in European literature).

The maritime career of this son of a peasant began when he joined the Levends, Turkish mariners operating off the Aegean coast [see LEWEND]. It was as commander of Levend ships that he participated in the battle of Prevesa (1538). His subsequent area of operation was the central and western Mediterranean, where in the wake of Khayr al-Dīn Barbarossa's successes [see KHAYR AL-DĪN PASHA], Turkish seamen and Janissaries played a crucial role in the confrontation with Christian powers, especially Spain and her dependencies. While greasing his ships on Corsica in 1540, he was captured by Andrea Doria's nephew Gianettino, but regained freedom three years later after Khayr al-Dīn, who was visiting with the Ottoman fleet French ports, had demanded his release and threatened to sack Genoa in case of non-compliance.

Like Khayr al-Dīn Barbarossa a generation earlier, Ṭorghud then used Djerba [see DJARBA] as his base and Tunis as the place to sell the spoils of his raids on Christian shipping and coasts. This led to a see-saw sparring with the Ottomans' main rival, Spain, and her naval proxy, the Genoese admiral Andrea Doria. Ṭorghud's capture of Mahdiyya in 1544 proved of short duration, and he himself narrowly escaped another capture early in 1551 when, cornered by Doria on the eastern side of the Kantara causeway between Djerba and the mainland, he cut a channel and slipped through to the other side. He then returned to the Aegean waters and offered his services to the Ottoman government, which was planning new naval campaigns. He participated in an attack on the Knights Hospitallers of Malta and on Tripoli, led in the summer of 1551 by the *Ḳapudan Pasha* Sinān Pasha. Disagree-

ments between this commander, no seaman but a brother of the Grand Vizier Rüstem Pas̲h̲a [*q.v.*], and Ṭorg̲h̲ud may have contributed to the failure before the main target of the campaign, Malta, but Tripoli was taken. After returning to the Ottoman capital, Ṭorg̲h̲ud was appointed *sand̲j̲aḳ beyi* of Karli-eli with Prevesa as its main harbour, while several captains of his suite also received official appointments as commanders of *mīrī* (imperial) galleys; one of these was the future *Ḳapudan Pas̲h̲a* Ḳilid̲j̲ ʿAlī [see ʿULŪD̲J̲ ʿALĪ]. Ṭorg̲h̲ud was eventually given a post he had coveted since 1551, the *beylerbeyilik* of Tripoli (1555).

The final years of Ṭorg̲h̲ud's life were marked by two memorable events, the battle of Djerba (1560) and the siege of Malta (1565). Both were major enterprises conceived in Istanbul and led by the *Ḳapudan Pas̲h̲a* Piyāle Pas̲h̲a [*q.v.*], but they had opposite results: at Djerba, the Turks triumphed over the Christian, chiefly Spanish forces; at Malta, they were thwarted by the determined defence of the Knights Hospitallers, and the failure was made worse by a mortal wound suffered by Ṭorg̲h̲ud. He was buried in a *türbe* by the mosque he had erected at Tripoli.

Like Kemāl Reʾīs, Selmān Reʾīs, and K̲h̲ayr al-Dīn Barbarossa before him, and ʿUlūd̲j̲ ʿAlī, Ḥusayn Pas̲h̲a Mezzomorto and D̲j̲azāʾirli G̲h̲āzī Ḥasan Pas̲h̲a after him, Ṭorg̲h̲ud represents the special brand of Ottoman naval commanders who first proved their worth as privateers but then, recruited by the Ottoman government, led the imperial fleet to signal victories or made it recover its effectiveness. Ṭorg̲h̲ud's case, however, also illustrates a frequent dilemma of this class whose recruitment as a rule differed from that of the administrative and military élite (theoretically, the sultan's slaves, in fact, his choice retinue), and therefore often received less recognition and chance to assert itself than it may have deserved.

TOROS DAĞLARI, the Modern Turkish designation of the Taurus Mountains, the southern and southeastern bordering-mountain chain system of the Anatolian plateau in Turkey. This is part of the young Tertiary folded mountain belt and rich in deposits of workable ores. Away from the basins and valleys, it is sparsely populated and extensively used by small livestock farming. Higher parts formerly used as summer resorts by Yürük nomadic tribes have recently been filled by small permanent forest farmer dwellings.

The southern flanks to the Mediterranean and the inshore parts are distinguished by a Mediterranean climate and vegetation (often maquis). In spite of uncontrolled woodcutting, clearing for cultivation and overutilisation as pastures, the Taurus mountains are often still covered with xerophytic forest residues of pine, juniper, oak and cedar.

The Western (Lycian) Taurus mountains start in the Mediterranean coast regions of western Anatolia with the Gölgeli Dağları, which are more than 2,000 m high. They form an assemblage of mountain ranges and massifs of Mesozoic Palaeogene limestones, flysch sediments and crystalline rock formations with important chrome ore deposits. This region, which includes parts of the Isaurian-Pisidian lake district, is rich in basins and poljes set into the longitudinal mountainous depressions. In the ranges of the Bey Dağları west of the Gulf of Antalya, with its new winter sport centre and national park, the Western Taurus mountains reach over 3,000 m.

In the hinterland north of this gulf, the wide-bowed bend of the Central Taurus, composed mostly of Palaeozoic limestones, begins. It stretches eastward to the "bulwark" of the High Bolkar Dağları and ends beyond the Cilician Aladağ (3,756 m, the Armenian Taurus) at the deep and striking depression of Kahramanmaraş. In its western parts, where the "Curve of Isparta" with parallel mountain ranges encloses further sections of the lake district, striking turns from southwest-northeast to northwest-southeast, and leads over to the Neogen limestone plateau of Taşeli. This slightly tilted and upfaulted table is full of caves, intensively karstified and canyon-shaped, and dissected by the Göksu river and its tributaries. The eastern section of the Central Taurus, the Cilician Taurus, is formed by the high wall of the Bolkar Dağları (3,524 m). Here in the hinterland of Tarsus, the chains are crossed by the Ecemiş depression, with the most famous ancient pass region of the Cilician gateway. Eastward, in the environs of the Ala Dağlar, one finds heights of more than 3,750 m. In former times the centre of the Kingdom of Little Armenia [see SĪS], these regions were settled by Armenians until their persecution and banishment in the early 20th century. They have recently been inhabited by Yürük and resettled Alevi Kurdish minorities.

From here two parallel mountain range systems, the Taurus and Anti-Taurus, turn northeastward, flanked by impressive intermontane basin lines. The outer southeastern ranges including the famous Nemrut Dağı of Commagene lead to the glacierised Cilo (Djilo) Dağı around Hakkâri which is the mountainous nucleus of Turkish Kurdistan and over 4,000 m high. The inner parts, following the Seyhan river system, are intertwined with the eastern Pontic chains of historic High Armenia and disappear under the cenotypal of the northeast Anatolian Ararat upland lava plateaus.

TOSḲ [see ARNAWUTLUḲ. 4).

TOUBA [see ṬŪBĀ].

TOUGGOURT [see TUGGURT].

TOURKOPO(U)LOI or TURCOPLES, Christianised ex-Muslim mercenaries of Turkish origin in Byzantine and Oriental Latin armies in the Balkans, the Middle East, Cyprus and Rhodes from the late 11th century onwards, especially the late 12th, 13th and 14th centuries (on the term's etymology, see C. Amantos, in *Hellenika*, vi [1933], 325-6; H. Diament, *Can toponomastics explain the origins of the Crusader French lexemes Poulain and Turcople?*, in *Names. Jnal of the American Name Soc.*, xxv [1977], 183-204). They are sometimes erroneously associated by older Greek

scholars with the early Ottoman institution of the *dewshirme* [*q.v.*] and the Janissary corps [see YEÑI-ČERI]. Their ancestors had been "Persian" (i.e. Saldjūḳ and Turcoman) mercenaries of Byzantium (Pachymeres, ed. Bonn, ii, 523-4); Crusader chroniclers define the latter's offsprings as *Turcopoli enim dicuntur, qui vel nutriti apud Turcos, vel de matre Christiana patre Turco procreantur* (Raymund of Aguilers, in *RHC, Occid.*, iii, 246), or as *Turcopoli gens impia et dicta Christiana nomine, non opere, qui et Turco patre et Graeca matre procreati* (Albert of Aix, in *ibid.*, iv, 380).

The earliest mention of the term appears in a Byzantine document referring to an Athonite monk Sergios Tourkōpoulos, probably an ex-Muslim (A.D. 1082); certainly the most celebrated Turcople in Byzantium (*ca.* 1078-*ca.* 1099/1103) was Tatīkios, who according to Anna Comnena (refs. in B. Skoulatos, *Personnages byzantins de l'Alexiade*, Louvain 1980, 287-92) distinguished himself in the Emperor Alexius I Comnenus' service against Normans, Saldjūḳs of Rūm, Pečenegs (Patzinaks), Ḳīpčaḳs (Cumans) and the knights of the First Crusade, though he finally abandoned the siege of Antioch [see ANṬAKYA] in 1098 and thus Byzantium missed a possible lucrative recapture (refs. in J. France, *The departure of Tatikios from the crusading army*, in *Bull. Inst. Hist. Research*, xliv [1971], 137-47; A. Savvides, *Taticius the Turcople*, in *Jnal. Or. Afr. Stud.*, iii-iv [1991-2], 235-8); even after that, Alexius I continued using Turcoples against the Saldjūḳs, and also providing the Crusaders with more Turcople regiments (*Alexiad*, ed. Leib, iii, 12; Albert of Aix, 575 ff.).

A detailed picture of Turcoples in Byzantine service appears in George Pachymeres and Nicephorus Gregoras; the latter reports (ed. Bonn, i, 229) that the Turcople descendants of the Rūm Saldjūḳ sultan Kaykāwūs II [*q.v.*] distinguished themselves in the service of the Palaeologi emperors Michael VIII (1259 or 1261-82) and Andronicus II (1282-1328) against the Catalan raiders and the semi-autonomous rulers of Thessaly [see TESALYA] between *ca.* 1268-*ca.* 1275 and as late as 1330-4. Turcoples had also participated on the Byzantine side in the Graeco-Latin war of 1263-4 in the Morea [see MORA]. In the late 13th century, Turcoples were installed in central and northwestern Greek Macedonia, in the area of the Vardar (Axiōs) river (see E. Zachariadou, in *Makedonika*, vi [1964-5], 62-74; S. Vryonis, *The decline of medieval Hellenism in Asia Minor*, Berkeley, etc. 1971, 441-2), while in the early 14th century, several among them settled in the western Thracian Rhodōpe, following their participation in Catalan raids against Byzantium (1305-6), their abandonment of the marauders (1307-8) and their eventual partial departure to Serbia. In Trebizond, too, an A.M. 6841 (A.D. 1305-6) inscription mentions a Geōrgios Torkōpoulos (see A. Bryer and D. Winfield, *Byzantine monuments and topography of the Pontos*, Washington 1985, i, 228 n. 354, correcting F. Uspensky's dating of 1203/4 or 1210/11).

Many Turcoples are also attested in the Christian Orient during the Crusading period (12th-13th centuries), either as fighting troops against Muslims (as in the case of the fifth Crusade of 1217-21, when those sent by Hugh I Lusignan of Cyprus occupied a conspicuous place in the Crusading army), or in the service of the military orders (Usāma Ibn Munḳidh, ed. Hitti, 79; other refs. in Savvides, 1993, 123-4, 126-30; Zachariadou, *Tourkopouloi*, in *Oxford dict. of Byzantium*, Oxford 1991, 2100b). Jean Richard has stressed that, in the Orient, Turcoples were employed in imitation of the Byzantine Tourkōpo(u)loi (*La Papauté et les missions d'Orient au Moyen Age, 13ᵉ-15ᵉ s.*, Rome 1977, 7-8; idem, *The Latin Kingdom of Jerusalem*, Amsterdam 1979, 140; idem, in *Bibl.*).

Following the fourth Crusade of 1204, Turcoples arrived to strengthen the armies of the Latin Empire of "Romania" at Constantinople, and also participating in the latter's war against the Bulgarians (see Villehardouin, ed. Faral, ii, Paris repr. 1963, §§ 136, 438). On Cyprus [see ḲIBRIS], Turcoples appear in Latin service from the late 12th century onwards, following the end of Byzantine rule there, by Guy I Lusignan; he distributed fiefs among Turcople mounted mercenaries, who under their captain (*Grand Turcopolier*) assumed the island's protection. Henceforth, the term is closely associated with lightly-armed archers (as a police force) in the Latin sources (refs. in Sir George Hill, *Hist. of Cyprus*, repr. Cambridge 1972, ii, 40, 54; P. Edbury, *The Kingdom of Cyprus and the Crusades, 1191-1374*, Cambridge 1991, 17, 122; Th. Papadopoullos, in *Hist. of Cyprus* [in Greek], iv/1, Nicosia 1995, 765, on their social status). From the 14th century onwards, they were drawn from local populations in the late Frankish and Venetian periods, 15th-16th centuries, when they feature in Greek vernacular sources like Leontios Machaeras and George Bustrōnios as Tourkopoūloi, Tourkopouliēredes, Tourkopoulīzai, etc. (refs. in Hill, *op. cit.*, ii, 773-4, with chart on eponymous cases, also in diplomatic connection with the Tekke, Ḥamīd and Ḳaramān amirates, as well as the Mamlūks of Egypt; other eponymous cases in Edbury, *op. cit.*, 169-70, 173, 175; Savvides, 1993, 135-6; *Prosopogr. Lexikon der Palaiologenzeit*, fasc. xii, Vienna 1994, nos. 29098, 29176-84).

Finally, on Rhodes Turcoples participated in the Hospitaller Knights' conquest of the island between 1306-10 [see RODOS, and A. Savvides, in *Byzantinos Domos*, ii [1988], 220, 227-9, with n. 142]; henceforth the *Turcop(o)lieri/Turcupellerii* (light cavalrymen) were extensively used by the Knights with the duty of patrolling the island's coasts and guarding its maritime populations (refs. in A. Luttrell, *Hospitallers in Cyprus, Rhodes, Greece and the West, 1291-1440*, London 1978, no. I, 278, 283; E. Kollias, *The city of Rhodes and the palace of the Grand Master*, Athens 1988, 33, 37; Z. Tsirpanles, *Rhodes and South Sporades ... 14th-16th centuries* [in Greek], Rhodes 1991, 276 nn. 8-9; idem, *Unpublished documents on Rhodes and the South Sporades, 1421-53* [in Greek], Rhodes 1995, 192, 629-30, 739-40, with Latin documents from the Malta archives).

TRANSJORDAN or **TRANSJORDANIA** [see AL-URDUNN].

TRANSYLVANIA [see ERDEL].

TRAVNIK, a town of central Bosnia, situated to the north-west of Sarajevo, in the narrow valley of the Lašva (a tributary of the river Bosna), located at an altitude of 504 m/1,653 feet between the mountains of Vlašić (1,943 m/6,373 feet) to the north, and of Vilenica (1,235 m/4,050 feet) to the south.

As is proved by numerous known archaeological sites, the neighbourhood of Travnik was occupied first by Neolithic and then by Illyrian populations. Many traces remain of the Roman period, but none at all from the first five centuries which followed the arrival of Slav populations in the Balkans (7th-12th centuries). Historical evidence reappears from the 13th century onwards: on the one hand, the remains of two churches and of five castle-fortresses, on the other, a number of mediaeval tombs and necropoles. One of these castle-fortresses, that of Travnik (dating from the early 15th century and renovated on numerous occasions since) is associated with the foundation of the town, the first mention of which dates from 1463-4, on the occasion of the visit to this place by sultan Meḥemmed II during his campaign against Bosnia. Subsequently, first a market was formed beneath the citadel, then an Ottoman *ḳaṣaba*, which became the seat of the *nāḥiye* of Lašva and (after 1528) of the *ḳāḍīlīḳ* of Bosna-Brod. The development of the town was, it seems, initially rather slow, then (from the second half of the 16th century) more rapid, since it is estimated that by the end of the 17th century its population had risen to 3,000-3,500 inhabitants. Ewliyā Čelebi visited Travnik in the summer of 1660 (see his *Seyāḥatnāme*, v, 442 ff., and especially the translation into Serbo-Croat (with important annotations) by H. Šabanović, *E.Č., Putopis, odlomci o jugoslavenskim zemljama*. Sarajevo 1967, 127-9). According to the renowned traveller, the town was at that time the *k͟hāṣṣ* of the *pas͟ha* of Bosnia, the seat of a *voyvode* and a *ḳāḍīlīḳ* with 150 *akčes*. He describes the fortress and the town, which according to him consisted of eleven *maḥalles*, with 2,000 solid houses (figures which H. Kreševljaković and D.M. Korkut, *Travnik u prošlosti 1464-1878*, Travnik 1961, 14, amend to seven *maḥalles* and 600-700 houses at the most), seventeen mosques, numerous elementary schools (*mekteb-i ṣibyān*), a *k͟hān*, a *ḥammām*, two *türbes*, and the *čars͟hī*. In K. Papić's scholarly monograph (*Travnik, grad i regija*, Travnik 1975, 102-12) which collates all the known documentation, can be found a detailed description of the development of the town and of its population during this early period (1463-1699), with prosperity naturally linked to the military situation of the Ottomans in this region.

In a totally unexpected manner, the time of Travnik's greatest success was set during the period of the empire's decline in South-Eastern Europe. This is readily explained by the fact that the seat of the Ottoman vizier was transferred in 1699 from Sarajevo to Travnik [see SARAJEVO], where it remained until 19 June 1850 (with two brief interludes, in 1827-8 and 1832-6 [or 1839]). The urban prosperity which resulted from this was accompanied by that of craftsmanship and of commerce, and was responsible for more than doubling the population figures of the town, which by the mid-19th century had risen to more than 7,000 persons (who are said to have included, according to the secretary of the French Consulate of Travnik, Amédée Chaumette des Fossés, a large majority of Muslims, about 1,000 Orthodox Christians, 500 Roman Catholics, 300 gypsies and 60 Jews), promoting Travnik from the status of *ḳaṣaba* (large village) to that of *s͟hehir* (town). In the early 19th century, and for a relatively short period, Travnik also became the seat of the very first European consulates in this part of the Ottoman empire, these being the French Consulate (from 1806 to 1814) and the Austrian Consulate (from 1808 to 1820), events described magisterially by Ivo Andrić (Nobel Prize for Literature in 1961) in his novel *Travnička hronika* (1st ed. Belgrade 1945; latest French tr., *La chronique de Travnik*, Paris 1996). (On this period in general, cf. Papić, *op. cit.*, 112-40.) Naturally, it is from the 18th-19th centuries that the most important monuments of Ottoman architecture in the town date (several mosques and *k͟hāns*, two *bedestens*, three *ḥammāms*, two clock-towers, three *medreses*, numerous bridges, *türbes* and fountains, a *tekke*, etc.) the majority of which have been subsequently restored and renovated, some of them destroyed (see anon., *Kulturno-istorijski spomenici-vlasništvo IVZ [Travnik]*, in *Glasnik Vrhovnog Islamskog Starješinstva u FNRJ*, Sarajevo, ii/4-6 [April-June 1951], 159-67, ii/7-9 [July-September 1951], 298-301; M. Mujezinović, *Turski natpisi u Travniku i njegovoj okolini*, in *Prilozi za orijentalnu filologiju*, Sarajevo, xiv-xv [1964-5 (1969)], 141-87, and xvi-xvii [1966-7 (1970)], 213-306; *Blago na putevima Jugoslavije*, Belgrade 1983, 327-9). Also available are several descriptions of the town made by western travellers from the early 19th century onward, such as that of F.C.H.L. Pouqueville in 1806, that of A. Chaumette des Fossés (*Voyage en Bosnie dans les années 1807 et 1808*, Paris 1816) and, most thorough of all, that of Ami Boué, from 1836-38 (*Recueil d'itinéraires dans la Turquie d'Europe*, Vienna 1854, ii, 228-30), who was astonished at the dilapidated state of the Ottoman vizier's residence and who supplies numerous interesting details regarding the condition of the town's inhabitants, particularly Muslims and Catholics.

The definitive transfer, in 1850, of the vizier's seat to Sarajevo, marked the beginning of Travnik's decline, which continued throughout the last years of Ottoman power (1850-78) (cf. Papić, *op. cit.*, 140-7). The population of the town diminished perceptibly, to such an extent, that according to the first Austro-Hungarian census, that of 1879, it numbered no more than 5,887 inhabitants (comprising 3,482 Muslims, 1,455 Catholic Christians, 576 Orthodox Christians and 374 Jews; cf. *Ortschafts- und Bevölkerungs-Statistik von Bosnien und Hercegovina. Aemtliche Ausgabe*, Sarajevo 1880, 61). This period was also marked by the construction of a Catholic church and an Orthodox church, as well as by the opening (in addition to a *rüs͟hdiyye* intended for pupils of all religious persuasions, but with instruction given in Turkish), of a Catholic primary school and an Orthodox primary school, and most of all by the construction of a large Franciscan monastery (with a church and a secondary school) at Guča Gora (in the immediate vicinity of Travnik), a monastery which, with other establishments of the same kind, was subsequently to play a very significant role in the religious, cultural and political life of the Catholic population of Bosnia-Hercegovina.

During the forty years of Austro-Hungarian occupation (1878-1918), the Ottoman town experienced many transformations, particularly after the great fire of 1903, in the course of which the entire historic centre of the city, where all the building (shops and residential properties) were made of wood, disappeared for ever. Then the first modern constructions appeared. The following table, constructed according to the four official censuses carried out by the authorities at the time (cf. Papić, *op. cit.*, 148-86, and esp. 151), shows the demographic changes:

Year	*Total pop.*	*Mus.*	*Cath.*	*Orth.*	*Jews*	*Others*
1879	5,887	3,482	1,455	576	374	-
1885	5,933	3,042	1,889	559	425	18
1895	6,261	2,983	2,179	651	426	22
1910	6,647	2,750	2,732	674	472	19

The principal Muslim dignitaries of Travnik (*begs* and *ʿulemāʾ*), as well as those of other places in

Bosnia-Hercegovina, took an active part in the political struggles which accompanied the beginning of the Austro-Hungarian occupation (see e.g. on this subject, R.J. Donia, *Islam under the Double Eagle. The Muslims of Bosnia and Hercegovina 1878-1914*, Boulder, Colo. 1981, 68-89 and *passim*). It may be added that the local scene was confused in the extreme as a result of the power-plays of the other leading elements of the population: the Catholic element (which was ultimately to declare itself Croat) and the Orthodox (which on account of its belonging to a national church could do nothing other than feel and proclaim its Serbian loyalties). It may be said, finally, as regards the Muslim population of Travnik in this period, that it had at its disposal, in the cultural sphere, eight *mektebs*, one *rüs̲h̲diyye* and three *medreses*, the oldest of which, that of Elči Hadži Ibrāhīm Pas̲h̲a (see A. Bejtić, *Elči Ibrahim pašin vakuf u Travniku*, in *El-Hidaje*, nos. 7-12, Sarajevo 1942), was replaced in 1894-5 by a new building, constructed in the "Moorish" style, the renowned "Fejzija" of Travnik, where among others, several members of the illustrious Korkut family were teachers (cf. A. Bejtić, *Derviš M. Korkut kao kulturni i javni radnik*, Sarajevo 1974).

There is little to say on the history of the town of Travnik in the 20th century, other than that the population has grown significantly, from 6,334 inhabitants in 1921 to more than 14,000 in 1975. But on account of its past, the old city of Travnik remains, if only on the cultural plane, the principal urban centre of the valley of the Lašva. It may be said in conclusion that at the time of writing (January 1997), the precise consequences for the town of Travnik of the civil war of 1992-5 remain unclear.

TRIBENĪ (lat. 22° 59' N., long. 88° 26' E.), in Sanskrit *Tri-venī* or "Three braids" referring to the convergence of the Bhagirathi, Jamuna and Saraswati rivers, a place in the district of Hooghly, West Bengal, India, an ancient place of Hindu pilgrimage and Sanskrit learning, mentioned in classical Greek (e.g. Pliny's *Natural history*), Sanskrit (e.g. Dhoyī's *Pavanadūta*), Bengali sources (e.g. *Cvandimangala*), and early European travel accounts.

Conquered by Ẓafar K̲h̲ān G̲h̲āzī towards the end of the 7th/13th century, Tribenī (also known by the Muslims as Fīrūzābād after the Bengal Sultan Fīrūz Shāh, r. 1301-22) and its neighbourhood (e.g. Sātgāon and Pāndu'ā [*q.vv.*]) prospered under Muslim rule, as evidenced by the impressive architecture of the period which was influenced by Islamic and local traditions. Arabic inscriptions from the Ẓafar K̲h̲ān *masd̲j̲id* and *madrasa* (earliest one dated 698/1298; see Mohammad Yusuf Siddiq, *Arabic and Persian texts of the Islamic inscriptions of Bengal*, Watertown, Mass. 1992, 27-30) suggest that, in addition to holding an important commercial and political position in south-west Bengal, the area was a notable Islamic educational and cultural centre. With the emergence in the 16th century of the new port city of Hooghly after the advent of European traders, and later of Calcutta further south, Tribenī and its surrounding towns lost their importance and urban character and declined to the status of villages in the rural landscape of Bengal.

TRUCIAL COAST [see al-imārāt al-ʿarabiyya al-muttaḥida, in Suppl.; ʿumān].

TSAK̲H̲UR, a Lezgian people of eastern Caucasia, Sunnī Muslims and numbering about 25,000. Their self-designation is Yik̲h̲bi, but others call them after the Ts'äk̲h̲ village. That name dates back to the 7th century, when the Tsak̲h̲ur probably formed part of Arrān [*q.v.*] (Caucasian Albania). They accepted Islam in the 10th-11th centuries. Their societies united into a sultanate in the 15th century. This *Elisuyskoe sultanstvo*, as it was called in the 18th century, ended in the next century with its incorporation into Tsarist Russia.

The Tsak̲h̲ur, whose main occupation has been transhumant sheep pastoralism, have traditionally lived in the isolated upper Samur valley in south-west Dāg̲h̲istān and on the other side of the watershed of the Great Caucasus, in present-day Ād̲h̲arbāyd̲j̲ān. At present, about two-thirds of the Tsak̲h̲ur live in the latter region, with most of the remaining third in Dāg̲h̲istān, i.e. in Russia.

Life used to be organised in patrilinear families that were often bilocational, living partly in the mountains, partly on the southern slopes in Ād̲h̲arbāyd̲j̲ān, with the herds moving with the seasons. Clan-ties among the endogamous Tsak̲h̲ur are strong. Their calendar is marked by a large number of Islamic and older festivities.

The Tsak̲h̲ur language belongs to the Lezgian subgroup of the Daghestan branch of the East Caucasian linguistic phylum. There are Tsak̲h̲ur inscriptions that date back to the 13th century. General literacy came with Soviet times; in the mid-1930s Tsak̲h̲ur was used at school, soon to be replaced by Azeri, and after 1952 by Azeri and Russian respectively. Since the early 1990s attempts have been made at revitalising traditional culture and at reintroducing Tsak̲h̲ur as a written language. Language retention is high, though Tsak̲h̲ur town-dwellers are more fluent in Azeri than in Tsak̲h̲ur.

(H.J.A.J. Smeets)

TU WEN-HSIU, Chinese Muslim military leader and head of the Panthay [*q.v.*] sultanate (1855-73) in western Yunnan, South-west China, d. 1873. Tu Wen-hsiu was born into a Yang family of Muslim father and Han mother in the Yung-ch'ang area in western Yunnan on 18 December 1826 (the 6th year of the reign of the Emperor T'ao-k'uang). He was originally called Yang Hsiu, with the Muslim name of Sulaymān. At the age of 13, when he passed the local public examination on the Confucian Classics with an excellent grade, the Han examination official, displaying discrimination against Muslims, ordered him to adopt his Han mother's family name, and renamed him as Wen-hsiu, meaning "of literary accomplishments and fine manners". However, he prefered to be called Sulaymān Yang amongst his fellow-Muslims. He then entered the local Ḳur'ānic school, and was educated under an *ʿālim* from the Ching-yang area in Shensi province [*q.v.*] called Man An-kuo who was probably a Naḳs̲h̲bandī-D̲j̲ahrī Ṣūfī *murs̲h̲id*, studying for 6 years and qualifying as an *Ahund* in 1843. Later, he went to Kung-ming, the capital of Yunnan province, for further studies for a

short period, under the well-known great Muslim scholar Ma Fu-ch'u, who was the then spiritual leader of Muslim rebellion in eastern Yunnan.

In 1856, after his parents and relatives were all killed by Han militia in a Han-Muslim clash, Tu openly joined the Muslim rebellion in the T'a-li region, being elected *de facto* leader of the T'a-li rebels by virtue of his literacy and justice (but some Muslim legends attributed it to his *karāma* [*q.v.*]). Tu then assumed the title of *Ḳāʾid d̲j̲amīʿ al-Muslimīn* ("The leader of all [Yunnanese] Muslims") or *Chung-t'ung P'ing-ma Ta-yüen-shuai* ("Generalissimo of all armed forces and cavalry"); but he was known to the Westerners as "Sultan Sulaymān". After Tu took complete control of the rebel group and set up its headquarters in T'a-li, the sultanate then took shape. Within a few years, the whole of western Yunnan was brought under T'a-li authority.

Most of Tu's writings have not survived except for some poems, couplets and a few essays on Confucian ethics. However, according to some recently-published manuscripts of court documents of the sultanate, part of his religio-political ideology becomes comprehensible. In principle, Tu intended to set up an Islamic government; thus the *S̲h̲arīʿa* and Islamic education systems were imposed, but applied to Muslims only. Because half of his subjects were Han and other aboriginal minorities, Tu had to adopt the Ming dynasty's system for non-Muslims in order not to cause grievances. By showing a positive image of Islam to his non-Muslim subjects, he hoped indirectly to encourage conversions to Islam. The documents also indicate that he hoped eventually to assimilate Muslims and non-Muslims into a syncretised culture. However, Tu died before his ideal materialised. The sultanate was subdued in 1873; Tu Wen-hsiu submitted to the Manchus, but committed suicide in order to secure lives of his followers from massacre. It is said that one of his daughters escaped from the Manchu massacres to Burma after the fall of the sultanate, with her offspring surviving to the present time.

TUAREG [see TAWĀRIK].

ṬŪBĀ, conventionally TOUBA, a simple hamlet of the Baol in Senegal which has become the sacred city and capital of the Murīdiyya [*q.v.*] dervish order. It lies 190 km/120 miles to the east of Dakar [*q.v.*] and is in process of becoming the second city of Senegal. It should have 200,000 inhabitants by the end of the 20th century, and every year it receives two millions of the faithful from all over the country for an annual pilgrimage (the Great Magal). Ṭūbā is a sacred enclosure, and has been for a long time an autonomous zone outside the authority of the state's agents and controlled solely by a "*k̲h̲alīfa*-general", his helpers and a militia of the order, the Bāy Fall.

Ṭūbā derives its importance from the initiatory mystical vision of the founder of the Murīdiyya, Amadu Bamba, probably in the late 1880s. Various etymologies have been current for the name; it most likely stems from a reference to *ṭūbā* "blessing" rather than to *tawba* "repentance".

In the last years of his life, between 1924 and 1927, Amadu Bamba conceived the project of a great mosque there and chose it as the site of his own tomb. After some hesitation, the French colonial authorities in 1926 agreed to this, but the misappropriation of the original funds gathered for this held back construction. Work began again under the direction of the founder's son and successor, Mamadu Mustafâ Mbacke, although progress was very slow. The foundations were not completed till 1932, and the building work, halted in 1939, was resumed in 1947 until its inauguration in 1963. The monument is made up of a giant minaret 96 m/315 feet high, four other minarets, fourteen domes and two ablutions chambers. The building is 100 m/330 feet long and 80 m/262 feet wide. The site's importance is underlined by the presence there of Amadu Bamba's and Mamadu Mustafâ's tombs. A library of 160,000 volumes illustrates the intellectual dimension which the order wishes to give to the shrine.

It was in 1928, at the first anniversary of his father's death, that Mamadu Mustafâ Mbacke organised a meeting of all the Murīds at Ṭūbā, this being the first Magal (a Wolof term meaning "festival, anniversary"). It became an annual event, and from 1945 onwards, the pilgrimage to the founder's tomb became a growing institution. After the death of the first *K̲h̲alīfa* in 1945, his brother and successor Falilu Mbacke in 1946 postponed the date of the Great Magal by a month, to 18 Ṣafar, henceforth commemorating the exile of Amadu Bamba to Gabon. A Lesser Magal nevertheless remains for the anniversary of the founder's death. The Great Magal lasts for four days and is the occasion for a gathering of devotees from all parts of the country and beyond. It also marks a firm point in time in relations between the Senegalese state and the order; a numerous official delegation marks on these occasions the state's recognition of the existence of the Murīds.

The quasi-extraterritoriality which Ṭūbā enjoys within the Republic of Senegal has made this religious centre also one for trade, a free trade zone, where products brought in from neighbouring Gambia escape state taxes. Under a very modern apparent exterior, one thus finds an ancient form of Senegalese, indeed, West African, Islamic life: the constituting of "maraboutic villages", enclaves which bring together the most keen devotees and which, through the force of the charisma of their directors, are able to escape from the exactions, pressures and constraints of the warrior and temporal authorities.

(J.L. TRIAUD)

TUBBAʿ (pl. Tabābiʿa), a term used by Muslim writers as a dynastic title (comparable with Firʿawn/Farāʿina for the Pharaohs, Kisrā/Akāsira for the Sāsānids, etc.) for those Ḥimyarite rulers who, between the late 3rd century and the early 6th century A.D., controlled the whole of Southwest Arabia. For two or three centuries before that, Ḥimyarites centred on Ẓafār and Sabaeans centred on Mārib had struggled for supremacy, often both simultaneously claiming the title "king (*mlk*) of Saba and the Raydan" [see ḤIMYAR; SABAʾ]. But shortly before A.D. 300 S̲h̲ammar Yurʿis̲h̲, "the first Tubbaʿ", eliminated both the Sabaean dynasty and the independent kingship of Ḥaḍramawt, and marked this by assuming the title "king of Saba and the Raydan and of Ḥaḍramawt and *Ymnt*" (the last area not securely identifiable, but perhaps the coastal regions as distinct from the Wādī Ḥaḍramawt). Towards the end of the 4th century, the most famous of all the Tabābiʿa, Abūkarib Asʿad, pushed his military expeditions far into central Arabia, and expanded S̲h̲ammar's title-formula by adding "and of their Arabs (bedouin) in *Ṭwd* ("Highland", synony-

mous with Nad̲j̲d [*q.v.*]) and Tihāma" [*q.v.*]; this expanded title was passed on to his successors. In later times, a legendary epic clustered round the name of this king, attributing to him fantastic exploits similar to, and perhaps inspired by, those of the Alexander romance [see ISKANDAR-NĀMA]. It is not clear how the Muslim writers came to envisage Tubbaʿ as a title; for though *Tbʿkrb* occurs as the individual name of a king of an earlier dynasty, the Tabābiʿa themselves used only the style *mlk* as title. The last to employ the long title mentioned above was Abraha [*q.v.*], but he was not a native South Arabian at all; his predecessor Yūsuf As'ar [see D̲H̲Ū NUWĀS] was possibly a member of the Ḥaḍramite clan Yazan [*q.v.*], and it is doubtful whether he was regarded as a Tubbaʿ. If not, then the last of the dynasty would have been Maʿdikarib Yaʿfir, epigraphically attested as reigning in the summer of the Ḥimyarite year 631 (either A.D. 516 or 521). Though almost all the Tabābiʿa mentioned by the Muslim scholars, particularly al-Hamdānī [*q.v.*], can be validated by contemporary epigraphic evidence, the latter contains lacunae, and Arabic traditions are sometimes mutually contradictory; hence it has not been possible to compile a fully definitive list of the Tabābiʿa.

(A.F.L. BEESTON)

TUBBAT, TIBBAT, TIBAT, the most frequent vocalisations in the medieval Islamic sources for the consonant ductus *T.b.t* denoting the Inner Asian land of Tibet (with *Tubbat*, e.g. in Yāḳūt, *Buldān*, ed. Beirut, ii, 10, also preferred by Minorsky in his *Ḥudūd al-ʿālam*, tr. 92-3, and his edition and tr. of Marwazī, see below).

The origin of the name has recently been examined by L. Bazin and J. Hamilton in a very detailed and erudite study, *L'origine du nom Tibet*, in *Wiener Studien zur Tibetologie und Buddhismuskunde*, xxvi [1991], 244-62, repr. in Bazin, *Les Turcs, des mots, des hommes*, Paris 1994. They believe that the Perso-Arabic, hence Western forms for the name can be traced back to the oldest attestation of the Chinese name for the land, *T'ou-fan*, for **Töpän* (beginning of the 7th century A.D.), to the Ork̲h̲on Turkish form *Tüpüt* (mid-8th century) and to Sogdian and Middle Iranian forms of the 9th century representing **Töpät*, all of which go back to Old Turkish *töpä* or *töpü* "height", with an early Turco-Mongol plural suffix *-t*, hence "the heights, highlands", the equivalent of the modern "Roof of the World". The geminated *-tt-* of the Arabic form would be an attempt to render the *p* by a language which did not possess this sound; the alternation *u/i* for the first syllable would be an attempt to render the *ö* of **Töpät*; and the final vowel would probably be pronounced *ä* or *e* in Persian, as in Marco Polo's *Tebet*. The Chinese and Turks could have received the toponym from the apparently Altaic T'ou-yu-houen people, who lived in the Koko Nor-Tsaidam region, i.e. northern Tibet, until their defeat and expulsion northwards by the Tibetans in 633.

1. The history and geography of Tibet in Islamic sources of the pre-modern period.

The first information on Tibet in mediaeval Arabic geographical and historical sources must have come through Central Asia via the Turks, at the time in their Mongolian homeland near-neighbours of Tibet on its north, so that the land is mentioned in the Bilge Ḳag̲h̲an inscription of the Ork̲h̲on [*q.v.*] as Tüpüt. Given its remoteness from the Islamic heartlands, it is not surprising that there were many fanciful and legendary touches in Islamic knowledge of Tibet. The fancied resemblance of *T.b.t* to Tubbaʿ [*q.v.*] gave rise to tales of a Yemeni origin of the kings of Tibet and of a pre-Islamic colony of Ḥimyarite Arabs there (cf. al-Ṭabarī, i, 685-6; Gardīzī, *Zayn al-ak̲h̲bār*, ed. ʿAbd al-Ḥayy Ḥabībī, Tehran 1347/1948, 263). A story first found in Ibn K̲h̲urradād̲h̲bih, 170, and repeated in many later sources, stresses the great happiness of the people of Tibet and the fact that any stranger going there becomes immediately full of laughter and joy.

At the time of the Arab conquests in Central Asia (1st-2nd/later 7th-8th centuries), the kingdom of Tibet was often at war with China, in the later 7th century seizing the so-called "Four garrisons" in the Tarim basin from China, and the Chinese annals often mention the Tibetans and the Arabs as being allies against the Chinese empire, presumably in Kās̲h̲g̲h̲aria and what was later Sin-kiang [*q.v.*] (see E. Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, St. Petersburg 1903, 291; R. Grousset, *L'empire des steppes*, [4]Paris 1951, 150-1, 155, 164, Eng. tr. *The empire of the steppes. A history of Central Asia*, New Brunswick, N.J. 1970, 103, 107, 114-15). The early Arabic historians mention the appearance of the Tibetans at times in Transoxania during the period of the Arab conquests. The rebel Mūsā b. ʿAbd Allāh b. K̲h̲āzim was attacked during his rule at Tirmid̲h̲ in ʿAbd al-Malik's caliphate by the Hayāṭila [*q.v.*] or Hephthalites, the Turks and the Tibetans, according to al-Ṭabarī, ii, 1153 (year 85/704). In al-Yaʿḳūbī, *Ta'rīk̲h̲*, ii, 362, and idem, *Buldān*, 301, tr. Wiet 124, the governor of K̲h̲urāsān D̲j̲arrāḥ b. ʿAbd Allāh received, in the reign of ʿUmar II (99-101/717-20), an embassy from Tibet requesting the despatch of missionaries to teach Islam there, and in idem, *Ta'rīk̲h̲*, ii, 479, the king of Tibet is mentioned among those rulers submitting to al-Mahdī (158-69/775-85). It is further alleged, *op. cit.*, ii, 550, that the king of Tibet adopted Islam in the caliphate of al-Ma'mūn (198-218/813-33) and sent to K̲h̲urāsān as a token of his conversion a golden idol set on a throne; but in al-Ṭabarī, iii, 815, "al-K̲h̲āḳān, king of Tibet", figures as one of al-Ma'mūn's enemies with whom he had to come to terms before he could attack al-Amīn. For all these stories, see D.M. Dunlop, *Arab relations with Tibet in the eighth and early ninth centuries A.D.*, in *Islâm Tetkikleri Enstitüsü Dergisi*, v [1973], 301-18.

It seems clear from these various mentions that the Arabs of that time generally understood by "Tibet" the region to the south of the Karakorum Mountains lying between Gilgit [*q.v.* in Suppl.] and Ladāk̲h̲ [*q.v.*] on the Indus headwaters, sc. Baltistān [*q.v.*], often called *Tubbat-i k̲h̲urd* "Little Tibet" and Bolor, the *Pulu* of such Chinese sources as Hiuen Tsang (Marco Polo traversed Bolor; see *The Book of Ser Marco Polo*, tr. Yule and Cordier, [3]London 1903, i, 172, 178-9 and map). There were difficult but possible routes to it southwards from Kās̲h̲g̲h̲ar and K̲h̲otan [*q.vv.*] (including that of the modern Karakorum Highway) and eastwards from Badak̲h̲s̲h̲ān via Wak̲h̲ān [*q.vv.*] and across the Pamirs, and these are mentioned by the Islamic geographers. There is an account of the route from Badak̲h̲s̲h̲ān in the *Ḥudūd al-ʿālam*, tr. Minorsky, 92-3, comm. 255-6, also in Gardīzī, 264-5, al-Bīrūnī, *al-Āt̲h̲ār al-bāḳiya*, ed. Sachau, 271, and Marwazī, ed. and tr. Minorsky, *Sharaf al-Zamān Ṭāhir Marvazī on China, the Turks and India*, London 1942, § 42, tr. 27-8, comm. 89-90, all going back to a common source, possibly the Sāmānid vizier al-D̲j̲ayhānī [*q.v.* in Suppl.]. A "gate of the two Tibets", *bāb al-Tubbatayn* (presum-

ably of Little Tibet and Tibet proper), lay between Badakhshān and the upper Oxus or Pandj river, with a guard post where the Tibetans levied an entry due of 2.5% on goods, and the danger of mountain sickness when crossing the high passes is mentioned (whence, says al-Bīrūnī, the Tibetans call it "the mountain which poisons", *djabal al-samm*). At a village called Samarkandāk (probably with the sense "little Samarkand") at the farthest limit of Transoxania lived Indians, Tibetans, Wakhānīs and Muslims (*Ḥudūd al-ʿālam*, tr. 121, comm. 309; it lay, in Minorsky's surmise, in the modern Sarḥadd district of Wakhān [*q.v.*], over which traffic goes to Gilgit and neighbouring areas).

These routes were important for the import into the Islamic world of the highly-prized, best-quality musk of Tibet [see MISK], where the musk-ox was raised, and this musk is mentioned in all the Muslim accounts of Tibet (cf. al-Masʿūdī, *Murūdj*, i, 352-6 = §§ 390-4; al-Thaʿālibī, *Laṭāʾif al-maʿārif*, ed. Abyārī and al-Ṣayrafī, 225, tr. Bosworth, 142; Marwazī, 28-9, comm. 91-2). The other famous product of Tibet was gold nuggets, concerning which there is retailed the legendary detail that they were guarded by ants (a story found also in Herodotus and the *Mahābhārata*); W. Tomaschek conjected that the Issedones of the Eurasian steppe in pre-Christian times had got their famous gold for export from the Pamirs region and northern Tibet (*Kritik der ältesten Nachrichten über den Skythischen Norden*, in *SBWAW*, cxvi [1888], 752-3; cf. *PW*, ix/2, cols. 2235-46, art. *Issedoi* (Herrmann)).

But after the initial period of the sporadic Arab-Tibetan contacts in Transoxania and its eastern fringes the Muslims acquired some knowledge of Tibet proper. They correctly placed it between China, India and the land of the Turks, and knew that it had its own king and language. The *Ḥudūd al-ʿālam*, tr. 93, comm. 258, states that Lhasa (transcribed remarkably faithfully as *Lhāsā*) had numerous idol temples plus a mosque serving the few Muslims there; this is the first mention of the Tibetan capital in Islamic sources. Other names mentioned seem identifiable with the Koko Nor and Tsaidam regions of northern Tibet, whilst the place Zāb on a huge river which marks the eastern frontier of Tibet suggests a dim awareness of Tibet's borders with Szechwan and the upper Yangtse river basin.

The actual name Tibet (in such forms as William of Rubruck's and Marco Polo's *Tebet*) probably reached Christian Europe independently of the Muslims, brought by the European travellers across Eurasia to Mongolia in the 13th century, although the late 12th-century traveller Benjamin of Tudela (who himself never went further east than Baghdād) mentions it as *Tubbot* (tr. M.N. Adler, *The itinerary of Benjamin of Tudela*, London 1907, 59).

Rashīd al-Dīn's [*q.v.*] world-history, the *Djāmiʿ al-tawārīkh*, contains some references to Tibet. Tibet did not start to become Buddhist until the 7th century, but from the Mongol period onwards it was an important centre for the diffusion of that faith, and Rashīd al-Dīn expressly states that the Buddhist monks of Tibet (*bakhshīs*) enjoyed the greatest prestige (cf. E. Bretschneider, *Mediaeval researches from eastern Asiatic sources*, London 1910, ii, 24-5).

Once the Muslims had invaded northern India and had penetrated across the Gangetic plain to Bengal and Assam, i.e. by the late 6th/12th century, there was the possibility of raids into Tibet proper, uninviting though the land must generally have seemed. The commander of the Ghūrids Muḥammad Bakhtiyār Khaldjī (d. 602/1205-6 [*q.v.*]) from his base in newly-conquered Bengal, mounted a campaign against Bhutan and Tibet from Assam, but failed to make headway and had to return to Bengal (see Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, tr. Raverty, i, 560 ff.). Once Islam was established in Kashmīr [*q.v.*] (i.e. from the mid-8th/14th century), raids were made into Baltistān or Little Tibet. Towards the end of the 9th/15th century Tibet was invaded by Muslim rulers under pretext of a holy war, Little Tibet in particular. At this time, all the lands of Bolor and Tibet between Badakhshān and Kashmīr were subjected by Mīr Walī, general of the ruler of Kāshghar of the house of Dūghlāt, Abū Bakr (Muḥammad Ḥaydar Mīrzā Dūghlāt, *Taʾrīkh-i Rashīdī*, ed. and tr. Elias and Ross, 320, 403). When Abū Bakr was overthrown by Saʿīd Khān (in 920/1514) the fortresses built in Tibet (in Ladakh) were abandoned by their garrisons and with their treasures seized by the Tibetans. Under Saʿīd Khān (920-39/1514-33), Tibet, Ladakh and the adjoining territories were invaded, first in 923/1517 by Mīr Mazīd and in 938/1532 by the Khān himself, accompanied by the historian Ḥaydar Mīrzā [*q.v.*] (*op. cit.*, 417 ff.). In 939/1533 Ḥaydar Mīrzā tried to reach Lhasa, which he calls Ursang, where the largest temples were, but was forced to turn back at Askābrak (454), only a week's journey from Lhasa. Ursang is probably the Gursāng of the *Ḥudūd al-ʿālam*, where there were large temples of idols (tr. 94, comm. 262-3). That Gursāng is also mentioned separately from Lhasa is no evidence against this identification: the *Ḥudūd al-ʿālam* is almost entirely compiled from written sources so that the same name often occurs twice in different forms, apparently from different sources. Later, as governor of Kashmīr (after 947/1540) Ḥaydar Mīrzā in 955/1548 undertook a campaign against Ladakh and Baltistān.

All this seems to show that Baltistān in the 10th/16th century was included in Tibet (according to the *Taʾrīkh-i Rashīdī*, 436 it lay "between Tibet and Bolor") and was not yet a Muslim country. The idea adopted by Cunningham and later writers, including A. Francke (*A history of Western Tibet*, 90), that Baltistān was converted between 1380 and 1400 by the ruler of Kashmīr, Sikandar b. Hindal But-shikan (792-816/1390-1413 [*q.v.*]), must be rejected.

By the second half of the 10th/16th century, Islam was already a political force in Little Tibet. The ruler of Kapulu, ʿAlī Mīr Shīr Khān, succeeded in uniting all Baltistān under his rule; the land was cleared of idols and other remains of Buddhism. He later succeeded in conquering Ladakh also, but only temporarily. He was also the founder of Skārdū, capital of Baltistān; in the *Taʾrīkh-i Rashīdī* (405), Askārdū is only mentioned as the name of a pass on the road from Kashmīr which now no longer exists. Baltistān remained the only Muslim land inhabited by Tibetans, and since 1841 has been under the suzerainty of Kashmīr. There are said to be historical works in the language of the Baltīs. They also use a script of their own supposed to date from the time of their conversion to Islam; the characters, probably of Tibetan origin although influenced by Arabic, are written from left to right (Grierson, *Linguistic survey of India*, iii, 32-3; Francke, *op. cit.*, 89-90). The Baltīs from the first professed Shīʿism; but we learn from the *Baḥr al-asrār* of Maḥmūd b. Walī (text in *ZVOIRAO*, xv, 235) that in the early years of the 11th/17th century the Sunna gained the upper hand, probably for a short time only. The king (his name is not recorded) who was converted to the Sunnī faith had his father and

brothers slain as heretics. Sunnī scholars were sent for from Kās̲h̲g̲h̲ar. Thirty years later, in 1044/1634-5, news of these events was brought to Balk̲h̲ by a certain Ḥasan K̲h̲ān, who was related to the ruling house.

In *ca.* 1682, when Central Tibet was under the rule of the Kalmucks [*q.v.*], the celebrated K̲h̲od̲j̲a Apaḳ (his tomb is still revered in Kās̲h̲g̲h̲ar), who had quarrelled with his K̲h̲ān Ismāʿīl (1081-93/1670-82), went to Lhasa, which he calls "town of D̲j̲ō" (*D̲j̲ū s̲h̲ahrī*) after a great statue of the Buddha. At his request, the Dalay Lama (in a Turkish manuscript we have the plural form: *Dalaylamalar*) gave him a letter of safe conduct to the K̲h̲ān of the Kalmucks, Galdan Bos̲h̲oktu. At the head of an army, which included the K̲h̲od̲j̲a, the K̲h̲ān invaded Kās̲h̲g̲h̲aria. Ismāʿīl K̲h̲ān was carried off a prisoner, and the rule given to the K̲h̲od̲j̲a (M. Hartmann, *Der islamische Orient*, i, 210, 212, 321, 326; *ZVOIRAO*, xv, 250).

(W. Barthold-[C.E. Bosworth])

2. Recent and contemporary history and ethnology.

Tibet (which the Muslims living there call *Tibbat* when they express themselves in Persian or Urdu) is a cultural region on the borders of India and China (between lats. 27° to 38° N., longs. 74° to 103° E.) The people speak Tibetan languages (of the Tibeto-Burmese group) and are steeped in Lamaist Buddhism. At the present time, this region is politically divided. It comprises, on the one hand, Tibet proper, now the Autonomous Province of Tibet in the People's Republic of China. On the other hand, it stretches out in two directions. It stretches extensively on the east and northeast towards the Chinese provinces of Sichuan, Gansu, Qinqhai and Yunnan, which give a home to 2 million Tibetans, i.e. as many as are in the Autonomous Province. In the other direction, it stretches up to the political area controlled successively by the Mug̲h̲als and then by British India, but now divided. Several hundred thousands of Tibetans live there. In the west, across the Karakorum chain, Tibetans are to be found in northern Kas̲h̲mīr [*q.v.*], divided amongst a Pakistani-controlled zone which is totally Islamised [see baltistān; hunza; and gilgit, in Suppl.] and an Indian-controlled zone, about 48% Muslim [see ladāk̲h̲]. In the south, across the Himalayas, the region of Tibetan culture, remaining totally Buddhist, extends into the north of Nepal [*q.v.*], Bhutan and the upper valleys of India (incl. Sikkim) situated on each side of these countries.

Tibet proper was progressively unified with the help of the Mongols of the 15th-17th centuries under the authority of a head with both spiritual and temporal powers, the Dalai Lama. After 1720, it passed effectively under Chinese control. After the Younghusband military expedition of 1904, the British imposed a Resident in Lhasa who functioned there till 1949. In practice, Tibet was independent between the proclamation of the Chinese Republic in 1911 and the Red Army's seizure of power in 1949. The Communist régime spread its effective control over the autonomous province of Tibet in 1959, involving the flight of the Dalai Lama, his government and a part of the country's élite, to India. In order to consolidate their control, the Chinese encouraged the planting of Chinese colonies in Tibet on a massive scale. Religious persecution was frequent, especially during the Cultural Revolution, which affected, amongst others, the Muslims.

Modern Tibetan society, within Tibet proper and on its margins alike, is very largely Buddhist. It is traditionally organised around clans, of which some are nomadic and some sedentary. It is hierarchical in structure. The noble clans making up the aristocracy dominate the peasants and nomads who form the commonalty. Artisans and those providing services, such as smiths, potters, butchers, fishermen, musicians, beggars, etc., make up classes regarded as inferior, forming something like castes. A remarkable feature is polyandry, which forms part of a social system of the type called "that of houses", the "house" being the basic unit whose property is indivisible; the brothers have to set up a single household round a single spouse in order to enjoy this property. This lay society was capped by a religious class, a sort of church made up of monks recruited through vocation and spread amongst several orders; they made up about one-fifth of the population.

Up against this Buddhist majority, there exists a very small minority of "Tibetan Muslims". This manner of referring to them covers several diverse populations: in Tibet proper, they are often made up of groups with outside origins. In the west, in Baltistān and Ladāk̲h̲, are to be found peoples of Tibetan origin and culture converted to Islam; in the northeast, within Chinese territory, one comes across both Tibetans converted to Islam and Muslims of Chinese culture. Below, we shall treat of the Muslims of Tibet proper, who may be divided into three groups: the Kas̲h̲mīrīs, the Chinese, and the G̲h̲arīb, the class regarded as inferior (for the other Muslims, see the *Bibl.*).

The Kas̲h̲mīrīs are the oldest-attested group and the best known. In Tibetan they are called *Kha-če* (< Pers. *k̲h̲ʷād̲j̲a*, in the sense of trader, and perhaps also, Ṣūfī), and by extension, this denotes all Muslims. The Kas̲h̲mīrīs trace their arrival in the land to the reign of the fifth Dalai Lama (1642-82), the organiser of modern Tibet. According to an oral tradition gathered at the end of the 19th century, a certain K̲h̲ayr al-Dīn, after a competition in magic with the Dalai Lama, obtained permission for Muslims to settle in Tibet; this tradition recalls the hagiographic accounts of the famous K̲h̲ʷād̲j̲a Afaḳ, or K̲h̲od̲j̲a Apaḳ (see above, 1.), of Kās̲h̲g̲h̲ar, which also mention a magical contest with the Dalai Lama. The first Christian Roman Catholic missionaries who ventured into Tibet attest the presence of Muslim merchants in Lhasa and the main towns of central and western Tibet from the first half of the 17th century onwards, and these merchants were in competition with other Indian, Nepali and Armenian traders. Sometimes they came directly from Kas̲h̲mīr via Ladāk̲h̲, but more often they were part of a network of merchants who traded between India and China. Setting out from Benares and Patna in India, they had set up colonies in Kathmandu [see nepal] and, within Tibet, at Kuti, Gyantse, Shigatse and Lhasa, and as far as Sining in China. Their presence is also attested at Gartok in western Tibet. They traded in both large and small objects, such as the making of clothes and of personal adornments, and they also acted as bankers for the monasteries. Within them, there were three status levels: a majority of *zāʾīda* "those born" in Tibet to old-established families, held the highest place; then came a rich and influential minority, the *Lada-kha-če*, who had come from Ladāk̲h̲, who had the highly-lucrative monopoly of leading the *lop-čhak*, the caravan which every three years brought tribute from the Māhārād̲j̲a of Kas̲h̲mīr to the Dalai Lama; and thirdly, the *Siring-pa*, who came from other regions of India and were relegated to the lowest rank. The Kas̲h̲mīrīs enjoyed a wide degree of autonomy for running their

mosques and cemeteries, and also regarding justice, having for this a community chief called *'go-pa* or *dpon-po*, recognised as such by the Dalai Lama's government and supervised by the finance department (*rčis-khaṅ las khuṅ*). When the Chinese regained control of China in 1959, these Kas͟hmīrīs numbered at most a few thousands. Most of them then fled to India, where they claimed Indian nationality in vain, and, as stateless persons, they were dumped in a refugee camp at Srinagar in Kas͟hmīr where there is still a considerable number at the present time. The best-educated and most fortunate have found jobs in India, Pakistan and even Saudi Arabia; a few hundreds remained in (or in some cases, went back to) Tibet, where they continue to maintain their places of worship.

The second group is that of the Chinese Muslims, called *Ho-pa-ling Kha-če*, from the name of the quarter in Lhasa where they live, or rather, *Gya* (?) *Kha-če*, or finally, *Hui*, the general term in China for Muslims of Chinese language [see AL-ṢĪN]; they claim to have arrived at the beginning of the 18th century. Their presence is attested at Lhasa, at Shigatse and along the roads of the northeast leading to China. They traditionally kept eating-houses and were butchers; they also had land where they grew vegetables and reared animals for butchering. They likewise had religious and legal autonomy under a head, the *Ho-pa-ling dponpo*, who was responsible to the department of agriculture (*so-nam las khuṅ*). Since they were considered to be Chinese citizens, they remained in their homes in 1959. Their number at that time is unknown. All that is known is that, since the 1980s, there has been a new influx of Chinese Muslims into Tibet. In fact, the Muslims of western China, profiting by the liberalisation of the economy, have invested in the Tibetan economy; today, according to the lowest estimate, there are 5,000 Chinese Muslims in the single town of Lhasa alone (some authorities give figures of 20,000 to 30,000). These new traders get along with difficulty with the old-established Chinese Muslims; they also have tense relations with the Buddhist population, who consider them as exploiters.

There remains a third, very intriguing small group, considered socially inferior, the G͟harīb, here in the sense of "poor". They were more numerous in the 19th century, but in 1959 there were only a dozen families. It seems that these were the group corresponding to the *ragyapa* amongst the Buddhists, persons degraded socially for their crimes, and their descendants. They begged, and they acted as police and took charge of the guard and the punishment of condemned persons for the head of the Kas͟hmīrīs. They also had their own head, who was officially recognised as a kind of chief of police over all the Muslims; they received an annual subvention from the Tibetan government.

Adapted to Tibetan life, often married to converted Tibetan wives, speaking Tibetan as their maternal language, these Muslims had adopted Tibetan customs; but faithful to the law of Islam, they rejected polyandry. Under the Dalai Lama's government, the Muslim communities enjoyed their own religious and legal autonomy, and they were officially represented in the Dalai Lama's palace at the time of the celebration of the New Year. In general, these Muslims were largely tolerated by the Buddhist majority, who nevertheless used to consider them to be of inferior and impure status because of their practice of a non-Buddhist religion and because some of them followed the trade of butcher, which belonged to castes considered inferior. After 1959, these Muslim communities have had various fortunes; that of the Kas͟hmīrīs has been reduced; that of the Chinese Muslims continues to grow; what has happened to the G͟harīb is unknown.

Bibliography: For the history of modern Tibet, see T. Shakapa, *Tibet, a political history*, New Haven 1967; L. Petech, *Aristocracy and government in Tibet, 1728-1959*, Rome 1973; D. Snellgrove and H.E. Richardson, *A cultural history of Tibet*, [2]Boston and London 1995; L. Deshayes, *Histoire du Tibet*, Paris 1997.

For the traditional concept of Tibetan society, see R.A. Stein, *La civilisation tibétaine*, [2]Paris 1981 (Eng. tr. *Tibetan civilization*, London 1972). For a comparative ethnology of the peoples of the Tibetan area, P. Dollfus, *Lieu de neige et de genévriers. Organisation sociale et religieuse des communautés bouddhistes du Ladakh*, Paris 1989; B.N. Aziz, *Tibetan frontier families. Reflections on three generations of D'ing-ri*, Delhi 1978; G. Samuel, *Civilized shamans: Buddhism in Tibetan societies*, Washington D.C. 1993.

For the sources on Tibetan Muslims, see Barthold, *EI*[1] art. *Tibet* and 1. above; also the introd. by M. Gaborieau to *Récit d'un voyageur musulman au Tibet*, Paris 1973, 14-30. For the first accounts of missionaries on the Muslims of Tibet, see the classic by C. Wessels, *Early Jesuit travellers in Central Asia*, The Hague 1924, and the recent specific study of H. Didier, *Les Portugais au Tibet. Les premières relations jésuites (1624-1635)*, Paris 1996.

On the Muslims of Tibet proper in general, and esp. on the Kas͟hmīrīs and the G͟harīb, the richest source is the autobiography, in Urdu, of the Muslim Nepalese merchant K͟hʷād͟ja G͟hulām Muḥammad (1857-1928), ed., tr. and comm. Gaborieau, *Récit d'un voyageur musulman au Tibet*, Paris 1973. Recent, complementary material in three works: one in Urdu by a Tibetan Muslim, Abū Bakr Amīr al-Dīn Tibbatī Nadwī, *Tibbat awr tibbatī musalmān*, Lucknow 1979; second, the French adaptation of the autobiography of a Ladāk͟h Muslim who lived and traded at Lhasa in the 1940s and 1950s, Abdul Wahid Radhu, *Caravane tibétaine*, Paris 1981; finally, a collective work, Gaborieau (ed.), *Tibetan Muslims*, special no. of *The Tibet Journal* (Dharamsala-Delhi), xx/3 (1995) (esp. the illustrated article of C. Jest, *Kha-che and Gya Kha-che. Muslim communities in Lhasa (1990)*, 8-20). See also Prince Peter of Greece and Denmark, *The Moslems of Central Tibet*, in *Royal Central Asian Jnal.*, xxxix/3-4 (1962), 233-40; and the unsigned article, *Tibetan Muslim refugees in Kashmir*, in *Tibetan Review*, Delhi (May 1976), 15-17.

On the Chinese Muslims in Tibet, see also Fang Jiangchang, *Research on the Huis and their mosques in Tibet—and on the spread and influence of Islam in Tibet*, in *Tibet Studies*, Lhasa, no. 2 (1989), 202-22; C. Moevus, *The Chinese Hui Muslims' trade in Tibetan areas*, in *The Tibet Journal*, xx/3 (1995), 113-23.

On the role of Ṣūfīs in Tibet, according to Urdu, Persian and Turkish hagiography, see Gaborieau, *Pouvoirs et autorité des soufis dans l'Himalaya*, in V. Bouillier and G. Toffin (eds.), *Prêtrise, pouvoirs et autorité en Himalaya*, Paris 1989, 215-38; and T. Zarcone, *Soufis d'Asie centrale au Tibet aux XVI^e et XVII^e siècles*, in *Cahiers d'Asie centrale*, Tashkent-Aix-en-Provence, i-ii (1996), 325-44 (concerning the visit of K͟hʷād͟ja Afaḳ, *alias* K͟hod͟ja Apaḳ, to the Dalai Lama).

Finally, on the literary influence of the Muslims, esp. the Persian poet Saʿdī, see *Khace Phalu's advice*

on the art of living, tr. Dawa Norbu, Delhi 1994; and T. Tsering, *The advice of the Tibetan Muslim "Phalu". A preliminary discussion of a popular Buddhist/Islamic literary treatise*, in *Tibetan Review*, (February 1988), 10-15, (March 1988), 18-21.

There are no special studies on the Muslims of Tibetan culture of northeastern Tibet; one can find information in the articles of Moevus and Zarcone cited above, and in D.C. Gladney, *Muslim Chinese, ethnic nationalism in the People's Republic*, Cambridge, Mass. and London 1991.

For the Muslims of Tibetan culture to the west of Tibet, see for the Pakistani region, BALTISTĀN; GILGIT, in Suppl.; and HUNZA; for the Indian regions, KAS͟HMĪR and LADĀK͟H, and for this last, also P. Dollfus, *The history of Muslims in Central Ladakh*, in *The Tibet Journal*, xx/3 (1995), 35-58; N. Grist, *Muslims in Western Ladakh*, in *ibid.*, 59-70; eadem, *Muslim kinship and marriage in Ladakh*, in C. Ramble and M. Brauen (eds.), *Anthropology of Tibet and the Himalaya*, Zurich 1993, 80-92; S. Srinivas, *Conjunction, parallelism and cross-cutting ties among the Muslims of Ladakh*, in *The Tibet Journal*, xx/3 (1995), 71-95.

(M. GABORIEAU)

ṬUBNA, conventionally Tobna, the Roman Thubunae, a historic town of the central Mag͟hrib, now in northeastern Algeria, situated 4 km/2.4 miles south of modern Barika (between Barika and Bit͟ham). Being at the extreme eastern end of the S͟hoṭṭ Ḥodna and the Belezma mountains, it commanded all the eastern part of the Ḥodna basin, just as Zabi/Msīla commanded the western part. The waters of the Bit͟ham permitted irrigation there.

These advantages were of significance at two epochs, the Roman and the Arab ones. The Romans built the town of Thubunae, which became a *municipium* under Septimius Severus and with its citadel, it was able to protect the countryside from nomads. According to the itineraries, Ṭubna was a day's march from Makkara and from Ngāwus, two days' march from al-G͟hadīr, Msīla and Biskra, and five days from Bāg͟hā. In A.D. 427 the Count Boniface stayed there, during which time he had a meeting with St. Augustine. The Byzantines made it the chef-lieu of a district and built a vast fortress there. Nevertheless, the Arabs conquered it, probably at the beginning of the 8th century. For the next two centuries, under various Arab powers, Ṭubna had a great strategic importance. It had a garrison (*d̲jund*) and new walls, and was the strongest *point d'appui* for the central power when suppressing revolts of the Berber K͟hārid̲jites or repelling the S͟hīʿī Kutāma. Ibrāhīm b. al-Ag͟hlab, governor of Ṭubna, set out from here to conquer the province of Ifrīḳiya and to found the Ag͟hlabid line of governors. Later, it belonged to the Fāṭimids, then the Zīrids and then the Ḥammādids.

During all this time, Ṭubna was a prosperous and populous place. Al-Bakrī calls it the greatest town of the Mag͟hrib between Ḳayrawān and Sid̲jilmāsa, and says that it was surrounded by a brick wall, with monumental gateways, and flanked to the south by a stone-built fortress crowned by vaulted chambers, with cisterns and accommodation for officials. Inside the town was a street lined with shops and markets. Outside the wall extended the suburbs, a cemetery, and irrigated gardens and fields. The fertile lands had many cotton plants. However, with the westwards movement brought about by the Umayyad power in Cordova, it was preferred to exercise local power from a stronghold created further to the west, Msīla [see MASĪLA], to which Ṭubna was attached. The town thus lost some of its splendour, but retained its military role.

In the mid-11th century, the arrival of the Banū Hilāl [*q.v.*] dealt a decisive blow to its prosperity. According to Ibn K͟haldūn, "after having reduced the towns of Ṭubna and Masīla to ruins, and having expelled their populations, they fell on the caravanserais, farms and towns, razed them to the ground and made the area a vast desert". Ṭubna was never able to recover completely after this. Its importance declined whilst Biskra benefited, and it soon disappeared completely. Today, the site of Ṭubna stretches out as a vast open space, with extensive ruins, traces of a wall 950 m by 930 m, and remains of the Byzantine fortress. Thus a whole slice of the history of the Mag͟hrib lies within this site, one hardly as yet explored.

TUBU, written in Arabic script as Tūbū, a people of the eastern Sahara.

They are distributed over an immense territory lying between the Libyan Desert, on the fringes of Egypt and Libya, in the east; the Ahaggar massif [*q.v.*] of southern Algeria in the west; the Fezzan [see FAZZĀN] region of southern Libya in the north; and the northern half of Chad [see ČAD, in Suppl.] and the adjacent fringes of Sudan in the east. In Fezzan, they constitute the greater part of the district of Gatrūn, and a few are still found in the Kufra oasis [*q.v.*]. The plateau of Djado [see D̲JĀDŪ], connecting the Ahaggar and Tassili-n-Ajjer [see TASSILI] with Tibesti, the massifs of Tibesti and Borkou [*q.vv.*] and the plateau of Ennedi, form a mountainous heartland for the Tubu, but they spread far southwards across the desert through strings of oases like those of Kawar [see KAWĀR and BILMA], through Bodele to Kanem [*q.v.*], hence along the course of the wadi of the Baḥr al-G͟hazāl almost to Lake Chad, and eastwards to Wādāy [*q.v.*].

The name Tubu or Tibbu was given by Europeans to all these peoples, but the various groups call themselves by particular names. Tubu is applied more particularly to the natives of Tibesti; in the Kanuri [*q.v.*] language, it means the people of Tū or Tibesti; the latter call themselves Tēda; in the same way are distinguished the Amma Borkuā (Borkū), the Kreda, Norea, Cheurafade in Wādāy and the Koeherda in the Baḥr al-G͟hazāl. From the linguistic point of view, two groups may be recognised, speaking dialects very different in vocabulary: the Tēda of Tibesti, and the Dazā settled in the southern districts. The Arabs give the latter the name of Gouran.

1. Social and religious organisation.

The Tubu are very distinct from the black Sudanese on the one hand, and the Arabs and Berbers on the other. They are as a rule of small stature, with a lean and slim body, dark skin, straight nose, sometimes aquiline, thin lips, and smooth hair. These physical characteristics are particularly strongly defined in the Tēda, who have remained isolated in their mountains. They are found scattered through the Dazā who are more or less mixed with negro blood. The poverty of their country dooms them to a wretched existence. Some are nomads, others sedentary. The main supplies come from the cultivation of the palm-tree and cereals in the *ennedi* or valleys with water, the rearing of goats in Tibesti and of cattle in the Chad region.

The Tēda also used to make some money by hiring out their camels: they acted as guides to caravans but were particularly given to brigandage whenever an occasion arose. This mode of life developed in them an extraordinary power of resistance to fatigue and privations, but also made them treacherous and cruel robbers, as European travellers from Nachtigal, who was the first to study them, onwards, are all agreed. The settled Tubu are found in groups, not as a rule large. They either dwell in little stone houses, covered with palm-branches, or in huts of wattle with roofs of thatch, or even in caves roughly furnished. The gardens adjoining the huts were cultivated by slaves, while the Tubu themselves fought and herded the flocks.

The Tubu are divided into two classes: the nobles or *maina* and the common people. Among the Tēda, the tribes are divided into suzerain and servile tribes. The former are three in number, the T͟homāg͟hera, the Gūnda, who have almost all emigrated to Fezzan, and the Tuzaba. The Sultan of Tibesti, the Derde or Dardai, who rules the country with the help of a council of nobles, is necessarily elected among the T͟homāg͟hara. Among the Tubu, on the other hand, as among the Sudanese peoples, the *Ḥaddād* (smiths and fishers and hunters) form a distinct caste, regarded as inferior and despised by all.

The Tubu are Muslim, but up to the 19th century their Islam seems to have been very nominal. It was from the efforts of the revivalist movement of the Sanūsiyya [*q.v.*] that the Tubu received a much stronger awareness of their religion, so that Tubu elders often refer to their pre-Sanūsī period as their *d̲j̲āhiliyya*. Sanūsī influence remained strong until the mid-20th century, and in the early part of this century provided the religious impetus for Tubu resistance to French and Italian colonial penetration of the eastern Sahara. Nevertheless, at least until recent decades, Tubu have been lax in observing some of the precepts of Islam; fermented liquors were drunk, and the *diya* [*q.v.*] or blood-money was not accepted in compensation for homicide.

2. History.

We have only incomplete and fragmentary notes on the history of the Tubu. The Arab authors up to al-Maḳrīzī make no mention of them. Relying on a passage by this author reproduced by Leo Africanus, they were for long regarded as Berbers and they have been identified with the Bardoa, mentioned by both these geographers. Barth tried to reconcile this view with the fact ascertained by him of the affinity of the Tubu and Kanuri languages. On the other hand, it is now agreed that the Tubu originally lived in the Sūdān and were then driven into the Sahara. In any case, they seem to have played a fairly important role in the history of Kanem. Some of their clans took part with the Kanembon in the foundation of this kingdom. Down to the end of the 12th century the sultans of Kanem kept up the custom of marrying wives from the Tubu. A certain number of Tubu had settled in Kanem, which the tribes who had remained in Tibesti came to attack in the 13th century. Sultan Dūname II (618-57/1221-59) was forced into a seven years' war with them, out of which he emerged victorious but with the resources of his kingdom exhausted. In the 14th century the Tubu were the allies of the Būlaba and helped the latter to conquer Kanem. Settled in the lands around Lake Chad, they shared the fortunes of their neighbours [see BORNŪ; KANEM].

As for the Tubu of Tibesti, nothing precise is known about them till the 17th and 18th centuries, when they were raiding Fezzan and southwards to Bornū [*q.v.*]. The Tubu in Kufra were largely displaced *ca.* 1730 by invading Zāwiya and Ḥassūna Arabs from Tripolitania. In 1842 the Tubu in Tibesti had to defend themselves against the Arab Awlād Sulaymān, who had been expelled from Fezzan by the Ottomans and who now migrated to the region north of Kanem. The expansion of the Sanūsiyya southwards along the Benghazi-Kufra-Wādāy trade route took them through the heartlands of the Tubu, and a centre of the order was established 1899-1902 at Kūrū/Gourou in Borkou. The Sanūsiyya were the religious driving-power behind Tubu resistance to the French in Chad, who did not finally establish their control over the Tubu till 1920. For most of French rule (sc. until 1960), the Tubu of the far north of Chad remained under military rule. The Derde of the Tubu and other traditional rulers like the sultan of Wādāy co-operated with the colonial power and retained, or even increased, their political and religious authority. But the proclamation of the Republic of Chad in 1960 upset the balance of power within the country, one previously regulated by the French. It now tipped slightly in favour of the Bantu peoples of the south, whilst more radically-minded Muslims educated outside the country have been less sympathetic to the maintenance of traditional rulers' powers. For the ensuing conflicts and instability affecting the northern part of Chad, see ČAD, in Suppl.

(G. YVER-[ED.])

3. Language.

Tubu is the name proposed by Nachtigal and introduced by J. Lukas for the language called usually in the French tradition (and also by J. Greenberg) Téda. It is spoken in the Republic of Chad and in adjacent parts of Nigeria and the Niger Republic (in Niger, also in the Kawar oasis, Chigaa group, and in the north, Brawia group) and in Libya. There is no general name for either the people or the language, which is divided into two main groups of dialects, those of the south and those of the north. In the related Kanuri language, the name Tu-bu ("people of Tibesti, since *-bu* is the pl. of the agent noun) designates only tribes speaking the southern dialect. The name Dazza (*dazza-ga* "the Dazza language") used for the southern dialects (e.g. by Le Coeur) is incorrect, insofar as it is used in the south to designate only a part of

the southern tribes, such as the Kaširda, Dugorda, Medeliya, Kumasálliya, etc.; cf. Lukas, 1953, p. XV. The name Tuda (vars. Téda, Toda) which also means "people of the Tu or Tibesti", in which the Tubu suffix *-da* is used to make an ethonym (cf. Lukas, *op. cit.*, 41), is only used for the northern group of dialects. The Arabs call certain Tubu tribes Gorʾān (in French usage, one sometimes finds "Goranes") and use the name "Amma (people of) Borkwa" for the Tubu living in Borku. In the 1930s it was estimated that there were *ca.* 200,000 Tubu speakers. Amongst the southern dialects one meets e.g. the dialect of Kašir-da of the Dazza group and that of Karada/Karra (Kre-da).

Certain religious and historical texts were written down in Arabic script. As everywhere, there exists a literature orally transmitted.

Tubu—or, more correctly, Tubu-Tuda—is amongst those African languages which have not yet been properly studied. Heinrich Barth gathered the first lexical and grammatical material in 1862, followed soon afterwards by Gustav Nachtigal, whose manuscript material was used by Johannes Lukas (1953). Gerhard Rohlfs gathered a certain number of words of the northern dialect; Henri Carbou published a dictionary and a certain number of phrases (1912); and P. Jourdan gave the first concise grammatical analysis of the language plus some texts (1935). The basic grammar is that of Lukas (1953), who studied the languages in the field in 1932-4 in the Bornu province of Nigeria with informants speaking the southern dialects; he also published a small collection of texts (1953-5). In 1950 Ch. Le Coeur published his *Dictionnaire* and in 1956 Ch. and M. Le Coeur produced their *Grammaire et textes Teda-Daza* on the northern dialects, a basic work.

Tone has a distinctive function in Tubu: *ámmà* "man" vs. *ámmá* "mankind", *búr* "to construct", *bùr* "to jump"; according to Le Coeur, the tonal system is simplified in the northern dialects.

Noun pls. are most often formed with *-a*, e.g. *bi* "land", pl. *bía*. Of cases, there are nom. in *-yi*, *-ye*, acc. in *-ga*, *-nga*, gen. in *-u*, *-ū*, *-o*, and dative in *-do*, *-du*, *-ru*; the case endings are originally postpositions.

The pronouns are:

S. 1. tobre, tare, tane, taní
2. nubre, nore, inta, enda, əndа, ənta
3. mure, mere, sígən, šigəni

Pl. 1. tobra, tara, tentá, tantái
2. nubra, nara, nentá, nentái
3. mura, mara, səgənta

The numerals in the Kaširda dialect are 1. *turòn*, 2. *ču*, 3. *akkuzú*, *aguzú*, 4. *tuzzṓ* (< 1+3), 5. *fṓú*, 6. *dessí*, 7. *túdusū* (< 4+3), 8. *wússū* (< 5+3), 9. *yisí* (cf. 6.), 10, *múrdem*, *múra*.

There are three conjugations: (a) with prefixes: 1. sing./pl. *ti*, 2. sing./pl. *ni*, 3. ø; (b) with suffixes and prefixes: 1. sing./pl. *-ər*, 2. sing./pl. *em*, 3. sing./pl. *ye-*; and (c) a periphrastic conjugation with an auxiliary verb *n* "to speak, think, be", belonging to the second conjugation treated as a suffix. The aorist has no affix: sing. 1. *ti-re* "I arrive", 2. *ni-re*, 3. *lli*, pl. 1. *ti-r-o*. 2. *ni-r-o*, 3. *ll-o*, *lli-du*. The perfect has the desinence *-de* (northern dialects) and *-d* (southern dialects): *la-n-ər-de* "I have seen", 2. *la-n-əm-me*, 3. *la-ye-n-ne*, etc. The progressive has *-i*, *-e* in the north and *-gi* in the south: 1. sing. *la-n-r-ę*, 2. *la-n-i*, 3. *la-yi-n-i*, etc.

Negative forms of the verb are *-o* in the north and *-ni*, *-ne* in the south, e.g. *la-n-ro* "I have not seen".

The prefix *t-/d-* forms passive and pronominal derived verbs, and *su-* forms causative verbs.

The normal word order for syntactic groups is SOV. Already in 1853 Barth discovered not only the close relationship of Tuda and Tubu but also a relationship between Tubu-Tuda and Kanuri. Reinisch, who later became a specially eminent scholar in the field of Cushitic languages, published in 1873 a study attempting to prove the monogenesis of the languages of the world, beginning from, amongst others, Tubu-Tuda. The thesis is unsustainable, but many scholars up to the present have investigated as a hypothesis genetic links between the Saharan languages and the Hamito-Semitic ones (e.g. Petrácek). In comparison with Kanuri, Tubu-Tuda retains certain archaisms, including the third conjugation with pronominal prefixes which links up with Béri/Zaghawa, e.g. Tuda 1. pl. *ti-n*, 2. pl. *-ni* and Zaghawa 1. pl. *te-*, 2. pl. *le* < **ne*, but it also shows some innovations, *inter alia*, in regard to the consonants. Together with Béri (Zaghawa), Berti and Beli (Bideyat), Tubu-Tuda and Kanuri form the language family earlier called "eastern Saharan languages" (Lukas 1939, i, 1951-2), later changed to "central Saharan" (Greenberg 1954). In regard to contacts with Arabic and Berber, borrowings from these are relatively few.

(A. Zaborski)

TUDJĪB, Banū, an Arab family, several members of which achieved distinction in Muslim Spain both under the Umayyads and in the period of the *Mulūk al-Ṭawāʾif* [*q.v.*], when two *taifas* led by them emerged, the Banū Hāshim of Saragossa and the Banū Ṣumādiḥ of Almeria.

Ibn Ḥazm in his *Djamhara* classifies the tribe of Tudjīb as part of Ḳaḥṭān or Yemen, established since the Arab conquest in the regions of Saragossa, Calatayud and Daroca, i.e. in the north-east of the peninsula, the Ebro valley, the "Upper Frontier" (*al-thaghr al-aʿlā* [see THUGHŪR. 2.]. The *nisba* al-Tudjībī survived the reconquista amongst the Mudéjares; thus in Arabic legal documents of the 12th century from Huesca or its district (Huesca had been reconquered in 491/1096 [see WASHḲA]), a good number of the Muslim witnesses have this *nisba.*

It seems that this northeastern region, with its capital at Saragossa, was largely settled by Arabs accounted Yemeni in genealogy, from the time when the leader of the opposition against the Syrian Ḳaysī Baldj [*q.v.*] in 124/742 was a certain ʿAbd al-Raḥmān b. ʿAlḳama of Lakhm. It was a region held only with difficulty by the *amīrs* in Cordova, one frequently in rebellion, with the Yemeni chiefs at times intriguing with the Franks, as when Charlemagne was tempted to send an expedition against Saragossa in 778. From this same century members of the Banū Tudjīb are mentioned. According to Ibn Ḥazm, the Tudjībids who assumed power in the Upper March from the 4th/10th century onwards issued from a certain ʿAbd Allāh b. al-Muhādjir, whose brother had entered Spain with Mūsā b. Nuṣayr in 93/712; and before this century, another branch of Tudjībids, the Banū Salama, had for a while held local power at Huesca, until a rising provoked by their cruelties had in 182/798 put an end to their rule.

The Arab preponderance in the March came largely to an end at the close of the 8th century, when *muwallad* families like the Banū Ḳasī [*q.v.*], originally from the eastern part of the March, around Arnedo and Tudela, rose to prominence, Mūsā b. Mūsā b. Ḳasī being recognised as governor of Saragossa in 237/852. The *amīrs* in Cordova never ceased to intervene in the region, supporting faithful governors, trying to reassume control of various towns or to attack the Christians, but the history of the region during the 3rd/9th century is one of confusion, local revolts, changes of governors, etc., probably with important lines of the Arabs continuing even though *muwallads* held the centre stage there. It may possibly be that the central government wished to rely more on pure Arab support against the *muwallad* strength, for in the 870s the *amīr* Muḥammad attached the Banū Tudjīb to his service (*iṣṭanaʿa*), confirming their chief, ʿAbd al-Raḥmān b. ʿAbd al-ʿAzīz, over his own *ḳawm*, restoring to him several places in the March, notably Daroca and Calatayud, and entrusting to them the task of fighting for the central power against a payment of 100 dīnārs for each campaign. This alliance seems to have achieved the eclipse of the Banū Ḳasī, for after 276/889-90 the Tudjībids held the governorship of Saragossa, until 312/924 under ʿAbd al-Raḥmān's son Abū Yaḥyā Muḥammad, called al-Aʿwar or al-Anḳar.

The family's power was now solidly enough established for it to survive the centralising policies of ʿAbd al-Raḥmān III, who launched expeditions of 323/935 and 325/937 with the aim of asserting direct central power over Saragossa and reducing the Tudjībids to obedience, especially as their head had recently allied with the Christian monarch of Leon, Ramiro II. The two Tudjībids ruling in Daroca and Calatayud were executed, but some fifty other members of the family were amnestied; Muḥammad b. Hāshim in Saragossa submitted and was allowed to retain his governorship on the favourable conditions that he broke off relations with the Christians, remained faithful to the caliph and paid tribute. A *ḳāḍī* of the town, Maʿn b. Muḥammad, who was a Tudjībid, is mentioned, and may have been a distant connection of the Banū Ṣumādiḥ branch, important in the 5th/11th century and amongst whom the unusual name Maʿn was common.

Shortly afterwards, Muḥammad b. Hāshim was captured temporarily by the forces of Leon at their victory of Simancas in 327/939, and after this ʿAbd al-Raḥmān ceased to intervene personally in the March, leaving it to the great aristocratic military families there and conceding a considerable degree of autonomy to them. Amongst these families were the two branches of the Tudjībids at Saragossa and Daroca, Muḥammad b. Hāshim having received, before his death in 338/950, the titles of *wazīr* and *ḳāʾid* of the Upper March. Under al-Ḥakam II, the Tudjībids appear frequently in the pages of the extant part of Ibn Ḥayyān's *Muḳtabis*, especially detailed on life at the court and in the central government for the years 360-5/971-5; it seems that the caliph, not wholly sure of their fidelity, tried to divert them into posts at court or into participation in the expeditions to the Maghrib.

It is difficult to follow the fortunes of the Tudjībids in the time of Ibn Abī ʿĀmir. In the latter's struggle of 369/980 with Ghālib, governor in Medinaceli, Tudjībids were found on both sides. One member of the family, Maʿn b. ʿAbd al-ʿAzīz, called *fāris al-ʿArab* "champion of the Arabs", was especially close to al-Manṣūr, who nevertheless eventually had him executed. The by now very numerous Tudjībids apparently kept their control of the March, although details of who filled which governorship there are lacking. They even extended their power, so that in 396/1006, a Tudjībid, Muḥammad b. Aḥmad b. Ṣumādiḥ, of a branch different from the main one, had managed to supplant at Huesca the *muwallad* Banū Shabrīṭ, who had held it for most of the 4th/10th century.

The same obscurity surrounds the circumstances of the beginnings of the Tudjībid *taifa* at Saragossa during the final crisis of the Umayyad caliphate, except that it was the branch which went back to Yūnus b. ʿAbd al-ʿAzīz of Daroca, executed by the caliph in 325/937, which now came to power in the Ebro valley. This last had been one of al-Manṣūr's generals latterly and had been much involved in the intrigues and fighting of the various claimants and pretenders in the last days of the caliphate, possibly receiving from the first Ḥammūdid caliph ʿAlī al-Nāṣir (405-8/1015-18) the titles and honorifics of *al-Ḥādjib*, *al-Manṣūr* and *Dhu 'l-Riyāsatayn*. He established a strong power on the March, expelling from Huesca Muḥammad b. Ṣumādiḥ, who retired to Valencia and whose son Maʿn founded a little later a *taifa* at Almeria [see ṢUMĀDIḤ, BANŪ, in Suppl.]. He surrounded himself with famous secretaries and nominated governors for secondary towns (including Sulaymān b. Hūd, future founder of the Banū Hūd of Saragossa [see HŪDIDS], now found first at Tudela and then at Lerida). He felt the pressure of Sancho the Great of Navarre, and it was probably this which led to an alliance with the Counts of Barcelona and with Castile, sealed by a matrimonial alliance between the two dynasties, apparently celebrated at Saragossa under the presidency of the Tudjībid *amīr.*

Al-Mundhir I's son Yaḥyā succeeded him briefly 414-20/1023-9, also with the title of *Ḥādjib* and the honorific of al-Muẓaffar, on the ʿĀmirid model, and was the first *taifa* ruler (apart from the Ḥammūdids) to mint his own coins, with his simple *ism* and title of *Ḥādjib*, and recognising as suzerains such figures

as the Ḥammūdid al-Ḳāsim al-Ma'mūn and the Umayyad caliph Hishām III al-Muʿtadd, established in Cordova in 420/1029. Yaḥyā's son and successor al-Mundhir II (420-30/1029-39) also minted dīnārs and fractional dīnārs, with his *laḳab* "of delegation", Muʿizz al-Dawla, and acknowledging Hishām III, to whom he gave protection at Lerida after his expulsion from Cordova in 422/1031 till his death there in 428/1036 and who served as a legitimising authority for his rule. Hishām's disappearance meant that a dirham of 430/1038-9 has al-Mundhir's own name plus a *laḳab* of caliphal resonance, al-Manṣūr.

These changes certainly had a political significance. In that same year, al-Mundhir II was assassinated by another Tudjībid, a military commander called ʿAbd Allāh b. al-Ḥakam, on the pretext that al-Mundhir had refused to recognise the "false caliph" Hishām II who had been proclaimed at Seville by the ʿAbbādids [*q.v.*] in 427/1035 and who had been theoretically recognised by various other heads of *taifas*. This ʿAbd Allāh belonged to the branch of the governors of Saragossa in the 4th/10th century, Muḥammad al-Anḳar, etc., with a common ancestor of the two lines in the later 3rd/9th century. Leaving aside the question of the recognition of the "false" Umayyad caliph of Seville, the incident seems to point to internal rivalries within the Tudjībid family, at the side of their tribal cohesion; the *Bayān al-mughrib* states that other Tudjībids had reproached al-Mundhir II for being the son of a Berber mother, from the lineage of the Dhu 'l-Nūnids of Toledo, leading one to think that the Tudjībids remained generally endogamous and considered Yaḥyā's marriage as a misalliance.

ʿAbd Allāh b. al-Ḥakam, in line with his apparent "political programme", minted money (dirham of 430/1039) in the name of the Umayyad caliphal claimant Hishām al-Mu'ayyad, with his own name appearing merely as *al-Ḥādjib* ʿAbd Allāh. But the murder of his predecessor seems to have provoked a reaction and even a rising against him in Saragossa. The *amīr* of Toledo, Ismāʿīl b. Dhi 'l-Nūn, maternal uncle of the dead man, and Sulaymān b. Hūd, a commander, also of Yemeni lineage and one who appears to have been the most influential person in the amīrate, marched on Saragossa, and after a twenty-eight days' reign, the last Tudjībid had to flee for refuge in the fortress of Rueda de Jalón, and at an uncertain date, probably in Muḥarram 431/October 1039, the second *taifa* dynasty at Saragossa began, that of the Banū Hūd.

The subsequent fate of ʿAbd Allāh is unknown, although the Banū Ṣumādiḥ subsisted in Almeria, and it may be that certain members of the family from Saragossa reached the Almeria court. According to the *Bayān*, when the first ruler there, Maʿn b. Ṣumādiḥ, died in 443/1052, "his cousins the Tudjībids" replaced him by his son Muḥammad. We have no information on the Tudjībid family members in the Ebro basin, although as we have seem, the *nisba* survived there widely. Also, at least one other family of prominence, the Banū Abī Dirham, *ḳāḍīs* at Huesca for almost the whole of the 5th/11th century, claimed membership of the Banū Tudjīb.

TUDMĪR, a *kūra* or province in the southeast of al-Andalus in the Umayyad period. The name is derived from that of Theodemir (or Theudimer), the last Visigoth governor, who delivered the province into the hands of the invading Muslim troops.

The province of Tudmīr has been identified with Aurariola, which is mentioned in the anonymous author of Ravenna (7th century), one of the eight provinces which make up the *Spanorum patria*. The capital of the province appears to have been Orihuela [see URYŪLA], where Theodemir lived in earlier times. However, at the beginning of the 3rd/9th century, during the reign of ʿAbd al-Raḥmān II, it passed to Murcia which was itself founded in 210/825 (R. Pockington, *Precisiones acerca de la fecha de la fundación de Murcia*, in *Hom. Prof. Torres Fontes*, Murcia 1987, 1327-32). With the fall of the Umayyad state the region lost the "official" name of Tudmīr and adopted the name of Murcia, its principal town. Nevertheless, the name Tudmīr seems to have been used occasionally to refer to the region as a geographical entity.

In this regard, much light can be found from evidence produced from biographical dictionaries. In the Umayyad period there was a preference for the name of the province rather than that of the town to indicate a place of origin for the individuals cited; see e.g. the *Akhbār al-fuḳahā'* of Ibn al-Ḥārith (d. 361/971), where we find Tudmīr three times, but never Murcia; or again the *Ta'rīkh* of Ibn al-Faraḍī (d. 403/1012), where Tudmīr appears twenty times and Murcia twice; in the *Takmila* of Ibn al-Abbār (d. 658/1260) the name Tudmīr had almost completely disappeared (only seven people are reported to have come from Tudmīr), though by contrast Murcia is mentioned more than 110 times, this name being used not only to designate the town but also the region or the district.

Very little is known for certain about the character of Theodemir. Attempts have been made to identify him with a certain Theodemir who is mentioned in the Acts of the Sixteenth Council of Toledo, but it is impossible to know whether that is the same person. Elsewhere, in a passage in the *Crónica mozárabe del 754*, he is reputed to have put to flight a Byzantine expedition during the joint reign of Egica and Witiza (700-2). However, this particular passage, which also contains an allusion to the treaty with ʿAbd al-ʿAzīz and other interesting information, appears to be an interpolation, and this throws its reliability into question. Finally, an Arab source like Ibn Ḥabīb (ed. J. Aguadé, 137) presents him as the lieutenant of the last Visigothic king, Roderic, mentioning him in connection with the Muslim landing in Spain.

The only fact which is historically reliable is that Theodemir at the time of the Muslim conquest was the governor of a region to which he was to give his name, and that he surrendered to the invading troops by concluding a treaty with them. This pact, concerning whose terms see the bibliography below, has been preserved in four different versions in Arab sources, as well as in translation in a Spanish source. They all agree on the fact that the Pact of Tudmīr was concluded in the month of Radjab 94/April 713, between Theodemir and ʿAbd al-ʿAzīz, the son of Mūsā b. Nuṣayr [*q.v.*].

Since the historicity of this text is generally acknowledged, no-one seems to have noticed that the Arab chroniclers provided another account of the event which in no way confirms the authenticity of the Pact of Tudmīr. In fact, there are in existence two different versions of this affair. The first probably originated in the work of Aḥmad al-Rāzī (d. 344/955) and is reproduced in numerous Arab chronicles such as *Bayān* of Ibn ʿIdhārī, the *Kāmil* of Ibn al-Athīr, the *Nafḥ* of al-Maḳḳarī, the *Akhbār madjmūʿa* or the fragment attributed to Ibn Abi 'l-Fayyāḍ; it is even in Christian sources like the *De rebus Hispanie* of Jiménez de Rada and the *Crónica de 1344* (which recapitulates passages of the *Crónica del Moro Rasis*). This version is the most detailed and consistently indicates that the conquest of Tudmīr was led by a contingent of the army which had disembarked with Ṭāriḳ [*q.v.*] in 92/711, and that after having dislodged Theodemir in the open country they surrounded him in Orihuela, where he ended up surrendering on reputedly favourable terms. The second version, attributed to Muʿāwiya b. Hishām al-Shabānisī (4th/10th century) and transmitted by Ibn Ḥayyān (d. 469/1076 [*q.v.*]), identifies the conqueror of Tudmīr as a son of Mūsā b. Nuṣayr by the name of ʿAbd al-Aʿlā, and not ʿAbd al-ʿAzīz (Ibn ʿAskar, in J. Vallvé, *Une fuente importante de la historia de al-Andalus*, in *And.*, xxxi [1966], 244-5; Ibn al-Khaṭīb, *Iḥāṭa*, i, 100; al-Maḳḳarī, *Nafḥ*, i, 275).

Within an historical narrative the Pact of Tudmīr is only mentioned twice. It occurs in the *Tarṣīʿ* of al-ʿUdhrī (4, tr. E. Molina López, *La cora de Tudmīr según al-ʿUdrī (s. iv)*, in *CHI*, iii [1972], 53-60), and in the *Crónica de 1344* (153-4). In both these instances it seems clear that the text of the Pact has been interpolated *a posteriori* in favour of the use of a pre-existing narrative, which not only did not contain this passage but which also set out the facts in a form which is incompatible with the established facts of the Pact: in the *Tarṣīʿ*, and also in the *Crónica*, it is a question of the narrative of Aḥmad al-Rāzī, clumsily modified with the deceptive intention of making it accommodate the terms of the Pact. The difference between al-ʿUdhrī and the *Crónica de 1344* lies in the place chosen for the interpolation. Whereas the geographer of Almeria kept the chapter given over to the conquest of Tudmīr by the forces of Ṭāriḳ, the translators of the *Crónica del Moro Rasis*, from which the *Crónica de 1344* was incontestably taken, preferred the passage where ʿAbd al-ʿAzīz appeared for the first time, when he was sent by his father from Mérida to reconquer Seville. However, as already observed, the modifications made were not very successful in that al-ʿUdhrī, the only one to reproduce the paragraph about the conquest of Tudmīr, forgot to suppress the sentence of al-Rāzī. In this he indicated that after the capture of Orihuela, the Muslims had written to Ṭāriḳ to give him an account of the victory without realising that ʿAbd al-ʿAzīz would logically have had to write to his father, who at that time was in Andalusia, where he was thought to have concluded the Pact. The *Crónica de 1344*, on the other hand, adopted the entire narration of al-Rāzī on the conquest of the Iberian peninsula by the Muslims, without realising that the region of Tudmīr, thanks to the interpolation, appeared to have been conquered twice, the first time by the forces of Ṭāriḳ and the second time by ʿAbd al-ʿAzīz b. Mūsā, who suddenly reappears on the scene having been sent by his father to Seville, fighting against the people of Orihuela. Whether or not it is authentic it is clear that the Pact of Tudmīr is a document which does not completely tally with what the Andalusian chroniclers relate about the Muslim conquest.

As for Theodemir, we see him subsequently marrying off his daughter to a client of the Umayyads,

ʿAbd al-Djabbār b. Khaṭṭāb, who came to Andalusia with the troops of Baldj in 123/741. He in turn, after living for a time in Cordova, moved to Tudmīr, where he married the previously-mentioned daughter of Theodemir. His descendants, the Banū Khaṭṭāb, formed one of the richest and most important families of the region, but it is not certain that the eponym Khaṭṭāb b. ʿAbd al-Djabbār was the outcome of the marriage of his father with the daughter of Theodemir (L. Molina, *Los Banū Jaṭṭāb y los Banū Abī Ŷamra (siglos ii-viii/viii-xiv)*, in *EOBA*, v [1992], 289-307). For the general history of the region, see MURSIYA.

(L. MOLINA)

ṬŪFĀN [see NŪḤ].

TUFANG [see BĀRŪD. v.].

ṬUFAYL B. ʿAWF, or b. Kaʿb, b. Khalaf, Abū Ḳurrān, al-Ghanawī (Ghanī being a clan of Ḳays ʿAylān), also designated al-Muḥabbir and Ṭufayl al-Khayl on account of the prominence which he accorded the horse in his descriptive verses, pre-Islamic poet, apparently of a middle Djāhilī floruit, and of an age with Aws b. Ḥadjar. He often vies with this latter for originary status of the "inter-tribal chain of *ruwāt*" (for which designation, see J.E. Montgomery, *The deserted encampment in ancient Arabic poetry: a nexus of topical comparisons*, in *JSS*, xl [1995], 283-316), which stretched in an unbroken line of succession to at least Kuthayyir ʿAzza, if not al-Farazdaḳ [*q.vv.*]. According to Sezgin, *GAS*, ii, 210, on the authority of Abu 'l-Faradj in the *Aghānī*, his death is to be dated to after *ca.* A.D. 608, as indicated by a threnody for Huraym b. Sinān. Krenkow (*Tufail al-Ganawī*, in *JRAS*, [1907], 816-20) established a connection between a *bā'iyya* by the *mukhadram* [*q.v.*] Zayd al-Khayl (chieftain of a clan of Ṭayyi' [*q.v.*]), in celebration of a victorious raid inflicted upon the ʿĀmir [*q.v.*], whose confederates the Ghanī were, and the splendid *bā'iyya* of 77 verses which Ṭufayl dedicated to a punitive raid on the Ṭayyi'. This flyting is the first *ḳaṣīda* [*q.v.*] in al-Akhfash al-Aṣghar's anthology *Kitāb al-Ikhtiyārayn* (ed. Fakhr al-Dīn Ḳabāwa, Damascus 1974) [see MUKHTĀRĀT. i]. It is this version of the poem (it contains three more verses than the version recorded in Ṭufayl's *Dīwān*, ed. Muḥammad ʿAbd al-Ḳādir Aḥmad, Beirut 1968) which Krenkow (*op. cit.*) mistakenly identified as "a poem from the Aṣmaʿiyyāt in the recension and with the comments of Ibn al-Sikkīt", a mistake which persists in his incomplete edition and translation of the *dīwān* (*The poems of Ṭufail ibn ʿAuf al-Ghanawī and aṭ-Ṭirrimāḥ ibn Ḥakīm aṭ-Ṭā'yī*, London 1927).

Ṭufayl's surviving works are occasional, predominantly celebrating the bellicose achievements of his tribe, especially those inflicted on the Ṭayyi'. Their occasional nature attests to the perseverance, in his poems and those of al-Nābigha al-Djaʿdī [*q.v.*], of a tradition in contradistinction to the camel cult which dominates much of late Djāhilī verse, a tradition persisting in the celebration of the horse as aristocratic and cultural emblem.

Bibliography: Given in the article.

(J.E. MONTGOMERY)

ṬUFAYLĪ (A.), in mediaeval Arabic literature an uninvited guest and/or a social parasite, whose behaviour constitutes *taṭfīl*.

The *ṭufaylī* was one of the most popular character types in the Arabic *adab* genre. This genre, designed to be at once informative and entertaining, possessed a distinctive discourse in which verse and prose co-existed with materials ranging from the legal to the philosophical, but where the anecdote reigned supreme. *Adab* works extended from the monographic (dealing with one subject or character type) to the encyclopaedic (with various subjects and characters), through the intermediate (with one character trait displayed in a variety of social types).

The *ṭufaylī* appears in all these *adab* texts, taking his place alongside other character types, such as misers and wise fools. In the encyclopaedic and intermediate *adab* collections, which tend to be organised in a descending hierarchical social order, these types appear at the end of the works with other marginal persons like women.

The monographic books, dedicated as they are to one character type, in this case the *ṭufaylī*, are more comprehensive in their vision. The classic text, that of the polymath al-Khaṭīb al-Baghdādī (d. 463/1071 [*q.v.*]), treats the reader to a variety of materials describing the *ṭufaylī*. This view is confirmed by the encyclopaedic volumes as well as by *al-Ḳawl al-nabīl bi-dhikr al-taṭfīl* of al-Aḳfahsī (d. 808/1405).

Taṭfīl in the mediaeval Arab-Islamic imagination was broadly-based. In the anecdotal literature, it could cover a variety of actions, with the *ṭufaylī* being someone who abused a situation of hospitality. The actions could range from coming uninvited to social functions, to consuming more than one's share of food or drink, or even to overstaying one's welcome. This more social component of the act combines with a psychological element manifested in the *ṭufaylī*'s obsessive attachment to food.

The anecdotal data is enriched by lexicographical information. In addition to the derivation of the word (either a *nisba* referring to Ṭufayl, a man of Kūfa who attended receptions without an invitation, or as a noun derived from the verbal root *ṭ-f-l*), the lexicographical materials make a distinction between someone who comes in uninvited while people are eating (*wārish*) and one who comes in uninvited while people are drinking (*wāghil*). Other terms define the act of taking out food or treat of greediness or overeating. These terms appear to be restricted to the

lexicographical domain, while the generic term of *ṭufaylī* covers all these acts in the anecdotal literature. Like many other *adab* categories, *taṭfīl* features a prototypical character who embodies the values inherent in the category: Bunān. Bunān serves not only as a hero of anecdotes but as an eloquent spokesman, justifying *taṭfīl* and giving advice to the potential *ṭufaylī*.

But an uninvited guest could find comfort in the fact that the Prophet Muḥammad himself brought uninvited guests along with him to functions to which he had been invited. *Ḥadīth*s mentioning this endow *taṭfīl* with a morally ambiguous flavour, itself tied to the high value of hospitality in Arab culture. This moral ambiguity permits the *ṭufaylī* to be a ludic character who can play with, among others, legal and theological materials. The wit inherent in such games brings the *ṭufaylī* close to many of his textual neighbours in classical Arabic literature.

(Fedwa Malti-Douglas)

AL-ṬUFAYLĪ, Abū Saʿīd ʿUthmān, called Ibn Darrādj, a client of the Yemeni tribe of Kinda, a fantastic character, something of a poet, who lived in the time of the caliph al-Maʾmūn (early 3rd/9th century).

He was one of various people with this nickname of al-Ṭufayl(ī) "parasite, intruder at a feast", the first said to have been a Kūfan called Ṭufayl al-ʿArāʾis (or al-Aʿrās), from the Banū ʿAbd Allāh of Ghaṭafān, who lived in Umayyad times [see ṬUFAYLĪ]. Like others of this class, Ibn Darrādj was a shameless intruder at feasts to which he had not been invited; and as an *adīb* and poet of some talent, he was numbered amongst the wittiest of the parasites. In the notice on him in the *Aghānī* (Dār al-Kutub, xvi, 251-3), Ahu 'l-Faradj al-Iṣfahānī gives several amusing anecdotes about this amusing character, even buffoon. Concerning how he would act if he were forbidden to enter a house where a feast was taking place, he replied, "I would kick up such a noise with my lamentations that the master of the house would see this as an evil augury and, in the end, let me in". He related that, one day, in the company of his son, he met a funeral cortège in which was a woman, weeping in these terms, "They are taking him to a place where he will have neither bed, nor carpet, nor hospitality, nor bed covering, nor bread and wine". His son said to him, "Father, they must be leading this cortège to our own house!".

Ibn Darrādj was clearly proud of his role as a *ṭufaylī*, since two verses lauding *taṭfīl* (the status of parasite) are attributed to him:

"O joy of being a parasite, may you last for ever, become rooted within me and never leave me,

For it is you which fulfils my wishes and consoles me in my cares".

Bibliography: See also *LʿA*, s.v. *ṭ-f-l*; Djāḥiẓ, *Bayān*, Cairo 1348/1949, iii, 221; Fouad Boustany, *Dāʾirat al-maʿārif*, iii, 57. (A. Ben Abdesselem)

TUFFĀḤ (A.) is the apple, *Pyrus malus, Rosaceae.* It descends from the asiatic Pyrus species and has spread in numerous varieties and cultivated forms, which have their centre of frequency in the Caucasus and in Turkestan. Most authors name the Syrian apples as the best ones, e.g. al-Thaʿālibī, *Laṭāʾif*, ed. de Jong, 95: "To Syria's particularities belong the apples. They are proverbial because of their beauty and scent. Every year 3,000 crates of these apples are delivered to the caliphs. It is said that those of ʿIrāḳ have a stronger scent than those of Syria"; and *ibid.*, 132: "The widely-travelled Abū Dulaf al-Khazradjī declares in a disputation that he could not wish for himself anything better than Syrian apples. The caliph al-Maʾmūn is said to have declared: 'The apple combines gleaming yellow, golden red and silvery white. The senses enjoy it: the eye because of its beauty, the olfactory organ because of its scent (*ʿarf*), the sense of taste because of its goût'" (al-Ḳazwīnī, *ʿAdjāʾib*, i, 250, ll. 11-13). Numerous poetic verses on the apple are given by al-Nuwayrī, *Nihāya*, xi, 162-7.

The next-best varieties, according to the geographers, were *al-tuffāḥ al-iṣfahānī, al-ḳūfānī* (from Bayt Ḳūfā near Damascus, and thus a variety of the Syrian apple), then *al-malaṭī, al-miskī, al-dāmānī* (from Dāmān in Mesopotamia). For these names, see de Goeje's glossary in *BGA*, iv, 197. The last-mentioned variety is also praised hy Yāḳūt: it is said to be proverbial because of its redness. For the excellent culture of apples in Persia, see Schwarz, *Iran*, 879-80, where a long list of places of origin is given. Because of their long storage life, these apples could be transported over long distances. The fact that they were given as valuable presents in Baghdād is also an indication of their great value. It is said that, at Iṣṭakhr, apples were grown whose one half had a sweet taste, the other a sour one.

In Egypt, on the other hand, the indigenous apples were said to be small and bad, and to have been but little cultivated (ʿAbd al-Laṭīf, *Ifāda*, ed. de Sacy, Paris 1810, 36, 117). In former days, it must have been as it is now: the Egyptian apples ripen early and quickly and therefore are not tasty (M. Schnehel, *Die Landwirtschaft im hellenistischen Ägypten*, Munich 1925, 314). It seems, however, that the cultivation of apples in Egypt was quite important in the early Islamic period, e.g. in the monastery of St. Antony, see Abū Ṣāliḥ al-Armanī, *The churches and monasteries of Egypt*, tr. Evetts, Oxford 1895, 160; for references from Arabic papyri, see A. Grohmann, in *ArO*, xiv, 213. In the *funduḳ Dār al-Tuffāḥ* of the fruit market in Cairo, the imported apples were stored, auctioned and resold (al-Maḳrīzī, *Khiṭaṭ*, Cairo 1270/1853-4, ii, 89, 102-3). The list in Dozy, *Suppl.*, i, 118, shows that the word *tuffāḥ* can also indicate quite different plants.

In pharmacology, it was mainly the skin that was used. The carrier of the scent of ripe apples is the ethereal oil in the skins. The leaves, blossoms and twigs are astringent, the unripe fruit more so than the ripe ones. The juice squeezed from the leaves is useful against poisons, while the blossoms strengthen the brains "in a miraculous way". Sābūr b. Sahl, *al-Aḳrābādhīn al-ṣaghīr*, ed. O. Kahl, Leiden 1994, describes some preparations: fruit purée of apples (*djawārish al-tuffāḥ*), no. 255, apple juice (*sharab al-tuffāḥ*), no. 318, and apple sauce (*rubb al-tuffāḥ*), no. 327.

(A. Dietrich)

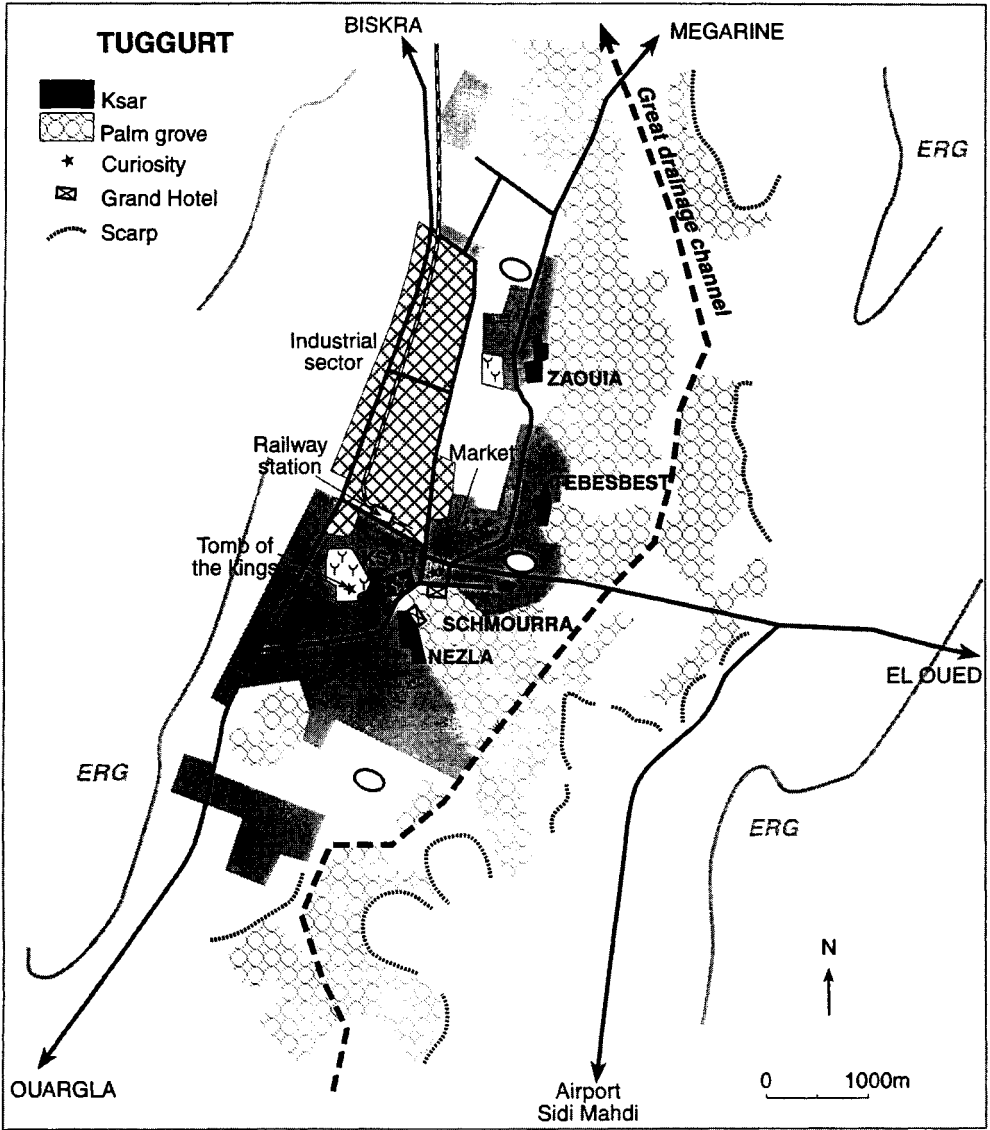
AL-ṬŪFĪ, NADJM AL-DĪN ABU 'L-RABĪʿ SULAYMĀN B. ʿABD AL-ḲAWĪ B. ʿAbd al-Karīm al-Ṣarṣarī al-Baghdādī (b. 675/1276-77 [?], d. Radjab 716/Sept.-Oct. 1316), Ḥanbalī legal scholar, especially in *uṣūl*, known in modern times particularly for his *maṣlaḥa* (public interest) theory. The vocalisation "al-Ṭawfī", used in Brockelmann and a number of other Western sources, is incorrect (see Ibn Ḥadjar, *Durar*, ii, 249).

He was born in an otherwise unattested town Ṭūfā, near Ṣarṣar, which in turn is not far from Baghdād. He had his first education in grammar and Ḥanbalī *fiḳh* in his home town and in Ṣarṣar. In 691/1282-3 he moved to Baghdād, where he continued his study of grammar and *fiḳh* and also attended courses in *ḥadīth* and other fields, including logic. After an interlude in Damascus, where he arrived in 704/1304-5 and studied with *inter alios* Ibn Taymiyya and the *ḥadīth* scholar al-Mizzī [*q.vv.*], he moved on to Cairo in 705/1305-6 (Ibn Radjab, *Dhayl*, ii, 367; the date 707/1307-8, given by Ibn Maktūm *apud* Taḳī al-Dīn al-Fāsī, *Muntakhab*, 59, is incorrect), where he studied *ḥadīth* with ʿAbd al-Muʾmin b. Khalaf (d. 705/1306 [see AL-DIMYĀṬĪ]), law with the Ḥanbalī *ḳāḍi 'l-ḳuḍāt* Saʿd al-Dīn al-Ḥārithī (d. 711/1312), and grammar with Abū Ḥayyān al-Gharnāṭī (d. 745/1344 [*q.v.*]). Al-Ḥārithī appointed him as *muʿīd* in the al-Manṣūriyya and al-Nāṣiriyya *madrasas*. In Radjab 711/Nov.-Dec. 1311 he found himself in jail, as we know from some of the colophons of the ms. Berlin, Landberg 752, a collection of short treatises by al-Ṭūfī. From the biographical sources we know that he had been accused of Shīʿī leanings (*rafḍ*, including *sabb al-ṣaḥāba*) and that he had a fall-out with Saʿd al-Dīn al-Ḥārithī, although which of these two events came first is unclear in the sources. At any rate, his case was referred to the authorities and he was subjected to a series of correctional punishments, including a few days in jail. It is almost certain that these two jailings are one and the same, especially since one of the pieces he wrote in the Sidjn Raḥbat Bāb al-ʿĪd was an *ʿaḳīda*—a common procedure for persons who wanted to demonstrate their "orthodoxy". He was also banned from Cairo to Damascus, where, however, due to a invective he had written against the Damascenes, he could not go. So he went instead to Damietta and then to the town of Ḳūṣ in Upper Egypt, a strongly Christian town in his time. There he read, as al-Adfuwī tells us (*apud* Ibn Ḥadjar, *Durar*, ii, 250), most of the books available in the local libraries, and there he also wrote a number of his own books. At the end of 714/March 1315 he went on his pilgrimage, stayed in Mecca and Medina for the year and repeated the *ḥadjdj*. In Medina he sought the acquaintance of al-Sakākīnī, the foremost Imāmī scholar there (as reported by the historian of Medina, al-Maṭarī (d. 741/1340), *apud* Ibn Radjab, *Dhayl*, ii, 370). From there he travelled to the Holy Land where he died in the city of Hebron.

From among the more than fifty known works of al-Ṭūfī, nineteen have been preserved, and of these nine have been printed. The bulk of his literary output is in the field of *uṣūl al-fiḳh*, but as a polymath he wrote in many other fields, as well. His published works include: (1) *al-Bulbul fī uṣūl al-fiḳh* (Riyāḍ 1383 [1983] and reprints), a summary (*mukhtaṣar*) of *Rawḍat al-nāẓir wa-djunnat al-munāẓir* of Ibn Ḳudāma al-Maḳdisī (d. 620/1223 [*q.v.*]); (2) *Sharḥ Mukhtaṣar al-Rawḍa* (ed. ʿAbd Allāh b. ʿAbd al-Muḥsin al-Turkī, 3 vols., Beirut 1407/1987), his commentary on his own summary; (3) *K. al-Taʿyīn fī sharḥ al-Arbaʿīn* (ed. A.Ḥ.M. ʿUthmān, Beirut 1998), an excerpt of which has been published earlier several times (most recently as *Risālat al-Imām al-Ṭūfī fī taḳdīm al-maṣlaḥa fī 'l-muʿāmalāt ʿalā 'l-naṣṣ* [annot. Djamāl al-Dīn al-Ḳāsimī al-Dimashḳī, ed. Maḥmūd Abū Rayya, Cairo 1966]), because in it al-Ṭūfī uses the tradition *lā ḍarar^a wa-lā ḍirār^a* as a legal maxim from which he constructs a bold theory of utility (*maṣlaḥa mursala*) which, he says, can supersede textual proofs; (4) *ʿAlam al-djadhal fī ʿilm al-djadal* (ed. W. Heinrichs, Beirut-Wiesbaden 1408/1987), a treatise on the art of disputation, in which the largest chapter is devoted to a technical treatment of all disputations contained in the Ḳurʾān; (5) *al-Iksīr fī ʿilm al-tafsīr* (ed. ʿAbd al-Ḳādir Ḥusayn, Cairo 1977), on the various disciplines, mainly linguistic, that contribute to a correct interpretation of the Ḳurʾān; (6) *al-Intiṣārāt al-islāmiyya fī kashf shubah al-Naṣrāniyya* (ed. Aḥmad Ḥidjāzī al-Saḳḳā, as *al-Intiṣārāt al-islāmiyya fī ʿilm muḳāranat al-adyān*, Cairo 1983), a refutation of a Christian attack on the Ḳurʾān; (7) *Mawāʾid al-ḥays fī fawāʾid Imriʾ al-Ḳays* (ed. Muṣṭafā ʿUlayyān, ʿAmmān 1414/1994), an original literary critique of the poetry of Imruʾ al-Ḳays [*q.v.*]; (8) *al-Ṣaʿḳa al-ghaḍabiyya fī 'l-radd ʿalā munkiri 'l-ʿarabiyya* (ed. Muḥammad b. Khālid al-Fāḍil, Riyadh 1997); (9) *Tafsīr Suwar Ḳāf, al-Ḳiyāma, al-Nabaʾ, al-Inshiḳāḳ, al-Ṭāriḳ* (ed. ʿAlī Ḥusayn al-Bawwāb, Riyadh 1992).

The strangest feature of al-Ṭūfī's life was that he, a Ḥanbalī jurist, was accused of Shīʿī leanings. One possible explanation would be that he really was a Shīʿī and practiced Ḥanbalī jurisprudence out of *taḳiyya*. This is not very likely, for three reasons: (a) Shīʿī scholars who practiced Sunnī law usually opted for the Shāfiʿī school; (b) he is not mentioned in the Shīʿī biographical literature before al-Kh^wānsārī (d. 1313/1895) (*Rawḍāt*, iv, 89-90), who takes his information from al-Suyūṭī (*Bughya*, i, 599-600) and expresses doubts about al-Ṭūfī's Shīʿism; and (c) some of the pieces of evidence adduced to prove his *tashayyuʿ* are clearly misattributed to al-Ṭūfī (cf. Heinrichs, *Ǧadal*). It seems to be closer to the truth if we see al-Ṭūfī as someone who is pained by the rifts in the Muslim community and tries to "rethink" Islamic history in order to rectify, at least mentally, the mistakes that were made in the past. He is, after all, part of the Ḥanbalī renaissance that flourished as a religious and intellectual rallying-cry within, and against, the general climate of anxiety following the Mongol catastrophe. In his endeavour to do justice to other points of view he may have appeared too lenient to the more narrow-minded. His tendency to look for common ground is evident also from the fact that, in contradistinction to his teacher Ibn Taymiyya, he wrote a defence of logic and *kalām*, *Dafʿ al-malām ʿan ahl al-manṭiḳ wa 'l-kalām* (not extant, quoted in *al-Ishārāt al-ilāhiyya* [see below], ms. Cairo, Dār, 687 *tafsīr*, fol. 195b). His "Christian" work is also of note in this respect. He is one of the few Muslim scholars who actually read in both the Old and New Testaments and, before he embarked on the above-mentioned refutation of a Christian polemic, he wrote critical annotations on the four Gospels, *al-Taʿālīḳ ʿalā 'l-anādjīl al-arbaʿa* (mss. Istanbul, Köprülü 795, 2, and Şehit Ali 2315, 4) which also contain an appendix with notes on Isaiah, Daniel, Jeremiah, and the twelve minor prophets. Although he is obviously intent on proving the incorrectness and internal contradictoriness of the Christian religion, he does suggest in another place the strange idea that Jesus might have been an angel rather than a prophet and that it was for this reason that his followers took him for a god (*ʿAlam al-djadjal*, 154).

One of his methods to insure the legitimacy of cer-

tain intellectual pursuits is to anchor them in the Ḳur'ān. He does so in his work on disputation (see above) and also in his last great work, *al-Ishārāt al-ilāhiyya ilā 'l-mabāḥith al-uṣūliyya* (mss. Istanbul, Damad Molla 30, 2; Rağıp Paşa 23; Cairo, Dār 351 *tafsīr Taymūr*; Dār 687 *tafsīr*; Aleppo, Aḥmadiyya 758; Escurial 1372), where he passes the whole Ḳur'ān in review to identify passages of relevance for both *uṣūl al-fiḳh* and *uṣūl al-dīn*.


As a legal scholar, he insists on his own *idjtihād* and shows considerable originality (for the *Sharḥ Mukhtaṣar al-Rawḍa*, cf. W. Hallaq, *Uṣūl al-fiqh*, 194). He is best known for his audacious understanding of *maṣlaḥa* (utility, public interest), which made him famous among the early modernists. Rashīd Riḍā published the relevant text (see above) in his journal *al-Manār*, ix (1324/1906), 745-70, and it has been reprinted several times since (cf. Muṣṭafā Zayd, *Maṣlaḥa*, and M.H. Kerr, *Islamic reform*, 81-3, 97-102).

One source describes al-Ṭūfī as wearing Ṣūfī garb (*fī ziyy ahl al-faḳr*, Ibn Maktūm *apud* Ibn Radjab, *Dhayl* ii, 369), and in one place he mentions *fuḳahā' aṣḥābinā al-Djīlāniyyīn* (*'Alam al-djadhal*, 53), so that it would seem possible to identify him as a Ḳādirī.

(W.P. Heinrichs)

TUGGURT, conventionally Touggourt, a town in the Algerian Sahara situated 160 km/100 miles to the north-east of Ouargla (Wargla), 100 km/62 miles south-west of El-Oued and 208 km/128 miles south of Biskra (lat. 33° 08' N., long. 6° 04' E.).

1. History. According to Ibn Khaldūn, a splinter of the Berber tribe of the Rīgha gained control of all the region between Biskra and Ouargla, where it became mingled with other Zanāta Berber elements. There were also Jews in the region. The town was for long dependent on the princes ruling the Maghrib or on the governors of Biskra, but, from the 14th to the 18th centuries, it was the capital of a vast region ruled by the Banū Djellāb. A Moroccan prince, Sulaymān b. Djellāb, related to the Marīnid family, halted at Tuggurt on his return from the Pilgrimage to Mecca, founded a mosque there and, with the aid of the local nomads, became recognised there as sovereign ruler. The line of the Banū Djellāb, whose tombs can still be seen in the "royal cemetery" of the town, ruled for four centuries, amongst various vicissitudes, partly due to dissensions amongst the local great families and partly from outside intervention by the Turks. In the 16th century, the Beylerbeyi Ṣalāḥ Re'īs plundered the town and exacted an annual tribute of 15 slaves. In the 18th century, the Banū Djellāb recognised the suzerainty of the Beys of Constantine, but without paying any tribute to them. Hence the Beys tried at various times to replace them by their own nominees, the Banū Gana of Biskra. Tuggurt was twice besieged, by Ṣalāḥ Bey in 1788 and by Aḥmad Mamlūk in 1821, but in vain. At the time of French colonial advance, Sulaymān b. Djellāb allied with the Sharīf of Ouargla against the new enemy. A French column occupied Tuggurt in 1854 and installed a garrison there. In 1871, the garrison was massacred at the time of a revolt, although this last was rapidly suppressed. Tuggurt is now, in independent Algeria, part of the Territories of the South.

2. Economic role. Tuggurt is the local capital of the Oued Rīgh, a vast trough of the Lower Sahara which benefits from artesian wells for irrigation and a great dryness of atmosphere favourable of high-quality dates, the Deglet Nour variety. Thus, with some 50 large villages and two million palm trees, the Oued Rīgh is the leading date-producing region of the Sahara.

The town also profits from its position on the Constantine-Biskra-Tuggurt-Ouargla axis, which has always been an important route; in mediaeval times, it was the departure point for the trans-Saharan caravan route connecting Ouargla with Agadès and Gao. In the French colonial period, the railway was constructed as far as Tuggurt, originally for the date trade (with a train leaving each night, in the season, laden with dates for the north); its role has become diversified today. But Tuggurt has always benefited from its position as the trans-shipment point from the railway or road and its role as distribution point for the products of the north over a large expanse of the Sahara. In 1960, the town was more important than Ouargla.

The coming of independence for Algeria damaged this regional role, but the town has been able to adapt. Whilst Ouargla has received a strong impulse from state direction, Tuggurt lives off its own private enterprise and dynamism: wholesale and service industries, an important date market, and diverse industrial undertakings. It now has 85,000 inhabitants.

3. The town. On the east, there are the palm groves and the rim of the plateau, and on the west, sand dune massifs. The heart of the town is made up of the *ḳṣar*, Mestāwa, dominated by the great mosque from the 18th century. Built of earth, plaster and palm trunks, the town has the peculiarity of a concentric, radiating pattern, with streets covered for hundreds of metres, very pleasant in the hot season. Originally circular, half of its area was razed by the French army at the end of the 19th century; the remaining half has been at the present time damaged by rains (1990) and mutilated by decisions of the public authorities.

The population is white, but there are nuclei of villagers who are black cultivators, the *Ḥashāshna*. The most important of these nuclei, Nezla, is on the site of the first town of Tuggurt, i.e. that existing before the 16th century.

The whole tends now to be drawn together by new quarters, which are progressively filling up the

space between the palm groves and the *route nationale* (large groupings and industrial zone). The palm groves, which encompass the town on the east, have been regenerated by the Great Canal (150 km/95 miles) intended to drain the whole of the Oued Rīgh.

TUGH (T.), amongst the early Turks an emblem of royal authority, a standard or a drum (the former being used as a battle-flag and a rallying-point on the battle-field), known from the time of the Türgesh or Western Turks in Transoxania (see below) and of the Uyghurs.

1. In older Turkish usage.

The traditional old Turkish standard was a horse's tail or a bunch of horse hair on a pole, or, in the regions of Inner Asia adjacent to Tibet, the tail of a yak (*kutās*). A great ruler would be described as having nine *tughs*, the maximum (*tokuz tughlugh khan*). Maḥmūd al-Kāshgharī, *Dīwān lughāt al-turk*, tr. Atalay, iii, 127, tr. Dankoff and Kelly, ii, 213, defines *tūgh* as (1) a drum beaten in the ruler's presence, i.e. as what would in later Islamic times be described as the *nawba* [see NAKKĀRA-KHĀNA and ṬABL-KHĀNA] (such great drums, *körgä*, were later used by the Mongols as rallying-points in battle, see Doerfer, i, 473-5 no. 339); and (2) an *'alam*, with the ruler's nine standards made of brocade or orange silk. This last definition must reflect Chinese influence. In fact, Clauson takes *tugh* to be a loan word from Chinese *tu* "banner". Middle Chinese *dok*, and the borrowing must have taken place early. The historian al-Ṭabarī speaks of the *ṭūkāt al-turk*, those of the Khāḳān of the Turks which Arab scouts saw (*'āyana*) when the commander Asad b. 'Abd Allāh was campaigning in Khuttal in the upper Oxus region [see KHUTTALĀN] in 119/737 (ii, 1598, cf. also 1611, 1616). Whether the meaning here is flags or horse tails' emblems does not emerge from the context with certainty, but al-Ṭabarī's source might have been expected to have used the familiar term *a'lām* if ordinary flags had been intended.

The word passed from the various Turkish languages into Mongolian as *tukh/tuk* in the sense of "battle-flag" and even as far as Tibetan (as *thug*) and Tungusic languages. Regarding Mongol usage, Marco Polo states that a corps of 100,000 of the Great Khān's troops is called a *tuc*, just as one of 10,000 is called a *toman* [see TŪMĀN. 1.] (Yule-Cordier, *The Book of Ser Marco Polo*, ²London 1903, i, 261, cf. 263-4). Finally, one may mention that Turkish soldiers brought the term into the history of the Indian Subcontinent in that the commander Ghiyāth al-Dīn Tughluḳ (*tughluk* "the man with the *tugh*") was in the early 8th/14th century the founder of the Tughluḳid line [*q.v.*] of Dihlī Sultans (see A. von Le Coq, *Türkische Namen und Titel in Indien*, in *Aus Indiens Kultur. Festgabe R. von Garbe*, Erlangen 1927, 2).

Bibliography: See on the early usage of *tughs* and on the linguistic aspects, Doerfer, *Türkische und mongolische Elemente im Neupersischen*, ii, 618-22 no. 969; Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 464. See also *İA* art. *Tuğ* (Bahaeddin Ügel) (mainly concerned with early usages, and does not cover the Ottomans).

2. In Ottoman usage.

Under the early Ottomans, the *tugh* continued to be an emblem of royalty and viceroyalty, with the sultans themselves campaigning under their banners (sometimes having on them a crescent moon emblem, amongst several others, see HILĀL. ii, at Vol. III, 383b-384a and Figs. 17-19) and as many as seven or nine *tughs*, horse tails suspended from a pole surmounted by a golden ball. Those to whom royal authority had been delegated had a lesser number of *tughs*. *Sandjak beyis* and *mīr-liwās* had one *tugh*; *beylerbeyis*, two; viziers, both the *kubbe wezīrs* [*q.v.*] of the Imperial *Dīwān* and provincial ones, three; and the Grand Vizier, five.

TUGHLUḲ TEMÜR (d. 764/1363), Čaghatayid [*q.v.*] *khān* in Central Asia. The fullest source of information, though largely concerned with his conversion to Islam, is the 10th/16th-century *Ta'rīkh-i Rashīdī* of Mīrzā Ḥaydar Dughlāt, who reproduces a Mongol tradition that his ancestor, the *amīr* Puladči, had brought Tughluḳ Temür from the Ḳalmaḳ country and enthroned him as *khān* of Čaghatay's *ulus* at the age of eighteen (*ca.* 752/1351). But whereas Ḥaydar names as his father the *khān* Esen Buḳa (d. *ca.* 718/1318), which is chronologically impossible, a 9th/15th-century genealogical work, the *Mu'izz al-ansāb*, makes Tughluḳ Temür the son of Esen Buḳa's younger brother Emil Khʷādja (Ḳoča). Tughluḳ Temür ruled over the eastern tracts of Čaghatay's *ulus*, the region still dominated by nomads and barely touched by Islam, and known as Jata or Mogholistān [*q.v.*] to distinguish it from Mā warā' al-nahr [*q.v.*], which was governed by other Čaghatayid *khāns*; the division of the *ulus* into two rival khānates dated from not long before Tughluḳ Temür's own accession. Tughluḳ Temür's conversion may not have been as complete as Ḥaydar suggests: he is known to have sent to Tibet for a Buddhist teacher at some time after 1360 (*The Blue Annals*, tr. G.N. Roerich, Calcutta 1949-53, ii, 504).

Tughluḳ Temür twice invaded Mā warā' al-nahr, in Rabī' II 761/March 1360 and in Djumādā I 762/March 1361: on both occasions he received the submission of local *amīrs*, including the future conqueror Tīmūr (Temür), whom he appointed as governor of Kish (Shahr-i Sabz). On the second expedition, Tughluḳ Temür advanced as far as Ḳunduz and the Hindū Kush before retiring again to Mogholistān. His harsh conduct, and that of his commanders, in Mā warā' al-nahr had in any case alienated Tīmūr among others. Tīmūrid chroniclers differ as to the date of Tughluḳ Temür's death, Yazdī (ed. Ilahdad, 87; ed. Urunbaev, fol. 107b) implying 765/1364, while Naṭanzī (125) confirms the year 764 supplied by Ḥaydar. He was buried in Almaligh [*q.v.*]. His son Ilyās Khʷādja, whom he had left as his deputy in Mā warā' al-nahr, was recalled to succeed him, but was himself murdered, together with most of his brothers, by the Dughlāt *amīr* Ḳamar al-Dīn. The later *khāns* of Mogholistān claimed descent from Khiḍr Khʷādja, allegedly an infant son of Tughluḳ Temür who had escaped the massacre.

TUGHLUĶIDS, the longest-lived dynasty to rule over the Dihlī Sultanate [*q.v.*], from 720/1320 to 815/1412.

1. History.

The founder of the dynasty, Ghāzī Malik Tughluķ, was probably an immigrant belonging to the Turco-Mongol group of the Ķara'unas, who nomadised in the borderlands between India and Central Asia (see R.C. Jauhri, *Ghiyāthu 'd-dīn Tughluq—his original name and descent*, in H. Krueger (ed.), *Kunwar Muhammad Ashraf commemoration volume*, Wiesbaden 1966, 62-6), and under the last two Khaldjī [*q.v.*] sultans had fought regularly against the Mongols as *muķṭaʿ* of Dīwpālpūr in the Pandjāb. When the Indian Nāṣir al-Dīn Khusraw Shāh murdered Ķuṭb al-Dīn Mubārak Shāh Khaldjī and usurped the throne (720/1320), Ghāzī Malik, encouraged by his son Muḥammad, who held the rank of *amīr-i ākhūr* at court, rebelled against him. The usurper was overthrown and Ghāzī Malik became sultan as Ghiyāth al-Dīn Tughluķ (720-5/1320-5 [*q.v.*]). During his reign Muḥammad, now as heir-apparent styled Ulugh Khān, headed two campaigns to subdue Tilang or Telingāna [*q.v.*] (*ca.* 721-3/1321-2); Maʿbar [*q.v.*] was reduced to submission at around the same time; and the sultan himself brought Bengal back under the authority of Dihlī (724/1324). On his sudden death in an accident outside Dihlī following his return from Bengal, Ghiyāth al-Dīn was succeeded by Muḥammad b. Tughluķ (724-52/1324-51 [*q.v.*]), under whom the Sultanate reached its peak.

Muḥammad's reign began with a successful campaign against the Mongols of the Peshawar region and with the suppression of revolts in Multān, the Deccan and Bengal. The contemporary chronicler Ḍiyā' al-Dīn Baranī [*q.v.*] alleges that the government exerted a closer control over a greater number of provinces than at any previous time in the Sultanate's history (*Tārīkh-i Fīrūzshāhī*, 468). In *ca.* 729/1328-9 the Sultanate successfully weathered the last major invasion from the Čaghatay khānate [*q.v.*] in Central Asia prior to that of Temür or Tīmūr [*q.v.*], led by the khān Tarmashirin (P. Jackson, *The Mongols and the Delhi Sultanate in the reign of Muhammad Tughluq*, in *CAJ*, xix [1975], 118-57). Muḥammad's generosity towards foreign immigrants, which became a byword, was partly designed to secure immunity from further Mongol attacks by means of the enormous wealth and patronage at his disposal; he may also have aimed to broaden the base of support enjoyed by a dynasty that had come to power mainly with the aid of elements from the Pandjāb.

Muḥammad is perhaps the most enigmatic and certainly the most controversial of the Dihlī sovereigns. In his personal devotions and his view that "religion and the state are twins", which led him to press Ṣūfīs into the state service and produced strained relations with many of the *ʿulamā'*, he may have been influenced by the ideology of Ibn Taymiyya [*q.v.*], one of whose disciples visited his court: his philosophy was misunderstood by contemporary authors like Baranī and ʿIṣāmī, on whom we depend for accounts of the reign (K.A. Nizami, *The impact of Ibn Taimiyya on South Asia*, in *Journal of Islamic Studies*, i [1990], 125-34). But Muḥammad certainly overreached himself. His plan to establish a second capital at Dēōgīr (renamed Dawlatābād) in the Deccan in 727/1327, in order to accelerate Muslim colonisation of that territory, was effectively abandoned by 735/1334. Another ambition, to reduce the Mongols of present-day Afghānistān and Transoxiana (the so-called "Khurāsān project"), was aborted within two years. The sultan is much criticised in the sources, as also by modern scholars, for this and other disastrous projects, such as the enhancement of the revenue demand in the Doāb region, east of the Djamnā [*q.v.*] (Jumna), which provoked a widespread insurrection by the cultivators, and the introduction in 730/1329 of a low-denomination bronze coinage, which had to be recalled after two years. It is possible, nevertheless, that all these measures formed part of a coherent policy, and that their failure was due to circumstances beyond the sultan's control.

The revolt of the Doāb cultivators (*ca.* 732/1331-2), which subsided within two years or so, was followed by risings elsewhere and by the secession of the more distant provinces of Maʿbar (734/1333-4), Bengal (*ca.* 735/1334-5) and Kampīla and Tilang (*ca.* 736/1335); and the outbreak of plague and a seven-year famine prevented Muḥammad from recovering these territories. Although the sultan seems to have enjoyed a respite from *ca.* 741/1340, and successfully sought a diploma of investiture from the ʿAbbāsid caliph at Cairo in 744/1343, revolts by the military officer class in the Deccan and Gudjarāt from 745/1344 onwards absorbed his energies during the last few years of his reign. The Deccan broke away under the Bahmanid [*q.v.*] dynasty, and although Muḥammad personally reduced Gudjarāt, the rebel leader, a Turkish slave officer named Tughay, took refuge with the Sumerā rulers of Thaṭṭā [*q.vv.*] in lower Sind. He was finally eliminated only after the sultan's own death on the Indus in 752/1351 while preparing for an attack on the Sumerās.

Muḥammad's troops enthroned his cousin Fīrūz Shāh b. Radjab, who had served him loyally as viceroy and chamberlain (*nā'ib bārbeg*), and despite opposition from the late sultan's *wazīr* Khwādja Djahān Aḥmad b. Ayāz, who proclaimed a reputed son of Muḥammad in Dihlī (Sir Wolseley Haig, *Five questions in the history of the Tughluq dynasty of Delhi*, in *JRAS* [1922], 365-72), the new sovereign was able to enter the capital in triumph. The era of Fīrūz Shāh (752-90/1351-88 [*q.v.*]) is often taken to have been one of recovery and consolidation, though in all likelihood the comparison with the chaos of Muḥammad's reign or with the disasters that followed Fīrūz Shāh's death has distorted the perspective of our sources. The reign admittedly witnessed only one revolt, that of Shams al-Dīn Dāmghānī in Gudjarāt (782/1380-1), and was relatively free of Mongol attacks. Fīrūz Shāh received a series of diplomas from successive ʿAbbāsid caliphs, recognising his authority over the entire subcontinent and islands as far afield as Java. Nevertheless, the sultan was obliged to acquiesce in the loss of the Deccan and the far south, and his few military exploits were undistinguished. Campaigns against Bengal, in 754/1353 and 760/1359, and against Djādjnagar (Orissa) in 761/1360 achieved little, and his only successes were the reduction of the *rādjā* of Nagarkōt (Kāngṛā) to tributary status and the submission of Thaṭṭā in *ca.* 767/1365, which thus avenged Muḥammad's humiliation. The burden of Fīrūz Shāh's domestic policy was to increase donations to Ṣūfī *shaykh*s and other charitable causes and to conciliate the nobility, thus

Genealogical Table of the Dynasty

- ? Tughluḳ
  - I. GHIYĀTH AL-DĪN TUGHLUḲ SHĀH I
    - II. MUḤAMMAD SHĀH
      - ⋮
        - III. GHIYĀTH AL-DĪN MAḤMŪD SHĀH
    - Ẓafar Khān
    - Maḥmūd Khān
    - Nuṣrat Khān
    - Mubārak Khān
    - Mas'ūd Khān
  - Radjab
    - IV. FĪRŪZ SHĀH
      - Fīrūz Khān
        - Fatḥ Khān[1]
          - V. GHIYĀTH AL-DĪN TUGHLUḲ SHĀH II
          - IXa. NĀṢIR AL-DĪN NUṢRAT SHĀH
      - Ẓafar Khān
        - VI. ABŪ BAKR SHĀH
      - VII. NĀṢIR AL-DĪN MUḤAMMAD SHĀH
        - VIII. 'ALĀ' AL-DĪN SIKANDAR SHĀH
        - IX. NĀṢIR AL-DĪN MAḤMŪD SHĀH
          - Ḳādir Khān
      - Shādī Khān
    - Ḳuṭb al-Dīn
    - Fakhr al-Dīn Ibrāhīm

N.B. That Fatḥ Khān, who usually appears in the secondary literature as a son of Fīrūz Shāh, was in fact the offspring of the sultan's eldest son Fīrūz Khān is clear from Bihāmadkhānī, *Tārīkh-i Muḥammadī*, fol. 416b (tr. Zaki, 20), and from Baranī, *Tārīkh-i Fīrūzshāhī*, 527 (text corrupt: the phrase that follows, *a'nī sulṭān muḥammad*, belong to Muḥammad Khān, i.e. the later sultan Nāṣir al-Dīn Muḥammad Shāh, whose name has dropped out); cf. also 'Afīf, *Tārīkh-i Fīrūzshāhī*, 65, where Fatḥ Khān is said to have been born in Fīrūz Khān's house. It has helped to confuse matters that Fatḥ Khān was in fact virtually a year older than his uncle Muḥammad, for whose birth (in 753/1352) see Sirhindī, *Tārīkh-i Mubārakshāhī*, 123.

forestalling revolts of the kind that had characterised Muḥammad's era; but the effect of the sultan's concessions was to relax the central government's control over revenue and the provincial administration. It may be that the military and fiscal capacity of the Sultanate, already diminished since the early years of Muḥammad b. Tug̲h̲luḳ, was gravely impaired.

In Fīrūz S̲h̲āh's last years, real power was in the hands of the *wazīr* K̲h̲ān D̲j̲ahān, who was hostile to his only surviving son Muḥammad and ousted the prince from the succession in favour of the old sultan's great-grandson Tug̲h̲luḳ S̲h̲āh II (790-1/1388-9). Over the next few years the situation was dominated by Fīrūz S̲h̲āh's large slave establishment, with whose aid both Tug̲h̲luḳ S̲h̲āh and his cousin and successor, Abū Bakr S̲h̲āh (791-2/1389-90), strenuously resisted Muḥammad's attempts to occupy the Dihlī complex. He was able to do so only when a sufficiently large number of the slaves deserted to him. Once in power, however, Nāṣir al-Dīn Muḥammad S̲h̲āh (792-6/1390-4) acted swiftly to destroy this powerful corps. His reign was largely taken up with struggles against Hindu chiefs in Alwar and the Doāb, and in the west the Khōkhar chief sacked Lahore just prior to Muḥammad's death. Muḥammad's elder son, 'Alā' al-Dīn Sikandar S̲h̲āh, died after a reign of little more than a month (796/1394) and was succeeded by his younger brother, Nāṣir al-Dīn Maḥmūd II (796-815/1394-1412 [*q.v.*]).

Maḥmūd S̲h̲āh, who came eventually under the tutelage of Mallū Iḳbāl K̲h̲ān [*q.v.*], presided over the final stage in the disintegration of the Sultanate. From 797/1395 an ousted court faction, headed by Tatar K̲h̲ān, son of the governor of Gud̲j̲arāt Ẓafar K̲h̲ān, maintained at Fīrūzābād a rival Tug̲h̲luḳid sultan, Nāṣir al-Dīn Nuṣrat S̲h̲āh. Both candidates were swept aside during the invasion of northern India by Tīmūr, who in 801/1398 sacked Dihlī. In the provinces power had by now passed to men to whom, as his principal lieutenants, Muḥammad S̲h̲āh had delegated considerable authority. Thus K̲h̲ʷād̲j̲a D̲j̲ahān Sarwar, the effective creator of the S̲h̲arḳī dynasty at D̲j̲awnpūr [*q.vv.*], was to all intents autonomous in the entire region east of the D̲j̲amnā as far as Biḥār; Ẓafar K̲h̲ān founded his own dynasty in Gud̲j̲arāt; and K̲h̲iḍr K̲h̲ān had secured Tīmūr's recognition as his deputy at Multān. After Tīmūr's withdrawal, Nuṣrat S̲h̲āh briefly reoccupied Fīrūzābād, but soon died. Mallū Iḳbāl K̲h̲ān thereupon re-established himself at Dihlī, but Maḥmūd S̲h̲āh, whom he invited to join him there in 801/1404, shortly deserted him and took refuge at Ḳannawd̲j̲ [*q.v.*], which he had wrested from the S̲h̲arḳīs. After Mallū's overthrow by K̲h̲iḍr K̲h̲ān near Ad̲j̲ūdhan in 808/1405, Maḥmūd returned to Dihlī, where he reigned until his death in 815/1412 over an empire that consisted of little more than the eastern Pand̲j̲āb and parts of the Doāb. His son Ḳādir K̲h̲ān seems to have perished in conflict with the S̲h̲arḳīs around this time, and Maḥmūd was briefly succeeded by one of his *amīr*s, Dawlat K̲h̲ān, who in the following year was vanquished by K̲h̲iḍr K̲h̲ān, founder of the Sayyid [*q.v.*] dynasty.

The Tug̲h̲luḳid era was one of high cultural achievement. The poets Badr-i Čāčī [*q.v.* in Suppl.] and Muṭahhar of Kara flourished in the eras of Muḥammad b. Tug̲h̲luḳ and of Fīrūz S̲h̲āh respectively, and the latter reign was notable for a crop of juridical works (Zafar ul-Islam, *Works of legal nature of Firuz Shah's reign*, in Devahuti (ed.), *Bias in Indian historiography*, Delhi 1980, 329-37). The sultans were enthusiastic builders (see below, 2. Architecture), especially Fīrūz S̲h̲āh, who was responsible for many new towns and fortresses which are listed by 'Afīf (*Tārīk̲h̲-i Fīrūzs̲h̲āhī*, 329-33) and who also constructed a number of canals.

2. Architecture.

The three major Tug̲h̲luḳid rulers were enthusiastic patrons of architecture and concentrated their building activity in Dihlī. The major architectural undertaking of sultan G̲h̲iyāt̲h̲ al-Dīn Tug̲h̲luḳ S̲h̲āh was the massive citadel of Tug̲h̲luḳābād, 7 km/4 miles to the east of the late 12th-early 14th century D̲j̲āmi' mosque in old Dihlī. The earliest extant Sultanate town, it has stone walls 9 to 15 m high, enclosing an area of about 162 ha;,water was provided through elaborate dams, sluice gates, and cisterns that created an artificial lake in which the sultan built a fortified necropolis to house his own tomb (Pl. XX, fig. 1) (see N. and M. Shokoohy, *Tughluqabad, the earliest surviving town of the Delhi Sultanate*, in *BSOAS*, lvii [1994], 516-50). Further to the north and closer to the D̲j̲amnā River, the powerful Čis̲h̲tī leader, Niẓām al-Dīn Awliyā', oversaw the construction of his great *dargāh*, the best preserved of a number of such Ṣūfī centres built in the Dihlī area during the Tug̲h̲luḳid period (see Z. Hasan, *Guide to Nizamuddin*, Memoirs of the Archaeological Survey of India, no. 10, Calcutta 1922; M. Ara, *Dargāhs in medieval India*, Tokyo 1977 [in Japanese]).

Sultan Muḥammad b. Tug̲h̲luḳ [*q.v.*] had a well-developed aesthetic sense and sustained a broader range of building activity. In the Deccan he established a second capital at Dawlatābād. In south Dihlī he built the imposing Sātpulāh (Pl. XX, fig. 2), a fortified dam and sluice gate that was part of 8 km/5 miles of walls linking the older centres of Sirī and Lāl Kōt with the sultan's new residence of D̲j̲ahānpanāh (see A. Welch, *Hydraulic architecture in medieval India: the Tughluqs*, in *Environmental Design. Journal of the Islamic Environmental Design Research Centre*, Rome, ii [1985], 74-81). This royal quarter contained a splendid D̲j̲āmiʿ mosque (the Begampur Mosque), attributed to the royal architect Ẓāhir al-Dīn al-D̲j̲ayus̲h̲, who used a classic Persian four-*īwān* plan with domed arcades and four domed chambers around a large inner court (Pl. XXI, fig. 3). The main entrance on the east side, approached by an imposing flight of stairs, regally dominates the street below. Forty-two miles to the north are the ruins of the Dār Sarā palace (Bid̲j̲ay Mandel), described at length by Ibn Baṭṭūṭa, who especially praises the palace's Dīwān-i ʿĀmm (*Hazār Ustūn* or "Thousand Pillars").

The contemporary chronicler S̲h̲ams al-Dīn ʿAfīf marvels at Fīrūz S̲h̲āh's passion for architecture and credits him with hundreds of cities, forts, palaces, mosques, *madrasas*, gardens, cisterns, and dams. In his own memoirs (*Futūḥāt-i Fīrūz-S̲h̲āhī*) the sultan (752-90/1351-88) refers to the vast sums spent on building projects and to his conscientious restoration of his predecessors' buildings. His patronage was supported by an effective bureaucracy, and his buildings display ingenuity, daring experimentation, and open-minded eclecticism, whether in incorporating pre-Islamic Indian architectural styles or trying out new architectural types. Royal irrigation canals made possible the rapid expansion of cities like Ḥiṣār in the Pand̲j̲āb, where the sultan built some of his most imaginative garden architecture (for the Tug̲h̲luḳid monuments of Ḥiṣār, see M. and N. Shokoohy, *Hisar-i Firuza. Sultanate and early Mughal architecture in the District of Hisar, India*, London 1988; for a study of Sultanate gardens, see A. Welch, *Gardens that Babur did not like*, in J.L. Wescoat and J. Wolschke-Bulmahn (eds.), *Mughal gardens. Sources, places, representations, and prospects*, Dumbarton Oaks, Washington, D.C. 1996, 59-93). He had a passion for hunting and built a number of *mahalls* (small hunting lodges) on the outskirts of Dihlī (Pl. XXI, fig. 4). On the banks of the D̲j̲amnā river 11 km/7 miles to the north of D̲j̲ahānpanāh he also established a new, elaborately fortified royal residence named Fīrūzābād (see J.A. Page, *A memoir on Kotla Firoz Shah, Dihlī*, Memoirs of the Archaeological Survey of India, no. 52, Delhi 1937). Among other structures the citadel contained three gardens, a palace, an audience hall, and a circular step well. In the courtyard of its *d̲j̲āmiʿ* mosque was a domed pavilion inscribed with the text of the sultan's *futūḥāt*, one of the few instances of monumental epigraphy under Tug̲h̲luḳid patronage. On the mosque's north side was the remarkable Mīnār-i Zarrīn (Pl. XXII, fig. 5), a three-tiered, stepped pyramid rising more than 14 m and supporting a massive Aśokan pillar, an impressive reminder of India's pre-Islamic past transformed into a *mīnār* that dominated the surrounding area (see A. Welch, *Architectural patronage and the past: the Tughluq Sultans of Dihlī*, in *Muqarnas*, x [1993], 311-22). Fīrūz S̲h̲āh also incorporated "Aśokan" pillars into a palace in west Dihlī and a mosque in Ḥiṣār (Pl. XXII, fig. 6).

Mosque types are many and evince a spirit of experimentation: the *ca.* 1352 Fīrūzābād mosque had four arcades three bays deep around a central courtyard; the *ca.* 1351-4 K̲h̲irkī mosque (Pl. XXIII, fig. 7) is a cross-axial mosque with four small courtyards letting light into the multi-domed interior; its impressive east gate at the top of a long flight of steps is flanked by *mīnārs* whose wedge-shaped flanges make explicit reference to the great Ḳuṭb Mīnār built in the late 12th and early 13th centuries by the first two sultans of Dihlī, Ḳuṭb al-Dīn Aybak and Iltutmis̲h̲ (Pl. XXIII, fig. 8). A number of other mosques consist essentially of open courtyards with modest prayer halls (see Welch and H. Crane, *The Tughluqs: master builders of the Delhi Sultanate*, in *Muqarnas*, i [1983], 123-66). Situated outside the walls of Fīrūzābād, the *dargāh* of Ḳadam S̲h̲arīf consisted of three arcades around an open pavilion that sheltered the tomb of the sultan's son Fatḥ K̲h̲ān and the relic of the Holy Footprint (see Welch, *The shrine of the Holy Footprint in Delhi*, in *Muqarnas*, xiv [1997]).

Built along the south and east sides of a large reservoir (*ḥawḍ*), the *madrasa-yi Fīrūz S̲h̲āh* (now known as the Ḥawḍ K̲h̲āṣṣ) contained teaching halls, residences, a mosque, and gardens (Pl. XXIV, fig. 9) and was famed for the quality of its faculty and students. At the juncture of the two sides was the founder's tomb, a square, domed structure, whose *miḥrāb* provided passage between the *madrasa*'s two sides (Pl. XXIV, fig. 10). A broad flight of stairs led from the tomb down to the reservoir's water, while at the north end of the east side the *madrasa*'s mosque had an open *miḥrāb* from which stairs descended to the water below (see Welch, *A medieval center of learning in India: the Hauz Khas Madrasa in Dihlī*, in *Muqarnas*, xiii [1996], 165-90). This close association of water and architecture is also found in many of the great step wells built in and around Dihlī that used forms and technology predating Islam in India.

There is no extant evidence of building activity during the remaining decade of Tug̲h̲luḳid rule after the death of Fīrūz S̲h̲āh, but the Tug̲h̲luḳid architectural achievement earned Tīmūr's admiration when he conquered Dihlī in 801/1398, and it looks forward in significant ways to the structures and patronage of the Mug̲h̲al emperors [see MUG̲H̲ALS. 7.].

Bibliography (in addition to references in the text): Among primary sources, the most valuable for any study of Tug̲h̲luḳid architecture are Baranī's *Tārīk̲h̲-i Fīrūz-S̲h̲āhī*, ʿAfīf's *Tārīk̲h̲-i Fīrūz-S̲h̲āhī*, the anonymous *Sīrat-i Fīrūz-S̲h̲āhī*, and Fīrūz S̲h̲āh's own *Futūḥāt-i Fīrūz S̲h̲āh*. The great Urdu scholar Sayyid Aḥmad K̲h̲ān wrote his *Āt̲h̲ār al-sanādīd* in 1847, and it is still an essential source (Eng. abridgement by R. Nath, *Monuments of Delhi*, New Delhi 1979). Zafar Hasan, *List of Hindu and Mohammadan architecture of Dihlī Province*, Delhi 1916-19, is a basic catalogue of monuments, including many that no longer exist. M.A. Husain, *A record of all the Qur'anic and non-historical epigraphs on the protected monuments in the Delhi Province*, Memoirs of the Archaeological Survey of India, no. 47, Calcutta 1936, is a basic source for any study of Sultanate architectural epigraphy. J. Burton-Page's arts. DIHLĪ and HIND. vii. Architecture, provide an overview of Sultanate architecture, as does R. Nath, *A history of Sultanate architecture*, New Delhi 1978. T. Yamamoto, M. Ara and T. Tsukinowa, *Delhi. Architectural remains of the Sultanate period* (in Japanese), 3 vols., Tokyo 1968-70, offers stunning photographs and ground plans as well as meticulous historical and geographical analysis of every significant Sultanate structure in Delhi. These and other primary and secondary

sources are discussed in Welch and Crane, *The Tughluqs: master builders of the Delhi Sultanate*, see above.

(A. Welch)

TUGHRA (T.), in mediaeval Arabic and Ottoman Turkish orthography, *ṭughrā*, a calligraphic emblem of Turkish rulers, from the time of the chiefs of the Oghuz to the Saldjūḳs and succeeding rulers in Persia, the Mamlūks and the Ottoman sultans. Under the latter, in particular, it became a highly stylised and artistic representation of the name and titles of the ruler or of princes from the royal family. Indeed, in Ottoman practice it became in effect the emblem of the state, being placed as a heading on official documents such as *fermāns* [see FARMĀN. ii] but also on legal documents like property deeds, *wakfiyyes*, inscriptions on official buildings, coin legends, identification documents like passports, postage stamps [see POSTA, at Vol. VIII, 327b], goldsmiths' marks, etc. It corresponds more to Pers. *nishān* "the ruler's sign manual" than to *tawḳīʿ* [*q.v.*], which corresponds more to Tkish. *tamgha* [*q.v.*], this last derived from Turkish totemistic symbolism.

1. Origin of the term.

The oldest mention of the word is in Maḥmūd al-Kāshgharī, *Dīwān lughāt al-turk*, fol. 232, tr. Atalay, i, 462, tr. Dankoff and Kelly, i, 346: "the *tughragh* is the seal (*ṭābiʿ*) and signature (*tawḳīʿ*) of the king; Oghuz dialect (*ghuzziyya*) and not known to the [Western] Turks; I do not know its origin". From this, there emerges that *tughragh* (with final *gh*) is the old, eastern Oghuz form from which came *tughra* in the Western Oghuz language of the Saldjūḳs. Thence it was borrowed into Persian and re-borrowed into Ottoman and Čaghatay Turkish as a loan word. In Saldjūḳ usage, the initial unvoiced dental acquired the orthography *ṭ* under the influence of the word's back vowel harmony. In the Arabic used by chroniclers and secretaries during Mamlūk times, it acquired the Arabic sound plural *ṭughrāwāt*, on analogy with *aghāwāt*, *bāshāwāt*, etc., and there evolved the form II verb *ṭaghghara* "to affix the *ṭughrā* on a document". From Ottoman, the word spread into Serbian and Bulgarian as *tugra* and into Romanian as *tura*. Its etymology remains as mysterious today as it was in al-Kāshgharī's time. Various fanciful suggestions of the sources were reviewed by Deny in his *EI*[1] art.; Doerfer surmised that it might have been borrowed from some pre-Turkish culture. See idem, *Türkische und mongolische Elemente im Neupersischen*, iii, 342-6 no. 1344; Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 471.

Bibliography: Given in the article.

2. History.

(a) In the central Islamic lands before the Ottomans.

The rulers of the first two great Turkish empires of the Middle East and the eastern Iranian lands, the Saldjūḳs and the Khwārazm Shāhs (virtually nothing is known of Ḳarakhānid chancery practice) seem to have used the terms *ṭughrā* and *tawḳīʿ* more or less interchangeably for the sultan's emblem or monogram. The sources for Saldjūḳ history tend to use the word *tawḳīʿ* for the emblem of Ṭoghrïl Beg and subsequent sultans (sc. the Ḳïnïḳ tribal emblem of the bow and arrow used by the first Saldjūḳ tribal chiefs—Temür Yaligh being allegedly the cognomen of the eponymous ancestor, Saldjūḳ's father Duḳāḳ—and known from Saldjūḳ coins if not from actual documents, and the club or mace, *čumāk*, mentioned by Rāwandī, *Rāḥat al-ṣudūr*, 98, as also being Ṭoghrïl Beg's emblem). The Khwārazm Shāh ʿAlāʾ al-Dīn Muḥammad [*q.v.*] had as part of his *ṭughrā*, according to al-Nasawī, *Sīrat al-Sulṭān Djalāl al-Dīn Mingburnu*, ed. Ḥāfiẓ Aḥmad Ḥamdī, Cairo 1953, 324, and Djuwaynī-Boyle, i, 349, the motto *ẓill Allāh fi 'l-arḍ* "the shadow of God on earth", and it is recorded that official documents and investiture patents from his chancery bore his *ṭughrā* (*ibid.*, i, 154, 329); but his son and successor Djalāl al-Dīn [*q.v.*] refused, in his reduced state, to use such a grandiloquent formula (al-Nasawī, *loc. cit.*). In the surviving collections of *inshāʾ* from the Saldjūḳ and Khwārazm Shāhī periods, the term *ṭughrā* does not appear on the documents themselves, but there are mentioned in them the *dīwān-i ṭughrā* and the official charged with drawing it, the *ṭughrāʾī* (first known in the person of Ṭoghrïl's *ṭughrāʾī*, the Turkish *amīr* Khumārtigin, but most notably this was the professional title by which the famous Saldjūḳ official, poet and stylist Muʾayyid al-Dīn al-Ḥusayn b. ʿAlī (d. probably in 515/1121 [see AL-ṬUGHRĀʾĪ]), who filled this office in the reign of Malik Shāh, was always known, even though he went on to become a vizier; cf. S.M. Stern, in his very thorough study of the signature in documents, 123-65, at 149 n. 1). It does seem reasonable to assume, with S.M. Stern, that, as Saldjūḳ and Khwārazm Shāhī chancery practice was elaborated, the *ṭughrā* of these rulers reduced the tribal mark element to stylised lines, dropped the pious mottos of each ruler (as detailed by Rāwandī) and incorporated the ruler's titles in a stylised pattern with elongated shafts of letters, foreshadowing later developments which were to culminate in Ottoman practice. See on the general topic of the *ṭughrā* during this period, Cl. Cahen, *La ṭugrā seljukide*, in *JA*, ccxxxiv (1943-5), 167-72; Stern, *Fāṭimid decrees. Original documents from the Fāṭimid chancery*, London 1964, 143-52; H. Horst, *Die Staatsverwaltung der Grosselǧūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 35-6.

It seems very probable that such dynasties which arose out of the decaying great Saldjūḳ empire as the Zangid Atabegs and then the Ayyūbids took over the use of the *ṭughrā* from the Saldjūḳ chancery. The Ayyūbid sultans had, like their Fāṭimid predecessors in Egypt and southern Syria, pious royal mottos as part of their *ʿalāma* [*q.v.*], and presumably a signature with the names and titles of the monarch. In the absence of actual documents with representations of the *ṭughrā* in them, Stern surmised that the graphic form was in the style of the *ṭughrā*, with elongated shafts to the letters and possibly also some vertical lines to set them off (*Fāṭimid decrees*, 154-5; cf. also his *Two Ayyūbid decrees from Sinai*, in idem (ed.), *Documents from Islamic chanceries*, Oxford 1965, 15-17). Further snippets of relevant information come from mentions of the *ṭughrā* in the manual on secretaryship of Ibn Shīth al-Ḳurashī (d. 625/1228; see on him W. Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928, 34-6), the *Maʿālim al-kitāba*, Beirut 1913, 43, and in the brief annals of Ibn Abi 'l-Dam (d. 642/1244 [*q.v.*]), in which he gives a model diploma of al-Malik al-Kāmil of Egypt for his own patron al-Malik al-Muẓaffar of Ḥamāt which, he says, ended with a *ṭughrā* (cited by Cahen, *La correspondence de Ḍiyā ad-Dīn ibn al-Athīr. Liste de lettres et textes de diplômes*, in *BSOAS*, xiv [1952], 42-3).

It should be noted that, around this time, we begin to find the word *ṭughrā* confused in Arabic literary and popular usage with the similar Arabic word *ṭurra*, literally "border of a piece of cloth", "upper border of a document", obviously arising from the part of the document where the *ṭughrā* was normally affixed; already Ibn Khallikān, *Wafayāt*, ed. ʿAbbās, ii, 190, defines the *ṭughrā* as "the *ṭurra* which is written with a

thick pen at the top of documents above the *basmala*", and *ṭurra* became the commonly-used form in later Egyptian popular parlance.

From the Ayyūbids, the use of the *ṭughrā* passed to their supplanters, the Mamlūks. A full description of Mamlūk practice here is given by al-Ḳalḳas̲h̲andī in his *Ṣubḥ al-aʿs̲h̲ā*, xiii, 162-6, cf. Björkman, *op. cit.*, 44, 168, illustrated by two drawings of the *ṭug̲h̲rās* of al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn and his grandson al-Malik al-As̲h̲raf S̲h̲aʿbān b. Ḥusayn [*q.vv.*]. According to al-Ḳalḳas̲h̲andī, the *ṭug̲h̲rā* was not used after S̲h̲aʿbān's reign (764-78/1363-77), confirmed by al-Maḳrīzī's (d. 845/1442) information in his *K̲h̲iṭaṭ* that it was no longer used in his time. Al-Ḳalḳas̲h̲andī gives considerable detail on the usage and the exact format of the *ṭug̲h̲rā* used on *mans̲h̲ūrs* or investiture patents for high military commanders. When the *ṭug̲h̲rā* was complex, containing many strokes, a fine (*d̲j̲alīl t̲h̲ult̲h̲*) pen had to be used; when there were fewer strokes, the larger type of script called *muk̲h̲taṣar al-ṭūmār* was used. A specially-appointed person in the *dīwān al-ins̲h̲āʾ* prepared the *ṭug̲h̲rās*, and the secretaries then inserted them in spaces left blank for them in the *ṭurra* or upper part of the document above the *basmala*. The *ṭug̲h̲rā* was composed of the sultan's honorifics, or his name and his honorifics, written on one line, with highly-prolonged upright strokes (*muntaṣibāt*) to letters like *ṭāʾ*, *ẓāʾ*, *kāf*, *lām*, etc. In al-Nāṣir's *ṭug̲h̲rā*, the 35 upright strokes are alternately single and in groups of two strokes, necessitating some re-arrangement for artistic purposes of certain letters in the words, and below the line of titles is the prayer *k̲h̲allada Allāh sulṭānahu* "may God prolong his dominion!" (see Pl. XXV, fig. 1). In that of S̲h̲aʿbān, the 45 upright strokes are in groups of two, again with the prayer for long life beneath the line of the sultan's titles, but also with his name S̲h̲aʿbān b. Ḥusayn in large script (*ḳalam al-ṭūmār*) written across the central verticals (see Pl. XXV, fig. 2).

(C.E. Bosworth)

(b) In the usage of the Ottomans.

The Ottoman *tug̲h̲ra*, though derived in all probability from the Sald̲j̲ūḳ model, differed markedly, at least in appearance, from the Mamlūk one.

One of the oldest Ottoman *tug̲h̲ras* known is that on the coins of the prince Süleymān Čelebi [*q.v.*], ruler in Rūmili 806-13/1403-13. This already contains the principal features of the emblem as it later developed.

1. The verticals to the number of three, which are taken from the *alifs* in the name of the prince and his father. The words *Amīr Süleymān* are surmounted by *(i)bn*, in turn surmounted by Bāyezīd. In a *tug̲h̲ra* of Meḥemmed (I) (i)bn Bāyezīd (cf. K̲h̲alīl Edhem, *Müze-i humāyūn meskūkāt-i ʿot̲h̲māniyye*, Istanbul 1334, i, 31), there are four verticals, but this number is exceptional and is only found, for the sultans, at a comparatively remote period.

2. The oval or elliptical curves, not closed, to the number of two, which meet in the lower part of the name of the prince and which turning first to the left, ascend, then turn to the right to cut the verticals in their upper parts and then disappear on the right. Exceptionally, we find one or three curves. The number two at quite an early period became sacred for the sultan's figure.

These curves seem originally to have been prolongations of the letters *nūn*, which occur in the word *(i)bn* and in the name of the prince or of his father or in the *tug̲h̲ra* of prince Süleymān, in that of Murād I, in that of Meḥemmed I, where the second *nūn* is supplied by the word *sulṭān* (cf. K̲h̲alīl Edhem, *loc. cit.*) or in the later *tug̲h̲ra* in which, according to Fekete, the *nūns* of the word *ibn* and *k̲h̲ān* have been prolonged. It is true that they are found very early, even when the names do not supply a second *nūn*; cf. the *tug̲h̲ras*, incomplete it is true, given by K̲h̲alīl Edhem, 44, 48, 55, 65, 67, 68.

At first, the names and the patronymic were placed in the escutcheon, circumscribed by the curves, but in the later development of the *tug̲h̲ra* this space was left partly vacant. At first only the name of the sultan was left there; the name of his father and later the two names were placed quite at the bottom of the verticals, where they formed a crowded group of intersecting lines, forming a more or less geometrical figure called *sere* which means "the little palm, space between the finger and the thumb" (properly "spreading out" = gerundive of the verb *ser-mek*; cf. the saying *ser-e serp-e, sele serpe*; the word is found with the same meanings in Kirg̲h̲iz, cf. W. Radloff, *Wörterbuch*, iv, 458).

Between the *sere* and the escutcheon is inserted the word *al-muẓaffar* "victorious" with the addition of *dāʾim*[an] "always", which is placed in the form of a very conventional seal in the centre of the escutcheon. The final *alif* of the word *dāʾimā* (*dāʾim*[an]) is lengthened and, turning sharply round to the left, cuts through the curves. These words appeared for the first time according to I. G̲h̲ālib Edhem (*Catalogue*, p. *zāy* and 206 n.) on the coins of Ibrāhīm II, whose reigu began in 1049/1640.

The two extremities to the right of the curves are given an elongated and more elegant form. They have become one more characteristic feature of the modern *tug̲h̲ra*, of which they form the arms (*tug̲h̲ra ḳollarî*). From the tops of the three verticals descend three broken lines like floating flames. As to the word K̲h̲ān, after having figured at the end of the name of the sovereign's father, it was added to that of the sovereign from the time of Maḥmūd I (1143-68/1730-54).

In the field to the right of the *tug̲h̲ra* was frequently placed a flower. In the same place the sultans later put their title of *g̲h̲āzī* when they had the right to it (Maḥmūd II put his poetic nom de plume *ʿAdlī* there, cf. Pl. XXVI, fig. 8). For the other modifications in detail undergone by the *tug̲h̲ra*, cf. L. Fekete, *Einführung in die osmanisch-türkische Diplomatik*, Budapest 1926, p. xliv, n. 1.

The form of *tug̲h̲ra* which we have just described was often imitated by private individuals, who used to substitute for the name of the sultan religious formulae in order to make *lawḥas* or calligraphic plaques to hang up in mosques, libraries, cafés or private houses. In Egypt, we even find tradesmen's signs of this kind, but they are now disappearing and it was quite recently allowable to commission a *k̲h̲aṭṭāṭ* or a maker of faience to make a *tug̲h̲ra* in one's own name (cf. Pl. XXVII, figs. 12, 13).

The official use of the *tug̲h̲ra* ceased in Turkey with the dethronement of the last sultan Meḥemmed VI [*q.v.*].

If we now compare the Ottoman *tug̲h̲ra* with the Mamlūk one in order to ascertain the graphic element which is common to both, we find that this element reduces itself to the uprights of the vertical letters. We are thus led to conclude quite naturally that the essential feature of the *tug̲h̲ra* is a certain number—not fixed—of upright strokes.

Although supplied later by the method of writing the words, the decorative motif represented by the

verticals must be older than the use of the Arabic script among the Turks.

The symbol of the tughra. If we suppose the *tughra* is not simply a conventional mode of writing, what symbol does it represent?

We have already mentioned that some see in it the figure of a bird. Others have gone so far as to see in it a horseman galloping at full speed (Tychsen), but the most popular theory is that which owes its fame to von Hammer (*Hist. de l'Emp. Ottoman*, i, 231). According to him, the *tughra* was the imitation of the mark left by the hand of sultan Murād I (761-91/1360-89), who, not being able to write, dipped his hand in ink (!) and stamped it instead of a signature on the treaty concluded with the Ragusans. This explanation, which seems to overlook the fact that the sultan in question had a chancellery, is taken by von Hammer from Engel (*Gesch. des Freystaates Ragusa*, Vienna 1807, 141), who does not give any authority. It is not known in the east and is clearly a legend, which originated no doubt in Ragusa itself. It nevertheless had a great vogue; Barbier de Meynard accepted it (*Rec. des hist. des Croisades*, iv, 138 n.), and it was defended quite recently by arguments taken from the antiquity of the use of finger prints.

Looking at the primitive form of the *tughra* (see above), all the hypotheses which we have just given fall apart at once. It is interesting to note that Fekete came to the same negative result, starting from the design of the Ottoman *tughra*, which is, however, more complicated. Later interpretations being based on more elaborate forms of the *tughra* are of little importance.

This is why the fact that the *tughra* or the *penče*, which is the imitation of it [see PENČE], is sometimes given the form of a bird in Turkish decorative art (a specimen of the year 1181/1767-8 is given in Pl. XXVII, fig. 14). Similarly, the fact that *penče* means "claw" and *sere* "palm" is not an argument in favour of von Hammer's theory, who, however, did not think of quoting it (the French word "griffe" is used also with the meaning of "stamp for a signature").

In thus simplifying the problem, one is led to ask if the hooks of which we have spoken have not some symbolical significance. One question arises which is put forward with all reserve: do not these verticals represent the *tugh* [*q.v.*], a word which we know was applied by the Turks to the horse or yak tails floating on the end of a pole, or earlier to flags in general? The main argument that can be produced against the suggestion is the rarity of the denominative verbal suffix *-ra*, from which we should have to derive *-ra-gh* (in *tughragh*) by a formation parallel to the well-known suffixes *-la* (*-la-gh*). See on this suffix Deny, *Grammaire de la langue turque*, and more especially, in *L'Anthropologie*, xxxiii [1923], 174.

As to the argument that one might be tempted to draw from the flames floating at the top of the *tughra* or from the fact that, in the *penče*, the custom became established of very often drawing two verticals for the *pashas* of two tails and three for the *pashas* of three tails or *wezīrs*, these are all intepretations *a posteriori* which prove no more than those rejected above (as a curiosity there is given in fig. 15 (Pl. XXVII) a signature in which the words *khāliṣ al-fu'ād* are arranged in three verticals of a *tugh*, although they refer to a woman). It is also to be noted that numismatists sometimes seem to take the word *tughra* in the larger meaning of "*motif* of decoration by letters" (*JRAS*, ix [1848], 300, 381).

It was noted in (a) above that the Saldjūḳ and Mamlūk rulers had officials whose special duty was to draw the *tughra* (in Turkish, *tughra čekmek*, in Persian, *tughra kashīdan*). Similarly, the Ottomans had the *nishāndji* or *tewḳīʿī*, and this official made up, with the three *defterdārs* and the *defter emīnī*, the five high officials at court, the *khʷādjegān* (d'Ohsson, iii, 350; von Hammer, xvii, 54; see further on this official, NISHĀNDJĪ).

It was the duty of this official and his staff, in the early and middle periods of the Ottoman empire, to examine and control all documents presented to him for marking with the sultan's *tughra*. According to the *Ḳānūn-nāme* of the *tewḳīʿī* (*nishāndji*) ʿAbd al-Raḥmān (of 1087/1676-7, *MTM*, 515), the following were the formalities to be gone through: When a *firmān* is promulgated requiring official authorisation (*taṣḥīḥ firmānī*), the law requires that the *tughra* be executed by the Grand Vizier himself. On receiving this *firmān*, the *nishāndji* inscribes on the reverse the words *defteri gele* "let its register be brought" (in which is the precedent to be examined) and sends it to the *defter emīnī*. The latter at once sends back the *firmān* with the required register through the *kisedār* (official in charge of the registers) of the archives (*defter-khāne*). After finding the required reference, the *nishāndji* verifies it and keeps the *firmān* ordering it.

He also receives in a sealed bag (*memhūr kise*) the *berāt* issued by the *ḳāḍī-ʿasker*, writes on the register opposite the names of the beneficiaries of these *berāt* the word *ṣaḥḥ* "verified, seen, approved", again seals the bag and sends it by its *kisedār* to the *kāghad emīnī* (who collects the chancellery dues).

According to the *ḳānūn* of Meḥemmed II, the *nishāndjis* had to be recruited from the *müderrisīn* of the grade of *dākhil* and *ṣaḥn*, i.e. from among lawyers (evidently on account of the qualifications demanded by them as regards legislation) and also from the *defterdārs* [see DAFTARDĀR] and the *re'īs ül-küttāb* [*q.v.*]. The early *defterdārs* ranked on this occasion as equal to the *beylerbeyis*, the early *re'īs al-küttāb* only ranked equal to the *sandjak-beyi*.

The *re'īs al-küttāb* became more important, and the *nishāndjis* gradually saw their functions reduced to the calligraphy of the *tughras*. Among their duties, however, they retained the control of the registration of transfers of *tīmārs* [*q.v.*] and of the *wakf* villages (*Ḳānūn-nāme* of Meḥemmed II, ed. Meḥmed ʿĀrif, 14, n. 5, suppl. to *TOEM* [1330/1912]).

According to the same *ḳānūn-nāme*, in the *dīwān-i hümāyūn*, the *nishāndjis* occupied the place of honour (*ṣadr*) along with the *wezīrs*, the *ḳāḍī-ʿaskers* and the *defterdārs*.

With the expansion of the empire, the *nishāndjis* were obliged to call in other officials for help; the *ḳānūn-nāme* of Meḥemmed II contains provisions for the *nishāndji* to be aided by the *kubbe wezīr*, who became called the *tughrakesh wezīr*, and commanders-in-chief (*serdār*) also had the privilege of affixing the *tughra*.

The work of the *nishāndjis* was somewhat lightened by the fact that the orders of the Porte destined for the capital did not have a *tughra*; only *firmāns* sent to the provinces were *tughralî* ("supplied with a *tughra*") (Mouradja d'Ohsson, Bianchi and Kieffer, under the word *ṭughralî*).

In conclusion, it may be added that the high officials and even the governors of the second class in tracing their *penče* frequently gave it a form very like that of the *tughra*. See photographs of orders issued by the former *wālīs* of Egypt (Pl. XXVIII, figs. 16-17) in which the *penče* resembles the sultan's *tughra*. Instead of (in the *penčes* of 1061 and 1062/1051-2 side-by-side with) *muẓaffar*, two, and later three, elliptical circles

are found. With the three shafts, they form letters *ṭā'* which, apparently, are an *a posteriori* reminiscence of the initial of the word *ṭūgh*. Instead of *dā'ima*, *ṣaḥḥ* is found. Instead of being at the top of the document, they were put on the margin of the right side and perpendicular to it.

When the *nishāndjī* disappeared with the *Tanẓīmāt* [*q.v.*] reforms, officials called *tughrakesh* were kept to draw the *tughra*.

(d) In Indo-Muslim usage.

Shortly after its appearance at the Saldjūḳ court some time in the 11th or 12th century, the *ṭughrā* gradually found its way to South Asia, most likely through the calligraphers who fled conflicts elsewhere in the Islamic world and took refuge in India. Unlike the Ottoman *ṭughrā* which served as an imperial signature or monogram (*ʿalāma*/*shiʿār*), the South Asian *ṭughrā* evolved as a decorative style of writing resembling the Mamlūk *ṭughrā* in Egypt, particularly in the regular repetition of the elongated vertical letters (e.g. the *alif*) drawn from the horizontal band of the calligraphic programme and the symmetrical arrangement of those verticals. This essential feature of the *ṭughrā* is visible in a number of inscriptions in Islamic architecture in South Asia, such as the invocations, *al-mulk li 'llah* and *Allāh Kāfī*, inscribed on medallions at Radja ki-Bain Masdjid *ca.* 912/1506 and Ḳilʿa-i-Kuhna Masdjid (*ca.* 948/1541) in Dihlī and in the early 17th-century mausoleum of Shāh Dawlat in Manēr, Bihār (Pl. XXXIII, fig. 1); a Persian inscription of the ʿĪdghāh in Jalor, Radjasthān (*ca.* 718/1318); an Arabic inscription over the east gateway of the Djāmiʿ Masdjid of Aḥmadābād, Gudjarāt, dated 827/1424 (Pl. XXXIII, fig. 2); and the tomb inscription of Muḥammad Amīn, the Ḳuṭb Shāhī ruler in Golconda, dated 1004/1595-6.

It was in Bengal, however, where the *ṭughrā* flourished and dominated architectural calligraphy during the 14th, 15th and early part of the 16th centuries. Because of its distinctive ornamental style, this regional variety can aptly be called the Bengali *ṭughrā*. The Miyāna Dar inscription (dated 871/1466-67) in Gawr presents a fascinating example of this regional development. On it, the surface has been divided into thirty-two calligraphic panels, each alternating *ṭughrā* and monumental *thulth* styles (Pl. XXXIII, fig. 3). Interestingly, only in this inscription does the calligraphy resemble the Ottoman *ṭughrā*. In monumental Bengali *ṭughrās*, the convoluted uprights (*muntaṣibāt*) of the vertical letters are highly stylised (Pl. XXXIV, fig. 4a), often bearing the characteristics of the letter *alif* of *thulth* with distinctive features of *zulf*, *badn* and *sayf* (Pl. XXXIV, fig. 4b). While the crescent-like undulating curves represented by the oval letters such as *nūn* and *yā'* (Pl. XXXV, fig. 5), and in some cases the upper horizontal stroke (*shākila*) of the letter *kāf* (Pl. XXXIV, fig. 4c) and the word *fī* (Pl. XXXV, fig. 6), are superimposed on the extended uprights of the vertical letters, the main body of the text clusters very thickly at the bottom rendering an extremely intricate pattern of writing (see Mohammad Yusuf Siddiq, *An epigraphical journey to an Eastern Islamic land*, in *Muqarnas*, vii [1990], 83-108). The calligraphers thus ranged freely in producing different forms and patterns of *ṭughrā*, using their creative imagination. However, it is not difficult to find a rhythmic pattern in the movement of the letters and the flow of lines in Bengali *ṭughrās*, which often contained a metaphorical expression of life, nature, and the environment of Bengal in abstract forms ranging from the bow and arrow of Bengali hunting life (fig. 5) to the swan and reeds of riverine rural Bengal (fig. 6). Though the *ṭughrā* lost its popularity in Bengal in the mid-16th century, it continued to appear in some South Indian Muslim kingdoms such as Golconda, Bidjapur, and Ḥaydarābād (see Siddiq, *al-Ṭughrā wa 'stikhdāmuhā fi 'l-Bangāl*, in *al-Fayṣal*, no. 148 [May-June 1989], 95-100).

The *ṭughrā* was used in some cases on coins during the Sultanate and Mughal periods (e.g. on some coins of the Emperor Akbar) in Dihlī and also in the east by the sultans of Djawnpur [*q.v.*]. It was also occasionally used on *farmāns* (e.g. the *farmān* of the Mughal Empress Nūr Djahān and Maḥmūd Shāh, the Bahmanid sultan of Gulbaraga in the Deccan). Among the rulers, however, the last Mughal emperor Bahādur Shāh Ẓafar (d. 1862) is best known for his charming little calligraphic pictures of faces and flowers in *ṭughrā* style. During the 19th and early 20th centuries, zoomorphic patterns of the *ṭughrā*, often in the form of lions, horses, camels, or birds usually containing a Shīʿī invocation, became popular. The *ṭughrā* is still popular for calligraphic designs in South Asia, particularly in Pakistan, where it is widely used for official and institutional monograms, for example, on postage stamps, coins, medals and legal deeds. Quite often, these monograms resemble the late Ottoman *ṭughrā* in their appearance.

(Muhammad Yusuf Siddiq)

TUGHRĀ, MULLĀ, 17th-century Indo-Persian poet, died *ca.* 1078/1667 (see Rieu, *Catalogue of Persian manuscripts in the British Museum*, ii, Add. 16,852).

According to most accounts, he was a native of Mashhad, but Ṭāhir Naṣrābādī, who was his contemporary, mentions him as a Tabrīzī, stating at the same time that he heard the poet being called Mashhadī (*Tadhkira-yi Naṣrābādī*, ed. Waḥīd Dastgirdī, Tehran 1361/1982, 339). Tughrā went to India towards the end of Djahāngīr's reign or in the beginning of Shāh Djahān's time. His first employer there was Mīr Muḥammad Saʿīd Mīr Djumla (d. 1663), prime minister of ʿAbd Allāh Ḳuṭb Shāh of Golconda. Later, he served as secretary for Shāh Djahān's youngest son Murād Bakhsh (d. 1661). He accompanied the latter in his expedition to Balkh (1646), and travelled widely in the Deccan, finally settling in Kashmīr, where he died.

Tughrā's poetic output comprises *ghazals*, *ḳaṣīdas*, *ḳiṭʿas*, *mathnawīs* and other similar conventional verse forms. Among the *mathnawīs* is his *Sāḳī-nāma*, "Book of the cup-bearer", a lengthy work of some 10,000 couplets, composed by him after Ẓuhūrī's poem in the same genre (see Aḥmad Gulčīn-i Maʿānī, *Kārwān-i Hind*, i, Mashhad 1369/1991, 816). In those poems

where the poet's pen-name Tug͟hrā did not scan in the metre, he has employed S͟hīfta as his pen-name. A conspicuous element in his poems is the occurrence of Hindī words, in the use of which one discerns a deliberate effort on the part of the author.

Although Tug͟hrā's poetry was reportedly much admired during its time, it was his prose writings that won greater exposure and recognition in wider circles. He was the author of a number of treatises (*risālas*) that include descriptions of places, eulogies of individuals, discussion on mysticism, collection of metaphors from music and medicine, poetical application of the names of the planets, letters, praise of Zulālī K͟hʷānsārī's (d. *ca.* 1025/1616) seven *mat͟hnawīs*, as well as some other subjects. Seventeen of these treatises were published at Kānpūr (1871, 1903) and Lakhnaw (1885), and formed part of the curriculum used previously in *madrasa* education.

AL-ṬUG͟HRĀʾĪ, Muʾayyid al-Dīn Abū Ismāʿīl al-Ḥusayn b. ʿAlī al-Muns͟hiʾ al-Iṣbahānī, secretary, Arabic poet and alchemist.

He was born in 453/1061 at Iṣfahān, and his poems give ample testimony of his lasting attachment to his native town. He entered the service of Sald͟jūḳs at the time of Malik S͟hāh and went on to become chief secretary under that ruler's son, Muḥammad I, with the titles *muns͟hi*ʾ, *mutawallī dīwān al-ṭug͟hrā*ʾ and *ṣāḥib dīwān al-ins͟hā*ʾ; in short, he was the second most senior official (after the *wazīr*) in the civil administration of the Sald͟jūḳid empire. The sources praise the excellence of his style, as well as his beautiful handwriting, but none of his official letters seems to survive. In 513/1119, not long after the death of Muḥammad I, the prince Masʿūd b. Muḥammad rebelled against his brother Maḥmūd III and declared himself sultan, at the instigation, it is said, of al-Ṭug͟hrāʾī, whom he made his *wazīr*. When Masʿūd was routed the following year, the victorious Maḥmūd pardoned his brother, but al-Ṭug͟hrāʾī was accused of being an apostate (*mulḥid*, presumably meaning an Ismāʿīlī), and executed (in the unanimous opinion of the historians, unjustly) by order of Maḥmūd's *wazīr*, al-Simīrumī; the best sources put this in Rabīʿ I 515/1121. His death was avenged in Ṣafar 516/1122, when one of his former slaves assassinated al-Simīrumī in Bag͟hdād; this circumstance invalidates the date 518/1124 which some authors give for al-Ṭug͟hrāʾī's execution.

Al-Ṭug͟hrāʾī's Arabic *dīwān* (critical edition by ʿAlī D͟jawād al-Ṭāhir and Yaḥyā D͟jabūrī, Bag͟hdād 1396/1976) contains odes to Malik S͟hāh's minister Niẓām al-Mulk [*q.v.*], his chief secretary Muʿīn al-Mulk Muḥammad b. Faḍl, the sultans Muḥammad I and Masʿūd [*q.vv.*] and to various other persons, but also many private poems and incidental pieces. In two short poems (nos. 28, 127) he declares his S͟hīʿī sympathies, but on the whole his verse does not have a strongly religious flavour. Through some quirk of fate, a single one of his poems has eclipsed all the others, namely a longish *ḳaṣīda* bewailing his ill-treatment at the hands of his contemporaries, commonly known as the *lāmiyyat al-ʿad͟jam*, a name which it owes to a superficial resemblance with the much earlier *lāmiyyat al-ʿarab* of al-S͟hanfarā [*q.v.*]. It has been the subject of various commentaries, the earliest, it seems, by al-ʿUkbarī (d. 616/1219), but the most famous is the gargantuan *G͟hayt͟h al-musad͟jd͟jam bi-s͟harḥ lāmiyyat al-ʿad͟jam* by al-Ṣafadī (d. 764/1363 [*q.v.*]; printed several times in Cairo); for other commentaries, supercommentaries, *tak͟hmīsāt*, etc., see Brockelmann. It was first printed, with a Latin translation by Golius, in Leiden in 1629, and, again with a Latin version, by Pococke, Oxford 1661, probably the first major work of Arabic poetry to be made known in the West. An English translation is contained in J.D. Carlyle, *Specimens of Arabic poetry*, Oxford 1796.

Al-Ṭug͟hrāʾī was also a famous and prolific author on alchemy. Of his extant works on that subject (listed, with a brief indication of their contents, in Ullmann; none of them is available in print) the most interesting appears to be the *Kitāb Ḥaḳāʾiḳ al-istis͟hhād* of 505/1112, a response to Ibn Sīnā's refutation of alchemy. The famous philosopher had maintained that each mineral belongs to a separate species, with its own "specific difference" (*faṣl*), and that consequently the transmutation of one mineral to another is impossible. Al-Ṭug͟hrāʾī accepted that each mineral has its own "specific difference", but claimed that the alchemist could "prepare" one substance for a divine intervention which would transform it to another, citing as a decidedly unfortunate parallel the supposed spontaneous generation of scorpions from a mixture of dust and straw. Some three centuries later, Ibn K͟haldūn summarised and rejected the arguments of both sides and defended a position which comes close to that of modern science: the minerals are all composed of the same basic elements and are thus, in principle, capable of transmutation, but the possibility of effecting the change surpasses the limits of human knowledge.

ṬUGHTIGIN, ẒAHĪR AL-DĪN ABŪ MANṢŪR (d. 522/1128), Atabeg of Duḳāḳ, son of the Saldjūḳid Tutush [*q.v.*] and founder in Damascus of the Atabeg dynasty of Būrids or Börids (497-549/1104-54 [see BŪRIDS]). He was a Turkish freedman of Tutush, who appointed him governor of Diyār Bakr and Atabeg of Duḳāḳ before giving to him in marriage Duḳāḳ's mother, Ṣafwat al-Mulk. When Tutush died in battle in 488/1095, he became regent for Duḳāḳ in Damascus, but his real reign did not begin till the death of the young Saldjūḳ prince in 497/1104.

Ṭughtigin at first strove to preserve his power by refusing to give back Damascus to Riḍwān [*q.v.*], Duḳāḳ's brother and prince of Aleppo, and by installing on the throne there a brother and then a young son of Duḳāḳ, called Ertash and Tutush respectively. Within a few months, Ertash's flight and Tutush's death allowed the Atabeg to assume sole power. He recognised Riḍwān's suzerainty in the *khuṭba* and *sikka*, but this recognition later disappeared whenever relations between Aleppo and Damascus became tense. Within a few years, Ṭughtigin managed to impose his authority on all the lands between the Ḥawrān in the south and Ḥamāt in the north, so that henceforth he appeared as the most powerful ruler in Syria.

Unlike Riḍwān, who showed no enthusiasm for *djihād* [*q.v.*], Ṭughtigin led several expeditions against the Franks to preserve the food supply of Damascus and communications with Egypt and Arabia. He combatted the Franks of Jerusalem in the regions of the Sawād and of Lake Tiberias, but the truces which followed these fights allowed the Crusaders to levy taxes on a part of the harvests of that region, which gradually passed under their control. He made similar agreements with the Count of Tripoli which gave the Franks a third of the harvests of the Biḳāʿ [*q.v.*], at the same time losing several fortresses in Mount Lebanon. Despite his efforts, he was unable to save Tripoli in 1109 or Tyre in 1124, and towards 519/1125, Damascus itself was threatened for the first time. Ṭughtigin had insufficient forces and power to resist the Crusaders alone, and help from nearby principalities, themselves weak and divided, was insufficient and useless. Despite these checks, Ṭughtigin gradually acquired, in Muslim eyes, the image of a fighter for the faith, as attest his titulature and the poetry written in his praise after 513/1119. Nevertheless, when his interests were threatened, as in 509/1115 when he felt menaced by the Great Saldjūḳ sultan, he did not hesitate to ally with the Franks.

His relations with Muḥammad b. Malik Shāh [*q.v.*] were, in fact, difficult until 509/1116. Muḥammad probably reproached Ṭughtigin with having impelled Duḳāḳ to support his brother and rival Berk-yaruḳ [see BARKYĀRUḲ] and with having usurped power in 1104. The Atabeg tried on several occasions to regain the sultan's confidence. In 503/1109-10 he even had the intention of going to Baghdād, but rumours of the sultan's desire to remove him from power led him to renounce this. When Mawdūd, *amīr* of Mawṣil, was assassinated in the great Mosque of Damascus by Ismāʿīlīs, Ṭughtigin was suspected of being behind the plot. Feeling threatened, he allied with the *amīr* Il-Ghāzī [*q.v.*], who was also on bad terms with the sultan. Then in 509/1115 Muḥammad sent an army into Syria under the command of the governor of Hamadhān, Bursuḳ b. Bursuḳ, with instructions to combat the two *amīrs* and then turn to attacking the Franks. Ṭughtigin and Il-Ghāzī preferred to ally with the Crusaders rather than lose their own power. The sultan's army was in the end defeated by the Crusaders without the intervention of the two *amīrs*, but in the next year, Ṭughtigin, regretting his attitude and disturbed by the Franks' advance, travelled to Baghdād and obtained the sultan's pardon and recognition of the government over his territories.

Within Damascus, Ṭughtigin's reign was marked by the rise of the Bāṭiniyya or Ismāʿīlīs under their Persian *dāʿī* Bahrām. The Atabeg allowed them to have a centre for propaganda (*dār al-daʿwa*) in the city and in 520/1126 handed over the fortress of Bāniyās [*q.v.*] to the south of Damascus to them. It remains obscure why he favoured this Shīʿī sect; he probably thought that their support might be useful against the Franks and Saldjūḳids. The Atabeg's death in 522/1128 coincided with Zangī's arrival in Aleppo, and from this time onwards it was northern Syria which was to be ahead of Damascus in the fight against the Crusaders. Ṭughtigin was buried near the *muṣallā* [*q.v.*] to the south of Damascus. His fighting skill and bravery made him, like Ṣalāḥ al-Dīn after him, a legendary figure in the epic Frankish literature of the 13th century. As the hero of the *Ordene de chevalerie* under the name of Huon of Tabarié, he was represented as a Muslim prince converted to Christianity who was said to have fought at the side of the Jerusalem Franks (J. Richard, *Huon de Tabarié*, in *La chanson de geste et le mythe carolingien. Mélanges R. Louis*, Saint-Père-sous-Vézelay 1982, 1073-8).

TUKARŌʾĪ or MUGHALMĀRĪ, a place near Midnapūr in the southern part of West Bengal, the site of a battle in 982/1574 between Akbar's finance minister and commander Rādjā Tōḍar Mal [*q.v.*] and the young ruler of Bengal, Dāwūd Khān Kararānī [*q.v.*], who had repudiated Mughal suzerainty. Dāwūd Khān was beaten by a ruse [see ḤARB. vi, at Vol. III, 202b] and forced to flee, allowing Akbar formally to annex Bihar, Bengal and Orissa.

Bibliography: See that to DĀWŪD KHĀN KARARĀNĪ, and also J.F. Richards, *The Mughal empire* (= *The New Camb. hist. of India*, I. 5), Cambridge 1993, 33. (C.E. BOSWORTH)

ṬUKHĀRISTĀN, the name found in earlier mediaeval Islamic sources for the region along the southern banks of the middle and upper Oxus river, in the wider sense of the term (see below), with the ancient of the Balkh as the centre of its western part and such towns as Ṭālaḳān, Andarāb and Walwālīdj [*q.vv.*] as its centres in the narrower acceptation of the term, sc. the eastern part. It comprised in its wider sense the modern Afghān provinces of Fāryāb, Djūzdjān, Balkh, Sanangān, Ḳunduz, Takhār and Badakhshān.

The name of the region obviously preserves a memory of the people known to the Hellenistic Greek historians and geographers as *Tokharoi*, who may have pushed into this upper Oxus region from the Inner

Eurasian steppes as well as into what later became Eastern Turkistān. The Tokharians of Bactria or the upper Oxus region apparently used languages of the Indo-Iranian Saka group; see for these last, J. Harmatta (ed.), *History of civilizations of Central Asia*, ii, *The development of sedentary and nomadic civilizations, 700 B.C. to A.D. 250*, UNESCO, Paris 1994, chs. 16-17, and for the history of the Tokharians of Bactria, B.A. Litvinsky (ed.), *History of civilizations of Central Asia*, iii, *The crossroads of civilizations A.D. 250 to 750*, UNESCO, Paris 1996, index, snn. "Bactria", "Tokharistan". But by the time of the coming of the Arabs to the region (sc. the second half of the 7th century), it is dubious whether the local people thought of themselves as in any way "Tokharians", unless perhaps we take into account al-Balād̲h̲urī's mention (*Futūḥ*, 408) of Bal̲kh̲ (in connection with al-Aḥnaf b. Ḳays [*q.v.*], who raided into the region in the 650s) as *madīnat Ṭuk̲h̲ārā*. It is also true that the Chinese Buddhist pilgrim Hsüan-tsang mentions lands of the T'u-hu-lo in both the desert east of K̲h̲otan (sc. the Takla Makan) and on the Oxus (*Mémoires sur les contrés occidentales*, tr. St. Julien, Paris 1857-8, i, 23, ii, 247). In his time, the western land of T'u-hu-lo was divided into 27 petty principalities, extending northwards across the Oxus as far as the "Iron Gate", sc. the Buzgala defile on the road from Tirmid̲h̲ to Nak̲h̲s̲h̲ab and Kis̲h̲s̲h̲ and thence to the Kashka Darya and Sogdia.

What we do know is that the language of the pre-Islamic inhabitants of Ṭuk̲h̲āristān survived there well into Islamic times on the evidence of the recently-discovered hoard of documents, mainly in the Middle Iranian Bactrian language, written in a cursive script derived from the Greek alphabet (thus confirming Hsüan-tsang's description of the writing system of the people of T'u-hu-lo, cf. Abdur Rahman, *The last two dynasties of the Śāhīs*, Islamabad 1979, 232 ff.), but with some also in Arabic. It seems that we have here the royal archive of a petty prince of Simind̲j̲ān and Rūb in southeastern Ṭuk̲h̲āristān (cf. for Simind̲j̲ān, al-Ṭabarī, ii, 1219, year 91/710; *Ḥudūd al-ʿālam*, tr. Minorsky, 63, 108-9, comm. 338), whose latest document stems from 549 of the Bactrian era, probably to be equated with A.D. 781, hence from the early ʿAbbāsid period. It is in these documents, one dating from the later 5th century A.D., that we find what is apparently the first mention of Ṭuk̲h̲āristān as such; one single person is described as "the Hephthal *yabg̲h̲u*, the *k̲h̲ar* [= "ruler"] or Rōb, the scribe of the Hephthal lords, the judge of Tuk̲h̲āristān and G̲h̲arčistān".

In the Islamic period, Ṭukhāristān in its wider sense included all the highlands dependent on Bal̲kh̲, right and left of the upper course of the Oxus. According to Yāḳūt (*Muʿd̲j̲am*, iii, 518), there were two Ṭuk̲h̲āristāns, Upper (*al-ʿulyā*) and Lower (*al-suflā*), but he does not seem to have had any exact idea of this division. Upper Ṭuk̲h̲āristān was said to be east of Bal̲kh̲ and west (according to modern maps south) of the D̲j̲ayḥūn (Oxus); Lower was also west of the D̲j̲ayḥūn but more to the east than Upper Ṭuk̲h̲āristān. The latter is also mentioned in Ibn K̲h̲urradād̲h̲bih and Ibn Rusta, and in al-Ṭabarī. According to Ibn Rusta, Upper Ṭuk̲h̲āristān, as was to be expected from the physical features of the country, lay north of the Oxus; on 292, 8, the high-lying territory on both sides of the Upper Oxus is included in Upper Ṭuk̲h̲āristān, along with Badak̲h̲s̲h̲ān and S̲h̲ug̲h̲nān. In Ibn K̲h̲urradād̲h̲bih, 34, on the other hand, it is assumed, as in Yāḳūt, that Upper Ṭuk̲h̲āristān lies east of Bal̲kh̲ and south of the Oxus. In al-Ṭabarī (ii, 1589, 1612) the expression Upper Ṭuk̲h̲āristān twice occurs without its situation being defined. In another passage (ii, 1180), we are told that the lands of S̲h̲ūmān and Ak̲h̲arūn (north of the Oxus on the Upper Kāfir-nihān) were in Ṭuk̲h̲āristān, without the qualification *al-ʿulyā*. Al-Yaʿḳūbī, *Buldān*, 289, 290, calls the district of the town of Bāmiyān [*q.v.*] "the first" (*al-ūlā*) or "the nearest" (*al-dunyā*) Ṭuk̲h̲āristān. Bāmiyān was the "first of the districts (*mamālik*) in the nearest, western Ṭuk̲h̲āristān". Ibn K̲h̲urradād̲h̲bih assumes that Ṭuk̲h̲āristān extends far to the northwest, including Zamon, the modern Kerkī (36), as well as to the south, where the frontier lands (*t̲h̲ug̲h̲ūr*) of Ṭuk̲h̲āristān are said to be Zābulistān (35) and Kābul (37).

The frontiers of Ṭuk̲h̲āristān in the narrower sense are given most accurately by al-Iṣṭak̲h̲rī (270); they were the lands east of Bal̲kh̲, west of Badak̲h̲s̲h̲ān, south of the Oxus and north of the main ridge of the Hindū Kus̲h̲; the most important towns besides the capital Ṭālaḳān or Ṭāyaḳān were Walwālīd̲j̲ and Andarāb.

When the Arabs made their first raids against Bal̲kh̲ and Ṭuk̲h̲āristān in ʿUt̲h̲mān's caliphate, they found various local princes like the above-mentioned *yabg̲h̲u* or D̲j̲abg̲h̲ūya ruling there, but the most powerful single force there was that of the ruler of the northern kingdom (sc. that north of the Hindu Kush) of the Hephthalites (Ar. Hayāṭila [*q.v.*], sing. Hayṭal (for *Habāṭila, sing. *Habṭal). The Hephthalites appear as such for the first time in al-Ṭabarī's history of the Sāsānids during the struggle for the Persian throne amongst his sons after the death of Yazdagird II in 457. They had conquered Ṭuk̲h̲āristān shortly before (al-Ṭabarī, i, 873, 4; Nöldeke, *Geschichte der Perser und Araber*, 119); from whom we are not told. During the Arab wars with the native princes, the last Sāsānids and the Turks, for the possession of Ṭuk̲h̲āristān, a D̲j̲abg̲h̲ū (*d̲j̲abg̲h̲ūya*, al-Ṭabarī, ii, 1206) is mentioned as king (*malik*) of Ṭuk̲h̲āristān; he was a prince of the Turkish people of the K̲h̲arluk̲h̲ (Ḳarluḳ); the expressions *d̲j̲abg̲h̲ūya al-Ṭuk̲h̲ārī* (ii, 1604, 1612) and *d̲j̲abg̲h̲ūya al-K̲h̲arluk̲h̲ī* (1612) are used promiscuously by al-Ṭabarī, although in one passage (1591) he does make a distinction between Ṭuk̲h̲āristān and the land (*arḍ*) of the *d̲j̲abg̲h̲ūya*.

The conquest of Ṭuk̲h̲āristān was difficult and prolonged for the Arabs. Ziyād b. Abīhi [*q.v.*], governor of the East for Muʿāwiya, was concerned for the safety of the eastern fringes of K̲h̲urāsān and feared the possibility of a revanche, with Chinese or Hephthalite aid, of the Sāsānid claimant Fīrūz, son of Yazdagird III. In 47/667 his commander al-Ḥakam b. ʿAmr al-G̲h̲ifārī raided into lower Ṭuk̲h̲āristān and G̲h̲arčistān, crossing the Oxus into Čag̲h̲āniyān and driving Fīrūz back to Chinese territory, and in 51/671 al-Rabīʿ b. Ziyād al-Ḥārit̲h̲ī conquered Bal̲kh̲ and again crossed into Čag̲h̲āniyān (al-Ṭabarī, ii, 109-10, 155-6; H.A.R. Gibb, *The Arab conquests in Central Asia*, London 1923, 16-17). The tribal conflicts in K̲h̲urāsān and the upheavals within the caliphate of the 680s and early 690s were not conducive to an extension of Arab power, and the Arabs faced a redoubtable foe in the Hephthalite ruler Ṭark̲h̲ān Nīzak [*q.v.*], and it was not until 91/709-10 that the governor of K̲h̲urāsān Ḳutayba b. Muslim [*q.v.*] was able to overcome the resistance of Nīzak and his ally the D̲j̲abg̲h̲ūya, killing Nīzak by an act of treachery. From now onwards, Arab control in lower Ṭuk̲h̲āristān was reasonably secure, and Bal̲kh̲ developed into a centre of Arab power (see Gibb, *op. cit.*, 36-42), although the caliphal grip was temporarily shaken by the revolt in 116/734 of al-Ḥārit̲h̲ b. Surayd̲j̲ [*q.v.*], who controlled Bal̲kh̲

for a while and who was supported by the local princes of Ṭuk͟hāristān; these last continued to send embassies to the Imperial Chinese court, requesting help against the Arabs, even after the decisive Arab victory at Talas in 133/751 over the Chinese army. Al-Ḥārit͟h had latterly allied with the K͟hāḳān of the Türges͟h or Western Turks, and Turks seem to have continued to be an ethnic constituent of the (otherwise mainly Iranian) population of Ṭuk͟hāristān; the *Ḥudūd al-ʿālam* (372/982) mentions K͟halluk͟h (= K͟harluk͟h) Turks as living in its steppe lands.

Under the ʿAbbāsids, Balk͟h and Ṭuk͟hāristān were at first governed by commanders sent out from ʿIrāḳ, but in the early 3rd/9th century they came within the vast governorship of the East allotted to the Ṭāhirids [*q.v.*]. In practice, Ṭuk͟hāristān was left largely to local dynasties, most notably the Abū Dāwūdids or Bānīd͟jūrids [*q.v.* in Suppl.], who controlled the silver mines of Andarāb and Pand͟jhīr, issuing their own coins, and whose *amīr* Abū Dāwūd Muḥammad was ruling in Balk͟h as late as 286/899; what may have been a parallel branch of the family ruled north of the Oxus in K͟huttal [see KHUTTALĀN] well into the 4th/10th century.

The history of Ṭuk͟hāristān henceforth forms part of that of the great powers of the East which dominated northern Afg͟hānistān—the Sāmānids, the G͟haznawids and the Sald͟jūḳs. Under the dynasty from central Afg͟hānistān of the G͟hūrids Ṭuk͟hāristān and Badak͟hs͟hān at the end of the 6th/12th and beginning of the 7th/13th centuries came within the territories of the subordinate branch of the G͟hūrids centred on Bāmiyān. The G͟hūrid historian D͟jūzd͟jānī frequently uses the term Ṭuk͟hāristān in his sections on the G͟hūrid sultans and the irruption of the Mongols, but after that time it seems to have dropped out of use.

(W. Barthold-[C.E. Bosworth])

TUKULOR, a name given to the branch of the Fulbe [*q.v.*] (Fulani) people who live in Futa Toro, the middle valley of the Senegal River, and are closely associated with Islamic practice and Islamisation in the wider region. Tukulor (French Toucouleur) is derived from Takrūr [*q.v.*], the name of a town and kingdom in the same middle valley. The derivation probably came from the Wolof language and people who were the western neighbours of the Tukulor; from the Wolof it passed into French colonial practice and from there into widespread usage in European and African ethnographies of Senegal and West Africa.

Over the 20th century, the Tukulor have adjusted to this designation, but they much prefer to call themselves *hāl pulār* "speakers of Pular" (Fulfulde, Fulani), the language common to the Fulbe people who have spread across the Sahelian belt of West Africa. By this term they link themselves to the larger ethnic expression; they also create a context for emphasising the "Fulbe *d͟jihāds*" which occurred in Futa Toro, Futa Jalon (the mountains of Guinea), Masina (the Middle Delta of the Niger) and most spectacularly, in Hausaland under the leadership of ʿUt͟hmān dan Fodio [see ʿUTHMĀN B. FŪDĪ] in the 18th and 19th centuries.

There is no written record of the use of the term Tukulor before the early 19th century. This fact reinforces the probability of derivation from Wolof to French to more general usage, and the close association of the term with Islamic learning, practice and militancy in the middle valley. In late 18th-century Futa Toro, a group of Muslims organised themselves against the depredations of nomadic raiders from the north and the inability of the local Fulbe régime (the Satigis of the Deniyanke dynasty) to provide for their security. Under the leadership of Sulaiman Bal and then Abdul Qadir Kane, they succeeded in defending themselves, mobilising the peasantry and finally in establishing a régime which they called an imāmate or Almamate. These very committed Muslims received the name of *tōrōd̲be* or "seekers of alms" from the Deniyanke, and transformed it into the name for themselves and, ultimately, into the designation of the ruling class of the new order. *Tōrōd̲be* origins were quite diverse ethnically and linguistically (Fulbe, Soninke, Malinke, Wolof, Hassaniyya, etc.). Their ancestors were attracted to the middle valley, largely because of its agricultural productivity, based upon two growing seasons (one rainfed, one floodplain) per year.

Abdul Qadir became the first Almamy (*ca.* late 1770s-1807). Not only did he seek to establish a truly Islamic culture at the village level, in place of the diverse practice of the Deniyanke; he also sought to "export" the Islamic vision and revolution to the west and east of the middle valley. He ultimately failed in his effort, and was assassinated by a coalition of insiders and outsiders exhausted by his militancy and righteousness. His successors in the position of Almamy survived until the French colonial conquest at the end of the 19th century, but they never combined the power and zeal of Abdul Qadir.

The vision of Almamy Abdul Qadir did persist, however, as the ideal of a Muslim leader and state. It also emerged in the word Tukulor, as a way of referring to the inhabitants of the middle valley, or at least many of them, who made Islamic culture into a kind of badge of ethnic identity. At least, so thought the Wolof, and the French after them. Many of the inhabitants of the middle valley who migrated to the west, and especially to St. Louis, the French colonial capital at the mouth of the Senegal River, communicated a sense of superiority in Islamic practice. Most of those who led *d͟jihāds* in western Senegal in the late 19th century, or who emerged as leaders of the Muslim brotherhoods of Senegal in the 20th century, were of Tukulor origin or claimed such an origin for themselves.

One person who gave strong impetus to the association of Tukulor and Islamic militancy was al-Ḥād͟jd͟j ʿUmar Tal [*q.v.*]. Born in the western confines of Futa Toro in the late 18th century, ʿUmar led a holy war against the Malinke and Bambara regimes of the western parts of modern Mali in the mid-19th century. To accomplish his purposes he recruited on a massive basis throughout Senegambia, and particularly in the middle valley. He enlisted perhaps as many as 40,000 people in the year 1858-9, and his son and principal successor, Aḥmad S͟hek͟hu, continued recruitment in Futa until his defeat by the French in the 1890s. The people who left their farms and homesteads in the middle valley to fight and settle in Nioro, Segu, Bandiagara and other bastions of the east were identified in various ways: *mud͟jāhid*, Futanke, and of course Tukulor.

Those who came back to the middle valley and lived in colonial Senegal reinforced the links between

Futa Toro, Islamic militancy and the designation Tukulor. Seydu Nuru Tal, a grandson of ʿUmar, helped to seal these links during the middle and later years of French colonial rule (*ca.* 1920-60). He used his grandfather's prestige, as the symbol of pre-colonial Islamic practice and militancy, to reinforce colonial authority and to undermine newer forms of Islamic reform.

These identifications have faded somewhat in the last few decades with the diversification and deepening of Islamic practice, the variety of kinds and origins of Islamic reform, the expansion of literacy in Pular and other West African languages, and the absence of any obvious central Islamic authority. The associations of the word Tukulor nonetheless survive, as well as some confusion between Tukulor and *tōrōḏbe*, the dominant class of the middle valley.

(D. ROBINSON)

ṬULAḲĀʾ (A.), the pl. of *ṭalīḳ*, which means "a person loosed, set free, e.g. from imprisonment or slavery" (Lane, 1874). The plural becomes a technical term in earliest Islam for denoting the Meccans of Ḳurays̲h̲ who, at the time when Muḥammad entered Mecca in triumph (Ramaḍān 8/January 630), were theoretically the Prophet's lawful booty but whom he in fact released (al-Ṭabarī, i, 1642-3: *ḳāla 'd̲h̲habū fa-antum al-ṭulaḳāʾ*. Cf. *Glossarium*, p. CCCXLII, and Mad̲j̲d al-Dīn Ibn al-At̲h̲īr, *Nihāya*, ed. al-Zāwī and al-Ṭannāḥī, Cairo 1383/1963, iii, 136).

It was subsequently used opprobriously by opponents of the Meccan late converts, such as enemies of the Umayyads, the clan of Abū Sufyān [*q.v.*] who had previously led the Meccan opposition to Muḥammad. In the exchange of letters between ʿAlī and Muʿāwiya b. Abī Sufyān during the Ṣiffīn [*q.v.*] negotiations (whether the correspondence is in fact authentic is doubtful), ʿAlī denounces his challenger as *ṭalīḳ ibn ṭalīḳ*, and declares that the *ṭulaḳāʾ* could never be accounted amongst the emigrants from Mecca before its conquest, the prestigious *muhād̲j̲irūn* [*q.v.*], since the Prophet had declared the *bāb al-hid̲j̲ra* to be closed at the surrender of Mecca; hence no member of Umayya was entitled to participate in a *s̲h̲ūrā* [*q.v.*] convoked to choose a new caliph, but only the Muhād̲j̲irūn and the Anṣār. See al-Minḳarī, *Waḳʿat Ṣiffīn*, ed. Hārūn, 29-30, 201; al-Balād̲h̲urī, *Ansāb*, iii/1, ed. Maḥmūdī, 279-82; al-Ṭabarī, i, 3278; al-Bayhaḳī, *al-Maḥāsin wa 'l-masāwī*, ed. Ibrāhīm, Cairo 1380/1961, i, 82; and cf. W. Madelung, *The succession to Muhammad. A study of the early caliphate*, Cambridge 1997, 194, 231.

Bibliography: Given in the article.

(C.E. BOSWORTH)

ṬULAYḤA B. **K̲H̲UWAYLID** B. **NAWFAL**, from the Bedouin Banū Faḳʿas, a part of the tribe of Asad, one of the false prophets who arose in Arabia during the lifetime of the Prophet Muḥammad and afterwards.

Details of Ṭulayḥa's life and activity before Islam are virtually unknown. Whereas certain clans of the Asad were connected with the religious and economic institutions of pre-Islamic Mecca, Ṭulayḥa's clan, Faḳʿas, had no such links. Neither does it seem to have taken a side in the struggle between Mecca and Muḥammad until the last phase of the Prophet's life. Muḥammad's raid on Ṭulayḥa and his clan at the place called Ḳaṭan, in the year 4/625-6, was most probably initiated by the Prophet rather than provoked by Ṭulayḥa (the former version is suggested by some sources, but the latter is favoured by many). Some sources relate that an unspecified number of Asadīs, headed by Ṭulayḥa, participated in the expedition led by the Meccans against Medina (al-K̲h̲andaḳ) in the year 5/627. Even if this information is true, it may be suggested that the Asadīs joined the siege in order to gain booty rather than achieve political ends (see Landau-Tasseron, *Asad*, 7-11, 20-2). Thus there is no unequivocal evidence that Ṭulayḥa was inimical to Islam during the Medinan period. Muslim traditions relate that he came to see the Prophet in the year 9/631, was converted to Islam but apostatised shortly afterwards. These accounts are doubtful, first, because they duplicate reports about another false prophet, Musaylima, and, secondly, because they may be biased: they may have been invented in order to justify the actions taken by the caliph Abū Bakr against Ṭulayḥa and his supporters during the Ridda [*q.v.* in Suppl.] wars (*ibid.*, 16).

Muslim historical tradition portrays Ṭulayḥa as an opportunist and a false prophet or rather, as a ludicrous imitator of Muḥammad. Yet it may be learned from the same tradition that Ṭulayḥa was actually a genuine D̲j̲āhilī soothsayer (*kāhin*) as well as a tribal chief. Descriptions of him as a poet, an orator, a composer of rhymed prose and an expert on genealogy probably relate to his religious function (al-D̲j̲āḥiẓ, *Bayān*, ed. Hārūn, Cairo 1968, i, 359; see a typical example of his functioning as *kāhin* and his rhymed prose in al-Wāḳidī, *K. al-Ridda*, Paris 1989, 50). References to his valour and his visits to the Persian court in pre-Islamic times indicate his role as a tribal chief (but the reference to him as "Lord of K̲h̲aybar" should not be taken seriously, for it merely duplicates the genuine reference to Musaylima as Lord of Yamāma, see Ibn Ḥubays̲h̲, 14, and al-Ṭabarī, i, 1796-97).

Ṭulayḥa acted as both a soothsayer and a tribal chief when he was leading a group of clans opposing Islam during the so-called apostasy (*ridda*) wars. He started the opposition movement while the Prophet was still alive, apparently thinking that by this act he was protecting the independence and honour of his Bedouin supporters (see Ibn al-At̲h̲īr, *Usd al-g̲h̲āba*, iii, 66; Ibn Aʿt̲h̲am, 20, and the poem in al-Wāḳidī, *op. cit.*, 50). His supporters in their turn do not seem to have believed in his prophethood; rather, they wished to avoid paying taxes to the Muslim state (see al-Bag̲h̲dādī, *K̲h̲izānat al-adab*, iii, 319). Ṭulayḥa was defeated by a Muslim contingent sent by the first caliph, Abū Bakr, in the battle of Buzāk̲h̲a [*q.v.*] (a place in Nad̲j̲d), in the year 11/632. He publicly repented in the time of ʿUmar, the second caliph, and his previous sins were altogether forgiven. He joined the Muslim armies and participated in important battles in ʿIrāḳ. He excelled in fighting and died a heroic death as a *s̲h̲ahīd* [*q.v.*] in the battle of Nihāwand in the year 21/642.

(ELLA LANDAU-TASSERON)

ṬULAYṬULA, TOLEDO, a town of Spain situated not far from the geographical centre of the Iberian peninsula, 71 km/44 miles south-south-west of Madrid. Built 568 m/1,863 feet above sea-level on a granite hill, and surrounded on three sides by a bend of the Tagus [see TĀDJUH], which has dug out its bed along a deep geological fault, it commands in its immediate vicinity a fertile *vega* which runs to the north-east and the north-west along the river, with the denuded plain of Castile beyond it.

It is today, in the framework of provincial autonomy in existence since 1975, the seat of the regional government of Castile-La Mancha, the old New Castile, now severed from the province of Madrid. The town remained fairly sleepy till the 1930s, as Lévi-Provençal described it in his *EI*[1] art., but since the end of the Civil War it has, over the half-century, enjoyed a certain development, with expansion beyond its original site, so that most of its population now resides no longer in the historic centre of the town but in new suburbs built along the plain. The traditional town centre, despite some decay and decline—although partly hidden behind the well-preserved facades and doorways, and explicable by the necessary adaptation to modern life—still preserves much of the remains of its past, and each day sees files of tourists on day-trips from Madrid.

The Arab geographers who describe the Peninsula all give descriptions, of varying lengths, of Toledo. Al-Idrīsī puts it in the *iḳlīm* of al-Shārāt [*q.v.*] (= Las Sierras). In his time, it had already been taken from the Muslims. He describes its excellent strategic position, its ramparts and the gardens which surround it, intersected by canals from which the water is raised for irrigation by means of norias. Abu ʾl-Fidāʾ also praises the beauty of its orchards, among the trees of which were pomegranates with enormous flowers. According to Yāḳūt, the cereals grown around Toledo could be kept for 70 years without deterioration and its saffron was of excellent quality.

Livy (*Hist.*, xxxvii. 7) is the first to mention the Iberian town of *Toletum* which was taken, not without difficulty, in 193 B.C. by the proconsul M. Fulvius. It remained very prosperous under Roman rule, and when Christianity was introduced into Spain, it soon attained great importance as a centre of religion. In A.D. 400 a council of 19 bishops met there for the first time. Toledo was taken in 418 by the Visigoths and in the 6th century became the capital of their kingdom in the Peninsula. In 567 Athanagilda made it his capital and when the king Reccared was converted to Christianity in 587, the Visigothic capital again became the religious metropolis of Iberia, on an even grander scale. The Roman Catholic clergy began to interfere in the political control of the country and to display their activity in numerous councils.

It is in Toledo that is laid the scene of the legendary episode of king Roderic and Florinda, daughter of Count Julian of Ceuta, and in the town the spot is still pointed out on the bank of the Tagus where she was bathing when the Visigothic prince saw her and fell in love with her (*Baños de la Cava*). The invader Ṭāriḳ b. Ziyād [*q.v.*] took Toledo in 92/714. He found it almost empty; only a few Jews had remained in it. Ṭāriḳ enrolled them in his army, which was soon rejoined in Toledo by the force he had sent to take Granada and Murcia. It is also in Toledo that the Muslim chroniclers locate the meeting of Ṭāriḳ and Mūsā b. Nuṣayr [*q.v.*]. The Arab leader only remained a short time there and continued his advance to the north of the Peninsula, going to Saragossa, which he seized.

The Arab writers who deal with the history or geography of al-Andalus almost all record fascinating but legendary stories which circulated in the early centuries of the Hidjra about the fabulous wealth which the Muslim invaders found in Toledo when they took the city. The best known story is that of the "closed house of Toledo"; the sources containing it were studied by René Basset (*La maison fermée de Tolède*, in *Bull. Soc. géogr. Oran* [1898], 42-58).

The name of Toledo recurs frequently in the chroniclers of Muslim Spain in the period of the governors and especially after the establishment of the Umayyad amīrate of Cordova. According to the accounts which they give and which are confirmed by the Christian chroniclers, the town very soon became a hot-bed of sedition and a continual centre of rebellion against the government.

It is certain that, in the time of Muslim domination, part of the population remained Christian, with their traditional faith and Visigothic law. But it seems impossible to evaluate exactly what proportion remained that has traditionally been called "Mozarab" [*q.v.*] within the general urban framework and, especially, in relation to the converts or *muwallads* [*q.v.*]. It is also doubtful whether the frequent revolts in Toledo against the Umayyad central power were mainly the work of the Mozarabs.

It was in Toledo that the great Berber rising of 122/740 found most support, and it was near it on the banks of the Wādī Salīṭ (Guazalete) that the rebels were crushed by the troops sent from Cordova. It was again in Toledo a little later, after ʿAbd al-Raḥmān I had deprived him of his governorship, that Yūsuf al-Fihrī sought refuge, and he was killed near the town in 142/759.

From the reign of the first Umayyad *amīr* to that of ʿAbd al-Raḥmān III al-Nāṣir, there was not a ruler

to whom Toledo was not a matter of care and anxiety, sometimes grave. In 147/764 Hishām b. ʿUdhra rebelled there, and ʿAbd al-Raḥmān I had to send his two generals, Badr and Tammām b. ʿAlḳama, against the town. On the accession of Hishām I (172/788), his brother and rival Sulaymān had himself proclaimed in Toledo and the *amīr* was forced next year to besiege the town, from which he had to retire after two months without success. In 181/797, soon after the accession of al-Ḥakam I, a new rebellion broke out in Toledo, stirred up by an individual named ʿUbayda b. Ḥumayd. But the Umayyad prince was not long in severely punishing the Toledans for their habitual insubordination.

Their spirit of rebellion at this time was fanned by the verses of one of their townsmen, who was very popular with them, the poet Ghirbīb. On the latter's death, al-Ḥakam appointed to the government of Toledo a convert (*muwallad*) named ʿAmrūs, a native of Huesca, who, by arrangement with the *amīr* of Cordova, after gaining their confidence, lured the notables of the town into a trap in which they were all slain. This was the famous "day of the ditch" (*waḳʿat al-ḥufra*) at an uncertain date (181/797-8 or 191/806-7). This has sometimes been considered as a literary topos, but it nevertheless reflects the severe repression by the Umayyad central government of the permanent inclinations towards autonomy of the ancient Visigothic capital.

This repression did not prevent further revolts in Toledo. In 199/814-15 al-Ḥakam himself marched against Toledo, and by a stratagem succeeded in entering it; he then burnt all the higher part of the town. In 214/829 Toledo was again the starting point of a rebellion raised by a *muwallad* named Hāshim al-Ḍarrāb ("the smith") and it took two years to suppress it. During the reign of ʿAbd al-Raḥmān II, an expedition was sent against Toledo under prince Umayya in 219/834. The next year, the *amīr* of Cordova laid siege to the town and it was taken by assault, after being invested for some months, in Radjab 222/June 837. Toledo remained subject to the Umayyads, to whom it gave hostages, until 238/852, but in this year, on the accession of the *amīr* Muḥammad b. ʿAbd al-Raḥmān b. al-Ḥakam, it rebelled once more. The intolerance of the *amīr* had exasperated the Toledans, and the latter, led by one of their number, Sindola, deposed their Arab governor and declared themselves free of Umayyad rule. Not only did they drive the representatives of the Cordovan government out of their town, but they organised an army which in Shawwāl 239/May 854 defeated the troops of the *amīr* Muḥammad near Andujar. Then, in order to resist the force sent against them from Cordova, they made an alliance with the king of Leon, Ordoño I, who sent an army under Gaton, Count of Bierzo, against them. But the resultant battle was disastrous for the Toledans, who lost 20,000 men. In 244/858, Muḥammad, giving the town no rest, inflicted another disaster on it by mining the bridge over the Tagus; it collapsed when crowded with soldiers. Toledo had to beg for *amān* in the following year, and Muḥammad appointed a governor there. From this time down to the reign of ʿAbd Raḥmān III al-Nāṣir, the Arab historians hardly ever mention Toledo. We only know that, in 259/873, its citizens obtained a treaty by which, if they agreed to pay tribute to Cordova, their political independence would be practically recognised.

The final subjection of Toledo was to be the work of the great Umayyad ruler al-Nāṣir. Before tackling it, he had to wait until all the other hot-beds of rebellion in his dominions had been exterminated. Once Badajoz had been taken, the caliph in 318/930 sent to Toledo a deputation of *faḳīhs* to make the citizens understand that their liberty was no longer compatible with the authority of the government of Cordova. This peaceful effort having failed, he at once laid siege to the town and came himself with a large army to direct operations. He pitched his camp at the stage (*maḥalla*) of Djarankas—probably corresponding to the modern Zalencas—and made it clear that he would not withdraw his troops until Toledo was taken by erecting some buildings and a bazaar which were given the name of Madīnat al-Fatḥ ("town of victory"), opposite the invested city. The blockade was continued into 320/932, and Toledo had finally to surrender. A strong Umayyad garrison was placed in the town and its capture had a great moral effect throughout Spain. Henceforth, it was the capital of the Middle Frontier (*al-thaghr al-awsaṭ*) and the office of governor of Toledo was one of the most important military offices of the Umayyad *dīwān*. Among the principal holders of this office were Muḥammad b. ʿAbd Allāh b. Ḥudayr, the *ḳāʾid* Aḥmad b. Yaʿlā and, in the reign of al-Ḥakam II, the general Ghālib b. ʿAbd al-Raḥmān al-Nāṣirī, the father-in-law of the famous *ḥādjib* al-Manṣūr [*q.v.*] Ibn Abī ʿĀmir.

During the period of troubles which ended with the fall of the caliphate of Cordova and in the dismemberment of the Umayyad state in Spain, Toledo no longer played an important part in politics. On several occasions it served as headquarters or as a refuge for rival rebels, but it does not seem to have itself taken advantage of these occasions to rebel, as it had so often done before. It was for several years the base of operations of the general Wāḍiḥ, and between his two reigns Muḥammad b. Hishām b. ʿAbd al-Djabbār found refuge there. Soon afterwards, when petty Muslim kingdoms [see MULŪK AL-ṬAWĀʾIF. 2.] were founded in the Peninsula, it became the capital of an independent *taifa*, that of the Banū Dhi 'l-Nūn.

The Banū Dhi 'l-Nūn [*q.v.*] were nobles of Berber origin who, in the reign of al-Manṣūr Ibn Abī ʿĀmir, had obtained certain military commands. They were settled in the region of Shantabariyya (Santaver, in the modern province of Cuenca). It was to them that the Toledans appealed when, on the fall of the Cordovan caliphate, they wished to give themselves a chief. ʿAbd al-Raḥmān Ibn Dhi 'l-Nūn, lord of Shantabariyya, sent them his son Ismāʿīl, who took command of the town and the territory belonging to it and appealed to the experience of a notable of Toledo, Abū Bakr b. al-Ḥadīdī, to administer it for him. According to several Arab chroniclers, Ismāʿīl b. Dhi 'l-Nūn was not the first king of Toledo but succeeded other chiefs of other families, Ibn Masarra, Muḥammad b. Yaʿīsh al-Asadī and his son Abū Bakr Yaʿīsh; other names are also mentioned: Saʿīd b. Shanẓīr and his son Aḥmad, ʿAbd al-Raḥmān b. M.n.y.w.h and his son ʿAbd al-Malik. The new ruler of Toledo, the beginning of whose reign is usually put in 427/1035-6, took the *laḳab* of al-Ẓāfir and was only a few years on the throne, dying in 435/1043-4.

His son Yaḥyā succeeded him and took the title of al-Maʾmūn. On his long reign, see DHU 'L-NŪNIDS. On the death of Yaḥyā al-Maʾmūn at the end of 467/1075, the kingdom of Toledo, now considerably increased passed into the hands of his grandson Yaḥyā b. Ismāʿīl b. Yaḥyā, who took the *laḳab* of al-Ḳādir. The great incapacity of this prince brought a period

in which decadence became more and more marked after the brilliant and prosperous long reign of al-Ma'mūn. Left to himself by the old Muslim allies of his grandfather, especially by the prince of Seville, he had to seek the alliance of the king of Castile and Leon, Alfonso VI. The latter granted him his protection, but in return demanded increasingly larger payment of tribute. To meet his engagements, al-Ḳādir had to oppress his subjects with taxation and the latter ended by rebelling. Al-Ḳādir retorted by more rigorous measures and had several notables of the town executed, along with his first minister Ibn al-Ḥadīdī. This only exasperated the Toledans against him still more, and he had to abandon his capital and seek refuge at Huete. The kingdom of Toledo was then offered to the Afṭasid king of Badajoz, al-Mutawakkil [*q.v.*], who in 472/1077 took possession of it. Alfonso VI retook Toledo soon afterwards for his Muslim ally, but this was only a pretence: on 27 Muḥarram 478, 25 May 1085, the king of Castile, after a treaty concluded between him and al-Ḳādir, which the latter could not escape signing, entered Toledo on his own account, thus making an important step in the progress of the Reconquista. The taking of Toledo had a great moral effect on Christians as well as Muslims. It, more than anything, determined the first invasion of Spain by the Almoravids in the next year.

But despite the initial successes of Yūsuf b. Tās͟hfīn and the Almoravids, and then those which their successors the Almohads were able, on occasion, to secure during their fight for the defence of al-Andalus against the Reconquista from the north, Toledo was never again to pass into Muslim hands.

Nevertheless, it remained for over a century one of their armies' main objectives. It was besieged, with the troops of Islam beneath its walls, several times, but never successfully. In 492/1099 Yaḥyā b. Yūsuf b. Tās͟hfīn encamped before Toledo at San Servando, before taking Consuegra on his journey homewards. Ten years later, a year after the battle of Uclès, the great expedition of ʿAlī b. Yūsuf b. Tās͟hfīn, the so-called campaign of Talavera, achieved the capture of the latter town and a siege of Toledo lasting several days. In 508/1114, raids mounted against Sagra and Sisla, the lands to the north and south of the town, were accompanied by a siege of Toledo. After the capture in 507/1113 of Oreja by the Almoravid governor of Cordova, there was a permanent presence of the veiled Ṣanhād͟jas on the Tagus a mere 50 km/30 miles from the town until 533/1139. Probably in this same year, the Christians recaptured Oreja, and Mora, 30 km/18 miles from Toledo, became the advance bastion for attacks on the town for a short period until 538/1144. After this, the enfeeblement of Almoravid power in the Peninsula and the Christian advances into al-Andalus removed the threat of an Islamic "reconquest" of Toledo until the consolidation of Almohad presence in the Peninsula, notably with Alfonso VII's capture of Calatrava [see ḲALʿAT RABĀḤ] mid-way between Toledo and Cordova, in 542/1147. The Almohad victory at Alarcos in 592/1195 enabled them to recover Calatrava and allowed them to push on as far as Madrid and Guadalajara, but without their effective control ever going beyond the defile and the tower of Guadalerza some 50 km/28 miles south of Toledo. In any case, the Christian victory at Las Navas de Tolosa/al-ʿIḳāb [*q.v.*] (mid-Ṣafar 609/17 July 1212) put an end to any possibility of the Muslims recovering Toledo.

After passing into Christian hands, Toledo long retained a strong Arabo-Muslim imprint. This imprint was not because of the small minority of Muslim faithful who remained there; the greater part of the Muslim population seems to have emigrated immediately after, or even before, the Christian reconquest. Lévi-Provençal's words in the *EI*[1] art. "Having been a town of Mozarabs under Islam, it remained a town of Moriscos for quite a long time after its return to Christianity", may now be criticised on several counts. The first is, that if there were Mozarabs in Toledo before 1085, they must only have been a minority of very limited influence. Second, the term "Moriscos" is now reserved by historians for those Muslims remaining in the Iberian Peninsula in the 16th century, officially Christians because baptised, whilst continuing in practice to remain Muslims. Lévi-Provençal really meant for this time the Mudéjars, Muslims under the Christian power and recognised as such by that power. There is hardly a trace of these, in practice, until the mid-13th century. The desecration of the Great Mosque, described in a contradictory fashion by Christian authors (e.g. Jiménez de Rada) and Muslim ones (e.g. Ibn Bassām), may have arisen because of something in the migration of the Muslim population or possibly because of the presence of the Almoravids at the town's gates in the succeeding years. It was the great advance southwards of the Reconquista in the 13th century which enabled the Christians to bring back to the Tagus valley a number of captives, eventually freed without any obligation to convert to Christianity but with no possibility of returning to Islamic territory. The small Mudéjar community of Toledo in the 14th and 15th centuries was part of the intellectual élite of the Muslims of Castile, which allowed them to continue to exist with this status until the royal decree of 1502 which gave them no choice except baptism or exile.

The Arab imprint on reconquered Toledo arose really through the Mozarabs, whose number grew remarkably, and through the Arab-speaking Jews, with the arrival in the Tagus valley of the *d͟himmī* minorities of Andalusia and even from the Mag͟hrib, in the mid-12th century in the face of the appearance of the Almohads. The theory that some of the Muslims in Toledo were allegedly converted to Christianity immediately after 1085 and became "Neo-Mozarabs", rests on very fragile and disputable foundations. Whatever the case, the old and new Mozarabs of Toledo gave their tone to the place, at least until mid-13th century, assimilating for a while the immigrants coming from the north, Castilians and Franks, and imposing the use of their language, the Hispanic Arab dialect, including also for writing. Numerous traces of Islamic civilisation filtered through by means of the Mozarab influence, and are still perceptible today in what remains of traditional urban structures and habitats. The "Arabised" ambience of Toledo in the 12th and 13th centuries explains its role as a centre for translation from Arabic into Latin and then Castilian and as a bridge between cultures.

There is not much visible of the town's Islamic past. However, one may mention the little mosque of Bāb al-Mardūm, which became part of the church of Cristo de la Luz and which is the only survival from the caliphal period (built Muḥarram 390/December 999-January 1000 by Aḥmad b. al-Ḥadīdī), and the mosque of the *calle de las Tornerias* or *del Solarejo*, perhaps from the period of the Taifas, which served as the Muslims' place of worship till 1502. Certain authors attribute this last to the 13th century, but it is difficult to think of a new place of Muslim worship being

built in Christian Toledo, even to replace the old ones which had been confiscated, at a time when the Mudéjars were so few. The foundations of the present buildings may contain some surprises.

AL-ṬULAYṬULĪ, ABU 'L-ḤASAN ʿALĪ b. ʿĪsā al-Tudjībī al-Ḳurṭubī, *faḳīh* of al-Andalus in the 4th/10th century.

He was originally from Toledo, where he studied with Wasīm b. Saʿdūn, and then at Cordova with various masters, including ʿUbayd Allāh, son of Yaḥyā b. Yaḥyā al-Laythī, and Aḥmad b. Khālid. Ibn Muṭāhir, the author of a lost *Taʾrīkh Fuḳahāʾ Ṭulayṭula wa-ḳuḍātihā*, says that he was a pious ascetic who practiced the precept of *al-amr bi 'l-maʿrūf wa 'l-nahy ʿan al-munkar* to the point of drawing on himself condemnation by the people of Toledo. He then retired to a *ḳarya* where he cultivated his own garden, which he refused to leave even when the caliph al-Ḥakam II tried to drag him out of his retreat. He owes his fame to a *Mukhtaṣar fi 'l-masāʾil [fi 'l-fiḳh]*, praised by the Ḳāḍī ʿIyāḍ, even though he points out that certain of the questions treated were open to criticism. The work had a great vogue, since it appears in the bibliographical repertories of Ibn al-Ṭallāʿ (d. 497/1104), Ibn Khayr (d. 575/1179 [*q.v.*]), Ibn Abi 'l-Rabīʿ (d. 688/1289) and al-Tudjībī (d. 730/1329 [*q.v.*]) which remained in use till the time of the Moriscos. A total of 16 mss. survive, eleven in Arabic and five in Aljamiado, from which M.J. Cervera is preparing a critical edition. Commentaries were written on the *Mukhtaṣar* by the Andalusīs Ibn al-Fakhkhār (d. 723/1323) and Muḥammad b. ʿAbd al-Raḥmān al-Karsūṭī (d. 755/1354). A versified version was made by Abū Ḥātim al-Ḍarīr (d. before 658/1260).

(Maribel Fierro)

ṬULB (pl. *aṭlāb*), a term applied to a squadron or battalion of cavalrymen, used mainly in the Ayyūbid and Mamlūk periods. The word appears to be unconnected to the Arabic root *ṭ-l-b*, and may be of Turkish origin. Al-Maḳrīzī, the only contemporary writer to attempt a definition, states (*Khiṭaṭ*, ed. Bulāḳ, i, 86, ll. 26-7): "A *ṭulb* in the language of the Oghuz/Ghuzz (*bi-lughat al-ghuzz*) is a commanding *amīr* who has a standard attached [to a lance], a trumpet which is sounded, and the number of 200, 100 or 70 horsemen" (cf. the tr. in Dozy, *Suppl.*, ii, 51, following Quatremère: "dans la langue des Curdes"). The term, however, is not found in any of the dictionaries of old Turkish. Also, from the context of the many examples of this term in the sources, it is clear that it should invariably be translated as a cavalry unit and not the officer commanding it. The *ṭulb*, whose size varied, was the basic parade and field unit of the Ayyūbid army, but appears to have been an *ad hoc* formation. In the Mamlūk period, it is used both for an *amīr*'s entourage of personal *mamlūks* as well as the larger unit under his command. At times it appears to be a generic term for any unit of horse-soldiers, and is also applied to the cavalry formations of the enemies of the Muslims, such as the Franks and Mongols. The verb *ṭallaba* is derived from this noun, meaning "to arrange cavalry in formation, or in a squadron", and the verbal noun *taṭlīb* and the participle *muṭallab* are found.

(R. Amitai)

TULBAND, the common Turkish pronunciation of Persian Dulband, a sash or wrapper for the head, thence turban, the typical form of traditional headdress in the eastern Islamic lands, the Iranian world, and the Muslim and Sikh parts of the Indian subcontinent. The *turban* of English, French and German, the *turbante* of Spanish and Italian, etc., come via forms like *tulband, tulbant*; in French and Italian the word is attested from the later 15th century, and in English from the mid-16th century. See Yule and Burnell, *Hobson-Jobson. A glossary of Anglo-Indian words and phrases*[2], London 1903, 943-4.

It should be remembered, however, that the word *dulband* is by no means so widely disseminated in the east as one would have expected from the general use of the word turban in Europe, but is limited to the Persian (and to a smaller extent Turkish) speaking area, and even here is not the only name in use. The commonest word in Arabic is *ʿimāma*, which properly means only the cloth wound round the cap and then comes to be used for the whole headdress, and in Turkish *ṣarïḳ* is the usual name for the turban. Besides these, however, there are a large number of other names for what we often loosely call turban and for its parts in different Muslim countries; these are given in a preliminary list at the end of the article.

The origin of this form of headdress ought probably to be sought in the Ancient East; a turban-like cap seems to be found represented on certain Assyrian and Egyptian monuments (cf. Reimpell, *Geschichte der babylonischen und assyrischen Kleidung*, 40; J. von Karabacek, *Abendländische Künstler zu Konstantinopel*, in *Denkschr. Ak. Wien*, lxii [1918], 87-8, and von Hammer, *GOR*, vii, 268, and *Staatsverfassung*, 441). In ancient Arabia, the pre-Islamic Bedouins are said to have worn turbans, and it has been supposed that the high cap is the Persian and the cloth wound round it the true Arab element of the turban (G. Jacob, *Altarabisches Beduinenleben*, 44, 237).

In Islam, in course of time the turban developed a threefold significance, a national one for the Arabs, a religious one for the Muslims and a professional one for civil professions (later divided into religious and administrative offices, *waẓāʾif dīniyya wa-dīwāniyya*) in contrast to the military ones.

Many details about the Prophet's turban have been handed down by Tradition, but most of these *ḥadīth*s bear obvious traces of a late date. They therefore prove nothing for the time of the Prophet, but only show what later ages wanted to believe. To the latter, the turban, as succinctly expressed in a *ḥadīth*, signified "dignity for the believer and strength for the Arab", *waḳār li 'l-Muslim wa-ʿizz li 'l-ʿArab*, and the Prophet to them is the owner of the turban par excellence (*ṣāḥib al-ʿimāma*). The makers of turbans in Turkey (*dulbenddjiyān*) actually chose the Prophet as their patron saint, for he is said to have traded in turbans in Syria before his call and to have exported them from Mecca to Boṣrā (Ewliyā Čelebi, i, 590). The only reliable *ḥadīth* is negative: the *muḥrim* is not allowed to wear the turban, nor *ḳamīṣ, sarāwīl*, etc. This *ḥadīth* is also found in al-Bukhārī in the *bāb al-ʿamāʾim* (*libās, bāb* 15) contrasted with the following, mostly weak, *ḥadīth*s. According to one, for example, Adam is said to have worn a turban which Gabriel wound round his head on his expulsion from Paradise; previously he wore a crown (*tādj* [*q.v.*]). The next was Alexander, Dhu 'l-Ḳarnayn, who wore a turban to conceal his horns. A much-quoted *ḥadīth* says that "turbans are the crowns of the Arabs" (*al-ʿamāʾim tīdjān al-ʿArab*), which is variously explained to mean either that turbans are as rare among the Arabs as crowns among other peoples, for most Bedouins only wear caps (*ḳalānis*) or no headdress at all, or that the Arabs wear turbans as the Persians wear crowns, so that the turban would be a national badge of the Arabs as the crown of the Persians. A similar *ḥadīth* says "wear turbans and thus be different from earlier peoples" (*iʿtammū khālifu 'l-umam ḳablakum*).

Still more numerous are the *ḥadīth*s which describe the turban as a badge of Muslims to distinguish them from the unbelievers; turbans are a mark of Islam (*al-ʿamāʾim sīmā al-Islām*); the turban divides the believers from the unbelievers (*al-ʿimāma ḥādjiza bayn al-kufr*

wa 'l-īmān or *bayn al-Muslimīn wa 'l-mushrikīn*); the distinction between us and the unbelievers is the turban on the cap (*farḳ mā baynanā wa-bayn al-mushrikīn al-ʿamāʾim ʿala 'l-ḳalānis*); or the Prophetic tradition "my community will never decay so long as they wear turbans over their caps" (*lā tazālu ummatī ʿala 'l-fiṭra mā labisu 'l-ʿamāʾim ʿala 'l-ḳalānis*); and on the day of judgment a man will receive light for every winding of the turban (*kawra*) round his head or round his cap. Thus "to put on the turban" came to mean "to adopt Islam". Nevertheless, the stage was never reached where it was a religious duty (*farḍ*) to wear the turban; it was, however, recommended (*mustaḥabb, sunna, mandūb*) and a general recommendation runs "wear turbans and increase your nobility" (*iʿtammū tazdādū ḥilm^an*).

Especially at the *ṣalāt* and on going to the mosque or tombs is the wearing of the turban recommended and it is said that two *rakʿa*s (or one *rakʿa*, or the *ṣalāt*) with a turban are better than seventy without; for it is not proper to appear before one's king with head uncovered. Alternatively, God and the angels bless him who wears a turban on Fridays. In great heat and after the prayer, however, it is permitted to take off the turban, but not during the prayer itself; on the other hand, the lack of a turban is no reason for absenting oneself from prayer. At other times also—in great heat or at home or while washing—the turban may be removed, and as a rule the Arabs always wore the turban "until the ascension of the Pleiades", i.e. until the beginning of the great heat. Even in later times, the turban played an important rôle in the spreading of Islam, e.g. in the Sudan (cf. A. Brass, in *Isl.*, x, 22, 27, 30, 33; *MSOS, As. Studien*, vi, 191-2).

It has not always been the custom in Islam for none but Muslims to wear turbans. The later regulations for dress demand, it is true, that only believers should wear turbans, while unbelievers are only to wear a cap (*ḳalansuwa* [*q.v.*]). But in earlier times, unbelievers were only to wear turbans of another colour or with some distinguishing mark. Rulers who were not generally well disposed to members of other faiths were always zealous concerning strict regulations about dress; but with a change of attitude, the observation of the prescriptions became slacker until it again became necessary to enforce them more strictly. In later days, appeal was frequently made to an alleged dress regulation by the caliph ʿUmar I, which is however probably a later invention and was probably transferred from ʿUmar II to ʿUmar I. The latter is said to have been the first to forbid Christians to wear the turban or dress resembling that of the Muslim (cf. A.S. Tritton, *Islam and the Protected Religions*, in *JRAS* [1927], 479-84). Further laws about dress are attributed to Hārūn al-Rashīd who, like ʿUmar II, is said to have issued a general order forbidding Christians to wear the same dress as Muslims. Al-Mutawakkil is said to have prescribed yellow for the unbelievers, including the turbans if they wore any, and the Fāṭimid al-Ḥākim black because this was the colour of the hated ʿAbbāsids. At one time, Christians were forbidden to wear red, at another, any one who wore white was to be punished by death. In Egypt and Syria in the 8th/14th century, Christians wore blue, Jews yellow and the Sāmira red, and they might also wear silk, turbans, and neck-veil (*ḥarīr, ʿimāma, ṭaylasān*) of these colours (al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, xiii, 364; see also GHIYĀR).

Turkish Anatolia had a whole series of dress regulations of its own: the earliest was enforced by ʿAlāʾ al-Dīn Pasha (d. 732/1331) in the reign of Orkhan. He introduced a cone-shaped cap of white felt but only for officials in the sultan's service; other subjects apparently had freedom of choice in their dress. In the reign of Meḥemmed the Conqueror, further laws about rank, titles and dress of the officials were issued. Under Süleymān the Magnificent, ranks and professions were carefully graded as described in the *Shamāʾil-nāme-i Āl-i ʿOthmān* of Luḳmān b. Seyyid Ḥüseyn, *ca.* 1580 (von Hammer, *GOR*, iii, 17; Karabacek, 4). Süleymān also regulated the use of the turban, hitherto apparently quite arbitrary, and issued regulations about the trade of turban-makers, *ṣarïkdjïlar* (von Hammer, *Staatsverfassung*, i, 443). Unbelievers were given red, yellow and black, while white was restricted to the Ottomans. *Ca.* 1683 in the reign of Murād IV, only the Turks of Istanbul wore wbite turbans; the Arabs in Egypt various colours; and the people of Barbary, white with gold. Jews and Christians in the east in those days wore blue (*Voyage d'Horace Vernet en Orient*, ed. M. Goupil Fesquet, Paris 1839-40) and, according to Niebuhr, *Reisebeschreibung nach Arabien und andern umliegenden Ländern*, Copenhagen 1774, Christians wore a blue stripe on their caps so that the tax-collector could at once readily recognise them.

In other countries also, the colour of the turban was not at all uniform, and for every colour authority was given from alleged *ḥadīth*s about the life of the Prophet, these traditions about turbans being of course all weak. A pious Muslim like al-Kattānī deduces from the contradictory description of the shape and colours of the Prophet's turban that he allowed himself considerable liberty and sometimes wore the turban without the cap and sometimes the cap without the turban, and sometimes both together; in the house or when visiting the sick, he put off both, but never when addressing the community, when he wished to make an impression on the people.

The commonest colour for the turban is white. The Prophet is said to have been fond of this colour, and it is considered the colour of Paradise. There is not actually a *ḥadīth* telling us that the Prophet's turban was white, but this is probably only because white was the normal colour. The angels who helped the believers at Badr are said to have worn white turbans.

If now the following references speak of turbans of other colours, they are not in direct contradiction with white, for the colours in question are connected with the events and have therefore a special reason. For example, another tradition says that at Badr the angels wore yellow turbans with the object of encouraging the fighting Muslims. According to another story, only Gabriel had a yellow turban of light, the other angels white, and others again reconcile the various statements about the angels at Badr by ascribing to some white, others green, black, red, etc. turbans. The Prophet is said to have at first liked the colour yellow but later to have forbidden it.

The Prophet is said to have worn a black cloak and a black turban on entering Mecca and at the speech at the gate of the Kaʿba, also on other occasions at sermons from the *minbar*, on the day of Ḥudaybiya and during his illness. In black, there is said to be a subtle allusion to sovereignty (*suʾdad*) and, besides, black is the foundation of all colours. The ʿAbbāsids claimed that the black turban of the Prophet worn at the entry to Mecca had been handed down to them, and in a tendentious *ḥadīth* in which Gabriel prophesies the coming of the ʿAbbāsids, he of course wears a black turban. Turbans of black silk (*khazz*) are said to have been at first permitted but later forbidden by

the Prophet; the so-called *ḥarḳāniyya* turbans are black (the derivation of the word is uncertain, according to al-Suyūṭī from *ḥ-r-ḳ*, to burn), and the Prophet is said to have worn them on his campaigns. Many great men in Islam are also said to have worn black turbans, such as al-Ḥasan al-Baṣrī, Ibn al-Zubayr, Muʿāwiya, etc. and al-Suyūṭī wrote a whole book on black dress (*Thaladj al-fuʾād fī lubs al-sawād*). Later writers often claim the black turban as the special headdress of the *khaṭīb* and the *imām*.

The Prophet is said to have at first liked to wear blue but then forbade it because the unbelievers wore it. On behalf of red, it is urged that the angels at Uḥud (or also at Ḥunayn) wore red turbans. According to others, Gabriel wore red at Badr and on one occasion appeared to ʿĀʾisha in a red turban. The so-called *ḳiṭriyya* turban which the Prophet wore is also said to have been red. Sometimes also striped material has been used as turban cloth, e.g. yellow and red or green and red (Fesquet).

In the history of religion the green turban is important, as the well-known badge of the descendants of Muḥammad. Tradition is unanimous that the Prophet never wore a green turban, and there is no support for the colour green in law or tradition. But green is the colour of Paradise, and it is also said to have been the Prophet's favourite colour; some say that the angels at Ḥunayn (or also at Badr) had green turbans. The green turban as a badge of the *sharīf*s is, however, of much later origin: the ʿAbbāsid al-Maʾmūn in Ramaḍān 201/April 817 is said to have clothed the eighth Shīʿī Imām ʿAlī al-Riḍā in green when he designated him his successor; the latter died before he could succeed, the ʿAbbāsids went back to black and there were even persecutions to compel the ʿAlids to wear black (see Ibn ʿAbdūs, *K. al-Wuzarāʾ*, ed. Märk, 395-6). They seem, however, for a period at least to have worn a piece of green cloth in the turban as a special badge (*shaṭfa*) and to have been fond of wearing green, especially in times of liberty of conscience. In 773/1371-2 the Mamlūk sultan al-Ashraf Shaʿbān ordered that the turban cloths (*al-ʿaṣāʾib ʿalā ʾl-ʿamāʾim*) of the ʿAlids should be green, and from 1004/1595-6 the whole turban became green by order of the Ottoman governor of Egypt, al-Sayyid Muḥammad al-Sharīf. This fashion spread from Egypt to other Muslim countries, at first regarded as a late innovation and sometimes disputed, but has now become generally approved. It is now regarded as a law that no non-ʿAlid should wear the green turban nor strictly anyone who is only connected with the Prophet on the mother's side, but this last point is frequently disregarded.

Not only the colour but other *ādāb* of the turban are regulated by religion: 1. When should a boy be first given a turban? When his beard begins to grow, when he reaches maturity, or at the age of, say, 7 to 10 years? One should go by the practice of the country; but in any case it shows shamelessness to wear a turban before one's beard begins to grow. 2. How should a turban be wound? Here again the answer is given by stories of how the Prophet wound his. It should be wound standing (trousers on the other hand are put on sitting), with the right hand, twisted to the right around the head and not simply laid upon it and in doing this, one should act according to the sunna, as regards pulling under the chin (*taḥnīk*) the loose end (*ʿadhaba*) and the size of the turban. As in putting on any other garment, one should utter a *basmala*, while the *ḥamdala* is only used for new articles of clothing. A new turban should if possible be put on for the first time on a Friday. It should be carefully done before a looking-glass, but one should not spend too much time over it. People of position may have their turban wound by two servants. There are countless ways in which a turban may be wound; 66 are mentioned, but these are not all. 3. The question whether gold and silver ornaments may be worn in the turban is usually answered in the negative. In the course of the development of the headdress, it was the women in particular who adorned their turban-like headdress in this way. Silk, on the other hand, is allowed with certain restrictions. 4. The turban has also acquired considerable religious significance as a symbol of investiture, since there is no crown or coronation proper as symbols of sovereignty in the Muslim East. The prototype is again an act of Muḥammad's; he is said to have put a turban on ʿAlī at the pond of Khumm [see GHADĪR KHUMM] and again when in Ramaḍān of the year 10 he appointed him governor of the Yemen; he is next said to have wound the turban on every governor in order to teach him fine manners (*tadjammul*) and to give him dignity. Following this example, the caliphs, the successors of the Prophet, put the turban on their viziers and later on sultans. For example, al-Ḳalḳashandī, iii, 280-1, describes the investiture of the Egyptian Mamlūk sultan Abū Bakr b. al-Nāṣir in 742/1341-2 by the Egyptian ʿAbbāsid caliph Ḥākim II. The caliph wore a black neck-veil (*ṭarḥa*) with white stripes (*marḳūma bi ʾl-bayāḍ*) and placed on the head of the sultan a black turban (*ʿimāma sawdāʾ*) with white stripes round the edge (*marḳūmat al-ṭaraf bi ʾl-bayāḍ*). Then we have a description of the investiture of al-Nāṣir Faradj by al-Mutawakkil in 801/1398-9, where we are told *ʿimāma sawdāʾ marḳūma, fawḳahā ṭarḥa sawdāʾ marḳūma*. The turban is also an essential feature of the robe of honour (*khilʿa* [*q.v.*]) which Muslim rulers used to bestow upon their viziers and *amīr*s (there is a poetical description of a turban, for example, in Mihyār al-Daylamī, d. 428/1037 [*q.v.*], *Dīwān*, i, 242; a description of a robe of honour of the Mamlūk period in al-Ḳalḳashandī, iv, 52-3), and this is the origin of the differences in the turbans of the different classes, which were such that the initiated could at once tell an individual's profession by his turban. In general, it may be said that the largest turbans belonged to the highest and most respected ranks, especially of the clerical profession, and the differences in sizes of the turban are, according to some, more important than those of colour. With this is connected the endeavour to give oneself as large a turban as possible, and against this religion has had to fight: a warning is uttered against wearing too large a turban, since it is an extravagance—but not among learned men; on the contrary, they ought to be recognisable at once by some external feature to attain success in their labours. Hence the dress of the scholar is not a censurable innovation (*bidʿa*), although earlier men of learning did not wear it. All other statements about the sizes of turbans, including definite lengths like seven or ten ells, are again defended from the example of the Prophet.

To mention a few isolated examples, we have in al-Ḳalḳashandī, iii, 280, the description of the turban of the ʿAbbāsid caliph al-Mustaʿīn, who in 815/1412 was for a period independent sultan of Egypt; his turban was round, of pleasing appearance (*laṭīfa*), with a tail hanging behind (*rafraf*) 1/2 × 1/3 ells in length. The Coptic Christian patriarch also had a larger and more regular shaped turban than the other priests. The dress of the Sultan of Morocco is described, e.g., in the *Masālik al-abṣār* of Ibn Faḍl Allāh al-ʿUmarī

(*Waṣf Ifrīḳiya wa 'l-Andalus*, ed. Ḥasan Ḥusnī ʿAbd al-Wahhāb, Tunis n.d. [*ca.* 1923]), 31, as not too large with *taḥannuk* and *ʿadhaba*; cf. al-Ḳalḳashandī, v, 203: with a long, narrow turban. The head-dress of the Ottoman sultans is frequently described. The turbans of dead sultans were kept in their tombs, e.g. in the mausoleums in Bursa (von Hammer, *Staatsverfassung*, i, 446), and in other places we find them modelled in stone on the tombs.

The turban, generally speaking, as noted above, became the badge of the civilian professions. Turban-wearer (*ṣāḥib al-ʿimāma*: Ibn Shīth, *Maʿālim al-kitāba*, 34 or *rabb al-ʿimāma*) is synonymous with civilian and there is the expression "he abandoned the turban of men of the law and assumed in its stead the cap (*sharbush*) and the dress of the *amīrs*" (al-Maḳrīzī-Blochet, 335 n.). Al-Ḳalḳashandī often uses *al-mutaʿammimūn* in this sense, e.g. xi, 114: *al-m. min arbāb al-waẓāʾif al-dīniyya wa 'l-dīwāniyya* and *al-m. dūna arbāb al-suyūf*. To distinguish the various officers, the officials in Turkey under the old régime had different badges on their turbans, clusters of feathers and egrettes (*süpürge* and *balïḳdjïl*), and soldiers wore on them decorations awarded for bravery (*sor ghuč* and *čelenk*; von Hammer, *Staatsverfassung*, i, 446). Fesquet says that secretaries and scholars wore the turban high with many windings, merchants and artificers wore it loose and broad, and slaves very small.

It is on this point that we find the differences in the different countries and especially between the Muslim East and the West. This is noticeable in the description of western dress in al-Ḳalḳashandī and in the *Masālik al-abṣār*, and vice-versa in the accounts of eastern customs as given by the Moroccan al-Kattānī. In Muslim Spain, very few turbans were worn at all; the neck-veil (*taylasān*; *Masālik*, 42; al-Ḳalḳashandī, v, 271) was rather worn instead; the loose end (*ʿadhaba*) and the chinstrap (*taḥnīk*) are, originally at least, apparently western fashions. In 1004/1596 we find the Turks being struck by the narrow turban of striped silk worn by the Persian ambassador (*GOR*, iv, 275).

In modern times the wearing of turbans has declined in some Muslim societies, although conservative and traditionalist circles have denounced tbe *bidʿa* implied in this and declared that contempt for the turban is heresy and unbelief. This trend attacked in a number of special treatises on the turban mentioned below, notably by al-Kattānī (see *Bibl.*) and according to them, anyone who succeeds in restoring the turban to a country acquires the merit of reviving a good tradition (*iḥyāʾ al-sunna*). In 19th century Ottoman Turkey the turban was officially replaced by the fez, which in its turn had to give way in 1925 to the modern European hat (*shapka*) just as in Persia under the Pahlawīs the turban was temporarily driven out by the *kulāh*.

The turban could also be used for many purposes other than that for which it was primarily intended. Thus in Saʿdī, *Būstān*, a man in the desert giving water to a dog dying of thirst uses his cap (*kulāh*) to get water out of the well and his turban-cloth (*dastār* or *mayzar*) as a rope. The turban was often used as a pocket, and also as a rope to tie up criminals, or to tie firmly in the saddle or to strangle. In 1032/1623 the rebel Turkish *ʿulamāʾ* chose the turban of Sheykh Aḳ Shams al-Dīn as their standard (*GOR*, iv, 590). In Mamlūk coats of arms [see RANK] *ʿiṣāba* means the cross or long bar, and in European heraldry a turban is the sign of a Crusader (*Papyrus Erzherzog Rainer, Führer*, 272). Some mussels of the genera of *turbo* and *clanculus* are called turban: Persian turban = *turbo cidarus*; Pharaoh's turban = *clanculus Pharaonis*; Turkish turban = *balanus tintinnabulum* (*Grande Encyclopédie*), and Turkish loans used to be known in the 19th century as "turban stock", and "turban lotteries" the shares of the Banque Ottomane, which were of very uncertain value.

As a survey of the many names for the turban and its parts, we give below an alphabetical list with short notes. The merit of first making a classification possible is due to Dozy, who in his *Dictionnaire des vêtements* and in his *Supplément* has collected ample material, which should generally be consulted. There are also the more recent works by Karabacek, Brunot and al-Kattānī.

ʿAdhaba is the end of the turban-cloth which usually hangs behind from the turban "between the shoulders". When this form of turban first came into use cannot be ascertained exactly; it is of course said to have been worn by the Prophet and by the angels at Badr and according to Ibn Taymiyya, Muḥammad had a dream in this connection in which God pointed to the place between the shoulders; but many of the orthodox regard this dream as anthropomorphism. The leaving of one end hanging down is recommended, and a turban without tails and *taḥnīk* is said to be *bidʿa*. On the position and length of the tail, there are differences of opinion; the most usual is four fingers long between the shoulders. The Ṣūfīs wear the tail on the left because the heart is on that side; wearing the tail behind the right ear was a privilege of the Ḥafṣid sultans of Tunis; the legists of the Imāmiyya are said to have left two tails hanging down, one before and one behind, and the so-called Baghdād turban had two tails. Form VIII of the verb *ʿ-dh-b* means "to wind the turban leaving a tail hanging".

ʿAḳāl, a cord of brown camel hair, which the ʿAneze wear instead of a turban cloth wound two or three times round their head-dress, which is called *kūfiyya*.

ʿAmāma, turban, another form of *ʿimāma*. According to the dictionaries, the pronunciation with *a* is wrong, but according to L. Brunot, *Noms de vêtements masculins à Rabat*, in *Mélanges René Basset*, Paris 1923, i, 121, this was the pronunciation in Algiers. It was there an unwound turban, and was also given as a present to the *walī* of the woman one wished to marry.

ʿArakiyya, perspiration-cap, a little cap of some light material which is worn below the turban-cap, to collect the perspiration, and which often peeps out below it. The Turks called it *ṣarïḳ ʿaraḳiyyesi*. The name *maʿraḳa* is also found; some wrote *ʿarāḳiyye* and would connect the word with ʿIrāḳ (Brunot, 120; al-Kattānī, 33). In everyday language, the word is said to mean ordinary cap (*kalansuwa*) and in earlier times in Syria it was a sugar cone-shaped cap adorned with pearls worn by women.

ʿAṣb[*a*] = *ʿiṣāba*, bandeau. Al-Bukhārī (*Libās*, *bāb* 16) says that the Prophet once wore a black *ʿiṣāba*. Among the Mamlūks, *ʿaṣba* was the double camel hump-like erection on the *ṭurṭūr* worn by men and women (Karabacek, 71), and in early 19th century Egypt it was a square black silk kerchief worn by women (Lane, *Manners and customs*, ch. 1).

ʿAzāba (another form of *ʿiṣāba*?) seems to be a head-dress with pearls and gold worn in Morocco and Egypt.

Bayḍa is properly an iron helmet but, according to al-Kattānī, 3, may also mean a turban.

Bughtāḳ or *Bughṭāḳ* or *Bukhtāḳ*, from *Bughlutāḳ*, etc. may mean turban and especially the high headdress worn by Mongol princesses and ladies of rank, adorned with gold and pearls.

Burnus, barnūs, was in earlier times not a cloak but a high cap and in this sense it is used in al-Bukhārī, *Libās, bāb* 13. Of later writers, for example, al-Ḳalḳashandī, v, 204, still uses it in this sense: the Sultan of Morocco wore a high white *burnus*. The corresponding verb is *tabarnasa*.

Burṭul[*la*], a high cap, with the pronunciation *barṭala*, a low skull-cap; in modern parlance it means the *tādj* of a bishop. Persian has *pertele* from it.

Danniyya (perhaps from *danīna*), the "pot-hat" of the *ḳāḍīs*, called *ʿurf* in Turkish.

Dastār (Pers.), turban-cloth; *dastār bandān*, the "turban-wearers", are learned men, dervishes, etc.

Dhuʾāba, the tail = *ʿadhaba*. This word seems to occur usually in Egyptian writers. In the dress of the Fāṭimid caliph and officials, an end of the turban cloth was left hanging down with or without a *taḥnīk* (cf. Ibn al-Ṣayrafī, *Ḳānūn*, ed. Bahgat, introd.). According to al-Ḳalḳashandī, iv, 43, Ṣūfī *Shaykhs* had a small *dhuʾāba* at the left ear. According to al-Suyūṭī, *Ḥusn al-muḥāḍara*, ii, 226, scholars and *ḳāḍīs* wore a *shāsh* with ends hanging down between the shoulders.

Dulband (Pers.) is perhaps the original of our word turban; cf. von Hammer, *Staatsverfassung*, 442, and *GOR*, iii, 17. *Dulband-dārān* are the turban-wearers, Turkish *dulbend aghasi*, the keeper of the sultan's turbans.

Farūdiyya, a square kerchief worn by women who make a kind of *rabṭa* with this and the *ṭāḳiyya* and *ṭarbūsh*. Two or three pieces of cloth used to be used, which formed a kind of small turban but quite distinct from that worn by men. The turban proper is distinctly a man's headdress, but women have occasionally had similar fashions. The vigour with which theologians attacked women who wore turbans or otherwise aped men's dress, quoting *ḥadīth*s to support their strictures, shows only too clearly the existence of such practices (cf. al-Kattānī, 42, 112).

Fez, the red cap originally belonging to Fās in Morocco, was replaced in Turkey in 1925 by the European hat (*shapka*), while it continued to be worn, e.g. in Egypt.

Fidām, turban, also a mouth-veil worn by the Parsīs and a kind of muzzle for camels and oxen.

Findjān seems to have been a headdress worn by women in Cairo and Syria, gilt below and decked with pieces of silver.

Ghifāra in early times was a kind of *ṭāḳiyya* for women, a red cloth with which they protected their veil from the oil on the hair. In Muslim Spain, it was the name of a similar cap for men, who usually wore not turbans but *ghafāʾir* of red or green wool, whilst Jews wore a yellow one. It would therefore perhaps correspond to the cap often called *shāshiyya* in the Maghrib which was worn under the turban.

Gulūta (Pers. pronunciation of the Arabic *kallawta*), a cap worn by women and children.

Hen(*n*)*in* (French), a high headdress worn by women in France and Burgundy, a 15th century fashion influenced by the East, which still survived in Germany in the 16th century. The form changed and was sometimes shaped like a sugar loaf or dome, sometimes like a roller or a truncated cone; sometimes it had two peaks, like the double henin worn by Queen Isabella of Portugal (Karabacek, ii, 67 ff., 84; there it is explained from the Arabic *ḥanīnī* "tinkling" [from the metal pendants on it?] which occurs once in the *Arabian nights*).

Ḥarfiyya is a name for the cap of the turban; cf. Brunot, 105.

Ḥunṭūz was a headdress worn by women in Morocco, triangular in shape, made of linen, three inches long and broad and a span high, with silk and silver, the whole looking something like a camel's hump; cf. al-Kattānī, 112.

ʿImāma, the most general Arabic word for the turban cloth and also for the whole turban; other forms are *ʿamāma, ʿimma*, pls. *ʿamāʾim* and *ʿimām*. The verb is *ʿ-m-m* in forms II, V, VIII, X. Details and variations according to colours, profession, and countries are mentioned above. Among special kinds may be mentioned the *ʿimāma Yūsufī* and *ʿimāma Sūsī* from Sūs in Morocco.

ʿImma is properly the style or form of winding the turban, then the turban itself. Al-Kattānī, 4: *ḥasan al-ʿimma = ḥasan al-iʿtimām*.

ʿIṣāba, turban-cloth like *ʿaṣba*, in more recent times also a headdress for women, as in the *Arabian nights*: *ʿaṣāʾib muzarkasha* of women and an *ʿiṣābat al-ḥuzn*. The *ʿaṣāʾib sulṭāniyya* under the Ayyūbids and Mamlūks in Egypt (al-Ḳalḳashandī, iv, 46; al-Suyūṭī, ii, 110) were the flags of the sultan in the public processions (*mawākib* [*q.v.*]), for the flags enveloped the head of the lance like a turban (al-Ḳalḳashandī, ii, 128; cf. al-Kattānī, 12-13, 36).

Ḳalansuwa [*q.v.*], a high headdress.

Ḳalewī or *ḳal*(*l*)*ewī* in Ottoman Turkey was a state turban which was worn in the capital by the Grand Vizier, the High Admiral (*Ḳapudan Pasha*) and the chief eunuch (*ḳizlar aghasi*) and in the provinces by the *pasha*s of three tails; cf. von Hammer, *Staatsverfassung*, i, 440, 444, and *GOR*, iii, 17, vii, 268, viii, 191.

Kalfa, pl. *kalfatāt*, a high cap, another form of *kallawta*.

Kallawta, kalūta, pl. *kalāwit, kalūtāt*, a cap. The word is perhaps connected with the French *calotte*, Pers. *gulūta*, and perhaps even with the Latin *calantica, calautica, calvatica*; in Syriac, *kalwā* is found with the meaning of tiara, mitre. This name was particularly common under the Turkish dynasties of Egypt; under the Ayyūbids, the sultan, the *amīr*s and the soldiers wore yellow *kalūtāt* without turbans (*ʿamāʾim*), with *dhawāʾib* hanging down behind (al-Ḳalḳashandī, iv, 39; al-Maḳrīzī, ii, 98). In the reign of al-Ashraf Khalīl b. Ḳalāwūn, caps embroidered with gold were introduced (*kalūtāt al-zarkash*; al-Maḳrīzī, *op. cit.*); according to another source (al-Ḳalḳashandī, *op. cit.*), they were red with *ʿamāʾim*; from the time of al-Ashraf Shaʿbān they were worn larger. The *amīr* Yalbughā al-ʿUmarī introduced a special form, the so-called *kalūtāt yalbughāwiyya* which were large, but under al-Ẓāhir Barḳūḳ, still larger *kalūtāt čerkesiyya* appeared (al-Maḳrīzī, *op. cit.*). In those days, a set of robes of honour included a *kalūta zarkash* (al-Ḳalḳashandī, iv, 52-3).

Ḳalpaḳ [see LIBĀS].

Ḳamṭa, a red cloth, adorned with pearls, which Egyptian women twisted round their *ṭarbūsh*.

Ḳawuḳ [see ḲAWUḲLU].

Keffiyye, popular pronunciation of *kūfiyya*.

Kelle push, a small white or red cloth cap, around which the turban can be twisted.

Khurāsānī in Ottoman Turkey was the round turban worn by viziers and other officials who were no longer in active service and therefore did not wear the *mudjewweze* (von Hammer, *Staatsverfassung*, i, 444). According to d'Ohsson, ii, 135, ʿOthmān I is said to have worn a cap of a red material, which was called *tādj-i khurāsānī* and was worn by the Tatars and the Čaghatay Turks.

Ḳināʿ, pl. *aḳniʿa*, also *miḳnaʿ*(*a*) was a cloth which men and women wound on the head, like the *ʿiṣāba* and the *kūfiyya*. Sometimes also it seems to mean a woman's veil of silk embroidered with gold, then again

to be the same as *ṭaylasān* (al-Kattānī, 12, 106). From *al-kinā'* came the Spanish *al-quinal*. Al-Bukhārī has a *bāb al-taḳannu'*.

Kisā', properly a general word for garment, is a piece of flannel worn by learned men in North Africa, around the body and head. In earlier times every one wore it and called it *ḥayk*, which was the name for a woman's veil (cf. Brunot, 133-4).

Konfil, a cap worn by women in Algiers and Tunis.

Ḳub', pl. *aḳbā'*, was in Egypt the name for the innermost cap of the turban, which could be kept on, even when sleeping, while the turban proper was taken off and put on a special turban stand, *kursī al-'imāma*; the *ḳub'* thus corresponds in a way to the later *ṭāḳiyya* and *'araḳiyya*. The Egyptian texts of the *Arabian nights* have *ḳub'* for *ṭāḳiyya*. *Ḳub' khaṭā'ī azraḳ* is a similar cap of blue Chinese silk. According to al-Maḳrīzī, ii, 105, there was a market called *sūḳ al-aḳbā'iyyīn* in Cairo. *Ḳubba'a* (= Syr. *ḳūb'ā*, Hebr. *ḳōba'*) is also said to have been a kind of cap or turban, but it also means the capital of a column.

Kūfiyya, popularly *keffiyye*, pl. *kawāfī*, is in Arabic probably a loanword from the Italian *(s)cuffia*, 6th century Lat. *cofea*, Span. *(es)cofia*, Port. *coifa*, Fr. *coiffe*, Eng. *coif*, to which the Turkish *uskuf(iyya)* is also said to be traced. It is a rectangular piece of cloth worn by the Bedouin and their women in Egypt, Arabia and 'Irāḳ on their heads, of linen or silk in various colours, almost a yard square. The cloth is folded diagonally, the ends hang down or are tied below the chin and above it the Bedouin sometimes, and townsmen usually, wind a turban. This form, which was already known in Egypt in the Mamlūk period and is mentioned in the *Arabian nights*, came into prominence again as part of the dress of the Wahhābīs.

Kūdj is a headdress worn by women, along with an *'iṣāba*. The word is perhaps a corruption of *seraghūdj*, *seraḳūdj*, which is said to mean a Tatar cap.

Ḳūḳa, a Persian word, is applied in Turkish to the plumed headdress worn by the princes of Moldavia and Wallachia and by the Aghas of the Janissaries (von Hammer, *Staatsverfassung*, i, 444).

Kulāh is the general Persian word for the cap, which replaced the turban in Persia. In Ottoman Turkey it meant more particularly the sugar-loaf-shaped headdress of the cooks, confectioners and wood-cutters of the Palace, and also a white felt headdress worn by the Janissaries = *keče* and one of red cloth worn by the *bustāndjis* = *baretta*. *Surkh kulāhān* was the Persian name for the Shī'ī Persians corresponding to the Turkish *ḳïzïlbash*; cf. Babinger, in *Isl.*, xi, 81.

Kulōta (cf. *kallawta*) means in Persian a veil worn by women or a child's cap = *gulūta*.

Kumma, kimma, pl. *kumām* is a little tight-fitting cap; cf. Abu 'l-Fidā', iv, 232, l. 5; al-Kattānī, 40.

Kurziyya, karziyya, kursiyya. The word seems to be a loanword in Arabic and Berber and to come from the Persian; it is found mainly in the Maghrib and Spain and was there applied to a man's headdress of white wool or strips of wool which the Berbers wound round their heads like a turban cloth. But now it seems to mean a cloak; cf. Brunot, 132-3.

Lāṭi'a (supply *ḳalansuwa*) means a small, tight-fitting (*lāṣiḳa*) cap, but is probably not a proper name for it; see al-Kattānī, 37, 40, 43.

Libda, lubbāda, a small cap of brown or white felt (*libd*) which the common people in Egypt wore under the *ṭarbūsh*. The very poor wore it alone, without *ṭarbūsh* and turban.

Lithām, a mouth-veil for men [*q.v.*].

Mandīl [*q.v.*], *mindīl*, a loanword from the Latin *mantile*, is applied to cloths generally, but may also mean the turban, especially in Turkish and Persian. It is found in this sense also in Arabic authors, like al-Tha'ālibī and al-Maḳrīzī, but they probably took it from the Persian.

Mayzar means in Persia the turban, probably derived from *mi'zar*, which, however, means a veil.

Ma'raḳa, a parallel form for *'araḳiyya*, perspiration-cap.

Mighfar, also pronounced *miḥfar*, the helmet, is a network of iron worn to protect the head in battle under the cap (*ḳalansuwa*): the Prophet is said to have worn one at the entry into Mecca. Soldiers wore a turban around the helmet, not only when fighting, but also in times of peace (Fries, *Das Heereswesen der Araber*, Heidelberg 1921, 59). Thus the Ottoman Murād IV, who was continually in the field, used to wind his turban cloth around his helmet (von Hammer, *Staatsverfassung*, i, 443). Hence the phrase "to slacken the turban" = to live in peace and security (al-Kattānī, 4) while "the turban on the neck" (*fī 'unḳihi mindīl* or *'imāma*) is a sign of submission.

Miḳna'a is the same as *ḳina'*, a head-cloth but the former is usually smaller. The *miḳna'a* of women is also called *ghifāra*.

Mikwar(a), *mikwāra* is a word for turban, and *mukawwir* thus came to mean the same as *muta'ammim*, i.e. theologian, man of learning, and in Muslim Spain, the officials and jurists, because these alone wore the turban there.

Mishmadh, mishwadh, mishwādh, mishwash, are rarer words for turban.

Mudjawwaza, Arabic, but apparently only found in Turkish as *müdjewweze*, a barrel- or cylindrical-shaped cap, which was worn with the turban cloth from the time of Süleymān's dress edict, as the proper court and state headdress. Süleymān is said to have been the first sultan himself to wear it (von Hammer, *Staatsverfassung*, i, 442; Pečewī, i, 4: *M. surkh*); the *müdjewweze* was previously the military cap, the red top of which peeped out from the turban cloth. Meḥemmed II is said to have worn his turban over a spiral *tādj*, like the *müdjewweze* of scholars, and the turban of his son Bāyezīd II, like his father's, resembled the type worn by learned men (Karabacek, 15; von Hammer, *GOR*, iii, 17, vii, 268, viii, 191).

Muḳla, a large turban worn by learned men of unvarying shape, but also the headdress of Coptic priests with a long narrow band.

Nuṣṣ ra's "half the head", was a small helmet or cap worn by seamen in the Maghrib; the name was also found in Egypt. In Morocco the *ṭarbūsh* was also called "*niṣf al-ra's*" because it covered half the head, tightly fitting; cf. Brunot, 117-18.

Parīshānī, the "untidy turban", was the name of the turban worn by the common people in the reign of Süleymān I; *GOR*, iii, 17.

Pertele, Pers. pronunciation of *burṭulla*.

Rabṭa of women consisted of the *ṭāḳiyya*, *ṭarbūsh* and *farūdiyya*; together they made a kind of woman's turban, but it was very different from that worn by men.

Ruzza was a small turban for young people in Morocco (cf. Brunot, 105-6).

Sādj was a green or black *ṭaylasān*; cf. al-Kattānī, 106.

Salīmī, a special variety of the kind of turban called *Yūsufī*, called after Selīm I, who is said to have preferred it, as did Selīm II also; *GOR*, iii, 17, vii, 268.

Sharbūsh, sharbush, pl. *sharābīsh, sharābish*, probably from the Persian *sarpūsh*, but the latter is a woman's headdress. In Syriac we find *sarfūshā* in Bar Hebraeus.

The *sharbūsh* was the headdress of the *amīrs* under the Mamlūks in Egypt; according to al-Maḳrīzī, ii, 99, it resembled the *tādj*, was three-cornered, worn without a turban, and one formed part of a set of robes of honour. It had a markedly military character, and the *sharbūsh* of the *amīrs* is contrasted to the turban of the jurists (al-Maḳrīzī-Blochet, 335). In Cairo in those days, there was a special market for sellers of *sharbūsh*, in which, however, in al-Maḳrīzī's time only robes of honour were sold, and in Damascus there was a *madrasa* called *al-Madrasa al-Mālikiyya al-Sharābishiyya*. Under the Circassian Mamlūks, the *sharbūsh* fell into disuse (and was replaced by the *kalūtāt čerkesiyya?*).

Ṣarïḳ also *ṣarghï*, a bandage, was the usual Turkish name for the turban. *Ṣarïḳlï* = turban-wearer, e.g. *ṣarïḳlï khodja* = cleric with the turban, *ṣarïḳdjï* = turban-maker; *ṣarïḳdjï bashï*, the sultan's turban-keeper. The first guild regulation of the turban-makers dates from Süleymān I's time, when their shops were first opened, and regulations about the wearing of turbans were drawn up (von Hammer, *Staatsverfassung*, i, 443).

Shadd, the turban-cloth, then the whole turban, a name used particularly in North Africa and Egypt. The Egyptian texts of the *Arabian nights* have *shadd* for *ʿimāma*. Sometimes *shadd* was particularly the white-and-blue striped turban of the Copts, while that of the Muslims was called *shāsh*; the *shadd baʿlabakkī* was particularly well known. The *shadd tādj al-khalīfa* at the court of the Fāṭimids was the office of the turban-winder to the caliph; al-Ḳalḳashandī, iii, 484.

Shāl. The word has passed into the languages of Europe, "shawl", etc., and means the turban-cloth or whole turban, especially in Egypt, sometimes also kerchiefs worn by women, e.g. in Arabia and North Africa.

Shapka/ṣapka is the Turkish word for the modern European hat, which was made compulsory in Turkey by law in 1925. Only clerics already wearing turbans (*ṣarïḳlï khodja*) were allowed to retain their turbans. A number of publications appeared at the time on the hat question (*shapka mesʾelesi*).

Shāsh, from which we get the English word "sash", meant the turban-cloth in Egypt, Syria, Arabia and Persia. Under the Ayyūbids, the *ḳāḍīs* and learned men wore turbans with large *shāshāt*; some let a tail (*dhuʾāba*) hang down between the shoulders or wore the neck-veil in addition (*taylasān*; al-Ḳalḳashandī, iv, 42; cf. al-Maḳrīzī, ii, 98, and al-Suyūṭī, ii, 226). The *shāsh*, however, also meant a cap (= *shāshiyya*) and formed part of a set of robes of honour; e.g. al-Ḳalḳashandī, iv, 52-3: *shāsh rafīʿ, mawṣūl bihi ṭarafᵘⁿ min ḥarīr abyaḍ*. From 780/1378 we also find the *shāsh* as part of a woman's dress; it is the cloth embroidered with gold and pearls, thrown over the double *ṭurṭūr*; cf. Karabacek, 67 ff.

Shāshiyya in Egypt was a cap, around which the turban-cloth was wound; it was of silk and might be trimmed with pearls and gold. On the other hand, however, it was the name given to the paper cap, put upon criminals, and also to iron helmet-like caps. To put on the *shāshiyya* meant "to adopt Islam." In early 20th century Morocco, it was a black cap for young people in the form of the *ṭarbūsh*, also a headdress in the form of a sugar-loaf, which the Darḳāwa dervishes wore, in Algiers a woman's cap (Brunot), in the oasis of Sīwa it was pronounced *shāsha*. *Shāshiyya* seems originally to have been the turban-cloth made of *shāsh* muslin; cf. *ZDMG*, xxii, 161.

Shemle was in Turkey in the reign of Süleymān I a carelessly wound turban-cloth, worn by the common people (*GOR*, iii, 17). In North Africa it was a cloth, still sometimes wound over the turban (*ʿimāma*); see Brunot.

Shimrīr = Span. *sombrero*, was the name given in Morocco to the European hat, sometimes also called *ṭarṭūr*; see Brunot.

Sīdāra is a skull-cap like the *ṭāḳiyya* worn under the *miknaʿa* and *ʿiṣāba*.

Sikka was the name for the Turkish dervish cap; cf. Jacob, *Die Bektaschijje*, in *Abh. Bayer. Ak. Wiss.*, 1. Kl., xxiv, no. 3 (Munich 1900), 40.

Sudūs, sadūs is a green *ṭaylasān* worn by women, especially in winter time as a protection from cold.

Tādj [*q.v.*], "crown", also turban.

Taḥnīk [*al-ʿimāma*] is a special adjustment, in which the turban-cloth is brought under the chin as a protection against heat and cold or its two ends tied under the chin. This form was found particularly in the Maghrib and those who used it defended it intolerantly and described all other forms of the turban as innovation (*bidʿa*), as the dress of the devil or of the Copts, or as a survival of the turbans of the followers of Lūṭ (al-Kattānī, 70). The opposite of *taḥnīk* is *iktiʿāṭ* or *iʿtidjār* (even letting the ends hang down is also wrong, in contrast to it), while other rare synonyms for the *taḥnīk* are *talaḥḥī* or *iltiḥā*. From the Maghrib, the Fāṭimids seem to have brought the *taḥnīk* to Egypt, and the *ustādhūn muḥannakūn* were the chief *amīrs* (eunuchs) at the Fāṭimid court who held the highest offices in the personal service of the caliph (al-Ḳalḳashandī, iii, 484; Ibn al-Ṣayrafī, *Ḳānūn*, ed. Bahgat, introd.). Farther east, also, the *taḥnīk* was occasionally found; e.g. even al-Ṣūlī is said to have recommended it. But it is no *sunna* with the Shāfiʿīs, while, for example, Ibn Ḳayyim al-Djawziyya [*q.v.*] recommended it.

Ṭaylasān, neck-veil of the *ḳāḍīs*.

Ṭāḳ, a green *ṭaylasān*, a name of very rare occurrence.

Ṭāḳiyya, pl. *ṭawāḳī*, is originally a Persian word, and in Persia was the turban or a high cap. French *toque* and Spanish *toca* are perhaps connected with it. The name seems to be first found in Mamlūk Egypt in the 8th/14th century, when it was a round cap with flat top in various colours, worn without the turban-cloth. Under al-Nāṣir Faradj, it was extended in height from 1/6 to 2/3 ells and swollen out like a cupola (perhaps under the influence of old Egyptian models) and called the Circassian *ṭāḳiyya*. Egyptian women are said to have imitated this for erotic or other reasons, and this form then made its way to the East. The *ṭāḳiyya* was stiffened with paper, and in a Fāṭimid cap, similar in shape, of the 5th/11th century have been found fragments of papyrus with writing upon them. These headdresses were quilted and had a rippled appearance. Other forms were evolved from them, such as the bottles, barrels, cones and the so-called unicorns (al-Maḳrīzī, ii, 104; Karabacek, 73; cf. *ṭurṭūr*). In more recent times *ṭāḳiyya* has been used as a synonym for *ʿaraḳiyya*; cf. Brunot, 116-17; al-Kattānī, 98.

Ṭals, parallel form for *ṭaylasān*.

Ṭarbūsh, probably, like *sharbūsh*, going back to the Persian *sarpūsh*, only found in Arabic from the 10th/16th century, was a tight-fitting cap, in Egypt usually of red wool, with a tassel of black or blue silk. Around this cap, men of rank wore the turban-cloth and under it the small *ṭāḳiyya* or *ʿaraḳiyya*. In Syria and in ʿIrāḳ, the *ṭarbūsh* had sometimes a peak, which hung behind or at the side and was kept in position by a piece of cloth. In Egypt this cap used to be called *shāshiyya* (in Morocco we still find both

terms in use side-by-side), in Spain *ghifāra*. *Trābshī* is a name given in Morocco to a young man, who does not yet wear the turban (Brunot, 118). The *ṭarbūsh* there was always imported from Europe; the *shāshiyya*, on the other hand, was made in the country itself.

Ṭarḥa = *ṭaylasān*.

Tasākhīn is also a kind of *ṭaylasān*.

Ṭurṭūr, *ṭarṭūr* (*a*), *ṭanṭūra*, *ṭanṭūra*, in Arabic a loanword of unknown origin (the Latin *turrita*, tower-shaped, has been compared), a high cap round which the turban can be wound. *Ṭarṭūra* seems to be found as early as a papyrus of the 2nd/7th century (Karabacek, 67), and in the 4th/10th century it was a popular headdress in Ḳayrawān (Karabacek, 68). The *ṭurṭūr* at a later date seems to have been a headdress of the Bedouin (they swore by it, *wa-ḥaḳḳ' ṭurṭūrī*; there is a saying "he fell at the first blow like the *ṭurṭūr* of a Bedouin") and to have gone out of fashion with the denizens of the towns. A *ṭurṭūr* of paper used to be put on the heads of criminals and prisoners captured from the enemy, and it was worn also by the "prince of the New Year" (*nawrūz*) at a popular festival in Cairo, which was prohibited in the reign of Barḳūḳ. The pointed *ṭurṭūr* was in the 8th/14th century, with or without the turban, the headdress of the common people in Egypt and the countries adjoining it (Karabacek, 68); at a later date, dervishes in Egypt wore sugar-loaf-shaped *ṭurṭūrs* with trimmings (Lane, *Manners and customs*, ch. I); in Turkey, it was worn by the volunteer corps of the Delis, in Algiers by the Dey's *čawushs*, in Morocco by the black soldiery. The name is found wherever Arabic is spoken, and *ṭurṭūr* in Arabic seems to have corresponded to *tādj* in Turkish and Persian. *Ca.* 780/1378, the double *ṭurṭūr* with two peaks like a camel's hump, and the *shāsh* above them, appears as a lady's fashion in Egypt and was taken to Europe (Karabacek, 71), and in more recent times the Druse and Maronite women of the Lebanon wore a *ṭurṭūr* plated with gold or covered with horn like the horn of a unicorn. In Fās, Algiers and Tunis also, the name was given to certain forms of women's headdress (see Brunot, 119; Karabacek, 80).

Ukrūf, *ukhrūf*, a high cap common in the Maghrib, which could be made either quite simply or of valuable material.

ʿUrf was in Ottoman Turkey a large globe- or pad-shaped turban worn by learned men, corresponding to the Arabic *danniyya* and the Persian *kulāhi-ḳāḍī*. Meḥemmed II was fond of wearing the *ʿurf* embroidered with gold; see von Hammer, *Staatsverfassung*, i, 444, and *GOR*, vii, 268, viii, 191.

Urṣūṣa, *arsusa*, *russa* is said to be a melon-shaped hat.

Usḳūf, also *usḳūfiyya*, from the Italian *scuffia* = Arabic *kūfiyya*, was a peaked cap embroidered with gold, which the officers of the Janissaries and some Palace officials like the Baltadjis wore, also called *kūka*. Süleymān Pasha, son of Orkhan, is said to have invented it; he is said to have introduced it out of affection for Djalāl al-Dīn Rūmī [*q.v.*] and even to have worn it. It came into general use in the reign of Murād I, and became a kind of ruler's crown; see von Hammer, *Staatsverfassung*, i, 444, and *GOR*, iii, 17.

Yūsufī, *ʿimāme-i Yūsufī*, is an old name for the Turkish turban; it is said to have been originally invented by Joseph and to be called after him. Selīm I and II wore these *Yūsufīs*, which were then called *Selīmīs* after them; see von Hammer, *Staatsverfassung*, i, 422, and *GOR*, iii, 17.

(W. BJÖRKMAN*)

ṬULKARM, a town of western Palestine, lying on the coastal plain just below the rise to the mountains of Samaria, some 18 km/11 miles to the east of the modern Israeli port of Netanya, in lat. 32° 19' N., long. 35° 02' E. at an altitude of 105 m/330 feet. The district around Ṭulkarm is fertile agricultural land, with an annual rainfall of *ca.* 600 mm, and famed for such agricultural produce as citrus fruits, olives, watermelons, etc.

Ṭulkarm is not mentioned by the classical Islamic geographers and travellers, and the first solid mention of it comes from early Mamlūk times, when at some time before 663/1264-5 Sultan Baybars divided it equally as *iḳṭāʿs* between two of his *amīrs*, Badr al-Dīn Basarī al-Shamsī al-Ṣāliḥī and Badr al-Dīn Baylik al-Khaznadārī. In records from this time and later,

the name appears at Ṭulkarm, possibly from an Aramaic predecessor Ṭūr Karmā. From the 10th/16th to the 19th centuries, the Ottoman *tapu defteris* mention it as a village in the *nāḥiya* of Ḳāḳūn in the *liwā'* of Nābulus [*q.v.*]. In 955/1548-9, it had 190 households plus three bachelors, but at the end of this century, the number of households had fallen to 156 whilst the numbers of bachelors had increased to 20. There are no references to any mosques or *imāms* at this stage of its history. Of Ṭulkarm's taxes, one-third was the ruler's *khāṣṣ*, and part of the rest went to the upkeep of *madrasas* outside the town and to the complex of al-Ẓāhir Baybars in Cairo. The sources are silent about the town from the 11th/17th to the 19th centuries, except for a reference to a learned Ḥanbalī scholar, Mar'ī b. Yūsuf al-Karmī (d. 1033/1623-4) who lived there but who had been born in Jerusalem; a number of his writings survive in manuscript.

Ṭulkarm began a more flourishing stage of its history at the end of the 19th century when in 1892 it was separated from the Ḳāḳūn *nāḥiya* and added to that of Banī Sa'b, becoming the seat of a newly-created *ḳaḍā'* in the *sandjaḳ* of Nābulus. It is depicted in travellers' accounts, *sharī'a* court registers and the Ottoman *sāl-nāme* as a steadily expanding, stone-built town, with piped water, several government offices and schools, including vocational ones. Towards the end of the First World War, in which Ṭulkarm had been the headquarters of the Eighth Ottoman army, and during the ensuing Mandate, Ṭulkarm benefited from its position on the standard-gauge Lydda-Haifa railway, being the junction for the 3 feet, 6 inches-gauge branch line to Nābulus. From 1948 to 1967 it was part of the West Bank of the Hashimite kingdom of Jordan. Its population has grown steadily in the 20th century, the 1937 population of 6,000 being subsequently swollen by Palestinian refugees. The town is in majority Sunnī Muslim, with a small Christian population.

(M.'A. AL-BAKHĪT)

ṬULUMBADJI̊ (T.), the Ottoman Turkish term for fireman, firefighter (< *ṭulumba* pump for fire-fighting < Ital. *tromba* with lambdacism and possibly with contamination from Tkish. *tulum* "waterskin", see H. Kahane and A. Tietze, *The lingua franca in the Levant. Turkish nautical terms of Italian and Greek origin*, Urbana, Ill. 1958, 448-9).

Water pumps appeared in Italy in the 15th century and spread around the Mediterranean shores. They are mentioned—already as *ṭulumba*—in the 1560s in connection with the building of the Büyük Čekmeče bridge near Istanbul (R. Anhegger, *Eyyübî'nin menâḳıb-i Sultan Süleyman'ı*, in *Tarih Dergisi*, i/1 [1949], 119-38), and in the next century Ewliya Čelebi mentions a gild of *ṭulumbadjiyān* (7 stalls and 80 members) who had the task of pumping water out of ships (*Seyāḥat-nāme*, i, Istanbul 1314/1896-7, 547-8). The firefighting pump was actually introduced into the Ottoman empire by a renegade Frenchman, who is only known by his convert's name, Gerček Dāwūd Agha, installed at Istanbul in 1128/1716 after a stay in the Netherlands and a Muslim convert shortly afterwards as the result of conflict with the Genevan jeweller Jacob Marchand. He constructed a pump after the fire at the Arsenal of 26 March 1718 and before the fire at the factory for making muskets (*tüfeng-khāne*) on 17 July 1718, and was appointed head of the company of firemen, *ṭulumbadji̊ bashi̊*, within the Janissary corps, after the fire at the cannon foundry (*ṭop-khāne*) of 16 January 1720.

From this time onwards, the *ṭulumbadji̊s* comprised a company (*odjaḳ*) of the Janissaries; after the abolition of the latter in 1826 they were attached to the newly-created units of the *'asākir-i manṣūre* and, after 1846, to the new gendarmerie. A specialist brought from Hungary, one Zichny, modernised the organisation in 1874, founding a battalion of firefighters, supplemented by two more in 1890 and a fourth in 1908. In 1925 the whole organisation was taken over by the municipality.

The personage of the *ṭulumbadji̊* was a major figure in Istanbul folklore of the 19th and early 20th centuries, projecting the image of a swaggering, ill-behaved fellow. The group had a common, precise method of dressing, frequented specific coffee-houses, organised races and had their own songs.

Bibliography: See essentially the detailed *İA* art. of Cengiz Orhonlu; also Turgut Kut, *Ülkemizde yangın tulumbasını ilk kez imal eden Gerçek Davud'un ve bazı tulumbacıların mezar taşları*, in *Tarih Dergisi*, xxxii (1979), 771-88. For the folklore aspect, see Reşad Ekrem Koçu, *İstanbul tulumbacıları*, Istanbul 1981. For a visual impression of *ṭulumbadji̊s* at the end of the 19th century, see photographs nos. 56-9 in C.E.S. Gavin (ed.), *Imperial self-portrait. The Ottoman empire as revealed in the Sultan Abdul Hamid II's photographic albums presented as gifts to the Library of Congress (1893) and the British Museum (1894)*, Cambridge, Mass. 1988 [= *Jnal. of Turkish Studies*, xii].

(ST. YERASIMOS)

ṬŪLŪNIDS, governing family of Egypt from 254/868 to 292/905, the date of the brief restoration of direct 'Abbāsid rule over the province.

A history of the family centres on the careers of its first two members, Aḥmad b. Ṭūlūn [*q.v.*] and his son, Khumārawayh [*q.v.*], who succeeded his father in 270/884. Ibn Ṭūlūn was sent as resident governor by Bāyakbāk (d. 256/870), himself appointed over Egypt by the caliph al-Mu'tazz in 254/868 (al-Ya'ḳūbī, *Ta'rīkh*, ii, 615). Ibn Ṭūlūn and Bāyakbāk were both members of the largely Central Asian Turkish guard formed initially in Baghdād then settled in Sāmarrā' upon its establishment by al-Mu'taṣim. A successful ten-years' reign enabled Ibn Ṭūlūn to present his appointed heir, Khumāramayh, with a seasoned military, a stable economy, and a coterie of experienced commanders and bureaucrats. Despite significant diplomatic and territorial gains by Khumārawayh, financial exhaustion, political infighting and strides by a revitalised 'Abbāsid state set the stage for Ṭūlūnid ruin some short years after Khumārawayh's assassination in 282/896. His son, Djaysh, was deposed by the Ṭūlūnid military command in 283/896 while his successor, and brother, Hārūn, was assassinated in 292/905. Shortly thereafter, an invasion by 'Abbāsid forces under the command of Muḥammad b. Sulaymān, with naval support from frontier forces based in Ṭarsūs,

brought an end to the reign of Shaybān b. Aḥmad b. Ṭūlūn, the last of the Ṭūlūnids.

The Ṭūlūnid period must be studied against the backdrop of a caliphate struggling with a growing loss of legitimacy, regional disturbances (including Coptic and ʿAlid-led movements in Egypt), a violent struggle principally in ʿIrāḳ between the caliphate and the Turkish command backed by allies within the administration, and a widening imperial financial crisis. The immediate external factors shaping Ibn Ṭūlūn's tenure in office included the emergence of Abū Aḥmad (b. al-Mutawakkil) al-Muwaffaḳ (d. 278/891) as the *de facto* ruler of the empire, and so rival to his brother al-Muʿtamid (d. 279/892), and the extended and costly revolt of the Zandj [*q.v.*] in southern ʿIrāḳ. Summoned from exile in Mecca by al-Muʿtamid (in 256/870), specifically to suppress the uprising, al-Muwaffaḳ quickly emerged as a power broker. His standing assumed formal status with the succession arrangement announced by al-Muʿtamid in 261/875, according to the terms of which Djaʿfar (b. al-Muʿtamid) al-Mufawwiḍ and al-Muwaffaḳ were to succeed to the caliphate in turn and each was to govern half of the empire, with al-Muwaffaḳ assigned over the eastern provinces (al-Ṭabarī, iii, 1890). The sum of these developments was the opportunity presented to Ibn Ṭūlūn to expand the authority wielded, up to that point, by governors of Egypt. As such the Ṭūlūnids can be counted among other 3rd/9th century families, including the Aghlabids [*q.v.*] and Ṭāhirids [*q.v.*], wielding regional power largely unhindered by imperial will (Grabar, 51-8).

A central problem of Ṭūlūnid history concerns the extent to which the family sought, and achieved, independence from the imperial centre. The most plausible interpretation (Frantz, 13, 29-30; Grabar, 37, 56-8; Kennedy, 310-12) relies on both the physical (coins, papyri, *ṭirāz* inscriptions, and weights) and literary evidence (see *Bibl.*). While fragmentary and on occasion ambiguous, the evidence suggests a careful balancing act on the part of Ibn Ṭūlūn and his heirs in a complex political environment. Various developments, on the one hand, indicate a move towards autonomy on their part. Among Ibn Ṭūlūn's achievements was the assertion of control, by 257-8/870-2, over much of the financial administration of Egypt. In 257, Yārdjūkh, the new apanagist of Egypt, granted Ibn Ṭūlūn authority over Alexandria and Barḳa, then, in the more significant appointment the following year, the *kharādj* of Egypt and authority (*wilāya*) over the Syrian *thughūr* (Ibn Saʿīd, 80, 84; al-Balawī, 72-3; al-Kindī, 216-17). Ibn Ṭūlūn thus achieved a position of financial strength as well as a victory over Ibn al-Mudabbir [*q.v.*], the head of the finance office and member of the imperial bureaucratic élite.

Also of note in this context were Ibn Ṭūlūn's efforts at creating an autonomous military and navy, a native Egyptian bureaucracy, and a network of financial and ideological support composed largely of high-level religious figures and merchants. The initial step towards the creation of a Ṭūlūnid army came with the revolt of ʿĪsā b. al-Shaykh, governor of Palestine, in 256/870. Terse reports indicate that Ibn Ṭūlūn exploited the occasion to create an army composed of Sudanese and Greek slaves (al-Balawī, 51). Ibn al-Dāya (Ibn Saʿīd, 80) refers to large numbers of "Reds" and "Blacks" (*al-ḥumrān wa 'l-sūdān*) which may be a reference to the two groupings (although "Reds" more often refers to the Persians). The sources also mention élite guard units surrounding the persons of Ibn Ṭūlūn (slave troops from the region of Ghūr in Afghānistān: Ibn Saʿīd, 78) and Khumārawayh (Arabs of the Ḥawf region of Egypt: al-Maḳrīzī, iii, 819). The first of these may have been the core around which Ibn Ṭūlūn built the larger army (al-Ṭabarī, iii, 2080). In a ceremony held in 258/871, Ibn Ṭūlūn had his forces swear personal allegiance to him (*al-bayʿa li-nafsihi*); the report (al-Yaʿḳūbī, *Taʾrīkh*, ii, 624) refers to the regular army, the Shākiriyya and the slave troops (?) (*al-djund wa 'l-shākiriyya wa 'l-mawālī*). Defections by high-ranking commanders, particularly that of Luʾluʾ in 269/883 to al-Muwaffaḳ and a mixed record of achievement by Ṭūlūnid forces in the field suggest persistent problems of securing such allegiance, perhaps a measure of Ṭūlūnid failure to secure an abiding basis of legitimacy.

One has also to contend with efforts at extending Ṭūlūnid rule over Syria, Palestine and the frontier zone with Byzantium (*al-thughūr*). A failed campaign in 269/883 to control Mecca and Medina was probably an attempt by Ibn Ṭūlūn to secure greater political appeal (al-Ṭabarī, iii, 2083-4). Though perhaps tied to Ibn Ṭūlūn's personal experience among the holy warriors of Ṭarsūs (Hassan, 278), the concerted efforts to control the frontier zone should probably also be understood in this manner. The initial steps towards rule over Syria and the *thughūr* included two campaigns by Ibn Ṭūlūn, in 265/878 and 269/882, in which he secured the allegiance of the military governors of the major Syrian cities, although Ṭarsūs eluded his control. Following his father's death, Khumārawayh faced the invasion of Syria by armies sent by al-Muwaffaḳ as well as the defection of Aḥmad b. Muḥammad al-Wāsiṭī, long a key member of Ibn Ṭūlūn's inner circle. Political as well as military gains enabled the younger Ṭūlūnid to extend Egyptian authority into the Djazīra, and, finally, over Ṭarsūs by 277/890. Two treaties negotiated with the ʿAbbāsid state in this period suggest the extent of Khumārawayh's prominence on the Near Eastern political stage. The first, with al-Muwaffaḳ in 273/886, recognised formal Ṭūlūnid authority over Egypt and the regions of Syria for a thirty-year period. The second treaty, reached with the new sovereign, al-Muʿtaḍid (d. 289/902), in 279/892, largely confirmed the terms of the earlier accord. Despite rather vague reports in the sources, however, both accords also contained provisions apparently seeking to confirm the status of the Egyptian governor as a vassal of the caliphal family (Haarmann, 49). The extraordinary dowry of some 400,000 dīnārs brought by Khumārawayh's daughter, Ḳaṭr al-Nadā, to her wedding in 279/892 with al-Muʿtaḍid, may have been an attempt to drain the Ṭūlūnid treasury (Frantz, 67).

On the other hand, numismatic and inscriptional evidence, weighed with compelling anecdotal material, points to an abiding concern on the part of the Ṭūlūnid administration not to distance itself unduly from the ʿAbbāsid state (Kennedy, 311). Coins and *ṭirāz* inscriptions which bear the name and title of the Egyptian governor, and thus read as marking a desire for autonomy, only date from 265-6/878-9. Among them is the inscription of 265/878 marking the foundation of Ibn Ṭūlūn's new congregational mosque. These are arguably best understood in the context of al-Muwaffaḳ's dominance over the caliphate (Grabar, 39-48). In this sense, these and other key measures on Ibn Ṭūlūn's part, such as the fashioning of the Egyptian army, the creation of an intelligence network and even the efforts at territorial expansion, were as much the means by which imperial interests were protected against the ambitions of al-Muwaffaḳ and his (largely Turkish) military coterie in ʿIrāḳ as they

were efforts to secure Ṭūlūnid authority.

No less significant a measure of service to the empire is that, on at least two occasions, in 257/871 and 262/875-6, Ibn Ṭūlūn remitted considerable sums of revenue, along with gifts, to the central ʿAbbāsid administration. The extended conflict with al-Muwaffaḳ would then have been an obstacle to more regular such payments (Frantz, 54-8). For al-Muwaffaḳ, the issue was, early on, to secure Egyptian revenue for the campaign against the Zandj, then to limit the growing presence of the Ṭūlūnid house. The pressing need for revenue and perhaps troops, inevitably drew al-Muwaffaḳ's attention to the considerable wealth of Egypt. Resistance by Ibn Ṭūlūn to such pressures, reflected, for example, in the letter sent in 263/877 by the Egyptian governor to al-Muwaffaḳ in which Ibn Ṭūlūn pointed out that al-Muwaffaḳ had no formal jurisdiction over Egypt, fuelled their escalating conflict.

Ṭūlūnid administration of Egypt bore several features of note. The literary evidence points to a highly centralised and pitiless style of rule joined to consistent attempts to win the backing of Egypt's commercial, religious and social élite. Ibn Ṭūlūn is reported to have replaced ʿIrāḳī officials with an Egyptian bureaucracy (Ibn Saʿīd, 83) and to have relied on the powerful merchant community for both financial and diplomatic support. Maʿmar al-Djawharī, a leading member of the Egyptian merchant community, served as Ibn Ṭūlūn's financier and maintained a network through which funds and intelligence made its way between Egypt and ʿIrāḳ. Concern over legal and religious sanction is suggested by Ibn Ṭūlūn's appeal, to an assembly of Egyptian and Syrian religious authorities convened in Damascus (269/882-3), for approval of his position against al-Muwaffaḳ. The need for such appeals is underscored by the refusal, on the part of the Egyptian chief *ḳāḍī*, Bakkār b. Ḳutayba, and two other jurists, to side with Ibn Ṭūlūn (al-Kindī, 226).

Fragmentary evidence does not permit a thorough assessment of Ṭūlūnid economic and financial policies. Important evidence points, however, to a stable and prosperous economy closely administered by the Egyptian bureaucracy and propitious levels of agricultural production blessed by consistent high flooding (Frantz, 267). The political stability of Egypt is a *sine qua non*. Recurrent revolts among the Copts and on the part of Arab nomadic communities along the upper Nile, were perhaps largely a response to more efficient Ṭūlūnid fiscal practices. The strength of the Ṭūlūnid economy is attributable to a complex of long-term socio-economic factors and more immediate reforms on the part of both Ibn al-Mudabbir in the period just prior to Ibn Ṭūlūn's appointment and the Ṭūlūnid administration itself (Frantz and Morimoto). The measures in question include changes in the tax assessment and collection system, an expansion in the use of tax-contracts (itself the source of an emergent land-holding élite in this period), and investment and repairs in the agricultural infrastructure. The key sector of production, investment, and participation in Mediterranean-wide commerce, was textiles, linen in particular (Frantz, 281-5).

Public works projects initiated by Ibn Ṭūlūn reflected practical and ideological concerns alike. The establishment of the new quarter of al-Ḳaṭāʾiʿ, and the replacement of the mosque of ʿAmr b. al-ʿĀṣ with a new congregational mosque, were a response to overcrowding, particularly with the influx of new regiments. The well-known tower of the Ibn Ṭūlūn mosque probably combines features borrowed from Samarran architecture and more local patterns. In addition to prodigious sums spent on military matters, the expenditures on Khumārawayh's part toward palaces, gardens and sumptuous social and artistic gatherings are said to have contributed to the alarming condition of the Ṭūlūnid treasury following his tenure in office.

Bibliography: The articles AḤMAD B. ṬŪLŪN (Z. Hassan) and KHUMĀRAWAYH B. AḤMAD B. ṬŪLŪN (U. Haarmann) should be consulted, along with the *EI*[1] art. *Ṭūlūnids* (H.A.R. Gibb).

1. The largely hagiographical biography of Ibn Ṭūlūn by Ibn al-Dāya [*q.v.*] preserved in Ibn Saʿīd's *al-Mughrib fī ḥulā al-Maghrib* (Cairo 1953) provides a near-contemporary account of his reign, complemented by a second valuable work, *al-Mukāfaʾa* (Cairo 1941). The *Sīrat Aḥmad b. Ṭūlūn* of al-Balawī [*q.v.*], while largely based on Ibn al-Dāya, is a credible elaboration of that life story. The chronicles of al-Kindī, al-Ṭabarī and al-Yaʿḳūbī all contain valuable information on the Ṭūlūnid period. The earlier works are the principal sources for later authors, principally Ibn Taghrībirdī, al-Maḳrīzī and al-Nuwayrī.

2. Studies. C.H. Becker, *Beiträge zur Geschichte Ägyptens*, Strassburg 1902, ii, 180-98, and Z.M. Hassan, *Les Tulunides*, Paris 1933, offer somewhat dated information and opinion. More recent scholarship includes O. Grabar, *The coinage of the Ṭūlūnids*, ANS Numismatic Notes and Monographs 139, New York 1957; G.M. Frantz, *Saving and investment*, Ph.D. diss., Ann Arbor, Michigan 1978; H. Kennedy, *The Prophet and the age of the Caliphates*, London and New York 1986, 309-13, K. Morimoto, *Fiscal administration*, Kyoto 1981, and E.W. Randa, *The Tulunid dynasty*, Ph.D. diss., Univ. of Utah 1990, unpubl. Frantz and Morimoto rely, in good part, on the extensive surviving papyri, and Frantz cites the earlier such research of N. Abbott and A. Grohmann.

TUM [see TIK WA-TUM].

ṬUʿMA, ILYĀS, Abū Faḍl al-Walīd, minor Arabic poet of the Mahdjar [*q.v.*] and of Lebanon, b. 1889 in Ḳurnat al-Ḥamrāʾ, Lebanon, d. 1941.

As the child of well-to-do parents, he received an excellent education at the ʿAyn Ṭūra school (1899-1903) and at the Madrasat al-Ḥikma in Beirut in 1905. His penchant for poetry manifested itself already during his school years in ʿAyn Ṭūra, where he composed poems in both flawless Arabic and French. He emigrated to Argentina in 1908 and went from there in 1910 to Brazil. He converted to Islam in 1916 and adopted the name Abū Faḍl al-Walīd. In 1920 he returned to Lebanon, where he lived until his death in 1941.

During his stay in Rio de Janeiro, he published a newspaper, from 1913 to 1917, named *al-Ḥamrāʾ* after the village where he was born and the Alhambra in Spain. From 1915 onwards he began to collect his poetry. The first volume came out in 1915 with the title *al-Gharībāt* ("Curiosities"), republished in Beirut in 1931 with the title *Aghārīd fī ʿawāṣif* ("Songs in storms"). Three more volumes followed: *al-Anfās al-mulahhiba* ("Kindling breaths"), Brazil 1917; *Rayāḥīn al-arwāḥ* ("Basil-scented souls"), Brazil 1918; and *al-Ḳaṣāʾid* ("Odes"), Rio de Janeiro 1921. The last volume was reprinted in Beirut in 1934 with the title: *Nafakhāt al-ṣuwar* ("Breaths of the pictures"). One prose work appeared from his hand in Rio de Janeiro in 1921, sc. *al-Ḳaḍiyyatayn* ("The two decisive issues"), about Eastern and Western politics.

After his return to Lebanon, he published a book on Arab history, *Aḥādīth al-madjd wa 'l-wadjd* ("Tales of fame and passion"), n.p. 1929; and *al-Mālik* ("The ruler"), n.p. 1932, on science, art and society. A volume of his essays on the Arabic language, poetry, prose and wisdom, appeared at Beirut in 1934 as *al-Tasrīḥ wa 'l-taṣrīḥ* ("Commission and permission"). He wrote three plays in prose, *Asrār Baghdād* ("The secrets of Baghdād"), *Nakbat al-Barāmika* ("The tragedy of the Barmakids"), and *Aḥmad wa-Wilāda* ("Aḥmad and Wilāda"), and one play in verse, *Ghāfir wa-Lubāna* ("Ghāfir and Lubāna"), 1932. He also translated poetry by Lord Byron which he published with the title *Zawāl al-hubb wa 'l-mulk* ("The end of love and power"), n.p. 1932.

Bibliography: Walīd Mashūḥ, *Abū Faḍl al-Walīd, al-shā'ir al-mudayyi'*, Damascus 1985. See also the *Bibl.* to MAHDJAR. (C. NIJLAND)

TŪMĀN, usually written thus in Arabic and Persian contexts, and pronounced *tümen* in Turkish and Mongolian ones, a term used in the eastern Islamic lands in mediaeval times with military, financial and administrative connotations.

The term appears to have entered Turkish from the Tokharian languages of what became Eastern or Chinese Turkestan, with the meaning of "10,000", but may be of Chinese origin (see Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth-century Turkish*, Oxford 1972, 507; G. Doerfer, *Türkische und mongolische Elemente in Neupersischen*, Wiesbaden 1963-75, ii, 641-2). Kāshgharī, however, translates it as "many" (*kathīr*), although he gives *tuman mink* as "a thousand thousand" (*alf alf*), i.e. a million (Maḥmūd al-Kāshgharī, *Dīwān lughāt al-turk*, tr. Atalay, Ankara 1941, 202 = Eng. tr. R. Dankoff and J. Kelly, *Compendium of the Turkic Dialects*, Cambridge, Mass. 1982-5, i, 306). Both the general and more precise meanings of 10,000 are found in other early Turkish sources.

1. As a unit in the Mongol armies theoretically of 10,000 men, and as an administrative district in Mongol-controlled territory.

In the Mongol empire, *tümen* clearly refers to a division numbering—at least in principle—10,000 men, which was further broken up into units of 1000, 100 and 10. The decimal organisation of Inner Asian armies has a long history, going back at least to the Xiongnu (Hsiung-nu) who fielded units up to 10,000 (Sima Qian [Ssu-ma Ch'ien], *Records of the grand historian of China*, tr. B. Watson, [2]Hong Kong and New York 1993, ii, 136-7), and was certainly found among the Mongols' more direct predecessors in the eastern Eurasian steppe, the Khitans, who founded the Liao dynasty in northern China and subsequently the Ḳara Khiṭāy state [*q.v.*] in Turkestan (D. Morgan, *The Mongols*, Oxford 1986, 89-90). Čingiz Khān [*q.v.*] already had a *tümen* of guards in 1206, although at this early stage the basic field unit appears to have been that of 1,000 soldiers (*Secret history of the Mongols*, §§ 202, 226; see § 106 for an even earlier usage of the term). *Tümen* is frequently mentioned in Persian and Arabic sources as the standard formation of the Mongol army in battle and elsewhere, both during the period of the united Empire and in the successor states. In the Ilkhānate, at least, it would appear that when Mongol commanders were mentioned in the pro-Mongol sources, these can be taken to be *tümen* commanders, thus giving us a suggestion as to the size of the particular army (J.M. Smith, *Mongol manpower and Persian population*, in *JESHO*, xviii [1975], 276). Whether *tümens* actually had a full complement of 10,000 troops remains an open question. In Mongol China, at least, there is evidence that these divisions had between 3,000 and 7,000 troopers in them (C. Hsiao, *The military establishment of the Yuan dynasty*, Cambridge, Mass. 1978, 170-1 n. 27). It may be assumed that a similar situation prevailed in the Ilkhānate, certainly because of the difficulty of keeping these units up to full strength given their frequent participation in campaigns. Besides divisions of Mongol and Turkish cavalrymen, the mainstay of the Mongol army, *tümens* of local troops of sedentary origin were formed, who joined the Mongols on their campaigns, including those against other Mongol rulers.

The expression *tümen* is also used to refer to administrative districts within the Ilkhānate. It may be possible that on occasion this usage was derived from the fact that the districts in question had to provide an actual *tümen* of local troops for the Mongol army (cf. Smith, *Mongol manpower*, 290-3, who argues that this was the case). In general, however, this seems unlikely, although it is also possible that it may be referring to those districts which provided the revenues for supporting a *tümen*. It appears that, on the whole, *tümen* was a general and indiscriminate term for an administrative district in the Ilkhānate (Morgan, *The Mongol armies in Persia*, in *Isl.*, lvii [1979], 89-91). *Tümen* as a label for a large military formation and an administrative region continued to be used in post-Ilkhānid Persia.

Bibliography: Besides the references cited above, see Doerfer, *op. cit.*, ii, 632-42, for an extended discussion with many examples; T.T. Allsen, *Mongol imperialism*, Berkeley, etc. 1987, 193-4, 209; P. Ratchnevsky, *Genghis Khan. His life and legacy*, tr. T.N. Haining, Oxford 1991, *passim*. (R. AMITAI)

2. As a unit of measure in accounting and numismatics used in Persia Central Asia and India, subsequently becoming a coin issued by the Ḳādjārs of Persia.

In the sense of a "heap [of money]", the word passed into Persian after the Mongol conquest and the early Ilkhānid rulers were said to have kept their treasuries as separate heaps of coins in the open air concealed under felt coverings, so that they could be physically picked up and moved about. Finding this practise too imprecise and informal for the needs of the state, Maḥmūd Ghazan [*q.v.*] decided to lock his treasury up, and to entrust bookkeepers with the task of determining exactly what, and numerically how much it possessed, rather than merely estimating the collective heights of piles of coins.

Maḥmūd Ghazan's coinage reform of 696/1297-8 was predicated on a change of attitude towards the official largesse that had formerly governed fiscal affairs to a more businesslike approach to financial management. The background to these financial reforms was recorded by Ghazan's court historian and *wazīr* Rashīd al-Dīn [*q.v.*], who stated that in the past there had been no one universal standard for the fineness of gold and silver. This caused trade to be distorted, and resulted in much individual loss and hardship. As a remedy, Ghazan ordered that a uniform design be adopted for his coinage dies, and that the coinage alloy be as pure as possible. The weight of the dirham coin was officially fixed at a half-*mithḳāl*, *ca* 2.16 gr, and the people were directed to exchange 3.5 *mithḳāls* of old silver coins for 3 *mithḳāls* of the newly-minted, purer silver coinage. Rashīd al-Dīn provides no extended description of the coinage itself, but the above agrees with numismatic evidence that one dirham

weighed a half-*mit͟hḳāl*, a double dirham one *mit͟hḳāl*, and six dirhams, or three double dirhams, three *mit͟hḳāls*, the coin which was known as the silver dīnār. To facilitate financial management, 10,000 silver dīnārs became the Ilk͟hānid unit of account to which the book-keepers gave the name *tūmān*. In this it was analogous to the Arabic *badra*, the skin of a lamb or goat capacious enough to contain a large sum of money. The usual amount reckoned as a *badra* was 10,000 dirhams, as the figure 10,000 was considered by the Arabs to represent both the perfection and the ultimate limit of numeration (Sauvaire, 136). In the *Tād͟j al-ʿarūs*, the *badra* is defined as a sack containing 1,000 or 10,000 dirhams, or 7,000 dīnārs. The equivalency of the last two figures is illuminating because it corresponds to the traditional ratio of ten silver dirhams *s͟harʿī*, each weighing 2.97 gr, being equal to seven gold dīnārs struck at the weight of the coinage *mit͟hḳāl*, 4.25 gr. It would thus appear that initially the *badra*, and later the *tūmān*, were considered to constitute the perfect unit of account having the mass of 10,000 coins of similar weight and fineness.

Under G͟hazan's reform gold did not form an official part of the new monetary system, and there was no standard weight for the gold coinage unit, although in practice gold coins were struck at roughly a quarter, half, one, two and three *mit͟hḳāls*. As a result, no regular exchange rate could be established between the fixed weight silver coins and the variably weighted gold. It was undoubtedly a wise decision on the part of Ras͟hīd al-Dīn to establish a mono-metallic coinage system sustained by an abundant supply of silver, where gold was treated as a commodity, held and traded in by means of coin-type ingots of standard purity but with a freely fluctuating value against silver.

There was no precedent in the western Islamic world which could have influenced G͟hazan's coinage reform, but the monetary system of the Dihlī Sultanate [*q.v.*] bore such striking similarities to that of the Ilk͟hāns that G͟hazan must have looked eastward for his inspiration. In India, the standard coin of the Sultanate was the heavy silver *tanga* [*q.v.*], also named the dīnār, weighing between 11.09 and 11.21 gr (H.N. Wright, 395). At the time of G͟hazan's reform, the Dihlī silver tanga/dīnār followed both a trinary and quaternary notation. Under the former system, the tanga/dīnār was divided into 6 dirhams, the notation adopted by the Ilk͟hāns, probably because it was compatible with multiples and fractions of the Persian *mit͟hḳāl*.

Unlike the tanga/rupee system in Sultanate and Mug͟hal India, the *tūmān* underwent a series of devaluations which reduced its original value of approximately 129.6 kg of pure silver under G͟hazan's reform

to only 41.45 gr of silver at the outset of the reign of Riḍā Shāh Pahlawī [*q.v.*]. Under Ghazan and his immediate successors, the most common Ilkhān coin was the double dirham. Silver dīnārs came into common use in Khurāsān under Öldjeytü [*q.v.*], while dirhams, halves and even quarters were commonly found in Anatolia and western Persia. The fractional denominations gradually faded from the Ilkhānid monetary system as the depreciation of the *tūmān* made them too light in weight for use as currency. In the West, their place was taken by the *akče* [*q.v.*]. In the East, the silver dīnār dominated the coinage system until the introduction of the Tīmūrid tanga [*q.v.*]. The Ṣafawids continued to use the *tūmān* as their unit of account, and assigned dīnār values to their silver coinage with the *shāhī* [*q.v.*] valued at 50 dīnārs, the *muḥammadī* at 100 dīnārs and the *ʿabbāsī* at 200 dīnārs. Under Nādir Shāh [*q.v.*], the rupee was valued at 500 dīnārs. Fatḥ ʿAlī Shāh introduced the *riyāl* of 1,250 dīnārs, and later the *ṣāḥibkirān* or *ḳirān* of 1,000 dīnārs. Fatḥ ʿAlī Shāh and his successors also issued fractions and multiples of the gold *tūmān*, while Nāṣir al-Dīn Shāh issued commemorative silver one-*tūmān* coins in 1301, 1307 and 1313 A.H. Although the *tūmān* ceased to be the official unit of account in 1932, the word continues in popular

use today with 10 *riyāls* spoken of as one *tūmān*. The tables record the vicissitudes of the *tūmān* from the time of its creation until its ultimate extinction, except for one murky period between the end of the Ilkhānids and the advent of the Ṣafawids, when it underwent what must have been a series of chaotic and obscure devaluations.

(R.E. Darley-Doran)

ṬŪMĀN BĀY (al-Malik al-Ashraf Abu 'l-Naṣr min Ḳānṣawh al-Nāṣirī), the last Mamlūk sultan of Egypt, r. 922-3/1516-17.

Born *ca.* 878/1474-5, he was purchased as a *mamlūk* by his paternal uncle Ḳānṣawh al-Ghawrī [*q.v.*], and presented to the reigning sultan, Ḳāʾit Bāy [*q.v.*], by whose son and successor, al-Nāṣir Muḥammad [*q.v.*] he was manumitted. During Ḳānṣawh al-Ghawrī's sultanate his career prospered. Appointed *dawādār kabīr* in 913/1507, he became in effect the sultan's chief minister, acquiring also the great offices of high steward (*ustādār al-ʿāliya*) and *kāshif al-kushshāf*. At this time of weakened governmental control over the provinces, he led five punitive expeditions to Upper Egypt, the granary of Cairo, to extort taxes in cash and kind, and to terrorise the local authorities. Disorders caused by Arab tribal raiding in Lower Egypt were met by him with severe, if ultimately ineffective repressive measures. Ṭūmān Bāy was appointed *amīr al-ḥādjdj* for the Pilgrimage of 917/1511-12, and in 920/1514 he served as regent *ad interim* (*nāʾib al-ghayba*) while the sultan paid a state visit to Alexandria.

He was again appointed regent in Rabīʿ II 922/May 1516, when Ḳānṣawh led his army to Syria for the fatal battle with the Ottomans under Selīm I at Mardj Dābiḳ [*q.v.*] (25 Radjab 922/24 August

1516). When the Mamlūk *amīrs* reassembled in Cairo, Ṭūmān Bāy unwillingly accepted election as sultan on 13 Ramaḍān 922/10 October 1516. As the Ottomans approached Egypt, Ṭūmān Bāy endeavoured to take the initiative and advance to the frontier. His plans were overruled by the *amīrs*, and he fell back on organising a line of entrenchments and a camp at al-Raydāniyya (north of Cairo) fortified with the cannons which had been cast in Ḳānṣawh's reign. His defences were overrun by the Ottomans, who were far superior in fire-power, on 29 Dhu 'l-Ḥidjdja 922/22 January 1517, and Ṭūmān Bāy fled. With some supporters he succeeded in briefly reoccupying part of Cairo, but was again forced to flee, and made his way to al-Bahnasā on the west bank. A settlement with Selīm granting him autonomous but tributary status was rejected by the *amīrs*, and Ṭūmān Bāy's forces were finally defeated near al-Djīza on 10 Rabīʿ I 923/2 April 1517. He was betrayed to the Ottomans by an Arab *shaykh* of the Buḥayra, with whom he had sought asylum. Selīm decided that he could not be allowed to live, and Ṭūmān Bāy was hanged at the Zuwayla Gate of Cairo on 22 Rabīʿ I 923/14 April 1517. His corpse received honourable burial in the *madrasa* founded by his uncle. As an official and a ruler, he is viewed favourably by the contemporary Egyptian chronicler, Ibn Iyās, but he clearly lacked the strength of will and ruthlessness to dominate the Mamlūk *amīrs*. This hampered him in his operations against the Ottomans, as did his lack of military experience apart from desert skirmishing. There were also underlying causes for his failure, notably the impoverishment of the sultanate, the inveterate insubordination of the Royal Mamlūks, and the obsolescence of Mamlūk tactics and armament.

TUMBĀK [see TUTUN].

TUMBATU (Swa. Tumbatu, Ar. Tunbatū in Yāḳūt, *Buldān*, only, iv, 366), an island of East Africa, *ca.* 5 miles long and 1 mile broad, and lying *ca.* 1/2 m northwest of Zanzibar in lat. 5° 50' S., long. 39° 13' E.

Yāḳūt says that people from Landjuya (sc. Zanzibar) had recently crossed to Tumbatu, where the inhabitants are Muslims. Manuscript histories of the island in Swahili, now lost, summarise the foundation legend of the settlement. The founder was Yūsuf b. ʿAlawī, of the Aḥdalī or ʿAlawī tribe (*sic*) according to Ingrams, having come from Tūsī, near Baṣra, in 600/1203-4. His eldest son became Sultan of Tumbatu, and his grandson Sultan of Kilwa, a tradition unsubstantiated by the Kilwa [*q.v.*] histories. Gray names the founder Yūsuf b. ʿAlawī, of the ʿAbdalī or ʿAlawī tribe; for Tūsī he writes Tūdī. The place-names are unidentified. The *nisbas* Aḥdalī, Aḥdal and ʿAbdalī still exist in Yemen, and should not be confused, as does Chittick, *Kilwa*, i, 239, with the Mahdalī of Yemen, the *nisba* of the second dynasty of Kilwa.

M.C. Horton's excavations describe a large site extending half-a-mile along the seashore, with numerous houses, a palace, two large mosques, one having two separate *muṣallās*, one perhaps for women. Occupation dates from *ca.* 1100 and terminates abruptly *ca.* 1350. The *miḥrābs*, and some surviving windows, are in the Sīrāf style of the Kizimkazi [*q.v.*] mosque; their inscriptions are in the same plaited Kūfic Sīrāfī style of 500/1106. It is evident that the carved elements come from earlier constructions, as at Shanga and elsewhere. The site was deserted precipitously, with coins left scattered on the floors, and bodies left unburied. The sudden evacuation was perhaps caused by bubonic plague, still endemic on the mainland. This suggests a date *ca.* 1350. The present villages of Gomani and Jongwe date only from the 17th or 18th century, their Swahili dialect having been recorded by Whiteley.

TÜMEN, Russ. Tyumen', the name of a town, previously called Čimgi-Tura on the Tura river in Western Siberia and of a subgrouping, the *Tümenli*, of the Siberian Tatars (who in 1926 numbered 22,636). The toponym derives, probably, from the Činggisid administrative-fiscal unit *tümen* (< Turk. *tümen* "10,000" < Tokhar. A. *tmān*, B. *tmāne*, an early borrowing in Mongol where it came to designate a military unit of 10,000 (Clauson, *Dictionary*, 507-8; Spuler, *Goldene Horde*, 303, 333, 377; Nasonov, *Mongolī*, 98 ff. [see TŪMĀN 1.]). This region had been largely inhabited by Uralic peoples, in particular the Ugric Khantī/Ostyak and Mańśi/Vogul peoples who had been undergoing displacement and assimilation by successive Turkic polities in the region (the Kimek Ḳaghanate, known to the 9th century Islamic geographers, and its heir the Ḳïpčaḳ confederation, early 11th century-1230s).

The region, an important centre of the fur trade, was incorporated into the Djočid *ulus*, forming elements in the territories of Shiban and Orda, brothers of Batu. With the fragmentation of the Djočid *ulus* in the late 14th century, Tay Bugha, a quasi-legendary figure of possible Noghay origins (see Frank, *Siberian chronicles*, 8-12), is associated, perhaps inaccurately, with the founding of the "Tümen khānate", from which the later "Khānate of Sibīr" would develop [see SIBĪR], with its initial political centre at Čimgi-Tura. Its early history is murky. Buffeted by the Noghay wars of Tokhtamïsh (who took refuge in this region and then faded from view after his defeat on the Vorskla in 1399) and the subsequent state-building activities of Abu 'l-Khayr (d. 1468), founder of the Özbek confederation, the Shibānid Ibaḳ (d. 1493 or 1495), appears to have taken power in parts of the region well before he and his Noghay allies despoiled the rapidly-fading Great Horde and killed its *khān* Aḥmad in 1481.

Ibaḳ (Ibrāhīm) expanded his holdings around the Tobol and established marital ties with "Mar" ('Umar ?) the Taybughid ruler of Čimgi-Tura. Although he murdered his Taybughid brother-in-law, Mar's grandson, Muḥammad (Mamat/Makhmet/Magmetuk), took his revenge subsequently, killing Ibaḳ and then shifting the capital of the Tümen khānate from Čimgi-Tura to Sibīr/Isker/Kashlïḳ, which may have been an old

Ostyak political centre (*PSRL*, xxxvi, 47; Armstrong, 66-7; Frank, *Siberian chronicles*, 12-14). Ibaḳ's brother, who made a bid for power in the Great Horde (1496), continued to hold some of the Tümen territory. "Kulluk Saltan" of the Russian sources was the last of the Shibānids to retain a foothold here. By the early 16th century, the region was under Taybughid control. This may be considered the formal end of the Tümen khānate, now completely absorbed into the Khānate of Sibīr. The borders of neither of these states are clear. They appear to have included some Ugric "principalities".

The Shibānids returned in the person of Küčüm Khān [*q.v.*] who, backed by the Özbeks now dominant in Transoxiana, seized power here in 1563, holding it until the Russian conquest of Sibīr in 1582. Küčüm may have also accounted for the migration here of some Volga Tatar groupings, although the strongest influx of Volga-Ural Tatars to this region came in modern times (latter half of 19th-early 20th century, see Tomilov, *Etničeskaya istoriya*, 17). The Russian city of Tyumen' was founded in 1586 near Čimgi-Tura. Other urban centres of the Tümen statelet were Ḳïzïl-Tura and Djangi-Tura (Kyzlasov, *Pis'mennïe*, 47, 59).

(P.B. Golden)

TŪN, a town of the mediaeval region of Ḳuhistān [*q.v.*] in northeastern Persia. It lay some 80 km/50 miles west-north-west of the main town of the region, Ḳā'in, and was often linked with it; Marco Polo speaks of *Tunocain* (Yule and Burnell, *The Book of Ser Marco Polo*, [2]London 1903, i, 83, 86), and Tūn wa Ḳā'in still figures in the *Bābur-nāma* (tr. Beveridge, 296, 301).

Tūn has no known pre-Islamic history, but was a flourishing town in the 4th/10th century, when the geographers describe it thus, mentioning especially its strong fortress. Nāṣir-i Khusraw was there in 444/1052, and describes much of the town as in ruins, though still reportedly with 400 carpet workshops (*Safar-nāma*, ed. Dabīr-Siyāḳī, Tehran 1335/1956, 126, Eng. tr. Thackston, 100-1). At the end of this century, Tūn and other places in Ḳuhistān were taken over by Ismā'īlī *dā'īs* from Alamūt, and the region became, and remains today, a centre for Ismā'īlism. Tūn's reputation here attracted the attention of the Il Khān Hülegü. After first attacking it in 651/1253, his commanders three years later besieged it for a week, sacking it and dismantling the citadel (Djuwaynī-Boyle, ii, 615-16). It nevertheless revived enough for Mustawfī to describe it a century later as prosperous, with a rebuilt citadel and fertile agricultural lands (*Nuzha*, 143-4, tr. 142). After that time, it played little part in historical events.

Today, the mediaeval Tūn has become the town of Firdaws (lat. 34° 00' N., long. 58° 09' E.), the chef-lieu of a *bakhsh* in the *shahrastān* of the same name, and with a population in *ca.* 1950 of 9,829 (*Farhang-i djughrāfiyā-yi Īrān-zamīn*, ix, 282-3).

(C.E. Bosworth)

ṬUNA, in Ottoman orthography Ṭūna, the Turkish name for the Danube/Donau river, and also, from 1282/1864, the name of a *wilāyet* under the new provincial reorganisation of that time, comprising five *sandjaks* in the northern part of what became in 1878 Bulgaria [*q.v.*, and A. Birken, *Die Provinzen des Osmanischen Reiches*, Wiesbaden 1976, 82].

Ṭuna as a frontier region and its economic aspects.

Two contradictory logics have shaped the destiny of the Danube. Geography makes it the second longest river in Europe (2,857 km/1,775 miles) and gives it the role of a unifying factor between southern Germany and the Black Sea, whereas history has continually counterbalanced this by dividing its vast basin amongst antagonistic states. Thus the battle front between the Ottoman empire and the Christian world for long adversely affected the Danubian route's value.

However, the Danube does not present, geographically, a homogeneous course. Its upper basin comes within the Germanic cultural area, whilst its middle stretches come within the great Pannonian plain, dominated by Hungarians and Serbs. The Iron Gates defile (in Serbian, *Derdap*, from Turco-Persian, *girdāb* "whirlpool") forms a barrier difficult to get through, isolating the lower, Rumano-Bulgarian basin. The lower Danube valley has an assymetrical profile: the southern bank is an elevated one, and holds the main cities, whilst the northern one, low and liable to flooding, was, until recent decades, covered with thick, marshy forest land (*lunca*). This last formed a real barrier parallel to the river itself, and contributed considerably to the autonomy of Wallachia and Moldavia *vis-à-vis* Ottoman power [see eflāḳ and boghdān]. Finally, the mouths of the Danube form a special stretch since, being accessible to sea-going shipping, they are orientated towards the Black Sea and the Straits.

Although known to Arabic geographers, the river did not really enter the Islamic sphere till the Ottoman conquests. The southern bank of the lower Danube was taken over towards the end of the 14th century (Nikopol [see nīkbūlī] 1393, Vidin [see widin] 1396). Above the Iron Gates, the capture of Smederevo (1459) was not decisive, so long as the strategically-situated fortress of Belgrade resisted (sieges in 1440, 1456). The mouths of the Danube, an important commercial crossroads, long controlled by the Genoese, were conquered at the end of the 15th century (Chilia 1484). Once the military barrier of Belgrade was lifted

(1522), the whole middle basin of the river was open to the Turks (Mohács [*q.v.*] 1526, definitive occupation of Buda [see BUDĪN] 1541).

From Komárom to the Black Sea, two-thirds of the Danube were Ottoman-controlled for a century and a half, yet this domination had hardly any effect in stimulating river traffic. Apart from the maritime section of the Danube, below Brăila, which had an active role in supplying Istanbul with food, the river remained a very regional line of communication, unable to compete with the great land axis Istanbul-Sofia-Belgrade. On the other hand, it played an important military role for transporting troops or frontier-harrying operations, with the help of *ṣaykas*, small, flat-bottomed gunboats.

From 1684 to 1739, the Danube formed the major axis for the Austrian military operations in Central Europe (Mohács 1687, Slankamen 1691, Senta/Zenta [*q.v.*] 1697, Petrovaradin [see WARADĪN] 1716). By the Treaty of Passarovitz/Požarevac [see PASAROVČA] in 1718, the Habsburgs gained Bosnian Posavina, northern Serbia as far as the Timok river, the Banat and Oltenia. This spectacular advance along the Danube was halted by the Treaty of Belgrade (1739), which left them only the Banat. Until 1878, the frontier along the Save and Danube (along its section Belgrade-Orşova) separated the two empires.

A genuine revolution took place from 1830 onwards, when steam navigation appeared and the waters (especially at the Iron Gates) were regulated by works undertaken by Count Széchenyi. After this, regular traffic, increasingly swift and growing in volume, was possible on the Danube, and it became the axis for Austrian commercial penetration of the Ottoman empire. Travellers for Istanbul passed through Vienna, and railways from Cernavoda to Constanţa [see KÖSTENDJE] (1860), and then Ruse-Varna (1866) gave the prospect of shortening the route. Under the impulse of Midḥat Pasha [*q.v.*], Ruse/Rusçuk [see RUSČUK], capital of the province of the Danube (*Ṭuna wilāyeti*), became a showcase of Ottoman reformism. Russia, which had a Danubian frontier since 1812 and had then become controller of the Delta in 1829, tried in the 1840s to counter this penetration in order to strengthen its commercial hegemony in the Black Sea. But after its defeat in the Crimea, it was ousted from the Delta. At that point, freedom of navigation was proclaimed and an international commission took charge of regulating the Delta.

The Ottoman Empire's positions along the Danube continuously fell back. In 1829 it had to renounce its enclaves on the Wallachian shore (Brăila, Giurgiu, Turnu Severin), and in 1867 the garrisons in Belgrade, Smederovo and Kladovo had to withdraw. The Treaty of Berlin of 1878 ended the whole of its control over Serbia and Rumania. It retained a theoretical control of the Bulgarian shore until 1908, but held until 1913 only the tiny island of Ada kale, below the Iron Gates, paradoxically forgotten until then by the international treaties [see ADA ḲALʿE].

ṬUNB, the name of two small islands (the Greater and the Lesser Ṭunbs) in the Persian Gulf situated to the west of the Straits of Hurmuz (lat. 26° 15' N., long. 55° 17' E.), whose modest history has been linked in recent times with that of the island of Abū Mūsā to their southwest (lat. 25° 52' N., long. 55° 00' E.). All three islands have been the subject of disputes between the ruling power in Persia to the north and the *shaykhs* of the Arab shores of the Gulf, those now forming the United Arab Emirates [see AL-IMĀRĀT AL-ʿARABIYYA AL-MUTTAḤIDA, in Suppl.].

The Ṭunbs are mentioned by the Portuguese author Duarte Barbosa in his description of the Inner Gulf (*ca.* 1518) as Fomon (read Tomon = Ṭunb) as amongst those islands dependent on the nominal Arab ruler in Hurmuz [*q.v.*]. Persia had a shadowy historical claim to the islands, but with the appearance of British naval power in the Gulf from the late 18th century onwards [see AL-ḲAWĀSIM], it was in general content to leave the islands under the control of local Arab *shaykhs*. However, in the later 19th century Persia steadily worked for the reduction of Arab influence on the Persian Gulf coast, and also in the 1860s revived earlier claims to al-Baḥrayn [*q.v.*]. Arab traders having been squeezed out of Linga [*q.v.*] on the coast of Fārs and having moved to Abū Mūsā, in spring 1904 Persian customs officials landed on the three islands, hauled down the flag of the *shaykh* of Sharjah (al-Shāriḳa [*q.v.*]) and hoisted the Persian one; but British diplomatic pressure compelled the Persians to withdraw. In the ensuing decades, Britain recognised the general right of the *shaykh* of Sharjah over Abū Mūsā and of the *shaykh* of Raʾs al-Khayma [*q.v.*] over the Ṭunbs. Just one day before the final withdrawal of Britain from the Gulf, Iranian forces on 30 November 1971 occupied the Ṭunbs and Abū Mūsā, doubting the abilities of the *shaykhs* to defend the islands in such a vital waterway as the Gulf, and they have remained in Iranian hands ever since then.

Cottrell (ed.), *The Persian Gulf States, a general survey*, Baltimore and London 1980, p. xxix, 53, 67-8, 127-8, 157-8, 176. (C.E. BOSWORTH)

ṬUNBŪR (A.), pl. *ṭanābīr* (vars. *ṭanbūr(a)*, *ṭanbūridja*, *ṭanpūr(a)*, *dambūra*, *dombra*, with other terms such as *buzuk*, *buzuki*, *bizik*, *baghlama*, *djura*, *sāz*, *dotār*, *setār*, etc.), denotes the pandore and various types of long-necked musical instrument. It is generally to be distinguished from the lute [see ʿŪD] by its smaller sound-chest and longer neck.

1. History of the instrument and its usage.

The pandore was known in ancient Egypt (Sachs, *Die Musikinstrumente des alten Ägyptens*, 54), Assyria (Engel, *Music of the most ancient nations*, 54), and Persia (terracotta from Susa in the Louvre, Paris). In Egypt, it appears to have been known as the *nefer*, which some scholars equate with the Hebrew *nebel*. The instru-

ment exists with but little change in the *gunbrī* of North Africa, the name of which carries, in its consonants *n-b-r*, a trace of the old Egyptian word.

The *gunbrī* (dim. *gunībrī*), in its most primitive form, with a gourd, shell, or wooden sound-chest, a skin or leather belly, and horsehair strings without tuning pegs, is the earliest form of the pandore known to us, and is to be found among the rural populations of North Africa from the Atlantic to the Nile. The sound-chest is constructed in many shapes and sizes, pear-shaped, ovoid, hemispherical and rectangular. The better type of instrument, which is used by the professional musician in art music, has tuning pegs, and is generally very artistically adorned with colours. It is mentioned by Ibn Baṭṭūṭa in his *Riḥla*, iv, 406, tr. Gibb and Beckingham, iv, 959. For a full description of the instrument, see Farmer, *Studies in Oriental musical instruments*, 39-49.

The *ṭunbūr, ṭinbār, tunbūr* (vulg. *ṭanbūr*) is the classical name for the pandore in the East. Al-Masʿūdī (*Murūdj*, viii, 90 = § 3214) attributes its invention to the iniquitous peoples of Sodom and Gomorra, hence perhaps the popular etymology (*ṭann* = "musical sound" + *būr* = "one destined to perdition"), although the lexicographers derive the word from the Persian *dum* or *dunba* ("tail") and *bara* ("lamb").

We first read of the *ṭunbūr* in Arabic literature in the 1st/7th century (*Aghānī*[1], v, 161). The instrument was already the most favoured instrument in Persia, in al-Rayy, Ṭabaristān and al-Daylam (*Murūdj*, viii, 91 = § 3215) and by *ca.* 900 it became so popular with the Arabs as to threaten the supremacy of the *ʿūd* (lute). Two books on the lives of famous pandorists were written at this period (*Fihrist*, 145-6). In the 4th/10th century two distinct types were known: the *ṭunbūr mīzānī* or *ṭunbūr baghdādī* which was attributed to the Ṣābians, and the *ṭunbūr khurāsānī*. The former, which retained in its frets the scale of pagan times, was used in ʿIrāḳ and to the south and west of it. The latter was favoured in Khurāsān and to the north and east of it. Both were generally found with two strings, although the *ṭunbūr khurāsānī* was sometimes mounted with three. These pandores are fully described by al-Fārābī. The identity of these particular types of pandores is lost after this and, indeed, the *ṭunbūr* is merely mentioned by name by the Ikhwān al-Ṣafāʾ, Ibn Sīnā (d. 1037), Ibn Zayla (d. 1048), and Ṣafī al-Dīn ʿAbd al-Muʾmin (d. 1294). It is not described in the *Kanz al-tuḥaf* (8th/14th century) although Ibn Ghaybī gives details of several types, three of which bear the name. The *ṭunbūr-i shirwānī* had a deep pear-shaped sound-chest (*kāsa*) and two strings. It was favoured by the people of Tabrīz. The *ṭunbūra-yi turkī* sometimes had three strings but more generally two. Its sound-chest was smaller than the preceding instrument, although it had a longer neck (*saʿid*). Both of these instruments were played with the fingers. In the *nāy ṭunbūr*, which was also mounted with two strings, a plectrum (*miḍrāb*) was used. Examples of the *ṭunbūr* in varying types crowd into Persian painting of the 9th-10th/15th-16th centuries. Ewliyā Čelebi and Ḥadjdjī Khalīfa mention it among the Turkish instruments in the 11th/17th century. The former says that the *ṭunbūr* was invented at Marʿash. It was evidently mounted with gut strings, as he mentions the *tel ṭunbūr*, probably a wire strung instrument, the invention of which he attributes to a certain Efendi Oghlī of Kütāhiya. It was smaller than the other *ṭunbūr* and was popular with the women-folk.

The *sharḳī* mentioned by him is probably identical with the *ṭunbūr sharḳī*. He says that it resembled the *čārtār* and was played by Turkomans. In late Ṣafawid Persia, as we know from Le Mans, Chardin and Kaempfer, the *ṭunbūr* or (and) *ṭunbūra* was still favoured. The latter shows it with three strings but says that four or more were also found in use. Niebuhr (*Voyage en Arabie*, Amsterdam 1776) says that *ṭunbūra* was the generic name for all the wire or metal-stringed instruments. He mentions three kinds of pandore: the *ṭunbūr* or *icitali*, the *sawuri*, and the *baghlama*. The *ṭunbūr*, which, he says, the Greeks of the Archipelago and Egypt called the *icitali* (? *īkītalī* < Tkish. *īkī* = "two" + τέλι "wire string", hence the modern Greek κίτελις), had two "wire strings". The *sawuri* is likened by Villoteau (*Descr. de l'Égypte*), who wrote a quarter of a century later, to the *ṭunbūr buzurk* ("grand pandore"), and so the name may probably have been *suwwārī* ("grand"). The *baghlama* was a smaller *ṭunbūr* of three strings, and Niebuhr says that this was the name given it by the Greeks of Cairo. All these instruments of Niebuhr have pear-shaped sound-chests. Villoteau, who gives designs and a full description of the pandores of Egypt, says that he saw them only in the hands of the Turks, Greeks, Jews and Armenians in Egypt. He names five of them; except for the first named instrument, which had a round sound-chest and four double strings, they all possessed a pear-shaped sound-chest with three strings, some of which were doubled.

In Lane's time (*The manners and customs of the modern Egyptians*, 1836, ch. XVIII) the *ṭunbūr* still continued to be ignored by native musicians in Egypt, and was only to be found in the hands of Greeks and other foreigners. In Syria and Palestine the *ṭunbūr* was favoured by native musicians in various forms. In Turkey, the most popular type was known as the *meydān sāzî* strung with three double strings, of which the smaller varieties take the older names of *buzuk* and *baghlama* (Lavignac, *Encycl. de la musique*, v, 3018). In Persia the type finds expression in the *sitār, čārtār*, and such-like instruments. It was the most important instrument in Khʷārazm and Turkistān, as well as in the Caucasus and the Balkans. It is the *tan-pou-la* of China, the *tumburu* of India, the *domra* of Russia, and the ταμπουρας of Greece. The St. Médard Evangel (8th century), the Lothair and Notker Labeo Psalters (9th-10th centuries), and the Apocalypse of St. John (Bibl. Nac., Madrid: 11th century) show the early influence of the *ṭunbūr* on Western Europe.

The *tār* is a long-necked pandore with an elongated vault-shaped sound-chest and curvatures at the waist. We probably see the type in ancient Hittite art. It is clearly delineated in the frescoes at Ḳuṣayr ʿAmra (early 8th century), and it frequently occurs in later Persian painting. It was to be found in the early 20th century in Persia and Central Asia, and Europe has borrowed the type in the *chitarra battente*. A tutor for the modern *tār* has been published in Persian (*Dastūr-i tār* by ʿAlī Naḳī Khān Wazīrī). As the word *tār* means "string", quite a number of differently strung instruments bear this word. The *yaktār* is a one-stringed instrument, better known in India. The *dūtār* is a two-stringed *ṭunbūr* with a pear-shaped sound-chest in Central Asia, and is mentioned by Ḥāfiẓ in his *Mughannī-nāma* (ed. Jarrett, 225). The *sitār* was originally a three-stringed instrument, but today it is more generally mounted with four strings. We see it in constant use in India with even more strings, where it is distinguished from the *tumburu* (= *ṭunbūr*) by being fretted and played with a plectrum. Its invention here is attributed to Amīr Khusraw of Dihlī (d. 725/1325 [*q.v.*]). The *čārtār* or *čahārtār* is a four-stringed instrument. According to Ewliyā Čelebi, it was invented by

the Ṣafawid Shaykh Ḥaydar (d. 1488). It is unknown in Turkey or Persia today but is still in use in India (Shahinda, *Indian music*, 78). The *pančtār*, a five-stringed instrument, is known in Afghānistān. The *shashtār* or *shashtā*, a six-stringed instrument, is said by Ewliyā to have been invented by a certain Raḍī al-Dīn of Shīrwān. Ibn Ghaybī (d. 838/1435) describes it at length, and mentions three different types, one of which had fifteen double sympathetic strings in addition. Its pear-shaped sound-chest was half the size of that of the lute (*ʿūd*) but its neck was long. It is praised by the Turkish poet Aḥmed Pasha (d. 901/1496) as one of three favoured instruments (Gibb, *HOP*, no. 77).

Other instruments of the pandore type are the *ḳaradūzan, yūnkār, yaltuma, čūgūr, čashda* and *sūndar*. The *yūnkār*, a smaller instrument of three strings, was invented by Shamsī Čelebi, the son of the Turkish poet Ḥamdī Čelebi (d. 915/1509). The *yaltuma* was also invented by him. It was also a small three-stringed instrument with a waisted sound-chest like the *tār*. The *čūgūr* was invented by Yaʿḳūb Germiyānī of Kütāhiya. It had five strings with a wooden belly, and was used by the Janissaries. The more recent Turkish instrument is a long-necked pandore used by the minstrels known as *sāz shāʿirleri*. The *čashda*, says Ewliyā, was invented by Banklīshāh of Salonica. It was a small instrument with a hemispherical sound-chest (cf. the *čahazda* mentioned and delineated by Kaempfer). The *sūndar* of the Kurds resembled the *čūkūr*, but had twelve metal strings (see Ewliya Čelebi, *Seyāḥat-nāme*, i/2, 235-6).

2. Technical aspects.

The *ṭunbūr* of Baghdād (described by al-Fārābī in the 4th/10th century) must have realised an acoustic system of division of the string into forty equal segments producing unequal consecutive intervals capable of integration with those of the harmonic system. It could only interpret melodies of a narrow range restricted to a few very close degrees, such as are found in certain liturgies of Upper Mesopotamia or in the *maḳām* [*q.v.*] *mukhālif* of ʿIrāḳ.

The *ṭunbūr* of Khurāsān (also described by al-Fārābī) must have realised a Pythagorean acoustic system with intervals of commas (531441/524288), of limmas (2a minor 256/243), of dilimmas (2a neutral, 3a Pythagorean diminished 65536/59049) and of tone (2a major 9/8) on a range of one-ninth per course. This system was to be revived and perfected by Ṣafī al-Dīn (7th/13th century).

Ṭanbūras are characteristic of the popular music of Upper Mesopotamia among the Kurds and the Aramaeans (Nestorians, Chaldeans, Jacobites, Syriacs). The strings are plucked.

The Levantine *buzuḳ* has been perpetuated by the Nawar gypsies. It realises a system of quarter-tones (demitone, three-quarter tone, tone) or a Pythagorean system of seventeen frets per octave, hence twenty-seven frets per course. The courses are two to three in number, inter-tuned with fourth and octave intervals. The strings are plucked with a plectrum.

The Turkish *ṭanbūr* displays a hemispherical box some 35 cm/13.5 inches in diameter consisting of lunes and a wooden board with a bridge. The neck measures 78 cm/30.5 inches on average. The eight strings, about a metre in length, cover two octaves and are grouped in four courses, inter-tuned and usually with fourth and octave intervals. The frets (39 to 62) embody a Pythagorean system embellished by Ṣafī al-Dīn and the process of evolution in Turkey, giving a potential maximum of thirty-one degrees to the octave. The strings are plucked with a plectrum or scraped with a small bow (*yay*). The effects of *glissando* or of *vibrato* (by oscillation of the neck) are appreciated.

Differentiation—illustration of an acoustic system

The Ottoman Turkish differential evolution has enriched the Pythagorean systems of the *ṭunbūr* of Khurāsān and the Ṣafī al-Dīn system. Henceforward, standardised on the *ṭunbūr* is a system (irreducible in quarter-tones) which is illustrated, in Turkey, in Upper Mesopotamia, in Aleppo and by the Baghdād School of the lute, with thirty-one degrees to the octave.

The following is given in explanation of Table 1:

Column 1: 31 degrees of the scale on string tuned in *yegāh*. The terms are of Irano-Sanskrit origin, or are Turkish variants on Arabic; *yegāh* derives from *yekgāh*, position 1; it is the bass "open" string. The seven constitutive degrees of the *Yegāh maḳām* mode are in capitals with 6a neutral-7a diminished (*segāh*) and 7a minor (*čargāh*).

Column 2: equivalent Latin notes when *yegāh* (tonic sol-fa called "re"), is in "la" at 220 hertz. The alterations indicated conform to the *arabesques* code (nine marks per major tone, cf. pattern in margin).

Column 3: (in Italian according to usage) Pythagorean intervals. To be noted is the identity of neutral and Pythagorean intervals in application of the calculations of Ṣafī al-Dīn, neglected outside Turkey.

Column 4: values in cents (1200/octave, 200/equal major tone).

Column 5: approximative equivalence in commas of Holder, worth 22, 64 cents (53/octave, 9/major tone, 5/apotome, 4/limma).

Column 6: concordance with the "JCC" code applied by the author. He defines the twenty-four and thirty-one potential degrees by numerical and alphabetical indices from 0.A to 24.Z within the octave, with a view to facilitating transpositions-confrontations of pitches and systems by an invariable and transposable definition *of maḳāms*. The *Yegāh maḳām* has the formula AEHKORTZ and the *Rāst maḳām* the formula AEHKOSVZ, irrespective of the pitch of the *rāst* key-tone or of the acoustic system (Pythagoro-commatic, quarter-tones, empirical).

Column 7: equivalent Latin notes with so-called *arabesque* alterations when *rāst, tonic*, called *sol*, is in *ré* of 293,34 hertz, according to usage.

Column 8: 31 degrees of the scale on string tuned in *rāst*. The terms are of Irano-Sanskrit origin, or are Turkish variants on Arabic; *rāst* signifies "right"; *dūgāh, segāh, čargāh*: positions 2, 3, 4; *evič* or *evdj* is the Ottoman-Turkish-Latin evolution of *awdj*, the acme. The seven constitutive degrees of the *Rāst maḳām* (in *rāst*) are in capitals with 3a neutral-4a diminished (*segāh*) and 7a neutral-8a diminished (*evič*). These neutral degrees are thus higher than they would be in a quarter-tone system. They are separated from limitroph major degrees (*buselik* and *mahur*) only by a comma. Thus the Turkish-style *Rāst* evokes a major harmonic mode.

Le code d'altérations arabesques confronte les code arabe, iranien, turc, les quarts-de-tons et commas. Assimilant 1 quart à 2 commas, il reprend de nombreux signes déjà utilisés sur portées orientales et en crée quelques nouveaux pour situer des altérations touchant les 9 commas du ton majeur.
Code d'altérations arabesques avec division du ton en 4 quarts - 9 commas

TUNDJELI (modern Tkish. Tunceli), a province (*il*) and town of eastern Anatolian Turkey. The *il*, replacement of the old *sandjaḳ* of Dersim, was created in 1936 and the town, also called Kalan (lat. 39° 07' N., long. 39° 34' E.), was founded at the same date as its new chef-lieu on the site of the village of Mameki.

The very mountainous *il* (7,774 km²) is drained by the Munzur Suyu and the Peri Çayı, affluents of the Murat Su, the eastern branch of the Euphrates [see AL-FURĀT], which marks its southern boundary, whilst its northern boundary is made up of the Munzur Dağları which separates it from the valley of the Karasu, the western branch of the Euphrates.

The site of Pulur Höyük, excavated before its submersion by the lake formed by the Keban dam (Koşay 1976) was occupied in the late Neolithic or early Bronze times. At numerous points in its history, the region was a border one: between the Hittite empire and the Hurrian kingdom of the Mitanni in the 2nd millennium B.C. under the name of Išuva; between Media and Cappadocia in the Persian empire; and then between the Romans and the Parthians. Taken by the Arabs in 18/639, it was disputed by the caliphs and the Byzantine emperors until in 480/1087 it passed under the domination of the Saldjūḳ Turks and then in 641/1243 under that of the Mongols. In the 8th/14th century it was disputed by the Banū Eretna [*q.v.*] and Mutahharten, ruler of Erzincan, and then by the Ottomans and Aḳ Ḳoyunlu in the next century. It was incorporated in the Ottoman empire by Meḥemmed II in 878/1473. In the 11th/17th century Ewliyā Čelebi described the citadel of Pertek, and Kātib Čelebi described Çemişkezek as the chef-lieu of a flourishing *ḳaḍā*. In the 19th century, the region made up the *sandjaḳ* of Dersim, with its centre Khozat (Hozat), dependent on the *wilāyet* of Maʿmūret ül-ʿAzīz, except during 1880-8 when it formed an ephemeral *wilāyet*. It then had nine *ḳaḍā*s and 533 villages with a total population of 63,430, made up of 15,460 "Muslims" (i.e. Turks), 12,000 Kurds, 27,800 Ḳîzîl-Bash and 8,170 Armenians who resided in the main urban centres, which were in fact only small places, except that Khozat reached a population of 5,600.

Shaken by the revolt of Ḳočgiri in 1921 and then divided between the *wilāyet*s of Elâziğ and Erzincan at the outset of the Republic, the region of Dersim in 1936 became once more a separate administrative unit, a *vilayet* with the name of Tunceli, and was again shaken by the revolt of Seyit Rıza in 1937. This comprised eight of the nine former *kaza*s of Dersim: the central one of Tunceli, which was the old *kaza* of Pah with a new centre at Tunceli or Kalan on the banks of the Munzur Suyu, Mazgirt, Pertek, Çemişkezek, Hozat, Ovacık (whose centre changed its location nine times after 1878), Nazimiye (the former Kızıl Kilise) and Pülümür. Its population was made up of Turks, peasants and town-dwellers, and Kurds, still in part semi-nomadic, who were the majority with 55% of the whole according to the 1950 census. The *il* is one of the most backward of the whole country, with a poor agriculture of cereals grown by wet farming and an almost non-existent industry (two units for the agriculture-food industry listed in 1991). It has suffered much rural emigration, which has hardly helped its chef-lieu Tunceli, a small town of 24,449 inhabitants in 1997, so that the *il*'s population, having reached a maximum of 157,974 in 1980, with a density of 20 persons per km², had fallen in 1997 to 86,268.

(M. BAZIN)

TUNGANISTAN, DUNGANISTAN, a name coined by Western scholars and travellers (W. Heissig, Ella Maillart) for an ephemeral régime, hardly to be called a state, in the southern part of Chinese Turkestan or Sinkiang [*q.v.*] 1934-7. The name stems from the Dungan or Tungan [see TUNGANS] troops, Hui, i.e. ethnic Chinese, Muslims who formed the military backing of Ma Hu-shan, styled "Commander-in-Chief of the 36th Division of the Kuomintang" and brother-in-law of Ma Chung-ying [*q.v.*], best-known of the five Muslim Chinese warlords who controlled much of northwestern China in the later decades of Kuomintang rule (sc. up to 1949).

Ma Hu-shan's fief of Tunganistan stretched along the southern rim of oases of the Tarim basin [*q.v.*], along what the local Uyghur Turks called "the lower road" (*ashtin yol*), the southern arm of the historic Silk Route from Transoxania to northwest China, being bordered on the south by the Kun Lun mountains and northern Tibet (map in Forbes, *Warlords and Muslims*, at 129). It was essentially a warlord's base, transplanted from Kansu [*q.v.*] or Gansu to the remote west of China as an outpost of Chinese colonialism. Ma Hu-shan ruled from his capital Khotan [*q.v.*] as an autocrat, called *pādishāh* "king" by his Turkish subjects, and his policies of financial exploitation weighed heavily on these last. Local revolts by them hastened the end of Tunganistan, and in 1937 Ma's military power dissolved and the area of Tunganistan fell to the Soviet-backed warlord already controlling northern Sinkiang, Sheng Shih-ts'ai. Ma retreated to British India, and thence made his way back to

The Turkish musician Necdet Yasar playing the *ṭunbūr* (1990).

China. He later led anti-Communist guerilla groups in Kansu, but was captured and executed at Lanchow in 1954.

Bibliography: A.D.W. Forbes, *Warlords and Muslims in Chinese Central Asia. A political history of Republican Sinkiang 1911-1949*, Cambridge 1986, 128-44.

(C.E. Bosworth)

TUNGANS, Dungans, in Chinese, T'ung-kan, the Turkic name given to those Hui (i.e. ethnically Chinese Muslims) settled within Chinese Turkestan or Sinkiang [*q.v.*], especially in the northern Sinkiang regions of Dzungaria and Kumul, but numerous also in the northwestern provinces of China proper such as Kansu [*q.v.*] (Gansu), Ninghsia [*q.v.*], Shensi [*q.v.*] (Shaanxi) and Tsinghai.

The Tungans in Sinkiang were estimated at 92,000 in the mid-1940s, and played a considerable political and military role there during the Chinese Republican or Kuomintang period (1912-49). From the time of the last Ch'ing or Manchu governor in Sinkiang, Yüan Ta-hua, and the first Republican one, Yang Tseng-hsin (1912-28), successive governors and warlords there relied on Tungan troops from Kansu as the most effective military force in the region. Although co-religionists of the Turkic Muslims of Sinkiang, the Tungans were the allies of the Han Chinese Kuomintang during the 1920s to 1940s, and inimical to the Turkic population. Thus they formed the essential backing of Ma Chung-yu in the 1930s and firmly suppressed for him various Turkic Muslim risings in Sinkiang. They were the mainstay of Ma Hu-shan's "Tunganistan" [*q.v.*] in the southern part of the Tarim basin 1934-7, and opposed the advance of the Chinese Communists up to 1948, almost the end of Kuomintang rule in mainland China.

Tungans from Kansu and Shensi had also been settled in the upper Ili valley region of northern Sinkiang, the area round Kuld̲j̲a [*q.v.*], hy the Emperor Ch'ien-lung (Zianlong) (*r.* 1735-96), In the later 19th century, there were further migrations, including a mass flight in 1877 after the collapse of Yaʿḳūb Beg's [*q.v.*] secessionist movement in Kashgharia. As a result of these movements, there has been a considerable community of Tungans living first in Imperial Russia and then Soviet Russia (Russian *Dungane*), comprising Tungans in the present Kirghizia Republic and those from Shensi in the Kazakh Republic. There are small urban groups in Bishbek (former Frunze) and Alma Ata, hut most are settled farmers in the Chu valley. They have a strong sense of ethnic identity and of their Sunnī, Ḥanafī Islam. They use the Kansu dialect of Chinese as their official medium of communication, since the mid-1950s written in a script hased on the Cyrillic one with five additional characters (the present, post-1990 status of this is unclear), though most Tungans are bi- or trilingual (i.e. with a Turkic language plus Russian). By 1980, the community numbered almost 100,000.

al-**TŪNĪ, ABŪ MUḤAMMAD** [see al-dimyāṭī].

TŪNIS, in Ar. also Tūnus, Tūnas, sc. Tunis, the capital of modern Tunisia. Like ancient Carthage, it is situated at the base of a large gulf, sheltered from northerly and north-westerly winds, at the junction of the western and the eastern Mediterranean. Like the capital of Punic and of Roman Africa, it was located at the intersection of natural routes serving the diverse regions of the country. But although the location of Tunis is often confused with that of Carthage, the two cities were constructed on two distinct sites. While Carthage, founded in the 9th century B.C. by seafarers from Tyre, was situated on the coast, Tunis, founded at the end of the 7th century A.D. by the Arab conquerors, is set back from the coast, on the landward side of a low-water lagoon, situated on a hill which slopes gently towards the east but towers over the Sedjoumi *sabk̲h̲a* to the west.

Arab Tunis was not created *ex nihilo*; it took the place of a more ancient city, Tunes, and adopted its name. It is generally agreed that this name is of Berber origin. The three radicals *t.n.s.*, which are encountered in other toponyms of North Africa, are said to signify "halt", "bivouac" or "encampment" in the Berber language (G. Mercier, *La langue libyenne et la toponymie antique de l'Afrique du Nord*, in *JA* [October-December 1924], 298-9; A. Pellegrin, *Essai sur les noms de lieux d'Algérie et de Tunisie*, Tunis 1948, 108-9). If the name is indeed Berber, a reasonable inference would be that the city was founded by the indigenous population. The notion that Tunes is actually more ancient than Carthage is credible, although the earliest evidence regarding the former dates from a period during which Punic Carthage was already a major city. The existence of Tunes is attested at the beginning of the 4th century B.C. In fact, according to Diodorus of Sicily, in 395 B.C., 200,000 Libyans rose in revolt against Carthaginian rule and seized control of Tunes (Diodorus, *History*, xiv. 77). The name of the city often recurs in the writings of Greek and Roman historians tracing the history of Carthage. It was successively occupied by Agathocles in 310, Regulus in 256, the Libyans of Matho in 240, Scipio Africanus in 203 and Scipio Aemilianus in 146 (S. Gsell, *Histoire ancienne de l'Afrique du Nord*, Paris 1913-27, iii, *passim*). It is known that Tunes derived its strength both from its natural location and from the fortifications with which it had been endowed (*locus quum operibus tum suapte natura tutus*, Livy, *History*, xxx. 9), and it seems logical to place this city, from which Carthage could be seen and which could be seen from Carthage, on the hill which would later be occupied by the Arab *ḳaṣba*. Having made common cause with Carthage, Tunes was destroyed at the end of the Third Punic War. But the smaller city was to be reborn. In an Africa which had passed under Roman domination, the existence of Tunes was still attested. It features in fact on the 4th century map of Castorius, better known as Peutinger's Table, under the name of Thuni, which could be a copyist's error for Thunis. Christianised, the city was an episcopal see, and the names are known of the bishops who represented the church of Tunes at the Conference of Carthage in 411 and at the Council of Constantinople in 553 (J. Mesnage, *L'Afrique chrétienne*, Algiers 1913, 164-5). But although the foundation of Tunes dates back to remote antiquity, and although the city succeeded in maintaining itself for centuries, it never played more than a modest role, in the shadow of the major metropolis which was successively the capital of Punic and of Roman Africa.

When the Arabs, at the end of the 7th century,

had completed the conquest of eastern Barbary with the capture of Carthage, they did not establish themselves there. Fearing lest a Byzantine fleet would arrive suddenly and retake the city, they decided to destroy it: demolishing its walls, cutting off the aqueducts which supplied it with water, filling in its harbours and devastating its agriculture. Judging that their security would thus be better served, they established themselves at the base of the lagoon, at the outskirts of Tunes, and the small town, occupied by troops and with new buildings proliferating, soon became a city which could easily be taken for an Arab foundation. The development of Tunis is closely linked with the destruction of Carthage. In fact, Arab historians date its birth to the year 80 of the Hidjra which began on 9 March 699, thus barely two months after the end of the year 698 which was fatal to Carthage, and attribute its foundation to Ḥassān b. al-Nuʿmān [*q.v.*], who took possession of the great ancient city (cf. Ibn Abī Dīnār, *K. al-Mūnis*, tr. J. Magnin, in *IBLA*, [1952], 156, 158). Having established himself in Tunis, on the orders of the Umayyad caliph ʿAbd al-Malik b. Marwān, Ḥassān b. al-Nuʿmān created an arsenal there, and a thousand Coptic labourers from Egypt were soon to be employed there in the building of ships, in order that the Rūm, i.e. the Byzantines, could be opposed on both land and sea (al-Bakrī, *Description de l'Afrique septentrionale*, tr. de Slane, Algiers 1913, 84). It is sometimes stated in the works of Arab authors that Ḥassān b. al-Nuʿmān, or one of his successors, brought the sea to Tunis. It should not be inferred from this that he dug a canal through the lake, a project which was to be realised at the end of the following century. In all probability, he dug a canal through the littoral strip separating the lake from the sea at the place called Ḥalḳ al-Wādī, i.e. La Goulette (cf. P. Sebag, *Les travaux maritimes de Ḥassān b. Nuʿmān*, in *IBLA*, [1970], 41-56). Thus the city at the base of the lagoon came to be linked with the shores of the gulf, and ships constructed in the arsenal of Tunis had access to the open sea.

In the early period of its existence, Arab Tunis assumed a military function. Troops were garrisoned there on a permanent basis, in readiness to oppose an enemy landing on the coast, or to take to the sea and raid the coasts of the Christian countries. Of the numerous maritime expeditions mounted by the Arabs in the 8th century, several were launched from Tunis (Ibn ʿAbd al-Ḥakam, *Conquête de l'Afrique du Nord et de l'Espagne*, ed. and tr. A. Gateau, [2]Algiers 1948, 115). The presence of hundreds and thousands of soldiers boosted the development of the city. Arabs blended there with the Berbers who were converted to Islam, either willingly or by force, and a new people was forged from the association of the races.

Tunis was for a long time a secondary city in relation to al-Ḳayrawān [*q.v.*], the capital, seat of the governors appointed by the Umayyad and ʿAbbāsid caliphs and, from the 9th century onward, of the Aghlabid *amīrs* who were to succeed in imposing their authority on eastern Barbary. But the officers and soldiers who constituted the *djund*, the militia of Tunis, did not always follow the orders of those to whom they owed obedience. On more than one occasion, at the initiative of an ambitious chieftain, the militia of Tunis rose in revolt, only to be crushed sooner or later by forces dispatched from al-Ḳayrawān. It was to these frequent revolts, the most important of which was that of Manṣūr al-Ṭunbudhī in the first half of the 9th century, that Tunis owed its reputation as a "factious city" (al-Bakrī, *op. cit.*, 87). It was none the less the object of solicitude on the part of the central power. The *amīr* Abū Ibrāhīm Aḥmad (240-9/854-63) undertook the construction of a new Great Mosque, replacing the one which dated back to the early years of the Arab conquest. An inscription dates the prayer hall and the cupola before the *miḥrāb* to the year 250/864 (S.-M. Zbiss, *Inscriptions de Tunis et de sa banlieue*, Tunis 1955, 28-9). The defences of the town were then improved, with the reconstruction of the ramparts, and the first *ḳaṣba* was established (Ibn Abī Dīnār, *op. cit.*, 160).

Towards the end of the 9th century, the *amīr* Ibrāhīm b. Aḥmad (262-89/874-90) installed himself there on a permanent basis and made it the seat of his government. But Tunis was not yet the country's first city. With the end of the Aghlabid dynasty, the choice of the last *amīrs* was called into question.

The Fāṭimid princes, of Shīʿī persuasion, who had been brought to power by a revolt at the beginning of the 10th century, then installed themselves in al-Ḳayrawān, before acquiring a new capital with the city of al-Mahdiyya [*q.v.*] which they created *ex nihilo*, on the eastern coast, whence al-Muʿizz b. Ismāʿīl departed for Egypt in 362/972. On leaving Ifrīḳiya, he entrusted its government to his loyal lieutenant Buluggīn b. Zīrī, who succeeded in transferring power to the members of his family, thus founding the dynasty of the Zīrid *amīrs*, who by turns had al-Mahdiyya and al-Ḳayrawān as their capital, at the end of the 4th/10th and beginning of the 5th/11th century. In the meantime, Tunis continued to develop. The Arab geographer al-Bakrī has left us the first detailed description. It was then "one of the most illustrious towns of Ifrīḳiya". The Great Mosque, Djāmiʿ al-Zaytūna, was situated in the centre. The building, constructed in the 3rd/9th century, was the object of renovation under the Zīrids, who added to it a narthex-gallery, a cupola at the entrance to the main axial nave and porticos on three sides of the courtyard, which on the basis of inscriptions *in situ* may be dated from the end of the 4th/10th century (Zbiss, *op. cit.*, 33-4). All around the Great Mosque were located the city's *sūḳs*, where manufacturing and commercial activity was concentrated. They were surrounded by residential quarters, with fine houses, their doors framed in marble, baths and caravanserais. The town was encircled by a wall with five gates, as follows: Bāb Ḳarṭādjanna, or Carthage gate, to the north-east; Bāb al-Saḳḳāʾīn, or Water-carriers' gate, to the north; Bāb Arṭa, to the south-west; Bāb al-Djazīra, gate of the Cap Bon Peninsula, to the south, and Bāb al-Baḥr, gate of the Sea, to the east. Outside the last-named was situated the arsenal, *Dār al-ṣināʿa*, established at the time of the foundation of the city. Further to the east, on the shores of the lake, was the port of Tunis, reduced to a single jetty where ships were berthed. It is on the littoral, at the mouth of the man-made canal that the Castle of the Chain, Ḳaṣr al-Silsila, described by al-Bakrī, should be located. The city was a hive of multiple activities, industrial, commercial and agricultural, and it was also a major educational centre. Judged on the basis of its *ḥammāms*, fifteen in number, its population was one-third of that of al-Ḳayrawān, which had forty-eight, but it was undoubtedly more important than the towns of Bizerta, Sousse, Sfax or al-Mahdiyya (al-Bakrī, *op. cit.*, 85-9). At this time Tunis could well be described as the second city of Ifrīḳiya.

Towards the middle of the 5th/11th century, the Zīrid *amīr* al-Muʿizz b. Bādīs repudiated the Shīʿī doctrine and rejected the sovereignty of the Fāṭimid

caliph of Cairo, professing allegiance to the ʿAbbāsid caliph of Baghdād. The response was not slow in coming. The caliph of Cairo unleashed on Ifrīḳiya the unruly Arab tribes of the Banū Hilāl and the Banū Sulaym [*q.vv.*], then encamped in the Delta. They invaded the country, emerged victorious from all their battles, succeeded in capturing and sacking al-Ḳayrawān, and forced the Zīrid *amīr* to withdraw to al-Mahdiyya. Then, throughout the extended territory, the Hilālians installed themselves as masters and, taking advantage of the general anarchy, a multiplicity of local powers took over the space vacated by an enfeebled central power. To ensure their defence, the population of Tunis appointed as governor an officer by the name of ʿAbd al-Ḥaḳḳ b. Khurāsān, who administered the town for many years and on his death bequeathed his power to his son who in turn bequeathed it to his descendants. Thus, for almost a century, Tunis was to be a small, independent principality, governed by the Banū Khurāsān [*q.v.*]. It is the most remarkable representative of this dynasty, Aḥmad b. Khurāsān (500-23/1106-28), who deserves credit for having restored the city's walls and for building within the walls a castle, the memory of which is perpetuated by a mosque, Djāmiʿ al-Ḳaṣr. Under the Banū Khurāsān, the population of Tunis increased, as many Muslim families from al-Ḳayrawān arrived to take refuge there (Ibn Khaldūn, *Hist. des Berbères*, tr. de Slane, i, 36). The small Jewish community which had been established in the 4th/10th century was swelled by emigrants from al-Ḳayrawān and al-Mahdiyya. At the gates of the city, merging with the *Madīna*, began the quarters which were to be the suburbs of Bāb al-Djazīra and of Bāb al-Suwayḳa (Ibn Khaldūn, *op. cit.*, ii, 31). Tunis also developed its industries and its dealings with other countries. A letter from ʿAbd Allāh b. Khurāsān to the archbishop of Pisa, dated 552/1157, lays down the condition of commerce between the two cities (A. Sayous, *Le commerce des Européens à Tunis*, Paris 1929, 50-2). Under the Banū Khurāsān, Tunis succeeded in eluding the clutches of the Normans from Sicily who, taking advantage of the anarchy afflicting the land, managed to take control of all the towns of the eastern coast. But it was to fall into the hands of the Moroccan ʿAbd al-Muʾmin who, having embraced the Almohad doctrine, wasted no time in making himself master of all North Africa, taking Tunis in 554/1159.

Before returning to his capital Marrakesh at the other extremity of the Maghrib, ʿAbd al-Muʾmin entrusted the administration of eastern Barbary to one of his sons, who took up residence in the *Ḳaṣba* of Tunis (Ibn Abī Dīnār, *op. cit.*, 154). At the same time, after three centuries during which the leading role had been played by al-Ḳayrawān or al-Mahdiyya, Tunis found itself promoted to the status of capital of Ifrīḳiya. The Almohad sultans were soon obliged to confront the enterprises of the Banū Ghāniya [*q.v.*], who succeeded in obtaining a foothold in the eastern Maghrib and even in taking control of Tunis in 600/1203. But their efforts were ultimately unavailing and the land, maintaining its allegiance to the Almohads, regained stability under the rule of a governor named ʿAbd al-Wāḥid b. Abī Ḥafṣ. Designated to succeed him on his death, his son Abū Zakariyyāʾ rejected the hegemony of the Almohads and proclaimed his independence in 625/1227. He thus founded the dynasty of the Ḥafṣids [*q.v.*], whose princes later awarded themselves the title of caliphs and who presided over the destinies of eastern Barbary for almost three centuries, with Tunis for their capital.

Shortly after asserting his independence, Abū Zakariyyāʾ undertook to remodel the *Ḳaṣba* of Tunis according to new plans (al-Zarkashī, *Chronique des Almohades et des Ḥafṣides*, tr. E. Fagnan, Constantine 1895, 35). This citadel comprised the palace in which the Sultan convened his council and gave audiences and the palace in which he and his family resided, as well as a congregational mosque, the building of which, undertaken in 629/1231, was completed in 633/1235 (*ibid.*, 35-6). It was encompassed by a high and strong wall with two gates, one of them, Bāb al-Ghadr, overlooking the countryside and the other, Bāb Intadjmī, opening on the town.

Under the reigns of Abū Zakariyyāʾ and of his successors, the *Madīna* of Tunis retained the structure which had been imposed upon it in the early Middle Ages, with its quarter of *sūḳs* in the centre, surrounded on all sides by residential quarters, but with new constructions enriching its monumental ornamentation. On more than one occasion, the Great Mosque was the object of restoration work which did not change its appearance (al-Zarkashī, *op. cit.*, 57, 93, 257). To respond to the needs of a burgeoning population, the *Madīna* was endowed with a new congregational mosque, the Djāmiʿ Bāb al-Baḥr, in the vicinity of the Gate of the Sea, in 682/1283 (*ibid.*, 67). More numerous creations affected the colleges or *madrasas* through which the Ḥafṣid sultans took pains to diffuse Sunnī orthodoxy and to train competent and committed functionaries. The first was the Shammāʿiyya (i.e. candle-makers') *madrasa* founded by the sultan Abū Zakariyyāʾ. It was followed by the Maʿāriḍiyya *madrasa* in the 7th/13th century, by the ʿUnḳiyya *madrasa* in the 8th/14th century, and by the Muntaṣiriyya *madrasa* in the 9th/15th century (*ibid.*, 73, 106, 214). The *madrasas* were supplemented by *zāwiyas*, and inscriptions *in situ* allow the dating in the 9th/15th century of the *zāwiya* of Sīdī Aḥmad b. ʿArūs and that of Sīdī al-Ḳalay. Among other foundations with which the *Madīna* was endowed under the Ḥafṣids, worth mentioning is the *māristān*, a hospital, which was built in the Sūḳ al-Ṣaffārīn (i.e. of the coppersmiths) under the reign of the sultan Abū Fāris (796-838/1394-1434), and the *mīḍaʾa*, monumental hall for ablutions, which was built in the Sūḳ al-ʿAṭṭārīn (i.e. of the perfumers) under the reign of the sultan Abū ʿAmr ʿUthmān (838-93/1435-88). The surrounding wall of the *Madīna*, reconstructed under the Ḥafṣids, was pierced by seven gates: to the north, Bāb Ḳarṭadjanna, Bāb al-Suwayḳa (which replaced Bāb al-Saḳḳāʾīn) and Bāb al-Banāt; to the south, Bab al-Djazīra, Bāb al-Djadīd and Bāb al-Manāra (which replaced Bāb Arṭa); and to the east, Bāb al-Baḥr, the city's principal gate.

Tunis was no longer identical with the *Madīna*, being flanked to the north by the suburb of Bāb al-Suwayḳa and to the south by the suburb of Bāb al-Djazīra; these two suburbs, the existence of which is attested as early as the 6th/12th century, underwent large-scale development to accommodate an ever-increasing population. Of a semi-rural nature at the outset, they were gradually urbanised. In the southern suburb the sultan Abū Zakariyyāʾ had created, in the proximity of the Horse Market, a *muṣallā al-ʿĪdayn*, an oratory for the celebration of the two festivals of the Muslim year (al-Zarkashī, *op. cit.*, 33). His wife ʿAṭf had founded, near the Sheep Market, a congregational mosque known as the Djāmiʿ al-Hawā or Djāmiʿ al-Tawfīḳ, as well as the Tawfīḳiyya *madrasa*, attached to the mosque (Ibn Khaldūn, *op. cit.*, ii, 382). The southern suburb was endowed with two other mosques: the Djāmiʿ Bāb al-Djazīra in the

7th/13th century, and the Djāmiʿ al-Ḥuluḳ, outside the Bāb al-Djadīd, in the 8th/14th century. Among Ḥafṣid constructions, also worthy of note is the *zāwiya* of Sīdī al-Djalīzī which dates from the end of the 9th/15th century. It was in the southern suburb, outside the Bāb al-Manāra, that a quarter was assigned for the garrisoning of the Christian militia which served the Ḥafṣid sultans (A. Adorne, in R. Brunschwig, *Deux récits de voyage en Afrique du Nord au XVᵉ siècle*, Paris 1937, 190-1). In the northern suburb, a congregational mosque, the Djāmiʿ Abī Muḥammad, was built by an Almohad governor at the beginning of the 7th/13th century. The following century, a second such mosque was erected there, the Djāmiʿ Sīdī Yaḥyā, as well as the *madrasa* adjoining it and sharing its name (M. Bel-Khūdja, *Taʾrīkh Maʿālim al-tawḥīd fi 'l-ḳadīm wa-fi 'l-djadīd*, Tunis 1939, 76-7, 184). Yet another such mosque, the Djāmiʿ al-Tabbānīn, was built in the 9th/15th century (al-Zarkashī, *op. cit.*, 235). The proliferation of congregational mosques, three in number in the southern suburb as in the northern, is a reliable indicator of the growth in the population of Tunis and of the expansion of the city under the Ḥafṣids.

For a long time the suburbs remained unprotected. It was only in the 8th/14th century that it was judged necessary to provide them with a surrounding wall, a construction which was completed under the reign of the sultan Abū Isḥāḳ (750-70/1350-69) (Ibn al-Shammāʿ, *al-Adilla al-bayyina al-nūrāniyya ʿalā mafākhir al-dawla al-ḥafṣiyya*, Tunis 1931, 131). It had virtually the same outline as that which was to be constructed at the end of the 18th century. It was pierced by three gates to the north: Bāb al-Khaḍrāʾ, Bāb Abī Saʿdūn, Bāb al-ʿUlūdj; and by four gates to the south: Bāb Khālid, Bāb al-Kurdjānī, Bāb al-Falla and Bāb ʿAlīwa. Under the Ḥafṣid sultans, Tunis already had the overall structure which would last until the eve of colonisation. To the south, the surrounding wall encompassed the cemetery of al-Kurdjānī, but it was outside the walls that the new cemetery was located, that of al-Djallāz, at the foot of the hill of Sīdī Ben Ḥasan.

To the east, outside the Bāb al-Baḥr, there was development of another suburb which consisted of *funduḳs* [see KHĀN] where Catalan, Venetian and Genoese Christian merchants had their residences and their warehouses. Further to the east was located the arsenal which continued to operate in Ḥafṣid times. It was not far removed from the jetty, used by the boats which transported merchandise and travellers between the town, at the base of the lagoon, and the harbour on the coast (Adorne, *op. cit.*, 186 ff.).

Far from the city, the Ḥafṣids acquired luxurious residences. The sultan al-Mustanṣir (647-75/1249-77) had built for himself, in a place called Rās Ṭābiyya, a fine palace in the middle of a park, linked to the *Ḳaṣba* by an avenue flanked by high walls (al-Zarkashī, *op. cit.*, 47). It was the same al-Mustanṣir who created not far from the Ariana the splendid residence of Abū Fihr, which was to be the object of enthusiastic descriptions (Ibn Khaldūn, *op. cit.*, ii, 339-40). More recent is the palace of Bardo (from the Spanish *prado* = garden), the creation of which dates from the reign of Abū Fāris and which was destined to survive to the present time (al-Zarkashī, *op. cit.*, 207). The Ḥafṣid sultans also attached their names to important hydraulic projects. Hitherto, the supply of water to the population had been assured by cisterns where rainwater was stored or by various wells sunk both within and outside the town. In the 7th/13th century, al-Mustanṣir undertook the restoration of the aqueduct which used to carry the water of Djabal Zaghwān to Carthage, adapting it to supply water to Tunis by constructing two diversions; one of them delivering water to a large reservoir situated close to the Great Mosque, the other delivering water to the residence of Abū Fihr, for the irrigation of gardens and orchards and for supplying the requirements of fountains and pools. In the 9th/15th century, Abū ʿAmr ʿUthmān (838-93/1435-88) increased the quantity of water supplied by the aqueduct by means of bore-holes created in the style of Saharan foggaras in a place called Kūm al-Uṭā, near Tunis (M. Solignac, *Travaux hydrauliques ḥafṣides de Tunis*, in *RAfr.*, [1936], 517-80). The chroniclers of the time also mention cisterns, watering-troughs and fountains owed to the munificence of the Ḥafṣids (al-Zarkashī, *passim*).

Promoted to the status of capital of Ifrīḳiya, Tunis experienced development in all kinds of activity, with urban industries becoming ever more diversified. Chronicles and accounts of journeys afford a glimpse of the trade guilds dedicated to the working of textiles, leather, wood and metals as well as those contributing to the construction and decoration of houses and palaces: masons, potters, plasterers and sculptors. The city had its luxury industries, too: jewellery, wrought gold and perfumes, while the more mundane requirements of the population were supplied by mills, bakeries and *ḥammāms*. Tunis was also an important commercial centre, conducting exchanges with the Christian countries by sea, and with the lands of the Levant and Black Africa by caravans. Finally, intellectual activities were developed to an unprecedented extent. With its Great Mosque, the libraries of which had been enriched by the Ḥafṣids, and its *madrasas*, Tunis became the major intellectual centre of the land. Scholars and academics displaced from Spain by the Christian reconquest and taking refuge in the Ḥafṣid kingdom made a considerable contribution to the success and prosperity experienced by the sciences and literature.

The population of Tunis was increasing, and was not composed solely of Muslims. After the upsurge of intolerance which had marked the Almohad conquest (on capturing the city, ʿAbd al-Muʾmin had compelled Jews and Christians to choose between conversion and death), the Ḥafṣid sultans adopted the traditional attitude of Sunnī Islam towards the People of the Book. Christians were permanently established—soldiers in the southern suburb, merchants outside the Bāb al-Baḥr—as were the Jews, who had their own quarter (*ḥāra*) within the walls of the *Madīna*. As for population numbers, the figure of 100,000 seems a reasonable estimate judging by the extent of the city, already approaching the dimensions which would take it into the modern age.

In the early 10th/16th century the corsair Khayr al-Dīn [*q.v.*], who had taken control of Algiers and proclaimed his allegiance to the Ottoman sultan in Istanbul, sought to extend his domination to eastern Barbary. With a combination of guile and force, he succeeded in taking Tunis in 941/1534. With the aim of regaining his kingdom, the Ḥafṣid Mawlāy Ḥasan appealed to the Emperor Charles V who, anxious to restrain Turkish expansion in the Mediterranean, came to the rescue of the dethroned sultan. At the beginning of summer 1535, at the head of a powerful armada, he made his way to Tunis, expelled the Turks from the city and restored Mawlāy Ḥasan to the throne. Under the terms of a treaty which imposed quasi-protectorate status on eastern Barbary, the Spanish occupied La Goulette where they undertook the con-

struction of a powerful fortress to protect the land from sea-born assault (L. Poinssot and R. Lantier, *Les gouverneurs de la Goulette durant l'occupation espagnole (1535-1574)*, in *Rev. Tunisienne*, [1930], 219-52). This limited occupation did not prevent the *beylerbey* of Algiers, ʿUlūdj ʿAlī [*q.v.*], from taking possession of Tunis in 976/1569. The Spanish response was not slow in coming. In the autumn of 981/1573, Don Juan of Austria expelled the Turks from Tunis and, to forestall a counter-offensive by Ottoman troops, left behind an armed force of 8,000 men, who constructed a new fortress, *Nova Arx*, between the walls of the city and the shores of the lake, comprising six bastions joined by curtains, covering an area of more than ten hectares (P. Sebag, *Une ville européenne à Tunis au XVI^e siècle*, in *CT*, [1961], 97-107). The arsenal, still shown on printed maps from the first half of the 16th century, disappeared at about this time. But the following year, the Turks returned in strength, laying siege to La Goulette and Tunis and forcing their garrisons to capitulate (Rabīʿ II 981/August 1574).

With the conquest of 1574, Ifrīḳiya became a province of the Ottoman empire, administered by a governor who bore the title of *pasha* and was supported by a 3,000 strong Turkish militia. Within a few years, power had passed from the *pasha*, representing the sultan in Istanbul, to the chiefs of the militia (1591) and from the chiefs of the militia to a *dey*, who recognised Ottoman sovereignty but governed the country in an absolute manner (1595). But there was a gradual increase in the power of the military chief, the *bey*, who twice a year, at the head of a mobile camp, *maḥalla* [*q.v.*], set out to collect taxes in the hinterland. One such commander, Murād Bey, bequeathed his responsibility to his son who bequeathed it in turn to his descendants, thus founding the dynasty of Murādī *beys*. Princes of this dynasty would succeed in the second half of the 17th century in supplanting the *deys*, ultimately reigning as sovereigns in their own right. Through all these vicissitudes, the city which was the seat of the "powers of Tunis", *pasha, dey* and *bey*, maintained its status as capital of the country.

During the 17th century, the population of Tunis was transformed by numerous ethnic arrivals. These were Turks recruited in various provinces of the Ottoman empire and constituting the militia whose strength, 3,000 men at the outset, had increased to 4,000, concentrated in the capital. They formed the bulk of the mobile camp commanded by the *bey* and supplied contingents of armed men who took part in privateering (J. Pignon, *La Milice des janissaires de Tunis*, in *CT*, [1956], 301-26). "National Turks" were supplemented by "professional Turks", the latter denoting those who had abandoned Christianity and embraced Islam in order to live among the Turks as Turks.

More numerous were the Moors who, expelled from Spain in 1609 by Philip III, found a haven in Ifrīḳiya. Some settled in the hinterland where they put the land to good use, bringing prosperity to the villages which they populated; others were installed in Tunis, playing their part in the manufacturing and commercial activities of the city and forming clusters of Andalusian population in the *Madīna* (*Zuḳāḳ al-Andalus*) and in the northern suburb (*Ḥūmat al-Andalus*) (J.D. Latham, *Towards a study of Andalusian immigration and its place in Tunisian History*, in *CT*, [1957], 203-52). Among the new ethnic arrivals, also worth mentioning are the Jews from Leghorn/Livorno. For the most part, these were Jews of Spanish origin, forced to emigrate by the rigours of the Inquisition and given permission by the Grand Duke of Tuscany Ferdinand II to live and work in the port of Leghorn. Having forged commercial links with the lands of the Maghrib, a number of them established themselves in Tunis where, henceforward, a distinction would be drawn between Tunisian Jews, the *Twānsa*, and those from Leghorn, the *Grāna* (M. Eisenbeth, *Les juifs en Algérie et en Tunisie à l'époque turque (1516-1830)*, in *RAfr.*, [1952], 155-63), Furthermore, benefiting from concessions awarded by the Sublime Porte or from treaties of peace and commerce which the European powers had signed with the *deys* and the *beys*, small mercantile colonies, principally French and British, were well established and active. Finally, thousands of Christian slaves, natives of all the Mediterranean lands, added to the diversity and the markedly cosmopolitan nature of the population of Tunis.

In this same century, Tunis continued to be the greatest industrial centre of the country. Andalusians were in the forefront of the development of the manufacture of *shāshiyya*s or caps, an industry which soon employed a considerable work-force. With techniques that they introduced, the Andalusians also contributed substantially to the renovation of other industries such as silk weaving, metal-casting and ceramics. This was also the golden age of privateering [see ḲURṢĀN]. Sailing galleys and galliots fitted with rams, or in other sailing ships like polacres and galleons, the corsairs of Tunis attacked merchant ships at sea or mounted raids on the coasts of Christian countries, returning from their cruises with ample booty. Merchandise was sold to traders who resold it at a profit. Men and women were reduced to slavery, only to be freed if they could raise the money for their redemption. The trade in plunder and the ransoming of captives laid the foundations for vast fortunes. "There are in Tunis, as there are in Algiers, men of great wealth who do not know the extent of the sums that they have amassed" (J.-B. Salvago, *Africa overo Barbaria*, ed. A. Sacerdoti, Padua 1937, 80). However, piracy was not an obstacle to peaceful relations with a number of countries. French merchants controlled commerce with Marseilles; contacts with Leghorn were handled by immigrants from that locality. Maritime traffic was mirrored by overland traffic: a caravan route linked Tunis with Morocco, another linked Tunis with Mecca and a third gave access to Black Africa, beyond the Sahara (N. Beranger, *Correspondance*, in P. Grandchamp, *La France en Tunisie au XVII^e siècle*, Tunis 1920-33, ix, x). Exchanges by sea and by land made the capital of the *deys* and the *beys*, according to one observer, "Barbary's most commercial city" (E. Plantet, *Correspondance des beys de Tunis et des consuls de France avec la Cour*, Paris 1893-99, i, 164).

At this time, Tunis retained its overall structure, with its *Madīna* flanked by two suburbs, but the Mūrādī *deys* and *beys* erected some new buildings. Under the reign of the Dey Yūsuf (1019-47/1610-37), the city was endowed with new *sūḳs*: Sūḳ al-Truk, for the tailoring of Turkish-style garments, Sūḳ al-Bashāmiḳiyya, for shoemakers specialising in the manufacture of pumps, Sūḳ al-Djerāba, for merchants from Djerba, and Sūḳ al-Birka for the sale of negro slaves. The same Dey built the mosque with octagonal minaret which bears his name, with the *madrasa* attached to it, as well as the *turba* which would be his final resting-place. Also owed to him is the construction, in the tailors' *sūḳ*, of the hall of ablutions, *mīḍa'a*, which would be transported to the Belvedere at the end of the 19th century, as well as the city's first coffee-house (Ibn Abī Dīnār, *K. al-Mūnis*, Tunis 1286/1869, 194-5). The *dey* Muḥammad Lāz (1057-63/1647-53)

built the minaret of the Ḳaṣr mosque as well as the *turba* which would be his mausoleum. The *bey* Ḥamūda b. Murād (1040-76/1631-66) who was without doubt the most remarkable prince of the Murādī line, endowed the Great Mosque with its first minaret, to be replaced in 1894 by the current one. It was also his reign which saw the building of the double gallery which constitutes its eastern façade: an inscription *in situ* dates it to the year 1047/1637 (G. Marçais, *Architecture musulmane d'Occident*, Paris 1954, 467). Also owed to him are the splendid mosque with octagonal minaret which was built in the vicinity of the *zāwiya* of Sīdī Aḥmad b. ʿArūs, the *turba* in which he was buried, as were all the princes descended from him, and a hospital which was erected on the site of the first Ḥafṣid *māristān* (Ibn Abī Dīnār, *op. cit.*, 225-6). Opposite the *Ḳaṣba*, where the *dey*'s palace was situated, Ḥamūda Bey had the Dār al-Bey constructed to serve as the official residence of the *beys*. To his son, Murād b. Ḥamūda (1076-86/1666-75), belongs credit for the construction of a college, al-Murādiyya, in the *sūḳ* of cloths and fabrics. After a long war of succession which ravaged the country for more than ten years, Muḥammad b. Murād (1097-1107/1686-96) undertook the construction of two *sūḳ*s, the Great and the Small, devoted to the making of *s͟hās͟hiyya*s, as well as the fine mosque with cupolas, commonly called the mosque of Sīdī Muḥriz, which was completed under the reign of his brother Ramaḍān b. Murād (1107-10/1696-99); the plans were drawn up by the French architect F. Amelot (Ph. de la Motte, *Etat des Royaumes de Barbarie*, Rouen 1703, 131).

In addition to constructions owed to the initiative of the *deys* and *beys*, there were numerous private buildings which have been the object of an exhaustive study (J. Revault, *Palais et demeures de Tunis (XVIᵉ et XVIIᵉ siècles)*, Paris 1967). Their siting affords a glimpse of the spatial distribution of the various ethnic groups. While Moors, Turks and Andalusians were concentrated in the upper city, non-Muslims were quartered in the lower one. Jews continued to inhabit the old *ḥāra*; European merchants were installed near the Bāb al-Baḥr, the Gate of the Sea. Initially accommodated in houses leased from the Moors, they subsequently settled in *funduḳ*s set at their disposal by the Powers of Tunis, where their residences and warehouses were located. When the Chevalier d'Arvieux visited Tunis in 1666, there were three *funduḳ*s: one allotted to the French, another to the British and the Dutch, and the third to the Jews of Italian origin (*Mémoires*, ed. J.-B. Labat, Paris 1735, iv, 15). Also concentrated in the lower part of the *Madīna* were the bagnios or slave prisons, each known by the name given to its chapel. In the second half of the 17th century there were thirteen of them, for which a list of names exists (de la Motte, *op. cit.*, 127).

There is little to be said of the suburbs, which continued to be populated by the lower orders. There were few new constructions. In the southern suburb, the mosque of Bāb al-Djazīra was restored under the reign of Yūsuf Dey (Ibn Abī Dīnār, *op. cit.*, 196). In the northern suburb, the Moors established there were endowed with a congregational mosque, the Djāmiʿ Subḥān Allāh, as well as a college, the al-Andalusiyya *madrasa* (Bel-K͟hūdja, *op. cit.*, 82-5, 186-7). Beyond the first and second perimeter walls were the necropolises: the Muslim cemetery outside the Bāb ʿAlīwa, the Jewish one outside the Bāb Ḳartādjanna and the Christian one outside the Bāb al-Baḥr, with a chapel dedicated to St. Antony. Here free men and slaves alike were interred. To the north-west of Tunis the Bardo, promoted to the status of royal residence by the last Ḥafṣids, was highly regarded by the *bey* Ḥamūda b. Murād, who restored and expanded it, embellishing both the palace and its gardens (Ibn Abī Dīnār, *op. cit.*, 227). Travellers have left enthusiastic descriptions of the place (d'Arvieux, *op. cit.*, iv, 47-8). During the 17th century the city, enclosed within the perimeter wall surrounding the *Madīna*, and its suburbs, did not expand, while its population, ravaged on more than one occasion by plague, varied considerably. It never reached the figure of 100,000 inhabitants.

In the early years of the 18th century, an officer of the militia who had organised the successful defence of the country when it was invaded by the Algerians, al-Ḥusayn b. ʿAlī al-Turkī, was appointed to the supreme magistrature with the title of *bey* and succeeded in bequeathing his power to his descendants. He thus founded the dynasty to which he gave his name and, as it had been the capital of the Murādī *beys*, Tunis now became that of the Ḥusaynid *beys* [see ḤUSAYNIDS].

During this century, the population of Tunis was not affected by new incoming ethnic groups. The armed forces of the country still comprised numerous Turkish soldiers and officers, natives of the various provinces of the Ottoman empire. Over the years, new recruits replaced those who were leaving on the expiration of their term of service, but a number of the latter married and settled in the country. The children born of Turkish fathers and Moorish mothers were called "coloughlis" (Tkish. *ḳulog͟hullari̊* = sons of slave soldiers), blending gradually into the urban population [see ḲUL-OG͟HLU]. A similar evolution applied to the Andalusians established in the city. Although loyal to their origin and fond of asserting their special identity, they married local women in increasing numbers, thus contributing to the mix of races. As it had in the past, the population of Tunis included, alongside the Muslim majority, Jewish and Christian minorities. Although they were both subjects of the *beylik* and subject to the status of *d͟himmīs*, from 1710 onwards Italian and Tunisian Jews were divided into two distinct communities, each with its own rabbinical court, its synagogues, schools and cemetery (Eisenbeth, *op. cit.*, 161-2). The Christians continued to be represented by small European mercantile communities, the French one being the most significant. As for Christian slaves, they were less numerous than they had been in the 17th century, although their number was to rise suddenly around the year 1800, with a final upsurge in piratical activity. All ethnic groups included, the population of Tunis increased by virtue of an 80-year absence of epidemics, from 1705 to 1785. However, it was reduced by a recurrence of plague which three times, in 1785, in 1794 and in 1818, ravaged the capital and, indeed, the whole country. The excessive estimates of certain travellers should be treated with caution; around 1830, the population of Tunis certainly did not exceed 80,000 inhabitants (A. Gallico, *Tunisi e i consoli sardi*, Bologna 1935, 189).

Tunis continued at this time to be a vibrantly active city. Accounts of journeys are full of detailed descriptions of its industries. The *s͟hās͟hiyya* industry was by far the most important, employing a large work-force, 15,000 persons according to the traveller-naturalist J.A. Peyssonnel, no doubt including the thousands of women who spun the wool and knitted the hats. Other trade guilds were devoted to the weaving of wool, of silk and of cotton, the tanning of hides and the manufacture of various types of footwear, working of wood, iron and precious metals, as well as all those involved

in construction: masons, potters, sculptors and plasterers (L. Filippi, in Ch. Monchicourt, *Relations inédites* . . ., Paris 1929, 118 ff.). The freedom of action of privateers was curtailed, following the signing by the *beys* of treaties of peace and trade with a number of the European Powers and the United States of America, which, to guard themselves against attacks by corsairs, were resigned to paying the Barbary States a kind of "tribute". Privateering was henceforward directed only against the principal states of the Italian peninsula, with Tunisian pirates attacking their merchant shipping and raiding their coasts. Privateering enjoyed a spectacular revival in the last years of the century, thanks to the distractions caused by the Revolutionary and Imperial wars in Europe (P. Grandchamp, *Documents concernant la course* . . ., in *CT*, [1958], 269-340). But following the resolutions of the Congresses of Vienna (1815) and of Aix-la-Chapelle (1818), the European Powers compelled the kingdom of Tunis to renounce piracy definitively. The capital of the Ḥusaynid *beys* remained the principal commercial hub of the country. At the end of the 18th century, the port of La Goulette was the object of substantial improvements under the direction of the Dutch engineers Homberg and Frank (P. Sebag, *La Goulette et sa forteresse* . . ., in *IBLA*, [1967], 13-34). Some exporting was conducted by other ports, but all imports passed through La Goulette. Maritime trade was conducted with Marseilles, Leghorn and the ports of the Levant. Other commerce was performed by caravans which linked Tunis with other lands of the Maghrib, with Mecca and with Black Africa. Reliable information is availahle concerning the caravan-route which brought ostrich feathers, gold dust and black slaves from the lands beyond the Sahara (L. Frank, *Tunis. Description de cette Régence*, Paris 1850, 116 ff.).

In the course of the 18th century, no changes are observable in the structure of the city, which retained virtually the same boundaries and the same area. However, successive *beys*, on acceding to power, lent their names to new buildings. As in the past, it was the central *Madīna* which benefited from the greatest number of creations. The founder of the Ḥusaynid dynasty, al-Ḥusayn b. ʿAlī (1117-48/1705-35) endowed it with a new congregational mosque, al-Djāmiʿ al-Djadīd, the New Mosque, in the Street of the Dyers, its construction completed in 1139/1726. Also owed to this ruler is the building of three *madrasas*, one of which adjoined the new mosque, while the other two were known by the names of al-Nakhla and al-Ḥusayniyya al-Ṣughrā, as well as the *turba* in which he was to be buried (al-Ṣaghīr b. Yūsuf, *Mashraʿ al-malikī*, Fr. tr. Tunis 1900, 14-15). ʿAlī I b. Muḥammad (1148-70/1735-56) constructed four new colleges: al-Bāshiyya, in the Street of the Libraries, al-Sulaymāniyya, in the Ḳashāshīn *sūḳ*, the ʿĀshūr street *madrasa* and the Bīr al-Ḥidjār *madrasa*. He also erected the *turba* which would be his mausoleum and that of members of his family (*ibid.*, 231-2). Succeeding his elder brother, who reigned barely three years, ʿAlī II b. al-Ḥusayn (1172-96/1759-82) lent his name to the construction of a college, al-Ḥusayniyya al-Kubrā, of a hospice, *takiyya*, designed for the sick and destitute of both sexes, and of the monumental tomb, Turbat al-Bey, which would be his last resting-place and that of all the *beys* who would reign after him (M. Ben Achour, *Tourbet el-Bey* . . ., in *IBLA*, [1985], 45-84). Ḥamūda b. ʿAlī II (1196-1229/1782-1814), having taken up residence in the Dār al-Bey, undertook to enlarge and embellish it, giving it the form which it would retain for a long time (Ibn Abi 'l-Ḍiyāf, *Itḥāf ahl al-zamān bi-akhbār mulūk Tūnis*, Tunis 1962-8, iii, 76). On one side of it was the Sūḳ al-Bey, allocated for the sale of expensive fabrics. Wishing to improve the living conditions of the Janissaries, this ruler constructed five barrack buildings for their use: Ḳashlat al-ʿAṭṭārīn, Ḳashlat al-Bashāmiḳiyya, Ḳashlat al-Zanaydiyya, Ḳashlat al-Wuzār and Ḳashlat Sīdī ʿAmīr (*ibid.*, iii, 38).

In addition to these public buildings, which have been mentioned by Tunisian chroniclers and have attracted the attention of historians of Muslim architecture, there are numerous private ones which have likewise heen the object of study (Revault, *Palais et demeures de Tunis* (*XVIII^e^ et XIX^e^ siècles*), Paris 1971). Their siting gives the impression that the spatial distribution of the various ethnic groups remained unchanged from one century to another. While Turks and Coloughlis, Andalusians and Moors inhabited the upper city, the minorities were quartered in the lower city. The Jews, whether Tunisian or Italian, occupied the *ḥāra*, which may have been extended. As for the Christians, they thronged the approaches to the Bāh al-Baḥr. Freemen were accommodated in the *funduḳs* and neighbouring houses. Slaves who did not lodge in the homes of their masters were confined overnight in the bagnios, less numerous than in the 17th century, most of them situated in the lower city. It was there that, in 1723, Spanish Trinitarians opened a hospital for the relief of the hardships of the captives (P. Ximenez, *Colonia Trinitaria de Tunez*, ed. I. Bauer, Tetouan 1934, 169 ff.).

The suburbs flanking the *Madīna* to the north and south continued to be occupied by the less privileged classes, and were also the destination of all those who arrived over the years from the hinterland. In the suburb of Bāb al-Djazīra, the only construction worthy of mention is the *zāwiya-madrasa* built in memory of the Kabyle mystic Sīdī al-Bashīr and owed to the *bey*, al-Ḥusayn b. Maḥmūd (1240-51/1824-35) (Bel-Khūdja, *op. cit.*, 211-12). On the other hand, the suburb of Bāb al-Suwayḳa was endowed with some significant structures. Yūsuf Ṣāḥib al-Ṭābiʿ, the all-powerful minister of the *bey* Ḥamūda b. ʿAlī, built there a fine congregational mosque with octagonal minaret and two adjoining *madrasas*, as well as a *turba* to accommodate his mortal remains (Ibn Abi 'l-Ḍiyāf, *op. cit.*, iii, 59). Successive *beys*, on coming to power, improved the supply of water to the two suburbs by building fountains, drinking-troughs and *fiskiyyas* to collect and conserve rainwater (*fiskiyya* of Bāb-al-Falla and *fiskiyya* of Bāb Sīdī ʿAbd al-Salām, attributed to ʿAlī I b. Muḥammad Pasha). In the northern as in the southern suburb, wealthy dignitaries had attractive homes built for them, a development testifying to veritable urbanisation.

To the east, on land traversed by open sewers (*khandaḳ*) whereby the city's effluent was discharged, a new quarter took shape around the tanneries which, situated for many years within the *Madīna*, were moved outside the walls in the course of the 18th century (A. Raymond, *Le transfert des tanneries* . . ., in *Rev. d'Hist. Maghrébine*, [1977], 192-200). This new quarter was known by the name of that of the Dabbāghīn ("tanners") (Filippi, *op. cit.*, 80). But this was of little significance; Tunis remained essentially confined to the triptych formed by the *Madīna* and its two major suburbs.

At the turn of the century, the *bey* Ḥamūda b. ʿAlī II decided to improve the city's defences by means of renovation of its ramparts. The works completed under the supervision of the Dutch engineer O. Homberg gave to the second perimeter wall the

outline which it was to retain virtually until the last years of the protectorate, with, to the south, the gates known as Bāb ʿAlīwa, Bāb al-Falla, Bāb al-Ḳurdjānī, Bāb Sīdī Ḳasim and Bāb Sīdī ʿAbd Allāh; and to the north, the gates known as Bāb al-Khaḍrāʾ, Bāb Sīdī ʿAbd al-Salām, Bāb Abī Saʿdūn and Bāb al-ʿUlūdj. The walls of this second perimeter were flanked at long intervals by bastions, the construction of which is dated by inscriptions to the first years of the 19th century (Ibn Abi ʾl-Ḍiyāf, *op. cit.*, iii, 36; Plantet, *op. cit.*, iii, 491). The second perimeter wall which enveloped the city to the south, the west and the north, was interrupted to the east, leaving the suburbs partially exposed. No doubt it was reckoned that, on this side, the lake of Tunis constituted adequate defence. It should also be noted that the approaches to the city were defended by a number of forts either constructed or renovated by ʿAlī I Pasha. These were, to the south the *burdj* of Sīdī b. Ḥasan; to the west the *burdj* of the Rābiṭa and the Flifel *burdj*; and to the north the Ṭaḥūnat al-Rīḥ ("Windmill") *burdj* (al-Ṣaghīr b. Yūsuf, *op. cit.*, 346; Ibn Abi ʾl-Ḍiyāf, *op. cit.*, ii, 144; Filippi, *op. cit.*, 91-2).

To the north of the city, the Bardo had grown in importance. The *beys* of the Ḥusaynid dynasty had added further constructions and had turned it into a small town with its palaces and gardens, within a perimeter wall flanked by round towers at the four corners (al-Ṣaghīr b. Yūsuf, *op. cit.*, 227-30; Ibn Abi ʾl-Ḍiyāf, *loc. cit.*).

After 1830, Tunisia was opened on a broader basis to European influences. On coming to power, successive *beys* undertook to modernise and to reform the country [see TUNISIA. II. (c)]. The Great Powers assisted this process through the participation of their technicians and industrialists. In this new context, Tunis experienced numerous changes.

The major factor here was the development over several decades of the foreign colonies. The Christian population, which since the suppression of piracy had consisted only of free individuals, was swollen by an influx of new arrivals fleeing the poverty of their native lands—Malta, Sicily, Sardinia and southern Italy—in the hope of finding employment and livelihood in the land of the *beys*. Furthermore, by virtue of a codicil dated 2 November 1846 to the Tuniso-Tuscan treaty of 11 October 1822, Jews of Leghorn who had settled in Tunisia in the course of the 19th century, whatever the duration of their residence, retained their original nationality and constituted part of the Italian colony (C. Masi, *La fixation du statut des sujets toscans israélites*... in *Rev. Tunisienne*, [1938], 155-79, 325-42). Thus the European population of Tunis may have approached or even exceeded a total of 15,000 on the eve of the French protectorate.

The development of foreign colonies gave a new impetus to urban activities. French, Italian or other business concerns controlled maritime exchanges: the exporting of grain, oil, wool, skins, wax, and the importing of textiles, metals, wood and colonial products such as sugar, coffee, rice and spices (Ch. Cubisol, *Notices abrégées sur la Régence de Tunis*, Paris 1867). Despite competition from imported manufactured goods, the trade guilds of the capital continued to supply traditional commodities to the Tunisian population: hats, fabrics, clothing, footwear, jewellery, etc. But the European influence was responsible for some innovations, such as the creation in 1277/1860 of the first Tunisian printing-press, leading to the publication of an Arabic-language official Tunisian newspaper (A. Demeerseman, *Histoire de l'imprimerie en Tunisie*, in *IBLA*, [1956], 275-312; and see MAṬBAʿA. 1.B.5). European expatriates also created the first modern industries, with machinery powered by steam.

The city, of which the first detailed map was drawn up in 1859 by the French engineer J. Colin, still retained the overall structure which it had had since the late Middle Ages. There were few new buildings in the *Madīna*, besides a few *zāwiyas* of Ṣūfī mystics. Old buildings were assigned to new purposes. The palace which for years had been the seat of the *Dīwān* of the militia, restored by the bey Muḥammad II b. al-Ḥusayn (1855-9), was converted into the Tribunal of the Sharʿ (1856). The Ṣādiḳī College, founded by the minister Khayr al-Dīn in 1875, was installed in the former Ḳashlat al-Zanaydiyya [see ṢĀDIḲIYYA]. The old *māristān* was transferred to the former Ḳashlat al-Bashāmiḳiyya and renamed the Ṣadiḳī Hospital as a mark of respect to the reigning sovereign, Muḥammad III al-Ṣādiḳ. New buildings were more numerous in the suburbs, these being for the most part new *madrasas* and *zāwiyas*. In the suburb of Bāb al-Djazīra, the most important new construction was that of a barracks designed for the beylical infantry, on the site of a former Ḥafṣid *muṣallā*, close to the Square of the Horses, which was completed under the reign of the *bey* Muṣṭafā b. Maḥmūd (1835-37) (Ibn Abi ʾl-Ḍiyāf, *op. cit.*, iii, 191). His successor, Aḥmad b. Muṣṭafā (1837-55), had a barracks block built outside the walls, to the north of the city, designed for the beylical artillery (*ibid.*, iv, 30).

The most significant changes took place to the east in the lower city. The continuing development of the foreign colonies took the form of a substantial extension to what was still called the "Frank Quarter". The Europeans had begun by leasing houses owned by Tunisians, then, having acquired the right to obtain real estate, they set about building houses conforming to their needs and their tastes, with windows opening on the street. At the ground floor level of these houses, shops proliferated, catering for all the multifarious needs of the population. Around the small square to which access was by the Gate of the Sea, consulates of the Powers represented in Tunis were concentrated. The *bey* al-Ḥusayn b. Maḥmūd (1824-35) authorised the construction of a church, on the site of the former Trinitarian Hospital, bearing the name of Sainte-Croix. After the first European school founded in 1845 by the Abbé François Bourgade, others were opened by the Frères de la Doctrine Chrétienne, for boys (1855), and by the Sœurs de Saint-Joseph de l'Apparition, for girls (1845). In 1843, with the collaboration of the Sœurs de Saint-Joseph, the Abbé François Bourgade founded a hospital bearing the name of Saint-Louis for the benefit of the European population (M. Gandolphe, *La vie à Tunis (1840-1881)*, in Ch.R. Dessort, *Histoire de la ville de Tunis*, Algiers 1926, 157-79). Under the pressure of numbers, the Frank Quarter ultimately exceeded the limits of the *Madīna*, extending towards the east, beyond the Gate of the Sea. The construction in 1861 of a new French consulate to replace the former, situated in the Fondouk des Français, increased the market value of land situated between the city and the shores of the lake, where building activity now accelerated. Shortly afterwards, the ramparts which had enclosed the *Madīna* were demolished. Henceforward, nothing would separate the old Frank quarter from the new buildings constituting the nucleus of the modern city of the future.

Under European influence, and that of the French consul Léon Roches, Tunis became a chartered muni-

cipality, but the city, even in its European sector, continued to suffer numerous deficiencies, such as open sewers and badly-paved streets congested with filth. However, the restoration of the Roman aqueduct from Zaghouan to Carthage, undertaken under the supervision of the French engineer J. Colin and completed in 1862, considerably improved the supply of water to the population. The installation by a British company of a gasworks provided the city with its first public lighting.

To the north-west of the city, the Bardo continued to enjoy the favour of the *beys*, who continually added to the constructions both inside and outside the complex. It was there that, during the reign of Aḥmad b. Muṣṭafā, a Polytechnic School was founded for training officers of the Tunisian army, and a mint for the striking of currency. On the coast, to the north, between La Goulette and La Marsa, and to the south between Radès and Hammam-Lif, *beys*, princes, senior officials and dignitaries constructed palaces and homes to serve as their summer residences (Revault, *Palais et résidences d'été de la région de Tunis (XVI^e^-XIX^e^ siècles)*, Paris 1977). This was the nucleus of what would one day become a suburb of Tunis. In the seventies, a British company undertook the construction of a railway connecting the capital with La Goulette, with La Marsa and with the Bardo, ceding the franchise to an Italian company in 1880, but it was a French company which obtained the franchise for lines linking Tunis with the Algerian frontier and with the cities of the Sahel. Thus on the eve of the French Protectorate, Tunis had two railway stations: an Italian station to the north, and a French station to the south.

The institution of the French protectorate in 1881 marked a turning-point in the history of Tunis. A rapid increase of the European population is then observable. From year to year, successive waves of migrants swelled the membership of the various colonies, and in the city alone, in 1911, there were 17,875 French, 44,237 Italians, 5,986 Maltese and 1,381 Greeks, Spaniards and others, amounting to some 70,000 Europeans. At the same date, the indigenous population, which was yet to be counted, could not have exceeded 85,000: 65,000 Muslims and 20,000 Jews, and the city comprised some 150,000 inhabitants on the eve of the First World War.

The growth of the European population corresponded to the development of all the functions assumed by the capital city. The installation of a modern administration led to an increase in officials and state employees. The effort towards progress was represented by the creation of railways and roads which improved the links between Tunis and the hinterland. A modern port was constructed below the city, connected to La Goulette and the open sea by a canal 10 km/6 miles in length passing through the waters of the lagoon. The port, completed in 1897, became a centre for the exportation of phosphates and of iron and lead ores, as well as the agricultural products of northern Tunisia, while also handling almost all the importation of combustibles, machines and manufactured products. The installation of credit establishments, banks and subsidiaries, aided the development of import-export commerce. Alongside the traditional professional guilds, severely tested by competition from imported manufactured goods, modern industries grew in number, using machinery powered by steam, among which the most prominent were consumer goods (flour-mills, pasta factories, distilleries) and construction materials (brick-works, tile-works, lime production).

The city continued to develop, actually becoming a double city. Alongside the ancient city, which retained the features of an Arab town, a new city came into being having the characteristics of a European city, with its methodical planning, chequered pattern and the straight lines of its arteries. Houses accommodating Europeans grew in number, but there was also an increasing number of Tunisian Jews who abandoned the *ḥāra*, overcrowded and insanitary as it was. From year to year, the number of streets viable for traffic increased. The new city expanded towards the east, where the establishment of the port of Tunis opened up the land in the vicinity of the lake. The city was also extended towards the south and towards the north. Standing out from the whole was the city centre, traversed from west to east by Marine Avenue, where the former French consulate had become the Residence-General of France, with its cathedral, offices, banks, commercial premises, theatre, hotels and cafés. On either side were mixed zones where residential buildings alternated with industrial enterprises, whereas further out, at the borders of the town, were the attractive residences of the ruling class and the villas of the affluent. The extension of the city was accompanied by the construction of a network of subterranean sewers to replace the ancient open drains, the development of a water supply, of gas and of electricity after the construction in 1908 of a power station at La Goulette. One of the most positive achievements was the laying out of the Belvedere Park, covering an area of close on 100 hectares. In the enlarged city, transport was provided by a network of tramways, using animal traction at first before conversion to electric power. Rail links with the northern and southern suburb accelerated the growth of a number of centres revolving in the orbit of Tunis. Finally, the city benefited from a socio-cultural infrastructure comprising schools, colleges, dispensaries, hospitals, and research institutes, facilities designed for the use of Europeans but by no means barred to Tunisians.

During the inter-war period, Tunis experienced new developments. The population of the town increased, as did that of the suburban area. The growth of the Muslim population, Tunisian and non-Tunisian, was still at a meagre rate (1921: 88,800; 1936: 110,000); that of the Tunisian Jewish population was stronger (1921: 22,600; 1936: 32,300) as was that of the European population (1921: 81,400; 1936: 115,600), within which the French had become as numerous as the Italians. During these years, the population of the city increased from 171,600 to 219,500 and that of the suburban area from 21,300 to 38,500. Commercial activities, as evidenced by importing and exporting via the port of Tunis, had been in a state of full expansion in the aftermath of the First World War, but contracted as a result of the worldwide recession, recovering only at the end of the 1930s. Traditional industries experienced increasing stagnation (R. Plissard, *L'artisanat en Tunisie*, Geneva 1936), but within the limits imposed by a system of customs union with France, modern industries made some progress (notable creations include those of a cement works, a lead foundry and a superphosphates factory). The old city constituted by the *Madīna* and the two major suburbs flanking it showed few changes. The first Tunis management plan adopted in the 1930s was at pains to preserve the special characteristics of the Arab town by subjecting new buildings to standards, both in architecture and in decoration (G. Eloy, *La ville de Tunis à l'Exposition coloniale*, Tunis 1931). But the modern city developed more. The city centre was bedecked

by new constructions: public, such as the Municipal Casino or the Consular Palace, or private ones, such business offices, hotels and prestigious buildings. The urban impetus was directed towards the east, the south and the north. State aid to companies building inexpensive homes was reflected in the creation of a group of satellite cities: to the north, Franceville, El-Omrane, Mutuelleville and Beau-Site: to the west, Taoufik and Najah; and to the south, Bellevue and La Cagna. At the same time, building increased in the suburban zone where some centres comprised more than 5,000 inhabitants in 1936: La Goulette, 10,800; La Marsa, 5,600; Hammam-Lif, 6,700; and Ariana, 5,500. New projects helped the improvement of the supply of water with a dam on the Oued Kebir (1924), of urban gas with a new plant at Franceville (1925) and of electricity with a new power-station at La Goulette (1927). A combined concern for sanitation and ornamentation led to the creation on the edge of the lake of a fine esplanade covering twenty hectares, with avenues flanked by trees, lawns and playgrounds. Education was boosted with the construction of schools and of colleges.

During the Second World War, Tunis, occupied by the Axis armies and exposed to Allied aerial bombardment, suffered serious damage. Destruction was inflicted not only on harbour installations, on commercial and civilian railways and factories, but also on numerous residential buildings, whose unfortunate occupants required re-housing. Once hostilities were ended, efforts were directed towards repairing the ruins left behind by the war and responding to the needs of a population which had in the meantime expanded.

In the conurbation of Tunis, from one census to another, an increase in population is noted, of Europeans (1936, 115,600; 1946, 145,000; 1956, 160,500); of Tunisian Jews (1936, 32,300; 1946, 42,400; 1956, 38,900); of non-Tunisian Muslims (1936, 12,800; 1946, 23,200; 1956, 23,200). The growth in the Tunisian Muslim population was on a larger scale, doubling and then trebling over twenty years (1936, 97,300; 1946, 238,100; 1956, 338,400). This accelerated growth is explained by the rupture of demographic equilibrium observed at this time in the country. A reduction in rates of mortality, while the birth-rate remained very high, led to over-population of the countryside, and thousands of indigent families arrived to swell the population of the capital, where they hoped to find work and subsistence. Tunis thus found available to it a work-force surplus to the requirements of reconstructing and modernising the infrastructure. Despite the projects of industrialisation undertaken in the post-war years, many of those who had flocked to the city were unable to gain regular employment and were compelled to engage in marginal activities which barely enabled them to survive. Including all the constitutive elements, the population of the city doubled (1936, 219,500; 1946, 364, 500; 1956, 410,000) and that of the suburban area more than trebled (1936, 38,500; 1946, 85,200; 1956, 151,100). The population of the conurbation had risen to a little over half a million by 1956.

The growth of the urban population led to a new extension of the built-up area; the modern city experienced new developments. There was an increase in density of construction in certain zones where there was still vacant land, and urban pressure was directed towards the north with the founding, beyond the Belvedere, of the new quarter of al-Manza. But the major development was the appearance around the old city of a belt of "shanty-towns" (D̲j̲abal Laḥmar, Mallāsīn, etc.); these "towns" were composed of improvised constructions, erected without prior authorisation, on land illegally occupied, without any communal facilities, and they were the handiwork of the thousands of rural families who had converged on the capital. Their population, which already stood at more than 50,000 in 1946, had risen to more than 100,000 in 1956. These new suburbs ultimately constituted a third city on the cusp of the old and the modern city. This tripartite division is also found in numerous suburban "parishes" which, sandwiched between old Arab villages and the European quarters, were constituted by shanty-towns of greater or smaller extent. To respond to the needs of an enlarged population, production of gas and of electricity was raised, and the supply of water was improved by the construction of a new dam on the Oued el-Lil. But there was stark contrast between the wealth of a few and the poverty of large strata of the population of Tunis.

Following Tunisia's achievement of independence, in 1956, Tunis has experienced major changes. Decolonisation led to the evacuation of the various European colonies which had accounted for a high proportion of the city's population; French, Italians and other Europeans were induced to leave the country to settle in France or in Italy. In the urban area of Tunis, within a few years they had lost nine-tenths of their strength (1956, 162,700; 1966, 21,600; 1970, 18,800). Tunisian Jews, although the new State proclaimed the equality of all nationals irrespective of religion, were subject to discrimination, in fact if not in law, and they too felt obliged to leave the country to settle in France or in Israel (1956, 38,900; 1966, 13,200; 1970, 6,700). Despite the exodus of the various national or religious minorities, the population of the conurbation increased solely on account of the growth of the Tunisian Muslim population, brought about by a surplus of births in relation to deaths and an influx of elements from the hinterland (1956, 561,100; 1966, 679,600; 1975, 873,500).

The Arabisation of the population was accompanied by that of all the sectors of urban activity, in which Tunisian nationals took the place of those who had left. Within a few years, the capital city was asserting its diverse functions. The new State promoted management, services, bureaucracy, employing greater numbers of officials and agents. Sheltered by customs arrangements which guaranteed them a monopoly over the internal market, manufacturing industries prospered: among others, the textile industry, the plastics industry and mechanical and electrical industries. The development of modern higher education, with faculties of literature, sciences, law, medicine and theology and numerous specialised schools, gave Tunis a cultural function of the first rank.

The city itself has changed. The new administrators were not slow in eliminating statues which were seen as symbols of the colonial order. They also set about "Tunisifying" the urban toponymy, substituting, for the names of Residents-General, of French military achievements, of French provinces and cities, those of Tunisian thinkers, leaders of the nationalist movement or heroes of the Third World. These superficial changes were accompanied by more profound ones. The exodus of the minorities was followed by a redistribution of the Muslim population within the urban area. All the families having the means had abandoned the "Arab" city to settle in the "European" city, renting apartments in the centre or buying villas and detached houses in the periphery. The new municipal administration was at pains to remodel the colonial

city in the interests of sanitation, air quality and improving the circulation between all its constitutive elements. The walls of the second perimeter which still enclosed the old city were dismantled, the ancient *Ḳaṣba*, occupied under the Protectorate by the French army, was destroyed, insalubrious quarters were demolished; the cemeteries, long disused, were landscaped and converted into public gardens or recreation grounds. At one time there were plans to run a thoroughfare through the *Madīna*, from west to east, but fortunately this project, which would have done irreparable damage to the historical nucleus of the city, was not pursued. In spite of the exodus of the minorities whose accommodation could now be occupied by nationals, it was necessary to build thousands of new residential units to respond to the demands of a population which was growing incessantly. Although the central authorities undertook the creation of "people's cities" to re-house the population of the shanty-towns, it was private enterprise, supported by credit arrangements, which succeeded in constructing tens of thousands of individual houses or apartments in communal buildings. Within a few years, the built-up area increased by several hundreds of hectares, with extension of the city towards the south, the west and the north. Development of the al-Manza quarter, inaugurated in the last years of the Protectorate, had been such that it had been necessary to give numerical order to its successive extensions, straddling the neighbourhoods of Tunis and of Ariana. The twelve suburban neighbourhoods, the population of which had doubled (1956, 151,100; 1975, 323,100), saw their built-up area increasing at a higher rate than that of the city. At the same time that it was being extended, the city was covered with a new generation of constructions, some public (administrative buildings, hospitals and educational establisbments), others private (banks, company offices and tourist hotels), all of them drawing inspiration from the models and canons of international modern architecture. It is only in the affluent villas of the new bourgeoisie that traditional Islamic architecture is to be found, with its cupolas, horse-shoe arches and frameworks of sculpted stone.

The whole constituted by the city and its suburbs, Greater Tunis, has surpassed the figure of one million inhabitants (1984, 1,082,000, comprising 596,000 for the city and 486,000 for the suburbs; 1994, 1,259,000, comprising 674,000 for the city and 585,000 for the suburbs). The recent development of the capital of the Tunisian Republic reflects the transformation of the former European city. Constructions of the colonial period have been replaced by taller buildings, including skyscrapers. The city centre has been continually absorbing neighbouring zones and is now extending over land reclaimed from the lake, the shores of which are being pushed forward.

(P. SEBAG)

AL-TŪNISĪ, MAḤMŪD BAYRAM (4 March 1893-5 January 1961), poet known for his corpus of Arabic strophic vernacular poetry (*zad̲j̲al* [*q.v.*]), prose satirist, song composer, playwright and writer of radio and film scripts. Bayram is remembered for bringing *zad̲j̲al* to a level of modern artistry that earned colloquial Arabic poetry new respect among the literati and prepared the way for the rise of a new colloquial poetry in the 1950s and 1960s.

Born in Alexandria to a family of third-generation Tunisian immigrant silk weavers, young Maḥmūd Bayram turned a failing career as a grocer into an informal education by reading the contents of his wrapping paper (finding, notably, *al-Futūḥāt al-Makkiyya*). Attending lectures at the nearby mosque and frequenting literary cafes, he began to write poetry. Publishing his early (1916-18) narrative poems of social criticism (in standard literary Arabic) in the Alexandrian daily *al-Ahālī*, he became an instant local hero with "al-Mad̲j̲lis al-baladī" (25 March 1917) which satirically laid bare the interests of the élite group at the centre of city politics. Already showing a populist stance that supported the emergence of a secular nationalism but criticised its leadership for self-interestedly ignoring the needs of most Egyptians, Bayram turned to colloquial poetry as the nationalist confrontation with Britain came to a head in 1919. His denunciations apparently drew the ire of the Palace, and this, plus his founding (without a license) of two popular-satirical organs for his anti-government writings earned him banishment by France (as a Tunisian under the Capitulations, he was a "protected subject" of France) as a political troublemaker on 21 October 1919. After a brief spell in Tunisia, he was expelled to France where he became one of thousands of itinerant North African labourers, working in construction, silk manufacturing, and iron smelting, according to essays which he sent to the weekly Cairene newspaper *al-S̲h̲abāb* beginning in 1921. Until 1925 he filled this newspaper with *zad̲j̲als*, satirical *maḳāmāt*, and the extended colloquial prose dialogues popular in their book form as *Muntak̲h̲abāt al-S̲h̲abāb. I. is-Sayyid w'imrātuh fī Bārīs* (Cairo, 1923) and *Muntak̲h̲abāt al-S̲h̲abāb. III. is-Sayyid w'imrātuh fī Maṣr* (Cairo 1925). These and a collection of poetry (*Muntak̲h̲abāt al-S̲h̲abāb. II*, Cairo 1923) were his first published volumes. In his poetry of this period, Bayram transformed familiar genres of Egyptian oral expressive culture such as the *mawwāl* and *sīra shaʿbiyya* [*q.vv.*] into vehicles of social criticism and political criticism.

Moving around France, he continued into the 1930s to write for Egyptian publications and tried his hand at writing plays. Around New Year, 1933, he moved to Tunis, where he challenged the dominance of an ensconced cultural élite; he and others of the *taḥt al-sūr* group founded popular oppositional periodicals closed successively by the authorities. Bayram's Tunisian colloquial poetry and prose demonstrate his linguistic versatility and his intimacy with the local political scene, and the local authorities acknowledged the power of his pen by banishing him on 17 April 1937. Sent to Damascus by way of Beirut, Bayram continued his efforts to return to Egypt while writing for local newspapers and composing song lyrics, poetry, and plays for Egyptian consumption. He reached Port Saʿīd in early April 1938, as a fugitive, whose presence

was officially ignored by the Egyptian government. (He would receive citizenship only in 1954.)

The last two decades of his life finally brought Bayram a measure of financial and social stability, as he wrote regularly for a succession of major newspapers and became a sought-after contributor to newer media. He wrote lyrics for Umm Kulthūm and other leading singers, and produced the popular "Ramaḍān riddles", while his versions of popular oral epics (notably, *al-Ẓāhir Baybars*) held Egypt's expanding radio audience to their sets. He earned a State Prize for Literature in 1960.

His *Dīwān* was published in two parts (Cairo, 1943, 1948) during his lifetime, the only version of his pre-1940s works to emerge under his own supervision. Volumes of his *Complete works* continue to appear from the General Egyptian Book Organisation (*al-Aʿmāl al-kāmila li-Bayram al-Tūnisī*, Cairo 1975-), although these are not critical editions that take into account discrepancies between first and later serial publication of his texts. Many partial collections of his poetry and *maḳāmāt* have appeared, as have numerous biographies and memoires written or edited by his friends, and also some of his later audiovisual media scripts. His writings in Tunis are collected in Muḥammad Ṣāliḥ al-Djābirī, *Maḥmūd Bayram al-Tūnisī fi 'l-manfā. Ḥayātuh wa-āthāruh*, 2 vols. Beirut 1987.

(MARILYN BOOTH)

AL-TŪNISĪ, MUḤAMMAD B. ʿUMAR b. Sulaymān, Tunisian author of the 19th century (1204-74/1789-1857).

He stemmed from a family of scholars in Tūnis, his grandfather having been a manuscript copyist who had gone on the Pilgrimage to Mecca and had then settled at Sennar [see SINNĀR] in the Sūdān, thus establishing a family connection between that region, Cairo (where Muḥammad's father became *naḳīb al-riwāḳ*, i.e. superintendent of the Maghribī students at al-Azhar) and Tūnis.

Muḥammad was born in Tūnis in 1204/1789, and after studying at al-Azhar, made his way to the Sūdān, where his father ʿUmar had been at the court of the local ruler of Dār Fūr [*q.v.*], ʿAbd al-Raḥmān b. Aḥmad, and spent seven and a half years there. He then moved to the adjacent region of Wadāī [*q.v.*], and the court of its sultan, Sābūn, at Wāra, spending a year and a half there before returning to Tūnis, after a ten years' absence, via Tibesti, Fezzān [*q.vv.*] and Tripoli, arriving home *ca.* 1228/1813.

He subsequently moved to Cairo and entered the service of the governor Muḥammad ʿAlī Pasha [*q.v.*], serving as a preacher (*wāʿiẓ*) with an infantry regiment of Ibrāhīm Pasha's army in the Morea during the Greek Revolt. He then became a translator of European medical works at the veterinary college established by the ruler at Abū Zaʿbal to the north-east of Cairo, and there met the French scholar Dr. Perron, after 1839 Director of the Ḳaṣr al-ʿAyn medical school, where Muḥammad al-Tūnisī then became chief reviser of translations. Alfred von Kremer, who first came to Egypt in 1850, commends him warmly as one of his teachers in Arabic, and states that he was also engaged in the editing and publication of various classical Arabic texts, such as the *Maḳāmāt* of al-Ḥarīrī and the *Mustaṭraf* of al-Ibshīhī. He also undertook revision of the Calcutta text of 1230/1817 of the *Ḳāmūs* of al-Fīrūzābādī, then printed at Būlāḳ in 1274/1857. In his later years he lectured on *ḥadīth* at the Zaynab mosque, dying at Cairo in 1274/1857, according to von Kremer.

At Perron's instigation, al-Tūnisī's experiences in the Sūdān and his observations on the land, its people and customs, were written down in Arabic in two comprehensive works, which Perron then translated into French:

1. *Voyage au Darfour par le Cheikh Mohammed Ebn Omar el-Tounsy . . . traduit de l'Arabe . . .*, Paris 1845, with its Preface by Jomard published separately as *Observations sur le Voyage au Darfour, suivies d'un vocabulaire de la langue des habitants et de remarques sur le Nil-Blanc supérieur*, Paris 1845. Cf. the detailed review of Perron's work by Sédillot, in *JA*, sér. 4, vol. vii (1846), 522-43. The Arabic text was published by Perron in his autograph as *Tashḥīdh al-adhhān bi-sīrat bilād al-ʿArab wa 'l-Sūdān*.

2. *Voyage au Ouadây, par le Cheikh Mohammed Ebn Omar el-Tounsy, traduit de l'Arabe*, Paris 1851, again with a long Preface by Jomard. The Arabic text, which Perron intended to publish, never appeared, and has since disappeared.

Al-Tūnisī also translated/wrote two works on botany and medicine, see Brockelmann, S II, 749.

Muḥammad al-Tūnisī was the first to give us full and reliable information about important parts of the eastern Sūdān. On Dār Fūr, we had before his time only the scanty notes of the explorer W.G. Browne and on Wadāī a little information gleaned by Burckhardt. It was not until several decades later that H. Barth and G. Nachtigal were able to visit these lands and describe them in more detail in their books. There is no reason to doubt al-Tūnisī's reliability; Perron checked his statements with the help of a number of people from Dār Fūr and Wadāī settled in Cairo and obtained complete confirmation of them. It cannot, however, be denied that there were certain defects in the Shaykh's description. A certain lack of order in the arrangement of the material, the lack of any approach to a regular system, a fondness for digression and a disposition to believe much too readily statements about the popular Islam of the country (e.g. especially about magic) are not as serious defects as the fact that he gave no exact geographical, topographical, statistical and meteorological data (cf. thereon the criticisms by Barth, in *Reisen und Entdeckungen in Nord- und Centralafrika*, iii, Berlin 1859, 525 ff., and Nachtigal, in *Petermanns Geogr. Mitteil.*, xxi [1875], 176, and in *Sahara und Sudan*, Leipzig 1889, iii, p. viii). Nevertheless, al-Tūnisī's two works form an important source for the ethnographical, cultural, and political conditions in the lands of the eastern Sūdān through which he travelled. In conclusion, it should be emphasised that the Shaykh's two books supplement one another; the much larger work on Wadāī also contains a good deal of information about Dār Fūr.

Bibliography: The main source for Muḥammad al-Tūnisī and his family is his own two travel books, esp. his autobiography in ch. 1 of his *Voyage au Darfour*, 1-25. See also Baghdādī, *Īḍāḥ al-maknūn*, i, 408; von Kremer, *Aegypten*, Leipzig 1863, ii, 324; Sarkīs, *Muʿdjam*, n.p. 1683; Brockelmann, II², 643,

(M. STRECK*)

AL-TŪNISĪ, SHAYKH ZAYN AL-'ĀBIDĪN, Tunisian scholar (*fl.* in the first half of the 19th century) who travelled in the Sūdān and wrote on Dār Fūr and Wadāī [*q.vv.*].

He was an Azharī by training who in 1818 or 1819 set out for the Sūdān and spent some ten years there. From Sennar [see SINNĀR] and Kordofān [*q.v.*] he went to Dār Fūr and Wadāī, returning eventually via Fezzān to Tūnis. He recorded his experiences and observations there in an Arabic work of modest length which was translated into Turkish and thence into German by G. Rosen as *Das Buch des Sudan oder Reisen des Scheich Zain el-Âbidîn in Nigritien*, Leipzig 1847 (cf. *ZDMG*, ii [1848], 482).

The importance of his book lies in the description of the state of civilisation and organisation of society in Dār Fūr and Wadāī. We are told of the court life, of the soldiers, a campaign, the natives, slaves and negroes, of trade, superstitions, a wedding, etc. These interesting notes are an important supplement to the far fuller description of Muḥammad al-Tūnisī [*q.v.*]. Noteworthy is an account of excavations made by Zayn al-'Ābidīn with the permission of the sultan of Wadāī in ruins near the capital (47-9, 61-75). Zayn al-'Ābidīn left Wadāī just as a change on the throne took place; the name 'Abd al-'Aẓīm given in Rosen's translation for the new ruler (108) should be emended to 'Abd al-'Azīz (cf. G. Nachtigal, *Sahara und Sudan*, Leipzig 1889, iii, 284, where an 'Abd al-'Azīz, grandson of Sābūn, ruler of Dār Fūr, is mentioned).

Bibliography: See that to AL-TŪNISĪ, MUḤAMMAD B. 'UMAR.

(M. STRECK*)

TUNISIA, a region of the northeastern part of the Maghrib. In mediaeval Islamic times it comprised essentially the province of Ifrīkiya [*q.v.*]. Under the Ottomans, the Regency of Tunis was formed in the late 10th/16th century, continuing under local Beys with substantial independence from Istanbul until the establishment of the French Protectorate in 1881, which in turn gave way in 1957 to the present fully independent Tunisian Republic.

I. GEOGRAPHY, DEMOGRAPHY AND ECONOMY.

(a) Geography.

Tunisia, situated between 6° and 9° degrees of longitude east, and between 32° and 37° degrees of latitude north, has an area of 162,155 km². Bordered by Algeria (Department of Constantine) the full length of its western frontier, it is bounded to the south by the Sahara and, in the far south-east, by Libya (Tripolitania). The Mediterranean washes its northern and eastern coasts, which are low-lying for the most part. The climate is generally moderately hot, but levels of precipitation vary considerably according to the region and even from year to year; in a country sandwiched between the sea and the Sahara, variations in latitude, and to an even greater extent in altitude, are a determinant factor in the fluctuations of rainfall. The relief is in fact very varied, although average altitudes are relatively low; the chains of mountains, continuation and conclusion of those of Algeria, impose a general south-west/north-east orientation.

To the north-west, towards Algeria, the mountains of Khroumiria [see KHUMAYR] and the Mogods, limestone and sandstone, rarely exceed 1,000 m/3,280 feet in altitude; subject to heavy rainfall, covered with oaks or with scrub, they contain zinc and iron mines (Douaria). They follow the coast where they blend, beyond the little port of Tabarka [see TABARKA] into the dunes of the Nefza, Cap Nègre and the little peninsula of Cap Serrat. To the east, they fall away gradually towards the hills surrounding the alluvial plains of Bizerta and of Mateur, both well irrigated and sustaining abundant corn-crops. The lake of Bizerta, connected to the sea via a channel, constitutes an ideal deep water roadstead *vis-à-vis* the nearby island of Sicily. Further to the east, the Ra's Sīdī 'Alī al-Makkī, above Porto Farina (*Ghār al-milḥ*), is the northern limit of the Gulf of Tunis, which is silted up by the alluvial deposits of the Medjerda and Wadi Miliane. The peninsula of Carthage, formerly an island, is joined to the continent by an isthmus which separates the Sebkha el-Riana from the lake of Tunis; the lake, below which is situated the capital, Tunis [see TŪNIS], is connected to the sea via the channel of La Goulette (*Ḥalk al-Wād*).

The Medjerda, which traverses northern Tunisia from west to east, is Tunisia's only genuine river; while the water level is low in the summer, from November to April the river is in flood, deep and muddy. Its lower course (Medjez el-Bāb, Tebourba) is separated by the gorges of Testour from its middle course, where it drains the broad alluvial basin of the Dakhla (region of Souk el-Arba and of Souk el-Khemis), as rich in cereals and pasturage as the nearby limestone hills of Beja. Its valley is bounded to the north by the calcareous mountains of Bejaoua and of Teboursouk, while to the south the very uneven relief of central and western Tunisia features alternation of calcareous outcrops and great plains, a continuation of the Saharan Atlas of Algeria. Tributaries of the Medjerda (Wadi Mellegue, W. Tessa, W. Siliana) and W. Miliane (plains of the Fahs and of Mornag), discharge directly or indirectly into the Gulf of Tunis.

To the south of the Haut-Tell is situated the most striking mountainous feature: the "Tunisian Dorsal" extends from the outskirts of Tebessa [*q.v.*] to Dj. Zaghouan (1,293 m/4,240 feet, 45 km/27 miles from Tunis) and as far as Dj. Reças and Bou-Kornine; it includes the highest summits: Chambi (1.544 m/5,064 feet) and Semama in the Byzacène range, the massif of Mactar, the Serdj, the Bargou, the Fkorine in the Zeugitane range. But it permits relatively easy communication with the south, via numerous cols or passes, in particular the major Ksour-Sbiba corridor; however, the watercourses which flow along the southern versant, such as Wadis Merguellil, Zeroud, El Hatob (which irrigates the plain of Gamouda), subject to a very irregular, even intermittent, climatic régime, tend to lose such water as they contain in the salt basins known as Sebkhas [see SABKHA]: S. Kelbia and S. Sidi El-Hani for example, in the plain of Kairouan, where the steppe-land begins. Its only urban areas besides Kairouan [see AL-ḲAYRAWĀN] are situated at the outlets

to the passes of the Dorsal: Sbeitla, Kasserine and Feriana. But, still more desert-like towards the south on account of increasingly meagre rainfall, it comes to an end, after Gafsa [see ḲAFSA] and the rich phosphate deposits of Metlaoui and Redeyef, in the depression of the Chotts [see S̲H̲AṬṬ] (Ch. El-G̲h̲arsa at -25 m/-82 feet, Ch. El-D̲j̲erid, Ch. El-Fed̲j̲ed̲j̲ enclosed by the D̲j̲. Cherb and the D̲j̲. Tebaga), at the oases of the D̲j̲erid (Tozeur, Nefta), a rich date-producing area, and at those of Nefzaoua (Kebili, Douz), where the Sahara begins. Further to the south-east, the limestone D̲j̲. Dahar (400/600 m/1,300 to 1,970 feet), with the massif of Matmata [see MAṬMĀṬA], is just the eastern rim of a vast Saharan basin.

(R. BRUNSCHWIG)

(b) Demography and economy.

Tunisia is the smallest of the states of the Mag̲h̲rib. In terms of population (8,785,700 inhabitants according to the census of 1994; see further below), it is ranked third among the countries of the region, after Algeria and Morocco but before Libya and Mauritania. A land of plains, hills and mountains, Tunisia is nevertheless the least mountainous state of the Mag̲h̲rib. It is also less well endowed than Algeria with reserves of oil and natural gas, and much poorer than Morocco in terms of fluvial hydraulic resources.

But in other respects Tunisia enjoys numerous advantages, in particular its openness towards the Mediterranean world and Europe and its rate of literacy which is the highest in the Mag̲h̲rib, more than 90% in the towns and more than 70% in the countryside. Investment in education has facilitated the formation of a substantial élite of cadres in all areas; some have gone in search of employment to the countries of the Gulf, or have settled in Europe or North America, as employment opportunities for intellectuals have become perceptibly fewer over recent years.

Furthermore, unlike Algeria and Morocco, and on account of its much less uneven and less mountainous terrain, Tunisia experienced waves of foreign penetration by the Phoenicians and then the Romans, followed by total Islamisation and Arabisation. This occupation by Mediterranean civilisations is also related to the importance of Tunisia's maritime frontages, especially that which extends from Bizerta to Djerba. This accounts for the fact that the eastern frontage is more densely populated than all the rest of the country, even though it is less humid than north-western Tunisia, or than the Haut-Tell.

Estimated at 1,200,000 inhabitants in 1881, with an average density of 7.3 per square km, the population of Tunisia has increased sevenfold, reaching a figure of 8,785,700 in 1994 with an average density of 53.6 inhabitants to the km^2. Annual growth in population, which reached 2.6% in 1966, has been reduced as a result of family planning policy, and was calculated at 1.7% in 1994.

The distribution of the population is very uneven: densities are higher in the more humid north than in the central steppes or in the Sahara to the south. But the more rapid development of the eastern littoral regions, in all respects, is responsible for the increase in population density there, and for the evolution of the country's major cities: the urban population represented 61% of the total population in 1994. The densely populated eastern littoral has reached an average of 90 inhabitants to the km^2, and comprises most of the country's towns, including the largest: Tunis, Sfax, Bizerte-Menzel-Bourguiba, Sousse, Gabès, etc. The Tunisian interior, much less urbanised, less populated and more rural, with densities varying between 30 and 60 inhabitants to the km^2, was formerly a land of semi-nomadic tribes; completely sedentarised today, it has become an agricultural region where orchards and market gardens predominate. Saharan Tunisia, formerly a region of nomadism and transhumance, is likewise currently fully sedentarised, deriving income primarily from oasis agriculture centred on the date-palm; from mining, especially of phosphates; and from the development of tourism. At the apex of the urban pyramid stands Tunis, the capital, with more than three times the population of the country's second city, Sfax [see SAFĀḲUS].

On account of demographic growth and meagre progress in agricultural productivity, Tunisia, once dubbed the "granary of Rome" is now permanently deficient in cereals, meat and dairy products. Commodities such as olive oil, dates and citrus fruits are in surplus, but even the production of these is subject to major fluctuations on account of variations in rainfall. The exportable surplus of citrus fruits is in decline (which is not the case in Morocco, for example), on account of urban and touristic development at the expense of orchards, the insufficiency of underground reserves of water and the lack of adequate dams. Levels of livestock do not cover the country's needs, and Tunisia imports dairy and meat derivatives on a regular basis. Fishing, concentrated on the eastern littoral, and especially at Sfax, in the Gulf of Gabès and in the Sahel, having reached and exceeded 100,000 tonnes in the mid-1980s, has declined and is in a state of continuing stagnation, having fallen to a figure of 84,000 tonnes in 1993. This decline is due in particular to over-exploitation of marine resources and to chemical pollution, resulting from the discharge of industrial waste and sewage into the sea. In all, agricultural exports represent no more than two-thirds of the level of food imports. Furthermore, despite the inadequacy of food production, what is being seen is a constant decline of the rural population which accounted for 70% of the total population in 1936, but only 39% according to the 1994 census.

Industry remains weak, despite recent progress, and remains concentrated in the urban centres of the eastern littoral, in particular at Tunis, at Bizerta-Menzel-Bourguiba, in the cities of the Sahel, Sfax and Gabès, etc., as well as in some less-centralised locations in the interior such as Beja, Kasserine and Kairouan.

The industrial base is feeble and inadequate; mineral resources are certainly diversified, but are limited, and in decline where metallic minerals are concerned. Only the phosphates of the Gabès region are in relatively abundant supply, but this industry is suffering as a result of stagnation of the international trade in phosphates: production has declined from 6 million tonnes in the mid-1980s to 4.3 millions today. Tunisia is attempting to compensate for this stagnation by developing sub-contracting industries such as textiles and leather, but even in this field competition is intense.

The development of the tourism sector, since the early 1960s, has afforded a partial compensation for industrial stagnation. Tunisian tourism is almost entirely resort-centred and is concentrated on the littoral from Cap-Bon to Nabeul-Hammamet, in the Sahel of Sousse and of Monastir, at Djerba and in the oases. The sector has experienced uninterrupted development: in 1994 the 152,933 tourist beds were split between 53,000 in the Sahel of Sousse and of Monastir, 40,000 in the region of Nabeul-Hammamet, 30,000 to 32,000 in the south-east, at Djerba and at Zarzis, 60,000 in the oases of the south-west, plus some 6,000 beds in the north, especially at Tabarka and Bizerte. Tourism

has led to the proliferation of airports in the vicinity of tourist centres, including Tabarka; but while the airports of Tunis, of Monastir and of Djerba are very profitable, the same does not apply to Tabarka, which does business only in the summer season.

Economic development and mobility of population have led to increased dynamism in the movement of merchandise and of people. It is a fact that railways have experienced little expansion since Independence and remain virtually dormant, with the exception of the Sfax-Gafsa-Gabès commercial routes, but the network of tarred roads has been substantially developed and links all regions of the country: a single dual-carriageway autoroute has been constructed from Tunis to Msaken, a distance of some 150 km/93 miles, the Tunis-Bizerta autoroute project is in the planning stage and there is talk of extending the north-south highway from Msaken to Sfax, although this is unlikely to be seen in the near future.

All in all, Tunisia has experienced major changes since Independence. Education has become universally available both in towns and in the countryside, for boys and girls alike (see VI. below); and a network of roads has made the majority of areas accessible. Industry, tourism and various services have experienced significant development almost everywhere. Although this development has not yet succeeded in erasing regional or social disparities, there can be no doubting the fact that Tunisia is a country on the move.

II. History.

(a) The pre-Islamic period.

The Berbers and Carthage. Tunisia was a gateway to the Maghrib for peoples of the Mediterranean coastlands, and in the early historical period was populated by nomadic and sedentary Berbers tribally organised. Its coastlands early attracted Phoenician voyagers, lured by possibilities of commerce with the West, and these founded ports and trading posts. It seems that they established themselves on the site of Utica towards the end of the first millennium; then, in 814 B.C. according to the Greek tradition, Carthage was founded by men from Tyre. Recent archaeological investigations have, however, tended to reduce the gap between this early date and that of the oldest remains so far found (see M. Vegas, *op. cit.* in Bibl., 213-14).

In the 6th century B.C. Carthage controlled the sea routes and dominated the Western Mediterranean. Before annexing southern Spain, its empire stretched as far as Sardinia and Corsica, the Balearic Islands, Malta and western Sicily, where there was incessant warfare in the 5th and 4th centuries with the Greek colonies of eastern Sicily. In the Maghrib, Punic colonies dotted the length of the coast, and around Carthage, its aristocracy held estates in the hinterland as far as Cape Bon and the Tunisian Sahel. It was control of the Mediterranean which was the pivot of the Punic-Roman warfare and which made the name of Hannibal famous. Abandoning Sicily in 264 B.C., the Carthaginians fell back in three phases, ending with the destruction of Carthage in 146 B.C. Yet despite the transformation of Carthaginian territory in northeastern Tunisia into a Roman province, for a century, Rome showed hardly any real interest in the Maghrib.

The Roman province. The fall of Carthage did not affect the advance of civilisation and there spread a mixture of cultures, beliefs, technical and artistic trends of Semitic, Egyptian, Greek and Hellenistic origin. A good number of towns continued to be administered by Suffetes and the Roman population there continued to worship Ba'al Hammon and Tanith, although the first deity was assimilated to Saturn and the second to Juno. The language of culture, Punic, co-existed with the Libyan vernacular of the province as also in the Numidian kingdom of Massinissa and Micipsa, dominant there and in southern Tunisia in the 2nd century B.C.; the two languages persisted in the countryside till the end of Roman domination, and a number of techniques inherited from the Punic period, notably in architecture, remained long after the Muslim conquest.

In 46 B.C. Julius Caesar inaugurated a new policy, annexing the Numidian kingdom and creating a Roman colony at Carthage. This soon became the capital of the Roman province of Africa, the richest and most important of the provinces of the Maghrib. Once colonies were founded, from the beginning of the 2nd century A.D., Roman municipal institutions were conferred upon the indigenous towns, favouring, with the spread of education, the integration of peoples. This century also saw a great economic advance, as in the production of ceramics and in agriculture, so that the province for long supplied Rome with part of its corn and exported olive oil in quantity. Social mobility allowed the descendants of decurions, notables of varying degrees of richness on whom the prosperity of the towns depended, to rise into the nobility; as knights, they took part in the Empire's administration and as senators, they sat in the Senate at Rome and attained the highest civil and military positions. Finally, urbanisation grew considerably, as the ruins of innumerable towns attest, many of Punic or Numidian origin and with names hardly changed much today, e.g. Carthage, Dougga, Bulla Regia, Mactor and Sbeitla. Towards the end of the century, the rise of the African dynasty of the Severi (193-235) marked the province's apogee.

It probably felt the effects of the great crisis of the Roman world (235-85), but was spared in large measure the troubles and problems of the Later Empire. The restoration of monuments and the manufacture in large quantities of mosaics which adorned the houses of the rich in the 4th century show that the province still retained a great deal of its economic prosperity. At the same time, the spread of Christianity and the richness of Christian literature in Latin showed both the power of the Church and the vitality of Romano-African culture, one to which the personality and work of St. Augustine gave a last brilliant flame. There were, however, some religious problems, notably that of the Donatist schism, and the western part of the province, especially, was affected by social troubles.

The period from Rome to the appearance of Islam. In 429 the Vandals pushed ahead of the other Germanic peoples who overran the eastern parts of the Roman Empire, establishing themselves in Spain and then embarking for Africa under their king Genseric, who was both vigorous and intelligent. They finally settled in the eastern part of the Maghrib, annexed the islands

and dominated the Western Mediterranean. The cultural contribution of the Vandals was very modest, but archaeology does not confirm the bad reputation of their name, since neither the commerce nor the agricultural prosperity of the province showed any obvious decline. The unwise actions, incompetence and anti-Catholic excesses of Genseric's successors contributed, together with successive waves of attack by nomadic and mountain-dwelling Berbers of the south and west of the province, to the fall of the Vandal kingdom.

An expedition launched in 533 allowed the Emperor Justinian, considering himself as the heir of Rome, to "reconquer" Africa. The Byzantines endeavoured to restore the administrative structure and to reinvigorate the economy, but the permanent menace of the Berber tribes forced them to adopt a defensive military policy and construct numerous fortresses which commanded possible invasion routes. The burden of taxation, numerous administrative or military failures and official corruption, provoking tensions and outbreaks, prepared the way for the ruin of the province, helped on by the Arab invasion of 647, although it was not until 698 that the incomers took control of Carthage.

(b) The Islamic period up to *ca.* 1500.

In early Islamic times, the land known only since the post-Regency period as Tunisia was known as Ifrīḳiya; see therefore IFRĪḲIYA on the origin of the term and the geographical extent of the region in early Islamic times.

As a part of Africa with an advanced civilisation, the presence of man is attested there from very early times, with various names in historic times for the inhabitants: Lebu and *Libyes* or *Barbaroi* for the Greeks, whence the name Berbers, and *Mauri* and *Numidii* for the Romans; the Berbers themselves called themselves *Imazighen* (sing. *Amazigh*) "proud ones" or "proud ones of the West". The Arabs retained the term Barbar and called the whole of North Africa the *Bilād al-Maghrib* [see AL-MAGHRIB]. Three Arab texts on the Berbers have recently been edited, a compendium (*madjmūʿ*) comprising, in chronological order, the *K. Shawāhid al-djilla wa 'l-aʿyān fī mashāhid al-islām wa 'l-buldān* by Abū Bakr b. al-ʿArabī (d. 543/1149), the *K. al-Ansāb* of Ibn ʿAbd al-Ḥalīm (8th/14th century) and the anonymous *K. Mafākhir al-Barbar* (probably 8th/14th century) (ed. Muḥ. Yaʿlā, Madrid 1996). The work of M. Shatzmiller [see MAFĀKHIR AL-BARBAR] seems to close a long-standing controversy over the identity of the work's author. The conquering Arabs also found Rūm, i.e. Byzantine Greeks and Hellenised elements, and Afāriḳa, romanised Berbers and Jews, who had possibly made their way westwards after the destruction of the Temple in A.D. 73.

The Arab invasions

At the moment when the Arabs appeared, Ifrīḳiya was one of the last Byzantine provinces, and the most western one, to fall into Arab hands. The new invaders arrived, however, by the land route linking Egypt with North Africa; they had the same way of life as the Berbers, and unlike the preceding rulers, the Byzantines, first installed themselves in the interior of Tunisia, whilst the coastlands remained still in Byzantine hands.

The conquest of Ifrīḳiya was slow and full of turns of fortune and reverses. The Arabs were far from their home bases, and the caliph ʿUmar is reported to have been reluctant to embark on the campaign, the dangers of this distance being expressed in the phrase *Ifrīḳiya tufarriḳ*, whilst a spurious *ḥadīth* said that "the Berbers have taken nine-tenths of humanity's stock of anger" (cf. Miquel, *La géographie humaine*, iv, 61, after al-Maḳdisī and Ibn al-Faḳīh). Whereas the campaigns in the Near East had been completed in a dozen or so years, the pacification of North Africa took 50 years to accomplish. ʿUthmān took up the attack again, and entrusted ʿAbd Allāh Ibn Abī Sarḥ [see ʿABD ALLĀH B. SAʿD] with the task, who won a great victory over the Patricius Gregory at Ṣubayṭila (Sufetula) in 28/647; the latter was killed, and the Arabs exacted a tribute of 300 gold talents. But this was a hollow victory, given the tenacity of Berber resistance; the Arabs led further expeditions, but always withdrew afterward to Tripolitania.

In 45/665 Muʿāwiya b. Ḥudaydj left Egypt with a force of 20,000 men and joined up with the troops in Tripolitania under ʿUḳba b. Nāfiʿ [*q.v.*], but despite successful raids on Hadrumeta (Sousse), Hippo Dyarrithus (Bizerta) and Djarba, the Arabs did not remain. In 50/670 another expedition by ʿUḳba ended with the foundation of al-Ḳayrawān [*q.v.*], the first point of anchorage in a hostile environment. In 62/681 ʿUḳba returned to the West, and reportedly reached the distant ocean, but on his return was attacked and killed at Tahuda near Biskra by Kusayla [*q.v.*] or Kasīla, chief of the Awrāba of the Barānis [*q.v.*] confederation. Kusayla held firm for several years, but was finally killed by an army under Zuhayr b. Ḳays al-Balawī in 67/686. The Berbers submitted, but by no means finally.

Resistance was now taken up by a woman, Dahiya or Dihya, etc., called in the Arabic sources the Kāhina [*q.v.*] or "priestess", from the tribe of Djarāwa, a tribe of the Berber Zanāta related to the Butr confederation in the eastern Aurès. This heroine's identity has been much discussed: pagan, according to Saʿd Zaghlūl ʿAbd al-Ḥamīd; Jewish, according to H.Z. Hirschberg, *A history of the Jews of North Africa*, i, Leiden 1974, and P. Sebag, *Histoire des juifs d'Afrique du Nord*, Paris 1991; or Christian, as M. Talbi tends to believe, a Romanised Berber, see his *EI*² art. and *Un nouveau fragment de l'histoire de l'Occident musulman (62-196/682-812), l'épopée d'al-Kāhina*, in *CT*, lxxiii [1971], 19-52. She would accordingly have been Christian rather than Jewish, even though her tribe may well have been Judaised, as Ibn Khaldūn affirms, and converted to Christianity, a reflection of the racial and religious diversity of North Africa. This is how Abdelmajid Hannoum has set forth his theory in *Historiography, mythology and memory in modern North Africa*, in *SI*, lxxxv [1997], 85-131 and *Myth and mythmaking in French historiography of North Africa*, in *Hespéris-Thamuda* (1996). He concludes that we have here a myth regarding North African origins which has played an important role in building up Maghribī nationalism.

The crises in the East of the caliphate delayed the Arab reaction, but Ḥassān b. al-Nuʿmān [*q.v.*], after some checks, finally expelled the Byzantines in 79/698

and defeated the Kāhina. The question of the revolts of the Berber tribes has evoked the question whether it is possible to group them according to their modes of life, attempted by R.W. Bulliett in his *Botr et Barānes: hypothèses sur l'histoire des Berbères*, in *Annales ESC*, xxxvi/1 [1981], 104-16, suggesting that the Butr were camel nomads and the Barānis sedentary mountain people, a brilliant reconstruction which brings out the relationship between their appellations—relating to their clothing—their technological level and their religious tendencies.

After the Kāhina's defeat, the Berbers themselves went on to participate in the conquest of the rest of the Maghrib and then of Spain. Though master of Carthage, Ḥassān preferred to lay out a *miṣr*, a military encampment-town, at Tūnis [*q.v.*], a small, nearby Numidian town, more sheltered by the sea; but for the moment, this was overshadowed by Ḳayrawān, the uncontested capital of the new province of the Arab empire.

Ifrīḳiya in the age of the Arab governors

Governors were sent out from the Umayyad capital of Damascus and then by the ʿAbbāsids from ʿIrāḳ, with 22 of these in almost a century (84-184/705-800). One of these, Mūsā b. Nuṣayr [*q.v.*], was to complete the overrunning of the Maghrib, whilst his lieutenant Ṭāriḳ b. Ziyād [*q.v.*] began the conquest of Spain. See on the period in general, Hichem Djaït, in *Hist. de la Tunisie*, ii, *Le Moyen-Age*, Tunis 1960, 11-97, repr. in *La wilāya d'Ifrīḳiya au IIᵉ/VIIIᵉ siècle*, in *SI*, xxvii [1967], 77-121, xxviii, 11-97, and idem, *L'Afrique arabe au VIIIᵉ siècle*, in *Annales ESC*, xxviii [May-June 1973], 600-11.

Amongst the many studies on the Arabisation and Islamisation of Ifrīḳiya and the rest of the Maghrib, see the older article by W. Marçais, *Comment l'Afrique du Nord a été arabisée?*, in *AIEO Alger*, iv [1938], 1-22, and more recently, M. Brett, *The spread of Islam in Egypt and North Africa*, in idem (ed.), *Northern Africa, Islam and modernization*, London 1973, and Bulliett, *Conversion to Islam in the medieval period, an essay in quantitative history*, Cambridge, Mass. 1979.

As for Ḳayrawān, this needs to be placed in a wider context, as the fourth garrison city founded, after Baṣra, Kūfa and Fusṭāṭ in the East, on the model of the Prophet's installation at Medina, so that it became, like them, a *dār al-hidjra*, in which Muslims could follow, in complete security, the precepts of the faith. Firstly, the site of the mosque and the *dār al-imāra* were chosen, and then lots of land, *khiṭaṭ*, distributed to the various tribes making up the army. These provisional arrangements of the *miṣr* developed into a genuine city, and the difficulties encountered and endured explain why it soon became considered as the fourth holiest city of Islam after Mecca, Medina and Jerusalem. According to the chroniclers, a high number of famous Successors settled there, which increased its prestige and aura of sanctity. The Umayyad governors had difficulty establishing their authority over the province, but an administration on the model of Damascus gradually evolved and links with the capital of the empire were kept up through the forwarding of part of the land tax and of slaves, much appreciated in the East.

This first phase of Ifrīḳiyan history lasted for almost a century, punctuated by politico-religious outbreaks and struggles, especially as the Berbers became partisans of Khāridjism, which entered the province from Tripolitania and the Djabal Nafūsa, with outbreaks between 123/740 and 155/771. These egalitarian rigorists, expelled from Ḳayrawān, founded dissident states in the central and farther Maghrib. See especially, on Khāridjism as it developed on the isle of Djarba [*q.v.*] and the southern zone of the Maghrib, AL-IBĀḌIYYA and ṢUFRIYYA. 2.

The Aghlabid amīrate

One of the last governors sent out from the East, al-Aghlab b. Sālim al-Tamīmī, was at the origin of the first autonomous dynasty in Ifrīḳiya, that of his son Ibrāhīm, appointed governor by Hārūn al-Rashīd in 184/800. His family benefited from their distance from the capital Baghdād, as had the lines of the Fihrids, and especially the Muhallabids, before them.

The Aghlabid principality flourished. The *amīrs* were great builders, and Ḳayrawān became one of the most brilliant centres of the Muslim West. The Great Mosque of ʿUḳba was enlarged and surrounded by ramparts, whilst its water supply, in basins, excited the admiration of the geographers and of travellers. The ʿIrāḳī model was followed in other places. Ibrāhīm I founded al-ʿAbbāsiyya, recalling his allegiance to the caliphs, 3 km/2 miles from Ḳayrawān, on the model of al-ʿAskar, the royal residence near Fusṭāṭ in Egypt (133/750), whilst the second Aghlabid capital founded at al-Raḳḳāda [*q.v.*] in 263/876 echoed the Ṭūlūnid one of al-Ḳaṭāʾiʿ in Egypt. Caliphal institutions were copied—a vizier, *ḥudjdjāb, ʿummāl, kuttāb*, often Christians, formed the administration and collected revenues. The *amīr* had a personal guard of black slaves, analogous to the caliph's Turks. A mixed society grew up in the towns, comprising Berbers, the *Rūm*, the *Afāriḳa*, Arabs from Syria and ʿIrāḳ, Persians from Khurāsān, etc., whilst Jews and Christians continued to form part of this society (cf. J. Cuoq, *L'église d'Afrique du nord des origines au XIIᵉ siècle*, Paris 1974).

The Aghlabids attracted scholars and literary men to their court and founded a *bayt al-ḥikma* on the Baghdād model. Physicians from the East founded a local school of medicine in Ḳayrawān. Mālikism became the dominant legal school there, with such leaders as Asad b. al-Furāt (d. 214/829) and Saḥnūn (d. 240/854 [*q.v.*]). The latter's *Mudawwana* became "the Vulgate of North African Mālikism"; cf. MĀLIKIYYA and Saʿd Ghrab, *Ibn ʿArafa et le malikisme en Afrique du nord*, 2 vols. Tunis 1992-6.

The Aghlabid *amīrs* were equally active outside their capitals, and towns like Tunis, Sousse, Monastir and Sfax benefited from their works. Thus the great mosque of Tunis was enlarged, the ramparts strengthened and palaces built *extra muros* to the north and west of the town. The coastal defences were strengthened by the building of *ribāṭs* [*q.v.*], the best preserved today being those of Monastir and Sousse. Assured of their hold on the country, the *amīrs* undertook the conquest of Sicily from 212/827 onwards [see ṢIḲILLIYA] and Sardinia [see SARDĀNIYA], secured a foothold on the coast of southern Italy and even raided Rome in 232/846. Ifrīḳiya was thus prosperous during their century's rule, but it could not stand aside from the Sunnī-Shīʿī struggles of the ensuing period [see further, AGHLABIDS].

The Fāṭimid caliphate

The *dāʿī* Abū ʿAbd Allāh al-Ṣanʿānī won over the Kutāma [*q.v.*] Berbers of Kabylia to the cause of his master, the Mahdī ʿUbayd Allāh, who claimed to be a descendant of the seventh Shīʿī Imām Ismāʿīl. In 297/909 the Mahdī seized Ḳayrawān and expelled the last Aghlabid Ziyādat Allāh III, whose reputation had already been sullied through his cruelties. ʿUbayd Allāh, now styled *amīr al-muʾminīn*, henceforth controlled the central and eastern Maghrib and, especially, the trans-Saharan routes which conveyed gold from the West African sources, thus being able to build up a

powerful army and navy. Two years after his appearance in Ifrīḳiya, ʿUbayd Allāh founded a maritime capital, al-Mahdiyya [*q.v.*], as a base for his intended Mediterranean policy, and during his 24-year reign carried on warfare against the Byzantines and the two caliphates of Cordova and Baghdād. A fine palace, a *sūḳ* and an arsenal were built within the ramparts, and the court of al-Mahdiyya attracted scholars, physicians, poets and littérateurs.

But Shīʿī proselytising activities provoked a resurgence of North African Khāridjism, with various revolts, the gravest of which was that of Abū Yazīd "the man on the donkey", a native of the Djarīd and representative of the Nukkāriyya [see AL-NUKKĀR] sect amongst the Zanāta Berbers, which affected the region between the Aurès and Ḳayrawān in 323-34/934-45. With peace restored, Ismāʿīl al Manṣūr returned to Ḳayrawān and founded nearby his new residence of Ṣabra al-Manṣūriyya [*q.v.*] in 337/948, which assumed the role of capital, previously supplanted by al-Mahdiyya.

Still aiming at the conquest of the East, al-Muʿizz made his power felt throughout the Mediterranean. An army from Ifrīḳiya conquered as far west as Fās, and in 359/969 his freedman Djawhar [*q.v.*] seized Egypt and founded al-Ḳāhira [*q.v.*] to the north of Fusṭāṭ. Al-Muʿizz left Ifrīḳiya and entrusted its government to his lieutenant Buluggīn b. Zīrī. See further, FĀṬIMIDS.

The Zīrids

For the first time since the Arab conquest, Ifrīḳiya was now governed by Berbers, the Zīrids being Ṣanhādja [*q.v.*] Berbers from the central Maghrib who had helped crush the revolt of Abū Yazīd. For some time they resided in their own centre of Ashīr [*q.v.*], then left for Ḳayrawān and then al-Mahdiyya. The land had revived after the Khāridjite revolts, and Ḳayrawān functioned once more as the intellectual and economic capital of the province. But Zīrid power was weakened by military operations required against the pro-Umayyad Zanāta and the pro-Fāṭimid Kutāma, and their cousins of the Banū Ḥammād [see ḤAMMĀDIDS] created their own principality in eastern Algeria, with its own capital of Ḳalʿat Banī Ḥammād [*q.v.*]. Mālikī pressure from within Ḳayrawān led the Zīrid *amīr* al-Muʿizz b. Bādīs *ca.* 442/1050 to break with Cairo and renew allegiance to Baghdād at a moment when Shīʿism in the East was being rolled back by the Saldjūḳs. The Fāṭimid caliph al-Mustanṣir [*q.v.*] reacted by unleashing Arab tribesmen against the Maghrib, led by the Banū Hilāl. See further, ZĪRIDS.

The Banū Hilāl: history and epic

These were Arab nomads who had long before left their native Arabian peninsula and settled in Upper Egypt. They were allegedly, so the sources say, incited by a Fāṭimid vizier to migrate to the North Africa of the rebellious al-Muʿizz b. Bādīs. It does seem to have marked an increase in nomadism in the Maghrib and a setback to urban life (cf. the reflections of Cl. Cahen on the phenomenon of nomadism).

After its sacking by the Hilāl, Ḳayrawān lost its former role permanently, and the countryside saw an increase in pastoralisation; our accounts of the catastrophic effects here are, however, all from city-dwelling chroniclers, hostile *ipso facto* to Bedouin and nomads. What does seem certain is that the land of Tunisia now became deeply Arabised and thus achieved an ethnic and cultural coherence. Popular memory retained the story of the invasions and made out of them a tribal epic, with very long poems on the migration to the West, the love of Djāziya, the roles of Abū Zayd al-Hilālī and Dhiʾāb, etc. (see HILĀL. part 2, and add to the *Bibl.* there, ʿAmr Abu ʾl-Naṣr, *Taghrībat Banī Hilāl wa-rāḥilihim ilā Bilād al-Maghrib*, Beirut n.d.; M. Galley and Abd al-Rahman Ayoub, *Histoire des Beni Hilāl*, Paris 1983; L. Saada, *La geste hilalienne*, Paris 1985).

The whole question has aroused strong controversy. What J. Berque has called "the received historical view" of the damaging effects of the Hilālian devastations was given by W. Marçais, H. Terrasse and H.R. Idris. More recently, others have expressed a more nuanced view: J. Poncet and Cl. Cahen, *Quelques mots sur les Hilaliens et le nomadism*, in *JESHO*, xi [1968], 130-3; Berque, *De nouveau sur les Béni Hilāl?*, in *SI*, xxxvi [1972], 99-111, repr. as *Les Hilaliens au Maghreb*, in *De l'Euphrate à l'Atlas*, i, 55-88; M. Brett, *The military interest of the battle of Ḥaydarān*, in V. Parry and M.E. Yapp (eds.), *War, technology and society in the Middle East*, London 1975, 78-88; idem, *The Flood of the Dam and the Sons of the New Moon*, in *Mélanges offerts à Mohamed Talbi*, in *CT* [1993], 55-67; R. Daghfous, *De l'origine des Banū Hilāl et des Banū Sulaym*, in *CT* [1975], 41-68; idem, *Contribution à l'étude des conditions de l'immigration des tribus arabes (Hilāl et Sulaym) en Ifrīqiya*, in *CT* [1977], 23-50; idem, *Maʿrakat Ḥaydarān wa ʾl-ṣirāʿ al-Zīrī al-Hilālī*, in *CT*, clxix-clxx [1995], 11-26.

The towns which resisted, like Tunis, Sfax, Tozeur, Gabès and Tripoli, sought protection from Arab or Berber tribal chiefs. These petty city-states were governed by autonomous lines like the Banu ʾl-Ward at Bizerta, the Banu ʾl-Rand at Ḳafsa, the Banū Malīl at Safāḳus and the Banu ʾl-Djāmiʿ at Ḳābis. Mahdiyya remained in Zīrid hands until the middle of the 6th/12th century. In particular, Tunis enjoyed a certain security for a century under the rule of the Banū Khurāsān [*q.v.*]; the town was defended, the suburbs developed and the Jews were able to install themselves *intra muros*. The *amīrs* built a palace and a mosque to the southwest of the Zaytūna (see A. Daoulatli, *Djāmiʿ al-Zaytūna*, Tunis 1966), thus moving the town's centre of gravity and preparing it for becoming the third capital of Ifrīḳiya.

During this 5th/11th century, pressure on Tunisia appeared with the advent of the dynamic and dangerous element of the Normans in the Western Mediterranean, only just installed in southern Italy and Sicily but soon attacking the coasts of Ifrīḳiya, at al-Mahdiyya, the Kerkenna Islands [*q.v.*] and at Djarba. These were the prelude to several centuries of attacks, later by Angevins, Catalans and then by Spaniards and corsairs, whilst on the more peaceful level, Italian, Frankish and Catalan merchants traded at the Maghribī ports and negotiated commercial treaties. As part of a reaction within North Africa, whereas the Fāṭimids and Zīrids had tried to unify North Africa from Ifrīḳiya, new Berber dynasties like the Almoravids and Almohads appeared from southern Morocco and moved eastwards in attempts to unite the Maghrib and al-Andalus. The Almohads combatted the Banū Hilāl and proclaimed holy war against the Normans, who had taken advantage of the disorders to seize al-Mahdiyya, Safāḳus and Djarba. The Almohads nominated a governor for Tunis, chosen as capital of the province, whilst they themselves were besieging Marrakesh.

The Ḥafṣids

ʿAbd al-Wāḥid b. Abī Ḥafṣ, from the Moroccan tribe of the Hintāta [*q.v.*], was a great *shaykh* of the Almohads who was given the governorship of Ifrīḳiya in 603/1206-7, at a time which was troubled by the pretensions of the rulers of Majorca and those of Ḳarāḳūsh [*q.v.*], the lieutenant of the Ayyūbid Ṣalāḥ

al-Dīn. The distance of the Almohad rulers allowed the governor Abū Zakariyyā' Yaḥyā b. Abī Ḥafṣ to break with them in 627/1229 and affirm his autonomy, giving birth to a new dynasty which was to reign there for over three centuries. Abū Zakariyyā' simply styled himself *amīr*, but his son Abū ʿAbd Allāh called himself *amīr al-muʾminīn* and in 650/1253 assumed the caliphal *laḳab* of al-Mustanṣir. This line of development was, however, stifled by the rise and the success of the Mamlūks in Egypt, with the installation of an ʿAbbāsid caliph in Cairo.

After the French king Louis IX (St. Louis) had been checked in Egypt, he turned his attention more westwards, and had the idea of seizing Ifrīḳiya as a preliminary to marching against Egypt by land, impelled thus by his brother Charles of Anjou, king of Sicily, who wished to revive the former Norman ambitions in North Africa; but St. Louis died at Tunis in August 1270 and was buried on the hill at Carthage. The danger was over, for this was the last attempt at a crusade in the West.

In the mid-8th/14th century, the new power in Morocco of the Marīnids [*q.v.*] seriously threatened Tunis and the Ḥafṣids, with the capital Tunis twice occupied temporarily, in 748-50/1348-50 and in 758/1357. The Ḥafṣids nevertheless survived, and in the next century enjoyed a renaissance under rulers like Abū Fāris ʿAbd al-ʿAzīz (796-837/1394-1434) and his son ʿUthmān al-Manṣūr (839-93/1435-88). Tunis was now the intellectual and economic capital of the province, and a period of fine building and development ensued. The palace of the Ḳaṣaba, with its mosque, became the new centre of the city. The Zaytūna was enlarged, a new basin for ablutions, the *mīḍaʾat al-sulṭān*, was built, and the Roman aqueduct restored. The population increase was signalled by the need to construct a second city wall comprehending the new suburbs. New religious buildings—mosques for newly-laid out quarters, *madrasas* and *zāwiyas*—were constructed, with an artistic style reflecting the double influence of the East and of al-Andalus. See further, ḤAFṢIDS.

The skies were, however, clouding for the Ḥafṣids as Europe was taking the decisive steps towards modernity, with the "crusade for Africa" menacing the coasts of Ifrīḳiya after the reconquest of Granada in 898/1492, whilst in the east, the power of the Ottomans was rising. Spaniards and Turks were henceforth to dispute control of the Mediterranean. The corsairs who had occupied Algiers since 922/1516 seized Tunis in 941/1534 and expelled the Ḥafṣid sultan. Charles V's armies occupied Tunis in 942/1535 and restored him. A fortress was built at La Goulette to defend the port entrance. The corsairs called in Ottoman help, and took definitive control of Tunis in 982/1574, thus closing the classical period of the history of Ifrīḳiya and heralding the period of the Regency.

Bibliography: 1. Primary sources. The main sources here are listed in the *Bibl.* to IFRĪḲIYA, to which should be added the fragments of ʿUbayd Allāh b. Ṣāliḥ b. ʿAbd al-Ḥalīm, ed. Lévi-Provençal in *Un nouveau recit de la conquête de l'Afrique du nord par les Arabes*, in *Arabica*, i (1954), 17-43; this author's *K. al-Ansāb* has now been published, Madrid 1996. Of general works, for Ibn Aʿtham al-Kūfī, see H. Massé, *La chronique d'Ibn Aʿtham et la conquête de l'Ifrīḳiya*, in *Mélanges M. Gaudefroy-Demombynes*, Cairo 1935-55, 85-90. Ibn al-Athīr in his *Kāmil* utilised the lost works of al-Warrāḳ and al-Raḳīḳ al-Ḳayrawānī. Al-Nuwayrī devoted a complete volume to the history of the Maghrib and al-Andalus, vol. xxii of the Cairo 1983 ed. of his *Nihāya*. Of Western sources, a fragment of al-Raḳīḳ's *T. Ifrīḳiya wa 'l-Maghrib*, covering the period from the mid-1st century A.H. to the end of the 4th one, is ed. Mundjī al-Kaʿbī, Tunis 1968, and also ʿA.A. al-Zaydān and ʿI.D.ʿU. Mūsā, Beirut 1990. Ibn ʿIdhārī's *Bayān* remains one of the most detailed and best-documented sources. Of Ibn al-Ḳaṭṭān's *ʿIḳd al-djumān*, only the section on the end of the Almoravids and beginning of the Almohads has survived. Of Ibn Khaldūn's *ʿIbar*, there is a new critical ed. by Kh.Sh. Suhayl and S. Zakkār, 4 vols. Beirut 1988. Two late authors, nevertheless of some use, are Ibn Abī Dīnār (11th/17th century), *al-Mūnis fī akhbār Ifrīḳiya wa-Tūnis*, Tunis 1967 and Beirut 1993 (the latter ed. bringing nothing new), and al-Wazīr al-Sarrādj, *al-Ḥulal al-sundusiyya fi 'l-akhbār al-tūnisiyya*, Beirut 1984.

Of individual dynasties, for the Aghlabids, note a lost source on the dynasty utilised by al-Bakrī, Ibn al-Athīr, al-Nuwayrī and Ibn ʿIdhārī. For the Fāṭimids, see FĀṬIMIDS and its *Bibl.*, to which should now be added al-Ḳāḍī al-Nuʿmān, *Daʿāʾim al-Islām*, Cairo 1948; idem, *K. Iftitāḥ al-daʿwa*, ed. F. Dachraoui, Tunis 1968, and W. al-Ḳāḍī, Beirut 1970; idem, *K. al-Madjālis wa 'l-musāyarāt*, ed. H. al-Faḳī *et alii*, Tunis 1979; al-Dāʿī Idrīs ʿImād al-Dīn, *K. ʿUyūn al-akhbār* (*T. al-khulafāʾ al-fāṭimiyyīn bi 'l-Maghrib*), ed. M. Yalaoui, Beirut 1985. For the Almohads and Ḥafṣids, see the *Bibls.* to AL-MUWAḤḤIDŪN and ḤAFṢIDS, to which should be added Ibn al-Abbār, *al-Ḥulla al-siyarāʾ*, Cairo 1963; Ibn Ḳunfudh, *al-Fārisiyya fī mabādiʾ al-dawla al-ḥafṣiyya*, Tunis 1968; Ibn al-Shammāʿ, *al-Adilla al-bayyina al-nūrāniyya fī mafākhir al-dawla al-ḥafṣiyya*, Tunis 1984 (see on this author, R. Brunschvig, *Ibn al-Shammāʿ, historien hafside*, in *AIEO*, i [1934-5], 193-212); Zarkashī, *T. al-Dawlatayn al-muwaḥḥidiyya wa 'l-ḥafṣiyya*, Tunis 1966.

For the geographers and for travel narratives, see the *Bibl.* to IFRĪḲIYA, and also ʿUmarī, *Masālik al-abṣār*, section on North Africa tr. Gaudefroy-Demombynes, *L'Afrique moins l'Égypte*, Paris 1927, and ed. Casablanca 1988. Of travellers, see ʿAbdarī, *Riḥla*, Rabat 1968; Tidjānī, *Riḥla*, Tunis 1980; Ibn Rushayd, *Malʾ al-ʿayba*, Tunis 1982; Ibn Baṭṭūṭa, *Riḥla*, i, 21-5, tr. Gibb, i, 13-17; Balāwī, *Tādj al-mafriḳ bi-taḥliyat ʿulamāʾ al-mashriḳ*, Morocco n.d.; Ḳalaṣādī, *Riḥla*, sc. *Tamhīd al-ṭālib*, Tunis 1979; Brunschvig, *Deux récits de voyage inédits en Afrique du nord au XV^e siècle, Adorne et ʿAbd al-Basīṭ ibn Khalīl*, Paris 1936. On the genre, S. M'ghirbi, *Les voyageurs de l'Occident musulman du XII^e au XIV^e siècle*, Tunis 1996.

For biographical dictionaries, see Abu 'l-ʿArab al-Tamīmī, *Ṭabaḳāt ʿulamāʾ Ifrīḳiya wa-Tūnis*, Tunis 1968; Khushanī, *Ṭabaḳāt ʿulamāʾ Ifrīḳiya*, Cairo 1953; Mālikī, *Riyāḍ al-nufūs*, Beirut 1983-5; al-Dabbāgh and then Ibn Nādjī, *Maʿālim al-īmān fī maʿrifat ahl al-Ḳayrawān*, Tunis 1968-78. Specifically Mālikī ones include al-Ḳāḍī ʿIyāḍ, *Tartīb al-madārik*, Rabat 1983; Ibn Farḥūn, *Dībādj*, Cairo 1972, and the continuations (*dhuyūl*) of the *Dībādj* by Ḳarāfī, *Tawshīḥ al-Dībādj*, Beirut 1983, and Aḥmad Bābā's *Nayl al-ibtihādj*, Cairo 1939. For Khāridjite ones, see AL-IBĀḌIYYA and its *Bibl.*

Legal sources have a special interest, as described by Cahen and Talbi, and by S. Ghrab, in his *Kutub al-fatāwā wa-ḳīmatuhā al-idjtimāʿiyya, mithāl nawāzil al-Burzulī*, in *Ḥawliyyāt al-Djāmiʿa al-Tūnisiyya*, xvi (1968), 62-102. The great corpora of Mālikī law included those of Saḥnūn [*q.v.*], Ibn Saḥnūn, Ibn

al-Furāt, Ibn Abī Zayd al-Ḳayrawānī, Ibn Djazzār and al-Ḳābisī (cf. H.R. Idris, *Deux juristes kairouanais de l'époque zīride: Ibn Abī Zaid et al-Qābisi*, in *AIEO*, xii [1954], 173-98). Maghribī scholars produced *fahāris* or *barāmidj*, the equivalents of the *mashyakhas* of the East, in which the names of their masters are noted, as with the *Fihrist* of al-Raṣṣā', Tunis 197?. For collections of *fatwās* and *nawāzil*, see the works of Burzulī and Wansharīsī mentioned in NĀZILA, and also Māzarī, *al-Mu'lim bi-fawā'id Muslim*, Tunis 1988; Maghīlī, *al-Durra al-maknūna fī nawāzil Mazzūna*, still in ms. but studied by Berque, *En lisant les nawāzil Mazzūna*, in *SI*, xxxii [1970], 31-9; H. Touati, *En relisant les nawāzil Mazouna, marabouts et chorfas au Maghreb central au XV^e siècle*, in *SI*, lxxvii [1993], 75-94); other ms. works exist by Ibn Shabbāt and Ibn al-Rāmī. The formularies of notaries are valuable for the light which they throw on private life: Ibn Munāṣif, *Tanbīh al-ḥukkām fi 'l-aḥkām*, Tunis 1977; al-Ḳāḍī 'Iyāḍ and his son Muḥammad, *Madhāhib al-ḥukkām fī nawāzil al-aḥkām*, Beirut 1990; Ibn 'Abd al-Rafī', *Mu'īn al-ḥukkām 'ala l-ḳaḍāyā wa 'l-aḥkām*, Beirut 1989. Hispano-Maghribī *ḥisba* treatises include Ibn 'Umar, *Aḥkām al-sūḳ*, Tunis 1975; see also Abū 'Ubayd al-Ḳāsim b. Sallām, *K. al-Amwāl*, Beirut 1988.

Hagiographical sources: many *manāḳib* works on the saints of Tunis are still in ms., but see e.g. the *manāḳib* of Muḥriz b. Khalaf [*q.v.*]. ed. Idris, Paris 1959, of al-Sayyida 'Ā'isha al-Mannūbiyya, Tunis 1925, of Shaykh Aḥmad b. 'Arūs by Rāshidī, Tunis 1303/1885, of Sayyidī Abu 'l-Ḥasan al-Shādhilī, by al-Ṣabbāgh, Tunis 1886; and of al-Daḥmānī, by al-Dabbāgh; also Ibn al-Ḳunfudh, *Uns al-faḳīr*, Rabat 1965; Ibn Khaldūn, *Shifā' al-sā'il li-tahdhīb al-masā'il*, Tunis 1991.

2. Studies. A survey of recent general histories of the Maghrib is given by M. Chapoutot-Remadi, *Thirty years of research on the history of the medieval Maghrib (seventh to sixteenth centuries)*, in M. Le Gall and K. Perkins (eds.), *The Maghrib in question. Essays in history and historiography*, Austin, Texas 1997, 35-61. On Tunisia specifically, H. Djaït *et alii*, *Histoire de la Tunisie*, ii, *Le Moyen-Age*, Tunis 1960; H.H. 'Abd al-Wahhāb, *Waraḳāt ta'rīkh Tūnis*, Tunis 1965, 1981; M.H. Sharīf, *Ta'rīkh Tūnis*, Tunis 1980. Of recent works on individual dynasties, F. Dachraoui, *Le califat fatimide au Maghrib 296-362/909-973*, Tunis 1981; H. Halm, *Das Reich der Mahdi. Der Aufstieg der Fatimiden (875-973)*, Munich 1991, Eng. tr. M. Bonner, *The empire of the Mahdi. The rise of the Fatimids*, Leiden 1996. (MOUNIRA CHAPOUTOT-REMADI and RADHI DAGHFOUS)

(c) The period from *ca.* 1500 to 1881.

What might be called "the modern period"—a European historical concept, but nevertheless pertinent here—in Tunisian history, began in Ifrīḳiya around the opening of the 16th century, with a severe crisis, involving the break-up of the old-established Ḥafṣid state, the collapse of urban and sedentary societies and the recovered autonomy of the tribes (cf. Leo Africanus, tr. Epaulard, ii, 374-94). The deeply-troubled land now became a military and political vacuum attracting the great powers of the Mediterranean basin, the Spaniards and the Ottomans. The struggle between these latter two powers lasted some forty years, ending with the Ottoman victory of 1574, supported by the majority of the local inhabitants, or, at least, of the town-dwellers (see Ibn Abī Dīnār, *al-Mūnis fī akhbār Ifrīkiya wa-Tūnis*, Tunis 1967, 160-3).

Tunis now became an Ottoman province, like Algiers and Tripoli, with the sultan represented there by a *pasha* or governor, a handful of secretaries, a *ḳāḍī efendi* at the head of the judicio-legal institution, and above all, a militia of 3,000 Janissaries and a *dīwān* closely connected with this militia and forming the governor's council. It was a régime of military occupation which, in fact, intervened little in the daily lives of the people, except for questions connected with the maintenance of public order, obedience to the new masters and taxation, apart from these leaving the subjects alone with their traditional institutions, religious or customary, which the régime was content to control or at least utilise to its own profit. Although the hand of the régime was light, it nevertheless had significant consequences for the land: it made it into an entity distinct from its neighbours, the future framework for the state and then the nation of Tunisia, and it introduced there a certain "modernity". This last took the form of a more modern type of army; a central, paper-shuffling bureaucracy, however rudimentary; and relations with lands across the seas—the Ottoman empire, from which the régime

derived its legitimacy, its Janissaries and secretaries and which offered an immense unified commercial market, and Christian Europe, from which came manpower, such as slaves, who might become powerful *mamlūks*, adventurers and merchants, bringing goods and precious currency, acquired from around 1580 onwards by privateering [see ḲURṢĀN. i.] and then, from the 17th century onwards, by trade. With this process taking place, there took shape within Tunisia a kind of split between a Mediterranean outlook, marked by links with the outside world and the means for dominating the rest of the land, and a hinterland, devoted to traditionalism and stagnation.

Towards the end of the 16th century, the government of the province (*iyāla*) evolved into what was in effect a régime autonomous of Istanbul, paralysed by a prolonged crisis: the Turks, permanently installed in Tunis, seized power by means of the junior officers of the militia, the *deys*, who surrounded and invested the *dīwān* in 1591 (R. Mantran, *L'evolution des relations entre la Tunisie et l'empire ottoman du XVI^e au XIX^e siècle*, in *CT*, xxvi-xxvii [1959], 319-33). The province took on thereafter, in European eyes, its "barbaresque" denomination and permanent characteristics: privateering activity (with its golden age in the first half of the 17th century); the enslavement of Christians (a real phenomenon, although widely exaggerated); and an internal "tyranny", which, as well as being something rather strange and barbarous, was valid for the whole of the Maghrib (L. Valensi, *Le Maghreb avant la prise d'Alger*, Paris 1969, 15-17, 94-112). In practice, the internal situation, political and social, continued to evolve. One of the Deys, ʿUthmān, "seized complete control of decision-making" (*infarada bi 'l-kalima*) in 1595 or 1598 and set up a kind of principate which, whilst perpetuating the Turkish and military dominance and whilst benefiting from the proceeds of corsair activity (at this time at its apogee), did not hesitate to rein in the excesses of the soldiery and encouraged the peaceful activities of the local people and of emigrants coming in from outside. Thus the Moriscos [*q.v.*], expelled from Spain in 1609, now came to play an important role in the increase in artisanal and agricultural activity characterising this period (see J.D. Latham, *Towards a study of Andalusian immigration in Tunisian history*, in *CT*, xix-xx [1957], 203-52); the Jews of Leghorn were natural intermediaries between the two shores of the Mediterranean; and finally, European merchants were installed at Tunis under the terms of treaties imposed, but in part warmly welcomed by one element of the ruling class, including the Dey (see P. Sebag, *Tunis au XVII^e siècle. Une cité barbaresque au temps de la course*, Paris 1989, 173; T. Bashrūsh, *Djumhūriyyat al-dāyāt fī Tūnis 1591-1675*, Tunis 1992, 63, 78, 107; J.M. Abun-Nasr, *The beylicate in seventeenth-century Tunisia*, in *IJMES*, vi [1975], 70-7).

This régime of the preponderance of the Deys, efficacious in Tunis and other places where there was a Turkish presence, progressively gave way to the predominance of the Murādī Beys from the middle of the 17th century onwards. These descendants of Murād, who had originally been a *mamlūk* of Corsican origin, were, as beys, commanders of the fiscal military organisation (*maḥalla* [*q.v.*]), and they now succeeded in breaking the resistance of the warrior tribes (Awlād Saʿīd, Awlād Shannūf, etc.) and in extending, within certain limits, the control of Tunis over the country's interior after some fifteen years of fighting (from 1628 onwards). They could thus now draw fresh resources from it and form new means of support, largely indigenous, thus enabling them to counterbalance the "Turkish" military institution and that of its representative, the Dey. Furthermore, responding to the demands of the local milieu, they re-established links with the earlier Ḥafṣid monarchical traditions. They founded a hereditary dynasty, and organised a royal court at Bardo, outside Tunis and away from the Janissary barracks; there at Bardo they brought together their military and civil "household", with their clients and their apologists and propagandists (see Ibn Abī Dīnār, *op. cit.*, 229-42). They did not, however, renounce at this time their "Turkish" or Ottoman allegiance, since they continued to depend on the services of the Janissaries and on privateering. But, thanks to local support, they managed to bend the Deys to their own authority and to frustrate by force the several attempts to restore the latter's power (in 1673, 1685-6 and 1694-5, on this latter occasion with the support of the Dey of Algiers to the "Turks" of Tunis). In regard to the latter, the Murādī Beys would figure as "Arab princes", unfaithful to their Ottoman suzerain (Plantet, *op. cit.*, 416-30); thus the Dey of Algiers would intervene at Tunis with the aim of putting an end—without, however, great success—to an evolution which could have been contagious, as much as by a desire for plunder. For other reasons, the Murādī line disappeared in 1702, the victim of a concatenation of internecine conflicts and the excesses of its last Beys, in addition to the discreet intervention of the Ottoman Porte. A Turkish officer who came back from Istanbul overthrew the Bey and then eliminated the rest of his family. He tried to restore the Turkish preponderance, but without success; at the first reverse which he suffered at the hands of the forces of Algiers, in July 1705, his attempt to turn back the clock collapsed leaving no trace, a sign of the irreversibility of the land's political evolution in the course of the 17th century.

It fell to his successor adeptly to take advantage of the "monarchical" experience begun by the Murādīs. Al-Ḥusayn b. ʿAlī (I), a *kulughlī* [see ḲUL-OGHLU] and leading member of the ruling class, appointed to the functions of Bey by the authorities and notables of Tunis, succeeded in repelling the invaders from Algiers (October 1705) and in rapidly eliminating rivals. He utilised at one and the same time support from the Janissaries, the *mamlūks*, and above all, the forces of the local notables of the land (caïds-*lazzām*, the *shaykhs* of local communities, local military groups, religious leaders, etc.). He concentrated all power into his own hands, whilst maintaining the old institutions (the Dey, the *dīwān* and the council), which willingly submitted to his will rather than to the inevitable Ottoman allegiance. In order to increase the resources at his disposal, he encouraged local production and commerce, but intervened in economic affairs to ill effect. He had recourse to the *mushtarā* (gathering together cereals at a low price and re-selling them to the benefit of Christian merchants) and developed tax-farming (*lizma*) at all levels, measures which were consonant with the growth of European commerce (M.-H. Chérif, *Pouvoir et société dans la Tunisie de Ḥusayn bin ʿAlī, 1705-1740*, Tunis 1984, i, 119-50, 184-9, 195-204). For various reasons, internal as much as external, the land suffered a long series of troubles between 1728 and 1762: civil war between the supporters of the Bey and those of his nephew ʿAlī (1728-9, and then 1735-40), the despotism of ʿAlī Bāshā (1740-56), and invasions from Algiers supporting one side or the other (1735, 1756, on the last occasion involving the sack of the capital, with distressing excesses which the population were slow to forget) (Plantet, *op. cit.*, ii, 500-5).

When peace returned in 1762, the Ḥusaynid régime benefited from more than half a century of stability and consolidation, internal as well as external, in the reigns of ʿAlī Bāy (1759-82) and Ḥammūda Bā<u>sh</u>ā (1782-1814). These successful policies were explicable by the closer alliance of the dynasty with local notables (not, however, excluding allegiance to the Ottomans and the ruling classes' connection with the "Turks") and by skilful exploitation of favourable internal circumstances (*ca.* 1760-75) and external ones (the wars of the French Revolutionary period and the Empire). The increase of European commerce in Tunis during the second half of the 18th century likewise benefited from this atmosphere, securing profit for the persons involved, the state and its associates and clients (Abun-Nasr, *The Tunisian state in the eighteenth century*, in *ROMM*, xxxiii [1982], 33-61; D. Panzac, *La Régence de Tunis et la mer à l'époque de Hammouda Pacha Bey (1782-1814)*, in *CT*, clxv [1993], 65-84).

Society in Tunis, for its part, belonged undoubtedly to the late Arab-Islamic civilisation, marked by its conservatism, even devotion to the past, on the material, social and mental levels, and characterised by unchanging techniques, the segmentation into patrilineal families, in separate communities (as well as the age-old rivalry between towns and countryside), submission to "patriarchal" authority (in the sense used by Hisham Sharabi, *Le néo-patriarchat*, Fr. tr. Paris 1996), etc. The "Tunisian" land was, moreover, distinguished by a massive presence of tribes in the countryside and by a relatively homogeneous culture, overwhelmingly Arab and Mālikī Sunnī. In modern times, rural society did not change appreciably (Valensi, *Fellahs tunisiens, l'économie rurale et la vie des campagnes aux 18ᵉ et 19ᵉ siècles*, Paris-The Hague 1977, 365-8) except for interventions by the beylicate, which had several consequences. It broke the power of the great tribes; consolidated the position of a class of notables (e.g. caïds, <u>sh</u>*ay*<u>kh</u>s and marabouts with a wide following), which became its clients; and it favoured an economy of money circulation through its direct or indirect functions and its initiatives (*mu<u>sh</u>tarā*, the farming out of its dues, creation of souks, etc.). Yet all things considered, this "progress" was limited because of numerous blocking factors, technological, demographic, mental and political. It is more on the level of the towns that one should seek change as a result of borrowings from the Andalusī immigrants, the Ottomans and others, which were felt in the spheres of food, habits, music and architecture, at least in Tunis itself, from the 17th century onwards. European influences on society showed themselves somewhat later, in the 19th century, but in a deeper and more lasting manner. The body of *ʿulamāʾ* expanded progressively from this century onwards and became hierarchically differentiated. As a result, they functioned as allies of the central power which gave them a privileged position, but they maintained a certain distance, especially in cases of conflict between Muslims (e.g. the war with Tripoli 1793-4; cf. Ibn Abi 'l-Ḍiyāf, *Itḥāf ahl al-zamān bi-a<u>kh</u>bār mulūk Tūnis wa-ʿahd al-amān*, Tunis 1964, iii, 23-4) or when reforms inspired by modernism were in the air, *ca.* 1860 (A. Ben Achour, *Catégories de la société tunisoise dans la deuxième moitié du XIXᵉ siècle*, Tunis 1989, 443-4). The new ideas flourished more amongst the local scholars connected with the *Ma<u>kh</u>zan* or with the lands outside; this was the case with the apologia for "progress" and an opening-up for commerce presented by the minister-secretary Ḥammūda Ibn ʿAbd al-ʿAzīz *ca.* 1775 (Chérif, *Ḥammūda Ibn ʿAbd al-ʿAzīz wa-afkāruhu "al-taḳaddumiyya"*, in *Rev. Hist. Maghreb.*, lvii-lviii [1990], 211-19), or further, with the modern notion of the fatherland [see WAṬANIYYA] set forth by Ibn Abi 'l-Ḍiyāf and his imitators in the 19th century (see A. Demeersman, *Formulation de l'idée de patrie en Tunisie (1837-1872)*, in *IBLA*, cxiii [1966], 35-71, cxiv-cxv [1967], 109-42; A. Abdesselem, *Les historiens tunisiens des XVIIᵉ, XVIIIᵉ et XIXᵉ siècles, essai d'histoire culturelle*, Paris 1973, 122-3). Artisans and traders who were in contact with the outside world, the great caïds-*lazzām* and the exporters of the products of the land, were, in their fashion, the vehicles for modernity, despite a traditional way of life and culture. The trade of manufacturing <u>*sh*</u>*ā*<u>*sh*</u>*iyya*s or chéchias, headgear introduced first by Morisco refugees and then taken up by indigenous craftsmen [see LIBĀS. i and ii, Glossaries], is an example of an activity of a capitalist type, in the sense of the term for that time (Valensi, *Islam et capitalisme: production et commerce des chéchias en Tunisie et en France aux 18ᵉ et 19ᵉ siècles*, in *Rev. Hist. Moderne Contemporaine*, xvii [1969], 376-400). At the beginning of the 19th century, a certain Ḥād<u>jdj</u> Yūnis al-<u>D</u>jirbī handled business on a Mediterranean scale (Panzac, *op. cit.*, 80), and *ca.* 1840-50, the trading and other activities of one Ben ʿAyyād brought to mind, through his ways of conduct and his mentality, the entrepreneurs and captains of industry of overseas lands (L.C. Brown, *The Tunisia of Ahmad Bey 1837-1855*, Princeton 1974, 342-3). But in the end, this was only an aborted "bourgeoisie", because of the traditionalism with which it was imbued, its non-evolving, imported techniques, the patrimonialism of the state and, finally, because of its dependence *vis-à-vis* the European capitalism with which it had to operate, in particular after 1815.

The 19th century was the age of European expansion, which became irresistible in all spheres and which provoked in Tunisia an upsetting of the earlier political and social state of balance, as elsewhere outside Western Europe. The expedition of 1815-16 of Lord Exmouth proclaimed to the Ma<u>gh</u>rib the new relationship involving force, and it brought about, more than the ending of corsair activity (by now moribund anyway), a liberty of commerce on the best possible conditions. The Bey of Tunis bowed to the exigencies coming now from Europe, on this occasion and on others, but soon found himself in a state of financial difficulty, whose burden he now placed on the shoulders of his subjects, whence the discontents of these latter, headed by the notables, and revolts (Chérif, *Expansion européenne et difficultés tunisiennes, 1815-1830*, in *Annales ESC* [May-June 1970, no. 3], 714-45). In 1830, the French installed themselves in Algiers, and in 1835 the Ottomans at Tripoli. In Tunis, Aḥmad (I) Bey (1837-55), faced with such threats, had recourse to an audacious policy of reforms. Out of this came a further step towards the feeling of the régime's Tunisian national identity (although it never ceased to proclaim its faithfulness to the Ottomans); the consolidation, in a certain sense, of the structures of state; the appearance of a core of men at court won over to the idea of reform; but also, the abortiveness of several ill-framed measures, unsurmountable financial problems, and sources of abuses and discontent (Brown, *op. cit.*, 348-56; Kh. Chater, *Dépendance et mutations précoloniales. La Régence de Tunis de 1815 à 1851*, Tunis 1984, 560-83).

Under Aḥmad's successors, reforms were accelerated under pressure from European consuls but also in response to a group of Tunisian reformers grouped round the person of <u>Kh</u>ayr al-Dīn [*q.v.*]: in particular, the grant of guarantees to the subjects in 1857

and a constitution in 1861. At the same time, extensive public works—of doubtful utility—were begun, juicy contracts were concluded with unscrupulous intermediaries, and finally, heavy outside loans were obtained on catastrophic conditions (extravagant commissions obtained over wine-bibbing, even downright fraud). The Bey was driven to raise taxes to intolerable levels, provoking a near-general revolt in 1864, that of ʿAlī b. Ghidhāhum [see IBN GHIDHĀHUM, in Suppl.], followed by merciless repression which left the land in ruins and permanently irreconciled. At the end of this infernal cycle, aggravated by the natural calamities of 1867-8, the beylicate announced its bankruptcy. An international financial commission was then in 1869 charged with overseeing the country's revenues in order to secure repayment of the debt (J. Ganiage, *Les origines du protectorat français en Tunisie (1861-1881)*, Paris 1959, 177-402). The defeat of France, the main pressuriser of the Tunisian government, in the Franco-Prussian War of 1870, gave Tunisia a momentary breathing-space, used by Khayr al-Dīn, now prime minister, to put affairs in order and to apply realistic reforms. But in 1877 he fell from power, and the descent to the abyss was resumed to France's profit, who succeeded in setting aside its rival Italy and in installing itself comfortably in Tunis under the Treaty of Protectorate imposed on the Bey on 12 May 1881. This was the logical outcome of a relationship based on force unfavourable for Tunisia for decades, but it was also the launching-pad for the new policy of colonial expansionism.

Tlili, *Les rapports culturels et idéologiques entre l'Orient et l'Occident en Tunisie au XIX^e siècle, 1830-1880*, Tunis 1974; and for a list of the Ḥusaynid Beys and a brief sketch of their history, C.E. Bosworth, *The New Islamic dynasties, a chronological and genealogical manual*, Edinburgh 1996, 55-6 no. 22.

(MOHAMED-HÉDI CHÉRIF)

(d) The period of the Protectorate and the establishment of independent Tunisia.

This period involved struggles for the achievement of national identity and then of national independence, led first by the reformist movement on the eve of the Protectorate and then by the nationalist movement during the Protectorate.

The situation before the imposition of the Protectorate

European penetration of Tunisia had begun in the mid-19th century as the balance of forces between East and West increasingly tipped in favour of the latter, favoured by the almost universal decadence of the Regency, permitting first commercial and financial penetration and then political and military by the outside forces. Commercial penetration was seen in the unequal treaties imposed on Tunisia by Britain in 1863 and 1875 and by Italy in 1868. By the terms of these, the Tunisian government could not forbid or limit the import of British and Italian goods, which were only to pay an 8% entry tax and be free of all internal dues to which the indigenous Tunisian products were subject. France profited equally from these arrangements by virtue of her most-favoured-nation status. There was also a financial penetration, aided by the policies of the Tunisian government in the 1860s of borrowing from the European powers. Once the Bey became unable to keep up interest payments, France, Britain and Italy intervened to place the country's finances under their tutelage and to protect their interests, so that under their pressure, the Bey Muḥammad (III) al-Ṣādiḳ (1859-82) set up in 1869 the *Commission financière internationale*, made up of Tunisians and foreigners, which acted until 1884 as in effect the real ministry of finance in Tunis.

This financial and economic control limited considerably Tunisian sovereignty in these spheres, and increased in the 1870s. Western Europe entered a period of economic depression in the period 1873-96, involving a shrinkage of the European internal market, resulting therefore in the piling-up of industrial products and capital. In order to find outlets and fields for investment outside Europe, France embarked on a policy of colonial expansion which was to lead, in Tunisia, to its occupation and the establishment of the Protectorate.

The Protectorate

Hence on 24 April 1881 a French army of 35,000 men invaded the Regency of Tunis from Algeria. At the same time, the Naval Division of the Levant sailed from Toulon, and on 1 May the Brigades of Mourant and Bréart landed at Bizerta. On 8 May General Bréart marched on Tunis and on the 12th appeared at the beylical palace of Bardo with a contingent of troops. The Bey bowed to *force majeure* and signed the Treaty of Bardo establishing French hegemony in Tunisia. The act of 12 May, euphemistically called a treaty, was in fact a French *diktat* imposed on Muḥammad al-Ṣādiḳ. It did not deprive the Bey of all powers but merely ensured French preponderance in Tunisia to the exclusion of all other European powers. It deprived the Bey of freedom of external action, since he was now unable to treat with any outside power without the consent of the French government.

It was only by the Convention of La Marsa imposed on ʿAlī (III) Bey (1882-1902) on 8 June 1883 that France established a real protectorate over Tunisia. The Treaty of Bardo had just reserved control of external affairs to France, but by this convention, the Bey's internal control of affairs was encroached upon without, however, it being suppressed altogether. Nevertheless, by promising to implement the administrative reforms which France judged useful and to contract no loans for the Tunisian state without the sanction of the French government, the Bey in fact placed himself within the hands of the French Republic.

In the period which followed, the Bey was little more than a decorative figure-head justifying the Protectorate in the eyes of French, Tunisian and European public opinion. He lost all his prerogatives to the Minister Resident, elevated in June 1885 to the status of Resident-General, who now became the real master within the Regency. Some Tunisian ministers were admittedly retained in the government, but their number was reduced to two (as against five French ones); the prime minister and the "minister of the pen", who were chosen by the Resident-General, hence could only function under his orders. Their role, wrote the Resident Paul Cambon, was limited to "putting into effect through local officials decisions taken by the Bey at the behest of the heads of the different administrative departments and after the Resident's previously-bestowed assent". The two Tunisian ministers were in any case under the oversight of a French official, the Secretary-General whose functions, as laid down in February 1883, made him the real director of the Tunisian administration. The Protectorate provided, it was true, that local administration should remain in the hands of indigenous Tunisian *ḳāʾids*, *khalīfas* and *shaykhs*, but a body of French officials, called civil controllers, was set up in

1884 to supervise them; their role was thus comparable to that of the Resident-General *vis-à-vis* the Bey and the Secretary-General *vis-à-vis* the Tunisian ministers.

Economic change

This political and administrative tutelage obviously created favourable conditions for an economic tutelage, seen, in an agricultural economy, in land colonisation. This last process, begun before 1881, increased in intensity with the Protectorate. In the period 1881-92 the French government opened up Tunisia to capitalists investing in land colonisation, a private system of colonisation. The Protectorate administration contented itself with assuring these capitalists of "perfect security, good administration and a satisfactory development of a communications system". But after 1892, a system of official colonisation was instituted side-by-side with the private one. This official system involved centralising as much land as possible into the hands of the state so that it could be granted out at moderate charges and with facilities for repayment to French nationals. Also, whilst the private system was concerned with *milk* land on more or less legal conditions, the state system was concerned with "dead" lands, collective lands, forest lands and habous (*ḥubūs* = *awḳāf* [see WAḲF]).

In this way, French-owned land which had amounted to some 114,000 hectares on the eve of the Protectorate, by 1892 amounted to 443,000 ha and in 1914 to 560,000 ha. If one adds to these the lands acquired by the Land Service which were not yet allocated, and those acquired by other Europeans, especially Italians, amounting to over 130,000 ha, nearly one million hectares passed from Tunisian ownership to that of European nationals. These lands were usually situated in the most fertile and well-watered regions and had constituted the best territories of the Regency. This foreign grip on this preponderant economic sector led to a decline in other sectors such as stock rearing, artisanal activities and commerce directly or indirectly linked with them.

The situation by the nature of things provoked a reaction against European penetration, at first from the native Tunisian élite and then by wide sections of the population against French domination.

The reformist movement and resistance to penetration

The promoters of the patriotic movement saw themselves as protectors of the sovereignty of their land against the European powers. Fascinated by the rise and development of Western Europe, they themselves sought to learn from it the means and power of resisting European influences.

The movement first appeared in the 1840s with Aḥmad (I) Bey (1837-55), an enlightened ruler who was inspired by Western ideas to embark on a programme of reforms. His army was reorganised with French aid and on the French model, with a polytechnic college founded in 1840 at Bardo to train competent officers. It was the first modern educational institution in Tunisia, and formed for its students a real window on science, civilisation and Western methods. In 1846 the Bey abolished slavery in the Regency before making an official visit to France which confirmed him in his modernist convictions, and the officials who accompanied him, headed by K͟hayr al-Dīn Pas͟ha [*q.v.*], and these last, with the support of graduates from the polytechnic college formed the new reformist movement, so that it continued after Aḥmad's death in 1855 under his successor Muḥammad (II) Bey (1855-9). The latter promulgated on 9 September 1857, mainly under pressure from the consuls of outside powers but also from that of internal reformists, the Fundamental Pact which, as in modern states, guaranteed rights to all inhabitants of the Regency irrespective of religion and nationality, in effect, security of life and private property, equality before the law, equality of tax burdens and freedom of worship. It envisaged the grant of a constitution, in fact proclaimed by Muḥammad (III) al-Ṣādiḳ Bey (1859-82) on 21 January 1861. This document limited the powers of the Bey and his ministers and, in theory, ended absolute power. It was the basis for a new political system involving a separation of powers, with a legislative assembly, the Grand Council, and court with judges who could not be removed. Despite its suspension in 1864 during a politically troubled period in Tunisia, the reformist movement remained attached to a modernist and democratic programme. Its chief, K͟hayr al-Dīn Pas͟ha, who resigned in 1862 his presidency of the Grand Council in protest against the violation of the constitution by the Prime Minister, occupied himself with strengthening the reformist current by providing it with a theoretical basis in his book of 1867, *Aḳwam al-masālik fī maʿrifat aḥwāl al-mamālik* "The most straightforward of ways for knowing the state of the lands". In it he attributed the decadence of the Islamic countries to their arbitrary and unjust systems of governance, and advocated the adoption of Western-type political systems based on liberty, justice and the respect for laws, which would bring about the appropriate intellectual and cultural climate for scientific and technological progress which would benefit the Islamic lands; the Western system of democratic and constitutional government was in no way contrary to Islam, and both systems shared a common origin in the ancient world (for further analysis, see K͟HAYR AL-DĪN PAS͟HA, at Vol. IV, 1154b).

He became Prime Minister in 1873, but was unable to introduce a parliamentary system into Tunisia or even to restore the 1861 constitution. He had to be content to lay the foundations for a state based on law by codifying laws and determining the duties of state officials in order to transform the state from an instrument of exploitation to one which would serve the people. He aimed at reconciling the people with the state, to guarantee their persons and property, hence stimulate them to work and develop the resources of the land. Such a policy also implied modernisation of the educational system in order to produce persons capable of carrying out such policies. Hence in 1875 he created the Ṣādiḳī college, parallel to the Polytechnic created at Bardo in 1869, with teaching provided in the natural and human sciences and in foreign languages, and utilising the services of foreign, above all French, instructors with their modern pedagogical techniques. Thus the College became a symbol of modernism and a link between the Arabo-Muslim and the Western civilisations, and its products formed a link between the reformist movement and the nationalist movement which grew up soon after the establishment of the Protectorate (see further on the college, AL-ṢĀDIḲIYYA).

The beginning of the nationalist movement

This manifested itself as a continuation of the reformist trends, with a continuity of personages from K͟hayr al-Dīn through ʿAlī Bās͟h Ḥamba and ʿAbd al-ʿAzīz al-T͟haʿālibī up to Bourguiba, and following essentially the policies set forth by the reformists before 1881, sc. constitutional institutions based on justice, freedom and equality before the law, and an educational system necessary for the renaissance and independence of Tunisia.

These ideas of an élite were far from the level of feelings of the mass of population, who reacted rather to the economic and social contradictions of the Protectorate régime as they touched their own basic interests; but it was the handful of reformers who led the movement of the creation of a national spirit, hence the foundations for a national movement. This last comprised, from the opening of the 20th century to 1956, three successive phases, those of the Young Tunisian movement, of the liberal constitutional Destour (*Dustūr*) party and then the Néo-Destour.

The *Mouvement Jeunes-Tunisiens* rose out of a journal, *Le Tunisien*, founded in 1907 by ʿAlī Bās̲h̲ Ḥamba, advocating a programme of economic, political and social measures within a modernist and nationalist framework. In the economic sphere, it mainly advocated the modernisation of agriculture and local industries through the provision of credit facilities, professional training and fiscal reforms aimed at combatting foreign competition. In the social sphere, the possibility of providing land for small Tunisian cultivators, re-acquiring lands allotted to foreign colonists, local control of public works, free and compulsory primary education and access to a secondary one, availability of higher education to the Tunisian élite and the right of Tunisians to all administrative posts on the same conditions as French persons. In the political sphere, the adoption of modern principles of rights and duties of governments and citizens would mean the participation of Tunisians in public life where such matters as taxation and their specific interests were involved. A reorganisation of the Tunisian judicial system was envisaged, on the basis of a separation of powers in the state and the codification of laws. The Young Tunisians did not therefore demand Tunisia's independence but simply a share in their country's government, and even set forth their programme as "un concours loyal à la France pour l'aider dans sa mission civilatrice". Nevertheless, by revealing the economic, social and political antagonisms with which large sections of the Tunisian population lived, they fostered the emergence of a public spirit which created conditions favourable to the emergence of a broader nationalist party.

This was the *Parti Libéral Constitutionel* founded in March 1920 under the leadership of ʿAbd al-ʿAzīz al-T̲h̲aʿālibī [*q.v.*], better known as the Destour Party. This grew out of the former movement, but went beyond its élitist character to become a party open to the masses and with, for the first time, a structure, a formal programme and means of action linking all its members. In the long term, this programme envisaged the ending of the Protectorate and the achieving of independence, but in the short term it aimed at a constitutional régime enabling the Tunisian people to govern themselves, with only the conduct of external affairs reserved to the French government.

In order to realise its aims, the Party had during the 1920s to mobilise all classes of society and acquire a wide popular constituency. By 1924, the Protectorate authorities estimated its adherents at 45,000 without counting a much larger number of sympathisers not officially registered as members. During this period, it had about 60 branches. Even so, the Party remained moderate in its demands, limited to reforms within the framework of the Protectorate, and in its methods of action. Its leadership rejected violence and was suspicious of mass movements for fear of being outflanked or compromised. Hence it came into conflict with a group of young nationalists, who had returned from study in Paris at the end of the 1920s, familiar with the techniques of mass action and the mobilisation of the masses employed by European Communist and Fascist parties. In 1932 they grouped themselves under Ḥabīb Bū Ruḳayba (Bourguiba) around a French-language journal, *L'Action Tunisienne*, which immediately began to reflect the radicalisation of the nationalist movement in Tunisia.

The Néo-Destour and the radicalisation of the nationalist movement

The leaders of *L'Action Tunisienne* took advantage of the economic and social crisis gripping Tunisia in the 1930s to lead the masses into political action. Thus it drew them into a struggle against the burial of Tunisians who had become naturalised French citizens in Muslim cemeteries. Hence the Destour Party congress in Tunis of May 1933 decided unanimously to associate the *Action Tunisienne* team with its own Executive Committee. The team manoeuvred to capture the whole of the party by an extraordinary congress held at Ḳaṣr Hilāl in the Sahel in March 1934, which resolved to dissolve the old Destour Party's Executive Committee and replace it by a new Political Bureau, led by Dr. Maḥmūd Māṭirī and with Ḥabīb Bū Ruḳayba as its Secretary-General (for details, see ḤIZB. i. at Vol. III, 524). In reality, the divergency of the so-called *archéos* and *néos* was largely one of methods of achieving similar programmes, but the Néo-Destour was now more in tune with the aspirations of the Tunisian masses and accelerated its demands. The Liberal Constitutional Party, the old Destour, lingered on until the violent events of April 1938, al-T̲h̲aʿālibī having been contemptuously rejected by the new party in the previous year (for details, see AL-T̲H̲AʿĀLIBĪ).

After the Second World War, the Néo-Destour became much more radicalised, with its resistance to French control taking on the character of an armed struggle in the early 1950s, leading to the achievement of internal autonomy on 3 June 1955 and full independence on 20 March 1956.

Bourguiba and the constructing of the modern state of Tunisia

This involved completing the country's independence, providing it with a constitution, developing a modern system of education and adapting Islamic legislation to the exigencies of modern times. The achieving of complete sovereignty involved further conflict with France until on 17 June 1958 French troops evacuated bases in Tunisia, with the evacuation of the naval base at Bizerta following on 15 October 1963. On 12 May 1964 Bourguiba nationalised the lands formerly granted out for colonisation.

The new Tunisian government proceeded to elect a constituent assembly (25 March 1956), which abolished the monarchy and proclaimed a republic (25 July 1957) and on 1 June 1959 promulgated a constitution. This last established a political system based on the separation of powers, equality before the law and the guarantee of liberty of opinion and freedom of association yet this remained a dead letter, since public liberties were suspended in 1963. However, although Bourguiba did not think Tunisia yet ready for democracy, he undertook its modernisation, attacking where necessary traditionalist currents reflecting what he considered as retrograde Islamic religious attitudes. Thus on 13 August 1956 he introduced a code of personal status which deeply modified certain dispositions of the religious law. In fact, the new code abolished polygamy, gave women guarantees against unilateral divorce and regulated divorce proceedings. He laid special stress on education for transforming fixed mental attitudes within the population and for

bringing about the emancipation of women. Hence over a quarter of the national budget was reserved for the education of both sexes, spread over all the regions and forming a means of social advance (see further on the position of women, section VI, below) This mode of political development, embodying the will of a good part of the Tunisian élite to modernise their land in order to protect its independence and sovereignty, forms a prominent thread in the history of contemporary Tunisia, but as is delineated in section (e) below, by no means the only one.

(ALI MAHJOUBI)

(e) Bourguiba and after.

As noted in the preceding section, Bourguiba confronted several Islamic religious practices head on, but his publicly avowed aim was to reform Tunisian Islam by bringing it more within the control of the state and by correcting corrupt and decadent practices which had crept into the faith and especially in the sphere of popular religion. Thus, as outlined above, Tunisia was the first Islamic country formally to abolish polygamy. Also, the *Sharīʿa* courts were abolished. The *ḥubūs* were nationalised, thereby bringing the *ʿulamāʾ* who had drawn their income from them into the state patronage nexus. The Zaytūna [*q.v.*] was incorporated into the University of Tunis. Pilgrimages and festivals at saints' tombs were controlled, and some shrines even demolished, and the Ṣūfī orders or *ṭuruḳ* [see ṬARĪḲA. II. 2.] viewed unenthusiastically. All these measures were aimed at controlling Islam by bringing it further within the ambit of the state apparatus. Yet the government actually increased steeply the number of mosques in Tunisia, with a three-fold increase during the period 1960-87. Bourguiba's ostensible attitude was that Islam had to be modernised in order the better to withstand contamination by Western values, and he denied the claims of local fundamentalists that they were the sole focus of Tunisia's religious identity. Yet Bourguiba's attempt in 1960 to abolish fasting [see ṢAWM] as deleterious for Tunisia's economic development backfired and had eventually to be abandoned.

Politically, Tunisia became for over twenty years a single-party state, with Bourguiba elected by the 1974 party congress as President for life. Economic development was at first pursued by long-term planning, the formation of co-operative societies (especially in the agricultural sector) and an initially moderate attitude towards private enterprise after the economic boycott by France after the nationalisation of French colonists' lands in 1964 had been eventually surmounted. A move towards more radical, collectivist policies began in 1969 when it was decreed that all private lands and private businesses and industrial concerns were to be formed into co-operatives. These policies proved highly unpopular and were abandoned in 1970, with their leading exponent, the minister Aḥmad Ben Ṣalāḥ, dismissed. Thereafter, Tunisia evolved into a mixed economy with the private sector playing a dominant role.

Nevertheless, discontents mounted within the country from 1971 onwards, with political repression of those demanding a more democratic and less autocratic political system, and in a climate of economic stagnation, strikes and riots increased, particularly in 1978. Rival political groups to the government grew up, from the Islamic Tendency Movement (though its leaders ʿAbd al-Fattāḥ Mūrū and Rāshid al-Ghannūshī were temporarily jailed) to a Social Democratic trend under Aḥmad Mastīrī and a Communist party under Muḥammad Harnal. After the riots of January 1984, the government of Muḥammad Mazālī made approaches to the Islamists and Social Democrats, and the Communists were allowed to function as a legally-permitted party.

The riots were a watershed for Bourguiba's régime, warning of the dangers of economic austerity measures and the formation of a parallel state within the state by the Islamists (after 1988 called the *Ḥizb al-Nahḍa* "Party of Renaissance" in order to comply with a government decree that no party should incorporate the term "Islam" in its title). The aged Bourguiba himself continued as President until toppled from power in November 1987. His successor as President, Zayn al-ʿĀbidīn Ben ʿAlī, made various concessions to the Islamists aimed at giving religion a more prominent role in public life, increasing the size and budget of the Islamic Religious Council and establishing the Zaytūna as a separate university. But conciliation of extremism proved impossible, and in the early 1990s Ben ʿAlī's stance hardened, so that the public manifestation of the *Ḥizb al-Nahḍa* had been largely destroyed by 1993.

Externally, Tunisia's diplomatic position remained uneasy amid the sharp North African regional rivalries. In 1983 Algeria offered a twenty years' treaty of peace and reconciliation, but this weakened Tunisia's relations with Morocco, since it apparently implied support for Algeria's position over the Western Sahara problem. Relations with its eastern neighbour Libya continued to be potentially explosive, especially after the abortive attempt at political union in 1974 and accusations of Libyan interference in the economically less advanced, hence more discontented, southern regions of Tunisia, seen in the January 1980 rebellion at Gafsa (Ḳafsa [*q.v.*]); in 1985 Libya expelled over 30,000 Tunisian emigrant workers, mostly involved in the oil industry. On the wider scene of Middle Eastern conflict, Tunisia became involved through the transfer in 1982 of the headquarters of the PLO to Tunis and also that of the Arab League after Egypt made peace with Israel.

III. Religious Life.

From the 5th/11th century at least, Tunisia took over Mālikī Sunnī Islam [see mālikiyya]. The island of Djarba [*q.v.*] is a special case; formerly the population was three-fifths Khāridjite [see al-ibāḍiyya] occupying two-thirds of the island, but is now about one-third (*ca.* 35,000 out of 110,000 inhabitants), spread over Adjīm, Guellala, Tlāt, Sedouikech and el-Māy (see Muḥammad Khūdja, *Rasā'il al-Shaykh Sulaymān al-Ḥīlātī*, Beirut 1998). But the distinctions are tending to become blurred: the mosques with square or tapered minarets welcome indifferently Sunnīs and Ibāḍī faithful, and even marriages between the two communities are no longer exceptional. This retreat of Ibāḍism has been due firstly, to the renewed vigour of Mālikism since Ḥafṣid times, despite the latter's origins from the Muwaḥḥidūn (see Brunschvig, *Ḥafṣides*, ii, 286 ff.), and secondly, to proselytism by ascetic *fakīhs* like al-Djimminī (Sīdī Brāhīm al-Djomnī, d. 1134/1722), whose knowledge of Khalīl b. Isḥāḳ's [*q.v.*] *Mukhtaṣar* of Mālikī *fikh* was so great that the Murādī ruler built for him a *madrasa-zāwiya* at Houmt-Souk, where he trained missionaries to go forth and preach the virtues of Mālikism (see Ḥusayn Khūdja, *Dhayl Bashā'ir ahl al-īmān*, ed. T. Mamouri, Tunis n.d., 130). In the region of the Djarīd [*q.v.*], a marabout called Abū 'Alī al-Sunnī or al-Naftī took up the same mission. Even in Tunis itself, the Ibāḍī men from Djarba had a mosque, the Djāmi' Hintātī, in the heart of the medina. These moderate Khāridjites—often called al-Khawāmis in order to approximate them to the main four orthodox *madhāhib* and perhaps, too, to differentiate them from more radical Khāridjite groups like the Azāriḳa [*q.v.*] and Nukkariyya [see al-nukkār]—seem to be the remnants of the great Berber Khāridjite movements whose revolts characterised the history of North Africa from the 2nd/8th to the 4th/10th centuries (see al-Raḳīḳ, *T. Ifrīḳiya wa 'l-Maghrib*, ed. M. al-Ka'bī, Tunis 141 ff.; Ibn 'Idhārī, *Bayān*, ed. Colin and Lévi-Provençal, i, 69; al-Maḳrīzī, *al-Mukaffā*, ed. M. Yalāwī, Beirut 1992, iii, 697).

Stages of Islamisation

The Islamisation of Tunisia was not achieved so quickly as the governor 'Abd al-Raḥmān al-Fihrī affirmed to the caliph al-Manṣūr. "It is today entirely Muslim and there is no more *saby* (i.e. no captives of war to forward to the capital)" (Ibn 'Idhārī, 167). The Ten Successors were said to have been sent by 'Umar II *ca.* 100/719 to teach the natives there the basics of the Ḳur'ān and Tradition, and the dogmas and rites of the new faith. The lists of these men in the *Ṭabaḳāt* literature, e.g. Abū Bakr 'Abd Allāh al-Mālikī's (d. after 460/1067) *Riyāḍ al-nufūs*, ed. B. Bakkūsh, Beirut 1992, 99, show that these *fakīhs* were above all transmitters of *ḥadīths* concerned with day-to-day practice; juridical controversies and theoretical debates would come later, beginning under the Aghlabids who, through their allegiance to Baghdād, professed Ḥanafism. This was given an impulse by Asad b. al-Furāt [*q.v.*], who implanted it for a while at Ḳayrawān before his *Asadiyya* was supplanted by the *Mudawwana* of Saḥnūn and Ibn Abī Zayd's [*q.v.*] *Risāla*. Neither the views of the Aghlabid *amīrs*, nor the persecutions—in fact, much exaggerated—by the Fāṭimids, silenced the great Mālikī voices (see Yalāwī, *al-Ḥayāt al-adabiyya bi-Ifrīḳiya fi 'l-'ahd al-fāṭimī*, Beirut 1986, 41), whose teaching and works spread all through the Maghrib and Muslim Spain (H.R. Idris, *Zīrīdes*, ii, 687 ff.). Under the Ḥafṣids, the *Mukhtaṣar fī fikh al-madhhab* of Ibn 'Arafa [*q.v.*] had the same fortune as the *Mudawwana* (Saad Ghrab, *Ibn 'Arafa et le Malikisme en Ifrīqiyya au VIII^e/XIV^e siècle*, Tunis 1992, i, 369; M. Maḥfūẓ, *Tarādjim al-mu'allifīn al-tūnisiyyīn*, Beirut 1984, iii, 368).

Ḥanafism

This cannot have re-appeared in Tunisia until the arrival of Ottoman troops in 982/1574 sent against the occupying Spanish, and it became implanted through the régime of the Deys and Beys who remained vassals, whether nominally or actually, of the Porte up to the French occupation of 1881. It survives today in islets in certain coastal towns: Bizerta, Kélibia, Sousse and Monastir, and in some towns of the interior: Béja, Le Kef and Zaghouan, sc. in the *thughūr* [*q.v.*] where the Turks had garrisons, and above all, in the capital, where the groups close to the Beylical power—military, civil and religious dignitaries—followed the *madhhab* of the court [see ḥusaynids]. But here also, the differences have tended to be attenuated: octagonal minarets no longer mark Ḥanafī mosques solely. Of the seven Ḥanafī mosques in Tunis (see Muḥammad Bel Khōdja, *Ma'ālim al-tawḥīd fi 'l-ḳadīm wa fi 'l-djadīd*, ed. Ben Ḥādjdj Yaḥyā Sahlī, Beirut 1985, 153 ff.), only two have a Ḥanafī *imām*. In general, Ḥanafism has lost its importance, never great, to the general dominance of Mālikism throughout the land. In the first place, the abolition of the Ḥusaynid ruling power contributed to this, with Tunisia becoming on 25 July 1957 a Republic with a parliament. Adhesion to the Ḥanafī law school no longer had any justification in the achieving or carrying out of any public office.

Justice

Secondly, there was the suppression in 1956 of the religious *Shar'* tribunal, set up in Tunis a century earlier under the name of the *Dīwān*. This supreme tribunal had two chambers: a Ḥanafī one, headed by the *Shaykh al-Islām*, and a Mālikī one, under the *Bāsh Muftī*. Both chambers were competent to consider, according to the litigants, cases relating to personal law—civil status, marriage, divorce, guardianship and succession. The *shar'ī* tribunals (*madjālis*) in the provinces were also suppressed and now attached to the civil courts. These last accordingly enlarged the sphere of their competence and were provided by the legislature with codes (*madjallāt*) in various areas: for commercial law, investment and finance, maritime law, real property, insurance, and above all, personal law, the watchword of the liberation of the Tunisian woman, to the point that the anniversary of the code's promulgation (13 August 1956) has become the Celebration Day of Women. All these documents, which laicised in some degree justice, were inspired by Mālikī, Ḥanafī or other decisions, and opted for a liberalisation of justice, e.g. in the handing-over to the sole surviving daughter of the whole of an inheritance (art. 143 bis, l. 2) instead of, as previously, just a half (a decision inspired by a legal provision attributed to the Shī'ī Imām Dja'far al-Ṣādiḳ (cf. al-Ḳāḍī al-Nu'mān, *Da'ā'im al-islām*, ed. Fyzee, ii, 378 nos. 1359-60; al-Maḳrīzī, *al-Mukaffā*, iii, 103, notice on Djawhar).

The teaching at the Zaytūna

The unification of the legal system and abolition

of the distinctions between the *madhāhib* inevitably brought about a shrinkage in the opportunities for teaching *fiḳh* in the two law schools, especially as the institution concerned with the training of future religious lawyers had this branch of its activities ended, and the Great Mosque, the Zaytūna, which had taught both Ḥanafī and Mālikī law, was now reduced to becoming a place for religious worship only. The educational function, at least on the secondary level, was ended (law of 4 November 1958), and higher education assigned to a "University of the Zaytūna" [*q.v.*] under the Minister for Higher Education. At present, it has two institutes for higher education plus a research centre: (1) the Higher Institute for Theology (for training teachers in this field); (2) the Higher Institute for Islamic Civilisation (open to students from outside Tunisia); and (3) the Centre for Islamic Research, situated in Ḳayrawān. As for the Higher Institute of Religious Sciences (meant for training and refresher courses for *imāms* and preachers), this was no longer part of the Zaytūna University, but after January 1997 was attached to the Ministry of Religious Affairs, itself set up in 1992. This is now ultimately responsible for all religious activities: teaching, the cult, training of *imāms* and preachers, organising of the Pilgrimage, exhibitions and commemorations, organising of cultural associations, congresses, colloquia, etc.

Suppression of the awḳāf

The *ḥubūs*/habous were likewise suppressed. Property in mortmain was restored to the original owners or, in case of the disappearance of these, became state lands. Hence there was no further need for administrators (*wukalā'*) responsible for superintending the *awḳāf* and of the procedures which had allowed the practice of enzel or *inzāl* [*q.v.* in Suppl.], the perpetual leasing of properties at a low price or in return for disproportionate benefits.

The question of the "Arabic" numerals and calendar reform

The new Republic took another audacious, but in the end accepted, decision: the replacement of the so-called "Indian" numerals, used in the East in all works of religion and scholarship by the so-called "Arabic" ones. The Gregorian calendar and its nomenclature was adoped side-by-side with the Hidjrī one in official publications, if not in practical life. Astronomical computation was now used to fix the beginning and end of the Ramaḍān fast (from Ramaḍān 1380/March 1960), but since the results of such calculations were not unanimously recognised, even in neighbouring countries, after the political changes of 7 November 1987, a mixed method was adopted: visual observation of the crescent moon by the *Muftī* of the Republic, an important person in the power hierarchy, holding the rank of Secretary of State. The creation of this office (decree of 28 February 1958) had *ipso facto* meant the suppression of the posts of *muftī* in the provinces, these having existed since the replacing of the Grand Judge (*Ḳāḍī al-Djamā'a*) in 1856 by various subordinates (e.g. the *Ḳ. al-Ahilla*, charged with observing the crescent moon; the *Ḳ.* of the Bardo, in the beylical palace; the *Ḳ. al-Maḥalla*, who accompanied the annual tax-collecting expedition (the last two abolished under the Protectorate); the *Ḳ. al-Farā'iḍ*, for the division of inheritance; the *Ḳ. al-Ankiḥa*, for civil status and marriage; and the *Ḳ. al-Mu'āmalāt*, for transactions). This return to observation of the heavens was supplemented by astronomical computation, entrusted to the staff of the National Meteorological Office (decree of 8 April 1988).

Ramaḍān and the Pilgrimage

Another of the measures of the first President of the Republic, Habib Bourguiba, this time one less well received, was aimed at combatting the idleness and carefreeness of the period of the month of fasting. Each citizen was in future to carry out scrupulously his normal daily task, without absenteeism and loss of productivity, a necessary initiative in a developing country, and a measure put forth with the best of intentions, but sometimes badly carried out and arousing the opposition of a part of the population. It nevertheless had positive results in the long run: it guaranteed freedom of conscience for citizens and forbade anyone to act as judge and meddle in the religious behaviour of his neighbour, whilst maintaining the requirements of punctuality and serious fulfilment of work obligations; nevertheless, some ameliorations of hours were foreseen, as in regard to Friday afternoons, always regarded as to be free from work in order to allow the faithful to fulfill their obligations of community worship. In this connection, the State continued to resist those who demanded a holiday for the whole of Friday. It argued with reason that, if the whole of Friday was added to Saturday as a holiday for financial institutions, and with Sunday as a universal holiday also, the effective work week would be reduced to four days. It has also resisted demands for more religious programmes, more Ḳur'ān recitation, more sermons, etc., on the state-controlled radio and television networks, although it has conceded the interruption at times of football matches by the *adhān* or call to worship.

Other measures have tended to bring more order into religious practice, e.g. to reduce the number of pilgrimages for which citizens received state aid, to the one Pilgrimage, as prescribed by the religious law, whilst leaving the faithful to use, at their own expense, patterns of procedure other than the state-sponsored one.

Ṣūfī orders, marabouts and zāwiyas

In the earliest centuries of Islam in North Africa, Ṣūfism was merely a particular attachment to orthodoxy and personal renunciation of the world and its goods, as with such persons as Buhlūl b. Rāshid (d. 183/799) and al-Rabī' al-Ḳaṭṭān (d. 333/944). The biographical dictionaries of authors like al-Khushanī [*q.v.*], the al-Mālikī mentioned above, and al-Dabbāgh's *Ma'ālim al-īmān*, are merely the *vitae* of Ḳayrawānī saints, who despite their devotion to spiritual aims, did not hesitate to take up arms to defend their faith when it was menaced by the Fāṭimid intruders, or to take part in the massacre of the last Shī'īs, like Muḥriz b. Khalaf, the patron saint of Tunis (see Idris, *Zīrīdes*, ii, 695). Under the Ḥafṣids and their successors, Ṣūfī asceticism became a kind of boisterous and noisy mysticism, associated with thaumaturgic practices aimed at attracting the masses and at stimulating pilgrimages to saint's tombs, transformed into centres for the Ṣūfī orders, and enriched by the offerings of the faithful. Certain of these *ṭuruḳ* [see ṬARĪḲA] limited themselves to sessions of *dhikr* [*q.v.*], like the Shādhiliyya [*q.v.*], followers of Abu 'l-Ḥasan al-Shādhilī on the hill of the same name at Tunis, and the Tidjāniyya [*q.v.*], introduced by the great religious lawyer and preacher Sīdī Brāhīm al-Riyāḥī (see his *Dīwān*, ed. Sahlī and Yalāwī, Beirut 1990, 8). Others, such as the Aysāwiyya or the 'Arūsiyya-Sulāmiyya, had more extravagant manifestations, generally disapproved of if not condemned. Today, there remain only the Ḳādiriyya, in various localities of the interior, the *zāwiya* of al-Sayyida 'Ā'isha al-Mannūbiyya, frequented above all by women, those of Sīdī Muḥriz, Sīdī al-Ḥalfāwī at Tunis, etc. The increase in education, urbanisation

and opposition to obscurantism, have inexorably alienated the urban, and even the rural, populations from these marabouts; certain sagacious promoters have tried to take advantage of such ecstatic celebrations as the *Ḥaḍra*, *Mīʿād*, etc., by mounting, with varying success, spectacular shows which are half-folkloric and half-cultural.

Mālikism also shows its strength in the persistence of ancient traditions from the Ḥafṣid period, like the ceremony of the *akhtām* (pl. of *khatm*) "closing" of public readings (*riwāya*), with or without commentary (*dirāya*), of the canonical collections of al-Bukhārī and Muslim and of the *Shifāʾ* of al-Ḳāḍī ʿIyāḍ [*q.v.*], readings which finish on 27 Ramaḍān in the Great Mosque in the presence of the Head of State himself. Likewise, the Mawlid [*q.v.*] is marked by readings of the Prophet's *Sīra* (*mawlidiyya*) in the mosques, and, at Tunis, by the chanted recitation of the 400 verses of the *Hamziyya* of al-Būṣīrī [*q.v.* in Suppl.]. This attachment to the *Sīra* and the Tradition is such that the women of Tunis continue to swear jointly "*bi 'l-Shifāʾ wa 'l-Bukhārī*".

Religion and modernity

To sum up, Tunisia, if it has kept itself within the fold of Islam by a skilful formulation of itself, in the first article of the Constitution, as ". . . an independent state whose religion is Islam . . .", has nevertheless made great steps towards the way of rationality. The Republic's first leaders did not disguise their admiration for Kemal Atatürk, and many of the legislative measures taken since 1956 bear the seal of modernity and have a progressive and sensible tendency towards the secularisation of state institutions, that of public life and society generally preceding the inauguration of state measures. In this way, the attempts of certain religio-political groups to "re-Islamise" the country and lead it back to an alleged original purity, have been frustrated by the public authorities and condemned by almost all the population.

IV. Languages.

Before the arrival of the Arabs in Ifrīḳiya [*q.v.*], in this region of the eastern Maghrib which was later to be called after its capital Tūnis, and its Islamisation, the linguistic situation there was already particularly complex and has in fact never ceased being so since its emergence on the stage of recorded history some three millennia ago, notably with the founding of the Phoenician trading posts and the birth of Carthage.

The oldest known language, that of the indigenous people called by the Romans Berbers, is Libyan, from which various local Berber tongues apparently derive [see lībiyā. 2.; also tifinagh]. It was rarely written, but is known to us from several hundred inscriptions, with one of them, a Libyco-Punic bilinguis, stemming from 138 B.C.; others are Libyco-Latin bilingues, that is, the oldest pieces of linguistic evidence already show the co-existence of at least two languages. With the foundation of the Carthaginian empire by Phoenicians from Tyre (814-146 B.C.), Punic became the official language, imposed on the local Numidian kingdoms, as their coins attest. For more than six centuries after the destruction of Carthage by the Romans, Punic continued to be used, even in the countryside whilst gradually giving place to Latin.

The period of Byzantine conquest (533-698) involved a Roman restoration after the interval of the Germanic Vandals. Roman civilisation, deeply Hellenised, allowed Greek to leave traces which are still perceptible.

Arabisation and its context

It can be said that the Arabisation of the land, following on the appearance of the Arabs in 647 until the fall of Carthage in 698, operated in a multilingual context, and these languages were subsequently to form a substratum which has left traces until the present day in toponomy, onomastic and the varieties of Arabic dialects (cf. the place names stemming from Punic, such as Ḳarṭādj, Utīk, Binzart, Ḳābis, Ḳafsa, Ḳirḳna, etc.; from Latin, such as Hergla, Rādis, Lamṭa, etc.; and from Greek, such as Ḳlībya, Ḳurbuṣ, Mistīr, etc.).

Latin continued to be the Arabs' language of administration, as contemporary coins show. For the four centuries up to the invasions of the Banū Hilāl [*q.v.*], Arabic co-existed with the previously-mentioned languages. We can put together an ethno-linguistic picture of this period from information in the Arabic geographers and historians, such as al-Yaʿḳūbī in the 3rd/9th century, through al-Bakrī up to Ibn Khaldūn [*q.vv.*] in the 8th/14th century; alongside the town-dwelling Arabs there was a more numerous class of *ʿadjam*, indigenous and non-indigenous peoples.

The first of these, called *ʿAdjam al-bilād*, comprised the great mass of Berbers, now Muslim but using their own Berber language; the *Rūm*, probably descendants of the Byzantines; and the *Afāriḳa*, apparently descendants of Romans or Latinised Berbers, Christians using the Latin language, as certain funeral epitaphs of the 11th century from Ḳayrawān [*q.v.*], the new capital of the province, show. These last two groups are also mentioned as existing in the towns of the Djerid. Other *ʿAdjam* comprised mainly Persians, in the military followings of the governors.

In the 11th century, *Afāriḳa* are only mentioned at Gabès/Ḳābis [*q.v.*] and Munastīr ʿUthmān [see monastir]. The *Rūm* are no longer mentioned and, like the Persians, had probably been assimilated. Instead are mentioned Arab Bedouin tribes besides Berber tribes in the vicinity of Ḳayrawān. It thus appears that Arab-Berber bilingualism was dominant at the time of the Hilālian invasions (1051-2), which were to accelerate and deepen the Arabisation of the land. The Arabs already settled in Ifrīḳiya used various dialects, according to their tribal and group connections (Ḳuraysh, Rabīʿa, Ḳaḥṭān, Ḳuḍāʿa and, especially, Tamīm, the tribe of the Aghlabid dynasty [*q.v.*]). With the Hilālian invasions, the Berber majority became progressively assimilated to the Arab tribesmen, by being in their company as pastoralists in their migrations. Ibn Khaldūn records precisely the gradual and irreversible substitution of Arabic for Berber, by then confined to various speech islands, most of these bilingual. At the present time, Berber, still spoken within the family by older people using Arabic for purposes of their daily life, is in process of extinction in its surviving pockets in southern Tunisia and on the island of Djerba [see djarba].

As for the evolution of Arabic, this took place in the context of a progressive cleavage between official, literary Arabic and the dialects, which came to form two groups, an urban one and a Bedouin one. Ibn Khaldūn describes their peculiar features, notably on the phonological level. Already, the famed velar occlusive /q/ of Arabic became distinguished in Bedouin speech by being voiced and in the urban one by being unvoiced, features which have continued until

the present day to distinguish the two speech groups (cf. his *Muḳaddima*, ed. Quatremère, iii, 302-5, tr. F. Rosenthal, iii, 348-51).

New linguistic features

The Arabo-Berber bilingualism which has marked the following centuries soon began to receive further, more numerous and more complex, outside linguistic influences, especially from the Romance languages of Europe and from Turkish. Already in the 12th century, the Normans, after conquering Sicily, seized several of the coastal towns of Tunisia between Susa and Gabès between 1148 and 1160. These contacts, despite commercial relations with the Genoese and Venetians, were more often on the military level: the Crusade of St. Louis (1270), attacks by the Aragonese (1284-1335) and by the Franco-Genoese (1390), and the growth of corsair activity in the Mediterranean [see ḲURṢĀN. i.]. The great conflict over control of the Mediterranean, with Christians (especially those of Spain) opposing the Muslim Turks, ended with Tunisia firmly within the orbit of the Turkish empire from the end of the 14th century to the end of the 19th. Thus these exchanges, whether military or commercial, and especially after the Turkish conquest of Tunis in 1574, brought about movements of peoples and linguistic contacts involving not only Turkish but also various Romance languages of Europe.

Turkish linguistic influence

From the Turkish conquest until 1933 (the date of the last Tunisian document written in Turkish), Turkish was the main language of administration. It was also the means of communication in the army between Turkish officers and the Janissaries who came from the different regions of the Ottoman empire, and was used at court. The descendants of the Ḳulughlīs [see ḲUL-OGH̲LU] became integrated with the mass of population, especially on the coastlands, leaving visible traces in personal nomenclature (*bās̲h̲ā, bay, kāhya, s̲h̲awīs̲h̲, bās̲h̲, zmantar, bayram, s̲h̲albī, zarkūn*, etc.) and in the lexicon of Tunisian Arabic, in which some hundreds of words are still current in the spheres of administrative and military terminology and in those of the kitchen (dishes, utensils, tools), dress and music. Tunisian Arabic has also borrowed the Turkish suffixed morpheme *-d̲j̲i* for names of professions, etc., e.g. *ḳahwād̲j̲ī* "maker/server of coffee".

Spanish influences

Apart from military conflict (along the coastlands, where several places were temporarily occupied by the Spanish), the main impact here certainly came from the extensive emigrations of the Moriscos [*q.v.*] from the Iberian Peninsula after the *reconquista* (12th-16th centuries). These Moriscos spoke Aragonese, Castilian and Catalan; many of them no longer used Arabic. This Muslim group also included a strong minority of Jews, equally expelled from the Peninsula.

Several dozen family names, still in use today, stem from this period: Blānku, Bunatīru, Burīga, Katalān, Karabāka, Mālḳi, Merrīs̲h̲ku, Mnāra, Mnakkbi, Nīgru, Ḳabādu, Ṣāns̲h̲u, Zaʿfrān, etc. Some quarters of Tunis acquired Spanish names: Murkāḍ (Mercado), Bīga (Vega), Bārdu (Pardo), etc. Complete towns were peopled with Moriscos, including near Tunis (D̲j̲dayda, Ṭburba, Md̲j̲ēz-l-bāb, Testūr); near Bizerta (Metlīn, El ʿAlya, Rās ed̲j̲-d̲j̲bel, Rafrāf, Porto Farīna, etc.); at Cape Bon (Grumbālia, Slimān, Niānu, Turki, Belli); and there are also a score of names in northeastern Tunisia (Ḳalʿat-l-andlus, Māter, Zagh̲wān, etc.).

Spanish was still spoken in some localities up to the 18th century. New crafts and industries were introduced, with their technical vocabularies (manufacture of the chéchia = *s̲h̲ās̲h̲iyya*, a red felt cap), and several hundred words from ordinary vocabulary were integrated into Tunisian Arabic: *karrīta* < *carreta* "pony trap", *kardūn* < *kardon* (a variety of thistle), and the well-known *hindī* (*opuntia ficus indica*). Amongst complete lexical fields entering Tunisian Arabic, the most original is that of playing-cards, with e.g. *s̲h̲kubba* < *escoba*, also extending to other games, e.g. *dimīnu* "domino".

The intensifying of linguistic contacts and borrowings

Especially from the 19th century onwards, these contacts with Turkish and Spanish gave place to contacts with other European languages, notably Italian and French. Certain influences are difficult to define clearly since they stem from a common Romance stock, one of whose aspects is the Mediterranean *lingua franca*; names of fish and the complete vocabulary of seafaring are clear examples.

Italian influence

This was especially clear in the later 19th century, with several hundred Italian terms firmly integrated in the Tunisian vocabulary, since colonisation by Italians was strong at this time. In 1870, these colonists amounted to 7,000, three-quarters of them Sicilians. A year later, there was an immigration of several thousand Livornese Jews. The establishment of the French Protectorate in 1881 did not stem its growth, and *ca.* 1926 it stabilised at *ca.* 90,000, more than the French colonist population (70,000 at that time) despite 45 years of French colonisation. Lexical borrowings from Italian are diverse, and cover in particular the spheres of industry, building, agriculture, fishing and the arts.

The Maltese

In the 19th century, several thousand Maltese emigrated to Tunisia, settling especially in Tunis, Porto Farina (Gh̲ār-l-milḥ), Sfax and Susa, where the Maltese, mainly from the working class, took up the trade of driving coaches, with several thousand of them holding a virtual monopoly, and with Tunisians also involved in the trade using Maltese too, since, as an Arab tongue, it had many affinities with Tunisian Arabic. At present, the Maltese amount to only a few hundreds, mainly old persons.

The Arabic of Tunisian Jews

The Tunisian Jews who had adopted Arabic whilst retaining their Jewish faith were more numerous before Tunisian independence in 1956, with those who had become naturalised Frenchmen choosing thereafter to emigrate to France. Their speech was an Arabic with certain peculiarities, which have been in general well studied. One should mention also the existence of a Jewish Tunisian literature written in Hebrew characters.

The influence of French

The progress of imperialism in the 19th century and the rivalry between France and Italy over Tunisia was sealed with the French Protectorate of 1881 (see II (d), above), which brought about a new linguistic situation involving a veritable Arabic-French bilingualism, bringing various borrowings and various forms of linguistic interference. Human contacts, commercial exchanges and an economic penetration had preceded the Protectorate, and thus French became the official language of public administration and education. At the present time, it is French which has supplied the greatest number of loanwords, several hundreds, into Tunisian Arabic, covering all fields and more or less integrated, and its influence continues to mark the linguistic situation in contemporary Tunisia, even after forty years of independence.

The present situation

From what has preceded, it emerges that the linguistic situation in Tunisia has been one of continuous contacts with outside tongues, culminating in an Arabic-French bilingualism, grafted on to a diglossia of literary language and dialects, with a clear division here; hence a fluctuating, continually evolving linguistic situation.

Diglossia

The literary level is essentially a written one, but it is nevertheless spoken in educational teaching and in official discourse, political and religious. It is considered as "superior" and appears in a neo-classical form in the sermons at Friday worship and certain literary works, and in a modern and functional form above all in the language of the media.

As for the dialect, the spoken tongue of all Tunisians, this is rarely written, but is used above all in the theatre, cinema and songs, as well as in popular poetry, of Bedouin origin and called *malḥūn* [*q.v.*]. It possesses various regional varieties with phonological and lexical distinctions none of which prevents mutual comprehension. Two levels can also be distinguished within it, one for familiar usage expressing daily needs, and the other, of a more intellectual tinge since it draws on the literary level, used above all by literate persons and in radio and TV broadcasts. One can thus say that there is a division of domains of each form of the language, but these are seen mainly as complementary rather than concurrent or opposed to each other.

All levels present certain common phonological points, such as the lack of an opposition *ḍ* – *ẓ*. The former, considered as an archetypal feature of the Arabic language by ancient scholars (the *lug͟hat al-ḍād*), is never pronounced according to the prescriptions of the classical Arabic philologists; in Tunisia, it is everywhere merged with the voiced interdental emphatic as /ḏ̣/ except at Mahdiyya, where the three interdentals are merged with the dentals. The phoneme *d̲j̲* is realised as a voiced prepalatal spirant. The question of the opposition *ḳ*/*g* has already been mentioned, but it should be noted that the pronunciation *g*, of Bedouin origin, is solely dialectical and functions as a regional variant. On the urban speech level, on the other hand, the palatal *g* functions at times as an expressive variant and sometimes as a distinct phoneme; but the opposition here is not very productive at all, being favoured rather in loanwords, especially in those from French.

On the level of the vowels, as well as the basic three, with two degrees of openness (open *a*; closed front *i* and back *u*), the Tunisian Arabic system, whilst partly preserving the ancient short-long opposition, has become enriched with intermediate vowels, notably the front semi-closed *e* and semi-open ɛ, as well as the back semi-closed *o*, with its semi-open variant ɔ.

Regarding syllable length, the four syllables of the literary tongue are found (CV, CV̄, CVC, CV̄C), but the system has become enriched by the frequent elision of short vowels, notably in the case endings; one may mention, in particular, the syllables CCVC, CCV̄C, CVCC, CV̄CC. The syllable having the accent in the literary language is generally the third from the end of the word or the penultimate one if it is long; in Tunisian dialect, it is the last if it is long, otherwise the penultimate. Consequently, the morphological structure of words emerges as quite different from that of the literary language.

The lexicon remains basically Arabic despite thousands of speech units derived from the substratum or from the superstratum as mentioned above, although the semantic field of these units is considerably modified in all senses (restriction, enlargement of meaning, displacement, etc.).

Regarding syntax, the loss of the case endings of the literary language has resulted in the position of the speech units in the sequence of discourse becoming more functional, hence less free. Tunisian Arabic has nevertheless evolved its own grammatical instruments, e.g. the unvoiced "hushing" sound which functions as the morphophoneme of interrogation (when prefixed) and of negation (when postfixed).

The dual of the literary language is only used now in frozen forms, being replaced by the syntagm "pair + plural".

The role of French

French still functions in Tunisia as a language of culture and of opening to the modern world, hence it is less a foreign than a second language, fully recognised as such. Therefore what is in practice bilingualism has become since the 1960s a political choice within the framework of *Francophonie*, even though in certain of its applications it is a factor causing difficulties at the school level amongst a youth which feels less and less at home in it. All primary education is now in Arabic, and French has the status of second language from the third year onwards. Despite this, the dominance of French at the secondary level, at which all the scientific disciplines continue to be taught in French, has favoured on the level of the school system and even in the administration, the persistence at the level of daily, discursive speech, of a hybrid spoken Arabic, dotted with words and phrases from French, involving a language with code mixing or code switching, although the basis remains Arabic. Beyond the level of particular motivations, this mixture is less a *lingua franca* than an idiolectal form favoured by the bilingualism of the educational and administrative systems. In this way French, despite the fears which it raises, still retains the essential nature of its prestige, which is nevertheless not proportional to the degree of its mastery.

It is undeniable that people's linguistic habits are determined by their education, the official language policy and the dominant linguistic usage in the administrative or professional milieu involved. If a Tunisian is more or less bilingual, certainly the case with all educated people, surveys have shown that he or she will be more likely to use Arabic in dealings with such departments of state as those of justice, the interior or defence; on the other hand, he or she will be more likely to write out a cheque or postal order in French (1,894 persons against 20 using Arabic, according to the present author's observations).

Within the different forms of the media, there is more or less a balance between usage of Arabic and French.

At the university level, French remains solidly established in the scientific disciplines, whilst it is retreating slowly but irreversibly in the fields of the human and social sciences. These same phenomena are observable in the literary expression of research and educational endeavour—theses, mémoires, articles in learned journals, etc., emanating from various educational and university establishments.

At the present moment, even though bilingualism is no longer explicitly put forward as a political and cultural choice, it continues to characterise the linguistic situation of Tunisia. Despite this, Arabisation continues slowly but surely, without being part of any official plan. Its future at the university level will determine

the eventual linguistic situation of the country.

V. Modern Literature.

The birth of modern Arabic literature in Tunisia is intricately connected, as is the case in other Arab lands, to the reformist movements of the 19th century. Maḥmūd Ḳābādū (1812-71), who was clearly influenced by the reformist ideas of Khayr al-Dīn Pasha (1820?-89 [*q.v.*]), is credited with having first introduced contemporary themes, such as anti-colonialism, nationalism and social justice, into Tunisian poetry. The first decades of the 20th century witnessed a more progressive poetry that rejected a rigid submission to classical canons, such as the panegyric, elegy and invective, and adopted socially-conscious themes as poets began to identify more openly with the rising partisan political movements. Muḥammad al-Shādhilī Khazandār (1881-1954), born to an aristocratic family and raised in a classical Arabo-Islamic milieu, best represents a new generation of poets who embraced literary and social reforms, advocating a populist and nationalist approach to literature.

However, it was the emergence of Abu 'l-Ḳāsim al-Shābbī (1909-34 [*q.v.*]) that would give Tunisia its first truly modern poet and its one literary giant whose impact reached the far corners of the Arab world. In his short and troubled life, al-Shābbī was able to fashion a revolutionary poetics that embraced modernity in its fullest sense. Steeped in the aesthetics of romanticism, and perhaps influenced by the Lebanese-American poet Khalīl Djubrān, al-Shābbī's poetry is denuded of the stock phrases and hackneyed images of classical Arabic poetry. It possesses a deep lyricism which has the capacity, in the words of the Arab critic Salma Khadra Jayyusi, "to swing in equal measure between thought and emotion". His poems, posthumously collected and published in one volume in Cairo in 1955, entitled *Aghānī al-ḥayāt* ("Songs of life"), celebrate change through positive action and denounce any form of human stagnation. Not merely a practitioner of poetry but a theoretician as well, al-Shābbī professed his ideas in a series of controversial lectures, which he delivered in 1929 on *The poetic imagination of the Arabs.* In them he criticises classical Arabic poetry as a mere literary craft, devoid of any true poetic feeling, and asserts that it was only when the Arabs moved to an urban milieu and interacted with other civilisations that they developed a truly poetic sensibility.

Al-Shābbī's radical views, along with his brilliantly innovative poetry, had a profound impact on the generation of Tunisian intellectuals of the 1930s, who would become in essence the architects of modern Tunisian literature. Taking the name of the cafe they frequented in the popular quarter of Bāb Suwayḳa in the old medina of Tunis, the Taḥt al-Sūr group included artists and intellectuals who all shared in the political mission of resistance to the French Protectorate and social equality, and who were committed to the creation of a popular literature to promote social advancement.

Two essential features must be mentioned in the formation of this group and its literary output. First, the passion for and commitment to journalism were keys to the content and dissemination of its ideas. Especially in the aftermath of the Protectorate government's lifting of press censorship on 6 August 1936, a plethora of journals exploded onto the cultural scene, producing poems, anthems, short stories, literary reviews, satirical sketches, and *maḳāmāt*, a traditional Arabic literary genre of rhythmic prose [see MAḲĀMA] once more made popular by the brilliant and acerbic Egyptian exile Maḥmūd Bayram (1893-1961) [see AL-TŪNISĪ], who spent the better part of the 1930s in exile in Tunis. These journals uniformly expressed the collective social and political views of the group in a register of Arabic and in artistic media that were accessible to the growing urban readership.

Secondly, the polymath quality of the group's members pointed to a wide range of cultural stimuli that impacted upon the group. It was a period of rich cross-fertilisation and experimentation, where poets and writers of the classical Arab literary heritage (*turāth*), as well as representatives of French, Russian and American literature, provided guidance and inspira-

tion. The charter members of the Taḥt al-Sūr group opened themselves to the latest trends in creative writing, painting, photography, cinema, theatre, music and literary criticism.

Ironically, as this fertile decade of the 1930s came to an end, its most illustrious members would go on to be identified with one particular genre. For example, Muṣṭafā Khurayyif (1909-67) would emerge as a prominent national poet, whose poems came to be less songs of love and passion and more celebrations of national and regional events, e.g. Tunisia's independence, the bitter Algerian war for independence, the events of 1948 in Palestine. Collected into a grand anthology entitled *Shawḳ wa-dhawḳ* ("Longing and taste", 1965) Khurayyif's poems reflect closely modern Tunisian history and the poet's commitment to social causes, features common to much of post-independence Tunisian poetry until the rise of the avant-garde school of the late 1960s, led by poets such as al-Ḥabīb al-Zannād (b. 1946) and Faḍīla al-Shābbī (b. 1946).

ʿAlī al-Dūʿādjī (1909-49) emerged from the group and became known as the father of the Tunisian short story. His stories, posthumously collected into one volume, *Sahirtu minhu al-layālī* ("It kept me up at night", 1987) reflect the author's experimentation with different narrative forms, styles and language registers, as well as his remarkable ability to capture the many facets of the Tunisian personality through a wide range of humorous as well as bleak human situations.

Al-Bashīr Khurayyif (1917-83), like his older brother Muṣṭafā and others of the Taḥt al-Sūr group, experimented in various literary genres, but his literary trajectory would also follow a more narrow path, that of the novel. His first, *Ḥubbak ḍarbānī* ("Your love has brought me down," 1958), is a semi-autobiographical tale of a young man's amourous adventures amidst theatrical circles in 1920s Tunis. *Barḳ al-layl* ("Night lightning," 1960) is a historical novel set in the Ḥafṣid state of the 16th century. However, he is best known for his grand epic, *al-Digla fī ʿarādjīnhā* ("Dates on their stalks," 1969). The novel, thoroughly grounded in social realism, narrates the struggles of the impoverished and exploited workers of Tunisia's rural south, and breaks new ground with his vivid details of daily life and the use of the regional dialect in the dialogue, greatly enhancing the realistic mode of the novel.

However, it is Maḥmūd al-Masʿadī (b. 1911), peripherally connected to the Taḥt al-Sūr generation, who enjoys the highest critical acclaim as Tunisia's premier novelist. His literary projects, most important of which are *al-Sudd* ("The dam," 1955), a romance written in the form of a play, and *Ḥakā Abū Hurayra wa-ḳāl* ("Thus Abu Hurayra narrated," 1973), a novel written in the form of *ḥadīth*, combines modern themes of existential angst and alienation of the individual from society with the legends, language, and narrative forms of the early Islamic period. His work extends beyond the borders of the Tunisian landscape and touches upon universal themes that were treated by both European and Arab writers in the years immediately following the Second World War.

In the period of post-independence (since 1956), journalism continued to play a vital role in the fostering of a national literature, with *al-Fikr* replacing *al-ʿĀlam al-adabī* (1930s) and *al-Mabāḥith* (1940s) as the periodical of prestige, and the concept of literary commitment (*iltizām*) continued to be the guiding force for a new generation of writers. Naturally, the story of colonial oppression and the national struggle for independence dominated post-independence prose and poetry. The 1950s witnessed a proliferation of short stories by such writers as al-Ṭayyib al-Tarīkī (b. 1920), al-Ṭāhir Ḳayḳa (b. 1922) and Rashīd al-Ḥamzāwī (b. 1934), who wrote of social injustice and class conflict, poverty and ignorance. Perhaps Tunisia's most prolific chronicler of historical events and their devastating impact on the masses is Muḥammad al-ʿArūsī al-Miṭwī (b. 1920) whose anti-colonial novels, *Wa min al-ḍaḥāyā* ("Among the victims," 1956), *Ḥalīma* (1964) and *al-Tūt al-murr* ("Bitter mulberries," 1967), focussed attention on the plight of the rural population, of women and the downtrodden. In his more recent work, al-Miṭwī's shifts from novel to short story, from the village to the city, from colonial rule to post-colonialism and from epic romances of good vs. evil to a more complicated, modern fiction.

A new generation of Tunisian writers, emerging since 1969, has succeeded in bringing Tunisian literature away from the preoccupations of history and society as protagonists and towards the individual and the quest for identity and personal freedom. There has also been a break with traditional literary themes, tampering with generic boundaries, and shifting away from the familiar modes of narration and the predictable Tunisian hero-type, and a more conscious effort to break the rules of literary canonicity, to construct complex anti-heroes, and to apply modern techniques of stream-of-consciousness, surrealism, allegory and irony. This generation is also responsible for the development of a modern Tunisian theatre whose bold, vernacular language and delvings into the Tunisian psyche have produced a highly popular art form with tremendous social impact.

ʿIzz al-Dīn al-Madanī (b. 1938), whose versatility and productivity are reminiscent of the Taḥt al-Sūr generation, chose historical themes to write plays that reflect the modern Tunisian's quest for the self, alienation from society and disappointment with what is viewed as the neo-colonialism of the Tunisian élite. His first novel, *al-Insān al-ṣifr* ("Zero man," 1967-71) reflects the absurdist vision of modern man's inability to communicate. His later collections of short stories mix reverie and reality in narrating the human condition.

Similarly, Ḥasan Naṣr (b. 1937), who may be considered as Tunisia's most successful master of the short story (*Layālī al-maṭar*, "Rainy nights," 1968; *52 layla*, "52 nights," 1979), frequently employs fantasy and surrealism, mixing tragedy and comedy, in writing about the conflicts between tradition and modernity, alienation and emigration that disrupt contemporary life and create an inverted world of chaos.

The decade of the 1980s throughout the Arab world has been frequently referred to as the "era of the novel". Despite the large number of poetry and short story anthologies, it is the novel which has drawn the most attention. In Tunisia, as elsewhere, it is a novel with a strong social dimension in which society's concerns are embodied in the individual's search for meaning to his life. Writers such as Ḥasan Naṣr and ʿArūsiyya al-Nālūtī (b. 1950), long identified with the short story, have in their more recent work turned to the novel. Perhaps the most prolific of Tunisian novelists, Muḥammad al-Hādī Bin Ṣāliḥ (b. 1945), published his seventh novel, *Min ḥaḳḳihi an yaḥlum* ("A right to dream") in 1991, in which he deals with the problematic role of the intellectual and literary commitment in a developing nation such as Tunisia. In contrast to the strong local emphasis in Bin Ṣāliḥ's novelistic project, Hishām al-Ḳarawī (b. 1955) has

produced two novels that deal with regional Arab issues, with the Lebanese civil war and the occupation of Beirut (*Aʿmidat al-djunūn al-sabʿa*, "The seven pillars of madness," 1985) and the desperate situation of Arab politics (*al-Nasr wa 'l-ḥudūd*, "The eagle and the borders," 1989).

The flight of the rural population to the city, widespread unemployment, emigration to Europe, the breakdown of the family, the rise of the police state, and the emergence of Islamic movements as political opposition, have all found their truest expression in the contemporary novel. The bread riots of 1984 serve as a haunting background to Muḥammad Riḍā al-Kāfī's (b. 1955) stunning novel, *al-Ḳināʿ taḥt al-djild* ("The veil beneath the skin," 1990), which narrates the withdrawal of the protagonist amidst a series of personal, financial and social setbacks. Journalist, short story writer and novelist, Riḍā al-Kāfī belongs to a long continuum of Tunisian writers which began with the Taḥt al-Sūr generation of the 1930s, dedicated to the creation of a new literature that is committed to society, its needs and its advancement, these being the basic principles that have defined and shaped modern Tunisian literature.

VI. THE STATUS OF WOMEN.

Tunisian society has undergone many transformations over the last century, and the place of women in society, and the relations of men and women, are one of the most significant indicators.

The sphere of work is especially notable here. Until the 1920s and 1930s, the essential unit of production was the family, in which both sexes participated, but with the rule that extra-familial tasks were the province of men. In both urban and rural milieux, women are mainly responsible for processing basic foodstuffs, spinning, making clothes, carpets, hangings, etc. Certain researches on urban artisanal production have demonstrated the importance of the non-visible work of women in certain fields of production considered as male ones.

For many reasons, including its colonial status, Tunisia came late to the industrial revolution and the changes in systems of production which inevitably brought with them upheavals in social relations, including the relationship between the sexes. It was only after independence that women really appeared on the labour market, the outcome of a long process, begun with the *Nahḍa*, in which the idea gradually took shape that the future of society would depend on the role women would play in it. Discussion at first revolved round the education and schooling of girls, and Khayr al-Dīn Pasha, Shaykh al-Sanūsī and the *Jeunes Tunisiens* all raised their voices on this topic. The debates became more spirited in the 1930s with the emergence of the national movement for independence, and Ṭāhir Ḥaddād's *Imra'atunā fi 'l-sharīʿa wa 'l-mudjtamaʿ* and the controversies which followed it were all notable factors here.

From the beginning of the 20th century, certain families had sent their daughters to school, and some women's associations were founded. But at the same time, the seclusion of women and the difference in their status compared with European women were raised by some nationalists into identity symbols. Discussion of this question of identity, the daily sight of European women wbo worked and were freely concerned with their occupations, the school enrollment of an increasing number of girls, the share of women in the national struggle, all stimulated reflection and discussion on such topics as the role of girls' education, wearing the veil, choice of spouse and women's share in the world of labour.

It was in this context that politicians, headed by Bourguiba, worked towards a more equal treatment of women and men (Personal Status Law of 13 August 1956 which forbade polygamy, forbade unilateral divorce, fixed the legal age for marriage, allowed women to sue for divorce like men, and made daughters the sole heirs of their parents in the absence of brothers; and the text of the Constitution) and stimulated a broad movement for an accelerated entry to school education for girls, for such educated girls to enter the labour market, for renunciation of wearing a veil, and for changes in the relationship of married couples. Since then the movement has gone forward, though not without hesitations and controversies, sometimes even violent, as in the 1986-7 Islamic fundamentalist polemics, which might have placed the advances in jeopardy if it had not been for the vigilance of women's groups and the political will of the ruling state power to guarantee, in the interests of Tunisia's development, male and female equality: the amendment to the Personal Status Law of August 1992, and the ratification of international conventions aimed at eliminating discrimination between sexes, not to mention action in the educational sphere, health (family planning), in the labour sphere and in the mass media.

Recent statistics are significant here: 83.2% of girls aged between six and thirteen are in school (89% of boys), whilst in 1995-6 47% of the children in primary schools were girls, and 48% of those in secondary schools and 44% of students are female. Women represent *ca.* 20% of the active working population. They thus have their place today in all spheres of education and the world of work.

Inequality nevertheless remains, above all in rural areas. Unemployment affects women more than men. Even if girls sometimes have better school results than boys, they still tend to choose less prestigious and appreciated careers. Women are poorly represented in the scientific and technological spheres and have few managerial functions; there are very few of them in politics, trade and professional unions and associations (except women's ones). Public life remains still

mostly a male preserve. All these reflect a latent resistance to social developments and an identity concept which looks more at the past than to the future.

(LILIA BEN SALEM)

AL-ṬŪR (A.), a word with the basic sense of "mountain".

It occurs ten times in the Ḳur'ān (II, 60/63, 87/93; IV, 153/154; XIX, 53/52, etc.), on two occasions (XXIII, 20; XCV, 2) expressly coupled with Sīnā'/Sīnīn, specifically meaning Mount Sinai. Virtually all its occurences in the Ḳur'ān are connected with the wanderings of the Children of Israel in the Sinai Desert [see BANŪ ISRĀ'ĪL; SĪNĀ'; AL-TĪH]. It was early recognised by the Arabic philologists as a loan word from Hebrew or Aramaic (cf. Hebr. *ṣūr* "rock" > "cliff", Aram. *ṭūrā* "mountain"), more proximately, from Syriac (see A. Jeffery, *The foreign vocabulary of the Qur'ān*, Baroda 1938, 206-7).

1. D̲JABAL AL-ṬŪR, Mount Sinai.

The Arab geographers (e.g. Yāḳūt, *Buldān*, iii, 557; Abu 'l-Fidā', tr. Reinaud, 65; cf. A.-S. Marmardji, *Textes géographiques arabes sur le Palestine*, Paris 1951, 135) locate the mountain as not far from the Red Sea (Baḥr Ḳulzum) and say that it was climbed from al-Amn (Elim ?), where the children of Israel once encamped. In the vicinity was the Wādī Ṭuwā, where Moses spoke with God before he was sent to Pharaoh (Ḳur'ān, XX, 12; LXXIX, 16; Yāḳūt, III, 553; Ṣafī al-Dīn, *Marāṣid al-iṭṭilā'*, ed. Juynboll, ii, 213).

On the north side of the mountain (now D̲jabal Mūsā) in what is now called the Wādī S̲h̲u'ayb (valley of Jethro) at a height of 5,000 feet is the monastery of Catherine, on the site of the castle built by Justinian I probably between A.D. 548 and 562 to protect the monks of Sinai. According to the Book of Monasteries (*Kitāb al-Diyārāt*) of al-S̲h̲ābus̲h̲tī, the "Church (*kanīsa*, for which Yāḳūt, ii, 675, writes *dayr*) al-Ṭūr" was on the top of the mountain, built of black stone and strongly fortified; there was a spring outside and another inside the building. The monastery was inhabited by monks and much visited on account of the miracles wrought there (ed. G. 'Awwād, Bag̲h̲dād 1386/1966, 310, 426-9). In this description, the Christian church of the Mother of God (Θεοτόκος), which was built also by Justinian on the slope of the mountain, probably on the site of the present Chapel of Elijah (see below), is confused with the monastery at its foot.

The monks of the monastery possess a copy of an alleged letter from Muḥammad granting protection (Pococke, *Description of the East*, i, 268-70; Moritz, in *APAW* [1918], Abh. 4, pp. 6-8), and a number of genuine documents of the time of the Mamlūk sultans Ināl, K̲h̲us̲h̲ḳadam and Ḳā'itbay (Moritz, *op. cit.*, 25 ff.). They mainly deal with the protection of the Christian monks from the raids of the marauding Bedouin of the country round, but seem to have been regarded by the latter as empty threats, as their frequent renewal shows (Ḳā'itbay issued no fewer than 22 *firmāns* for the monastery during the 30 years of his reign!). The monastery was frequently stormed, set on fire, its gardens robbed and pilgrims and merchants plundered; sometimes the monks even had to seek refuge in the monastery of the village of al-Ṭūr (see below) (Moritz, *op. cit.*, 28).

Within the monastery "between the church and the dwellings on the northern part of the buildings" there is still a mosque, the pulpit of which was, according to an inscription, presented by Abū 'Alī al-Manṣūr Anūs̲h̲takīn al-Āmirī in Rabī' I 500/November 1106 in the reign of the caliph al-Āmir bi-Aḥkām Allāh (Moritz, 50-2). The monastery of Sinai in this inscription is called the "upper monastery" (*al-dayr al-a'lā*) to distinguish it from monasteries in al-Ṭūr (῾Ραιθοῦ) and Fārān. According to another inscription, this same Anūs̲h̲takīn founded three *masād̲j̲id* (places for prayer) on the Munād̲j̲āt Mūsā, a mosque on the hill of the monastery of Fārān and another below Fārān al-D̲j̲adīda, and a lighthouse on the shore of the coast (al-Sāḥil). By Munād̲j̲āt Mūsā is certainly meant the traditional Sinai, now D̲jabal Mūsā (Moritz, 54); it was only in the 14th century that the name was transferred to a smaller hill east of the monastery of St. Catherine, which is now called (like a hill near Fīrān) D̲jabal Munād̲j̲a. Of the three *masād̲j̲id*, only two could have been on the top of D̲jabal al-Ṭūr, namely, the Christian church built in A.D. 364 by St. Julian and a small mosque, also mentioned by al-Idrīsī; the third place of prayer no doubt lay on a small plateau 500 feet below the summit on which now stands a chapel of Elijah erected at a later date. The mosque on the "hill of the monastery of Fārān" is perhaps to be sought on the D̲jabal al-Muḥarra, that of new Fārān in the oasis of Fīrān, in the gardens of which the inhabitants of the "city of the Amalekites" Fārān later settled (al-Maḳrīzī, *K̲h̲iṭaṭ*, Būlāḳ, i, 188; Moritz, 56). Moritz supposes the lighthouse (57) to have stood at that point on the coast where the Wādī Fīrān enters the sea and there is a poor anchorage.

In a Syriac description of the seven climes of the 13th century A.D., the mount of Sinai (*Ṭūrā de-Sinai*) forms the centre of the crescent-shaped map in the second clime (Chabot, *Notice sur une mappemonde syrienne*, in *Bulletin de géogr. hist. et descript.* [1897], 104, and pl. iv.).

The library of St. Catherine's has proved to be of unique value for its preservation, *inter alia*, of important manuscripts and archival documents in Arabic. The former are important for Christian Arabic literature, and the latter significant for both mediaeval Islamic history and Arabic diplomatic [*q.v.*], given that original documents, as opposed to texts copied into later works, such as manuals of secretaryship, have been so sparsely preserved in the pre-Ottoman Islamic Middle East. As Stern noted, it can hardly be coincidental that these administrative documents have been preserved by a monastery, which had a sort of corporate existence lacking in Islamic institutions (*Fāṭimid decrees*, 4). B. Moritz was the pioneer in 1914 in drawing the attention of the scholarly world to all

this Arabic material (in his *Beiträge zur Geschichte des Sinaiklosters im Mittelalter nach arabischen Quellen*, in *APAW* [1918], Abh. 4; cf. also C. Schmidt and Moritz, *Die Sinai-Expedition im Frühjahr 1914*, in *SBPAW* [1926], 26-34). More recently, S.M. Stern studied archival material in his *Fāṭimid decrees. Original documents from the Fāṭimid chancery*, London 1964, see esp. ch. 1; *Petitions of the Ayyūbid period*, in *BSOAS*, xxvii [1964], 1-32; and *Two Ayyūbid decrees from Sinai*, in Stern (ed.), *Documents from Islamic chanceries. First series*, Oxford 1965, 9-38. Cf. also E. Khedoori, *Charters of privileges granted by the Fātimids and Mamlūks to St. Catherine's Monastery (ca. 500-900 A.H.)*, diss., Univ. of Manchester 1958, unpubl. For the material from the succeeding Mamlūk period, see also H. Ernst (ed. and tr.), *Die mamlukische Sultansurkunden des Sinai-Klosters*, Wiesbaden 1960; and for the Ottoman one, K. Schwarz, *Osmanische Sultansurkunden des Sinai-Klosters in türkischer Sprache*, Wiesbaden 1970, and R. Humbsch, *Beiträge zur Geschichte des osmanischen Ägyptens, nach arabischen Sultans- und Statthalterurkunden des Sinai Klosters*, Freiburg 1976. For catalogues and publications relating to the Arabic mss. of the Library, see the *Bibl.* below.

The little town of al-Ṭūr lies to the south-west of the Djabal Mūsā on the Gulf of Suez, about 50 miles from Rās Muḥammad, the most southern point of the Sinai peninsula. In the early years of the 20th century, it was in regular caravan communication with the monastery of St. Catherine, some of whose monks usually staying in the town (Weill, *La presqu'île du Sinai*, 82). It lies at the only spot on the west coast of the peninsula which is completely free from coral reefs and has therefore an anchorage. As al-Ṭūr is further excellently supplied with water, and has large palm-groves in the vicinity, it has always been the most important harbour in the peninsula. In ancient times, it was called Ποσείδιον (Agatharchides, in Strabo, xvi, 776 and Diodorus, iii, 42) and later (from the Arab tribe of the 'Ραϊθηνοί) 'Ραϊθοῦ ('Ραηθώ in Suidas); probably the monastery there dated from the pre-Arab period.

Al-Ḳalḳashandī already knows al-Ṭūr as the most important Egyptian harbour for the ships of the pilgrims to Mecca, until about 450/1047 when ʿAydhāb [*q.v.*] took its place. It was not till 780/1378-9 that the harbour of al-Ṭūr was restored and the pilgrims henceforth again took the northern route (Weill, *op. cit.*, 92-4). After the discovery of the sea-route to India by the Portuguese, al-Ṭūr gradually lost its importance and sank to be a mere fishing-village, until in the second half of the 18th century a quarantine station was put there for pilgrims returning from Mecca and the place began to flourish once more. Sultan Murād built the fort of Ḳalʿat al-Ṭūr near the old monastery, but both are now completely in ruins.

2. ṬŪR ZAYTĀ or DJABAL ZAYTĀ, the Mount of Olives, east of Jerusalem [see AL-ḲUDS. A.], height 2,680 feet, still called DJABAL AL-ṬŪR. According to tradition, 70,000 prophets died there of starvation and are buried there. The Ascension of Jesus, according to an old tradition, took place from the Mount of Olives. Between it and the town ran the Wādī Djahannam (vale of Kedron, now Wādī Sittī Maryam with the well of Siloam, Arabic ʿAyn Sulwān) over which ran the bridge of al-Sirāṭ. The village of Kafr al-Ṭūr now stands on the hill.

3. AL-ṬŪR, the hill of Tabor (still called DJABAL AL-ṬŌR). At the spot where Jesus revealed himself to his disciples, the monastery of Dayr al-Ṭūr or Dayr al-Tadjallā stood on the hill. In the Crusading period there was a fortress on the top, which Ṣalāḥ al-Dīn captured and al-Malik al-ʿĀdil had restored in 608/1212. The Crusaders tried in vain to recapture it in 614/1217. Baybars in Djumādā II 661/April-May 1263 used the fortress as a base of operations for his raids against ʿAkkā.

Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, 124 n. 4; Luke and Keith-Roach, 137-8; Marmardji, 134.

4. AL-ṬŪR, the hill of Gerizim, height 2,849 feet, above Nābulus, the sacred mountain of the Samaritans. Jewish tradition makes it the scene of the sacrifice of Isaac. The hill is still called Djabal al-Ṭōr or al-Djabal al-Ḳiblī to distinguish it from the Djabal al-Shamālī or Islāmiyya (Ebal) to the north of the town.

Bibliography: Yāḳūt, iii, 557; Ṣafī al-Dīn, ii, 214; Le Strange, *Palestine under the Moslems*, 74, Luke and Keith-Roach, 6, 129; Marmardji, 134.

5. ṬŪR HĀRŪN, the hill of Hōr (5,600 feet) west of Petra, called after Aaron, who according to an old tradition, is buried there (Josephus, *Antiquities*, iv. 4, 7). When the children of Israel accused Moses of having slain him, he showed them on the top of the hill the bier on which Aaron lay. In al-Masʿūdī, the hill is called Djabal Maʾāb in the district of al-Sharā; he also mentions the caves in the mountain. On the east-

ern peak (5,200 feet) of the Djabal al-Nabī Hārūn is Aaron's grave (Ḳabr Hārūn), which is still a place of pilgrimage for the Bedouin.

(E. HONIGMANN-[C.E. BOSWORTH])

ṬŪR ʿABDĪN, "mountain of the [Christian] devotees", a mountainous plateau region of northern Mesopotamia, in early Islamic times coming within the province of Diyār Bakr [*q.v.*] and now, in the Turkish Republic, coming within the *il* of Mardin. It has been notable throughout the Islamic period for the survival—at least until the later 20th century—of a vigorous Syriac Christianity, with many churches and monasteries.

1. Geography.

Ṭūr ʿAbdīn stretches roughly from Mārdīn [*q.v.*] in the west to Djazīrat Ibn ʿUmar [*q.v.*], the modern Turkish town of Cizre, in the east. To its north and east, the Tigris forms the boundary up to the point where it is joined by the Batman Su. In its northwestern part lies the Koros Dağı. In the south, the borders of Ṭūr ʿAbdīn are well marked where the wall of the tableland slopes steeply, often precipitously, to the North Syrian plain, with the tableland looking from the desert like a strong barrier. Below this wall runs the historic road from Mārdīn to Naṣībīn [*q.v.*] (modern Nusaybin) and thence to northern ʿIrāḳ. Together with Ṭūr ʿAbdīn are usually included the mountains around Mārdīn, with the Mazı Dağı to its west and, separated by a pronounced depression, the basalt ridge of the Karaca Dağı. Its two modern urban centres are Mardin and Midyat (Aramaic: Midhyadh).

The average height of Ṭūr ʿAbdīn is in its central portion about 3,000-3,500 feet above sea-level. In the district between Midyat and Ḥiṣn Kayfā [*q.v.*] on the Tigris and in the mountains of Mārdīn, individual peaks reach 4,300 feet. In general, however, Ṭūr ʿAbdīn lacks any marked heights and looks everywhere like an undulating plain which is cut by deep and broad wādīs. The largest is the Wādī Khaltān, which flows into the Tigris at Finik (to the northwest of Djazīrat Ibn ʿUmar).

Ṭūr ʿAbdīn consists almost entirely of limestone, often with beds of marl. In places, however, we find angular basalt blocks scattered, which are of volcanic origin. Such outcrops of basalt are found especially in the east, towards Djazīra, where the basaltic Elimdagh rises as a continuation of the southern wall of limestone of Ṭūr ʿAbdīn, and also west of Mārdīn where the lava from the Karadja-Dagh flowed out. To the nature of the rock composing it, Ṭūr ʿAbdīn owes its many caves, which are often, as in ancient times, used as dwellings. Such caves are numerous, for example in the region of Midyat (mentioned as early as the Assyrian inscriptions), and notably at Ḥiṣn Kayfā, which is the regular troglodyte capital.

The eastern and western part of Ṭūr ʿAbdīn is in general characterised by an absence of trees, but in its centre, east of Midyat, a strip of forest runs from north to south. Here we have many small hills overgrown with stunted trees (dwarf oaks) and shrubs. As a result of the scarcity of forests and the fact that most of the rainfall sinks into the porous limestone, there is a serious scarcity of water in a large part of Ṭūr ʿAbdīn. For watering the cattle, water is collected in cisterns, often very old, and large ponds. The south has the most plentiful supply of water; there we find numerous springs and countless little streams running southwards through the hills, usually to disappear in the sands of the Mesopotamian plain at no great distance from the foot of the mountains. The streams that flow from the southern side of Ṭūr ʿAbdīn enter the river Djaghdjagh, which divides into two arms above Naṣībīn. The southern slopes of the Karadja Dagh, as well as the Mārdīn mountains, are drained by the Khābūr [*q.v.*] which receives the waters of the Djaghdjagh at al-Ḥasaka in northeastern Syria.

In spite of many barren patches and the generally unfavourable irrigation conditions, there are many stretches of ground which grow cereals well and excellent pastures, especially in the hollows which hold the fertile reddish-brown earth, and on the slopes of the little hills, which are preferably used for the vine. At the monasteries we find well cared-for vineyards. Terraces to which the soil has been carried have also been built to grow the vine and fruits. The people are exceedingly skilled in irrigating their fields. In addition to cereals (usually barley) and the vine, cotton and all kinds of fruits (especially very fine apricots) are grown. In the wooded portions of Ṭūr ʿAbdīn oak galls and manna resin are gathered, and are found in large quantities. A ridge west of Mārdīn, the Djabal al-ʿAfṣ, takes its name from the plentifulness of oak galls there (*ʿafṣ*). On the wines and other products of the soil of Ṭūr ʿAbdīn, see E. Prym and A. Socin, *Der neuaramäische Dialekt des Ṭūr ʿAbdīn*, Göttingen 1881, i, p. viii, and Cuinet, *La Turquie d'Asie*, ii, Paris 1892, 429.

Bibliography: For 19th and early 20th-century travellers who journeyed through the interior of Ṭūr ʿAbdīn, from Shiel (1836) to de Beaufort, Sandreczki, Goldschmid, Socin, Sachau, Lehmann-Haupt, Sir Mark Sykes, Gertrude Bell, etc., and the reports of American missionaries, see *EI*[1] art. *Bibl.*, and note A. Socin, *Zur Geographie des Ṭūr ʿAbdīn*, in *ZDMG*, xxxv (1881), 237-69. Of recent studies, see Naval Intelligence Division, Admiralty Handbooks. *Turkey*, London 1942, ii, 477-8, 572-3; W.C. Brice, *A systematic regional geography. South-West Asia*, London 1966, 136-7.

(M. STRECK*)

2. History.

Ṭūr ʿAbdīn was already known to the Assyrians as the Kasiyari mountains; it is found thus called in the inscriptions of Adad-nirari I (1308-1275 B.C.) and Šulman-ašarid (Shalmaneser) I (1275-45). In Assyrian inscriptions we find, as well as Kasiyari, two other names apparently referring to parts only of Ṭūr ʿAbdīn: Ni-irbu, probably the central part of the massif, and Izala, the southern fringe and the Mārdīn region (whose name is also mentioned), the Syriac Īzəlā and Arabic Djabal Izal. The whole region corresponds roughly to τὸ Μάσιον ὄρος, Masius, of later Greek geographers like Arrian and Ptolemy.

The Aramaic name Ṭūr ʿAbdīn stems from the period when the massif had become a flourishing centre of Eastern church life and monasticism. The name appears in a Syriac *Lives of the Saints* from the time of the Emperor Julian (*r.* 351-63). Byzantine sources also note many fortresses in the region, built to face the frontier with Sāsānid Persia; these are listed e.g. in the *Descriptio orbis romani* of George Cyprius (beginning of the 7th century). In Byzantine sources we find the ethnicon Τουραβδηνός. The name appears in the Armenian geography of Moses Khorenacʿi as Turabdin, apparently, however, denoting a restricted area, the southern fringes of Ṭūr ʿAbdīn (see Marquart, *Ērānšahr*, 141, 158), perhaps Izala.

In mediaeval Arabic sources we also find the name Ṭūr ʿAbdīn. For the pre-Islamic period we have it in verses of the poet Abū Duʾād al-Iyādī, which tell us that the legendary founder of the kingdom of al-Ḥaḍr [*q.v.*], Sāṭirūn, also ruled the land of Ṭūr ʿAbdīn (see Ibn Khurradādhbih, vi, 95, ll. 11-12 = Yāḳūt, *Muʿdjam*, ed. Wüstenfeld, iii, 559, l. 5, and cf. also Yāḳūt, ii, 284, ll. 13-14). Ṭūr ʿAbdīn is also mentioned in a poem, the subject of which is Khusraw and Shīrīn: see Ibn al-Faḳīh, 159, l. 19 f.; al-Masʿūdī, *Tanbīh*, 54, l. 1, mentions that in Ṭūr ʿAbdīn remnants of the Aramaeans still survive. Ibn Rusta, 90, l. 8 and al-Balādhurī, *Futūḥ*, 175, l. 12, point out that the Hirmās, a tributary of the Khābūr [*q.v.*], rises in Ṭūr ʿAbdīn. We may also mention that the Arab geographers (see Ibn Ḥawḳal, ed. de Goeje, 73, l. 3, and Abu 'l-Fidāʾ, *Taḳwīm al-buldān*, ed. Paris, 282) also have the special name Djabal Māridīn for the southern borders of Ṭūr ʿAbdīn, the district of Naṣībīn and Dārā. The Modern Syriac pronunciation of Ṭūr ʿAbdīn (one also hears Ṭūr al-ʿAbedīn) is ū-Ṭūro daʿ-ʿĀbōde. The name Ṭūr ʿAbdīn is locally not unknown, especially in Christian circles, but belongs to the literary rather than to the spoken language. This hill-country is called in Arabic *al-Ṭūr*, also *al-Djabal* and *Djabal Ṭōr*, or *Djabal al-Ṭūr*; cf. Prym and Socin, *op. cit.*, i, pp. i, ii, and Sachau, *Reise in Syrie und Mesopotamien*, Berlin 1883, 387.

The district of Ṭūr ʿAbdīn passed with the rest of Mesopotamia (al-Djazīra) into the hands of the Arabs in the years 18-19/639-40, see al-Balādhurī, *Futūḥ*, 176, ll. 3-5 = Yāḳūt, iv, 390, ll. 15-16, and Caetani, *Annali dell'Islām*, iv, 36, 156. The Ṭūr belonged to the Mesopotamian province of Diyār Rabīʿa under the caliphs.

As regards its political history after the conquest, Ṭūr ʿAbdīn generally shared the fortunes of the adjoining districts forming the rest of al-Djazīra. Concerning the interior, Ṭūr ʿAbdīn proper, there is comparatively little in the Arabic sources. On the other hand, important towns on its borders like Mārdīn, Djazīrat Ibn ʿUmar, Ḥiṣn Kayfā and Naṣībīn are frequently mentioned. There is important material for local history in Syriac literature, particularly in chronicles and hagiographic texts. Valuable information for the history of Ṭūr ʿAbdīn in the 9th/15th century, especially for the period of Tīmūr's campaigns, is contained in a continuation of the *Chronicon Syriacum* (of profane history) of Barhebraeus (Abu 'l-Faradj) by anonymous monks (one of whom belonged to a monastery in Bāsebrīna); see Baumstark, *Gesch. der syrisch. Literatur*, Bonn 1922, 328. In mediaeval times and up to the present day the history of the Kurdish tribes in Ṭūr ʿAbdīn and the country round it is of importance. The history of the Kurdish dynasties of Djazīrat Ibn ʿUmar and Ḥiṣn Kayfā is of special importance in this connection; cf. the account based on the Kurdish chronicle *Sharaf-nāma* of Sharaf al-Dīn Bidlīsī [*q.v.*] given by H.A. Barb, in *S.B. Ak. Wien*, xxx [1859], 117 ff., and see also KURDS, KURDISTĀN. iii. B.

In the redistribution of territory which followed the First World War, Ṭūr ʿAbdīn was left to the Turks. In the administrative division of the Ottoman empire as it existed down to that War, Ṭūr ʿAbdīn belonged to the *wilāyet* of Diyārbakr and to the *sandjaḳ* of Mārdīn, which was divided into five *ḳaḍās*: Mārdīn, Djazīra, Midyat, ʿAwīne and Naṣībīn; see Cuinet, *op. cit.*, 412, 496-7. As noted above, it is now in the *il* of Mardin.

In the early Byzantine period and the first centuries of Islam, Ṭūr ʿAbdīn was probably inhabited almost entirely by Christian Aramaeans. Later, more and more Muslims (mainly Kurds) settled there, so that with the gradual decline in the numbers of Christians, the result of frequent persecutions by the Muslims, the proportion altered more and more in favour of the latter down to the First World War. According to Cuinet's statistics, not, however, too reliable (*op. cit.*, 412, 496-7), the *sandjaḳ* of Mārdīn, which in area at least was larger than Ṭūr ʿAbdīn in the wider sense, had in 1890 in all 194,072 inhabitants, viz. 122,522 Muslims, 67,970 Christians, 1,500 Yazīdīs, 1,500 Gypsies and 580 Jews: the Christians were thus a third of the whole population. In the two *ḳaḍās* which were almost entirely within Ṭūr ʿAbdīn, those of Midyat and ʿAwīne, Cuinet, 513, 517-18, gave the population in 1890 as 31,920 Christians and 37,712 Muslims. In the central *ḳaḍā* of Midyat the numbers were about equally balanced: 22,632 Muslims and 22,186 Christians, the majority Jacobite in theology, with a few thousand Uniate Catholics and a few hundred Protestants.

In 1882 the Ottoman government granted the Christians *millet* [*q.v.*] status, but this has not been maintained by its recognition as a minority under the Turkish Republic, with its state policies of Turkification. The 20th century has accordingly brought much violence and persecution for the Syriac Christian community, as it did for the Armenian Christians of the Ottoman Empire. Extensive emigration began after the persecutions of 1915 in eastern Turkey. Violence against the Christians, above all from the surrounding Kurds, exacerbated by central and local Turkish officialdom's failure to protect the Christians, was unleashed in the disturbed, post-First World War years before the new Turkish Republic established its authority in the eastern provinces of the realm. In 1924 the Jacobite Patriarch, Ignatius Elias III, was driven from his residence at Dayr Zaʿfarān to the east of Mardin, and migrated, with 3,000 to 4,000 of his followers, to the safety of French-mandated Syria (see H.C. Luke, *Mosul and its minorities*, London 1925, 113).

With the internal insecurity which characterised Turkey in the 1960s and 1970s, persecution and violence against the Christians by unrestrained Muslim Kurds increased, especially with the return to Ṭūr ʿAbdīn of Kurds from Beirut after the Lebanese Civil War broke out in 1975, who now wrought their vengeance on the local Christians. Internal emigration to Turkish cities like Istanbul (with a community there estimated in 1985 at 12,000), Ankara, Diyarbakır, Elâziğ and Malatya, increased, as did external emigration to Germany, Austria, Sweden, Switzerland, the Netherlands, Belgium and the United States, where there are now substantial communities. The restoration of order within Turkey by the military régime after 1980 improved the condition of the Ṭūr ʿAbdīn Christian community, but the future remains uncertain for it, especially with the present resurgence of Islamic fundamentalism within Turkey, and emigration continues.

The focus of the Christian community, in the 1980s numbering some 10,000, remains the town of Midyat, in whose vicinity 33 villages were still inhabited by Christians in 1983; of the 80 monasteries known in mediaeval times (see below, 3.), six remain with resident monks and nuns (Anschütz). The community in Midyat comprises traders and craftsmen, such as gold and silversmiths, dyers and tailors, plus what might be called a proletariat which has come in from the countryside and is en route for Istanbul or Europe. Outside the town, the villagers still use largely

primitive agricultural and stock-rearing methods.

Bibliography: Older sources are detailed in *EI*[1] art. s.v.: notable there are Gertrude L. Bell, *Amurath to Amurath*, London 1911, 296-322; F. Sarre and E. Herzfeld, *Archaeologische Reise im Euphrat- und Tigrisgebiet*, Berlin 1911-20, *passim*; Sir Mark Sykes, *The caliphs' last heritage*, London 1915, 354-7, 578; W.A. Wigram, *The Assyrians and their neighbours*, London 1923. A classic recent study is H. Ritter, *Ṭūrōyo. Die Volkssprache der syrischen Christen des Ṭūr ʿAbdīn*, 3 vols. Beirut-Wiesbaden 1967-71, with material of historical and demographic as well as of linguistic interest. For the recent situation in Ṭūr ʿAbdīn, see Gabriele Yonan, *Assyrer heute. Kultur, Sprache, Nationalbewegung der aramäischsprechenden Christen im Nahen Osten*, Hamburg 1978, and the works of Helga Anschütz, especially her monograph *Die Syrischen Christen vom Tur ʿAbdin*, Das östliche Christentum, N.F. 34, Würzburg 1984, and see her essay *Christliche Gruppen in der Türkei*, in P.A. Andrews and R. Benninghaus (eds.), *Ethnic groups in the Republic of Turkey*, Beihefte zum TAVO, Reihe B, no. 60, Wiesbaden 1989, 460-4, also *ibid.*, 161-3.

(M. Streck-[C.E. Bosworth])

3. Religious complexion.

Christianity spread from Edessa into Ṭūr ʿAbdīn at an early date. At the Council of Chalcedon (451) there is mentioned a bishop of Ciphas/Ḥiṣn Kayfā, and in the *Notitia Antiochena* of 570 a bishop of Turabdin, whose seat may have been at Ḥāḥ, is listed. From the time of the great Christological controversies until the 20th century, Ṭūr ʿAbdīn has been the citadel of the Jacobites; nowhere do or did they exist until recent times in such solid masses as in these highlands and in Mārdīn and its vicinity. Ṭūr ʿAbdīn proper originally seems to have been a single Jacobite bishopric; *ca.* 1089 it was divided into two dioceses, the bishops of which lived in Ḳarṭamīn and Ḥāḥ respectively. Later, in the 13th century, other sees were created in the chief towns of the district. In the middle of the 14th century differences between the patriarch of Mārdīn and the Bishop of Ṣalāḥ (2 hours' journey north of Midyat) led to a schism, in the course of which the bishops of Ṭūr ʿAbdīn cast off the authority of the patriarch and chose the bishop of Ṣalāḥ as patriarch of Ṭūr ʿAbdīn and Ḥiṣn Kayfā. This split lasted for over a century.

In addition to Jacobites, there were in Ṭūr ʿAbdīn in mediaeval times, and even later, communities of Nestorians. The oldest monastery there, that of Mār Awgen, was for long in their possession (see below). These Nestorians were won over to Rome in the 16th and 17th centuries and henceforth called themselves Chaldaeans (*Kaldāniyyūn*), as a religious community with their own ritual. The members of this so-called Chaldaean church settled in Ṭūr ʿAbdīn had in the early 20th century at their head two bishops (in Mārdīn and D̲j̲azīra); according to a native Chaldaean cleric, they numbered in 1914 8,070 souls. According to Cuinet, there were in 1890 in Ṭūr ʿAbdīn about 4,000 Syrians (*Suryāniyyūn*), i.e. Jacobites in union with Rome, who were under a Patriarch of Mārdīn and a bishop of D̲j̲azīrat Ibn ʿUmar. According to Cuinet, there were in the administrative district of Mārdīn also 28,666 Armenians, of whom one half professed to belong to the Orthodox Church, the other half in fairly equal portions to the Roman Catholic and to the Protestant churches. The Armenian Protestant community is a creation of the activity of American missions. The prosperity caused by the civilising influence of the American missionaries, who had their main centres in Mārdīn and Midyat, spread practically over the whole of Ṭūr ʿAbdīn, but ceased with the First World War. Finally, Cuinet gives from about 1890 as further Christian inhabitants of the *sand̲j̲aḳ* of Mārdīn 6,730 Greeks (who had to leave Turkish territory after the War), and mentions 580 Jews.

Ṭūr ʿAbdīn plays a very important part in the history of eastern monachism. According to a tradition in Nestorian circles, St. Eugenius came from Egypt in the 4th century and founded a monastery in the southern part of Ṭūr ʿAbdīn, and thus laid the foundation of the monastic system which developed to such an extent in Mesopotamia. St. Eugenius, who had many followers, is said after his death in 363 to have been buried in the monastery built by him. Certainly, by mediaeval times Ṭūr ʿAbdīn had become a regular monks' citadel like an eastern Mount Athos. When Niebuhr, *Reisebeschreibung nach Arabien und anderen umliegenden Ländern*, Copenhagen 1778, ii, 387-8, was told that there were over 70 ruined monasteries in this mountain land, one need not think this is an exaggeration. Great churches, for the most part of the 7th-10th centuries, are still to be seen. These monuments of mediaeval ecclesiastical architecture of the east are of considerable importance for the history of Christian art.

Amongst the monasteries, many of whose ruins still dot the region's landscape, important has been the mother house of all the monasteries of Ṭūr ʿAbdīn, that of Mār Awgen, situated 13 miles east of Mārdīn. In mediaeval times it was the centre of the Nestorians of the west, but in more recent ages was inhabited by Jacobite monks. The monastery of Abraham, often referred to in Syriac literature as "the great monastery [on Mount Īzlā]", was founded by the creator of Nestorian monachism, Abraham of Kaskar (d. 588). Dayr al-Zaʿfarān, one hour's journey east of Mārdīn, was the seat of the Jacobite Patriarch till his removal in 1924 to Aleppo (see above, 2.). In the early 20th century the principal monastery and goal of pilgrimage for Jacobites was Ḳarṭamīn, 12 miles southeast of Midyat. This was perhaps the most celebrated one of the Jacobites of Western Asia, with some 300 monks in its mediaeval heyday; it is still functioning on a small scale, and is usually known locally as Mār Gabriel after its celebrated abbot, d. 667.

The Muslim part of the population of Ṭūr ʿAbdīn consists mainly of Kurds. They have spread more and more widely into the heart of Ṭūr ʿAbdīn in recent centuries, and the Christian peasants with whom they have been constantly warring are being driven more and more from the southern slopes of the mountains towards the plains. The followers of the Yazīdī religion in Ṭūr ʿAbdīn are also Kurds, but their numbers are insignificant. The most important Yazīdī tribe there is called D̲j̲ilkī (Ts̲h̲elkī), hence *čalkōyo* = Yazīdī in the Ṭūrōyo language.

Arab Bedouin also encamp occasionally in Ṭūr ʿAbdīn especially on its southern outliers; for the names of some of them see J.G. Taylor, *Travels in Kurdistan*, in *JRGS*, xxxv [1865], 54-5, and M. von Oppenheim, *Von Mittelmeer zum Persische Golf*, Berlin 1900, ii, 68. A special position is occupied by the large tribe of the Mḥallamī (Muḥallamīya) whom we find as early as the already mentioned anonymous continuation of the *Chronicle* of Barhebraeus (year 1407). They are the result of the intermarriage of Arabs and Kurds (with Arab influence predominant), and are said to have renounced Christianity over 300 years ago. They dwell mainly in the part of Ṭūr ʿAbdīn running west of Mārdīn to the Tigris.

Bibliography: In addition to references given in 2. above, see Gertrude L. Bell, *The churches and the monasteries of the Ṭūr ʿAbdīn*, new ed. by M.M. Mango, London 1982 (orig. Heidelberg 1911); G. Wiessner, *Christlische Kultbauden im Ṭūr ʿAbdīn*, i-ii, Wiesbaden 1981-3; A. Palmer, *Monk and mason on the Tigris frontier. The early history of Tur ʿAbdīn*, Cambridge 1990.

(M. STRECK*)

4. Languages.

Three indigenous languages (here in the sense of dialect clusters) are spoken in Ṭūr ʿAbdīn: Mārdīn Arabic, Ṭūrōyo, and Kurmāndjī. Of these the first two are peculiar to the area (though with some overspill into the plain south of Mārdīn in the first case), whereas Kurmāndjī is, of course, the language of the northern Kurds in general, of which the Ṭūr ʿAbdīn variety represents just one distinctive dialect. The distribution of the three languages is roughly as follows: Arabic in the Western part and Kurmāndjī in the Eastern, while the Ṭūrōyo-speaking villages are grouped in a large oval around Midyat, the centre of Ṭūr ʿAbdīn. Two important Arabic-speaking towns are, however, situated in the Eastern part: Ḳarṭmīn (Yayvantepe) and Āzəkh (İdil). It should be noted that there is much interpenetration of the language areas, not only geographically, but also in the sense that there are, or were, a number of villages with a linguistically-mixed population, which also meant that many people were polyglot. Speakers of Ṭūrōyo are often quadrilingual in Ṭūrōyo, Mārdīn Arabic, Kurdish and Turkish. Other languages of importance are the official state and school language Turkish and, among the Christians, Classical Syriac in its Western variety, used not only as a church language, but also as a medium for serious writing for the community; it is thus not entirely a dead language.

(i) Mārdīn Arabic is a member of the Anatolian group of the northern Mesopotamian *qəltu* dialects, the others being the Diyarbakır, Siirt, Kozluk and Sason dialect groups (see Jastrow, *Qəltu-Dialekte*, i, 2). The *qəltu* dialects are characterised by a number of isoglosses, chief among them the ending *-tu* for the 1st person sg. perfect, as in the shibboleth *qəltu* "I said", and the umlaut *imāla*, conditioned by an adjacent /i/, as in *bəsētīn* (Mārdīn) "gardens". The Anatolian dialects in turn are distinguished from the Euphrates and Tigris groups by the following main isoglosses: (a) the development of a copula from the independent personal pronouns, as in *bayti gbīr-we* (Mārdīn) "my house is big" (with some overspill into the Tigris group); (b) /n/ rather than /m/ in the following pronominal forms: *hənne* "they", *baytən* "their house", *əntən* "you (pl.)", *djītən* "you (pl.) came", and *baytkən* "your (pl.) house" (Mārdīn forms); (c) the negation *mō* for the imperfect, as in *mō tbīʿ* (Āzəkh) "you (m. sg.) do not sell" vs. *mā tbīʿ* in the Euphrates dialect of Dēr iz-Zōr. The Mārdīn group is distinguished from the other Anatolian groups by certain features that must be called conservative, prime among which is the preservation of the interdentals (with the exception of the villages of Djawze, Ḳəlləf, and Āzəkh), whereas the Diyarbakır dialects have dentals, Siirt labiodentals, and Kozluk and Sason sibilants instead. For further isoglosses see Jastrow, *Qəltu-Dialekte*, i, 28-29.

Mārdīn Arabic is, in turn, divided into six dialects which, from west to east, are as follows: Plain dialects (outside Ṭūr ʿAbdīn proper; 9 villages), Mārdīn city and vicinity (partly outside the Ṭūr; Mārdīn plus 6 villages), Kōsa (tribal name; 16 villages), Mḥallami (tribal name; 19 villages), Ḳarṭmīn, and Āzəkh. For a list of towns and villages in which these dialects are spoken, together with their official Turkified and their historical names and their population according to the census of 1965, see Jastrow, *Qəltu-Dialekte*, i, 6-15. Cf. also the language map of Ṭūr ʿAbdīn in Anschütz, *Die syrischen Christen*, no. 7 (in back pocket), where additional villages are indicated as Arabic-speaking.

Most of the speakers of Mārdīn Arabic are Sunnī Muslims (mostly Shāfiʿī). Only Mārdīn, Ḳəlləf (Dereiçi) in the Mḥallami area, and Āzəkh (İdil) have sizeable Christian, mostly Syrian Orthodox, communities. Other villages, too, are listed by Anschütz as having small Christian populations, but the emigration of Christians in recent years has been so intensive that little can be said about the present situation.

Mārdīn Arabic is not a written language in any of its dialects (for an interesting private attempt of writing the dialect of əṣ-Ṣawr [Savur], transitional between Mārdīn proper and Kōsa, see Sasse, *Mḥallami*, 282). There is also no diglossia situation, since Standard Arabic is unknown to the speakers of Mārdīn Arabic.

(ii) Ṭūrōyo (*nisba* of Ṭūr ʿAbdīn, denoting the language as well as the inhabitant) is one of the four Neo-Aramaic languages that form an archipelago of remnants of the ancient Aramaic language, once dominant in the Fertile Crescent (for an overview see Heinrichs, *Studies*, pp. x-xv). Although historically belonging to Eastern Aramaic, Ṭūrōyo is so different from the Northeastern Neo-Aramaic group (to which Modern Assyrian belongs) that it has been assigned separate status as Central Neo-Aramaic (Tsereteli, *Klassifikation*, and Jastrow, *Mīdin*, p. xx). To this would also belong the rather aberrant and almost extinct dialect of Mlaḥsô (see below).

Ṭūrōyo is characterised by a certain conservativeness in its phonology vis-à-vis the Northeastern group; it preserves the pharyngeals /ḥ/ and /ʿ/ (*ḥalwo* "milk", *ʿaṣro* "ten") as well as the fricative variants /f/, /w/, /th/, /dh/, /kh/ and /gh/ of the stops /p/, /b/, /t/, /d/, /k/ and /g/ (though as phonemes and not as conditioned allophones as in the ancient Aramaic languages) and the diphthongs /aw/ and /ay/. Phonological innovations are the unconditioned shift of /ā/ to /ō/ (*mōro* "lord") and the loss of ancient gemination with compensatory lengthening of the preceding vowel (*shāto* "year"). On the morphological level the most striking innovations are: (a) the development of a definite article from the ancient pronouns of the third person (*ū-malko*, "the king", *ī-malaktho* "the queen", *am-malke* "the kings", and likewise *am-malakyōthe* "the queens;" the article always carries the stress); (b) the development of a copula (e.g., *ōno harke-no* "I am here", *hiye/hiya harke-yo* "he/she is here"); (c) the restructuring of the verbal system, i.e. the abandonment of the old Semitic prefix and suffix conjugations and recreation of the tenses on the basis of participles, as follows (the forms in parentheses give the Classical Syriac [CS] equivalents; the latter is, however, not the immediate forerunner of Ṭūrōyo):

	present	*preterite*
First form (equivalent to CS Pʿal and Etpʿel)		
active	*gōrəš* (*gāreš*)	*grəšle* (*grīš-leh*)
	"he pulls"	"he pulled"
passive	*məgrəš* (*metgreš*)	*griš* (*grīš*)
	"he is pulled"	"he was pulled"
Second form (equivalent to CS Paʿʿel and Etpaʿʿal)		
active	*mḥālək* (*mḥallek*)	*mḥālakle* (*mḥallak-leh*)
	"he throws"	"he threw"
passive	*miḥālək* (*methallak*)	*mḥālək* (*mḥallak*)
	"he is thrown"	"he was thrown"

Third Form (equivalent to CS Afʿel and Ettafʿal)

active	*maʿməd* (*maʿmed*) "he baptises"	*maʿmadle* (*maʿmad-leh*) "he baptised"
passive	*mitaʿməd* (*mettaʿmad*) "he is baptised"	*mtaʿməd* (not in CS) "he was baptised"

In addition to verbs that have *grəšle* in the first form preterite active, there are "intransitive" ones that have the form *dāməx* "he slept," *damixo* "she slept" (CS *dammīk[ā]*). All forms ending in *-le* are ergatively inflected: *grəšle* (lit. "pulled [m.] by him") "he pulled" or "he pulled him", *grišōle* (*grīšā-leh*) "he pulled her", *grišile* (*grīšīn-leh*) "he pulled them".

Tenses formed from an infinitive, such as they exist in Modern Assyrian (*bə-grāša ʾīle*, lit. "in pulling he is", "he is pulling"), are not found in Ṭūrōyo. The passive is formed from the old passive participles and those of the t-stems, and not periphrastically as in Modern Assyrian.

The main dialect split in Ṭūrōyo is between the town dialect of Midyat (Midyōyo) and the village dialects. Mutual comprehension is never hampered.

The majority of speakers are Syrian Orthodox (Jacobite), with a smattering of Uniates and Protestants. The last thirty years have seen an ever increasing exodus of the Christian population from Ṭūr ʿAbdīn mainly due to Kurdish pressure. As a result of this there are now large Ṭūrōyo-speaking communities in a number of Western countries, especially in Germany, the Netherlands, the USA and Sweden. The total figure of speakers is not precisely known, but is likely to be in excess of 50,000.

Ṭūrōyo was not written for most of its history. Some attempts were made in the 1870s, at the instigation of the American missionaries in Mārdīn, to write Ṭūrōyo in the Syriac script (see Heinrichs, *Written Ṭūrōyo*). But this did not in the least rival the success of the Eastern Neo-Syriac (> Modern Assyrian) standard language devised by the American missionaries in the 1830s in Urmia, the reason being that (a) the Ṭūrōyo speech community was much smaller and (b) the Jacobites, when not writing in Classical Syriac, preferred Arabic and Turkish Karshūnī. When H. Ritter launched the revival of Ṭūrōyo studies in the 1960s, a simplified version of his (non-phonemic) transcription, using Roman letters and diacritics, was taken up by some of his informants. But it was only in Sweden in the 1980s that an official standard was created by Yusuf Ishaq and his collaborators (see Ishaq, *Ṭūrōyo*), again based on the Roman alphabet with only a few diacritics. This was done primarily for elementary school education, pursuant to a 1976 Swedish law requiring that children be instructed in their mother tongue. The first primer *Toxu qorena* ("Come [pl.], let's read!") came out in 1983. The language chosen was not one of the dialects, but a mixed town-village form which is now becoming increasingly used (cf. *qorena*, "let's read", with *qurena* in Midyat and *qorina* in the villages). The new standard has since been widely adopted also for other publications. Since 1987 the journal *Nsibin* (Södertälje) has appeared regularly in Ṭūrōyo and Turkish; the publishing house of the same name has also produced a fair number of monographs in Ṭūrōyo (educational materials, poetry, history). The total number of Ṭūrōyo speakers in Sweden was estimated at 18,000 in 1987 (Ishaq, *Ṭūrōyo*, 190), of which 4,000 to 5,000 then resided in Södertälje, south of Stockholm. But the reading public for Ṭūrōyo publications goes far beyond Sweden, as letters to the editor in *Nsibin* show.

The hierarchy in the Syrian Orthodox church has not been very sympathetic to the use of the vernacular in Roman letters, advocating instead the use of the classical language. This is indeed used in other journals, e.g. *Bahro Suryoyo* (Södertälje 1979-), which, however, also publishes texts in Ṭūrōyo (often poetry), but in Syriac letters. The semi-official (?) publication by G. Büyükbalık *et al.*, *Hej Midyat! Šlomo Midyat!* (Södertälje n.d. [*ca.* 1993]), contains the same Ṭūrōyo stories in both Roman and Syriac letters (and Swedish translation).

Related to Ṭūrōyo, but sufficiently different to make mutual comprehension difficult if not impossible, is the former dialect of the village of Mlaḥsô (now Yünlüce) near Lice in northern Diyarbakır province. Almost all of the Christian inhabitants of the village became victims of the Armenian massacres in 1915. O. Jastrow found the last survivors and collected texts from them, on which he based his grammar (see *Bibl.*).

In the important town of Cizre (see IBN ʿUMAR, DJAZĪRAT) on the margin of Ṭūr ʿAbdīn, there used to be a Jewish community that spoke a Neo-Aramaic dialect of the Eastern variety (see Nakano in *Bibl.*).

(iii) Kurmāndjī [see KURDS, KURDISTĀN, v. Language], the language of the northern Kurds, is spoken in a specific Ṭūr ʿAbdīn dialect, according to Socin, *Kurdische Sammlungen*, p. xxxiv. In addition to the Kurds who are Shāfiʿī Sunnīs, there are also Syrian Orthodox Christians and Yazīdīs who speak Kurmāndjī as their mother tongue. The Christians live(d) mostly in mixed Muslim-Christian villages north and east of Midyat, the largest concentration being in Karbōrān (Dargeçit) (34 km/21 miles north-east of Midyat). The switch from Aramaic to Kurdish must have occurred a few centuries ago, since there exists a small Christian literature in Kurmāndjī in Syriac script, the most famous product of which is the *Lāvidj* ("Song") in sixty stanzas on the terrors of the Day of Judgment, composed by Mafriyān Shamʿūn, who died in 1740 (see Ritter, *Ṭūrōyo*, A, i, 347-55, on the martyrdom of Mafriyān Shamʿūn and the occasion of the composition of the song). Mss. of the *Lāvidj* exist in several libraries.—The Yazīdīs live in eight villages southeast of Midyat (see Ritter, *Ṭūrōyo*, A, i, *15*).

A VIII 14, in two sheets, Wiesbaden 1987).

(W.P. Heinrichs)

TURABA, the name of a wadi and of a settlement in western Arabia, and also of a settlement in northern Arabia.

1. The wadi.

This runs in a northeasterly direction from the mountains of the Sarāt [*q.v.*] to the south of al-Ṭāʾif and past the settlement of Turaba, when it becomes the Wādī Ṣubayʿ. It flows through a region of *ḥarras* [*q.v.*] through the Ṣubayʿ [*q.v.*] country and disappears into the ʿArḳ al-Ṣubayʿ of Nadjd. The mediaeval Islamic geographers describe it as being three nights' journey long and as having date palms, trees, fruits and cultivation. They place it variously in tribal territory of the Hilāl, ʿĀmir and Ḍibāb (see al-Hamdānī, *Ṣifa*, ed. M.ʿA. al-Akwaʿ al-Ḥiwālī, Riyāḍ 1394/1974, 63, 296, 312; Yāḳūt, *Buldān*, ed. Beirut, ii, 21). Modern travellers like Philby have noted a considerable flow of water in the wadi after heavy rains.

2. The settlement in western Arabia.

This is located in lat. 21° 15' N., long. 41° 34' E. at 125 km/78 miles to the east of al-Ṭāʾif [*q.v.*] in what was regarded as the western borderlands of Ḥidjāz, being normally controlled in mediaeval times by the power ruling at Mecca and al-Ṭāʾif. It existed, however, in pre-Islamic times, and the Sabaic inscription of the well of Murayghān (Ry 506) describes how forces of Kinda and Saʿd-Murād, allies of the Abyssinian viceroy of South Arabia Abraha [*q.v.*], defeated hostile Bedouin, apparently part of Maʿadd, on the route through *T.r.b.n* in 662 Himyarite era/probably A.D. 552-3. See A.F.L. Beeston, *The well of Mureighan inscription*, in *BSOAS*, xvi (1954), 391-2; S. Smith, *Events in Arabia in the 6th century A.D.*, in *BSOAS*, xvi (1956), 435-6; M.J. Kister, *The campaign of Ḥulubān. A new light on the expedition of Abraha*, in *Le Muséon*, lxxviii (1965), 425-6.

In 1813, the walled town of Turaba was strenuously defended by the Wahhābīs of the local Buḳūm tribe against the invading Egyptian army of Muḥammad ʿAlī Pasha's brother-in-law Muṣṭafā Bey, but had to capitulate in 1815 to Muḥammad ʿAlī's forces (see G. de Gaury, *Rulers of Mecca*, London 1951, 200, 208-11, 223, 228-9, 239). In summer 1918 the Sharīf Ḥusayn b. ʿAlī [*q.v.*] of Mecca claimed control of Khurma, 90 km/56 miles further down the wadi from Turaba and awarded to him by the British government in its endeavour to settle territorial dispute between the Sharīf and ʿAbd al-ʿAzīz Ibn Suʿūd of Nadjd and his Wahhābī supporters. But in May 1919 Ḥusayn's second son ʿAbd Allāh [*q.v.*] was decisively defeated at Turaba by Ibn Suʿūd's Ikhwān, leaving al-Ṭāʾif and Mecca vulnerable to Suʿūdī attack, even though this did not in fact come until 1924 (see H.St.J. Philby, *The heart of Arabia*, London 1922, i, 168-70, 177, 180-1, 301, ii, 22-3; idem, *Arabia of the Wahhabis*, London 1928, 40, 101-2, 319; idem, *Arabian jubilee*, London 1952, 195, 200). Turaba is now a medium-sized provincial town of Saudi Arabia in the *imāra* or province of Mecca with road connections and an air field.

Bibliography (in addition to references given above): Naval Intelligence Division, Admiralty Handbooks, *Western Arabia and the Red Sea*, London 1946, 29, 281, 296; Zaki M.A. Farsi, *National guide and atlas of the Kingdom of Saudi Arabia*, Jeddah 1989, maps A3 and 44.

3. The settlement in northern Arabia.

This small place, also spelt Turba, is located in lat. 28° 18' N., long. 42° 56' E. at 150 km/95 miles north-east of Ḥāʾil [*q.v.*] in the *imāra* of Ḥāʾil.

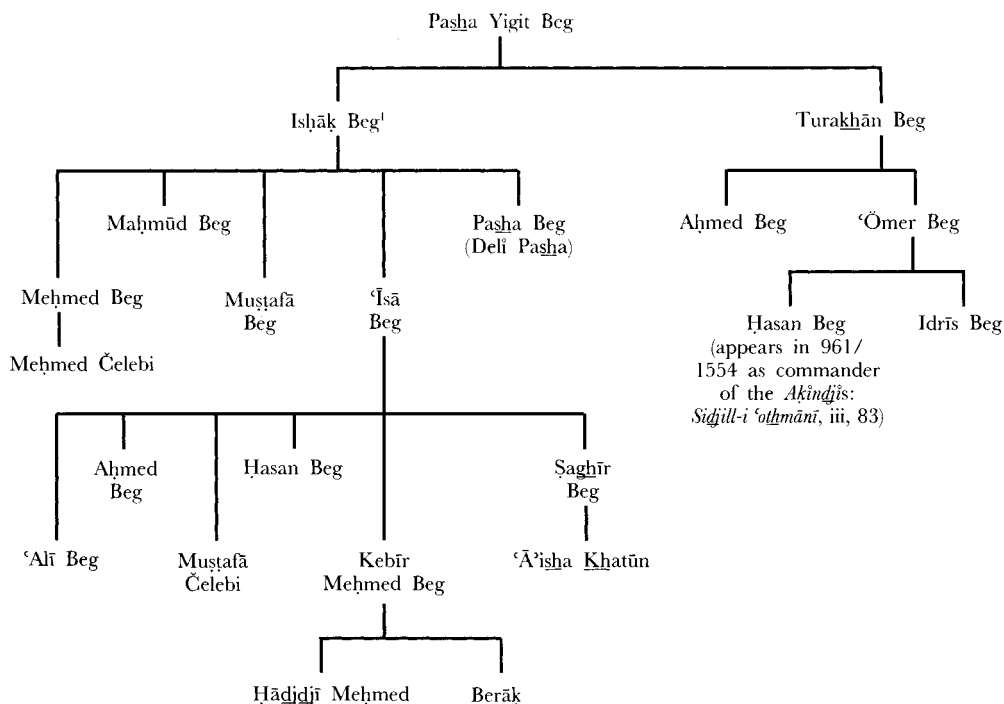
Bibliography: See Farsi, *National guide and atlas*, maps A1 and 115. (C.E. Bosworth)

TURAKHĀN BEG, an Ottoman general, conqueror of Thessaly and warden of its marches, d. 860/1456.

The hitherto obscure origin of Turakhān Beg is now explained in his last will and testament of Djumādā I 850/August 1446 (in a certified Greek translation in Epam. G. Pharmakidis, Ἡ Λάρισα, Volo 1926, 280-7), where he calls himself son of the "late Pasha Yigit Bey" (τοῦ μακαρίτου Πασσᾶ Γηγὴτ Βέη). Accordingly, his father was the well-known Pasha Yigit Beg (called by the Serbians and Italians Pasaythus, Basaitus, etc.; cf. C.J. Jireček, *Staat und Gesellschaft im mittelalterlichen Serbien*, iv, 7, n. 5) who conquered Üsküb (Skoplje) on 6 Jan. 1392 and governed a part of Bosnia after 791/1390 in the modern southern Serbia as Ottoman warden of the marches. He must have died about 816/1413 in Üsküb. There his tomb (*türbe*) is still shown; see Gliša Elezović, *Turski spomenici u Skoplju*, Skoplje 1927, 5, with an illustr. There is no support for the statement of the *Sidjill-i ʿothmānī*, i, 37, that he did not die till 835/1431; nor for the statement that the Grand Vizier Isḥāḳ Pasha had been his "slave" (*kōle*). This is obviously due to confusion with Isḥāḳ Beg, the first governor of Bosnia, whose "lord" (*efendi*) he is called in a curious gloss in the *Altosman. anonymen Chroniken*, ed. F. Giese, 28,3 (which is probably followed by Ṣolaḳzāde, *Taʾrīkh*, 52). Nor was Yigit Beg the son of Isḥāḳ Beg, as has been stated in Jireček, *Geschichte der Serben*, ii/1, 127 (probably following Leunclavius, *Hist. Musulm. Turc.*, 315, 13), but obviously his father, as is evident beyond doubt from the Arabic inscription on the mosque of Ghāzī Isḥāḳ Beg at Skoplje of the year 842/1438-9 (see text in Elezović, *op. cit.*, 11, below). When therefore Isḥāḳ Beg appears in Č. Truhelka, *Tursko-slovenski spomenici dubrovačke arhive*, Sarajevo 1911, 200, as the son of Pasha Yigit Beg ("Pašait-beg"), this is quite correct, although his epithet there, Hranušić, is an unnecessary Slavisation (see 192, below). It is therefore evident that Isḥāḳ Beg and Turakhān Beg were sons of Pasha Yigit Beg, i.e. were brothers. We do not know when and where Turakhān was born. The meaning of the name also is uncertain, if it is not to be connected with the old Turkish title *Tarkhān* (as in Astrakhān), mentioned in Ibn Baṭṭūṭa, ii, 410; its pronunciation is assured by the Byzantine form Τουραχάνης in G. Phrantzes, Ducas, Chalcocondyles, in the *Chronicon breve*.

Nothing is known of the early career of Turakhān

Genealogical tree of the descendants of Pasha Yigit Beg

- Pasha Yigit Beg
  - Isḥāḳ Beg[1]
    - Meḥmed Beg
      - Meḥmed Čelebi
    - Maḥmūd Beg
    - Muṣṭafā Beg
    - ʿĪsā Beg
      - ʿAlī Beg
      - Aḥmed Beg
      - Muṣṭafā Čelebi
      - Ḥasan Beg
      - Kebīr Meḥmed Beg
        - Ḥādjdjī Meḥmed
        - Berāḳ
      - Ṣaghīr Beg
        - ʿĀʾisha Khatūn
    - Pasha Beg (Delī Pasha)
  - Turakhān Beg
    - Aḥmed Beg
    - ʿÖmer Beg
      - Ḥasan Beg (appears in 961/1554 as commander of the *Akindjis*: *Sidjill-i ʿothmānī*, iii, 83)
      - Idrīs Beg


1) The left part of the genealogical table is taken from Cl. Elezović, *op. cit.*, 121. It requires to be checked, as there might be confusion with the descendants of an Ewrenos-oghlu, among the sons of ʿĪsā Beg at least. See also Jireček, *Staat und Gesellschaft*, iv, 8 n. 1, where attention is called to such possible confusions.

Beg. His name is found for the first time in May 1423, when he appeared in command of the cavalry in the Peloponnesus, broke through the ruined trenches of the Isthmus at Hexamilia, took most of the defences recently restored by the Emperor Emanuel on this tongue of land and, meeting no resistance, ravaged the interior of the country. He attacked a number of Byzantine towns like Mistra, Leondári, Gardhíki, Dabiá (*Chronicon breve*, in the Bonn ed. of Ducas, 199) and subdued the Peloponnesus for the Ottomans as far as the lands held by the Venetians. This whole campaign (Phrantzes, 117; Chalcocondyles, 238) was most probably intended as a reconnaissance against Venice. Soon afterwards, Turakhān appeared, if Ducas reports correctly, with his cavalry on the Black Sea (50). He also took the field against the Albanians and inflicted a decisive defeat on them (Chalcocondyles, 239, 252) and reappeared in the Peloponnesus, where from Naupaktos he prevented the despot Constantine from taking the town of Patras (Phrantzes, 150). At the end of 1431 he again destroyed the walls of the Isthmus of Corinth, besieged Thebes in the summer of 1435 and conquered it in a few days (Phrantzes, 157-159). At this time, the Byzantine historian Georgios Phrantzes made his acquaintance in Thebes (160-1). At the beginning of Nov. 1443, Turakhān Beg commanded one of the Ottoman corps in the battle against John Hunyadi and his Vlach allies in southern Serbia. His peculiar conduct in the battle of Izlādī (*Altosman. Chron.*, ed. Giese, 58, tr. 90) was held to be responsible for the defeat (Katona, xiii, 253: *Twrhambeg*; Chalcocondyles, 315) and he was sent in custody to the state prison of Bedewī Čardaḳ at Toḳat. Nothing is recorded of the next ten years of his life. In the early days of October 1453, Meḥemmed II sent Turakhān with his two sons Aḥmed and ʿÖmer with a large force to the Peloponnesus, where he again took the outer defences of the Isthmus, invaded Arcadia plundering and burning, and ravaged and burned the whole Gulf of Messene passing via Ithóme (i.e. Messene). When the difficulties of communication made it necessary to divide his army, Aḥmed was captured in the pass of Dervenaki between Mycenae and Corinth by the brother-in-law of Matthaeus Azanes, the despot Demetrius of Sparta (cf. Phrantzes, 235; W. Miller, *The Latins in the Levant*, London 1908, 426), but was liberated in December 1454 by his brother ʿÖmer (*ibid.*, 383-4). In October 1455 Turakhān appeared with his sons in Adrianople (Phrantzes, 385-6). He died in the middle of 1456, probably at a great age (Phrantzes, 386).

His official residence as governor was at Larissa in Thessaly (Turkish: Yeñishehr-i Fanār [*q.v.*]), the lands of which he held as a fief. There he built a mosque and numerous other buildings for charitable purposes; even a Christian church, in Tirnovo (Greek Tyrnawos) not far from Larissa, which is still standing, was built by him. His tomb, a chapel-like *türbe*, is in Larissa

on the north-east edge of the town. The cemetery around it with a monastery has now disappeared. Turak͟hān Beg had two sons, Aḥmed and ʿÖmer, who accompanied their father on his campaigns. ʿÖmer, who appears as Ottoman warden of the marches in the Peloponnesus, while his brother Aḥmed succeeded his father in Thessaly, was left in 1456 by Meḥemmed II on the Peloponnesus with an army (Phrantzes, 388 ff.), in 1463 acquired the country round Naupaktos and in 1467 after an initial reverse inflicted a defeat on the Venetians (Phrantzes, 425; a fuller account of ʿÖmer, Ὀμάρης [Phrantzes always writes Ἀμάρης], is given by Chalcocondyles, see Index, s.v. Omares). On the further life of the two brothers, of whom Aḥmed, like his father, had made the Pilgrimage, not much is known. ʿÖmer seems to have been the more active of the two. In 1477 he fought on the Isonzo against the Venetians (J. von Hammer, *GOR*, ii, 151), next year defeated the Albanians (*ibid.*, ii, 157), and was still alive in 1484, as his will dated Muḥarram 889/ February 1484 shows (Pharmakidis, *op. cit.*, 287-303, 307-10). He had two sons, one of whom, called Ḥasan Beg, is known from his will written in S͟hawwāl 937/May 1531 (Pharmakidis, 310 ff.), while the other, Idrīs Beg, made a name in his day as a poet and excellent translator of Hātifī's *K͟hosrew u S͟hīrīn* and *Laylā u Mad͟jnūn* into Turkish (see Sehī, *Ted͟hkire*, 36-7).

The family of the Turak͟hān Og͟hullarï, which was established around Larissa and owned extensive estates until quite modern times, later played no important part in history. A certain Fāʾiḳ Pas͟ha, recorded as a late descendant of Turak͟hān Beg, by his extortions as governor of Rūm-eli made his name hated; he was beheaded in the court of the Palace at Istanbul, aged 70, in March 1643 (see von Hammer, *GOR*, 322, from Naʿīmā; Zinkeisen, *GOR*, iv, 535). J. Ph. Fallmerayer in 1842 saw "at the chief mosque [of Larissa] a biography of Turchan-Beg preserved there" (*Fragmente aus dem Orient*², 1877, 381 ff.), but this seems to have since disappeared (like the ms. biography of the Ewrenos-Og͟hullarï [*q.v.*] mentioned by Beaujour, *Tableau du commerce de la Grèce*, i, 117).

Bibliography: Given in the article. See also C. Imber, *The Ottoman empire 1300-1481*, Istanbul 1990, index; and MORA; TESALYA; YEÑIS͟HEHIR.

(F. BABINGER)

TŪRĀN, a geographical-ethnic term in the *S͟hāh-nāma*.

In Firdawsī's epic, *Tūrān* refers to the land to the north-east of Īrān, the border between the two countries being the River Oxus (called by Firdawsī the D͟jayhūn). The term is assumed by the poet to derive from that of a son of Farīdūn named Tūr, the area covered by the name being designated as his apanage. The first occurrence of *Tūrān* in the *S͟hāh-nāma* (apart from a formulary reference in the panegyric to Maḥmūd of G͟hazna) specifically links Tūr and Tūrān (*digar tūr-rā dād tūrān zamīn*; "then he gave Tūr the land of Tūrān"; i, 90, 183). In Firdawsī's version of events, king Farīdūn divides the world between his three sons, Salm receiving the west ("Rūm"), Tūr receiving Tūrān, and the youngest, Irad͟j, receiving Īrān. Much of the first half of the epic is taken up with recurrent warfare between Īrān and Tūrān, and this is traced to the fratricidal slaying of Irad͟j by his older brothers Salm and Tūr, and the revenge taken on them by Irad͟j's grandson Manūčihr.

The enmity between Īrān and Tūrān as it is presented in the *S͟hāh-nāma* has been seen by some (e.g. A.M. K͟hazanov) as a reflection of rivalry between the sedentary world of Īrān and the nomadic world of southern central Asia. Firdawsī's text lends some support to this theory: Tūrān raids Īrān much more often than Īrān raids Tūrān, which fits presuppositions concerning nomadic raids on sedentary areas; the border area is described as covered in the tents (*k͟hargāh*) of the Tūrānians (iii, 7, 24), implying they are a nomadic population, and the wealth of Pīrān-i Vīsa, the chief advisor of the Tūrānian king, is described as consisting partially of flocks of sheep (iii, 81, 1256). However, Firdawsī shows little concern to characterise the conflict according to this nomadic/sedentary scheme, and the mode of life of both peoples is presented as virtually identical (e.g. Pīrān-i Vīsa and his king live in palaces, as the Iranian aristocracy does, not tents). In so far as the societies differ, this is largely for ethical reasons, (though Firdawsī places ethically admirable and contemptible characters in both camps), with the Tūrānians being seen as, generally, the more culpable.

For Firdawsī, "Tūrānian" is virtually synonymous with "Turk"; this reflects the omnipresent Sāsānid influence on the essentially prehistoric material which forms the opening sections of the *S͟hāh-nāma*, as the area designated Tūrān was probably at least partly occupied by Turkish tribes during the Sāsānid period. Though Tūrān's southern border is clear enough (the River Oxus, the crossing of which by Tūrānian troops signals the renewal of war, and the forcing of such troops back beyond which signifies Īrānian victory) its other borders are left nebulous. In the opening stories of the poem Tūrān sometimes seems by implication to include "Čīn" (China, e.g. the first time the name is used, i.90.183), and it is said to stretch as far as "the Sea of Čīn" (iii, 75, 1159-60). Later in the poem, however, Tūrān is clearly differentiated from "Čīn", and characters move from one to the other (vi, 260, 715), or the name appears in a list of countries that also includes "Čīn" (e.g. vii, 105, 1791; ix, 276, 3784). In the quasi-historical closing section (especially during the reign of Anūs͟hirwān the Just) "Čīn" largely replaces Tūrān as Īrān's major Asian rival.

ṬŪRĀN (or Ṭuwārān?), the mediaeval Islamic name for the district around Ḳuṣdār [*q.v.*] or Ḳuzdār in the east-central part of what is now Balūčistān, the territory in British Indian times of the K͟hānate of Kalāt [see KILAT].

According to al-Ṭabarī, i, 820, the kings of Ṭūrān and of Makurān (Makrān) submitted to the Sāsānid Ardas͟hīr (224-41). The Paikuli inscription only mentions the Makurān-S͟hāh. Herzfeld, *Paikuli*, 38, thought that these princes at first owned the suzerainty of the Sakas, and their submission to Ardas͟hīr was the result of the conquest of Sakastān (= Sīstān) by this monarch.

Al-Balād͟hurī does not mention al-Ṭūrān. According to one of his sources, al-Ḥad͟jd͟jād͟j [*q.v.*] appointed Saʿīd b. Aslam to Makrān and "(all) that frontier". Al-Iṣṭak͟hrī, 171, and Ibn Ḥawḳal, 226, among the inhabited places in Ṭūrān mention Mad͟jāk, Kīzkānān, Sīwī and Ḳuṣdār (or Ḳuzdār). Ibn Ḥawḳal, 232, says that Ṭūrān is a valley with a fortified town (*kaṣaba*) also called al-Ṭūrān and in its centre is a fortress

(*ḥiṣn*) commanded by a certain Abu 'l-Ḳāsim al-Baṣrī. He also mentions Ḳuzdār separately from the *ḳaṣaba* of the same name. Ḳuzdār was the town (commercial?) of Ṭūrān, possessing "a district and several towns". A certain Mug̲h̲īr (or Muʿīn or Muʿtazz) b. Aḥmad had seized Ḳuzdār and only recognised the direct authority of the ʿAbbāsid caliph.

The town of Ḳandābīl, five farsak̲h̲s (more accurately 5 *marḥals*) from Ḳuzdār, is outside of Ṭūrān and is the capital of the district of the Budhas (al-Balād̲h̲urī, *Futūḥ*, 436: Zuṭṭ al-Budha). Ḳandābīl, lying in the plain, is identified with Gandāwa (75 miles north-east of K̲h̲uzdar, to the north of the Indus, at a height of 314 feet above sea level).

The position of Kīzkānān, the residence of the already mentioned Muʿīn b. Aḥmad (chief of Ṭūrān according to al-Iṣṭak̲h̲rī, or of Ḳuzdār, according to Ibn Ḥawḳal), is unknown. Marquart, *Ērānšahr*, 192, 275-6, connected Kīzkānān with Ḳīkān (cf. al-Balād̲h̲urī, 432), and sought it at Kalāt. In this case, Kīzkānān = the *ḳaṣaba* al-Ṭūrān. The land between Kīzkānān and Ḳandābīl, inhabited by Budhas and possessing vines, bore the name of its chief Ayl (or Utl?).

Yāḳūt, iii, 557, reckons Ṭūrān (the *ḳaṣaba* of which is Ḳuṣdār and which has several *rustāḳ*) among the *nāḥiya* of Sind. He also mentions a *nāḥiya* of Ṭūrān in Madā'in and a village of Ṭūrān belonging to Harāt.

Bibliography: Tomaschek, *Zur hist. Topogr. Persiens*, i, 56, thought that the name Ṭūrān might come from the Iranian term Tūra, which means "enemy, non-Iranian countries"; Marquart, *Ērānšahr*, 31-3, 187, 190; Le Strange, *The lands of the Eastern Caliphate*, 332; *Ḥudūd al-ʿālam*, tr. Minorsky, 123; C.E. Bosworth, *Rulers of Makrān and Quṣdār in the early Islamic period*, in *St. Ir.*, xxiii (1994), 199-209.

(V. Minorsky*)

TŪRĀNS̲H̲ĀH b. AYYŪB, al-Malik al-Muʿaẓẓam S̲h̲ams al-Dawla Fak̲h̲r al-Dīn, older brother of the famous Ṣalāḥ al-Dīn [*q.v.*], the Saladin of European writers, conqueror of the Yemen in 569/1173 and founder of the Ayyūbid dynasty there [see ayyūbids].

Tūrāns̲h̲āh first appears on the historical stage in the year 564/1168-9 after his arrival in Egypt from Syria with a number of members of the Ayyūbid house to strengthen the hand of Ṣalāḥ al-Dīn, still technically the vizier of the Fāṭimid caliph there. Tūrāns̲h̲āh was soon in action, assisting to suppress a rebellion of black slave guards who were attempting to return power into the hands of the Fāṭimids with the connivance of the Franks. He succeeded in banishing the guards to Upper Egypt. In 567/1171-2, Ṣalāḥ al-Dīn finally put aside all pretence that he was merely the vizier of the Fāṭimid caliph. He put an end to the mention of the caliph in the *k̲h̲uṭba*. Further trouble from the slave troops in Upper Egypt in 568/1172 necessitated the despatch of a large army from Cairo. Tūrāns̲h̲āh was the logical choice as commander of the army. He pursued the fleeing Sudanese, firstly to Aswān and from there into Nubia. Arriving at Ibrīm, the Ayyūbid army under Tūrāns̲h̲āh defeated the local Nubians and plundered the town, taking prisoner all men, women and children. The church of this Christian community was converted into a mosque by him, the cross destroyed and the *ad̲h̲ān* made from the dome. The place abounded in pigs, and these were slaughtered at the command of Tūrāns̲h̲āh. The local bishop was thrown into the fortress along with the other prisoners. He left a garrison in Ibrīm and gave it as a fief to one of his *amīrs*. He returned north to Egypt, bringing with him much booty, mainly slaves, and reported to his brother Ṣalāḥ al-Dīn on the barrenness of the land and its oppressive climate.

In 569/1173 Tūrāns̲h̲āh led a massive army up the Nile, across the Egyptian desert, across the Red Sea and down into Tihāma [*q.v.*], the coastal plain, and into the Yemen. Ḥaraḍ was taken, and Zabīd, and then the army crossed over to the Taʿizz area [*q.v.*], before turning southwards to Aden [see ʿadan]. Having dealt with Aden, he moved north and halted for a while in al-Dumluwa and D̲h̲ū D̲j̲ibla before marching on the important town of D̲h̲amār which he took over. He then stood at the gates of Ṣanʿā' [*q.v.*]. This in essence is the sum total of the military achievements of Tūrāns̲h̲āh in the Yemen. By the time he left the country to return to Egypt in 571/1176 (for he never felt at home there), he had virtually rid the Yemen of the Sulaymānī *s̲h̲arīfs* ruling in northern Tihāma, the Mahdids [*q.v.*] based in Zabīd, and the Ismāʿīlī Zurayʿids of Aden.

The reasons for the conquest of the Yemen by the Ayyūbids from Egypt in 569/1173 can be briefly summarised as follows. It may well have been that the Ayyūbids were looking to expand their strategic and economic interests by their military action at the southern end of the Red Sea. There are certainly suggestions in the primary sources that the internal affairs of the Yemen and, in particular, the strong Fāṭimid influence there, perturbed the Ayyūbids greatly, not to mention tales of religiously disaffected dynasties like the Mahdids in Zabīd, rumoured to be K̲h̲ārid̲j̲ites. Tūrāns̲h̲āh is supposed to have been subjected to strong pressure from the Ayyūbid court poet ʿUmāra al-Ḥakamī, himself a Yemeni, to invade his native land which, he claimed, was weak and divided and in need of Ayyūbid domination. There are reports, too, of an invitation from the Sulaymānī *s̲h̲arīfs* to rid the area of the Mahdids. Perhaps the strategic and economic reasons were the strongest, but it should also be borne in mind that the powerful and restless character of Tūrāns̲h̲āh may well have been instrumental in Ṣalāḥ al-Dīn's agreeing to his expedition to the Yemen, for it would seem it was at the former's instigation that the conquest was undertaken. Tūrāns̲h̲āh's sitting idly in Cairo for any length of time at the head of a numerous army was a dangerous situation which his brother was eager to avoid.

Tūrāns̲h̲āh was offered the governorship of Damascus on his return to the north from the Yemen in 571/1176. He went as governor to Alexandria in 574/1178 and it was there that he died in 576/1180. He was buried in Damascus.

(G.R. Smith)

TURBA (a.), a term which comes to acquire the sense of tomb, mausoleum, in Islamic funerary architecture.

1. General meaning of the term.

Turba (sing. and coll. *turāb*, pl. *turab*) in its basic meaning as "earth", "dust" and "soil", is widely mentioned in the canonical *ḥadīth* collections (Wensinck, *Concordance et indices de la tradition musulmane*, Leiden 1936, i, 268-68). Here, *turba* is designated as the material from which the earth and mankind was formed (*wa 'l-nās banū Ādam wa-khalaḳa llāhu Ādam min al-turāb*, al-Tirmidhī, *Sunan*, Ḥimṣ 1965, ix, 21). As part of pious elaborations on the physical appearance of Paradise, Muslim, al-Tirmidhī and Ibn Ḥanbal report traditions describing the composition of the soil (*turba*) in Paradise consisting of saffron and musk (Wensinck, i, 268), based on the Prophet's saying about the pure and scented quality of the soil in Paradise (al-Tirmidhī, *Sunan*, ix, 84). Outside the context of the *ḥadīth*, discussions take place in *adab*, historical and legal literature concerning the healthy or unhealthy quality of the soil (*turba*) of a region (al-Iṣfahānī, *Aghānī*[3], i, 207; al-Khaṭīb al-Baghdādī, *Ta'rīkh Baghdād*, xiii, 41), the problem of the contamination of the soil on a cemetery with the flesh of the deceased and its inherent consequences for its suitability as a place for the ritual prayer (al-ʿAynī, *ʿUmdat al-ḳārī fī sharḥ Ṣaḥīḥ al-Bukhārī*, Cairo 1308/1890, viii, 222) or the miraculous or healing effects of the soil from places like Karbalā' or Nadjaf (Ibn Ḳuluyya, *Kāmil al-ziyarāt*, Nadjaf 1356/1937-8, 280-5). In mediaeval works on agriculture, however, different qualities of soil were not discussed under the term *turba*, but under *ṭīn, ṣaʿīd* or *arḍ*.

Finally, *turba* is legally acceptable as a substitute to perform the ritual ablutions (*wuḍū'*) in the case of lack of water and this procedure is known as *tayammum* [*q.v.*]. Based on Ḳur'ān, IV, 43, and V, 6, al-Shaʿrānī discusses the opinions of the four Sunnī schools on the similarities of pure *turāb* or *raml* with water (*al-Mīzān al-kubrā*, Cairo 1313/1896, i, 144-5). The permissibility of *turba* for the performance of *tayammum* is again supported by the conviction that *turba* was the material God used when he created the earth.

2. *Turba* in the funerary context.

Turba is frequently associated with the funerary context by association with dust into which the dead body turns after death (*wa-anā bayt al-turāb wa-anā bayt al-dūd* (al-Tirmidhī, *Sunan*, vii, 167). *Turba* acquires the meaning of "tomb" in inscriptions on mausolea in combination with other terms designating certain architectural forms (R. Hillenbrand, *Islamic architecture*, Edinburgh 1994, 257). But it is rarely used as a simple synonym for *ḳabr* in the sense of "grave" (for exceptions see al-Buḥturī, *Dīwān*, ed. Ḥ.K. al-Ṣayrafī, Cairo 1964, iii, 1951; Cl. Huart, *Epigraphie arabe d'Asie Mineure*, Paris 1895, 82-3, no. 57, Ibn Manẓūr, *LʿA*, Beirut 1374/1955, i, 228). Arabic literary texts generally make a clear distinction between *turba* and *ḳabr* [*q.v.*]. The latter is used almost exclusively as a term which refers to the location of a tomb or to describe a simple grave with no architectural features attached to it (al-Khaṭīb al-Baghdādī, vi, 199, 276, 304, 333, x, 42, xi, 232). It must be noted, however, that the Persian translation of *turba*, i.e. *khāk*, is only known from literary sources (Dihkhudā, *Lughat-nāma*, xviii, 73-4) and it does not play a role in epigraphy or funerary architecture similar to that of *turba*. *Khāk* is used exclusively to mean an inconspicuous grave with no solid shelter attached to it. In Persian literature, a specific use of *turba* which acquires the meaning of *tābūt* (cenotaph) as can be found in al-Hudjwīrī's description of a miraculous event within the mausoleum of the mystic Abū Saʿīd at Mayhana (*Kashf al-mahdjūb*, ed. V.A. Zhukovski, Leningrad 1928, 1930), must be regarded as an exception. In combination with an architectural term as in *turbat-khāna*, *turbat* signifies the funerary function of a building (Dihkhudā, xiii, 547).

3. *Turba* and funerary architecture.

More frequently, *turba*, Tkish. *türbe*, is used as a standard term designating an Islamic funerary building or complete funerary building complex of various forms or, in a more generic sense, denoting only the funerary aspect of a building. Formulations like *dufina fī 'l-turbati 'l-latī banāhā/istadjaddahā* (Ibn al-Djawzī, *Muntaẓam*, ix, 118-19, x, 182), *naḳala fulān/nuḳila fulān ilā turbat[in] buniyat/banāhā lahū* (*ibid.*, vii, 48, 139, 265; al-Khaṭīb al-Baghdādī, iii, 247), or the visual qualities attached to a building (*turba ʿaẓīma*, Yāḳūt, *Muʿdjam al-buldān*, ed. Beirut, iii, 46-7) also corroborate the generic use of *turba* for single funerary structures of any type. Accordingly, the term was applied also to the famous tomb of the Fāṭimid caliphs in Cairo which had been installed in the Western Palace by the caliph al-Muʿizz after 362/973, called the *turbat al-zaʿfarān* (al-Maḳrīzī, *Khiṭaṭ*, i, 252, 297), *al-turba al-Muʿizziyya* (Ibn al-Ma'mūn, *Akhbār Miṣr*, in A.F. Sayyid, *Nuṣūṣ min akhbār Miṣr li-Ibn al-Ma'mūn*, Cairo 1983, 40) or *turbat al-a'imma* (*ibid.*), and the separate tomb chamber of the caliph al-ʿAzīz (al-Musabbiḥī, *Nuṣūṣ ḍā'iʿa min akhbār Miṣr li 'l-Musabbiḥī*, in *AI*, xvii [1981], Arabic part, 21). Both the *turbat al-zaʿfarān* and the *turba* of al-ʿAzīz were not freestanding mausolea but consisted of a separate chamber (*ḥudjra*) within the palatial complex, hence the designation *turbat al-ḳaṣr* (Ibn Khallikān, *Wafayāt*, ed. ʿAbbās, i, 303, v, 375), even though they appear to have faced the main artery of Cairo and were possibly visually identified as tombs by domes, *shubbāk*s or external inscriptions.

In epigraphic texts on funerary buildings, *turba* appears only as late as in the middle of the 5th/11th century in Persia (Dāmghān, Čihil Dukhtarān (446/1054-5): *RCEA*, vii, no. 2572; Abarḳūh, Gunbad-i ʿAlī (448/1056-7): *RCEA*, vii, no. 2582), followed by examples in ʿIrāḳ (al-Dūr, Imām al-Dūr (last third of the 11th century A.D.): *RCEA*, ix, no. 3574) and Syria (Mausoleum of Duḳāḳ b. Tutush b. Alp Arslan at Damascus (*ca.* 500/1100): *RCEA*, viii, no. 2942). The use of *turba* as a generic and non-architectural term in the context of mausolea is reflected especially by inscriptions in which the word *turba* is used as a secondary terminological designation denoting the *utilitas*, i.e. the building's funerary function, in combination with a term by which information concerning the architectural or religious quality of a building is established. For example, the Dāmghān tomb tower inscription starts with "Has ordered the building of the *ḳubba*..." and continues with "preparing for his rest a tomb (*turba*) for himself and for his offspring (*mustaʿidd[an] li-nawmihī turbat[an], lahū wa-li-awlādihī*...). Although single, free-standing domed or conically roofed structures certainly would have evoked visual associations with funerary buildings throughout the Islamic world during the mediaeval period, the use of double terminologies can be explained by the fact that, besides the term *ḳubba*, also *ḳaṣr, dawlat-khāna* or *masdjid*, none of which originally denoted the funerary context of a building, were soon incorporated into the terminology for mausolea. For this reason, inscriptions using a double terminology of the type *hādhihī 'l-kubba turbat[un]* continue well into the 7th/13th century (Huart, *op. cit.*, 74, no. 47). A double terminology in which *turba* is combined with another term bearing a religious quality can be found in the epigraphical panels inside the Imām Dūr mausoleum in al-Dūr, which

designate the building as both *masdjid* and *turba*. In opposition to Dāmghān, the use of *turba* at al-Dūr denotes the character of the funerary structure for a building that—apart from its form—would otherwise only have ambiguously conveyed the term for its usage in its inscription.

When used as the only term in a funerary inscription, *turba* may also suggest the meaning of "mausoleum". In this sense, the tomb tower at Abarkūh is labelled only as *turba*. Similarly, the mausoleum over Nūr al-Dīn Zangī's tomb in Damascus with its distinctive "sugar-loaf" dome, although of another architectural type than the mausoleum at Abarkūh, is also called *turba* in the inscription (*RCEA*, ix, no. 3293). Designated as *turba*, it is clearly distinguished terminologically from the *madrasa* which is mentioned in the same inscription and which forms the larger part of the whole complex.

In the majority of epigraphic texts on mausolea between the 5th/11th and the 7th/14th centuries, *turba* is widely replaced by *kubba*, which acquires an additional meaning—beyond its quality as a genuine architectural term used otherwise in the context of mosques and secular buildings—for designating funerary structures in general. There exists no quantitative evaluation of the terminology for funerary architecture in epigraphy or according to specific regions, but one can observe a general preference for *kubba* or *mashhad* as against *turba* in Khurāsān, central Persia and ʿIrāk to denote funerary buildings (but cf. the name of Turbat-i Djām [*q.v.*]), in opposition to Syria and Egypt, where *turba* is widely understood as a term for mausolea and outnumbers both former designations (cf. KUBBA, above, at Vol. V, 291a). In the Levant, this phenomenon is also evident in literary texts, for instance Pilgrimage guides (Ibn al-Zayyāt, *al-Kawākib al-sayyāra fī tartīb al-ziyāra*, ed. K.M. al-Radjab, Baghdād n.d.) or local histories and biographical works (Ibn Ṭūlūn, *al-Kalāʾid al-djawhariyya fī taʾrīkh al-Ṣāliḥiyya*, ed. M.A. Dahman, Damascus 1949; idem, *Kudāt Dimashk*, ed. Ṣ. al-Munadjdjid, Damascus 1956).

Historiographers and geographers often apply *kubba* and *turba* in descriptions of funerary structures in an unspecific way as "mausoleum" without implying architectural or other connotations. Ibn al-Djawzī and Yākūt apply both terms, obviously for stylistic reasons, when describing mausolea of two caliphs in Baghdād isolated from the rest of the caliphal necropolis as *kubba* or *turba mufrada* (*Muntaẓam*, vii, 289; *Muʿdjam al-buldān*, iv, 47) with no indication given that these buildings were of a distinctly different form. *Turba* in its use as a general term for mausolea is further confirmed towards the end of the 5th/11th century through the existence of the court office of the *nāẓir al-turab fi 'l-Ruṣāfa* (*Muntaẓam*, ix, 117) and 100 years later through that of a *farrāsh bi-turab al-khulafāʾ* (Ibn al-Nadjdjār, *Dhayl Taʾrīkh Baghdād*, ed. C. Farah, Ḥaydarābād 1398/1978, i, 278).

In the same way, *turba* can be used as a synonym even for *mashhad* (*Muntaẓam*, viii, 248), a term otherwise often used to describe a larger funerary shrine complex consisting of a courtyard with arcades, adjacent rooms and the tomb structure proper. This distinction is made in Ibn al-Athīr's report on the destruction of the Mashhad Bāb al-Tibn (al-Kāẓimayn) in Baghdād by a Sunnī mob in 443/1051 which mentions the pillaging of the *mashhad* and the burning of the *turab*, the mausolea of the Seventh and the Ninth Imāms (ed. Beirut, ix, 577). However, in his mention of the *mashāhid li 'l-ṣāliḥīn wa 'l-turab li 'l-akābir* in the Karāfa cemetery in Cairo, Yākūt (iv, 317) clearly establishes a terminological hierarchy not predominantly based on visual elements but with the goal of marking the distinction between mausolea erected for secular rulers and high officials (such as Ibn Ṭūlūn or al-Mādharāʾī [*q.vv.*]), and the shrines of venerated religious authorities like al-Shāfiʿī [*q.v.*]. Whether this type of terminology was a generally accepted system, reflecting different grades of esteem and popular veneration for those individuals within the Muslim community, or whether it was based on personal choice of vocabulary cannot be determined. Contemporary authors like Shams al-Dīn Ibn Ṭūlūn appear not to have made the same distinctions; he describes Ṣalāḥ al-Dīn's soaring domed structure over al-Shāfiʿī's tomb in Cairo as both *kubba* and *turba* (*Kalāʾid*, 108, 110; *Kudāt Dimashk*, 108, 178).

Bibliography: Given in the articles but see also that to KUBBA. (T. LEISTEN)

TURBAT-I ḤAYDARĪ [see ZĀWA].

TURBAT-I [SHAYKH-I] DJĀM, a small town in northeastern Persia in the modern province of Khurāsān. It is on the Mashhad-Harāt highway, 150 km/96 miles from Mashhad and 75 km/48 miles from the Afghān frontier (lat. 35° 16' N., long. 60° 36' E.).

The earlier Islamic name of Turbat-i Djām was Būzadjān or Pūčkān (both names in Mustawfī, *Nuzha*, 177, tr. 171, cf. also 143-4, tr. 151-2, where he calls it Djām); it was here that the great mathematician Abu 'l-Wafāʾ al-Būzadjānī (d. 368/998 [*q.v.*]) was born. The geographers describe it being four stages from Nīshāpūr, in a fertile agricultural region depending on *kanāts* for irrigation; Būzadjān itself produced cotton cloths (see *Ḥudūd al-ʿālam*, tr. Minorsky, 103; Yākūt, *Buldān*, ed. Beirut, i, 507; Le Strange, *The lands of the Eastern Caliphate*, 356-7). In the 8th/14th century, Mustawfī, *loc. cit.*, praises its fertility, with 200 villages in its *rustāk*, and he praises its numerous shrines, in addition to the famed one of the mystic Shaykh Aḥmad-i Djām (d. 536/1142 [*q.v.*]). According to Ibn Baṭṭūṭa, iii, 75-7, tr. Gibb, iii, 580-2, the town of Djām, because of its sanctity, was exempt from paying taxes to the sultan (in this case, the Il Khānid Abū Saʿīd, who had allegedly stayed in the Shaykh's hospice; the tomb of the Shaykh was also visited later by Tīmūr and the Mughal fugitive Humāyūn).

In the 19th century, Djām, as it was then called by its inhabitants, was a small place. In 1830 E. Conolly estimated that it had *ca.* 200 houses; in 1894 C.E. Yate estimated *ca.* 250, and noted that, although Djām had formerly had a local chief, it was now directly under the Kādjār governor of the district. The modern Djām is the chef-lieu of a *bakhsh* of that name in the *shahrastān* of Mashhad (*Farhang-i djughrāfiyā-yi Īrān-zamīn*, ix, 74-5).

TURBAN [see TULBAND].

TÜRBE [see TURBA].

TURFAN, a fertile oasis town in the Uyghur Sinkiang Autonomous Region (Eastern or Chinese Turkestan) of the People's Republic of China [see SINKIANG], and district centre of a *hsien* or county of the same name. Native Uyghur Turks pronounce the name as Turpan, the Chinese as Tu-lu-fan. The Turks, who constitute the basic population, have been Muslims since the dawn of the modern era, and today use a modified Arabic alphabet for their script. There is also a sizable Chinese constituency, and Uyghur Turkish and Chinese are the

two official languages. The historical term "Uyghur" for the Turki-speaking inhabitants of Sinkiang and their language as spoken today is a concept created in the 1920s as a result of modern nationalism; prior to that, "Turki" was the prevalent term. It better expressed the closeness of this language to Uzbek, an equally recent creation which replaced the term "Turki" in Uzbekistan.

Turfan's historical importance lies chiefly in its pre-Islamic past, and owes much to the site's position on one of the intersections of the Silk Road network, along which trade and culture travelled between China, the West, and India from antiquity to the end of the Middle Ages. In contrast to most other parts of the *Dār al-Islām*, Islamisation of the population of this city and region occurred late and gradually, approximately from the end of the 14th century to the early 16th. Another difference is that, except for the relatively brief period of the 16th and early 17th centuries, and a still briefer period in the 19th, Islamic Turfan has remained under the rule of non-Muslims—first the Buddhist Djungars (also spelled Zungars) and then the Chinese. Yet another contrast is the fact that Islamic civilisation, often brilliant in other parts of the *Dār al-Islām*, including Western Turkestan, did not rise to a similar level in this part of the world. The area is especially important to philologists, however, because of the texts in "Tokharian" and in Uyghur Turkish found here by archaeologists from several countries, especially Germany (several expeditions led by A. Grünwedel and A. von Le Coq in the early years of the 20th century). Most of the Uyghur texts pertain to the final stage of pre-Islamic Turfan (9th-14th centuries), and, in their depository in Berlin, have been a treasure trove for the historical study of Turkic languages.

The modern town, its name (the earliest known mention dates from 1377; cf. E. Bretschneider, *Mediaeval researches from Eastern Asiatic sources*, London 1910, ii, 189-202), and its Islamic identity differ from Turfan's predecessors: the ruined cities of Chiao-ho, 20 km to the west, and Ḳočo, 40 km to the east. These two archaeological sites, together with several others in the vicinity, are in scholarly literature comprised under the name of Turfan, despite the anachronism and topographical inaccuracy of this usage. Other appellations have also existed: Yar-khoto (Turco-Mongolian, "Cliff-city") for Chiao-ho; Kao-chang, Huo-chou and Idiḳut-shähri for Ḳočo. In Muslim sources, Ḳočo is usually called Ḳara Khodja or Ḳara Khodjo, which eventually became limited to a town adjacent to the ruined site on the north-east but distinct from it; the archaeological site, with an area considerably larger than Ḳara Khodja, is in scholarly literature known as Kao-chang or Ḳočo.

Chiao-ho (Chinese for "[City between] twin rivers)" was the capital of a kingdom known in the 2nd century B.C. as Chu-shih. Chiao-ho retained its importance, until in the 6th century Ḳočo became the seat of the local royalty. The basic population in those centuries spoke an Indo-European tongue labelled by linguists as Tokharian; conversion to Buddhism, which penetrated here from India, resulted in the compilation of texts written in this language, priceless documents for modern linguists and cultural historians. At the same time, the relative proximity of China facilitated the first conquest of this area by the Middle Kingdom (1st century B.C.): a precedent for a pattern of intermittent suzerainty that was to recur here and in other parts of Sinkiang throughout history.

In addition to influences from India and China, the Turfan area also underwent those of the Turco-Mongol nomads of the Eurasian steppe to the north of the Tianshan mountain range. The dynasty which ruled in Ḳočo by the time this city gained primacy may have been part of the Turkish élite which came to dominate the area. These Turks followed the example of the native population and converted to Buddhism, so that this religion remained implanted in Turfan until the aforementioned Islamisation a millennium later. It is less clear, however, what linguistic effect the presence of probably Turkic-speaking rulers had on the population at this time.

During the final stage of Turfan's pre-Islamic past, that of the Uyghur kingdom of Ḳočo (9th-13th centuries), the population became Turkicised. The area came under the sway of the Uyghur ḳaghans of Mongolia for some time prior to the ḳaghanate's destruction by the Ḳirghiz [*q.v.*] in 840; one branch of the Uyghurs then established itself in Ḳočo, creating a civilisation remarkable for its composite nature, peaceable character and aptitude for survival. The Uyghur ruling class mostly retained the Manichaean religion, to which it had converted while still in Mongolia following the lead of the ḳaghan Bögü (759-80), whereas the bulk of the local population remained Buddhist or, to a lesser degree, Nestorian Christian. The three religions coexisted peacefully, and it was at this period that the greatest number of texts in Uyghur Turkish were written. The Uyghur ruler, known in Mongolia by the title of ḳaghan, adopted here the additional Turkic title of *iduḳ ḳut* ("auspicious felicity"), eventually abbreviated as *idiḳut*, hence the name of the capital as *Idiḳut shähri* ("idiḳut's city"). In a manner parallel to the religious tolerance prevalent here, the people of the society of this kingdom also appear to have lived harmoniously side-by-side, despite initially divergent origins, languages, and ways of life. The ruler and the Uyghur élite escaped the exceedingly hot summers of the Turfan area by moving to the northern slopes of the Tianshan mountains, where the kingdom's other capital, Bishbaliḳ (*q.v.*; "Five towns" in Turkic, known in Chinese as Bei-ting, "the Northern mansion"), lay some 100 km/65 miles due north of Turfan.

In the second half of the 12th century, the Uyghur ruler of Ḳočo became a vassal of the Ḳara Khitay [*q.v.*], who had established themselves as the suzerains of much of Western and Eastern Turkestan. This step was followed by a more crucial one taken by the Uyghur ḳaghan Barčuḳ in 1209, when he declared allegiance to Čingiz Khān [*q.v.*]; he then appeared in person at the Mongol court two years later in order to render homage to the conqueror. Barčuḳ's pragmatic sense not only saved his kingdom from the devastations attendant on the Mongol conquests but also set the stage for a recruitment of the Uyghur scribal class (*bakhshis*) into the administrative structure of the Mongol Empire. The Uyghur script, of Sogdian and ultimately Syriac origin, also became the Mongol script through this process.

The area of Turfan lost its distinct identity after the disappearance of the Uyghur state towards the end of the 13th century. The former kingdom lay between eastern (Chinese) and western (Central Asian) Mongol states fighting for the spoils of the disintegrating Mongol Empire. Documentation on when Turfan proper began to eclipse Ḳočo in size and importance, and how Islam began to assert itself there, is scanty. The first reference to its Islamisation is found in Mīrzā Ḥaydar Dughlāt's *Tārīkh-i Rashīdī*, ed. and tr. N. Elias and E.D. Ross, London 1895, 52, Persian text ed. and tr. W.M. Thackson, Cambridge, Mass.

1996, text 32, tr. 28, where we read that Khidr Khʷādja, Khān of Mogholistān [*q.v.*] (1392-99), "undertook a campaign against Karakhodja and Turfan, two very important towns in China (Khitay), and forced their inhabitants to become Muslims...". We can infer, however, that the conversion remained incomplete, for when in 1420 an embassy from Shāhrukh, the Tīmūrid ruler of Harāt, passed through Turfan on the way to China, the bulk of the population was still Buddhist (Ḥāfiẓ-i Abrū, *Zubdat al-tawārīkh*, selection and tr. K.M. Maitra, *A Persian embassy to China*, Lahore 1934, repr. New York 1970). Moreover, when the embassy stopped a few days later at "Karakhodja", several Chinese officials of the ruling Ming dynasty recorded its members' names and the purpose of the mission. This suggests that the long arm of Chinese power made itself felt even while full-fledged conquest was still three centuries away, and while there were political and religious links between this area and the regions to the north and west. Paradoxically, these links were at this time more palpable still farther east, for it was at the next way station, "Kāmul" (better known as Hami), that the embassy met with signs of an Islamic presence: a mosque built by its ruler, Amīr Fakhr al-Dīn, who had erected it opposite a large Buddhist temple.

The Uyghur identity of the by then extinct kingdom of Kočo, however, may not yet have been fully forgotten, for Islamic sources of the 16th century still refer to the Turfan area as "Uyghuristān". It was the pious Moghol khān Manṣūr (1503-45) whose *ghazā* forays into the eastern marches of Turkestan not only propagated a firmer implantation of Islam in the Turfan area but also led to the extinction of Buddhism there. Much of Eastern Turkestan was soon afterwards exposed to renewed invasions by Oyrat Mongols, who, after founding an empire of their own that included the Turfan area, converted to Buddhism. The masters of this empire are known by the Mongol name of Djungars, but Muslims used the Turkic name Kālmāk [see KALMUK] for them as well as for the other Western Mongols. By then the Turks of the Turfan area professed Islam, and it was this denomination as well as the city that became the main mark of their identity: they were Muslims and "Turpanlïks", and forgetting all the other highlights of their past, they attributed the Buddhist and other monuments to the "infidel Kalmuks".

Both the Djungars and their successors the Chinese of the Ching (Manchu) dynasty who destroyed the Djungars in 1758, exercised a relatively benign rule in Turfan, as in other parts of "Nan lu", the southern portion of Sinkiang. This leniency translated itself in varying degrees of local self-rule. The Turfan area came under the authority of a petty monarch bearing the Chinese title *wang* (king) and residing in nearby Lukchun. Amīn Khʷādja Khānlïk (ruled *ca.* 1730-60), the first member of these loyal clients of the Manchus, appears to have been descended from the Khʷādjas of Eastern Turkestan. These were a family of Nakshbandī dervishes who assumed temporal rule in places like Kāshghar, Yarkand and Khotan (eventually as clients of the Djungar overlords). They were suppressed there by the Chinese in the wake of the destruction of the Djungars, so that the Turfan branch of the Khʷādjas formed a significant exception and maintained itself until the fall of the Manchu monarchy in 1911.

The rebellion of Yaʿkūb Beg [*q.v.*] against Manchu rule produced a brief spell of independence for Sinkiang, and the Turfan area was the easternmost segment which he managed to bring under his rule. It was near Karakhodja that the Chinese army inflicted the first defeat on him in 1877 before eliminating him altogether. This reconquest led to a reinforcement of the Chinese presence also in Turfan, where a Chinese city grew up east of the Muslim one.

TURGAY, the name of a land-locked river-system in the western part of what is now the Kazakhstan Republic and also of a town on the river Turgay (lat. 49° 38' N., long. 63° 25' E.) some 640 km/380 miles east-south-east of Orenburg. It lies in the steppe region now known as the Turgayskaya Stolovaya Strana.

The main river Turgay is formed of the Karïnsaldï Turgay, which receives the Tastï Turgay, and the Kara Turgay, and flows into Lake Durukča; north of it runs the Sarï Turgay, which is called Ulkuntamdï in its upper course and receives from the west the Muildï-Turgay and the Sarï-bui Turgay. The Sarï Turgay flows into Lake Sarï-Kopa. In Turkish, *turghay* or *torghay* means "little bird" (Radloff, *Wörterbuch*, iii, 1184, 1457); Kara Turghay is a name of the starling. The fortifications of Orenburg are called Torghay Kala.

The modern town of Turgay on the river of the same name was built in 1845 by Major Tomilin as a fortress and one of the centres of Russian power among the Kirgiz [*q.v.*] (here meaning Kazakhs) under the name of the Orenburg fortress (Orenburgskoye Ukreplenye). In 1865 the territory of the Orenburg Kirgiz was divided into two provinces (*oblast'*), the Ural and the Turgay. When the Turgay province in 1868 was divided into districts (*vyezd*), the fortress was made the capital of the district and called Turgay. As there was no suitable centre in the province itself, the Turgay province was administered from Orenburg. The governor lived there and in it was published from 1881 the official gazette, *Turgayskiya Oblastniya Vyedomosti*. The southern part of the province with the town of Turgay was less suitable for agriculture and Russian colonisation than the north, on account of the scarcity of fertile areas, although in the 1860s about 1,300 hectares were cultivated on the river Turgay alone. From Turgay, trade routes lead northwards to Orsk and Kustanay, and southwards to Irgiz and Perovsk (now called Kïzïl-Orda).

Before Russian rule, the present Turgay territory was inhabited only by nomads and hardly mentioned in historical sources. The 5th/11th century author Gardīzī in his section on the land of the Kimäk [*q.v.*] Turks describes itineraries going northwards from the

lower Syr Darya along the Irghiz and Turghay rivers towards the Urals and the Ishim-Irtysh basin, and his river S. fūk (read Sukūk, Tkish. *savuk/sovuk* "cold"?) may be the Turgay (*Zayn al-akhbār*, ed. Ḥabībī, 258). The campaign of the Khwārazm Shāh ʿAlāʾ al-Dīn Muḥammad [*q.v.*] against the Kïpčak and his encounter with the Mongols (612/1215-16), described by al-Nasawī, ed. Houdas, 9 ff., apparently reached this region (see Barthold, *Turkestan*³, 370-1; Marquart, *Über das Volkstum der Komanen*, 128 ff.; cf. *Ḥudūd al-ʿālam*, tr. Minorsky, comm. 307-8).

TÜRGESH [see TURKS. I.2].

ṬURGHUD ʿALĪ PASHA [see ṬORGHUD].

TÜRK ODJAGHÎ (T., literally "Hearth of the Turks"), a cultural and social organisation in late Ottoman and early Republican Turkey, formally instituted in 1912 and enduring until 1931. It aimed to spread Turkish nationalist ideology through its cultural and social activities in the Ottoman Empire. Its journal *Türk Yurdu* ("Homeland of the Turks") was widely read, and at the time it was closed down by the Kemalist state, it had over 30,000 members and 267 branches in Anatolia. In 1932 it was replaced by the *Halk Evleri* [see KHALKEVI] in towns and *Halk Odaları* in large villages, serving the same purpose but under the tight control of the ruling Republican People's Party.

The predecessors of the *Türk Odjaghî* were the *Türk Derneghi* ("Turkish Association", 1908-11) founded by Yūsuf Akčura [*q.v.*], Nedjib ʿĀṣîm, Weled Čelebi and others; and *Türk Yurdu* ("Homeland of the Turks", 1911-12) founded by Meḥmed Emīn [*q.v.*] and Yūsuf Akčura, whose journal *Türk Yurdu* was inherited by the *Türk Odjaghî*. According to its records, the initiative for the Hearth came from the students of the military medical school in 1911, and the plan was put into action on 12 March 1912 by Hüseyin Fikret, Meḥmed Emīn, Aḥmed Ferīd, Yūsuf Akčura, Meḥmed ʿAlī Tewfīk and their colleagues. After the Balkan Wars, the organisation was chaired by Ḥamdullāh Ṣubḥī, a well-known literary figure.

The *Türk Odjaghî* played an important role in creating a group of young intellectuals who identified themselves with the Hearth and its ideology, as opposed to the troubled Ottomanist ideology of the Second Constitutional period. Although Pan-Turkism [*q.v.*] was not a common ideal among the members of the Hearth during its early days, following the Balkan Wars, its members began to stress Turkish nationalism. *Türk Yurdu* started to carry articles in support of Turkism, and promoting the use of Turkish language within the borders of the Empire. The Hearth was also keen to promote a more active and public role for Turkish women, which they believed had existed in previous Turkic history. After 1913, some members of the Committee of Union and Progress [see ITTIḤĀD WE TERAKKĪ DJEMʿIYYETI] joined the Hearth, and political figures such as Djemāl Pasha and Ṭalʿat Pasha attended its meetings, aiming to use it as an extension of their ruling party. However, after World War I broke out, they regarded the *Türk Odjaghî* as their political rival because of its influence in Anatolia through its many branches.

Until 1918, the Hearth had 2,000 members with 35 branches all over the Empire, and these functioned as cultural societies for the promotion of Turkish language, culture and arts; it opened libraries, as well as offering food and board for needy students. Among its members were well-known names like Khālide Edīb, Ḍiyā Gökalp, Aḥmed Aghaoghlu, and Fuʾād Köprülü.

Türk Odjaghî aimed to be a centre of culture, hence, one of its objectives was to unite with the "folk", and populism always played an important role in its activities. Several of its members were founders of the Peasants' Movement before the foundation of the Republic. After the War, it promoted Westernisation while continuing to have ties with the other Turkic groups in the world. It gave its support to the Kemālist reforms, and received the support of Muṣṭafā Kemāl.

Its headquarters were moved to Ankara in 1930, and its administration was controlled by the members of the Republican People's Party (RPP), who saw the Hearth as a "cultural affairs" organisation of the Party. However, very soon, its branches in Anatolia were regarded as political rivals to the RPP, and from 1928 onwards, the pro-government press began to publish articles stating that, since nationalism was a state policy, the *Türk Odjaghî* no longer had a mission. After 1930, its members were also criticised by Leftists for being nationalists, and the Hearth was fancifully compared with Italian Fascist organizations. The fact that some members of the Hearth were also members of the opposition *Serbest Cümhuriyet Fırkası* ("Free Republican Party"), and that Ḥamdullāh Ṣubḥī, the chairman of the Hearth, was a known supporter of pluralism and defender of freedom of thought, drew suspicion. Finally in 1931, the Hearth and its branches were closed, and their property taken over by the RPP in an effort to gather all civil organisations under the ideological umbrella of a single political party. Immediately afterwards, the *Halkevleri* were opened, which inherited the libraries, activities, and membership of the *Türk Odjaghî*. At the time when it was closed, the Hearth had 30,000 members in 267 branches, libraries, and an established programme of courses on different subjects and lectures.

Türk Ocağı was re-opened in 1986 in Ankara, but although its members were higher bureaucrats, it was not able to attain the popularity and the respected intellectual status it had in the 1920s. It remains in existence.

TÜRK YURDU [see MAKĀLA. 3].

AL-**TURK, NIKŪLĀ** B. YŪSUF B. NĀṢĪF, (1176-*ca.* 1244/1763-*ca.* 1828), Syrian Melkite Christian chronicler, scribe and poet, of Greek extraction from Istanbul, born and died in Dayr al-Ḳamar, Lebanon. Sent to Egypt (1798-1804) by his employer, Bashīr Shihāb II [*q.v.*], Prince of the Druzes, he wrote a chronicle of the French occupation. Several versions have appeared: *Dhikr tamalluk djumhūr al-Fransāwiyya al-akṭār al-Miṣriyya wa 'l-bilād al-Shāmiyya (1792-1801)*, ed. Alix Desgranges aîné, Paris 1839, and ed. Dr. Yāsīn Suwayd, Beirut 1990, using the same text; Gaston Wiet (ed.), *Chronique d'Egypte, 1798-1804/Mudhakkirāt Nikūlā Turk*, Cairo 1950, from a manuscript in the Bibliothèque privée de Sa Majesté le roi Farouk, and *Taʾrīkh Nābulyūn al-Awwal (1792-1801)*, ed. Amal Bashshūr, Tripoli 1993, from a manuscript in the Ẓāhiriyya Library in Damascus. It is asserted that he left no issue.

A minor poet, he earnt his living flattering the rich and powerful: a dithyrambic ode glorifies Napoleon's military power in Egypt, *Ode arabe sur la conquête de l'Egypte, traduite par J.J. Marcel*, Paris 1830. His collected poetry, *Dīwān al-Muʿallim Nikūlā al-Turk*, ed. Dr. Fouad E. Boustany, Beirut 1949, repr. 1970, records

the principal contemporary events of private and official life in Lebanon.

TÜRKÇÜLÜK [see PAN-TURKISM].

ṬURK̲H̲ĀN SULṬĀN, ṬURK̲H̲ĀN K̲H̲ĀDID̲J̲E SULṬĀN (*ca.* 1626-83), mother of the Ottoman sultan Meḥemmed IV [*q.v.*].

Ṭurk̲h̲ān Sulṭān entered the Ottoman imperial harem as a slave of the *wālide sulṭān* Kösem Sulṭān [*q.v.*], mother of Murād IV (1623-40) and Ibrāhīm (1640-8) [*q.vv.*]. Nothing is known of her background, except that she had a brother, Yūsuf Ag̲h̲a, who died in Istanbul in 1100/1689. She gave birth to sultan Ibrāhīm's eldest son Meḥemmed in 1641; there may also have been a daughter, Fāṭima Sulṭān, 1642-57. On Ibrāhīm's deposition in 1648 and her seven-year-old son's accession as Meḥemmed IV, Ṭurk̲h̲ān acquired the rank of *wālide sulṭān* ("royal mother") [*q.v.*], but initially remained in the shadow of Meḥemmed's grandmother, the more politically-experienced and powerful Kösem Sulṭān, then known as *büyük* ("senior") *wālide sulṭān*. A threat by Kösem to dethrone Meḥemmed IV in favour of a younger brother resulted in Kösem's own assassination in 1651, probably at Ṭurk̲h̲ān's instigation, and the latter's assumption of the full regency for the ten-year-old Meḥemmed. The extreme political instability of the years immediately after 1651 led in 1656 to the appointment as Grand Vizier of Köprülü Meḥmed Pas̲h̲a [see KÖPRÜLÜ. 1], to whom Ṭurk̲h̲ān Sulṭān surrendered much of her political authority as regent. Although Köprülü's appointment has been said to have ended the "sultanate of women", Ṭurk̲h̲ān's personal influence over Meḥemmed IV and her role as intermediary remained important (for her career generally, see L.P. Peirce, *The imperial harem: women and sovereignty in the Ottoman empire*, Oxford 1993, *passim*).

Ṭurk̲h̲ān Sulṭān died in 1094/1683 and was buried in her own tomb at the Yeñi Wālide mosque in Istanbul, a foundation begun by Ṣāfiye Sulṭān [*q.v.*], mother of Meḥemmed III, in 1598 but completed only in 1663 by Ṭurk̲h̲ān herself. At least two minor mosques and other small endowments by her are known (Peirce, *op. cit.*, 206-12).

TURKISTĀN, TURKESTAN, a Persian term meaning "land of the Turks".

1. As a designation for the Central Asian lands to the north of modern Persia and Afg̲h̲ānistān.

Tbis roughly corresponded to the older Transoxania or Mā warā' al-nahr [*q.v.*] and the steppe lands to its north, although these last were from Mongol times onwards (sc. the 13th century) often distinguished as Mog̲h̲olistān [*q.v.*]. To the Persians, of course, only the southern frontier of the land of the Turks, the frontier against Īrān, was of importance and this frontier naturally depended on political conditions. On their very first appearance in Central Asia in the 6th century A.D., the Turks reached the Oxus [see ĀMŪ-DARYĀ]. In the time of the Sāsānids, therefore, the land of the Turks began immediately north of the Oxus; according to the story given in al-Ṭabarī (i, 435-6) the Oxus was settled by an arrow-shot of Īras̲h̲ as the frontier between the Turks and the "territory (*'amal*) of the Persians". According to the Armenian Sebēos (7th century A.D.), the Vehrot, i.e. the Oxus, rises in the land of T'urk'astan (*Histoire d'Héraclius par l'évèque Sebèos*, tr. Fr. Macler, Paris 1904, 49; J. Marquart, *Ērānšahr*, 48); in another passage in the same work (43; Marquart, 73) T'urk'astan is associated with Delhastan, i.e. Dihistān (in the neighbourhood of the Caspian Sea, north of the Atrek [*q.v.*]).

By the victories of the Arabs, the Turks were driven far back to the north; for the Arab geographers of the 3rd-4th/9th-10th centuries, Turkistān therefore began, not immediately north of the Oxus, but only north of the area of Arab culture known as "the lands beyond the river", Mā warā' al-nahr. Turkistān, the land of the Turks, was then regarded as the regions north and east of Mā warā' al-nahr. The town of Kāsān in Farg̲h̲āna [*q.v.*], north of the Sīr Daryā [*q.v.*], was "where the land of Turkistān begins" (Yāḳūt, iv, 227). The towns of D̲j̲and and S̲h̲ahrkand on the lower course of the same river were in Turkistān (ii, 127, iii, 344); in Turkistān lay the town of K̲h̲otan (ii, 403). From this use of the name, it has been held (especially by M. Hartmann, *Chinesisch-Turkestan*, Halle 1908, 1) that the name "Turkistan" was first applied by the Russian conquerors of Central Asia quite arbitrarily to the land of Mā warā' al-nahr. As a matter of fact, the name Turkistān had long regained its earlier significance as a result of the Turkish conquests, perhaps less in literature than in everyday usage. To the people of Persia and Afg̲h̲ānistān, the "Turks in Turkistān" were their immediate neighbours on the north; thus in a lullaby taken down in S̲h̲īrāz in 1886 we are told "Two Turks came from Turkistān, brought me to Hindūstān" (V. Žukovskiy, *Obrazcî persidskago narodnago tvorčestva*, St. Petersburg 1902, 169-70). Through the Özbeg conquests of the 10th/16th century, a new Turkistān arose south of the Oxus. The corresponding province of Afg̲h̲ānistān still bears the name of Turkistān; as the southern frontiers of this Turkistān some travellers (R. Burslem, *A peep in Toorkistan*, London 1846, 57-60) give the pass of Aḳ Rabat north of Bāmiyān [*q.v.*]; others (J. Wood, *A journey to the source of the River Oxus*, new ed. London 1872, 130), the pass of Had̲j̲ikak, a little farther south, where the watershed between the basins of the Helmand [*q.v.*] and the Oxus is; farther west, in the region between the Murg̲h̲āb and the Āb-i Maymana, the frontier of Turkistān is given as the range of Band (or Tīrband)-i Turkistān (see further, 2, below). The name Turkistān in this context was introduced into the scientific terminology of the 19th century, not by the Russians but by the British, probably under the influence of the Persian and Afg̲h̲ān usage.

In literature, especially in travellers' records, a distinction has usually been made between Russian, Chinese and Afg̲h̲ān Turkestan, although the word Turkestan (or Turkistān) had an administrative significance only in Russia and Afg̲h̲ānistān. Sometimes instead of these we find the terms West and East Turkestan. The Governorate-General (*guberniya*) of Turkestan was founded in 1867 by the Russians, with Tas̲h̲kent [*q.v.*] as its capital and General K.P. Kaufman as its first head. The frontiers of this

Governorate-General were sometimes contracted, sometimes extended. From 1882 to 1898 the province of Semiryečye, at one time included in Turkestan, belonged to the Governorate-General of the Steppes with Omsk as its capital. In 1898 Semiryečye and the Transcaspian province (Turkmenia) were incorporated in Turkestan. For the history of Semiryečye, see YETI SU.

In 1886, Prof. I. Mus̲h̲ketov attempted to give the name "Turkestan" a definite geographical significance, independent of administrative conditions. Under the influence of A. Petzhold's book *Umschau im Russischen Turkestan nebst einer allgemeinen Schilderung des Turkestanischen Beckens*, Leipzig 1877, he proposed to give the name Turkestan or the Turkestan basin to the lands between the central mountains of Central Asia and the basin of the Caspian Sea, the Iranian plateau and the Aral Sea; Mus̲h̲ketov had no doubt that the frontier between Russia and England in the not-too-distant future would be established on the Hindū Kus̲h̲ [*q.v.*]. He proposed to replace the term "Chinese Turkestan" (see below) by the Chinese one Han-hai (interpreted by European scholars since Richthofen as the "dry sea").

After the downfall of Tsarist Russia in 1917, a supra-ethnic Turkistan Autonomous Government (*Turkistan Äwtanam Hukumäti*, also known as the "Khokand Autonomy", *Qoqan Äwtanamiyäsi*) came into existence on 10-11 December 1917, founded by Reformist or D̲j̲adīdist elements [see D̲J̲ADĪD; and IṢLĀḤ. v. In Central Asia, in Suppl.] based on Khokand, as Central Asia's second (after Khiva) independent, indigenous state. This was replaced on 30 April 1918 by a Soviet régime, at first called the Autonomous Turkistan Republic (ATR) and based on Tashkent, but the Bolsheviks in Moscow were hostile to any ethnic, tribal or local groupings, and worked to destroy the ATR, e.g. by encouraging Kazaks to the north of the ATR to unite with Kazaks within it to form their own Kirgizistan (i.e. Kazakstan) ASSR to the east of the Caspian.

Nevertheless, a start had been made in nurturing a common feeling of Turkistan unity, and some people linked this with their language and literature, despite other views that, for language and literature, there were subordinate ethnicities such as Uzbeks, Kazaks, Turkmens, etc. But Moscow worked against all feelings for integration in the ATR, as also in the Bukharan and Khwarazmian People's Conciliar Republics (BPCR and KhwPCR), branding their local leaders as "bourgeois nationalists", fanning Kazak and Turkmen unwillingness to work with Uzbeks in common administrative-political units and playing off various groups with each other.

In autumn 1924 the various ethnic groups of Central Asia were encouraged by Moscow to form their own ethnic units; this led to the formal dismemberment of the Turkistan ASSR, decreed on 11 May 1925, and the abolition of the Khwarazmian and Bukharan SSRs, which had only just been set up in 1923 and 1924, respectively. The term "Turkistan" vanished from the press and for decades, Stalin's censors treated it as a forbidden name and concept; the name survived only for a small town in the Kazakhstan SSR (see 3, below). And, as Allworth has remarked, "The loss of the name *Turkistan* represented more than a change of designation—it deprived Central Asians of the prerogative to determine their own identity".

It should be noted that the vast mountain, desert and oasis region to the east and north of the Tien Shan Mountains and to the east and north of the Pamirs and Kun Lun Mountains, comprising the Tarim basin and the region of Džungaria to its north, has conventionally been known as Eastern Turkestan or, reflecting more recent political domination, Chinese Turkestan. For this, see KĀS̲H̲G̲H̲AR; K̲H̲OTAN; ḲULD̲J̲A; SINKIANG; TARIM; TURFAN; YARKAND.

(W. BARTHOLD-[C.E. BOSWORTH])

2. As a designation for the largely Turkish part of northern Afg̲h̲ānistān lying to the south of the Oxus.

From early mediaeval times, the region around Balk̲h̲ and Mazār-i S̲h̲arīf, the early mediaeval Ṭuk̲h̲āristān [*q.v.*], known generally by the 18th century as the *wilāyat-i Balk̲h̲*, has become gradually Turkicised, mainly with Uzbeks and Turkmens at the present time, although significant minorities of Persian- and Pas̲h̲to-speakers, etc., are also to be found.

In the later 18th century, the Afg̲h̲ān court tended to refer to this *wilāya* as "Turkistān", and this was taken over in the first half of the 19th century into British and European usage. But after the Russian advance into Central Asia, official British usage felt that "Turkistān" *tout court* might give credence to Russian claims that the city-states of the *wilāya* were not necessarily part of the Afg̲h̲ān monarchy but could be considered as part of "Greater Turkistān". Hence in 1869 Sir Henry Rawlinson, in a *Memorandum on the Frontiers of Afghanistan*, recommended that, for political purposes, Britain should no longer use the term "Turkistan" but instead, "Afghan Turkistan", and this was adopted in official usage and publications to distinguish it from "Russian Turkistan" north of the Oxus. See for a thorough discussion of the question, J.R. Lee, *The "Ancient Supremacy". Bukhara, Afghanistan and the battle for Balkh, 1731-1901*, Leiden 1996, pp. xxxi-xxxiv.

(C.E. BOSWORTH)

3. The name of one of the oldest small towns of what is now southern Kazak̲h̲stān, situated in the region of Čimkent, on the Tashkent-Orenburg road, on the left bank of the Syr Darya, some 30 km/18 miles from the river. An oasis at the fringes of the Kizil-Kum, it is irrigated by watercourses emanating from the Karatau mountains (the site of ancient gold mines) and canals fed by the river Karaychik. Throughout its long history it has been disputed by conquerors either famous or obscure, all anxious to confirm their hegemony by possession of a strategic urban site at the confluence of the nomadic and sedentary zones of Central Asia.

Turkistān is identified with the ancient city of S̲h̲āwg̲h̲ar, of which no traces have ever been discovered (Le Strange, *Lands*, 485). The Arabo-Persian geographers of the 4th/10th century mention it in their

works, including al-Muḳaddasī and, in particular, Ibn Ḥawḳal, 340, who relates that a campaign was said to have been conducted against it by the Sāmānid prince Naṣr b. Aḥmad (303-30/914-43) with an army of "300,000 men"; this is not confirmed by other sources of the period (such as al-Iṣṭakhrī, 291). The victorious campaign conducted against the Turks in 290/903 in the neighbourhood of what is now Turkistān by Ismāʿīl b. Aḥmad (278-94/892-907), founder of the Sāmānid dynasty, seems more plausible (Masal'skiy, *Turkestanskiy kray*, St. Petersburg 1913, 282). It is true that in the 6th/12th century al-Samʿānī, facs. ed. 228, describes it as the zone confronting the Turks, while Yāḳūt, *Buldān*, iii, 245, a century later, is already describing it as a "Turkish town", yet neither of the two alludes to the name of Yasī (Esī) by which it came to be known.

It is, however, as such that it appears in the 8th/14th century in Yazdī's *Ẓafar-nāma*, ed. Calcutta, ii, 9, a usage attested since the end of the 6th/12th century (Barthold, *Zwölf Vorlesungen*, Berlin 1935, 141, Russian tr. in *Sočineniya*, v, Moscow 1968, 117; idem, *EI*[1] art. *Turkistān*). Developing from a village (*karya*), Yasī enjoyed its greatest prosperity during the Mongol period, by virtue of the cult dedicated to the *shaykh* Aḥmad Yasawī, called Ata Yesevī by the Turks and founder of the Ṣūfī order of the Yasawiyya, who lived and died there in 562/1166-7 [see AḤMAD YASAWĪ]. Considered as the one who converted the Turks to Islam, he is buried there in the impressive mausoleum which Tīmūr built for him at the end of the 8th/14th century (M.E. Masson, *Mavzolei Khodža Ahmad Yasevi*, Tashkent 1930). It was in the 9th/15th century that Yasī took on the name of Turkistān, the mausoleum becoming known as *Ḥaḍrat-i Turkistān*. Henceforth, it attracted numerous pilgrims and became the preferred burial site of pious Muslims, and later, of the Özbeg/Uzbek princes of the Shaybānid dynasty, and of the Kazakh sultans. The mausoleum consists of a massive cube flanked by two towers surmounted by a huge entry-portal. In the interior, the principal hall contains the sacred cauldron (*kazanlïk*) which, previously used for preparing food for pilgrims and Ṣūfīs, serves today as a depository for coins. The tomb of the saint is located in a section facing the entrance. On the outside, a 19th century mosque, an older mosque, a library, a *ḥammām*, and the remains of the wall of the ancient fortress may be observed.

From the last quarter of the 9th/15th century onward, it was around the town of Turkistān that the principal events took place of a rivalry which was to continue for decades and even centuries. This involved the last Tīmūrids of Transoxiana, the Čaghatayid *khāns* of declining Mogolistān (Yūnus and his son sultan Maḥmūd), the Kazakh *khāns* and the Uzbek conqueror Muḥammad Shaybānī Khān. A series of battles between these two last took place during the 1470s, the prize being the principal towns of the Syr Darya basin which were besieged and captured in turn by the Kazakhs or the Uzbeks. By the end of the 15th century the situation had stabilised: the towns of Sighnāḳ, Sūzak and Sawrān were incorporated into the Kazakh khānate, whilst those of Utrār, Uzgend, Arkūk and Turkistān remained in Uzbek hands.

Thus in 893/1488, Maḥmūd, the Čaghatayid prince of Tashkent, appointed Muḥammad Shaybānī governor of Turkistān, and this marked the true starting-point of the latter's political career in Transoxiana (Bacqué-Grammont, *Une liste ottomane*, 438). The Uzbek sultans took refuge there in 915/1511, at the time of one of the last offensives of Bābur. The Kazakh *khān* Ṭāhir died there in the second quarter of the 16th century. After 1007/1598, it became part of the Uzbek state of the Ashtarkhānids, who replaced the Shaybānids when in the 11th/17th century the town passed once more under Kazakh domination, extending then as far as Tashkent. In 1062/1652, the Kazakh Djahāngīr Khān, who had perished in battle against the Kalmuks, was buried there close to the mausoleum of Aḥmad Yasawī (Klyastorniy and Sultanov, *Kazakhstan*, 304). The Kazakh *khān* Tawke (the famous legislator of the three tribes who, nominally at least, accepted Russian sovereignty in 1129/1717), received a Russian delegation there in 1105/1694 (led by the Cossacks Fedor Skibin and Matvey Tročin, sent from Tobolsk) and a Kalmuk delegation (representing the Oyrats of Džungaria) in 1110/1698, which did not, however, prevent the seizure of the town by the Oyrats in 1135/1723, a fate also suffered by Sayram and Tashkent. Turkistān was then one of the sensitive points in the confrontation between Kazakhs. Oyrats and Chinese which ultimately served the interests of the Russian power. It passed under the domination of the Kazakh sultan Yūnus Khōdja who ruled in Tashkent after 1194/1780. At this time, Turkistān constituted an independent principality, despite nominal subservience to Bukhārā. It was the Kazakh Tozay Khān who was governor there when the town was seized by ʿUmar, the Uzbek *khān* of Khoḳand, in 1814 or 1815.

Like other oasis towns of the Syr Darya basin in the 18th and 19th centuries, Turkistān experienced economic decline and a disintegration of sedentary life which cannot be attributed solely to the activities of the Uzbeks but is documented by Russian travellers, such as Burnasev, 141, and Meyendorff, 61. The town comprised 5,000 inhabitants when it was incorporated into the Russian empire in December 1864, after three days of conflict between a battalion of Cossacks from the Urals led by Lt. Verevkin and 10,000 soldiers from Khoḳand who "miraculously" spared the cupola of the mausoleum (*Entsiklopedičeskiy slovar'*, St. Petersburg 1909, 38). In 1910, the Tsarist administration recorded 13,514 inhabitants, 3,616 houses, 2 churches, 41 mosques, 24 educational establishments, one library and 57 workshops or factories (cotton processing, manufacturing, trading companies) (*Adres' spravočnik Turkestanskogo kraya*, Tashkent 1910, 116). The population of the town had reached 77,000 in 1987.

Since the independence of Kazakhstān, the town has been the object of close attention on the part of the Kazakh authorities. The Turkish Republic has contributed towards the refurbishment of the mausoleum, and has helped with the financing of a Turco-Kazakh university (also incorporating a hotel), one of the signs of the new state's resolve to combine reconstruction with the assertion of a distinctive identity.

(CATHERINE POUJOL)

TÜRKMEN (T. Türkmän; A. al-Turkumān, al-Turkmāniyyūn, al-Tarākima; P. Turkmānān) a term used collectively for Turkic tribes distributed over much of the Near and Middle East and Central Asia from mediaeval to modern times.

Etymology

A number of modern studies have taken up this question, rejecting the Persian popular etymology of *Türk-mānand* "similar to the Türks", already proposed by al-Bīrūnī (cf. Golden 1992, 213) and al-Kāshgharī [*q.v.*] in his *Dīwān lughāt al-turk* (tr. Dankoff 1984, ii, 363) and repeated by later authors including Rashīd al-Dīn Ṭabīb. Similarly, Abu 'l-Ghāzī Bahādur Khān explains in his *Shadjara-yi Tarākima* that the Tādjīks first called the Türkmen who had settled in Mā warā' al-nahr Türks. With time, their features changed to resemble more those of the local (i.e. Iranian) population. Therefore the Tādjīks gave them the name *Türkmen*, with the meaning "resembling the Türks, Türk-like", but that the common people were unable to pronounce *Türk-mānand* and therefore said *Türkmen* (ed. Ölmez 1996, 170, tr. 251). G. Doerfer states that *türkmän* is obviously a derivation from *türk* "ruling people > Turk" with *män* as a kind of augmentative suffix (see *Türkische und mongolische Elemente im Neupersischen*, ii, Wiesbaden 1965, no. 892, with further references). Golden (1992, 212-13) similarly views the term as "deriving from *Türk* + Turk. *-men* (a suffix of strengthening)".

The term Türkmen is used by Muslim historians, geographers and other authors writing within the sphere of the Saldjūḳid empire and its successor states for those of the tribal federation of the Oghuz/Ghuzz (*q.v.*, see also F. Sümer, art. *Oğuzlar*, in *İA*)—which included non-Oghuzic elements—that had become Muslims. However, by the Mongol period the appellation Türkmen had completely superseded that of Oghuz (W. Barthold, art. *Turkomans*, in *EI*[1]). More pointedly, Golden (1992, 212) suggests that, initially, the term Türkmen was possibly not an ethnonym but a technical term denoting Islamised Turkic populations, including the Oghuz. He draws attention to the possibility of a pre-Saldjūḳ history of the term referring to a Sogdian (8th century) and a Chinese (9th century, cf. also Barthold 1962, 79-80) source. The following citations from some of the earliest Muslim texts that refer to the Türkmen as Islamised Oghuz follow Golden (1992, 212-13, cf. also Barthold 1962, 77-120). The geographer al-Muḳaddasī (fl. 4th/10th century), who visited Khurāsān, is considered the first Muslim source to refer to "the Turkoman who have converted to Islam through fear" and to "the sovereign of the Turkoman" (*Aḥsan al-taḳāsim*, 274-5, tr. B.A. Collins and M.H. al-Tai, 274-5). The scientist al-Bīrūnī al-Khwārazmī (d. 440/1048), who knew the region well, mentions in his *K. al-Djamāhir fī ma'rifat al-djawāhir* (ed. Krenkow 1936, 205) that the Oghuz call "any Oghuz who converts to Islam" a Türkmen. Al-Marwazī (d. after 514/1120), a physician at the Saldjūḳ court, writes in his *Ṭabā'i' al-ḥayawān*, which includes sections on human geography, that some of the Oghuz when they came into contact with Muslim countries converted to Islam, then being called Türkmen (ed. Minorsky 1942, 18/29). Al-Kāshgharī describes the Ḳarluḳs [*q.v.*] as a "tribe of the Turks. They are nomads, not Oghuz, but they are also Turkman" (tr. Dankoff 1982, i, 353), but also says "Oγuz—a tribe of the Turks; the Turkmän" (*ibid.*, i, 101) and "*türkmän*. They are the Oγuz" giving a long story about the encounter of their original 22 tribes (*ibid.*, i, 101-2) with Dhu 'l-Ḳarnayn [*q.v.*], including the etymology mentioned above (*ibid.*, ii, 362-3).

History

1. Pre-Mongol period.

In the wake of the conquests of the Oghuz/Türkmen under the leadership of the Saldjūḳ family and during the period of its rule (5th-6th/11th-12th centuries), large numbers of Türkmen not only joined the Saldjūḳ armies but also migrated as tribal groups from their habitat in the periphery of the Islamic world (i.e. the area bordered by the Ural and Irtysh rivers, the eastern shores of the Caspian Sea and the lower Syr-Darya valley) to northern Persia, Ādharbaydjān, Asia Minor, 'Irāḳ, Syria, the Ḥidjāz and even North Africa. Some of these groups became settled and merged with the local populations, while the majority continued a nomadic or semi-nomadic way of life preserving tribal structures. (For details of these developments, see GHUZZ and SALDJŪḲIDS, with references.) Modern scholarship has underlined the enormous impact of these migrations on the political, economic, social and cultural structure of the central Islamic lands with their predominantly Iranian and Arab populations. A further effect was the beginning of the lasting Turkification of Ādharbaydjān and Anatolia. Attention is also drawn to the fact that, due to their historical role, we are better informed about the Türkmen than on any other Turkic people of the Middle Ages.

When central Saldjūḳ rule collapsed and regional successor states were established, in most cases by members of the Saldjūḳ family or its close associates [see ATABAK], Türkmen tribal groups continued to form their major reservoir of warriors, since the migration of Türkmen from Central Asia continued. Moreover, already during the height of Saldjūḳ power a number of principalities had emerged in the borderlands of the empire whose leaders were not members of the Saldjūḳ family but were Türkmen tribal chiefs, e.g. the Dānishmendids [*q.v.*] in eastern Anatolia, who played an important role in the conflicts of the 6th/12th century between Crusaders, Byzantines and Saldjūḳs. The Mengüček [*q.v.*] principality to the east of the Dānishmendids and that of the Saltuḳ Oghullarî [*q.v.*] around Erzurum were each annexed by the Rūm Saldjūḳ sultan before the Mongol conquest. Of more consequence was the Salghurid [*q.v.*] dynasty, founded by members of the Salur [*q.v.*] tribe, in Fārs, and the ruling family of the Artuḳid [*q.v.*] principality which belonged to and derived its strength from the Döger [*q.v.*] tribe of the Bozoḳ branch (see below) of the Türkmen. It continued to hold its own in the Mārdīn and Āmid (Diyārbakr) region up to the beginning of the 9th/15th century.

No reliable information is available about the number and tribal composition of Türkmen who remained in Central Asia. In the early 5th/11th century the region of the Balkhān [*q.v.*] mountain ranges east of the Caspian sea became a place of retreat for the Oghuz and other Turkic tribes, while the Mangîshlak [*q.v.*] peninsula further north is already mentioned as such in the 4th/10th century. In the second half of the 6th/12th century, a certain number of Türkmen settled in eastern Khurāsān without, however, gaining any political importance, partly due to the rise of the Khwārazmshāhs [*q.v.*]. In the 7th/13th century, the Mongol conquests led to the large-scale expulsion into different directions, or incorporation into the Mongol army, of Türkmen living along the main route of military operations in Transoxania and Khurāsān. In this way, a second wave of Türkmen, uprooted from a nomadic, semi-nomadic or settled way of life, again reached the central Islamic lands, and this wave was to change their political, ethnic and socio-

economic structure even more thoroughly than the earlier one set into motion by the Saldjūḳ conquests.

2. Mongol and post-Mongol period.

Particularly successful politically were those Türkmen who made Anatolia, Armenia, Kurdistān and northern Syria their new home, soon to create small domains of semi-independent rule. While earlier studies based on Mamlūk, Persian, Ottoman and European sources furnished mainly political and socio-economic information concerning these Türkmen principalities (*beyliks*), more recent studies have also focused on their individual contribution to culture, particularly to the development of literature, art and architecture within the former territories of the Byzantine empire, now reduced to the northwestern part of Anatolia, that of the moribund Rūm Saldjūḳ state under the overlordship of the Il-Khans [*q.v.*] and of the northern borderlands of the Mamlūk empire. However, the history of the major Türkmen amīrates of Anatolia is still not very well explored. This is partly due to the complicated situation regarding sources, e.g. the loss or lack of written sources connected to the way of life of the ruling Türkmen élite and its supporting tribes, as opposed to the settled Muslim and Christian subjects, and to subsequent Ottoman rule, with its different state ideology, which superseded that of the Türkmen *beyliks*.

Among the more well-known Türkmen principalities of Anatolia are those of the Ṣarūkhān around Manisa and the Aydîn-Oghlu in the hinterland of Izmir, of the Menteshe Oghullarî on the southwestern coast, of the Germiyān Oghullarî with their centre in Kütahya, the Hamīd Oghullarî and Tekke Oghullarî around Eğridir and Antalya, the Ḳaramān-Oghullarî with their centre in Konya, the Djandar Oghullarî between Sinop and Kastamonu, of the Dhu 'l-Ḳadr (Dulghadîr) Oghullarî and the Ramaḍān Oghullarî [*q.vv.*] in southeastern Anatolia (for an overview, see İ.H. Uzunçarşılı, *Anadolu beylikleri*[4], Ankara 1988). It should not be forgotten that the Ottoman empire had likewise its roots in a Türkmen principality founded by the eponymous ʿOthmān I [*q.v.*] in the northwestern corner of Anatolia.

Most of these principalities have in common the period of their origin as quasi-independent domains in the 1330s and 1340s, in the wake of the demise of the Rūm Saldjūḳ sultanate and the fact that they were finally incorporated into the Ottoman empire in the period of Sultans Murād II (824-55/1421-51) and Meḥemmed II (855-86/1451-81 [*q.vv.*]). In central Anatolia, the powerful Ḳaramān *beylik* constituted a serious threat to Meḥemmed II's bid for supremacy until 865/1461. In southeastern Anatolia, the Dhu 'l-Ḳadr Oghullarî with their centre in Marʿash, and the Ramaḍān Oghullarî around Adana, were able to resist the Ottomans, under Mamlūk protection, until Selīm I succeeded in defeating them in 921/1515. A large part of the Dhu 'l-Ḳadr tribesmen entered Shāh Ismāʿīl Ṣafawī's [*q.v.*, see also SAFAWIDS and ĪLĀT] service and became one of the constituents of his Ḳîzîl-bāsh [*q.v.*] troops, along with other Türkmen tribes such as the Ustādjlū, Rūmlū, Shāmlū, Takkalū, Afshār, Ḳādjār, Warsāḳ and Bahārlū. However, beginning with Shāh ʿAbbās I (995-1038/1587-1629) the predominant role of the *ḳîzîl-bāsh* Türkmen in the Ṣafawid central administration and provincial government was more and more reduced. By conserving their traditional way of life, in particular their seasonal migrations, the Türkmen tribal federations continued to evade, even confront, state authority both in the Ottoman empire and in Persia down to the first half of the 20th century (for an overview, see Planhol 1993, *passim*). It must also be borne in mind that it was in this atmosphere of Ottoman-Ṣafawid confrontation (10th/16th century) that the religious syncretism which developed among the Türkmen in Saldjūḳ times on the basis of practices and beliefs brought from Central Asia, and entered Sunnī and Shīʿī Islam, led to the formation of a new heterodox creed in Anatolia, Alevism (cf. several studies in *Alevism in Turkey and comparable syncretistic religious communities in the Near East*, ed. K. Kehl-Bodrogi, B. Kellner-Heinkele and A. Otter-Beaujean, Leiden 1997).

Of more political consequence than the Anatolian Türkmen *beyliks* were the states founded by the Ḳara Ḳoyunlu and Aḳ Ḳoyunlu Türkmen tribal confederations respectively. At times even serious rivals of the Tīmūrids, Mamlūks and Ottomans, they gained momentum with the re-migration of Türkmen to the east, essentially to Persia, from the 8th/14th till the beginning of the 10th/16th centuries. The Aḳ Ḳoyunlu (*q.v.*; the best study on them is J.E. Woods, *The Aqqoyunlu. Clan, confederation, empire*, Minneapolis and Chicago 1976) dominated eastern Anatolia and western Persia from the mid 8th/14th century until the conquest of these regions by the Ṣafawid Shāh Ismāʿīl in 907-8/1501-3. Their leading clan was the Bayîndîr [*q.v.*], which claimed as its eponymous ancestor one of the 24 grandsons of Oghuz Khān, who were considered as the founders of the legendary 24 Oghuz tribes. Their most successful ruler, Uzun Ḥasan (871-83/1466-78 [*q.v.*]), made Tabrīz his capital after gaining the upper hand over the rival Ḳara Ḳoyunlu (*q.v.*; see also F. Sümer, *Kara-Koyunlular*[3], Ankara 1992). At the height of its power under Djihān Shāh (843-72/1439-67), the Ḳara Ḳoyunlu empire comprised eastern Anatolia, Armenia, ʿIrāḳ and most of Persia.

Central Asia

Owing to the lack of historical evidence, it is not possible to prove direct continuity from the Oghuz/Türkmen of Saldjūḳ times to the post-Mongol Türkmen. Very little information is also available for the Tīmūrid period. The history of the modern Türkmen tribes can only be traced from the 10th/16th century onwards, when they slowly moved from their retreat in the western fringes of modern Turkmenistan (Mangîshlak peninsula, Üst Yurt plateau, Balkhān mountains, Ḳaraḳum desert) in an eastern and southeastern direction to the agricultural oases (Khʷārazm, the Murghāb valley). This movement was probably caused by a growing desiccation of the steppe and the pressure exerted by stronger neighbours like the Ḳalmuḳs, the Ḳazakhs [*q.vv.*] and the Persians (cf. Bregel 1981). The rule of Abu 'l-Ghāzī Bahādur Khān (1054/1644-5 to 1074/1664), Shaybānid ruler of Khīwa and historian of the Türks and Türkmen, was likewise marked with frequent expeditions against the Türkmen tribes of Khʷārazm, the Ḳaraḳum desert and the Mangîshlak peninsula, leading to the temporary submission of some of them (Abu 'l-Ghāzī, *Shadjara-yi türk*, ed. and tr. P.I. Desmaisons as *Histoire des mongols et des tatares par Aboul-Ghâzi Béhâdour Khân*, St. Petersburg 1871-4, ed. 297-372, tr. 318-50). According to Abu 'l-Ghāzī's own words, he composed his history of the Türkmen people, the *Shadjara-yi tarākima* ("The family tree of the Türkmen"), in 1071/1660-1, because Türkmen scholars, *sheykhs* and *beks* who had heard that he was an expert on history asked him to do so in replacement of the numerous *Oghuz-nāmas* which they considered as worthless (ed. Ölmez, 109, tr. 232). This history clearly mirrors the historical traditions and legends of the Oghuz that had earlier been recorded by

Rashīd al-Dīn in his *Djāmiʿ al-tawārīkh* (see *Die Geschichte der Oğuzen des Rašīd ad-Dīn*, tr. K. Jahn, Vienna 1969). In addition, Abu 'l-Ghāzī's work adds events that probably have to be placed mostly within the 9th/15th century.

According to Abu 'l-Ghāzī, Oghuz Khān divided his descendants into the senior Bozoḳ and the junior Üčoḳ division of tribes. He mentions in his work the Bayat, Bigdili, Dodurga, Döger, Ḳarḳîn and Ḳayî, which are traditionally considered as belonging to the Bozok (right wing) division, and the Ava, Bayîndîr, Bečene, Bügdüz, Čavuldur, Čepni, Eymür, Igdir, Ḳara Ivli, Ḳînîḳ, Salur and Üregir belonging to the Üčoḳ (left wing) division. The Teke as well as the Ersarî [*q.v.*] are represented as connected to the Salur, and the Yomut and Göklen [see GÖKLÄN] are not mentioned at all (ed. Ölmez, index). These tribes began to move into the oases of Khʷārazm and southern Turkmenia only by the middle of the 11th/17th century. The Ersarî and one part of the Yomut began to become sedentary farmers by the end of that century, as did the Čavuldur (Čawdor [*q.v.*]) and Teke from the beginning of the 12th/18th century onwards (Bregel 1981, 32-6).

The decline of the Khanate of Khīwa from the early 12th/18th century permitted to the Türkmen increased political interference in Khʷarazm. Under the Ḳungrāt [*q.v.*] dynasty, established in 1218/1804, the campaigns against various Türkmen tribes became one of the constants of Khīwan politics. Temporarily subdued militarily, or often out of sheer need for victuals which were only to be had in the sedentary areas, the Türkmen were forced to send auxiliary troops to participate in Khīwa's campaigns against the rival Bukhāran emīrate. Continuous raids into the neighbouring Persian provinces and Persian punitive expeditions into Türkmen territory exhausted both sides. Nevertheless, the tribes were able to preserve a certain amount of autonomy. After fighting victoriously with Khīwan and Persian armies between 1855 and 1861, they enjoyed for a short while independence. In the course of its colonial expansion into Central Asia, Russia first conquered Bukhārā, Khīwa, Khoḳand [*q.v.*] and the eastern coast of the Caspian sea (1281-93/1865-76). The Türkmen, however, offered strong resistance for several years. In 1289/1881 the Russians stormed the fortress of Göktepe [*q.v.*] and in 1302/1884 they occupied Marw [*q.v.*]. From 1897-1917, "Transcaspia" was administered as part of the governorate-general of Turkestan (a good overview of these events is given by Yu. Bregel in *EIr*, art. *Central Asia*. vii, in vol. V, 193-203).

While in the 13th/19th century the three Uzbek khanates Bukhārā, Khīwa and Khoḳand turned into despotic monarchies, with the Uzbek military caste adopting a more and more sedentary character, the social structure of the Türkmen tribes remained largely tribal. The authority of their elders (*aḳ saḳal*) rested not on dynastic power but on personal qualification (R. Meserve, *A description of the position of Turkmen tribal leaders according to 19th century Western travellers*, in *Altaica Berolinensia*, ed. B. Kellner-Heinkele, Wiesbaden 1993, 139-48; for an overview of the tribal composition and a non-conclusive estimate of population numbers for the 19th century on the basis of Western sources, see the art. *Türkmenler* by M. Saray in *İA*). However, the continuous process of breaking-up and reshaping of tribes (*uruk*) and subtribes (*oymak*) between the 17th and 19th centuries has not been sufficiently studied, although source materials are not lacking. The major chronicles for 13th/19th century Khīwa, e.g. the *Firdaws al-iḳbāl* and its continuations, by Mu'nis (1192-1244/1778-1829 [*q.v.*]) and Āgahī (1224-91/1809-74 [*q.v.* in Suppl.]) contain large sections on the interrelationship between Khīwa and the neighbouring tribes (*Firdaws al-iḳbāl*, ed. Yu. Bregel, Leiden, etc. 1988; sections of the continuations tr. into Russian in *Materialî po istorii Turkmen i Turkmenii*, ii ed. V.V. Struve *et alii*, Moscow-Leningrad 1938). An example of how detailed a result can be achieved by using indigenous chronicles and archival documents, in addition to travel, diplomatic and military reports (particularly Russian), is given by Yu. Bregel' in his *Khorezmskie Turkmenî v XIX veke*, Moscow 1961.

3. Modern period.

Republic of Turkmenistan

In 1926 the Teke and Yomut formed more than 50% of the total Türkmen population (Bregel 1981, 35). Bregel puts forward a cautious estimate of population numbers for the various tribes in the 1920s (1981, 12-17). In 1989 the Türkmen constituted 72% of a population of 4.1 million inhabitants (R. Götz-U. Halbach, *Politisches Lexikon GUS*[3], 1996, 332 with further references to the most recent developments). The Republic of Turkmenistān [*q.v.*], founded in 1991, is the first independent state of the Central Asian Türkmen. It was established within the borders of the Turkmenskaya SSR, founded by the Soviet régime in 1925. Only during the Soviet period did a sense of national identity begin to emerge alongside tribal and local loyalties. Smaller communities of Türkmen are also to be found in the other Central Asian republics, particularly in Uzbekistan (cf. M. Durdîev and S. Kadîrov, *Dunyädäki Turkmenler*, Ashgabat 1991, 56-7).

Iran

The contemporary Türkmen population was estimated at several hundreds of thousands of *ca.* 2% of a population of 26.3 millions in 1967-9. Most of them are agriculturists settled close to the Iran-Turkmenistan border. They are predominantly the descendants of the Yomut and Göklen, related to the important tribal confederations of the southern Turkmenian plateau (Planhol 1993, 553-5).

Afghānistān

In the 1920s and 1930s, thousands of Türkmen immigrated into Afghānistān to avoid Sovietisation and collectivisation. Settling in the northernmost rural areas along the Soviet-Afghan border, they contributed an important new factor to Afghan economy as semi-nomadic karakul breeders and as carpet weavers. After 1978, the new régime recognised the languages of the larger minorities, among them the Türkmen, conceding publication and broadcasting in these languages. The Türkmen are considered the second largest group among the various Turkic ethnic groups (estimated at about 12% of a total population of *ca.* 14 millions in 1979) after the Uzbeks (E. Grötzbach, *Afghanistan*, Darmstadt 1990, 68, 73-5, 118/9; Planhol 1993, 596, 602).

Turkey

There are no estimates available on the number of Türkmen in the Republic of Turkey, since they speak Turkish. There are Sunnī Muslim and Alevi Türkmen. Among the Sunnīs, the Avşar, Çepni [*q.vv.*], Bekdik and Hotamış seem to be the more important groups. They are widespread in western Anatolia (Afyonkarahisar) and central Anatolia (Kayseri, Sivas, Konya, Niğde, Yozgat), and consider themselves as descendants of Oghuz Khān. They are endogamous and patrilinear. Among some Alevi Türkmen, group identity is rather based on religion than on common descent and origin in Central Asia. Again, the Çepni

are listed among them, the Sıraç, Barak, Nalcı and Tahtacı, but also tribal names derived from place names, like the Adalılar, Üsküdarlı. They are widespread in western Anatolia (Balıkesir, Manisa, İzmir, Muğla), but also to be found in the Gaziantep region. In the 1950s and 1980s, Türkmen families from Central Asia and Afghānistān emigrated to Turkey (see P.A. Andrews, *Ethnic groups in the Republic of Turkey*, Wiesbaden 1989, 63-8, 265-95, 593, with further references).

Syria and Lebanon

The descendants of the Türkmen tribes that moved into the Fertile Crescent beginning with the 5th/11th century are well-documented in the historical sources down to the 20th century. Although the majority of the large confederations of eastern Anatolia that had had their winter pastures since mediaeval times in the north of the Syrian desert (al-Djazīra) had been resettled in the 12th/18th century by the Ottoman authorities to western and southwestern Anatolia (Planhol 1968, 235-40), European travellers in Greater Syria in the 19th century frequently report encounters with Türkmen. Areas with a compact Türkmen population or a strong minority existed in 1967, particularly south of the Turkish-Syrian border around Aʿzaz, Çoban Bey and Baer Bassit, and, as stock breeders, south of Kunaitra until 1967 (E. Wirth, *Syrien*, Darmstadt 1971, 179, 401, 417).

Next to nothing is known about Lebanon's Türkmen inhabitants. However, in 1994 the ethnologist A. Nippa visited a Türkmen settlement near Baʿlabakk. This community calls itself *ḳabīlat Suʿaydiyyīn* and preserves a narrative of its origin that relates it vaguely to the Saldjūḳs and Ottomans. They speak a Turkish idiom. Before the Syrian-Lebanese border was drawn in 1948 they circulated freely between the Biḳāʿ and the Aleppo, Ḥamāt, Ḥims and Palmyra regions, where they had relatives. When the German photographer Hermann Burchardt visited the Türkmen of Baʿlabakk between 1893 and 1903, they were still nomads (A. Nippa, *Lesen in alten Photographien aus Baalbek*, Zürich [1996], 146-89).

ʿIrāḳ

Like Syria, modern ʿIrāḳ has a Türkmen minority that descends partly from the mediaeval Türkmen invaders, the northern Mesopotamian basin, over centuries serving as the winter pastures for the eastern Anatolian confederations. Today's Türkmen settlements are to be found in the area with a Kurdish majority south of Kirkūk, Irbil and Mawṣil respectively. Population numbers are difficult to assess, since political interests are particularly complicated in regard to this area. According to official government statistics, Türkmen are estimated at somewhat less than 2% of a population of *ca.* 16.3 millions (1987). They speak a Turkish idiom, but are believed to be no longer tribally organised (see *Irak: a country study*, 'Washington D.C. 1990, 82, 85). Planhol (1993, 281, 766) mentions a Turkish estimate of 1.5 millions (1987) and an English one of 75,000 (1937).

Bibliography: There is no comprehensive work on the past and present of the Türkmen. Corresponding to the subject, the bibliography is extremely scattered. Apart from the references given in the arts. referred to above and in the text, only a few basic works can be mentioned here: Yu. Bregel, *Bibliography of Islamic Central Asia*, i-iii, Bloomington, Ind. 1995; a number of arts. in the recent *EIr* (1986-) are more comprehensive than those in *EI*; for the most recent bibliographies of the Türkmen *beylik*s in Anatolia, see *Türkiye Diyanet Vakfi İslam Ansiklopedisi* (1988-); still a valuable outline of the history of the Central Asian Türkmen is W. Barthold, *Four studies on the history of Central Asia*, iii, Leiden 1962, 73-170, *A history of the Turkman People*; X. de Planhol, *Les fondements géographiques de l'histoire de l'Islam*, Paris 1968; P.B. Golden, *An introduction to the history of the Turkic peoples*, Wiesbaden 1992; H.R. Roemer, *Persien auf dem Weg in die Neuzeit*, Beirut 1989; Yu. Bregel, *Nomadic and sedentary elements among the Turkmens*, in *CAJ*, xxv (1981), 5-37 (important critique of Soviet field research); Ebulgazi Bahadır Han, *Şecere-i Terākime*, ed. and Turkish tr. by Z.K. Ölmez, Ankara 1996; de Planhol, *Les nations du Prophète*, Paris 1993.

(Barbara Kellner-Heinkele)

TÜRKMEN ČAY (İ), conventionally Turkomanchai, a village in the Persian province of Ādharbāydjān, famed as the site for the treaty which ended the Russo-Persian War of 1826-7.

The modern village of Turkamān (lat. 37° 35' N., long. 47°, 42' E.) is on the Tabrīz-Miyāna main road 40 km/25 miles to the west of Miyāna. In the 8th/14th century, Mustawfī calls the village Turkmān Kandī and says that it was once a town (*Nuzha*, 183, tr. 174). A few decades later, Clavijo calls it *Tucelar* and *Tunglar* (evidently a corruption of Türk-lär) and says that it is inhabited by Turkmens (*Travels*, ed. Sreznevski, St. Petersburg 1881, 172, 354).

The Russo-Persian peace treaty was signed there on 10/22 February 1828, from a position of Russian strength, the Russians having occupied the provincial capital Tabrīz; amongst those present at the negotiations as observers were British officers.

This diplomatic document consisted of two parts. 1. By virtue of the political treaty, which was to take the place of the Gulistān treaty of 1813, Russia annexed the khānates of Eriwān and Nakhičewān and received from Persia a contribution of 5,000,000 *tūmāns* = 20,000,000 roubles, but this was later reduced. 2. A special agreement fixed at 5% *ad valorem* the customs duties between the two countries and regulated the personal status of Russian subjects; in criminal cases, they were to be tried by Russian courts, civil cases concerning both nationalities were dealt with by Russo-Persian tribunals with the participation of the Russian consular representatives, etc. This particular agreement of 1828 is the historical origin of the Persian capitulations. By the most favoured nation clause, all the states of Europe in time secured similar rights. On its accession to power in 1917 the Soviet government renounced *sua sponte* all the old political and judicial privileges in Persia and this renunciation was sealed by the Persian-Soviet treaty of February 28, 1921. All foreign capitulations in Persia were eventually abolished by Riḍā Shāh in 1927-8 [see IMTIYĀZĀT. iii].

The Treaty of Türkmen Čay set the tone for Russo-Persian relations over the next 90 years, and it enshrined the new unequal status of the two powers. Persia lost further territory since the 1813 treaty and had to pay what was, for a country with a primitive economy, an enormous indemnity. The commercial section laid down the basis for Russian commercial penetration of northern Persia, so that Ādharbāydjān became the corridor for a flood of Russian imports, creating already in the 1830s and 1840s a trade imbalance heavily in Russia's favour (cf. Minorsky, in *BSOS*, xi [1943-6], 878-80; M. Entner, *Russo-Persian commercial relations, 1828-1914*, Gainesville 1965).

Bibliography: Türkmen Čay is mentioned by all the travellers who have gone from Tabrīz to Ḳazwīn, cf. Hommaire de Hell, *Voyage*, Paris 1854-60, iii,

83-4 (the village has 200 houses) and the atlas, pl. lvi (room where the treaty was signed); Brugsch, *Reise*, Leipzig 1862-4, i, 181; Lycklama a Nijeholt, *Voyage*, ii, 85; A.H. Schindler, *Reisen*, in *Zeitschr. Gesell. Erdk.*, 1883, 333 (100 houses, altitude 5,285 feet).
The text of the treaty of 1828 in F. Martens, *Nouveau recueil des traités*, vii/2 (1830), 564-72; Ṣanīʿ al-Dawla, *Mirʾāt al-buldān*, i, 410-18; Yuzefovič, *Dogovorî Rossii s vostokom*, St. Petersburg 1869, 214-7; Hertslet, *Treaties concluded between Great Britain and Persia*, etc., London 1891. (V. MINORSKY-[C.E. BOSWORTH])

TURKMENISTAN, a former Soviet republic in the southwestern part of Central Asia, now (since 1991) the Republic of Turkmenistan (Turkmenistan Respublikası).

It possesses an area of 488,100 km², and has a total of 3,736 km of land boundaries with Uzbekistan (1,621 km), Iran (992 km), Afghānistān (744 km), Kazakhstan (379 km), and 1,768 km sea boundaries with the Caspian Sea. The Ḳara Ḳum desert [*q.v.*] takes 90% of the total area. The latest official census of 1989 in the Soviet Union gave a population figure of 3,534,000 for the Turkmen SSR, whereas an early 1996 estimate suggests a population of 4,075,316 for Turkmenistan. The native Turkmen make up 77% of the total population, which includes Uzbeks (9.2%), Russians (6-7%), Kazakh (2%), Ukrainians (0.5%), and other ethnic groups of Tatars, Armenians, Azerbaijanis, Balūč (0.8%). The capital city is Ashgabat (the former ʿAshḳābād [*q.v.*]) with a population of 544,700. Other major cities are Dashhawuz, Mary (the former Marw [see MARW AL-SHĀHIDJĀN]), Charjou, and Kerki. Turkmen has been the official language since 1990, and 95% of the population speak it; 38% are also Russian speakers. It is a secular state with a majority Sunnī Muslim population. The republic's currency is the manat, introduced on 1 November 1993. The territories of the present-day Turkmenistan were included partly in the Turkistan Autonomous Soviet Socialist Republic (1918-24), and partly in the two independent states of the Khorazmian People's Conciliar Republic (1920-4) and the Bukharan People's Conciliar Republic (1920-4). Soviet Russia, which had initially recognised the sovereignty of the republics of Khorazm and Bukhara, later succeeded in infiltrating the politics of these two states and removing the reformist national cadres, the so-called "Young Khivans" and "Young Bukharans", from power by 1923-4. On 19 September 1924, the names of these two states were changed from "People's Conciliar Republic" (Khalḳ Shūrālar Djumhūriyyeti) into "Socialist Soviet Republic" (Sotsialistik Sovet Respublikasî) by emphasising the change of state ideology to a Soviet-type socialism. On 27 October 1924, the national-state demarcation in Central Asia abolished the Turkestan ASSR, the Khorazmian SSR, and the Bukharan SSR and created five ethnic republics, one of which became the Turkmen SSR. An All-Turkmen Constituent Congress of Soviets was held in Ashgabat in February 1925 which led to the formation of the embryonic Turkmen Communist Party. The Turkmen SSR was formally incorporated into the USSR on 13 May 1925. Like other parts of Central Asia, Soviet Turkmenistan was also affected by the armed struggle of the nationalist Basmači bands [see BASMAČIS] through the 1920s and 1930s. The Soviet collectivisation policies were a disaster for the Turkmen, who formed traditionally a nomadic society. The forced settlement of nomads on collective farms (*sovkhoz, kolkhoz*) and other harsh Soviet policies resulted in open rebellion in 1928-32. Also, the Stalinist purges of 1937-8 took a heavy toll of the leading Turkmen party and government officials, intelligentsia and writers.

On 27 October 1991, the Turkmen Supreme Soviet (parliament) adopted a law on independence, declaring the Turkmen SSR as a sovereign and independent country, and changed its name to the Republic of Turkmenistan. This decision was based on a national referendum in the former Turkmen SSR, where 94.1% of the electorate voted for independence. On 21 December 1991 it joined other republics in the Commonwealth of Independent States (CIS). Turkmenistan became a member of the UN on 2 March 1992. The republic's new constitution was adopted by referendum on 8 May 1992. The current president of Turkmenistan is Saparmurad Niyazov "Turkmenbashi", who was the former first secretary of the Turkmenistan Communist Party and the chairman of the republic's Supreme Soviet since 7 January 1990. He was elected president on 27 October 1990 and re-elected on 21 June 1992. In December 1993, the new Turkmen parliament or Majlis voted to extend Niyazov's presidency until 2002 without another re-election. Turkmenistan's economy is highly dependent on the production and processing of energy resources and cotton. Rich in mineral resources, it has *ca.* 4 trillion m³ of non-associated gas and 1.1 billion tons of oil reserves. Despite its mineral wealth, the major constraints of Turkmenistan are the old Soviet-type socialist economy, lack of transportation links to outside markets, scarcity of water, and an authoritarian rule which has little tolerance for democratic opposition parties.

I. History.

1. The pre-Islamic period: the first Turks in history and their languages.

Towards 540, on the northern fringes of China, the nomadic empire of the Zhouan-zhouan (proto-Mongols?) dominated the lands of Mongolia and some neighbouring zones. Its Ḳaghan or ruler had as his vassals notably the chiefs of two important tribal confederations, those of the Türks, in the northern Altai, and the equally Turkish-speaking one of the "High Waggons" (Chinese Kao-kiu) in the Selenga basin (the northern part of central Mongolia).

After an abortive revolt by these last, the Türks rose up in their turn and their chief Bumîn crushed the Zhouan-zhouan and became Ḳaghan of Mongolia in 552. He died shortly afterwards and his son succeeded him under the name of Mugan Ḳaghan (553-72). For his part, Istämi, the younger son of Bumîn with the title of Yabgu (552-75), after having defeated the main forces of the Hephthalites (whose origins, for long discussed, probably sprang from a strong Eastern Iranian element [see HAYĀṬILA]), conquered from them Soghdia, allying with the Sāsānid Persian emperor [see SĀSĀNIDS] who received as his share Bactria (565). But Istämi was to invade it four years later, having assured himself, through an exchange of ambassadors, of the benevolent neutrality of the Byzantines, hostile to the Persians (against whom they were soon to wage a lengthy war, 572-91). Istämi's death interrupted this Graeco-Turkish alliance; his successor Tardu, having an impulsive and adventurous temperament, did not hesitate to march against the Byzantine cities of the Chersonese (576-90) from his own base. This same Tardu, profiting from the internal struggles amongst the Türks of Mongolia after Mugan Ḳaghan's death, tried to impose his domination from 600-1 onwards, but failed, had to flee and disappeared in 603. The rupture between the western and eastern Türks, which he had provoked by his incursions from 581 onwards, became definite. Moreover, the western Türks themselves split into rival khānates and groups. The eastern Türks of Mongolia were much weakened by deadly struggles within the ruling family, with ephemeral Ḳaghans perpetually being attacked by rivals. From 616 to 621, the Chinese empire was itself the prey of civil warfare. The Sui dynasty foundered after 618, and the T'ang which succeeded it was only able to restore order under its second emperor, T'ai-tsung (627-49). Meanwhile, profiting from the enfeeblement of China (which the internal dissensions of the Türks had fuelled), a new ruler, El Ḳaghan (620-30), managed to almost restore the former power of the eastern Türks, and even went on to threaten the Chinese capital Ch'ang-an. But T'ai-tsung, a great war leader, defeated him *ca.* 630 and took him prisoner.

Henceforth, for just over a half-century (630-82), the eastern Türks came under a vigilant Chinese protectorate. For their part, between 611 and 618 the western Türks had gradually recovered a certain unity. Thus their ruler Tong Yabgu extended his authority from the Altai to the Caspian and from the Aral Sea to the Hindū Kush, and his reign (618-30) was marked by successes in the Tarim [*q.v.*] basin. T'ai-tsung encouraged him as a counterweight to the eastern Türks. But once these were placed under Chinese tutelage, his policy changed. He allowed the Ḳarluḳ [*q.v.*], an important tribe nomadising between Lake Balkhash and the Tarbagatay, to rebel against Tong Yabgu, who was then murdered. Deprived of a supreme chief, the tribes of the western Türks formed themselves into two factions which fell into mortal strife with each other, and never again did they form a unified khānate. As for the eastern Türks, fifty years later they were to shake off the Chinese yoke and create once more an independent state.

Under the impulse from a great military leader, Tonyukuk, a resistance movement took shape, based on a popular revolt against the Sinicised Begs and profiting from the dispersal of the Chinese in Central Asia. Tonyukuk had himself enthroned, under the name of El-tärish Ḳaghan, a distant relative of El Ḳaghan (682). The new Ḳaghan soon unified the majority of the Türk tribes of Mongolia. Carrying on warfare by turns against the Chinese, the Tokuz Oghuz (a group of nine clans grouped together and arising out of the old Kao-kiu), the Ḳîrḳîz (the later Ḳîrghîz) of the upper Yenisei and various Mongol-speaking tribes, conducted raids almost every year into China from 683. On his death in 691, his younger brother succeeded him as Kapgan Ḳaghan, and benefited from the rivalry between the Dowager Empress Wu-Hou and the legitimate heir of the T'ang, while continuing the incursions into China. In the west, he fought with the factions of the western Türks and the Türgesh of the Ili, and in the east, the Bayarku, who killed him in 716.

During a palace revolution in which Kapgan Ḳaghan's family perished, Köl Tegin, the younger son of El-tärish Ḳaghan, ensured the enthronement of his elder brother Bilgä Ḳaghan, who, on the advice of his father-in-law Tonyukuk, sought peace with the Chinese, while still keeping up the pressure on them by raids. He secured peace in 721-2, and his relations with the T'ang emperor Hiuan-tsang became, and remained, cordial. When Bilgä Ḳaghan died from poison in 734, his son and successor Tängri Ḳaghan reigned for hardly seven years before he, too, was murdered. All the tribes subject to the Türks rebelled, and it was finally the Uyghur who reigned in Mongolia 744-840. These Uyghur, themselves divided into ten clans (On Uyghur), were the royal tribe of the Toḳuz Oghuz or Nine Oghuz (the Toghuzghuz of Arab historians) and not a separate people, as has long been believed.

With the collapse of the state of the eastern Türks, there came to an end the first period, known historically, of the organisation within the Turkish-speaking world of a pastoral and militarily nomadic society, one which had a tribal basis but was relatively centralised, with communal institutions grouped round a monarchical power whose ideology, in its final expression, was affirmed in an official, written language,

türk, this being an innovation. In effect, if there were from the second half of the 6th century some Turkish translations of texts from the Buddhist canon, for missionary purposes, none of these has survived; but if they did exist, their writing system must have been a cursive one (one perhaps adapted, as with classical Uyghur, from the Sogdian alphabet). However, the oldest Turkish texts which have come down to us are funerary inscriptions, on stone stelae and written in original, geometric characters invented for the phonology of Turkish. They comprise epitaphs of high officials or rulers, composed under the dynasty of El-tärish Ḳaghan. The most important, those of Tonyukuk, Köl Tegin and Bilgä Ḳaghan, allow us to establish the official doctrine of Turkish power at around 700.

The Ḳaghan is instituted by the Great Sky God, Tängri [see TAÑRÎ], and he is his emanation; his wife, the Katun, is the emanation of the Mother-Goddess Umay, partner of Tängri. This Supreme God, the inspirer of power, is also the God of Armies who decides victories. Other divinities are the sacred Earth and Water of the Türks, Iduk Yer-Sub, who intervene at the side of Tängri. The ideal dwelling-place of the Ḳaghan is the Sacred Mountain of Ötükän [see ÖTÜKEN], near the Orkhon river [*q.v.*], where he sacrifices to the divinities, but his encampment, which makes up the "court" (with the princes, Tegins, and high officials), moves around according to the seasons and the military operations, with appropriately fitted-out tents. In the various regions of the "empire", the tribes have as chiefs their hereditary lords, the Bey or Bäg, who owes allegiance to the Ḳaghan. But the famous Orkhon funerary inscriptions, mentioned above, contain, in the mouth of Bilgä Ḳaghan, strong reproaches against the submission of the Beys to the Chinese protecting power, and praise the "people" (*bodun*), who led a patriotic resistance to them by rallying to El-tärish Ḳaghan.

Despite its short period of existence (682-744), the "empire" as restored by this ruler played an outstanding role in fixing the ideology of power ("heavenly" Ḳaghan, cf. the Chinese Emperor "Son of Heaven"), the institutions and, above all, the official language ("Orkhon Turkish") of the Turkish-speaking states. Thus the Uyghur, when they achieved power over the Türks of Mongolia, retained their titulature, organisation and written language, which became the *Uygur Türk tili*, with its epigraphic writing system. When they were chased out by the Ḳîrḳîz in 840, they would go on to found, in what was to become Eastern Turkestan, a new "empire", urbanised and largely sedentarised, and would retain this Türk language in their manuscripts (most of them in the cursive script of Sogdian origin), with Persian, Sogdian, Syriac, Sanskrit or Chinese connections depending on the religions (Manichaeism, Nestorian Christianity and, above all, Buddhism) which they were to adopt. It would be the same, with numerous borrowings from Arabic and Persian to add to the Türk-Uyghur vocabulary, amongst the various Turkish-speaking peoples of Central Asia who, from *ca.* 950 onwards, converted to Islam in increasing numbers. Finally, most of them, identifying themselves from the starting-point of their written language, would be called or would call themselves Türk. This was to be the case e.g. in the first Turkish-speaking Islamic-led state, that of the Ḳarakhānids [see ILEK-KHĀNS]. Thus the name which originally denoted only a confederation of tribes in the Altai became extended to a whole linguistic group under the influence of the written language of the last eastern Türk dynasty.

To this linguistic grouping there belonged—as well as those elements of the Toḳuz Oghuz who left with the Uyghur, after the Ḳîrḳîz invasion, towards the Ti'en Shan and the Tarim basin (or, in lesser numbers, towards Kansu [*q.v.*])—other Oghuz who set out westwards across the Inner Asian steppes, became Islamicised and became the nucleus of the Saldjūḳ and then Ottoman empires. These linguistic ancestors of the Türkmens, the Turks of Ādharbāydjān and the Turks of Turkey, did not feel the influence of the phonologically conservative Türk-Uyghur literary language, so that their own language evolved separately and thus became differentiated from Ḳarakhānid Turkish and its descendant Čaghatay, the common literary language of Turkish-speaking Muslims of Central Asia. It is from Oghuz Turkish that Ottoman and the three modern written languages of Turkey, Ādharbāydjān and Turkmenistan derive, though from an Oghuz Turkish which has not escaped some influence from Orkhon Turkish.

The case of Ḳîrghîz (ancient Ḳîrḳîz) is, at first sight, enigmatic. On their funerary monuments carved between the 8th and 10th centuries, the Ḳîrḳîz of the upper Yenisei have left behind inscriptions in the same language, apart from a few minor details, as that of the eastern Türks and written in an alphabet very like their own, except for a small number of signs. One might therefore conclude that the language of the Ḳîrḳîz was at that time hardly different from that of the Türks. Yet the Ḳîrḳîz spoken language today presents many individual peculiarities, part of them to be found in Kazakh and the living languages which should be connected with the Kuman (Comans) and Ḳîpčak (two names for a single Turkish-speaking people, originally from the Irtysh-Obi region in south-western Siberia, who in the 11th century invaded the European steppes from the Volga to the Danube [see ḲANGHLÎ; ḲÎPČAḲ; ḲUMĀN]). Since these same peculiarities are to be found amongst the Tatars [*q.v.*], the Mongols of Čingiz Khān's empire who became Turkish-speaking, one is led to think that they stem from a relatively late influence from the phonology of Mongol consequent upon the great Mongol expansion of the 13th-14th centuries.

When the conversion to Islam of the Ḳarakhānids, two or three centuries earlier, gave birth to the first Muslim Turkish literature, its mode of expression, the direct ancestor of Čaghatay, was an evolved form of classical Uyghur (written in either the Uyghur or Arabic script), whence, ultimately, Orkhon Türk. Pre-Ottoman and Ottoman Turkish, stemming from a western Oghuz dialect of the 11th-13th centuries, also profited in the creation and the writing of its literary language from the Ḳarakhānid experience.

(L. BAZIN)

2. The tribal history of the Central Asian Turks.

The name *Türk* spread as a political designation during the period of Türk imperial hegemony to their subject Turkic and non-Turkic peoples. Subsequently, it was adopted as a generic ethnonym designating most if not all of the Turkic-speaking tribes in Central Asia by the Muslim peoples with whom they came into contact. The imperial era also provided a legacy of political and social organisation (with deep roots in pre-Türk Inner Asia) that in its Türk form became the common inheritance of the Turkic groupings of Central Asia.

In the aftermath of the Türk collapse, a number of Turkic tribal confederations appeared or re-emerged, many of which were or came to be associated with distinctive linguistic features. In Central Asia three units may be delineated: Southeastern/Turkī, Northwestern/Ḳîpčaḳ and Southwestern/Og͟huz. The Southeastern, which also predominated in the Uyg͟hur successor state (744-840) of the Türks in Inner Asia (and perhaps in the Ḳîrg͟hîz Ḳag͟hanate on the Yenisei which overran the Uyg͟hur realm in 840), was represented by the Ḳarluḳs [*q.v.*]. Formerly allies of the Uyg͟hurs, they had, *ca.* 745, migrated to the lands of the fading Western Türk/Türges͟h Ḳag͟hanate in Semireč'e/D̲j̲etisu. The Ḳarluḳ defection contributed to the Muslim victory at the Battle of the Talas/Aṭlak͟h (133/751) over China (Gibb, *Arab conquests*, 95-9; Beckwith, *Tibetan empire*, 136-42). As Chinese influence in Central Asia receded, due to civil war (755), the Ḳarluḳs became dominant in the Western Türk lands (766), controlling the region south of Lake Balk͟has͟h and extending across Îssîḳ Köl, the Ili, Ču and Talas rivers. Their original core appears to have consisted of three tribes (the *Üč Ḳarluḳ*): the Bulaḳ, the *Tas͟hlîg͟h and the Čigil. The latter, in turn, appear to have been a numerically large subconfederation led by a chieftain bearing the title *tügsin* (*Mud̲j̲mal al-tawārīk͟h*, ed. Bahār, 421; Gardīzī/Bart'old, Pers. 31/51) noted by Maḥmūd al-Kās͟hg͟harī (tr. Dankoff, i, 329-330) as that of a "commoner in the third rank from the king"). Like many of the other Ḳarluḳ tribes, they were shamanists, but had Christian (most probably Nestorian) elements among them. The Tuk͟hsi tribal grouping that had previously nomadised in the region of the Western Türk capital at Suyāb had also been absorbed by the Ḳarluḳs. The *Ḥudūd al-ʿālam*, ed. Sotoodeh, 81, tr. Minorsky, 97, describes the latter as primarily engaged in pastoral nomadism, "near to civilized people, pleasant tempered and sociable". After the collapse of the Uyg͟hur Ḳag͟hanate, the Ḳarluḳs may have put forward a claim to the pan-Turkic imperium. Ibn al-Faḳīh, Mas͟hhad ms., ed. Sezgin, 340, says that "the kingdom is with them" while al-Masʿūdī, *Murūd̲j̲*, i, 155, reports that "they had political power and from them came the Ḳag͟han of Ḳag͟hans". Closely associated with the Ḳarluḳs, to their east in the Lake Balk͟has͟h and Ala Köl region, were the Yag͟hma, a powerful and numerous tribal grouping ruled by the Bug͟hra K͟hān (*Mud̲j̲mal al-tawārīk͟h*, 421), whose royal house descended from the Toḳuz Og͟huz [see TOG͟HUZG͟HUZ]. Both the Ḳarluḳs and Yag͟hma played a role in the formation of the Ḳarak͟hānid state [see ILEK K͟HĀNS] which took shape in the latter half of the 10th century and is associated with further Turkic tribal movements westward, touched off by the Ḳîrg͟hîz and then Ḳitan takeover of Mongolia (early 10th century) and the large-scale conversions of Turkic tribes to Islam.

In the Ḳarak͟hānid realm, the resources of the Ḳarluḳ, Čigil, Yag͟hma, Tuk͟hsi and other nomadic unions were now formed into a powerful state extending from Eastern to Western Turkistan which grafted its traditional Turkic political superstructure on the already existing state institutions of Iranian (Sāmānid) Central Asia. The advance of Islam under the Ḳarak͟hānids was resisted by a number of Turkic tribal groups: the Uyg͟hur statelets, the Yabāḳu and the Basmîl being most prominent among their foes. The latter two spoke non-Turkic languages as well as Turkic and were in the process of Turkicisation. Bekeč/G͟hāzī Arslan Tegin, one of the Ḳarak͟hānid leaders, is credited with defeating a much more powerful pagan Turko-nomadic army led by the Yabāḳu chieftain Böke Bud̲h̲rač (Kās͟hg͟harī/Dankoff, i, 83, 163, 340, 344, ii, 268, 330). This has been associated with the Ḳarak͟hānid victory, recorded under the year 408/1017-18, over a force of "300,000 tents of the tribes of the Turks" coming from "al-Ṣīn," among whom were the K͟haṭāy (Ḳitan, Chin. Ch'itan) "who (subsequently) ruled over Transoxiana" (Ibn al-At̲h̲īr, ix, 297-8; Dankoff, *Three Turkic verses*, 157). It may also be related to the disturbances caused by the Ḳūn and other migrating tribes from Inner Asia (see below). A generation later, this same source reports that in Ṣafar 435/Sept.-Oct. 1043, "10,000 tents of the infidel Turks who used to make nocturnal attacks on the Muslim towns in the region of Balasag͟hun and Kās͟hg͟har . . . embraced Islam" (Ibn al-At̲h̲īr, ix, 520).

The other major tribal conglomeration that formed on the borders of the Central Asian Islamic world was that of the Og͟huz [see G͟HUZZ] whose speech, in al-Kās͟hg͟harī's day, was already viewed as different from "K͟hāḳānī" (i.e. Ḳarak͟hānid/Southeastern Turkic, Kās͟hg͟harī/Dankoff, i, 75-6). According to Ibn al-At̲h̲īr, xi, 178, the Og͟huz, the western neighbours of the Ḳarluḳs, arrived in the Syr Darya region "from the most distant parts of the Turks" during the caliphate of al-Mahdī (158-69/775-85). Here, they established a polity of some 22-25 tribes or clans under their *yabg͟hu* [*q.v.*] (an ancient Inner Asian title of Tok͟harian or Iranian origin, indicating a high status in the hierarchy of tribal confederations of the Türk Empire), his deputy (*k͟halīfa*) the *kül erkin*, and numerous "kings" (*mulūk*) and chieftains (*ruʾasāʾ*, see Ibn Faḍlān, ed. Dahān, 91, 96, 97, 101, 103). Although the Yabg͟hu was the paramount political figure, the Og͟huz union never moved beyond the bounds of an advanced tribal confederation. Ras͟hīd al-Dīn, ed. Romaskevič *et al.*, i, 80-1, 119-24, ed. Raws͟han and Mūsāwī, i, 42, 58-61, reports that they were actually divided into two subconfederations, the senior *Bozoḳ* consisting of the Ḳayî, Bayat, Alḳa Evli, Ḳara Evli, Yazîr, Döger, Dudurg͟ha, Yaparlî, Avs͟har, Ḳîzîḳ, Begdili and Ḳarḳîn groupings, and the junior *Üčoḳ* composed of the Bayundur, Pečene, Čavuldur, Čepni, Yigdir, Bügdüz, Yîwa and Ḳînîḳ. Al-Kās͟hg͟harī/Dankoff, i, 101-2, has a slightly different listing. The Ḳînîḳ, from whom the Sald̲j̲ūḳs [*q.v.*] derived, are noted first, with the Bayundur (from whom the ruling clan of the Aḳ Ḳoyunlu [*q.v.*] later claimed descent) and Ḳayî (from whom the Ottomans derived their origins) just below them.

The Og͟huz displaced the Pečenegs [*q.v.*] westward, incorporating elements of that tribal union in a series of wars in which they secured the Volga-Ural, Syr

Darya and Khʷārazmian steppes. Their aggressiveness was soon felt in Khazaria and the neighbouring Islamic territories. In the early 10th century, the Khazars were able to gain their support against the Alans. In 965, however, they were allies of the Rus' in the devastating assaults that ended Khazar hegemony in the Volga-Caspian-Pontic steppes. The *Ḥudūd*, ed. Sotoodeh, 86, tr. Minorsky, 100, depicts them as typical nomadic raiders "with arrogant faces". Muslim merchants, as we know from Ibn Faḍlān, however, were soon making their way to them and establishing commercial relationships as well as ties of reciprocal hospitality. The *Ḥudūd* says that "among them merchants are very numerous". The Khʷārazmian city of Kāth [*q.v.*], "the emporium of the Turks", became particularly associated with trade with the Oghuz. With the further growth of trade, Oghuz towns such as Yangï Kent (Pers. Dih-i naw, Arab. al-Madīna al-Djadīda/al-Ḳarya al-Ḥadītha), the winter quarters of the Yabghu, Sabrān, Sïghnāḳ [*q.v.*] and others begin to develop along with groupings of sedentarised Oghuz (Ibn Ḥawḳal, ed. Kramers, ii, 488; *Ḥudūd*, ed. Sotoodeh, 118, 122, 123, tr. Minorsky, 119, 121, 122; al-Masʿūdī, *Murūdj*, ed. Pellat, i, 116; Kāshgharī/Dankoff, i, 329, 333, 352, 362). This close relationship with Iranian Central Asia led to a significant Persian lexical influence on the Oghuz vocabulary (Kāshgharī/Dankoff, i, 51). This interaction entailed both peaceful, commerce-oriented relations and predatory raiding, the Khʷārazmians being compelled to engage in annual winter campaigns to drive back the Oghuz from their territories (al-Bīrūnī, *Āthār*, ed. Sachau, 236). The Oghuz enjoyed little peace within their own union. Islam had begun to penetrate various tribal groupings and soon became a source or pretext for internecine strife. Similar processes were occurring among the Ḳarluḳs. Those Oghuz and Ḳarluḳs who embraced Islam were called *Türkmen* (Kāshgharī/Dankoff, i, 353, ii, 362; Bīrūnī, *K. al-Djamāhir*, 205; Marwazī/Minorsky, 18/29). Why this term, which later became an ethnonym associated in particular with the Oghuz, developed this specific Muslim coloration is unclear. By the late 10th century, as the Oghuz union underwent further fragmentation aided, no doubt, by the economic and cultural impact of the Irano-Muslim cities on the Turkic tribes, Selčük (usually transcribed in Arabic as *sldjwk*), son of Toḳaḳ Temir Yalïgh, the *sü bashï* (army commander) of the Oghuz Yabghu (or Khazar Ḳaghan) converted to Islam and became a "fighter for the faith" against his still pagan fellow-tribesmen. Selčük's followers were soon caught up in the larger contests for power between the weakening Sāmānid state, the Ghaznawid *ghulām* offshoot of the latter and the now emerging Ḳarakhānids. This was the background to the rise of the Saldjūḳ empire [see SALDJŪḲIDS].

Somewhat less well known was the Northwestern Turkic-speaking Kimek confederation, a union of Turkic, Mongolic and perhaps other tribal elements located in Western Siberia, north of the Ḳarluḳ and Oghuz unions [see KIMÄK]. This name does not appear in the Türk-era Orkhon inscriptions. While some Muslim sources refer to their ruler as "king", the *Ḥudūd* (ed. Sotoodeh, 85, tr. Minorsky, 99-100) accords him the imperial title of Ḳaghan and suggests a governmental structure beyond that of a tribal union ("he has eleven lieutenants . . . and the fiefs (*aʿmāl*) are given by heritage to the children of the lieutenants"). The Kimeks were an important conduit in the fur trade with the Islamic lands and their more developed polity may derive from their commercial prominence. Among the tribes of the Kimek union were the Ḳïpčaḳs [*q.v.* and below] who are mentioned in a fragment of a mid-8th century Uyghur runic inscription (Moyun Čur/Selenge or Shine Usu, N4). It has been suggested that they are to be identified with the *Sir* people noted in the Orkhon inscriptions and Chinese sources (Klyashtornïy, *Kïpčaki*, 153-64). By the 10th century, if not earlier, the Ḳïpčaḳ subconfederation was located in the western sections of the Kimek state, in the Volga-Ural region. The Kimek appear to have remained largely pagan, although some "Madjūsī", Manichaean and perhaps Buddhist influences are noted (al-Idrīsī, 718-19; Kumekov, *Gosudarstvo*, 109-12; Arslanova and Klyashtornïy, 306-15).

In the western steppe (Volga-Ural and then Ponto-Caspian) zone were the camps of the Pečeneg union [*q.v.* and below].

In the course of the 11th century, this Turkic tribal world underwent considerable change. The Ḳarluḳ-Yaghma-based Ḳarakhānid and Oghuz-derived Saldjūḳ states had emerged, and the Kimek-dominated confederation had given way to the now amalgamated Ḳun (Ḳuman)-Ḳïpčaḳ confederation. The latter appear most frequently under the name Ḳïpčaḳ in the Islamic sources. In Western Eurasia they were better known as the Ḳumans (Cumans/Comans, or by various loan-translations, e.g. Rus. *Polovtsï*, Arm. *khartesh* "pale, sallow" and in the region around Khʷārazm as the Ḳanglï [*q.v.*]. The Ḳïpčaḳ union, which expanded from its core lands in Western Siberia to encompass the steppelands from Khʷārazm to the lower Danube, was politically much weaker than its predecessor and, while remaining a source of pressure on its steppe and sedentary neighbours (Rus', the Khʷārazmshāh state), never created a state.

By the eve of the Mongol conquests, all the Turkic states and tribal confederations of Central Asia were in decline and fragmenting. The Činggisid invasions of the early 13th century caused the migration of still more Oghuz groupings to the Near and Middle East and destroyed the traditional tribal and confederational patterns that had been inherited from the Türk era. The new imperial dispensation required a Činggisid ruler and personally dependent armies. The Mongol rulers deliberately broke up the large confederations, interrupting the process of ethnic consolidation and scattering the tribal armies according to their empire-wide needs. Thus the tribes of the Ḳarakhānid state (e.g. the Ḳarluḳs) briefly re-appear in locally prominent roles only to be eventually dispersed over the Činggisid holdings. Ḳïpčaḳs saw service in China and Inner Asia (and in the Mamlūk realm) and Uyghurs, with their literary skills, were to be found on the Volga and in the Near East. The Ḳïpčaḳs, most of whom remained in their steppe homelands, were, over time, re-organised into the armies of the Ulus of Djoči. Their language became the lingua franca of Činggisid Western Eurasia, much as it had been before.

As Činggisid rule weakened in the 14th century, the Turkic nomads became retribalised. The older tribal or confederational names (such as Ḳïpčaḳ) resurfaced as clan, sub-tribe or tribal component names, while newer names, often based on that of a charismatic leader, became the political and subsequently ethnic names of these groups, e.g. the Özbeks (< Özbek, r. 712-42/1312-41, the Mongol ruler who assured the victory of Islam among the Turkic and Mongol nomads of the Ulus of Djoči), Noghays (< Noghay, d. 699/1299, the famous political figure of Western Eurasia), etc. The process was furthered by Aḳsaḳ Temür/

Tīmūr-i Lang, who savaged the Djočid realm while attempting to create a personal army out of the fractious tribal groupings and denomadicising former tribesmen of the Ulus of Čaghatay. Thus tribes or clans bearing the names Ḳîpčaḳ and Ḳanglî can be found among the Özbeks, Ḳazaḳs, Ḳaraḳalpaḳs, Ḳîrghîz, Bashḳorts, Altay Turks, Noghays and Crimean Tatars. The different Ḳîpčaḳ armies, combined now with Eastern Turkic and Mongol (Djalayir, Ḳongḳirad, Manghid, etc.) elements have produced the Central Asian Turkic peoples (noted above) of today, as well as the Ḳaračay-Balḳars and Ḳumuḳs of the North Caucasus.

3. The Turks of Western Eurasia and Central Europe.

Although it is generally believed that the ancient homeland of the Turkic peoples was located in Southern Siberia and Mongolia, the first clear references to Turkic peoples are found in reports dealing with Western Eurasia. The expansion and then decline of the Hsiung-nu (*Hünnü), an Inner Asian people of still undetermined ethno-linguistic affiliations, touched off a series of migrations of tribes in the first and second centuries A.D. that appear to have brought Turkic-speaking tribes to Kazakhstan and the trans-Volga region, areas hitherto dominated by Iranian nomads. It was here that the peoples known as the Khiyōn in Sāsānid Persia and the Chionitae/Οὖννοι/Hunni (names probably connected to Hsiung-nu) of the Greek and Latin authors took form. Pressured by the rise of the Jou-jan (Asian Avar) state, *ca.* 350 they began to approach the Volga region and by 375 had crossed into the Caspian-Pontic steppe zone, subjugating a number of Iranian, Finno-Ugric, Germanic, Slavic and other peoples, including, perhaps, some Turkic groupings that had been driven westward before them and made their presence felt along the frontiers of Iran and Transcaucasia. The language of the European Huns and their relationship to the Asian Huns remain the subject of much debate. The Hunnic polity extending from the Pontic steppes into Pannonia reached the zenith of its power under Attila (d. 453), who raided but never seriously threatened the Eastern and Western Roman Empire. With his death, the Hunnic union quickly dissolved in a revolt of the subject peoples (454). In the aftermath of the Hunnic collapse we find our first firm data on Turkic peoples in this region. Priscus (ed. and tr. Blockley, ii, 352-5) reports the migration into the Pontic steppe zone and inauguration of diplomatic contacts with Constantinople, *ca.* 463, of the Oghur (= Common Turk. *oghuz*), Shara Oghur (Σαράγουροι) and On Oghur tribal groupings, who had been driven westward by the Sabirs who were, in turn, pushed to the Volga zone by the Asian Avars. These Oghuric tribes, speaking a form of Turkic distinct from the other Turkic languages and surviving today only in Čuvash, were a western grouping of the Ting-ling later called T'ieh-lê, a confederation, among whose eastern tribes were the Toḳuz Oghuz [see TOGHUZGHUZ]. By 480, the Bulghars (< Turk. *bulgha-* "to stir, confuse, disturb, produce disorder"), who would become the most prominent of the Oghuric peoples, were already being drawn into the Byzantine diplomatic web. They appear to have been closely related to the On Oghur, for 8th, 9th and 10th century Byzantine sources (cf. Nicephorus, ed. de Boor, 24; Theophanes, ed. de Boer, i, 356; Constantine Porphyrogenitus, *De thematibus*, ed. Pertusi, 85) link them. The later Balkan Bulghar ruling house would claim Attilid affiliations.

These and other Oghuric groupings were subjugated by the "European Avars", whose origins and relationship to the Inner Asian Avars/Jou-jan and Hephthalites (Arab. Hayṭal [see HAYĀṬILA] are unclear. They had arrived in the Pontic steppes *ca.* 557 in flight from the Türks, had by 568 established contact with Constantinople (Theoph. Sim., ed. de Boor, 257-8; Procopius, *De bello Goth.*, 84-95, 235-51; Agathias, ed. Keydall, 176-9, Menander, ed. and tr. Blockley, 42-5, 138-9) and were soon (567-8) forced to seek refuge, along with some of their Oghuric vassals, in Pannonia from the Türks, who extended their hegemony to Western Eurasia (Menander, ed. and tr. Blockley, 178-9). Avar predatory raiding combined with the steady Slavic pressure on the Byzantine Balkan holdings, leading, ultimately, to the Slavicisation of much of the region.

The Western branch of the Türk ḳaghanate established here by the *Yabghu Ḳaghan*, Ishtemi, brother of Bumîn, founder of the empire, after a short-lived alliance with Sāsānid Persia (leading to the crushing of the Hephthalites in 557), soon turned to Byzantium (568) as relations with Persia soured over commercial issues. Türk forces in Transcaucasia played an important role in Heraclius's victory over the Sāsānids in the Perso-Byzantine wars of 605-28. The Eastern Ḳaghanate, however, weakened by internecine strife, the revolt (582) of Tardu, Ishtemi's son, whose nearly successful bid for supreme rule was halted only by the revolt of the T'ieh-lê *ca.* 603, succumbed to T'ang China in 630. The Western ḳaghanate, itself splintering into rival factions (the Tu-lu and Nu-shih-pi), which formed the On Oḳ ("Ten Arrows") union, fell

to the T'ang in 659. This was the background for the emergence, *ca.* 650, of two rival successor ḳag͟hanates in Western Eurasia: the K͟hazar one [see K͟HAZAR], ruled by a dynasty of probable Western Türk (A-s͟hihna) origin, and the Bulg͟har one which, *ca.* 635, under the leadership of Ḳubrat and with Byzantine encouragement, appears to have freed itself from Avar overlordship. The K͟hazars won the contest for paramountcy, forcing the dispersal of the Bulg͟har tribes. One grouping, under Asparuk͟h, fled to the Balkans (*ca.* 679), founding there the Balkan Bulg͟har state. Others fled to Pannonia and Italy. Those tribes that remained came under K͟hazar rule, some of them subsequently migrating to the Middle Volga (8th-9th century) where they formed the Volga Bulg͟har state [see BULG͟HĀR]. The Balkan Bulg͟hars, in the course of the 8th century, were badly buffeted by internal disputes and warfare with Byzantium. They revived in the early 9th century and under Krum (d. 814), posed a serious threat to Constantinople. According to Ibn al-Nadīm (*Fihrist*, ed. Flügel, i, 111, tr. Dodge, i, 254), the caliph al-Ma'mūn sent a lengthy letter to the "Burg͟har" ruler explaining Islam to him. In 864, however, their Ḳag͟han, Boris (*r.* 853-88), caught up in the Byzantino-Frankish struggle to dominate Slavic Central Europe, was forced to convert to Orthodox Christianity. Thereafter, the Balkan Bulg͟hars underwent Slavicisation.

The K͟hazars created one of the greatest political units of Eurasia, dominating the north-south and east-west trade arteries from their capital, Atīl/Itil [see ATIL], on the lower Volga. Their political borders extended from the North Caucasian steppelands (where they had fought the Arabs to a standstill in the course of protracted warfare (642-737) for control of the Caucasus) to the Middle Volga and from Kiev to the K͟hʷārazmian steppes. From the latter region, a special corps of professional soldiers, the *Ors/Urus* (الارسية) was recruited, and the chief minister of the state was also a K͟hʷārazmian Muslim. Formed out of the westernmost groupings of the Western Türk tribal confederations (among whom were Common Turkic and Og͟huric elements), and including Iranian, Finno-Ugric, Palaeo-Caucasian and Slavic peoples, the K͟hazar ḳag͟hanate was ruled by a dual kingship, the senior figure of which, the *Ḳag͟han*, was a sacralised monarch. Open to a variety of religious influences, the ruling house and the K͟hazars *per se* converted to Judaism (Ibn Faḍlān, ed. Togan, 45/104; Ibn al-Faḳīh, 298). Ibn Rusta, 139, however, limits Judaisation to their "supreme chief" and members of the élite who "sympathise with his inclinations". Al-Mas'ūdī, *Murūd͟j*, ed. Pellat, i, 212, who places the conversion in the caliphate of Hārūn al-Ras͟hīd (170-93/786-809), also localises the Judaised element to the king, his entourage and "the K͟hazars of his tribe". Islam was particularly prominent in the K͟hazar cities and Orthodox Christianity had adherents in the Crimea and other Byzantine-influenced regions. Each religious community had its own judges, as did also the pagans (al-Mas'ūdī, *op. cit.*, i, 213; al-Iṣṭak͟hrī, 221).

K͟hazaria declined in the course of the 9th and 10th centuries, and in 965, its core lands in the Volga-Don region were overrun by the Normano-Slavic Rus' [see RŪS] in alliance with the Western Og͟huz.

The Volga Bulg͟hars, who had been vassals of the K͟hazars, adopted Islam in the early 10th century, leading to the dispatch of a caliphal mission of which Ibn Faḍlān [*q.v.*], a participant, has left us a remarkable account. Volga Bulg͟haria, a major link in the trade of Northern Europe with the Islamic world via K͟hʷārazm, developed a sophisticated and urban-centred Islamic culture, while ruling over a complex grouping of Og͟huric and other Turkic groupings, as well as Finno-Ugric peoples. According to Rus' tradition, they sent a mission to Rus' in an unsuccessful attempt to convert Volodimir I (980-1015) to Islam (*PSRL*, i, 840-85). Periodic clashes with Rus', usually over local commercial advantage, had by the early 13th century led to serious conflict which was halted only by the Mongol invasions. The Volga Bulg͟hars, after offering valiant resistance, became part of the D͟jočid Ulus. Under Činggisid rule, they were Ḳïpčaḳicised linguistically, becoming one of the core elements of the Volga Tatar people. They played an important role in the Islamisation of the D͟jočid realm and in the development of Islamic institutions there.

In the Pontic steppelands, the K͟hazars were displaced by the Pečeneg tribal union [see PEČENEGS] which never formed a state. The Pečenegs raided and traded with their neighbours (especially Rus') and occasionally served as a source of Byzantine pressure on the latter. In 1036, however, the Rus' soundly defeated them and the weakened Pečenegs, pressured by the Og͟huz, drifted off to the Danubian frontiers where they were largely concentrated by the 1050s. Here, they were in closer contact with the Hungarians whom they had evicted from the Pontic steppes in 895. Hungarian tradition places Pečenegs in Hungarian service as early as the latter half of the 10th century. Muslim authors (al-Mas'ūdī, *Murūd͟j*, i, 235; *Tanbīh*, 180; Ibn al-At͟hīr, ed. Beirut, i, 339, Marquart, *Streifzüge*, 64 ff.) note the Pečenegs and Hungarians as allies in 322/934 in an attack on the Balkans. There were Pečeneg settlements, often as border guards and light cavalry, in Hungary in the course of the 11th century. The migration of the Western Og͟huz to the lower Danube after 1060, defeated by the Ḳïpčaḳs and Rus' and ravaged by disease, produced more chaos in the region. Remnants of these Og͟huz, Pečenegs and other steppe peoples took service with the princes of Kiev, forming by the mid-12th century the grouping called *Černii klobutsi* in Russian. The Pečenegs, as their neighbours well knew, were often fickle allies. Thus in 1071, Pečeneg forces, which had frequently raided Imperial lands, helped to relieve the Hungarian siege of Byzantine Belgrad. But, in 1073, allied with the Og͟huz, they raided as far as Constantinople and in 1078 joined a Ḳuman/Ḳïpčaḳ attack on Adrianople. In 1087 they inflicted a nearly fatal defeat on the Byzantine Emperor Alexis Comnenus. The latter, however, in 1091, in conjunction with the Ḳïpčaḳs, broke their remaining military power at Levunion. Pečeneg elements took service with István II of Hungary (1116-31), who sought to use them to counterbalance his nobles. Toponyms of Pečeneg origin (e.g. *Besenyö* "Pečeneg") are to be found in many parts of Hungary.

The Ḳuman-Ḳïpčaḳ confederation which supplanted the Pečenegs and Western Og͟huz as masters of the K͟hʷārazmian-Volga-Danubian steppe zone engaged in a complicated pattern of relations with their sedentary neighbours that involved both predatory raiding, alliances (often cemented by marital ties) and professional, mercenary soldiering. Thus the increasingly fragmenting Rus' princely factions had Ḳïpčaḳ allies and foes in their internecine struggles. The decline of Rus', sometimes attributed to Ḳïpčaḳ depredations, however, was more the product of Rus' disunity. The K͟hʷārazms͟hāhs, although bound by marital ties to some of their ruling clans (al-Nasawī, ed. Houdas, i, 172), faced similar difficulties. The Georgian royal house, however, used its Ḳïpčaḳ kinsmen to fight off

the Sald̲j̲ūḳs, preserve their national independence and become a regional power. Frequently seen as raiders in the Balkans, Ḳîpčaḳ military forces played an important role in the creation of the Second Bulgarian empire (1188-1393). In short, they were able to integrate themselves into the regional political structure, exploiting the local weaknesses of often more powerful sedentary neighbours while retaining their independence. Although some groupings were, in time, converted to Islam (around K̲h^wārazm) or Christianity (from Rus', Byzantium, Georgia and Hungary), the majority of the Ḳîpčaḳs remained pagans in the pre-Mongol period.

The Mongol conquest of the Ḳîpčaḳs, completed in 1238-9, broke up the tribal union and scattered various elements throughout the Čing̲gisid world and beyond (see above, 2.). Some 17-20,000 Ḳîpčaḳ families, it is estimated, took refuge in Hungary whither, in 1239, under their chieftain Köten, they were invited by the crown seeking military reinforcements against the Mongols and domestic foes. Suspected of being Mongol spies (since their kinsmen were already under Čing̲gisid rule), they left Hungary on the eve of the Mongol invasion (spring, 1241), but were induced to return in 1246 by Béla IV and settled strategically around the country, especially in regions that had been devastated by the Mongols. The Hungarian kings attempted to use them as a counterbalance to the nobility. Ḳuman-Ḳîpčaḳ influence reached its zenith under Kun László ("László the Cuman", *r.* 1272-90), whose mother was a Ḳîpčaḳ. Under growing baronial and Church pressure, László was forced to begin the process of converting and sedentarising the pagan Ḳîpčaḳs. This led to a revolt which László, who had been dilatory in carrying out this policy, was compelled to suppress (1280). The "Cuman problem" largely subsided after his death, and by the mid-14th century they had been converted and were in the process of assimilation. During the Reformation, many Cumans became Calvinists.

Ḳîpčaḳs are associated with the origins of Rumanian statehood. In the 13th century, the Wallachian and Moldavian lands up to the Olt river were called "Cumania", and Ḳîpčaḳ-derived toponyms are common (see Lazarescu-Zobian, *Cumania*, 265-72). The 14th century Wallachian voevoda, Basaraba, founder of the Wallachian state, was of Cuman origin. Ḳîpčaḳs continued to play a significant role in the politics of the Second Bulgarian Empire. The Terterid (1280-1323) and Sis̲h̲manid (1323-98) dynasties which ruled Bulgaria until the Ottoman conquest were of Cuman origin. Pečeneg and Ḳîpčaḳ traces are also found in the toponymy of Bulgaria.

4. The Turks in the Sald̲j̲ūḳ and Ottoman periods.

For these in the Asiatic lands, see ALANYA; ANADOLU, iii; AS̲H̲RAF OG̲H̲ULLARÎ; ATABAK; AYDÎN-OG̲H̲LU; DĀNIS̲H̲MENDIDS; DEÑIZLI; DHU 'L-ḲADR; ERETNA; GERMIYĀN-OG̲H̲ULLARÎ; ḤAMĪD or ḤAMĪD OG̲H̲ULLARÎ; ILDEÑIZIDS; ISFENDIYĀR OG̲H̲LU; ḲARAMĀN-OG̲H̲ULLARÎ; ḲARASÎ; ḲUBRUS; MENGÜČEK; MENTES̲H̲E OG̲H̲ULLARÎ; MUʿĪN AL-DĪN SULAYMĀN PARWĀNA; ʿOT̲H̲MĀNLÎ; RAMAḌĀN OG̲H̲ULLARÎ; RŪM. 2; ṢĀḤIB ATĀ OG̲H̲ULLARÎ; SALD̲J̲ŪḲS; SALG̲H̲URIDS; SALTUḲ OG̲H̲ULLARÎ; ṢARŪK̲H̲ĀN; S̲H̲ĀH-I ARMAN; TEKE-OG̲H̲ULLARÎ.

For those in eastern and southeastern Europe, see ARNAWUTLUḲ; BALKAN; BOSNA; BULGARIA; DOBRUD̲J̲A; IḲRĪTIS̲H̲. Ottoman period; LIPḲA; MAḲADŪNYĀ; MŌRA; ṢIRB; TESALYA; DALMATIA, in Suppl.

5. The modern Republic of Turkey (*Türkiye Cumhuriyeti*).

The Republic of Turkey was proclaimed by the Great National Assembly (*Büyük Millet Med̲j̲lisi*) in Ankara on 29 October 1923. For almost seventy years (until 1991) it was the only fully sovereign Turkic state in the world. The republic was the product of a successful struggle for self-determination waged by the Society for the Defence of the National Rights of Anatolia and Rumelia (*Anāṭōlī Rūmīli Müdāfaʿa-i Ḥuḳūḳ-u Milliyye D̲j̲emʿiyyeti*) between November 1918 and August 1922. The latter's success was embodied in the Treaty of Lausanne of 24 July 1923, in which the victors of 1918 (and losers of 1922) recognised the complete independence of Turkey within the armistice lines of 30 October 1918 (with the exception of the oil-rich *wilāyet* or province of Mawṣil [*q.v.*], which was awarded to ʿIrāḳ in 1926 after arbitration by the League of Nations). The borders established at Lausanne have remained unchanged except for the addition of the province of Hatay, the former district of Alexandretta (İskenderun [see ISKANDARŪN]), which was handed to Turkey by the French mandatory power in Syria in 1939. After this addition, the surface within the borders was (and is) 779,452 km². Even before the proclamation of the Republic, Ankara, the small (pop. 30,000) Anatolian town which had

been the headquarters of the resistance, was proclaimed the new capital [see ANKARA], thus replacing Istanbul. The population within the new borders was very different from that of late-Ottoman Anatolia. At 13.5 million it was at least 25% smaller, and the almost total disappearance of the Greek and Armenian communities meant that it was now 98% as opposed to 80% Muslim. The majority consisted of Turkish speakers, but there were sizeable Kurdish, Arab and Circassian minorities, as well as numerous smaller communities. Almost a third of the population consisted of immigrants, or direct descendants of immigrants, from the Balkans, the Crimea and the Caucasus [see MUHĀDJIR. 2].

The exact relationship between the Republic and its predecessor, the Ottoman Empire, is problematical. The independence war had been waged for the independence of the Ottoman Muslims who wanted to remain attached to the empire, not for a new republic. The last sultan, Meḥemmed VI [*q.v.*], had fled the country in November 1922, but his cousin ʿAbd al-Medjīd had been proclaimed caliph and remained so until the abolition of the caliphate and the banning of the dynasty in March 1924. The Ottoman constitution remained in force until April 1924, but the Law on Fundamental Organisation (*Teshkīlāt-i Esasiyye Ḳanūnu*) of 1921 already allowed the national resistance movement to operate as a *de facto* republic within its framework. Of all the successor-states to the empire, Turkey was the only one which inherited its central state apparatus and army. It also inherited by far the largest part of the Ottoman debt.

Immediately after the proclamation of the Republic, the leader of the Defence of Rights movement, Muṣṭafā Kemāl Pasha (from 1934: Kemal Atatürk [see ATATÜRK]), was elected its first president. In the period 1923-6 he established complete control over the political system, changing the electoral law, transforming the Defence of Rights movement into the People's Party (*Khalḳ Firḳasi*, from the 1924 Republican People's Party, *Djümhūriyyet Khalḳ Firḳasi* [*q.v.*]) of which he was chairman, and banning all political opposition under the Law on the Maintenance of Order (*Taḳrīr-i Sükūn Ḳanūnu*), which was passed on 3 March 1925 in the aftermath of an Islamist Kurdish insurrection in the south-east of the country. In July and August 1926 all potential competitors for political power, the former leaders of the Committee of Union and Progress (*Ittiḥād we Teraḳḳī Djemʿiyyeti* [*q.v.*]) and most of the former leadership of the Defence of Rights movement, were purged in trials held after the discovery of a plot against Kemāl's life.

The power monopoly thus established, was used by Kemāl and his circle (often called "Kemalists") to launch a campaign of reforms to modernise Turkish society. Strongly influenced by positivist ideas, the Kemalists saw secularisation as a precondition for modernisation. The secularisation of the legal system, the educational system and the administration had, of course, already progressed a great deal since the *Tanẓīmāt* [*q.v.*] reforms and, in particular, during the second constitutional period, but the Kemalists completed it with the introduction of secular (Swiss) civil law in 1926, the unification of education in 1924 and the scrapping of Islam as state religion in 1928. They went much further than their predecessors in their attempts to secularise society and culture. Partly, the secularisation drive took place on a symbolic level. In 1925, the traditional male headgear was banned and replaced with the European hat; the wearing of the veil was discouraged. Some measures had a practical *and* a symbolic aspect, such as the introduction of the European calendar and clock in 1926 and the replacement of the Arabic with the Latin alphabet in 1928. Popular religion was a particular target of the Kemalists, with the abolition of dervish orders [see ṬARĪḲA. II. 5] and the closing down of shrines in 1926. As a result, the dervish orders went underground until after World War II. Efforts to "Turkify" Islam by translating the Ḳurʾān and the call to prayer were made, but remained unpopular with the population at large. It should be emphasised that Kemalist secularisation did not so much mean separation of religion and state, as control over religion on the part of the state, through the Directorate of Religious Affairs (*Diyānet Ishleri Bashkanlighi*), the direct successor to the Ottoman office of *Sheykh al-Islām* [see SHAYKH AL-ISLĀM. 2].

The Kemalists tried to create a popular base for their modernising programme through the activities of the People's Party, which, except for six months in 1924-5 and three in 1930, was the only legal party until 1946; and through the "People's Homes" (*Halk Evleri* [see KHALḲEVI]), educational centres linked to the party, which replaced the older "Turkish Hearths" (*Türk Odjaḳlari*) in 1932. These efforts were relatively successful in the towns, where a Kemalist middle class of civil servants, officers, teachers and students came into existence, and where middle-class women managed to take an active part in public life for the first time. The Kemalist modernisation drive hardly reached into the countryside, however, where 80% of the population continued to live.

The republic was fashioned after the model of the European nation-states, and this brought with it an intense effort at nation-building on the basis of a Turkish identity, which was meant to replace the Ottoman, or Muslim one and to submerge linguistic, ethnic and religious differences within the country. Expression of minority cultures, whose existence was officially denied, was strictly forbidden. A new Turkish identity was forged with the help of a nationalist reinterpretation of history. with emphasis on the pre-Islamic history of the Turks and of linguistic purism, which aimed at replacing Arabic and Persian vocabulary with Turkic material. The Turkish Historical Society (*Türk Tarih Kurumu*) and the Turkish Linguistic Society (*Türk Dil Kurumu*), founded in 1931 and 1932 respectively, carried the government's message in these fields. Until his death in 1938, Atatürk was personally very much involved in these movements, but under his successor, İsmet İnönü (who had already been Prime Minister 1923-37), the reform movement lost some of its impetus.

The Kemalist leadership was confronted with immense problems in the economic field. Anatolia had been devastated by ten years of almost continuous warfare. The agricultural sector recovered relatively quickly after 1923, as soon as an adequate supply of manpower became available. This was not true for commerce and industry, however. The disappearance of the Armenians and Greeks meant the loss of almost all commercial, financial, managerial and technological know-how, as well as of access to international trade networks. Until 1930, the Kemalists tried to reconstruct the economy with free market policies, although the state itself operated a number of monopolies taken over from the Ottoman Public Debt Administration. At the same time they tried to rear a "national bourgeoisie" to take the place of the Greeks and Armenians. When the world economic crisis struck, the People's Party decided in 1932 to

make "statism" (*devletçilik*) the basis of economic policy. This was a form of state capitalism, in which the state provided the investments which the private sector could not provide. At the same time, agriculture, which had been hit very hard by the fall of world grain prices, was supported by the creation of a state buying agency. The state sector grew into the dominant force in the Turkish economy. It also trained generations of engineers and managers. In the later thirties, the economy gradually recovered, but World War II again brought great hardship.

After World War II, the new hegemonic position of the United States (whose support Turkey needed badly) and the need to relieve internal pressures combined to persuade İnönü's government that Turkey should move from dictatorship to a degree of democratic pluralism. İnönü supported the founding of an opposition party in 1946, and in the first free and fair elections of the republican era, in May 1950, the opposition, the Democratic Party (*Demokrat Parti*) won by a landslide. This party and its successors (the Justice Party (*Adalet Partisi*) between 1961 and 1980 and the Motherland Party (*Anavatan Partisi*) and True Path Party (*Doğru Yol Partisi*) after 1983) were different from the People's Party in that they were not dominated by bureaucrats and (former) officers. They were coalitions representing the countryside, small-to-medium businesses and the emerging industrial sector. The dominant figures in this block were Adnan Menderes [*q.v.*] between 1950 and 1960, Süleyman Demirel between 1965 and 1980 and again after 1993, and Turgut Özal between 1980 and his death in 1993. These centre-right mass parties usually commanded between 40% and 50% of the vote, while Atatürk's old party, the RPP, and its offshoots (the Populist Party (*Halkçı Parti*), the Social Democrat Party (*Sosyal Demokrat Parti*), the Social Democrat Populist Party and the Party of the Democratic Left (*Demokrat Sol Partisi*), all after 1983) polled between 25% and 40%, thanks in part to the support of Turkey's Alevi minority. Before 1971, under İnönü, its programme was statist and represented the interests of the state bureaucracy; after 1971, under its new leader Bülent Ecevit, it moved left of centre.

The Democrats were strong believers in a free market economy and they encouraged the private sector. With American aid, Turkey witnessed an investment boom, primarily in the agricultural sector. Where the RPP before 1950 had invested in railways, the DP promoted the building of roads and the import of trucks and cars. Thanks to the road building programme, the villages of Turkey for the first time really came into contact with the outside world. This opened up new horizons and encouraged mobility. The economic policies of the DP were also reckless and uncoordinated, however, and this led to high inflation and economic dislocation in the later fifties. When this gave rise to opposition, the government of Menderes grew more and more authoritarian.

Menderes's successors between 1961 and 1980, mainly Süleyman Demirel's Justice Party, adopted a more cautious and planned approach to liberalism. In this period, the main economic policy was that of import-substitution industrialisation. The government promoted the development of oligopolies producing consumer goods (usually in the shape of joint ventures with European or American firms) in a market shielded from foreign competition. This protectionist policy also allowed high wages to be paid to the workers in the new industries.

Fierce anti-communism and anti-socialism, primarily inspired by fear of Turkey's traditional enemy Russia, was a feature of all mainstream Turkish parties of the republic. It had been so even when relations with the Soviet Union had been excellent (in the thirties), but it grew even stronger in the cold war environment. Trade unionism was regarded with suspicion in this context and suppressed until after World War II, when the apolitical trade union confederation *Türk-İş* was founded with American support. In 1967, a number of leftist unions broke away to form a rival confederation, *DİSK*. From then on, there was fierce competition between the two organisations.

The attitude of the Democrats and their successors vis-à-vis unofficial Islam was much more relaxed than that of their Kemalist predecessors. They gave room for expression of Islamic sentiments in public and accepted the support of dervish orders. From the sixties onwards, people with a rural background (exemplified by Demirel and later Özal) gradually took over political and commercial power and for these, religiosity and modernity were not irreconcilable. Although large parts of the secularist intelligentsia, the bureaucracy and the army felt threatened by what they saw as a "return to Islam", the basic secularist structures of the state remained in place.

Both the economic policies and the ideological position of the Democrats and their successors tended to raise suspicions within the army, which regarded itself as the keeper of Atatürk's heritage. Military officers intervened in political matters frequently and twice took over power themselves. In May 1960, Menderes was toppled by a coup by a group of relatively junior officers, some of whom had radical ideas about a new social order. After the coup, these radicals were sidelined, however, and there was a quick return to civilian rule. The military had a new constitution drawn up, which emphasised separation of powers and increased civil liberties. At the same time, the new constitution gave the military an official say in politics through the establishment of the National Security Council (*Millî Güvenlik Kurulu*), which advised the government on security matters. After 1961, the upper hierarchy of the army kept a wary eye both on the officer corps (to prevent new coup attempts) and on the civil politicians. It repeatedly warned the politicians about the limits to their freedom and power and one of these "memoranda", that of March 1971, actually resulted in two years of civil rule under military tutelage. During this period, the civil liberties enshrined in the constitution were curtailed.

The most dramatic development of the post-war era was the startling growth of the population, which began in the fifties when hygienic and medical conditions in the countryside started to improve. The population reached its prewar size in the late thirties (at about 17 million). It stood at 20.9 million in 1950, doubled to 40 million by 1975 and at the time of writing stands at about 60 million. Population pressure in the countryside and the attractions of the industrialisation in the cities have combined to bring about a massive urbanisation. The population of Istanbul grew tenfold between 1950 and 1990. From the early sixties onwards, this migration acquired an international dimension when Germany, and later other European countries, started to recruit Turkish workers. This continued until 1974, when official recruitment stopped. The result was the emergence of a Turkish community of over 2.5 million within Western Europe.

From 1974 onwards, Turkey entered a protracted economic and political crisis. The oil crisis quadrupled Turkey's energy bill, the attendant economic

downturn in Europe led to decreased money transfers from Turkish workers abroad, and Turkish industry and government had trouble finding the hard currency to pay for import of industrial raw materials. Inflation soared and led to large-scale labour unrest. The political crisis expressed itself in the inability of the political establishment to create stable ruling coalitions, primarily because of unwillingness on the part of Demirel and Ecevit to cooperate. Left-wing and right-wing terrorists, who had been active since the end of the sixties, used the increasing paralysis of the political system to start an armed struggle for control of the streets.

An economic stabilisation package, including austerity measures and a basic reorientation from import-substitution industrialisation to export-driven growth, was announced in January 1980, but political circumstances prevented its implementation.

After almost a year of preparations, the Turkish army took over power in a coup on 12 September 1980. A junta headed by the chief of the general staff, General Kenan Evren, ruthlessly established law and order and curtailed political freedom. A new and very restrictive constitution, which transferred power to the executive and limited civil rights, was enacted in 1983. Once order was re-established, the junta allowed the economic stabilisation package to be carried out by its architect, Turgut Özal. The liberalisation of the Turkish economy bore fruit with strong, export-led growth and a wave of foreign investment in the 1980s. Tourism and export earnings replaced workers' remittances as the main source of hard currencies. Özal himself reaped the rewards in political terms. His Motherland Party became by far the strongest force in the country and he himself was Prime Minister (1983-91) and President (1991-3). From 1987, the party leaders of the period before 1980 who had been banned from politics by the junta, were allowed to re-enter politics, and a struggle between the pre-1980 and post-1980 political élites began both on the right (between the Motherland Party and Demirel's True Path Party) and on the left (between the Social Democrat Populist Party led by İsmet İnönü's son, Erdal and the Democratic Left Party of Ecevit). This fragmentation led to political instability, precisely at a time when (from the late eighties) the economic and political problems mounted.

Although the industrial and commercial sector were basically strong, economic growth became highly erratic and inflation soared again to pre-1980 levels, because of the basic imbalances in government finances. These were caused by inefficient tax collection, a bloated bureaucracy and the slow pace of privatisation in the inefficient state economic enterprises.

The main political problem was that of the political and cultural rights of the Kurds. A Marxist Kurdish independence movement, the Kurdistan Workers Party (*Parti-ye Karkeran-e Kordestan* or PKK) started a guerrilla war for Kurdish independence (later changed to autonomy) in 1984, which between 1984 and 1996 cost over 20,000 lives. An army of 250,000 men fought the PKK. This further strained Turkey's state budget. The state reacted to the challenge with increasing repression and the resulting deterioration in the human rights situation damaged Turkey's relations with the West.

The inability of the established parties to solve the economic problems and the Kurdish questions, combined with their feuding amongst themselves brought to power the Islamists. The Islamist Welfare Party (*Refah Partisi*), which became the largest party in the mid-nineties and whose leader Necmettin Erbakan took over as Prime Minister in 1996, had its roots in the late sixties, when the Islamist movement started as a protest of small traders and artisans who felt squeezed between the industrial sector and the emerging labour movement. Erbakan founded the National Order Party, later National Salvation Party (*Millî Selâmet Partisi*), in 1970. After 1983 the party re-emerged as the Welfare Party, but it was only in the nineties that it became more than a party of the conservative middle classes in provincial towns and developed into the voice of the poor migrants in the big cities.

The foreign policy of the early Republic was aimed at the preservation of the hard-won gains of the national independence war. During the twenties and thirties, good relations with the Soviet Union (which had supported the Kemalists in their independence struggle) formed the cornerstone of foreign policy. Relations with France and Britain slowly recovered from the traumas of World War I and its aftermath. From the mid-thirties onwards, the threat of Italian expansionism led to a rapprochement with these former enemies. In 1936 this made possible the conclusion of the Montreux Convention, which handed back full sovereignty over the straits to Turkey. In breach of a defensive alliance concluded with Britain and France in 1939, Turkey (whose leaders remembered the disasters World War I had brought upon the country) remained neutral during World War II, only declaring war on Germany in February 1945. After the war, Turkey looked for protection against Soviet claims on Turkish territory, which the Americans were prepared to give under the "Truman doctrine" formulated in 1947. From now on, the main trend in Turkish foreign policy was political, economic and military integration with the West, expressed in membership of NATO in 1952 and associate membership of the European Economic Community in 1963, two steps which seemed to seal a century of efforts on the part of the Turkish political élite to integrate with the West. Over the years, the security partnership with the United States grew very close, while at the same time the European Community became by far Turkey's most important trading partner. Full membership of the EC (later EU) which was the declared aim of the association agreement, remained elusive, however. When Turkey formally applied for membership in 1987, it was turned down and offered a customs union instead. This union, which integrated Turkey's market with that of the EU, but gave it no say in EU decision making, eventually took effect from January 1996.

In the thirties, Turkey became a member of regional formations: fear of Bulgarian aggression led to the conclusion of the Balkan Pact with Greece, Yugoslavia and Romania in 1934. The Saadabad Pact of 1937 linked Turkey to ʿIrāḳ, Iran and Afghānistān. After World War II, however, Turkey was politically rather isolated in the regions of which it formed a part. Relations with the Arab countries suffered from the traumatic heritage of World War I, from Turkey's early support for Israel (it was the first Muslim country to recognise the Jewish state) and from its emphatic membership of the Western bloc. In 1955, Turkey, Iran, Pakistan, Great Britain and Nūrī al-Saʿīd's ʿIrāḳ concluded a defensive alliance, the Baghdad Pact, but the rising tide of "Arab socialism" after the Suez crisis of 1956 further isolated Turkey. Relations with the Arab world remained cool, even after economic ties blossomed in the early eighties. The establishment of

the Islamic Republic in Iran on the one hand was frightening to Turkey, but on the other it gave Turkey the chance to replace Iran as the United States's foremost ally in the "northern tier" of the Middle East.

Turkey's relations in the Balkans and Black Sea region were determined by the cold war, in which Turkey was the foremost NATO bastion. The relationship with the NATO ally Greece after 1955 was marred by the Cyprus problem. In 1964 Turkey came very close to invading the island to protect the rights of the Turkish minority; in 1974 it actually invaded and occupied nearly 40% of the island.

In the nineties, the whole picture changed because of the dissolution of the Soviet Union and the Warsaw Pact. On the one hand, this meant that Turkey lost its position as an anti-communist bulwark, but on the other that it regained its room for manoeuvre. The emergence of five new Turkic republics in Central-Asia created new possibilities, even when early expectations that Turkey could fill the political "vacuum" left by Moscow turned out to be vastly exaggerated. In 1991 Turkey itself took the initiative for the founding of the "Black Sea Economic Cooperation Council" and it developed good relations with Bulgaria, Macedonia, the Ukraine and Russia.

Bibliography: A bibliography of the history of the republic with any claim to provide adequate coverage, should include at least seventy titles—clearly an impossibility within the framework of a short article such as this. But there exist a number of historical overviews with bibliographies which constitute excellent starting points for further reading and research: B. Lewis, *The emergence of modern Turkey*, London 1961, 1968; S.J. Shaw and Ezel Kural-Shaw, *A history of the Ottoman Empire and modern Turkey*, ii, *Reform, revolution and republic. The rise of modern Turkey, 1808-1975*, Cambridge 1977; G. Lewis, *Modern Turkey*, London 1955 and many subsequent editions; R. Davison, *Turkey. A short history*, New York 1968, Huntington 1988; Feroz Ahmad, *The making of modern Turkey*, London 1993; and E.J. Zürcher, *Turkey. A modern history*, London 1993, 1997. (E.J. Zürcher)

6. The Turks outside Turkey to 1860.

See for these, BASHDJIRT; BUKHĀRĀ; GĪRAY; KASHKĀY; ĶAZAĶ; ĶĀZĀN; KHALADJ; KHĪWA; KHOĶAND; KIRGIZ; ĶIPČAĶ; ĶIRĪM; ĶUNGRĀT; MANGĪT; MANGĪTS; NOGHAY; ÖZBEG; SHĪBĀNIDS; SIBĪR; TÜRKMEN.

7. The Turks outside Turkey from the late 19th century to the present.

The presence of Turks or Turkish-speaking groups in Southeastern Europe is largely due to the Ottoman expansion and subsequent colonisation or assimilation of previous populations; a difficulty arises over definition, since in the Balkans there is a tendency, both etic and emic, to regard all Muslims as Turks, regardless of their language, to the extent of ignoring their real ethnic origin. A sense of nationality based on religion is thus dominant. At the same time, there are some groups which are Turkic in both language and ethnic origin. In certain cases the local designation of these two overlaps. Some religiously-defined groups remain as a result of flight or expulsion from the mainland of Anatolia. In the case of territories close to Turkey, such as ʿIrāķ, Syria, and Ādharbaydjān, Turks remain either as elements of the Türkmen expansion which did not coalesce with the main body in Anatolia, or as tribes which were removed by the Ottomans from Anatolia and resettled to countervail Arab dissidence on marches from which Turkey has subsequently withdrawn [for these see TÜRKMEN; YÖRÜK]. All of these groups are represented in the immigrant population of Turkey [see MUHĀDJIR. 2].

The Ķaraim (Ķaray, pl. Ķaraylar) [see KARAITES], the group of ethnic Turks settled furthest west, are non-Talmudic Jews in religion, speaking a modern Comanic language. They now occupy three areas in Lithuania around Panevežys, Trakai (Troki) and Vilnius, and two in the Ukraine around Halicz (Galič) on the Dniestr and Luck (Lutsk). Although they are first mentioned by Rabbi Petachia of Regensburg between Kiev and the Crimea in 1175, and they continued to live mainly in the south of Crimea, their origin is obscure. Attempts to link them with the Jewish Khazars have failed to produce conclusive evidence. In the 8th/14th century 483 families are said to have moved to greater Lithuania. In the 20th century some dispersed to Warsaw, St. Petersburg and Moscow. Parts of the population which remained in the Crimea were linguistically assimilated to the Crimean Tatars: they survived both the Nazi occupation, by arguing that they were ethnic Turks, and the Soviet deportation of Tatars. In 1970, 2,596 lived in the Crimea, and 1,975 elsewhere in the USSR. About 300 live near Yevpatoria on the west coast. Some emigrated to Istanbul where their community gave its name to Karaköy. Their rabbinical co-religionists, the Ķirīmčaķ, who lived in the Crimea around Karasubazar and Feodosiya, were possibly descendants of the Khazars: their Turkish is said variously to have been assimilated to Crimean Tatar and to differ from both that and Ķaraim. Although declining in numbers, there were still 6,383 in 1926, of whom 4,728 declared their own language as their mother tongue. They were nearly exterminated by the Nazis, though 1,800 survived and in 1979 were scattered throughout the former Soviet Union, with a few hundred in New York.

In former Yugoslavia, Muslims speaking Serbo-Croat, like the majority of Bosnians (*Boşnak*) and the Muslims of Herzegovina (*Hersek*) [see BOSNA; HERSEK], as well as those from Southern Serbia and Macedonia (*Čitak*, pl. *Čitaci*) speaking either Serbo-Croat, Macedonian or Albanian, are largely of South Slavonic stock converted to Islam under the Ottomans from the 9th/15th century onwards, from both peasants and nobility, though some ethnic Turks have been assimilated among them. The converted peasantry of Bosnia, dubbed *Potur* (< Serb. Cr. *po-turčiti* = Turkicised), retained some Christian practices in their religion. Such converts appear to have been accorded an intermediate status between *dhimmī* [*q.v.*] and full Muslims (Ménage, *op. cit.*, 209), at least in the earlier phase of the Empire *ca.* 1500. These largely autochthonous groups can be distinguished from immigrant Turkic elements of the population, mainly in the south of the country, who have retained both their identity and their language, like *Čitak* from Kosovo or Macedonia, who gain further definition from their adherence to the Bektāshī *ṭarīka* [see BEKTĀSHIYYA]. Serbian Muslims were known to the neighbouring Christian population in West Macedonia as *Torbeš* (pl. *Torbeši*) or *Poturi*, and occasionally as *Kurki*. *Torbeši* in the Reka region of Serbia were known as *Gorani*. In 1921 the census showed 150,139 Turks, and in 1953 254,000, of whom 200,000 were in Macedonia and 53,000 in Serbia. Between 1923-60, 269,101 Muslims left for Turkey. By 1984 the number of Turkish-speakers was *ca.* 130,000, forming nearly 7% of the population in Macedonia and 1% in Kosovo: they primarily inhabited towns, and formed a substantial part of the citizenry in Prizren, Skopje, Gostivar, Debar, Struga, Ohrid (Okhrī), Kruševo, Titov Veles, Štip and others,

mainly working as craftsmen. Peasantry lived in the valley of Vardar and eastern Macedonia around Radoviš. Although the Turkish-speaking population of western Macedonia was depleted by the exodus of 1955-6, it has been replaced by Albanian Muslims. Around Gostivar a remarkable interaction of languages has taken place (Jašar-Nasteva, *op. cit.*). At Prizren the Sinâniyye, Ḳādiriyye, Khalwetiyye and Melāmī *ṭuruḳ* are represented, and notably the Rifāʿiyye; at Ohrid the Ḥayātīs maintain a *tekke* as an important centre. In the Strumica region of southern Macedonia, *Čitak* was used to designate a settled farming population of Turkish-speaking Slavonic Muslims in distinction to the ethnically Turkish *Yörük* pastoralists. A distinct group of these *Čitak* in Svidovica, Banjsko, and Makrijevo, on the northern slopes of Mt. Belasica, as also at Zleovo in Radoviste, was Bektāshī, with records dating back to the 10th/16th century: they, too, preserved observances from their former Orthodox belief. Like others in the region they particularly revered Ṣarî Ṣalṭuḳ Dede [*q.v.*]. The prevalence of this order here and in Albania can be explained by the absence of central Ottoman authority, especially in Albania, after it was banned, and the Janissaries disposed of, in 1241/1826 [see YEÑIČERI]. The nearest large centre for the Svidovica Bektaşis was at Maya Dağ across the border from Gevgeli (Gevgelija), though the main *tekke* for the region was to the north at Štip. There are also Khalwetī and Melāmī dervishes in the same area.

An immigrant population of Turkish-speaking Yörük and Türkmen [*q.vv.*], transferred after the conquest of Rumeli, was established as a militia to keep the peace as well as for the benefits of their pastoral economy: thus Ḳara Timurtash Pasha moved nomads from Saruhan to Serez, Ertughrul, son of Bāyezīd I, took nomads from Menemen to Filibe (Plovdiv), and Lütfī Pasha relates how many Türkmen tribes were taken from West Anatolia to Rumeli. In particular, they were established in the east of the *eyālet* of Selānik and the part of Üsküp *eyālet* (Skopje) to its north. Their importance was recognised in special legislation in the *Selanik yörükler kanunnamesi* (see Truhelka, *op. cit.*). Although their descendants (*Juruci, Koniarides*) have largely withdrawn to Turkish Thrace or Anatolia in the migrations of 1923 or 1950-58, a few hundred remain in a handful of villages on Mt. Plačkovica in Macedonia, still working as tented shepherds (see Eggeling, *op. cit.*), with a dialect closer to that of Anatolian Yörük than West-Rumelian Turkish. As late as 1976 they still formed a distinct ethnos of former nomads in the Strumica region, where a group of villages on the southern slopes of Mt. Ogražden was known as Yörüklük, and in two villages on Mt. Belasica on the Macedonian-Greek-Bulgarian frontier, within the Doiran group (see Filipovič, *op. cit.*). Yörük were established as far south as Larisa in Thessaly, and in the Rhodope and Balkan ranges to the north, with the seats of their beys in mountainous localities such as Thessalonika, Plovdiv and Yambol.

Following the Ottoman occupation of Bulgaria [*q.v.*] from 795/1393, Turkish settlers were established in the eastern plains northward to the Dobrudja, where they rapidly became the majority, spreading up the Maritsa valley to Plovdiv, and the Danube to Vidin: immigration reached a maximum in the 12th/18th century. Extensive conversion of the local population took place in the 10th-11th/16th-17th centuries. In addition, some 100,000 Tatars were settled in Bulgaria after the Crimean War. There had been about 600,000 Muslims of Turkish origin, and a further 200,000 converted Slavs before World War II, or 683,000 and 123,000 respectively, with 10,000 Tatars and Gagauz in 1950. Despite the very large numbers involved in the population exchange of 1925-28 and the subsequent expulsion of 1950-8, amounting in all to 374,478 from 1923-60, there were still 650,000 registered Turks spread widely over the country in 1965, concentrated most densely in the Rhodope massif. The attempts at forced assimilation in 1983-5, when with *ca.* 700,000 they formed 10% of the total population, culminated in the expulsion of 300,000 in 1989. Many of these returned once the government had fallen and conditions had eased. The term *Pomak* [*q.v.*] was used by their Christian compatriots for mainly Bulgarian-speaking Muslims of Slavonic origin, though some claimed Turkish ancestry, and called themselves *Turci* (Lory, *op. cit.*, 101): these lived principally in the Rhodope, and the mountains of eastern Macedonia around the Struma. Until the Turko-Russian War of 1293/1877, there were 100,000 more in 60 villages to the north of the Balkan massif in the Danube region west of Loveč and Pleven, of whom 5,000 remained in 1985. They began to leave the Rhodope after the revolution of 1302/1885. *Akhriyān* ~ *agaryān*, a term documented from 835/1432, and shown by Ménage (*op. cit.*, 1969) to be derived from mediaeval Greek *'agarīnós*, "Hagarene > Muslim", was adopted as a self-designation by the Muslim Bulgarians living in the central Rhodope between Nevrokop and Pazardžik, around the upper Arda and Kričim rivers. Although, like *Potur*, adopted by the Ottoman authorities to describe somewhat dubious converts in the Balkans in a pejorative sense, it fell out of use, to survive only as a specifically Rumelian term. *Čitak* (= "coarse") is used etically for village Turks in general, though they call themselves *Türk*. An alternative, *Gadjal*, was used less often, but also pejoratively: the Bulgars of Šumen and Razgrad referred to all Turkish villagers as *Gadjal* or *Čitak*, whereas the Turks of Deliorman, calling themselves *Türk* or *Tahtakülâh*, called the Dobrudja Turks *Gacal* (see Bobčev 1940, 138-9).

Substantial immigration of Alevis has led to the usual polarisation of the Muslim population, reflected in the terminology, though they did not necessarily live in separate villages. The Sunni population of Deliorman called itself *Türk* while referring to the Alevi among them as *Kizilbaş*, which they accepted, with *Alevi* and *Aliyân* as alternatives (*ibid.*, 139, 143-4). These Alevis are centred particularly around Dulovo (Ak Kadınlar). *Amuca* is another designation applied to Alevis who formerly lived in the villages of Belören, Gaipler, Ahmedler, Topçular and Kara Abalar, east of the Tundja and south of Burgas in the coastal area near the Turkish frontier, later expanding to found Dikence, Bokluca and Gündüzlü. They are claimed by Salci (*op. cit.*) to be descendants of followers of Sheykh Bedr ül-Dīn [see BADR AL-DĪN] who survived his overthrow in 1420: their location supports this possibility. Most are now resettled in Turkey near Kırklareli, where in 1943 they numbered 15,000 in 25 villages, and where they were locally identified as *Kızılbaş*.

Gagauz [*q.v.*] are represented in Bulgaria by about 5,000, mostly in distinct villages in the Dobrudja, and Deliorman, but partly in and around the towns of Varna, Kavarna, Balčik, Yambol and Topolovgrad: they appear to be pre-Ottoman Turkic immigrants converted to Orthodox Christianity. Their language, although closest to the Turkish of northeast Bulgaria, is heavily influenced by Slavonic, Romance, and Greek intrusions. They perceive the Turks of Deliorman as closely related, calling them *Amuca*. A substantial emi-

gration to Bessarabia occured between 1750-1846, as a result of local oppression (Hoppe, *op. cit.*, 1957, 127, 131) and especially 1807-12 as the region was ceded to Russia. The majority, 138,000 in 1979, still live there (now Moldavia), with others in the adjacent district of Odessa in the Ukraine, and a few in Central Asia. Some remain in the Romanian Dobrudja and at Iaşi. They are also found at Edirne and in small settlements near Alexandroupolis.

In Greece, the term Turk included such minorities as *Vallachades*, *Karadjiovalides* (Muslim Meglen-Vlachs), and *Surguç*, besides Sunnī Turkish settlers and *Koniarides* (Yörük). Vardarians (Oghuz, Pečenegs, Ḳumans) had already founded colonies in Macedonia and Thrace from 457/1065 under Byzantine rule. The Muslim population grew under the Ottoman administration from 795/1393, augmented by local converts, until it reached one-third of the total by 1800. Despite extensive massacres of Muslims during the War of Independence, 1,400,000 (25.2%) still remained Muslim a century later in 1920. In 1922, the population exchange was arranged on the basis of religion rather than race: between 1923-60, 407,788 left for Turkey, 61% in 1923-33. Thereafter, Muslims continued to live in three areas: Rhodes and Chios, which were then Italian, Western Thrace and Epeiros, which had a large Albanian community until 36,000 were massacred in 1945. Their total number has remained relatively constant, at 134,722 (1.8%) in 1940, and 130,000 in 1971 (1.5%). Of those who remained in 1971, 70,000 Turks lived in Thrace, especially in the neighbourhood of Xanthī, Komotīne, and Alexandroupolis (= İskeçe, Gümülcine, Dedeağaç), and 10,000 in the Aegean (Rhodes and Kos/İstanköy); 20,000 Pomaks were on the Bulgarian border (Rhodope, Xanthī) in Thrace and 10,000 in Greek Macedonia; 8,000 Albanians stayed on in Epeiros and 2,000 in Athens; a remnant of 2,000 others (Vlachs and Gypsies) is found in Thrace, with 8,000 (mainly new Egyptian Arab immigrants) in Athens. In Crete [see IḲRĪṬISH], which became Ottoman by 1080/1669, the Muslim population declined from 91,000 (70%) in 1836 to 27,852 (8.3%) in 1921: these left for the Turkish coast, Libya and Egypt in 1923. In Western Thrace, conquered by Greece in 1919, Muslim Turks between the Rivers Evros or Maritsa and Nestos were exempted from the exchange to compensate for the Greek community and Patriarchate remaining in Istanbul. Although the Turks constitute the only minority officially recognised in Greece, their guaranteed rights, ranging from inheritance to political representation and the maintenance of mosques, have been subject to considerable interference, and non-Muslims have been settled in confiscated lands, so that many emigrated (6,000 during the Cyprus crisis in 1974-5), and their presence fell to 27.2% in 1971. Popular demonstrations of hostility towards them in 1996-7 appear to have been condoned. Of the *Vallachades*, Greek-speaking Muslims in southwest Macedonia (Grevena) and Thessaly, some can now be found in Central Anatolia (see Svanberg, *op. cit.*, 1980). The Meglen-Vlachs, converts to Islam in the 12th/18th century, were also unable to remain after World War I, and withdrew to Eastern Thrace or Anatolia. The *Surguç*, an Orthodox Christian group in southeastern Macedonia, bilingual in Turkish and Greek, were claimed to have entered the Balkan peninsula before the Ottoman conquest, possibly as a remnant of the Ḳomans [*q.v.*]; in 1913 they were said to number 4,500 (see Meinhard 1899; Cvijić 1913, 115; Weigand 1924, 82). *Gagauz* in Greek Macedonia, in and around Neazichni (formerly Željahovo) numbered about 4,000 in 1900, over eight villages. Today they are said to number 10,000, still identifiable as a distinct group and still speaking Turkish.

The Dobrudja (Dobrogea) plateau south of the Danube delta was first settled by Turks in *ca.* 662/1263-4, when Türkmen from Anatolia led by Ṣarī Ṣalṭuḳ arrived with Byzantine acquiescence. Tatars entered it in the 8th/14th century as Batu's Horde disintegrated, followed by further contingents sent there by the Ottomans in the 14th-16th centuries. Some of the Horde's largest offshoot, the Noghay [*q.v.*] joined them in the 11th/17th century, after losing the eastern part of their territory to the Ḳalmaḳ, while further Anatolian Turks were brought there to complete the colonisation. As the Ottoman protectorate of the Pontic Steppe collapsed in 1773-4, and the Russians expanded southward, both the Noghay and the Crimean Tatars beyond them [see ḲIRĪM] began to emigrate to Ottoman territory, and especially Dobrudja. The Ottomans recorded the arrival of 300,000 in the seven years following the annexation of the Crimea in 1783. A further exodus took place after the Crimean War (1853-6), and another from the West Caspian Steppe in 1859-64 during the Russian conquest of the Caucasus. The Dobrudja thus became the only European region of the Empire with an almost entirely Turko-Tatar population: the exceptions were Romanian villages on the Volga, and a few of Vlachs. The Turks tended to live in towns, whereas the Tatars remained rural. Finally, an influx of 20,000 Circassians settled in the north in 1866. The Turko-Russian War of 1293/1877-8 caused 80-90,000 Turks and Tatars to leave for Turkey and Bulgaria; the Circassians were removed to Anatolia, or to found protective settlements on the marches of Palestine and the pilgrimage route. By 1880 the total Turko-Tatar population was estimated at 48,100. From 1878 new Romanian legislation, including sequestration of land, led to substantial movement of Turks into the countryside; despite this they were subjected for some thirty years to relentless restrictions intended to Romanise the region. In 1900 a total of 43,740 Muslims lived in Romania as a whole. In 1911 the Dobrudja population had declined to 10,836 Turks and 25,086 Tatars, and by 1930 these formed only 21.2% of the total, which by then included the southern part annexed from Bulgaria. In 1934-8, 80,092 Muslims left Romania for Turkey including 37,000 from Dobrudja, in connection with the exchange agreement of 1936. In all, 121,351 left between 1923-60. Among them were almost all the Alevis of northern Dobrudja, who were Çelebi Bektāshīs: in the south (Deliorman), which in 1940 reverted to Bulgaria, they continued to flourish. The official figures for 1977 showing 23,303 Turks and 23,107 Tatars in Romania are regarded as unreliable. The proportions of the two have fluctuated throughout this century, but at present the Tatars are in the majority: they still tend not to mix. Both are concentrated in the provinces of Constanta and Tulcea, but some are found as far north as Iaşi. In 1980 the state-appointed *müfti* and his staff were all Tatars, perhaps with the intention of dividing the Muslim community by alienating the Turks. In the 1980s some 5-6,000 Tatars, most of them of Crimean origin, remained in the Bulgarian Dobrudja, about a fifth still speaking Noghay.

About 2,000 Tatars from Belorussia live in Poland mainly around Bialystok, but they no longer speak their language. Mişär Tatars, a group of mixed Turkic and Finno-Ugric origin formed in the 8th-9th/14th-15th centuries, came to Finland from the Nižniy-Novgorod region of Russia after the 1918

revolution: some 1,000 live there, mainly in Helsinki, Tampere and Turku, where they retain their Sunnī religion and culture. Others emigrated to Stockholm.

II. Languages.

(i) Introduction
(ii) Genetic position
(iii) Structural features
(iv) Turkic languages in the past
(v) Turkic languages today

(i) Introduction

The family of the genetically-related Turkic languages is represented today by about 120 million speakers and 21 literary idioms. The first written evidence (8th century) belongs to a people which emerged in the 6th century under the name Turk which, due to certain historical circumstances, has become the name of the entire language family. The hypothesis that these peoples and languages originate from areas close to Inner Asia is strongly supported by certain linguistic evidence.

The spread of Turkic languages also demonstrates the important role that these peoples played in the historical development of Eastern Eurasia. From the 6th century onwards, they began occupying a vast area of the Eurasian continent, the extent of which has always been changing. From remote periods of their prehistory until today, they have come into contact with many extinct and living languages in Eurasia.

The Turkic migrations led, in some areas, to a process of assimilation. At times, the Turkic conquerors successfully imposed their language upon conquered peoples, while sometimes they were absorbed by the conquered, local population. Because of this complex historical process, the history of Turkic languages contains a variety of abstract, superstrate and substrate phenomena.

The use of the term Turkic for the entire language family, while reserving the term Turkish for the idiom spoken in the area occupied by the Ottoman Empire [see ʿOTHMĀNLÎS] and Turkey, is a contemporary development (see the corresponding Russian and French terminology: *tyurkskiy/turetskiy; turcique/turque*).

In the interpretation of the terms *Türk dili/Türk dilleri* (Turkish language/Turkic languages) there is a significant difference between scholars in Turkey and other countries (including the Turkic-speaking political units of the CIS). This difference reflects the variety of perceptions regarding the historical and contemporary relations of these languages. According to the majority of modern Turkish scholars, these languages are territorial variants (*lehçe* or *şive*) of one language (without giving a clear geographic and linguistic definition of this possible central idiom). This view, which originates in the national movement of the Turks in Russia in the 19th century [see GASPRALI, ISMĀʿĪL], was inspired by the model of Arab linguists. Among all other scholars, there is consensus in the consideration of contemporary Turkic languages as independent idioms.

Bibliography: The extensive scholarly literature reflects the wide scope of Turkic peoples and languages, and the great interest in their study. The steady increase of publications in the Turkic-speaking countries renders this orientation more difficult. Therefore the following bibliographical sketch gives priority to reference works, guides, etc., facilitating further information.

A general guide to retrospective and current bibliographies in Turkic studies, including linguistics. G. Hazai-B. Kellner-Heinkele, *Bibliographisches Handbuch der Turkologie*, i, Budapest-Wiesbaden 1986 (see esp. 271-300).

Comprehensive bibliographies. R. Loewenthal, *The Turkic languages and literatures of Central Asia*, The Hague 1957; Hazai (ed.), *Sovietico-Turcica, Beiträge zur Bibliographie der türkischen Sprachwissenschaft in der Sowjetunion 1917-1957*, Budapest 1960.

Also *Index Islamicus* (see Pearson); the current part continued by G.J. Roper (2 vols. London-New York 1991), the retrospective one by W.H. Behn (Millersville, Pa. 1989; Supplement, part 1: *ibid.*, 1995).

Current bibliographies. *Linguistic bibliography for the year . . . and supplement for previous years*, Dordrecht-Boston-London . . . (started with a retrospective volume for the period 1939-47: Utrecht 1949; continued with the year 1948: Utrecht 1951); *Novaya sovetskaya literatura po obshčestvennîm naukam, Yazîkoznaniya*, Moscow 1954-; *MLA [= Modern Language Association] international bibliography of books and articles on the modern languages and literatures*, in *Publications of the Modern Language Association*, lxxii (1956)—(the previous volumes do not treat Oriental languages). The *Index Islamicus* of Pearson was continued under the same title as a current bibliography; Hazai-A. Tietze (eds.), *Turkologischer Anzeiger/Turkology Annual*, i-xxi, Vienna 1975-96 (focused on Ottoman and Turkish studies, but with vol. vi, in the case of linguistic studies, they also concern other areas, but only to a certain extent).

Introductions (with extensive bibliographies) where Turkic linguistics are embedded in the framework of Altaic and Central Eurasian studies. J. Benzing, *Einführung in das Studium der altaischen Philologie und der Turkologie*, Wiesbaden 1953 (Turkish tr., in *Türk Dili Araştırmaları Yıllığı Belleten* [1957], 131-7; [1958], 214-78); D. Sinor, *Introduction à l'étude de l'Eurasie centrale*, Wiesbaden 1963; N. Poppe, *Introduction to Altaic linguistics*, Wiesbaden 1965.

Comprehensive turcological introductions (with extensive bibliographies). *PTF*, ed. J. Deny *et alii*, 2 vols., Wiesbaden 1959-64; N.A. Baskakov, *Vvedenie v izučenie tyurkskikh yazîkov*, Moscow 1962; *Turkologie*, in B. Spuler (ed.), *Handbuch der Orientalistik, Erste Abteilung, Der Nahe und der Mittlere Osten, Fünfter Band, Altaistik, Erster Abschnitt*, Leiden 1963; A. Dilâçar, *Türk diline genel bir bakış*, Ankara 1964; A. Caferoğlu, *Türk dili tarihi*, 2 vols., [2]Istanbul 1970-4; Baskakov (ed.), *Yazîki narodov SSSR, Tom vtoroy, Tyurkskie yazîki*, Moscow 1966; *Türk dünyası el kitabı*, Ankara 1976; P.B. Golden, *An introduction to the history of the Turkic peoples*, Wiesbaden 1992; F. Bozkurt, *Türklerin dili*, Istanbul 1992; K.H. Menges, *The Turkic languages and peoples. An introduction to Turkic studies*, [2]Wiesbaden 1995; L. Clark, *The Turkic languages. A survey of instructional and reference material*, in *American Association of Teachers of Turkic Languages, Newsletter*, 15-16 (1994), 11-6; 17 (1995), 7-18; 18-19 (1996), 7-20.

Further introductions (restricted to Ottoman and Turkish linguistic studies, but taking into account the orientation needed on a wide basis). Hazai, *Kurze Einführung in das Studium der türkischen Sprache*, Budapest-Wiesbaden 1978; idem (ed.), *Handbuch der Türkischen Sprachwissenschaft*, Budapest-Wiesbaden 1990. Other reference books with linguistic interest are G. Moravcsik, *Byzantinoturcica*, 2 vols. Berlin 1958; Sinor, *Inner Asia, history—civilization—languages. A syllabus*, Bloomington, Indiana 1969.

History of research work. Menges (1-10: *Sketch of the history of Turkic studies*), Poppe (100-24: *History of Chuwash and Turkic linguistics*). Additional works: Fr. Babinger, *Die türkischen Studien in Europa bis zum Auftreten Josef von Hammer-Purgstalls*, in *WI*, vii/3-4 (1919), 103-29; A.N. Kononov, *Očerk istorii izučeniya turetskogo yazïka*, Leningrad 1976; idem, *Istoriya izučeniya tyurkskikh yazïkov v Rossii. Dooktyabr'skiy period*, ²Leningrad 1982; idem, *Bibliografičeskiy slovar' otečestvennïkh tyurkologov, Dooktyabr'skiy period*, ²Moscow 1989; O. Pritsak, *Vorwort zum Nachdruck*, in W. Radloff, *Versuch eines Wörterbuches der Türk-Dialekte*, i, The Hague 1960, v-; A. Temir, *Türkoloji tarihinde Wilhelm Radloff devri. Hayatı—ilmî kişiliği—eserleri*, Ankara 1991.

(ii) Genetic position

Turkic languages, with regard to their genetic origin, form a language family which is closely related to the Mongol and Manchu-Tungus language families (see ALTAIANS; Hazai, *Altaic languages*, in *Enc. Brit.*; Menges, *Altaic*, in *EIr*, i, 909-12). They share common typological features (see below, iii) in their language structures, as well as a series of phonetic and other correspondences, which can be undoubtedly traced back to remote periods of history.

Many scholars consider this evidence as proof for the genetic relationship of these idioms, and regard them therefore as units of a common language family, namely, the Altaic (J.G. Ramstedt, N. Poppe, M. Räsänen, P. Aalto, T. Tekin, etc.). Other scholars consider this as evidence of linguistic borrowings which resulted from the historic contacts between these peoples, and are opponents of the so-called Altaic theory (J. Németh, L. Ligeti, Benzing, Sir G. Clauson, A.M. Shčerbak, Doerfer, etc.).

Although the idea of the Altaic language family emerged in the 18th century (cf. Poppe, 125-56), Ramstedt is considered the founder of this school, since he laid down a comprehensive synthesis in which all aspects of a possible genetic relationship are taken into account (see Aalto, in *CAJ*, xix [1975], 161 ff.).

The posthumous publication of J.G. Ramstedt's synthesis opened a new chapter in the heated, but fruitful, debate regarding the validity of the Altaic theory (see Clauson, in *CAJ*, ii [1956], 181 ff.; idem, *Turkish and Mongolian studies*, London 1962; Doerfer, *Elemente*, 5 ff.; idem, in *Indogermanische Forschungen*, lxxi [1966], 81 ff.). Despite the continuation of this debate, it has helped clarify many relevant linguistic and historic details and, in parallel, has opened new fields of investigation.

Today, those who accept the relationship of Altaic or even Uralo-Altaic languages also include the Korean and Japanese languages which, previously, were considered only as hypothetical links in the genetic network (see Poppe, 149 ff.; Aalto, in *CAJ*, xix [1975], 175 ff.; R.A. Miller, in *UAJb*, li [1979], 1 ff.; J. Street, in *OLZ*, lxxv [1980], 101 ff.; Menges, in *CAJ*, xxviii [1984], 234 ff.).

The adherents of the "Nostratic school", which focuses on the reconstruction of the development of proto-languages which existed in the remote past of the Eurasian continent, consider the genetic unity of Altaic languages as an important element of their theory.

The opponents of the Altaic theory regard the ancient correspondences between the Turkic, Mongol and Manchu-Tungus languages as a result of borrowings which help reconstruct, especially in the case of Turkic languages, some features of structure in the historical period which preceded the first written linguistic records.

Despite the polarisation of views regarding the main issue, in some details of this debate (which are also relevant to the prehistory of Altaic peoples) we can observe a rapprochement of some ideas and explanations (see Doerfer, in *UAJb*, N.F. i [1981], 93 ff.; idem, in *CAJ*, xxviii [1984], 37-8).

In the new phase of discussion concerning the Altaic theory, there have been pointed out the requirements of the strict application of traditional approaches and criteria of historical and comparative linguistics (see Doerfer, in *Voprosi Yazïkoznaniya* [1972-3], 50 ff.; idem, in *ibid.* [1981-4], 35 ff.; idem, *The conditions for proving the genetic relationship of languages*, in *The Bulletin of the International Institute for Linguistic Sciences, Kyoto Sangyo University*, ii/4 [1981], 39 ff.). The application of methods and experiences which are mainly a product of Indo-European studies, has often led to an impasse due to the lack of sources concerning the earlier periods of Altaic languages (particularly in the case of Mongol and Manchu-Tungus, which are considered more "conservative" than Turkic languages).

It has become evident that a more comprehensive explanation of the "relationship-like primaeval relation" of these languages (a term used by Németh, in *Nyelvtudományi Közlemények*, xlvii [1928], 63) must take into consideration many specific aspects of the development of these languages which relate to the geographic and historical circumstances of their original habitat and their later migrations (slow and rapid shifts and on-the-spot mixture of the population, bi- and multi-lingualism, language exchange, social strata factors, etc.).

Undoubtedly, the above-mentioned factors have deeply influenced the circumstances of formation and geographical distribution of correspondences which have completely reshaped the scope of the available linguistic evidence. This historical context, when compared to Indo-European languages, is distinctly different and requires a particular methodological approach for the explanation of these facts.

(iii) Structural features

The phonetic stock of Turkic languages is rich in vowels and relatively poor in consonants, clusters of which are rare. The phonetic systems of the single languages, with few exceptions, show great similarity.

Lacking exact experimental studies of a comparative nature, many controversial views have been expressed concerning the suprasegmental elements (stress and tone). However, it is generally accepted that "in most Turkic languages . . . the expiratory stress falls on the first syllable" (Poppe, 180); musical tone is independent of the stress and falls on the last syllable (*ibid.*; L. Bazin, in *PTF*, i, 11). On the other hand, shifts may occur due to the effects of some specific suffixes (*ibid.*; A. von Gabain, in Spuler (ed.), *Altaistik*, 10).

Vowel harmony, followed by the harmony of consonants, is one of the most characteristic features of Turkic languages. This morphonological rule (from a phonetic point of view, an assimilation with extensive effects), is essentially based on three oppositional dimensions of vowels (back/front; rounded/unrounded; high/low). Following strict rules, they determine vowel sequences, manifested in word construction. The harmony is not restricted to the basic morphemes, but also extends to bound morphemes (suffixes) which, in this way, accumulate more phonetic variants.

The best-known model of vowel harmony is palatal harmony, which means that in one word only back or front vowels may occur. This exists in all Turkic languages. In the sphere of rounded and unrounded vowels, various patterns exist. In this respect, there are two main variants: labial harmony, where high vowels, following the division of back versus front, are also divided in an opposition of rounded versus unrounded; and labial attraction, where low vowels are also involved in the dependence of the harmony of rounded vowels.

Due to the peculiarities of the given phonological system, the combination of these models, as well as other minor variants, are characteristic in every single language. Therefore, in various ancient and contemporary Turkic languages, the realisation of vowel harmony displays a degree of diversity because of the specific development of the given language.

In the application of all models of vowel harmony, there are many exceptions, particularly in the case of loanwords which may preserve, often to a great extent, their phonetic autonomy.

The agglutinative nature of Turkic languages is one of their striking characteristics. This often-criticised term mainly stresses the contrast with flexional idioms (e.g. Indo-European languages). This peculiarity points to the use of bound morphemes (suffixes) on the level of word derivation and of grammatical operation in an almost exclusive way.

Definite articles and grammatical gender are absent in Turkic languages. For numerals, the singular form of nouns is used. Prepositions are not used. The case system is relatively simple. Case suffixes are identical in singular and plural because the plural has an independent suffix.

The parts of speech show less diversity: essentially, nouns, verbs and particles can be differentiated. No grammatical means exists to distinguish between nouns and adjectives. Turkic languages are rich in verbal derivatives, in which nouns of action, participles and gerunds (converbs) have an important function in syntactical operations.

An essential feature in syntax is the modifier (attribute, apposition) which always precedes the modified word (e.g. a noun), while the noun in the genitive (possessive) case precedes the noun representing the possession.

With respect to sentence structure, the position of constituent elements (word order) is determinative. At times, the main operational principle is coordination. The subordinate clause, beginning with conjunctions or relative pronouns, appears in Turkic languages as a result of foreign influences.

It is important to note that most of these essential peculiarities, combined with other minor ones, are common to the Finno-Ugric, Mongol, Manchu-Tungus, Korean and Japanese languages, giving them a strikingly common character which sets them apart from other Eurasian languages.

(iv) Turkic languages in the past

1. *Preliminary remarks*

The history of the Turkic languages truly manifests the specific characteristics of the past of these peoples, particularly in the sense of their unique role and the proportions of territorial and cultural change as well as hiatuses and their efforts for stability.

The diffusion of Turkic peoples, their expansions and internal movements, was a long-lasting and gradual process combining frequent confrontations with the settled civilisations. This process had profound consequences with respect to the formation of these languages. On the one hand, it led to the constant change (enlargement or diminution) of the linguistic territory while, on the other hand, it caused important population redistributions in certain areas. This process, manifested is varying extents, steadily influenced the evolution of individual idioms, their dialectal divisions and their contacts with other languages.

The conquests of Turkic peoples often resulted in the imposition of their language upon their subjected peoples (e.g. Iranians in Central Asia), or even on their new sovereigns (the Mongol ruling classes in the West). In both cases, this led to either a slow or a rapid assimilation process. Quite often, they were obliged to accept the language of the majority (Bulgar, Mamlūk, Ḳipčaḳ, etc.). Also, cohabitation with other peoples led to a cultural-linguistic symbiosis which eventually expressed itself in the form of strong bi- and multilingualism (e.g. Turkic/Iranian, Armenian, Greek, Russian, etc.). This linguistic framework formulated the basis for mutual linguistic influence.

The available sources of the early history of Turkic peoples (scanty reports from the Byzantines, Chinese, Arabs, etc.) as well as evidence offered by linguistic monuments and linguistic traces in contemporary languages, cover a large chronological period in a vast geographic area. The nature of these sources displays a unique diversity which changes from area to area, and from epoch to epoch requiring, therefore, different methodological approaches in their analysis. However, the huge network of linguistic evidence is incomplete in many areas. Even in the case of well-documented peoples such as the K̲h̲azars [*q.v.*], the Pečenegs [*q.v.*], etc., we have no coherent linguistic records. Therefore, there is only indirect evidence which leads us to believe that these idioms belong to the Turkic language family. Furthermore, there are certain cases in which there is a lack of any clear proof for the connection between the linguistic evidence and the supposed users of this language (e.g. the case of the Ḳarluḳs [*q.v.*]).

2. *Prehistory*

Comparative evidence. A comparative study of

Turkic, Mongolian, and Manchu-Tungus languages provides us with a variety of evidence regarding their prehistory. The common loanwords that exist in this very early period, undoubtedly prove the close contacts and relations that existed among these groups. At the same time, these linguistic data assist us in the localisation of the original habitat and subsequent migrations of Turkic peoples.

From the accepted, but differently interpreted, linguistic correspondences, there are two which are particularly important for the prehistory of Altaic languages. The first one is the Turkic initial *h-/ø-* ~ Mongolian *f-* ~ Manchu-Tungus *f-* ~ *p-*, which allows a reconstruction **h-* < **f-* < **p-*. (It is necessary to add that the Turkic initial *h-* has been, only recently, attested in the newly-discovered archaic dialect: see Doerfer, in *UAJb*, N.F., i [1981], 93 ff.) At the same time, the possible links of this correspondence with Uralic languages underline its historical importance (see Poppe, 151-2).

The second one is the so-called rhotacism and lambdacism, which is the essential element of controversy between the "pro" and "anti" Altaists.

T. Tekin, an adherent of the genetic relationship of Altaic languages, calls these correspondences "the main pillar of the Altaic theory" (*CAJ*, xxx [1986], 141 ff.) and explains that "It has long been established that Common Turkic *z* and *š* correspond to *r* and *l* in Chuvash, e.g. Com. Turk. *toḳuz* "nine": Chuv. *tăχăr*, *tăχχăr* "id." Com. Turk. *tāš* "stone": Chuv. *čul* "id." These sound correspondences were first called and are still referred to as "rhotacism" and "lambdacism", because, at the beginning, it was generally believed that Chuvash *r* and *l* had originated from Turkic *z* and *š* respectively. Later on, when it was discovered that Common Turkic *z* and *š* are represented by *r* and *l* also in Mongolian and Manchu-Tungus, an exactly opposite theory on the priority problem was put forward by Ramstedt, the founder of Altaic comparative linguistics. According to Ramstedt, Chuvash and Mongolian *r* and *l* were older than Turkic *z* and *š*, and the latter had developed from *r* and *l*. In support of this theory, which may better be called "zetacism" and "sigmatism", cf. T. Tekin, in *AO Hung.*, xxii (1969), 51. Opponents of the Altaic theory regard the vocabulary material (which reflects these phenomena) as borrowings which resulted from very old contacts, probably between "proto-languages".

The endless debates over this problem have brought about a consensus on one point only: both sides agree that the phonetic issuing-point in the reconstruction, which was originally supposed as **r'* or **ř* > *r* ~ *z*; **l'* or **ľ* > *l* ~ *š* (see Ramstedt, in *JSFOu*, xxxiii/1 [1922-3], 26 ff.; Poppe, in *Ungarische Jahrbücher*, vi [1926], 107 ff.) should be *ri̯*, instead of *r'*, and *li̯*, instead of *l'*, respectively. The isoglosses of this correspondence divide the old and contemporary Turkic languages into two groups. This division, which was attested at a very early stage of research, has given scholars the opportunity to trace back an important event in the history of Turkic peoples and to try to link it with concrete events of history.

First linguistic traces. Chinese historical works have given special attention to nomadic peoples, who were a constant threat to the northern parts of the Chinese Empire. Nevertheless, the linguistic evidence of these sources is very scant and does not therefore allow for an exact identification of languages used by these peoples.

From an investigation of a Hiung-nu distich (4th century) and some T'o-pa (Tabgač) words (4th-5th centuries), both recorded in Chinese script, there arise specific problems in phonetic reconstruction, since they are considered as traces of a Turkic language (Bazin, in *Oriens*, i/2 [1948], 208 ff.; idem, in *T'oung Pao*, xxxix [1950], 228 ff.). The objections against these interpretations underline the fact that research on this subject cannot be regarded as satisfactorily closed (von Gabain, in *Isl.*, xxix/2 [1949], 244 ff.; Doerfer, *Elemente*, i, 96; idem, in *CAJ*, xvii [1973], 4).

Other approaches to the problem of linguistic relations, with respect to the nomadic empires of the Sien-pi (4th century) and the Juan-juan (5th-6th centuries), such as that of P. Pelliot, have remained in a stage of hypothesis (W. Barthold, *Histoire des Turcs d'Asie Centrale*, Paris 1945, 19).

Nomadic peoples from Asia, who moved in an early period westwards and eventually settled in an area around the North Caucasus and Black Sea and in Pannonia, were in close contact with various neighbouring civilisations (Byzantium, the Roman and Frankish Empires). Yet the sources relating to these peoples contain only some incoherent data for linguistic analysis. The interpretation of this material (names, titles and single words) presents many difficulties. As far as the names and titles are concerned, it is generally viewed that they cannot be accepted as indisputable proof for linguistic identification.

With regard to linguistic material from the Huns, a nomadic group which settled in Pannonia (4th-5th centuries), this has been interpreted several times. The opinions are very diverse. Scholars such as Németh (in *Orientalia Suecana*, ix [1991], 179-87) and O. Pritsak (in *ZDMG*, civ [1954], 124 ff.) consider the data on the Hunnic language as proof of the Turkic origin of this group. On the other hand, Doerfer argues that the available data is completely insufficient and ambiguous, and categorically refuses to accept the former hypothesis (*CAJ*, xvii [1973], 1 ff.).

With regard to linguistic material from the Avars, a nomadic group which also settled in Pannonia (5th-8th centuries), analysis has also been extensive. Németh represents the opinion that Turkic linguistic traces can be attested to the language of the Avars. A recent analysis of a runiform inscription found in Hungary, dating from the 8th century, attributes this text to the Avars (J. Harmatta, *Avarların dili sorununa dair*, Ankara 1988). Further validation may transform this discovery into a major breakthrough in the linguistic identification of nomadic groups living in this area and at this period.

The investigation of language relations in nomadic empires of a multi-ethnic and multi-lingual character, and the attempts to clarify the attested language relics which probably represent the language of the ruling clan, have come to a consensus on one point: although there is no direct evidence which proves the Turkic linguistic presence in the above-mentioned areas and periods, it is safe to say that Turkic elements were present during the large-scale migrations of nomadic peoples in the greater area between Inner Asia and Central Europe (Menges, 16 ff.).

3. *Emergence*

According to historical evidence, the Turkic-speaking peoples are attested for the first time in the 6th century A.D. Their presence is related to two geographical areas, namely Inner Asia (the region of the Orkhon river [*q.v.*]) and Eastern Europe (the Pontic region).

In Inner Asia, a new nomadic power emerges in the middle of the 6th century. The ruling clan bears the name Türk, which is later used with reference to

the whole of the rapidly-growing empire. The rulers of this state have bequeathed to us the first coherent texts (inscriptions on funeral steles written in an ancient Turkic idiom), which clearly display the character of a *z-/š*-language.

In Eastern Europe, the presence is manifested in a larger geographic triangle (Pontic, Balkan and Volga regions), which is represented by the Bulgars [see BULGHĀR]. This tribe, being one of the so-called Og͟huric peoples, is manifestly present in the Pontic region in the 5th-7th centuries. Later, due to a historical separation in the 7th century, they moved to the north-east of the Balkans, near the Danube river (after the end of the 7th century) and, at an unknown date, also to the Volga region (Moravcsik, i, 66-7). The language of the Bulgars in the north-east of the Balkans is the so-called Danube Bulgarian. This language is attested only from sporadic relics, words, titles and names as well as from loan-words borrowed by local Slavonic, an ancient form of contemporary (Slavic) Bulgarian. The language of the Bulgar ruling clan was absorbed by the surrounding population, resulting in the rapid loss of the original Turkic language. The most important linguistic record of this language is the "list of Bulgarian princes" ("Bulgarische Fürstenliste"). The language of the Volga Bulgars has been preserved in funeral inscriptions, written in the Arabic script (14th-15th centuries). These short but coherent texts are extremely important linguistic monuments for the investigation of the history of this idiom.

Early Turkic loan-words in the language of the Hungarians (who lived in the vicinity of Og͟huric peoples, following their gradual migration between the 6th and 9th centuries), display an organic connection with the first two groups of linguistic evidences.

Despite the facts that all these records have been discovered in regions far from each other, are diverse in nature, and represent different eras, they have a common character with regard to the main characteristic feature *r-/l-* versus *z-/š-*. This element manifests the linguistic unity of the various Bulgar groups. The extinct language of the Volga Bulgars represents a link between the old dialects of the *r-/l*-type and the Chuvash language, the only contemporary Turkic idiom which possesses this phonetic feature.

The earliest unambiguous evidence pointing to the history of the Turkic languages exhibits two distinct types of languages from a phonetic point of view, which were present in two remote areas of the Eurasian continent. The split of the Turkic languages into two groups is clear evidence of the early move of Turkic tribes bearing the *r-/l*-idiom towards the West. It is worth mentioning that at this same time (i.e. in a very early period) the *r-/l*-language type has not been attested in the East, and vice versa, the *z-/š-* type in the West, a fact probably mainly due to the lack of sources in this early historical period.

Many attempts have been made to link the early division of Turkic languages with the migrations of nomadic peoples known from historical sources. Since the generally-accepted view, which connects the appearance of the *r-/l*-language type in Eastern Europe with the historical migration into and presence of the Huns in the same area, lacks completely convincing evidence, it should only be regarded as a hypothesis. Nevertheless, there is no doubt that the move of the Huns from the East to the West, and the migrations of other significant nomadic peoples, caused important changes in the geographical distribution of languages in the area.

However, in this context, we have to take into consideration the fact that the *r-/l*-language type (as shown by Németh, in L. Ligeti (ed.), *Analecta orientalia memoriae Alexandri Csoma de Körös dicata*, Budapest 1942-7, i, 57 ff., and Menges, 55 ff., and recently underlined by M. Erdal, *Die Sprache der wolgabolgarischen Inschriften*, Wiesbaden 1993, 162) might have had important links with the Siberian area which was not the main scene of the migration of the Huns (see O. Pritsak, *Die bulgarische Fürstenliste und die Sprache der Protobulgaren*; Ligeti, *A propos des éléments "altaiques" de la langue hongroise*, in *Acta Linguistica Hungarica*, xi [1961], 15-42; Erdal, *op. cit.*).

4. *The historical formation of language territories*

Contemporary Turkic languages are spread over a large part of the Eurasian continent, extending from North China to the Balkans, and from north-eastern Siberia to the Arabic Near East. The majority of the larger languages (Uyg͟hur, Uzbek, Ḳirg͟hiz, Kazakh, Turkmen, Ād͟harī and Turkish) form almost a coherent linguistic block, whereas some other widely-spoken languages (Tatar, Bashkir and Chuvash) and minor idioms, (Yakut, Altai, Khakas, Tuvinian, Kumuk, Nogai, Karaim and Karachai-Balkar) are, to a certain extent, in a marginal or even insular position in relation to the nucleus of the language territory.

This historical formation of the geographical extension of Turkic languages is documented by written sources dating from the 6th century, but lack of sources makes the exact linguistic background of migrations prior to this period unknown to us. The present extension and stabilisation of the immense Turkic language territory is the result of migrations and conquests which took place throughout the 6th-12th centuries. Hence tables of the distribution of Turkic languages recorded in historical sources of the 11th-12th centuries essentially correspond to the contemporary situation. The main linguistic groups occupy the same geographical areas: the "Uyg͟hur group" occupies the southeast, the "Oyg͟huz group" the southwest, and the "Ḳipčaḳ group" the northwest of the language territory. This distribution survived the upheaval of the Mongol invasion (13th century) which, on the one hand, caused significant migrations, especially in the Ḳipčaḳ area, while on the other hand, it consolidated existing linguistic relations in Central Eurasia (see A. Samoilovitch, *EI*[1], art. *Turks. II. The Turkish languages*. 3, at IV, 912; T. Halasi-Kun, in *Analecta Orientalia memoriae Alexander Csoma de Körös dicata*, 140; C. Brockelmann, *Osttürk. Gramm.*, 5; Sir Gerard Clauson, *Turkish and Mongolian studies*, London 1962, 31-33, 47).

The origin of geographically marginal or linguistically incoherent areas are the product of either ancient or relatively recent migrations (Chuvash, Yellow Uyg͟hurs, Salars, and Yakuts) or the expansion of other languages (Russian in the Eastern Europe, Siberia and Central Asia) resulting in the ethnic-political transformation of Central-Eurasia.

In the central area, after the 14th century, only a few migrations contributed to the formation of language territories (e.g. the eastward movements of the Turkmens; the Ḳipčaḳ-Uzbek migration to south-Central Asia; the re-settlement of the Ḳirg͟hiz and Taranchis; the move of the so-called Truhmens, i.e. Türkmens, to the north, the westward and southward Ottoman colonisation; the northward migration of the Gagauz, etc.).

In the 20th century, certain historical developments (population exchanges, deportations, etc.), in certain language districts have resulted in the re-formation of the distribution of Turkic speakers (Turkey, Greece, the Crimea, the Caucasus and Cyprus). Massive immigration of Turkish workers in Western Europe in

recent decades has resulted in the extension of the sphere of influence of this idiom.

Today, Turkic languages are spoken in China, Mongolia, the CIS (either in independent or autonomous political units), in Afghānistān, Iran, 'Irāḳ, Jordan, in some Balkan countries, in Cyprus and in certain West European countries (Germany in particular).

5. *The written and literary idioms*

Preliminary remarks

The emergence of Turkic written and literary languages is related to different geographical-cultural areas and ages which, from a chronological perspective, clearly reflect a process of the historical diffusion of Turkic peoples from Inner Asia towards the West. The cultural centres of various areas, which in certain epochs existed and had an effect simultaneously, often reflected the interrelation of each other. Consequently, they were open to influences beyond their own political boundaries and dialectal backgrounds. This was manifested in the structure of idioms in use. Generally speaking, we can observe the "open" character of these literary idioms. This is true since, in the same period, different dialectal factors affected, in parallel, the development of language.

The structure of the writing systems used during these centuries, certainly strengthened this trend, even in the frequently-used Uyghur and Arabic scripts. In other words, the lack of exactness of these alphabets, given their phonetic realities, created a degree of flexibility in the dialectal realisation of literary idioms. This resulted in the easy recognition of written products which would originate from other dialectal spheres and ultimately, the mutual acquaintance of languages which extended beyond standard dialectal borders. These unique historical circumstances led therefore to strong linguistic interrelations as a result of language intermingling. Not surprising, a certain dialectal "overlapping" in the given literary idiom was very often observed.

The emergence and development of different literary languages was closely related to the religion accepted and used by the given community. The historico-cultural background widely influenced the formation of language. The acceptance of a particular religion also led to the acceptance of loanwords, while offering new options for their writing systems. The literary idioms which emerged after the 8th century in the immense area of Eurasia, corresponded to the needs of peoples who used Turkic languages for many centuries. In the Turkic linguistic territory one may observe the development of linguistic-literary norms which continued well into the 19th and 20th centuries: in the southeast, the Uyghur-Ḳarakhānid-Čaghatay, in the northwest, the Ḳïpčaḳ, and in the southwest the Oghuz. Despite the geographic shift of political and cultural centres in the southeast (Inner and Central Asia), the literary idioms which emerged display a chronological continuity which is evidence for their close linguistic relationship (particularly in structure). The northeast and related areas display a diversity in the available sources due, to a large extent, to historical circumstances which failed to produce a common line of development. The literary language of the southwest, associated with the most significant political power in the history of Turkic peoples (sc. the Ottoman Empire), manifests strong normalisation and clear continuity. In the Caucasian-Caspian region (on the fringes of the Ottoman Empire and incorporated in other political units) a separation took place at the level of the literary languages. The immense bulk of linguistic records, inscriptions, manuscripts and documents, which have reached us from different areas and epochs of the Turkic languages, present very specific problems. Many texts are not dated or exist only in later copies, and this fact has burdened the clarification of the chronological components of their language history.

Turkic languages came into contact with many writing systems during their history. The first one was the so-called runic script (of Semitic, Aramaic origin), which was of a semi-syllabic character. The available monuments reveal that its diffusion area stretched from Inner Asia to Eastern Europe, also probably involving non-Turkic idioms. The use of Sogdian, Estrangelo, Manichaean, Brahmi, Tibetan and Syrian scripts remained restricted to Inner Asia. The Uyghur script, which emerged from speed writing used in Sogdia, was used mainly in Inner Asia but was also known in Central Asia. The few documents written in the Uyghur script and found in West Asia (Ottoman Anatolia) do not prove its widespread use. The Arabic script came into use after the 7th century in all major areas of Turkic languages (the first attestation dates to the 11th century). In addition, the Greek and Armenian alphabets were used in the Western sphere of the Turkic languages. Finally, many texts from the same area, written by foreigners, often for missionary purposes, appear in Latin, Cyrillic and Georgian alphabets (14th-19th centuries). All these writing systems require specific methods for their linguistic evaluation. In the 1920s, due to state-guided language policies, Latin and Cyrillic scripts dominated Turkic languages and marginalised the Arabic script. The big political changes in the Turkic world in the 1990s have also signalled the first steps toward the reformation of the present set-up (the content of which remains vague).

The Turkic peoples, originally followers of shamanism and "Tanriism" (Doerfer [see TAÑRÏ]), became associated with Manichaism, Buddhism, Taoism, Judaism, Islam and Christianity. The religious-cultural background of a given group of written texts substantially determines the scope and method of linguistic research necessary for their study.

Bibliography: Unfortunately, there is no general survey regarding the vast number of Turkic linguistic remains, but the available studies offer good overviews of these sources. Since they deal with this material either from a geographical, chronological or linguistic point of view, they often overlap, but this is nevertheless useful for the assessment of individual monuments.

The best comprehensive survey about the whole of the Turkic language monuments is offered by the relevant chapters in the two volumes of *PTF*, by now, however, sometimes obsolete due to the rapid progress of research. A very selective, but useful short list includes: M. Räsänen, *Ein Überblick über die ältesten Denkmäler der türkischen Sprachen*, in *SO*, xiii/1 (1946); M. Mansuroğlu, *Turkish literature through the ages*, in *CAJ*, ix (1964), 81-112; S. Tezcan, *En eski Türk dili ve yazını*, in *Bilim, kültür ve öğretim dili olarak Türkçe*, Ankara 1994, 271-323. Bibliographies supplying introductions to the pre-Islamic period: A. von Gabain, *Einführung in Zentralasienkunde*, Darmstadt 1979; W.E. Scharlipp, *Die frühen Türken in Zentralasien. Eine Einführung in ihre Geschichte und Kultur*, Darmstadt 1992. Grammars: von Gabain, *Alttürkische Grammatik. Mit Bibliographie, Lesestücken und Wörterverzeichnis*, 3rd ed. Wiesbaden 1974 (Turkish ed. *Eski Türkçenin grameri*, Ankara 1988); V.G. Kondrat'ev, *Grammatičeskiy stroy pamyatnikov drevnetyurkskoy pis'mennosti viii-xv vv.*, Leningrad 1981. Dictionaries: V.M. Nadelyaev *et alii*, *Drevnetyurkskiy slovar'*, Leningrad 1969 (pp. xxi-xxxviii:

Spisok istočnikov = list of sources); Clauson, *An etymological dictionary of pre-thirteenth-century Turkish*, Oxford 1972 (authorities quoted: pp. xiii-xxxi); K. Röhrborn, *Uigurisches Wörterbuch. Sprachmaterial der vorislamischen türkischen Texte aus Zentralasien*, 5 fascs., Wiesbaden 1977-94 (pp. 17-28: *Bibliographie*; successive supplement in each fascicle).

Inner Asia (1). The region of the Orkhon, Talas and Yenisei rivers.

The epigraphic monuments of these areas, which date from the 7th to the 10th centuries and have a diverse geographical-political background, are the most ancient records of Turkic languages. Some of them, especially the long and coherent inscriptions of the Orkhon [*q.v.*] Turks, enable us to analyse the structure of the language in detail. The majority of these texts are written in the so-called runic scripts (some scholars prefer to use the equally ambiguous term runiform). Although they display a degree of structural unity, minor differences have been established. Based mainly on these pieces of evidence, attempts have been made to define various trends which influenced the formation of the language.

Surveys of the linguistic texts. The above-mentioned dictionnaries offer a comprehensive register of sources, which may be completed, especially with regard to new publications by G. Doerfer, *Versuch einer linguistischen Datierung älterer osttürkischer Texte*, Wiesbaden 1993. Anthology: S.E. Malov, *Pamyatniki drevnetyurkskoy pis'mennosti. Tekstî i perevodî*, Moscow-Leningrad 1952. The Runic monuments. Survey: D.D. Inner Asia (2). The region of the Tarim Basin (Turfan) and Kansu (Dunhuang).

The Uyghurs, under the pressure of the Ķîrghîz [*q.v.*], left their former habitat in the north (9th century), and moved to northern China (the present province of Kansu) and to the Tarim basin. In both regions, they established independent political units and created a culture which integrated different religions. Due to chance, a great number of manuscripts and wooden block prints, mostly of a religious character, have survived and form therefore a solid basis for the investigation of this ancient idiom of the Turkic languages. The Mongol invasions put an end to the flowering of the Uyghur culture. However, the literary language was in use to a certain extent up to *ca.* the 18th century. The language of the Uyghur texts can be regarded as an organic continuation of the former idiom as represented by the epigraphic monuments. Despite a relative unity and stability in structure, over the centuries we find certain cases in which some features underwent a slow, successive change.

It has been long accepted that Manichaean texts written in this script represent the oldest layer within this group of monuments. The Buddhist texts in Uyghur script (translations of well-known religious-literary works) belong to the middle layer. The youngest group, formed mostly by juridical documents and wooden block prints (also of a Buddhist content) belong to the Mongol period. Recent research, which has integrated a series of criteria including external and internal linguistic features, has offered a more detailed chronology of these linguistic monuments.

Surveys of the language monuments. J.P. Laut, *Der frühe Buddhismus und seine literarischen Denkmäler*, Wiesbaden 1986; idem and Röhrborn, *Der türkische Buddhismus in der japanischen Forschung*, Wiesbaden 1988; P. Zieme, *Religion und Gesellschaft im Uigurischen Königreich von Qočo*, Opladen 1992 (pp. 16-45, *Buddhistische Schrifttum der Uiguren*). Inner Asia (3). The region of Kāshghar.

The Kingdom of the Ilek-Khāns [*q.v.*] (in Turkological literature, the Ķarakhānids, 9th-12th centuries), was founded by tribes which formerly lived in the West Turk Empire but later moved to the area of Kāshghar. The conversion of the dynasty to Islam (10th century) created new conditions for the future development of Turkic languages. The literary idiom which emerged in the next century followed the Uyghur language tradition but experienced the consequences of new religious-cultural circumstances. The first literary works (the *Ķutadghu bilig* [*q.v.*], and the linguistic compendium *Dīwān lughāt al-Turk* of Kāshgharī [*q.v.*]), were written in the Arabic script. The latter one, which contains extensive word material, includes texts (proverbs and samples of folk poetry) which give a detailed account of Turkic languages in the 11th century and is, therefore, a source of immense linguistic value. The *ʿAtabet al-ḥaḳā'iḳ*, a didactic work of Aḥmed Yüknekī (11th or 12th century [see AḤMAD YUKNAKĪ]), also belongs to this literary idiom, the so-called Kāshgharī or Khāḳānī one. The structure of this language illustrates organic ties to the former Turkic literary idiom which was established in Inner

Asia and manifests the clear continuity of linguistic development (Poppe, 67; Doerfer, *Versuch*, 219 ff.).

General works (some of them concern also the following periods): A.N. Samoylovič, *K istorii literaturnogo sredne-aziatskogo-turetskogo yazïka*, in *Sbornik Mir-Ali-Shir*, Leningrad 1928, 1-23; C. Duxbury, Mass. 1982-5; Kâşgarlı Mahmud, *Dîvânü lûgati't-türk*, Ankara 1990.

Central Asia (1). The region of Khʷārazm. Khʷārazm [*q.v.*] is considered as a crucial region in the history of Turkic peoples since it was a crossroad of different Turkic elements (Uyghur, Oghuz and Ḳïpčaḳ). The literary idiom which emerged in this area (14th century) clearly reflects the intermingling and merging of these languages. The Khʷārazmian literary language, which was also used in the *Dasht-i Ḳïpčaḳ* [*q.v.* in Suppl.] in the lands of the Golden Horde, was a clear continuation of the literary idiom of the former period with respect to its structure.

Central Asia (2). The region of the Tīmūrid cultural centres.

The Čaghatay language, which emerged in the Tīmūrid empire and flourished in the cultural centres of Bukhārā and Samarḳand, is an Islamic Central Asiatic literary language which reached a high stage of development. It was used over the centuries in a vast geographic area which stretched from Inner Asia to the Crimea and the Volga region. This sophisticated literary language also met the needs of the Ḳïpčaḳ and Oghuz peoples. Mīr 'Alī Shīr Nawā'ī [*q.v.*], who is considered the most outstanding figure of Čaghatay literature (if not its founder), contributed to the standardisation and the strengthening of its Turkic components, although it has remained (to a certain extent) open to other Turkic literary idioms and has tolerated their impact.

Eckmann (in *Studia altaica. Festschrift für Nikolaus Poppe*, 51 ff.), who emphasised the organic links of this language with former literary idioms, suggested the following stages of its history: (1) Pre-classical period (from the beginning of the 15th century to the composition of Nawā'ī's first *dīwān* in 1465); (2) Classical period (1465-1600) with such representatives as Ḥusayn Bayḳara, Nawā'ī, Bābur, Bayram Khān, etc.; and (3) Post-classical period (1600-1921), characterised on the one hand by the careful imitation of Nawā'ī's language and, on the other hand, by the penetration of Uzbek elements.

Eastern Europe and its diffusion areas

The first monument representing the language of this area is the *Codex Cumanicus*, appearing at the turn of the 14th and 15th centuries. It is a compendium of specimens (some of them translations of religious texts), grammatical examples and glossaries, composed for missionary purposes. In the notes of the texts, the language is referred to as *comanicum* and *chomaniche*, while in the texts themselves, we find the terms *tatarče* and *tatar til*. It represents dialects spoken in the area of the Ḳïpčaḳ [*q.v.*; see also DASHT-I ḲÏPČAḲ and ḲUMAN). Texts from the Crimea, despite Ottoman influences, also reflect Ḳïpčaḳ influences, explaining the formation of the mixed language characteristic of the local population. The sources are mostly official documents which originate from the successor khānate of the Golden Horde; this link is also reflected in the emerging Tatar literary language.

The Armenians of south-western Ukraine (originating from the Crimean community) were in permanent

contact with Ḳîpčaḳ Turks through their trading activities. As a result, they accepted this linguistic idiom as their administrative and religious language. Of this we possess many 16th-17th century records (official documents, language manuals, religious texts, etc.) which reflect a specific dialect of the Ḳîpčaḳ languages.

Under the rule of the Mamlūks [*q.v.*] in Egypt and Syria (13th-16th centuries), we witness the emergence of a Turkic literary idiom which in structure resembles the literary idiom of Kh^w^ārazm, reflecting the mixed Ḳîpčaḳ-Oghuz provenance of the ruling class which emerged from slaves purchased by the Ayyūbid [*q.v.*] sultans and *amīrs* from the Pontic and north Caspian areas. The linguistic records can be divided into three groups: (a) Mamlūk-Ḳîpčaḳ proper (structurally very close to the literary idiom of Kh^w^ārazm); and (b) a mixed Oghuz-Ḳîpčaḳ dialect with two sub-groups: (1) a dialect with prevailing Ḳîpčaḳ elements, and (2) a dialect with prevailing Ottoman Turkish elements.

On the other hand, the literary activity of the Mamlūk period displays close ties to other Turkic areas, mainly to Kh^w^ārazm and to Istanbul (also attested by linguistic evidence). Daily contact between the ruling class and the Arab population created the need for compiling grammars and dictionaries; these used Arabic linguistic models, and likewise reflect the mixed character of the language used in the Mamlūk-Ḳîpčaḳ area.

West Asia (1). Anatolia.

Although Anatolia was conquered by the Saldjūḳs [*q.v.*] of Oghuz [see GHUZZ] origin at the end of the 11th century, it is not until the end of the 13th century that we find the first written literary works which attest this idiom. The first works exhibit strong influence from the Turkic language tradition of the east (orthography and grammar), which disappears with the gradual standardisation of the norm of the literary language. Literary activity in the first period arose in various politico-cultural centres in Anatolia, following the collapse of the Rūm Saldjūḳ state, and because of this, the richness of documentation is not comparable with other Turkic languages. Because of strong Arabic-Persian influences, careful analysis is necessary in order to discern the Turkish core of this language material. The language of this period tends now to be called Old Anatolian Turkish instead of the former Old Ottoman, a term which lacks historical validity. The emergence of the centralising Ottoman rule created entirely new conditions for the development of this literary idiom. The written language experienced enormous Arabic and Persian influences, effectively creating a gap between the written and spoken tongues, and it was the task of language reform in Turkey in the 20th century to deal with this linguistic gap.

In the sphere of historical phonetics, a large group of records written in non-Arabic tongues (Latin, Greek, Armenian, Georgian, Cyrillic, Hebrew and Syriac), including grammars and dictionaries (composed mostly by Europeans), present source material of immense value for their investigation; first attempts at periodisation have made it clear that the final solution to the problem will arise from systematic and statistically-based linguistic search.

A survey of literature concerning the history of the idiom is given in the related chapters in Hazai, *Kurze Einf.*, and *Handb. d. t. Sprachw.*

The Oghuz background: Z. Korkmanz, *Das Oghusische im XII. und XIII. Jahrhundert als Schriftsprache*, in *CAJ*, xvii (1973), 294-303; M.I. West Asia (2). The South-Caucasian region. In Ādharbāydjān, widespread literary activity has been attested over centuries. Nevertheless, the literary language was not "able to make progress against the influence on the one hand of Persian culture and on the other of the Ottoman Turkish. The rehabilitation of Ādharbāydjānī or Ādharī [*q.v.*], which is closely related to the spoken dialect, began in the middle of the 19th century in Transcaucasia (Mīrzā Fatḥ ʿAlī Akhundov). It became strongly influenced by Ottoman Turkish at the beginning of the 20th century..." (A. Samoilovitch, *EI*[1], art. *Turks*). Even though the local dialect left many traces in certain literary works, its development was concealed by the written idiom, which was dominated by the Ottoman norm. It is accordingly difficult to ascertain purely through language texts the historical separation of the local dialect and its emergence in the literary language (probably during the Ṣafawid period (see G. Doerfer, in *EIr*, v/3, 226).

A thoroughly selected informative survey is offered by I. Bellér-Hann, *A history of Cathay. A translation and linguistic analysis of a fifteenth-century Turkic manuscript*, Bloomington, Ind. 1995 (Bibliography: 188-200). See also Doerfer, *Azeri (Ādarī) Turkish (= Azerbaijan. viii)*, in *EIr*, iii/3, 245-8.

West Asia (3). The East Caspian region. It is generally accepted that the Turkmens played a significant role in the early (Khʷarazmian) period of Islamic Central Asian Turkic literature, but they later came under the influence of the Čaghatay language (Samoilovitch). Poets who lived in the 18th-19th centuries essentially used this language (Z.V. Togan, in Spuler (ed.), *Altaistik*, 244), and traces of the local idiom can be attested in selected manuscripts of their works. The modern Turkmen literary language emerged only in the Soviet period (Baskakov, *Tyurk. yaz.*, 91).

See M.N. Khïdïrov, *Nekotorïe voprosï po istorii turkmenskogo yazïka*, Ashkhabad 1975; Z.B. Mukhammedova, *Issledovaniya po istorii turkmenskogo yazïka XI-XIV vekov*, Ashkhabad 1973; S. Ataniyazov (ed.), *Türkmen dilinin tarïkhï grammatikasïnïn problemalarï*, Ashkhabad 1980.

The emergence of contemporary literary languages

The second half of the 19th century is considered a turning point in the history of Turkic literary languages. During this period, we have two main idioms: Čaghatay (in its late "post-classical" version) in the east and Ottoman in the west which, in both cases, were used by Turkic peoples. Čaghatay was used by Turkic peoples of Central Asia, the North Caucasus and the Volga region; historically, it belongs in the Uyghur-Ḳïpčaḳ linguistic area and includes many versions due to strong influences from local idioms. Ottoman, beyond the borders of its empire, broadly influenced the linguistic development of the Crimea and Ādharbāydjān (the so-called West Oghuz area).

The economic, political and cultural challenges of this period created a completely new socio-cultural situation which included both integrating and separating tendencies. Language, being one of the most important factors of self-identification, and at the same time, an important instrument of economic-cultural development and modernisation, partook of these trends in the realm of Ottoman socio-political life. On the other hand, the Turkic world further east was confronted with similar challenges but under very different circumstances. Its geographic isolation and fragmentation, and its lack of a common political centre, was in sharp contradiction with the situation in the west, where the Ottoman Empire was a strong and centralised power.

Following the Russian conquest and integration of Central Asia, one may observe two opposing trends: nationalist and local. The first one emerged in the Crimea and is closely associated with the name of Gasprali [*q.v.*], who represented the idea of language unity (*dilde birlik*) and was actively involved in the creation of a new common language for all Turkic peoples. The second one was expressed by strong efforts to create literary languages on the basis of local idioms. This trend coincided with the ambitions of Imperial Russia which followed a policy of "divide and rule" and favoured tendencies of separation. The appearance and rapid unfolding of regional written idioms of Tatar and Bashkir (based on the Ḳïpčaḳ tradition), of Uzbek and (New-) Uyghur (based on the Čaghatay tradition, but also assimilating Ḳïpčaḳ elements), and of Ādharbāydjānī (based on the Ādharī variant of the common Oghuz tradition), was the result of the abovementioned tendencies.

The results of this linguistic evolution became clear in the 20th century, with the creation of the Soviet Union and the Republic of Turkey. This new political set-up was bound to strengthen and even seal the linguistic fragmentation of the Turkic peoples. The creation of new literary languages, Moscow's policy of Russification and Sovietisation, the changes in the writing systems of both countries, and finally, the language reform of Turkey, completed a process which had begun at the end of the 19th century.

The immense political changes of the Turkic world which have resulted from the dissolution of the Soviet Union, have not left untouched the issue of language. We are currently witnessing the emergence of old and new options for the formulation of language policy in the newly-independent Turkic republics. For example, preliminary steps have been taken in the direction of the introduction of the Latin alphabet at the expense of Cyrillic. Such steps demonstrate a tendency of linguistic rapprochement, the ultimate results of which remain to be seen.

General surveys with extensive bibliographies: A. Bennigsen-Ch. Lemercier-Quelquejay, *La presse et le mouvement national chez les Musulmans de Russie avant 1920*, Paris-The Hague 1964; E.A. Allworth, *Central Asian publishing and the rise of nationalism*, New York 1965; I. Baldauf, *Schriftreform und Schriftwechsel bei den muslimischen Russland- und Sowjettürken (1850-1937). Ein Symptom ideengeschichtlicher und kulturpolitischer Entwicklungen*, Budapest 1993.

6. *Alphabets used in the course of history*

The oldest writing system of Turkic peoples is the so-called runic alphabet, which was used mostly for inscriptions on stone discovered in the Yenisei, Talas and Orkhon regions; the name reflects a certain resemblance to the Old Norse inscriptions, but the more precise term runiform is preferred. It is widely believed that the Turks became acquainted with this script through Sogdian-speaking Nestorian Christians (Menges, 67). The inscriptions of the Orkhon region

(8th century) illustrate, in comparison to other areas, a degree of normalisation. The script has also been attested in a number of manuscripts.

In Inner Asia, which in early Turkic history was a crossroad of different cultures and religions, Turkic peoples were exposed to a large number of alphabets. The well-documented Manichaean script has been traced back to the Syriac Estrangelo, being "only its slightly modified form" (Menges, 69). One form of the Sogdian alphabet, which is also traced to another variant of the Aramaic script, was the source for the development of the Uyghur script (which appears in texts of the Tarim Basin and in Dun-Huang). Syriac script was also used in texts by Nestorian Christians. The Brahmi script, introduced by Buddhist missionaries in Inner Asia, was also adopted in Turkic texts, and the clear rendition of vowels by this script is of great value for the history of phonetics. Certain texts also reveal the use of Tibetan.

In a relatively short period, the Uyghur script attained a dominating role in Inner Asia and effectively overshadowed parallel writing systems; this role lasted up to the transition to the Mongol script, which was later also inherited by the Manchus. The Uyghur script was also able to influence the parallel development of Islamic literary activities in Inner Asia.

The Arabic script was first adopted by Turks in Inner Asia (following essentially the Uyghur writing tradition) and expanded in the following centuries, the Oghuz literary usage of Anatolia being the second area of adoption of the Arabic script. In the initial period of adaptation, the script was infused with the eastern heritage, but local innovations quickly phased out this influence. The Hebrew alphabet was used by the Khazars (attested only in historical sources) and later, by the Karaims (which is still in use). A Ķïpčaķ group in the 16th century adopted the Armenian alphabet. The same alphabet was also used for Turkish spoken by Armenians living in the Ottoman Empire, thus leaving behind a large amount of written and printed material. The Greek alphabet was used by the Karamanlis (Turkish-speaking Orthodox Christians) in the Ottoman Empire, and its use is documented by literature, mostly of a religious character, which flourished over centuries. In the Ottoman period, we further find texts in the Latin, Syriac, Cyrillic and Georgian scripts written by Europeans, and these, which include grammars and dictionaries, are of great value for language history.

In the early 18th century, Russian missionaries introduced the Cyrillic script to a variety of Turkic-speaking peoples (Chuvashs, Tatars, Kazakhs, Yakuts, etc.). Among the Altai Turks and Tuvinians, the Mongolian script was used to "a very limited degree" (Samoilovitch, in *EI*[1], IV, 914). The Gagauz, who officially obtained in 1947 a writing system based on Cyrillic in 1947, used an amalgam of Cyrillic and Latin based on the Romanian alphabet (L.A. Pokrovskaya, in *Tyurk. yaz.*, 112-13). For Tatars living in Romania, the Latin script was introduced after World War II. Turkey introduced the Latin script in 1928-9. At the same time, the Soviet Union also introduced the Latin script, later replaced (in the 1940s) by the Cyrillic alphabet. Recent political changes have paved the way for a re-latinisation of Turkic languages.

Despite these revolutionary changes, which have affected the great majority of Turkic speakers in China, Turkic speakers in Afghānistān, Iran and ʿIrāķ continue to use the Arabic script. The Cyrillic alphabet introduced into Mongolia was also used by local Turkic languages. Finally, Turkish speakers in the Balkans and Cyprus adopted the new Latin script soon after the language reform of Turkey.

Bibliography: Poppe, 37-57; Menges, 67-71. For the alphabet changes in the Soviet Union, see Baldauf, *Schriftreform und Schriftwechsel bei den muslimischen Russland- und Sowjet-Turken 1850-1937* (with extensive bibl. and a useful chronological survey).

7. *General characteristics of their historical development*

Structure. It is generally accepted that Turkic languages "show considerable conservatism in the whole extent of their known history" (Samoilovitch, *loc. cit.*). With regard to their phonetic stocks and phonological systems, a comparison can be made between older and contemporary idioms. Such a comparison has illustrated considerable differences only in limited cases (mainly in marginal languages). On the other hand, the comparison of the Western Oghuz idioms with those of Central Asia, illustrates a certain "shift" in the articulation basis, which manifests a certain develarisation. Clearly, this has probably resulted from strong Indo-European, Iranian, influences (see A. Vambery). Sound harmony, the main element of morphological structure, has remained characteristic of almost all languages thus demonstrating a rather wide variety of realisation (Poppe, 181-4). Rupture or aberration was caused by foreign influences (i.e. the Iranisation of the sedentary Uzbek population; the Slavic influences on the Karaim, etc.; see Menges[2], 182).

While the morphological structure "is extremely resistant to both internal and external changes, the syntax is more vulnerable to influences and consequently changes" (*ibid.*). Introduction of subordinative conjunctions in Turkic languages, the original syntax-pattern of which is based on clause coordination, is the result of their long-standing contacts with foreign languages. The result of this influence varies according to the individual languages and may show a different picture at the level of the literary idiom and the spoken dialects.

Interrelations with other languages. Contact of Turkic languages with other idioms is reflected in evidence of linguistic interaction. The borrowings in their vocabulary clearly illustrate the extensive contact of Turkic peoples with other Eurasian civilisations and languages. At the same time, we find traces of Turkic loans in other Eurasian languages. The original word-stock of Turkic languages clearly displays influences from Paleoasiatic, Mongol, Uralic, Semitic and Dravidian languages. The diffusion of Turkic peoples in the south and west, and the creation of their successive literary languages through a process of cultural interaction, left their vocabularies exposed to foreign borrowings. The literary idioms of the east display clear Chinese, Iranian, Tokharian, Syriac, Sanskrit, Tibetan and, later, Mongol influences, together with a constant alteration of their character and intensity. The literary idioms of the west experienced Arabic and Persian influences. All Turkic literary languages in the CIS display strong Russian influences.

Due to the historical distribution of Turkic peoples, their languages came in close loan-contacts with many other local idioms, the input of which has remained regionally limited. The main source-languages of the south-east are Chinese, Mongolian, Manchu and Tādjīk; in the north-east, Mongolian; in the north-west, Uralic; and in the south-west, Arabic, Persian, Kurdish, Caucasian, Armenian, Greek and Balkan Slavic. In addition, Russian is an important source language for Turkic idioms of the CIS. The influence of West European languages on Turkish has been very strong for a long time. At a later stage, similar influences

appeared in other Turkic languages, often via Russian. Today, we are witnessing a strong and direct West European influence on Turkic languages. In turn, these protracted contacts also resulted in the substantial influence of many neighbouring languages (from China to the Balkans) by Turkic idioms.

8. *Genetic connections of idioms: classification*

The purpose of this approach is to codify, on the basis of concrete linguistic features and feature combinations, those idioms which exhibit a historical connection and common development. The resulting table will demonstrate the relationship of the given idiom to former stages of its linguistic development.

Traditional linguistic classification of Turkic languages is based exclusively on phonetic features. This classification reflects their inner development and complex differentiation process. The division between "central languages" and "marginal languages" (Chuvash, Yakut and K͟halad͟j), is generally accepted due to their significant linguistic divergence. However, the position of the later ones, especially of Chuvash, is debated since it reflects the position of the Altaic theory. Its followers regard it as an independent link in the Altaic language family. Its opponents do not recognise this specific role and regard it as one member of the Turkic language family.

The Central Turkic languages are divided into the following groups: Uyg͟hur (or Čag͟hatay) languages (Uzbek, New Uyg͟hur, Salar); Ḳîpčaḳ languages (Ḳîrg͟hîz, Kazakh, Karakalpak, Kumuk, Karachai-Balkar, Nogai, Crimean Tatar, Tatar, Bashkir); Og͟huz languages (Turkmenian, Ād͟harbāyd͟jānī or Ād͟harī, Turkish, Gagauz); the Altai, Khakas and Tuvinian languages. Within the Ḳîpčaḳ language group, according to the terminology of Menges (60), the following subgroups can be stated: 1. Ponto-Caspian languages (Karaim, Karachai-Balkar, Crimean Tatar, Kumuk); 2. Volga-Kama-West-Siberian languages (Tatar and Bashkir); 3. Uralo-Caspian languages (Kazakh, Karakalpak, non-Iranised or Ḳîpčaḳ Uzbek, Nogay, Ḳîrg͟hîz).

The marginal status of Yakut is explained by the late migration of these people to the north between the 13th and 18th centuries (Menges, 52). Khalad͟j, spoken in northern Iran, forms a very small and extremely conservative language island, which preserves a series of striking archaisms.

New attempts at classification, which deal with transitional features that link these languages in an organic continuum, focus on the position of individual languages and their relation to each other (Menges, 60-1; Doerfer, in *MT*, xi [1985], 1-34; Tekin, in *Erdem*, v/13 [1990], 129-39). Finally, the introduction of mathematical methods has given a new dimension to linguistic analysis, the results of which remain to be seen.

9. *Periodisation of language history*

The history of the majority of contemporary Turkic languages cannot easily be traced back to the origins. In contrast to Indo-European languages, there are no written linguistic monuments which form an uninterrupted continuum. Their development was concealed by the commonly-used Islamic literary languages (see above, iv, 5). Nevertheless, there are notable exceptions to this rule: Uzbek, New Uyg͟hur, Tatar, Turkish and Ād͟harbāyd͟jānī or Ād͟harī, respectively. The organic continuity of these languages and their former literary idioms are attested by extensive linguistic documentation. On the other hand, the simultaneous use of these languages by speakers of other idioms contributed, to a certain extent (at least in an abstract way), to their formation. Remarkable is the case of the Turkmens, whose role was more significant in an earlier rather than a later period (see Samoilovitch, in *EI*[1], Vol. IV, 912).

The use of the terms Old and Middle Turkic for pre-Islamic and Islamic Turkic languages, attested by many linguistic monuments, and the use of New Turkic for modern languages, is an old tradition. The exact content and scope of these terms have never been defined; this also explains their varying and complex interpretations of these terms (see *PTF*, i, pp. vii-viii; Poppe, 73). The boundary between Old and Middle Turkic is based not only on external linguistic factors, which by themselves may support such a distinction due to their organic regional-historical vicinity, but is also based on internal ones (see Eckmann, in *Studia Altaica*, Wiesbaden 1957, 51-9; Poppe, 67-8). In reality, this borderline between the Middle and New Turkic is represented by a period of transition: the disappearance of common literary languages and the emergence of new, independent idioms. In the case of West Og͟huz languages (Turkish and Ād͟harbāyd͟jānī or Ād͟harī), such a transition probably occurred in the 18th-19th centuries; but for other languages, it occurred in the 19th-20th centuries.

v. Turkic languages today

1. *Preliminary remarks*

The 19th century is considered a turning point in the history of the Turkic languages. It is the period of their discovery and the beginning of a new era in their development. Systematic scholarly research has revealed a large network of living local idioms and their varying structures. Also, extensive research and discoveries have brought to light many historical perspectives of the Turkic language family. In parallel, the second half of the 19th century witnessed a break with the old literary languages. This event prepared the ground for the birth of new literary languages in the 1920s and 1930s. These languages, based on living idioms, did not have their phonetic particularities concealed by conservative writing systems (a characteristic feature of the old literary languages). Finally, the new period signals the beginning of a state-guided language policy.

2. *General survey*

The following survey, based on established literary idioms, gives information with respect to their geographic extension and number of speakers. Explanations concerning their dialectal background and recent past available in the separate columns. For census problems, see G. Hazai, in *Cahiers d'études sur la Mediterranée orientale et le monde turco-iranien*, xiv [1992], 5 ff.

Compass points, relating strictly to language territory, take Kās͟hg͟har as their centre.

A. South-west (East Caspian and South-Caucasian area, Near East, Balkan):

Ād͟harbāyd͟jānī
- Iran
- CIS
- Afg͟hānistān

Gagauz
- CIS
- Bulgaria

Turkish*
- Turkey
- Balkan countries
- West European countries
- ʿIrāḳ
- Cyprus
- Syria
- Jordan

Turkmenian
CIS
Iran
Afghānistān
ʿIrāḳ
* Genetically the "Crimean Osmanli" belongs to Turkish (see Doerfer, in *PTF*, i, 272-80).
B. South-east (Central and Inner Asia, North China*):
(New) Uyghur
China
CIS
Uzbek**
CIS
Afghānistān
* There are two small Turkic languages which do not have a literary tradition and are spoken in the province of Kansu (northwestern China). Salar is close to New Uyghur; literate persons use this language, together with the Arabic alphabet (Poppe, 49). The Yellow Uyghurs have no literary language. Some phonetic features link the languages to the Khakas (Poppe, 40). However, these isolated languages share certain common features (K. Thomsen, in *PTF*, i, 566).
** The present Uzbek literary language has a very large heterogeneous dialectal background. According to St. Wurm (in *PTF*, i, 489), we have the Ḳîpčaḳ-Uzbek dialects (close to Kazakh), the semi-Iranised and Iranised dialects (losing partially or fully their vowel harmony), and the Turkmenised dialects (called by G. Doerfer *Oghuz-Kipchak*, see *EIr*, v, 227). The dialectal conditions greatly influenced the foundation of the new literary language, which initially, was based on Ḳîpčaḳ dialects (1929-30). Some years later, the Iranised dialect of Tashkent was chosen as the dialectal basis (1937) of the literary idiom.
C. North-west (Lithuania, Ukraine, Crimea, Siberia, Central Asia):
Bashkir (CIS)
Chuvash (CIS)
Crimean Tatar (CIS)*
Karachai-Balkar (CIS)
Karaim (CIS)
Karakalpak (CIS)
Kazakh
CIS
China
Mongolia
Afghānistān
Kirghiz
CIS
China
Afghānistān
Kumük (CIS)
Nogai (CIS)
Tatar
CIS
Romania
Turkey
China
Bulgaria
* The present status and future of Crimean Tatar is unclear. At the end of the World War II, the entire population was deported from the Crimean peninsula to Central Asia, where they used, as documented by printed material, their literary language. This fact clearly contradicts the position that their language "can be regarded as practically extinct" (Poppe, 44). In recent years, they have been allowed to return to the Crimea but, so far, only a small number has chosen to do so.
D. North-east:
Altai (CIS)*
Khakas (CIS)**
Tuvan***
CIS
Mongolia
Yakut (CIS)****
* Altai is a literary language, created for the small ethnic groups of the Altai Kray territory of the Russian Federation. It unites the Altai, Telengit and Teleut dialects, which are very similar, and the dialect group of Tuba (Kumandins and Lebed Tatars) which has transitory links to the Shor (Menges, 60) and Ḳîpčaḳ languages (Poppe, 41). Until 1947 it was called Oirat, a name selected in 1917 (see Pritsak, in *PTF*, i, 569).
** Khakas is the name of the literary language created for the Sagai and Kacha peoples, which live in a district of the town Abakan and form the main population of the Autonomous Republic of Khakassia of the Russian Federation. The name itself was chosen after 1917, borrowed from Chinese historical sources. Prior to 1924, when the Latin alphabet was introduced, they had no script. The Latin script was replaced in 1939 by the Cyrillic one (Poppe, 40). The literary language is also used by the Shors, who speak a similar dialect but who lived during the years 1925-39 in a separate political unit and had their own literary language (Pritsak, in *PTF*, i, 630; Poppe, 40).
*** Tuvan (Tuva, Sojot, or Uriankhai) is spoken in the Autonomous Republic of Tuva of the Russian Federation (prior to 1944, it was a semi-independent republic). Before the introduction of the Latin alphabet (1931), which was replaced in 1941 by Cyrillic, they used the written Mongolian language (Poppe, 39). The language of the Karagas is close to Tuvan. According to Baskakov (*Tyurk. yaz.*, 12), they use Tuvan while, according to Poppe (39), "they have no script of their own and can read and write only Russian".
**** Yakut is also used by the Dolgans, who are Yakutised Samoyeds.

As the preceding survey illustrates, huge masses of Turkic-speaking groups live outside the borders of established literary languages, in addition to the exceptional case of the Azerbaijanis, most of whom reside outside the borders of the Republic of Azerbaijan. The intercourse of the speakers with other parts of a language territory varies from country to country. Certain countries which are very sensitive to minority issues (e.g. Iran, ʿIrāḳ, Afghānistān), prefer to limit cross-border contacts of ethnic kin.

The establishment of the exact setting of genetic groupings, and their relations in the conglomerate of the Turkic dialects, require further study. Research among the Ḳîrghîz and Uzbek populations of Afghānistān, and especially, among the Oghuz-speaking groups of Iran, has greatly enriched our knowledge concerning language relations in these areas. In the latter case, there have been some initial attempts to genetically classify these idioms. The fact that Turkic languages, with the exception of the marginal languages (see above, iv. 8), are very similar at the structural level, does predicate the mutual comprehension of different Turkic speakers, but this is, to a certain extent, possible only within the smaller genetic groups, i.e. Oghuz, Ḳîpčaḳ and Uyghur (see L. Bazin, in *Hérodote*, xlii [1986], 106-7; Hazai, *loc. laud.*).

General surveys about Turkic peoples and languages: Sh. Akiner, *Islamic peoples of the Soviet Union, with an appendix of the non-Muslim peoples of the Soviet Union*, London 1983; J. Faensen, *Sprachen in der USSR. Verzeichnis der Namen mit Angaben zu Verbreitung, Sprecherzahl, Schrift und Publikationsstatistik*, Osnabrück 1983; L. Bazin,

Les peuples turcophones en Eurasie. Un cas majeur d'expansion ethnolinguistique, in *Hérodote*, xlii (1986), 75-108; L. Johanson, *Grenzen der Turcia. Verbendendes und Trennendes in der Entwicklung der Türkvölker*, in *Turcica et Orientalia. Studies in honour of Gunnar Jarring on his eightieth birthday 12 October 1987*, Istanbul 1987, 51-61; J. Kornflit, *Turkish and Turkic languages*, in C. Bernard (ed.), *The world's major languages*, New York and Oxford 1987, 619-44; V. Kozlov, *The peoples of the Soviet Union*, London-Bloomington-Indianapolis 1988; M. Ruhlen, *A guide to the world languages. 1. Classification*, Stanford 1991; Hazai, *La question linguistique dans le monde turc actuel*, in *Cahiers d'études sur la Méditerranée orientale et le monde turco-iranien*, xiv (1992), 5-15.

The general Turkological introductions (see above, i) give good selective bibliographies concerning the individual languages. Exhaustive bibliographic information is offered by the following works:

Ādharbāydjānī. Sh. Saadiev, *Bibliografiya literaturî po azerbaydžanskomu yazîkoznaniyu (Sovetskiy period)*, Baku 1960; S.G. Memmedova, *Obshčestvennie nauki Sovetskogo Azerbaydžana 1920-1980 gg., Bibliografičeskiy ukazatel'*, Baku 1983.

Bashkir. T.M. Garipov, M.L. Rafikov and Z.G. Uraksin, *Bibliografiya po bashkirskomu yazîkoznaniyu (1917-1967)*, Ufa 1969; A. Valeeva, *Bashkirskoe yazîkoznanie (1967-1977 g.g.). Ukazatel' literaturi*, Ufa 1979; Garipov *et alii, Bashkirskoe yazîkoznanie. Ukazatel' literaturi*, Ufa 1980.

Yakut. N.E. Petrov, *Yakutskiy yazîk (Ukazatel' literaturî)*, Yakutsk 1958.

Fortunately, we possess two excellent bibliographic surveys about dictionaries of Turkic languages: A. Tietze, *Die Lexikographie der Turksprachen*, i, *Osmanisch-Türkisch*, in Fr. J. Hausmann *et alii, Wörterbücher, dictionaries, dictionnaires*, Berlin and New York 1991, 2399-2407; G. Doerfer, *Die Lexikographie der Türksprachen*, ii, *Sonstige Türksprachen*, in *ibid.*, 2407-15.

3. *Contemporary developments*

The emergence and subsequent establishment of the Soviet Union and the Republic of Turkey after World War I inaugurates the era of state-guided language reform. This policy, fuelled by the opposing, but equally strong, ideological perceptions of the two states, was the determining force in the future development of Turkic languages.

Concerning the Soviet Union, see the remarks in section iv. 5, above. Concerning Turkey, after the rapid reform of the written script (in effect, in 1929), the purification of the vocabulary from Arabic-Persian elements came on the agenda. After some initial social tension (due to lack of experience of those involved), a new literary language was born. This new language has also been responsible for the standardisation of its oral format. In the early 1950s, the language issue gradually became a political affair; as B. Brendemoen points out, *dil dâvâsı* (the language affair) gradually developed into a *parti dâvâsı* (party affair) (in Hazai, *Hb. türk. Sprachw.*, i, 457). Today, instead of one central language policy, various opposing social and political forces are determining the drive for linguistic reform. In turn, this drive has resulted in the permanent change of the language norm. The linguistic revision (if not translation) of Ottoman literature, and even literary works of the first period of the Republican era, manifests the rapidity and intensity of this process.

In contrast to nationalist and Pan-Turkic movements, which espoused the linguistic unity of the Turkic world, historical developments of the 20th century have favoured the separation and stabilisation of Turkic idioms. This trend has been particularly acute for dialects which were left outside of the sphere of the established literary languages. The language territory, especially in the central area, exhibits at the level of dialects a strong standardising influence of 21 literary languages. This creates the danger of disappearance of the territorial language variants, which are particularly important in the investigation of language history. The insular position of dialects or languages also involves a specific danger-factor for their future existence. The disappearance of dialects (e.g. Litovian Tatar, Krimčak, etc.), and the endangered position of the Karaim language, are clear results of this development.

The enormous political changes of the early 1990s have created completely new conditions for the future development of Turkic languages. Nevertheless, the re-latinisation of alphabets in the CIS, combined with certain efforts to initiate a common language policy with Turkey are, for the time being, vague trends with no clear agenda. The opening of the formerly isolated areas of the CIS has placed the Turkish language in a privileged position. Turkish attempts at "cultural expansion" in these areas, particularly in the educational field, may result in the widespread use of the language within the Turkic world.

Works representing the Soviet language policy: *Mladopis'mennîe yazîki narodov SSSR*, Moscow-Leningrad 1959; Yu. D. Desheriev and I.F. Protčenko, *Razvitie yazîkov narodov SSSR v sovetskuyu épokhu*, Moscow 1968; Deshe-

riev, *Zakonomernosti razvitiya literaturnïkh yazïkov narodov SSSR v sovetskuyu épokhu. Razvitie obshčestvennïkh funktsiy literaturnïkh yazïkov*, Moscow 1976. Problems of the emergence of the Turkic literary languages in Russia and the two alphabet reforms in the Soviet Union are exhaustively treated in the monograph of J. Baldauf (see above, iv. 6), which offers an excellent bibliography and a calendar of these events. Concerning language reform in Turkey, its different stages and political background, see Brendemoen, in *Hdb. d. türk. Sprachenwiss.*, i, 454-93 (with a comprehensive bibl.); J.M. Landau, *Language policy and political development in Israel and Turkey*, in idem, *Jews, Arab, Turks*, Jerusalem 1993, 133-49.

Concerning recent developments in the Turkic world, see A.B. Ercilasun, *Lâtin alfabesi konuşunda gelişmeler*, in *Türk Dili*, no. 523 (1995), 738-78. (G. HAZAI)

III. LITERATURE.

1. Pre-Islamic literature of the Türks.

The information on oral literature of the early Turks is scarce. The first written records in Turkic languages are known from the inscriptions in Mongolia and Siberia. While the existence of pre-6th-century texts is highly debated, the first dated inscriptions are from the first half of the 8th century. These inscriptions are lamentations as well as praises of the deceased ḳaghans or other noble persons. The script is called runic and was deciphered only in 1893 by V. Thomsen. Later, W. Radloff edited the bulk of these inscriptions. The research on these monuments as well as the discussion on their literary form is continuing. In general, these are prosaic accounts containing passages in poetical form (cf. Bazin; Klyashtornïy).

From several regions of Central Asia, mainly from the Turfan region and Dunhuang, texts have came to light through the numerous expeditions from various countries since the end of the 19th century. These texts written in a variety of scripts, but mainly in the so-called Uyghur script (which is in principle another variant of the Sogdian script), are mostly of religious content, and are dated between the 9th and 17th centuries. The Central Asian regions were influenced by merchants and ideas passing through the region. Thus the world religions of Manichaeism, Christendom and Buddhism found here shelter and/or supporters in the Central Asian oases along the Silk Road.

The Manichaean literature is written in Manichaean as well as in runic and Uyghur scripts. The texts are confessions, doctrinal works, hymns of many kinds, prayers, letters, etc. Some of them are written poems using strophic alliteration (cf. Clark).

The Christian literature, written not only in Uyghur but also in Syriac script, is rather limited, but the story of the Magi is a precious piece amongst it (cf. Asmussen).

The Buddhist literature is rich, but it is not clear to what extent one can speak of a "canon". Texts were translated from Tokharian, Sogdian, Sanskrit and Tibetan, but mainly from Chinese. Not only were many works of the Hīnayāna deciphered, but also, even to a greater extent, works of the Mahāyāna and Tantrism. Among the Mahāyāna sūtras we find the most famous ones, such as the *Lotos Sūtra* or the *Golden Light Sūtra*. But new compositions were also produced, e.g. a poetical version of the **Amitāyurdhyānasūtra* which is known only from its Chinese prose form. The *Samantabhadracaryāpranidhāna* was taken as a model for making similar verses. In addition to the Amitābha belief, Maitreyanism developed and was widespread, as shown by the early translation of a famous work called *Maitrisimit* which exposes the career of the future Buddha Maitreya in a way like that of the historical Buddha. Recently, some Chan texts have also been found. Altogether, by the increasingly prolific editions of new texts we get a fuller picture of what can be called Uyghur Buddhism. Only a few translators are known by name; Šingqo Šäli Tutung worked as the most prominent at the turn of the 10th to the 11th centuries (cf. Elverskog, with full bibl.).

Non-religious literature is little known (cf. Zieme). In addition to letters, which are not literature in the true sense, there are some poems and benediction texts which were in use for some rites. Adaptations of Greek (e.g. fables of Aesop, the *Alexander Romance*), Indian (e.g. *Pañcatantra, Rāmāyana*) and Chinese (e.g. *Yijing*) themes became known, and show us Central Asia as a transitory region between West and East.

Islam slowly penetrated into the Turfan region, where even in the 15th century, Buddhism was still alive. Besides showing the adoption of Islam, there are also some literary traces of opposition to Islam (cf. Tezcan/Zieme).

Türk dili*, 277-88. (P. ZIEME)

2. Early Turkish Islamic literature up to the Ottomans.

The migration of ever growing numbers of Turkish speakers, belonging predominantly to the Oghuz branch, into Western Asia from the late 4th/10th century onwards, especially in the wake of the battle of Malāzgird [*q.v.*] in 463/1071 and later of the Mongol invasions of the 7th/13th century, and the subsequent formation of Turkish Islamic polities in Western Persia and Asia Minor during the 7th/13th and 8th/14th centuries led to the development of a Western Turkish Islamic literature distinct from its Eastern counterparts, notably Ḳarakhānid and Čaghatay literatures. Because the post-8th/14th century development of this vast corpus of Islamic Turkish literature until the early 14th/20th century took place under Ottoman rule, it is normally referred to as "Ottoman Turkish literature". We will here be concerned only with the pre-Ottoman period.

Although the earliest extant specimens of Western Turkish literature date back to the second half of the 7th/13th century and the first half of the 8th/14th century, it has been argued, on the basis of several early works that bear the imprints of both Eastern and Western Turkish, that this written literature had begun to take shape earlier (for a recent summary, see Zeynep Korkmaz, *Eski Türk yazı dilinden yeni yazı*

dillerine geçiş devri özellikleri, in *Türk Dili Araştırmaları Yıllığı-Belleten* [1991], 55-64). It seems, however, safer to assume that the emergence of a high literary culture in Western Turkish occurred under the patronage of Turkish *beylik*s in Asia Minor which proliferated concomitantly with the decline of Saldjūḳ rule in Anatolia after the defeat inflicted upon them by the Mongols at Köse Dagh (641/1243 [*q.v.*]) (Ş. Tekin, *Meḥemmed bin Bālī'nin eski Anadolu Türkçesine aktardığı Güzīde adlı eserin Harezm Türkçesindeki aslı ve "olabolğa" meselesi hakkında*, in *Türklük Bilgisi Araştırmaları*, xv [1991], 408-13). In this context, the often-cited decree of the Ḳaramānid Shams al-Dīn Meḥmed Beg, said to have been issued after his capture of Ḳonya in 675/1277, that only Turkish should be used in the chancery assumes special significance [see KARAMĀN-OGHULLARÎ, at Vol. IV, 620a].

The great bulk of the earliest layer of Western Turkish literature was religious, especially mystical, in tone and content. The main representatives of this trend in verse were: Sulṭān Walad (623-712/1226-1312 [*q.v.*]), the son of Djalāl al-Dīn Rūmī [*q.v.*], whose Persian works *Ibtidā-nāma* and *Rabāb-nama* as well as his *dīwān* contain 367 couplets in Turkish; Yūnus Emre (possibly d. 720/1320 [*q.v.*]), the renowned mystical poet whose posthumously collected *dīwān* holds the distinction of being the first *dīwān* in Western Turkish literature and who also composed a *mathnawī* of 562 couplets entitled *Risālet al-nuṣḥiyye*; Gülshehrī (d. after 717/1317 [*q.v.*]), whose Turkish works include a free adaptation of ʿAṭṭār's *Manṭiḳ al-ṭayr* with the same title and a sacred biography of Akhī Ewrān [*q.v.*], both in *mathnawī* form, as well as a number of *ghazals*; ʿĀshıḳ Pasha (d. 733/1333 [*q.v.*]), who is best known for his monumental mystical *mathnawī* of around 12,000 verses called *Gharīb-nāme* but who also composed smaller *mathnawīs* as well as self-standing poems; Aḥmed Faḳīh, most likely the name of several—possibly as many as five—figures who lived in Anatolia during this period, to whom is attributed a *ḳaṣīda* of 83 verses called the *Čarkh-nāme*, as well as a *mathnawī* of 339 couplets called *Kitāb-i ewṣāf-i mesādjid al-sherīfe*; and the great Ḥurūfī poet Nesīmī (d. *ca.* 820/1417-8 [*q.v.*]), whose Turkish *dīwān* played a pivotal role in the development of Ādharī poetry. On the profane side, the important figures were: Khodja Dehhānī [*q.v.*], a poet of the 7th/13th century generally viewed as the earliest representative of Ottoman *dīwān* poetry, only ten of whose poems have been recovered; Sheyyād Ḥamza [*q.v.*], an obscure figure who appears to have lived during the first half of the 8th/14th century and who is best known for his 1,529-couplet *mathnawī Yūsuf u Zelīkhā*; Mesʿūd b. Aḥmed, another obscure poet who is known for his long *mathnawī Süheyl ü New-bahār*, an adaptation from an unknown Persian work, and his selective verse translation of Saʿdī's [*q.v.*] *Bustān*; Ḳāḍī Burhān al-Dīn (d. 800/1398 [*q.v.*]), the remarkable scholar and statesman who holds the distinction of being the first Western Turkish poet to collect and arrange his own *dīwān*; Fakhrī, who translated Niẓāmī's *Khusraw u Shīrīn* in 758/1367; Yūsuf Meddāḥ, the author of *Warḳa we Gülshāh*, which he composed in 770/1368-9; and a certain Kemāl-oghlu, who compiled a romance entitled *Ferah-nāme* in 789/1387. Well-known poets of the turn of the 8th/14th century not mentioned here, such as Sheykh-oghlu (d. *ca.* 812/1340) and Aḥmedī (d. 815/1413 [*q.v.*]), were transitional figures who ended their careers under Ottoman patronage.

The most important prose writers of this period are Muṣṭafā Ḍarīr (d. after 796/1392-3 [*q.v.*]), best known for his moving translation of a late version of the *sīra* of Ibn Isḥāḳ in five volumes but who was also an accomplished poet with a short *Yūsuf u Züleykhā* to his credit; and Ḳul Mesʿūd, the earliest translator of *Kalīla wa-Dimna* into Turkish. There are numerous other extant prose works of translation from Arabic and Persian, often of unknown provenance and mostly on religious/ethical topics. In this context, special mention should be made of religious epics, which originated as popular oral epics after the conquest of much of Asia Minor by the Turks in the late 5th/11th century. Written versions were composed as early as the 7th/13th century: the *Baṭṭāl-nāme*, celebrating the exploits of Sīdī Baṭṭāl Ghāzī [*q.v.*], and the *Dānishmend-nāme*, devoted to Melik Dānishmend [see DĀNISHMENDIDS] and designed as a sequel to the *Baṭṭāl-nāme*, were first committed to writing in the mid-7th/13th century, though the *Dānishmend-nāme* survives only in the later version by ʿĀrif ʿAlī (761/1360). The emergence of a closely related genre, hagiography, can possibly be also dated back to the 8th/14th century, though written versions begin to surface only towards the end of the 9th/15th century.

The prominent and striking feature of this corpus is the clear, though not unchallenged, predominance of Arabic and especially Persian literary norms and conventions in both poetry and prose. Continuities with earlier Turkish literary traditions, for instance the use of alliteration as an organising principle in poetry, can still be traced (M.S. Fomkin, *Sultan Veled i ego tiurkskaya poeziya*, Moscow 1994), though the supremacy of the new Islamic literary horizons is not contested. The significance of the Arabic and Persian legacy should not, however, conceal from view the real and momentous literary event of this period, namely, the emergence of an Islamic Western Turkish literature at all cultural levels, folk, popular and élite.

Heinrichs (ed.), *Neues Handbuch der Literaturwissenschaft*, v, *Orientalisches Mittelalter*, Wiesbaden 1990, 258-64, 278-83, 319-25, 475-81; relevant articles in *Türkiye Diyanet Vakfı İslam Ansiklopedisi*, Istanbul 1988-. A new ed. of the *Baṭṭāl-nāme* is that of Y. Dedes, *Battalname*, introd., Eng. tr., Tkish. transcription, comm. and facs. text, 2 parts, Cambridge, Mass. 1996.

(A.T. KARAMUSTAFA)

3. Turkish literature of the Golden Horde and of the Mamlūks.

The subject population of the Golden Horde (the Mongol rulers of which were Muslim by 1260) in the Volga Delta consisted of largely nomadic Ḳîpčaḳ Turks, who although partially Islamicised, were considered pagan for the purposes of the slave trade; Ḳîpčaḳ slaves provided the manpower of the Mamlūk armies in Egypt and Syria, whereas some of their compatriots, Muslim scholars from the Ḳîpčaḳ, such as Berke Faḳīh, and Sayf from Saray, migrated to Egypt and Syria. This may have been the case with Ḳuṭb, the author of the oldest Turkish *mathnawī* version of *Khusraw u Shīrīn*. He composed this work probably in Khʷārazm in what is called Khʷārazmian Turkish. It has been assigned to the Golden Horde because it was dedicated to its Prince Tînîbek, who campaigned in Khʷarazm when he became Khān in 741/1341, and

to Melek Khatun of the White Horde. Ḳuṭb kept himself strictly to Niẓāmī's [q.v.] work, reproducing its motif structure and metre [see FARHĀD WA-SHĪRĪN]. A governor of the Golden Horde, Muḥammad Khwādja Beg, was in 754/1353 the dedicatee of a *mathnawī* entitled the *Maḥabbat-nāma*, comprising 440 *bayts* in the *hazadj* metre, written by Khwārazmī on the banks of the Syr Darya.

"Mamlūk Turkish literature", when J. Eckmann published his surveys, was generally known as "Ḳîpčaḳ literature". Much of the material Eckmann discussed consists of manuals which he himself regarded as "of little value, consisting merely of translations of Arabic or Persian books". From the 1960s onwards, the attention of scholars, notably A. Zajączkowski and A. Bodrogligeti, has been increasingly directed towards works of literary value produced under the Mamlūks. The ethnic consciousness in the Mamlūk ruling class persisted through its two periods of rule in Egypt and Syria (al-Ghawrī had fond memories of his native Caucasus). It showed itself in the Mamlūks' names and their interest for the history and legends of their peoples. Thanks to them, two of the oldest monuments of Islamic Turkish literature, the *Ḳutadghu bilig* [q.v.] and the *Dīwān lughāt at-Turk* [see AL-KĀSHGHARĪ], with prime data on mediaeval Turkdom, were preserved continuously in Mamlūk libraries. This interest often continued into the second generation who wrote in Arabic, such as Ibn al-Dawādārī [q.v.], and Ibn Taghrībirdī [see ABU 'L-MAḤĀSIN], historians who retold legends on the Turkish and Mongol tribes, and al-ʿAynī [q.v.], who included excerpts from al-Kāshgharī in his world history. If the Ḳîpčaḳ-speaking Mamlūks of the *Dawlat at-Turk* [see AL-BAḤRIYYA], cherished the earliest Turkic classics, the Turkish-speaking Mamlūk élite of the *Dawlat al-Djarkas* [see BURDJIYYA], of Circassian and Anatolian (*Rūmī*) origin, valued Yūnus Emre, ʿĀshîḳ Pasha and Gülshehrī [q.vv.], who wrote in old Anatolian Turkish akin to the Turkoman (or Oghuz, sometimes dismissed as a less "pure" form of Turkic) of the Arabic glossaries. Political and literary ties with Rūm had existed from the beginning of the Mamlūk state (the *sheykh* Mukhliṣ Pasha, ʿĀshîḳ Pasha's father, a refugee from Saldjūḳ Rūm, spent years in Egypt). All the preserved Turkish works written for the education, edification and amusement of the Mamlūk class are from this later period. This literature has not yet been adequately evaluated, and very little of the material has been published; this is partly due to an anachronistic dismissal as "Ottoman" by linguists concentrating excessively on the Ḳîpčaḳ remains, and partly to their absence from the Ottoman *tadhkira* literature [cf. MUKHTĀRĀT. 3. In Turkish]. The works in Ḳîpčaḳ are mostly non-artistic; manuals on archery and the equestrian arts [see BAYṬĀR], such as the *Kitāb fī ʿilm al-nushshāb, Munyat al-ghuzāt, Bayṭarāt al-wāḍiḥ* and *Kitāb al-Khayl*; on *fiḳh*, such as Berke Faḳīh's *Irshād al-mulūk wa 'l-salāṭīn* (written in Alexandria in 789/1387); Muḳbil b. ʿAbd Allāh's commentary on al-Nasafī, *Sharḥ al-Manār* (1402), is in Ḳîpčaḳ Turkish, too, as A. Mertol Tulum (*Şerhu 'l-Menâr hakkında*, in *TDED*, xvi [1968]) has shown; to these can be added three books entitled *Kitāb fi 'l-fiḳh* and a translation of Abu 'l-Layth al-Samarḳandī's [q.v.] *Muḳaddimat al-ṣalāt*). Under Īnāl [q.v.], six volumes of a sumptuous Ḳur'ān with interlinear Old Anatolian Turkish translation were completed in Shaʿbān 863/June 1459 (Berlin, Staatsbibliothek, Hs. or. 6163). Muṣṭafā Ḍarīr [q.v.], the blind Mawlawī author, came from Arzan al-Rūm (Erzurum) to Cairo to compose his *Tardjamat al-ḍarīr wa-taḳdimat al-Ẓāhir*. In this vast and complex work in Old Anatolian Turkish prose and verse, begun *ca.* 779/1377, completed after the accession in 784/1382 of al-Ẓāhir Barḳūḳ [q.v.], the miracles surrounding the Prophet's birth and life are woven into a single developing narrative down to the life of his community and the deeds of the early heroes of Islam. His *Tardjama-i futūḥ al-Shām*, a free translation of al-Wāḳidī's work (partly printed in F. İz, *Türk edebiyatında nesir*, i, 245-6), was completed in 795/1392 for the governor of Aleppo. He also wrote a *Yūsuf u Ẓulaykhā* and a *Yüz ḥadīth terdjemesi* partly published in İz, *op. cit.*, 27-33). Berke Faḳīh's rhymed epilogue on his sole extant copy of *Khusraw u Shīrīn* is dated 1383. Kemāloghlu Ismāʿīl in his *Feraḥ-nāme* adapted an Arabic prose story in a Turkish *mathnawī* in 789/1387 for the governor of Syrian Tripoli. Sayf-i Sarāyī translated Saʿdī's *Gulistān* into Ḳîpčaḳ Turkish under the title *Gulistān bi 'l-turkī*, a work dedicated in 793/1391 to the powerful Mamlūk Batkhaṣ al-Sudūnī. In an appended small anthology comprising poems, mostly in Khwārazmian Turkish, by Mawlā Ḳāḍī Muḥsin, Mawlānā Isḥāḳ, Mawlānā ʿImād Mawlawī, Aḥmad Khwādja al-Sarāyī, Khwārazmī, ʿAbd al-Madjīd, Ṭoghlî Khwādja, Ḥasanoghlî and himself, Sayf laid down his prosodic principles. Al-ʿAynī [q.v.] enjoyed a high reputation as an Arabic and Turkish scholar. He lectured for Barsbāy [q.v.] on history and related subjects, and occasionally translated into Turkish for him. For the Anatolian aspects of his universal history (in Arabic, ed. Muḥammad Muḥammad Amīn), he relies to a great extent on the accounts of eyewitnesses and on his own knowledge of the country. He translated the Ḥanafī *faḳīh* al-Ḳudūrī's [q.v.] legal treatise into Turkish for Ṭaṭar. Sultan Ḳā'itbay [q.v.] left behind a *madjmūʿa* of poetry (Istanbul, Aya Sofya 2047); for his library, a finely illuminated copy was made in 886/1481-2 of the collection of poems, mostly *ghazals*, *Āyat al-baṣā'ir wa-ghāyat al-sarā'ir* by Rūḥī al-Mamlūk, whose personal name, according to the colophon of the ms. Or. 4128 in the British Library, appears to have been Ḳaradja (G.M. Meredith-Owens, in *Oriens*, xviii-xix [1967], 497). For the library of the same sultan, the sumptuous copy (in Istanbul, Topkapı Sarayı, Koğuşlar 883, Karatay, *Türkçe yazmalar*, i, 164 no. 489) of Muḥammad b. Adjā's (1417-76) translation of the *Futūḥ al-Shām* by al-Wāḳidī into 12,000 Turkish verses was made. The translator, a judge under Ḳā'itbay, also composed a biography in Arabic (ed. ʿAbd al-Ḳādir Aḥmad Ṭulaymāt, Cairo 1974) of his protector, the *Amīr* Yashbek min Mahdī (d. 885/1480). ʿAbd Allāh from Diwrīgī [q.v.], a *ḳāḍī* in Cairo, composed an *ʿarūḍ* manual in *mathnawī* form in 849/1445 (ed. T. Gandjeï, *The Baḥr-i dürer: an early Turkish treatise on prosody*, in *Studia turcologica memoriae Alexii Bombaci dicata*, Naples 1982). In 893/1487-8 Ibrāhīm b. Bālī from ʿAyntāb composed a *mathnawī* on geographical matters, the *Ḥikmet-nāme*, for Ḳā'itbay. A Turkish quatrain by Ḳā'itbay's son Meḥmed is in the universal history *K. ʿUḳūd al-djawhariyya* (vol. ii, Istanbul, Ayasofya 3313). Ḳānṣawh II al-Ghawrī [q.v.] left behind a small anthology of Turkish poems by himself and others, including Ottoman court poetry, called his *dīwān* (B. Flemming, *Notes on ʿArūż in Turkish collections*, in B. Utas and L. Johanson (eds.), *Arabic prosody and its applications in Muslim poetry*, Uppsala 1994, 61-80). The Turkish *K. al-Miʿrādj* (Koguşlar 989) was copied for al-Ghawrī. A small *Risāle-yi deste-gül fī keyfiyyet-i khilḳat* written for this same ruler, possibly by a student *mamlūk*, is preserved in the Leiden University Library, Cod. Or. 1390. Implicit in Ḳā'itbay's, and especially Ghawrī's,

court poetry was both oral and written poetic proficiency in the three Islamic languages of Turkish, Arabic and Persian. The *Dawādar* Ya<u>sh</u>bek min Mahdī al-Ẓāhirī, who wrote some Turkish poetry himself, was a great patron of Arabic and Turkish letters [see MIṢR]. Ḳipčaḳ-speakers mingled with Turkoman-speakers from the Mamlūk cities of Āmid [see DIYĀR BAKR] and ʿAyntāb [*q.v.*], from Aḳ Ḳoyunlu-ruled Arzan al-Rūm [see ERZURUM], or from other parts of Anatolia. Some of these non-Arabs were sent with embassies to Turkish rulers (al-ʿAynī to Ḳaramān [see ĪNĀL]; and Ibn A<u>dj</u>ā to Tabrīz and to Rūm). After the introduction of Imāmī <u>Sh</u>īʿism as the official religion in Persia, turcophone poets from Persia and Ā<u>dh</u>arbāy<u>dj</u>ān went to live in Egypt and Syria under Mamlūk protection, whilst others went to the Ottoman Empire. The Ottoman princes <u>Dj</u>em and Ḳorḳud [*q.vv.*] visited Cairo in 1481 and 1509 respectively. For Ḳay<u>gh</u>usuz Abdāl [*q.v.*], who spent several years in Egypt, a Bektā<u>sh</u>ī [*q.v.*] *tekke* was built on the Muḳaṭṭam hills [*q.v.*]; Gul<u>sh</u>anī [*q.v.*] settled in Cairo. Sarî Gürz's [*q.v.*] disputations in that city (914/1509) are documented by a member of al-<u>Gh</u>awrī's circle in *al-Kawkab al-durrī fī masāʾil (a<u>dj</u>wibāt) al-<u>Gh</u>awrī* (Istanbul, Topkapı Sarayı, III. Ahmet 1377), containing answers which al-<u>Gh</u>awrī gave to various religious questions and some Turkish poetry. Al-<u>Gh</u>awrī appreciated the "dervish" style cultivated by the Turkish poet and Ṣūfī <u>sheykh</u> <u>Sh</u>arīf from Āmid, whose full name was Ḥusayn b. Ḥasan. His is the oldest known Turkish verse translation of Firdawsī's *<u>Sh</u>āh-nāma*, begun in 906/1501 and finished within ten years; it comprises two large volumes containing about 60,000 *bayts*. The earliest partial edition was undertaken by A. Zajączkowski, *Turecka wersja Šāh-nāme z Egiptu Mameluckiego*, Warsaw 1965, and in *RO* (reviewed in *Isl.*, xlv [1969]). The published parts can be briefly summarised as follows. The Prologue includes doxologies of God and the Prophet, praise of al-<u>Gh</u>awrī and his predecessors, the reason for writing the book, the reigns of Gayūmar<u>th</u>, Hū<u>sh</u>ang, Tahmūra<u>th</u> and <u>Dj</u>am<u>sh</u>īd. Fols. 616a-640b: colophon of vol. i and reign of Luhrasp (= beginning of vol. ii). Fols. 672-677b: five of the seven deeds of Isfandiyār. In *RO*, xxviii/1 (1964). Fols. 874a-883: Iskandar's death and the lament of the philosophers. In *RO*, xxviii/2 (1965). Fols. 1096a-1124b: Excerpts from the stories of <u>Kh</u>usraw Parvīz and <u>Sh</u>īrīn, <u>Kh</u>usraw's treasures and <u>Sh</u>īrūya's ascension. Fols. 1152-1170a on Firdawsī's *<u>Sh</u>āh-nāma* (in prose), epilogue with praise of al-<u>Gh</u>awrī, his scholarly, literary, and musical sessions, and his buildings. <u>Sh</u>arīf deviates from Firdawsī in using the *haza<u>dj</u>* metre and in re-adapting themes from Niẓāmī. His work is preserved in the autograph presentation copy (Hazine 1519, dated 1511) which has 62 miniatures (vol. i was completed in 1507 in the Dome of Ya<u>sh</u>bek, vol. ii in 1511 in the Mu'ayyad Mosque) and in other mss. such as Uppsala 147; Hazine 1520-1522; British Library, Or. 1126 and Or. 7208; and Vienna, Austrian National Library, A.F. 307 (519).

Ḥusayn b. Muḥammad al-Ḥusaynī wrote the minutes of al-<u>Gh</u>awrī's *ma<u>dj</u>ālis* in the Arabic *Nafāʾis al-ma<u>dj</u>ālis al-sulṭāniyya fī ḥaḳāʾiḳ al-asrār al-ḳurʾāniyya*, including a Turkish poem.

Ḍarīr's and <u>Sh</u>arīf's works have been highly influential in Anatolian Turkish writing (the indebtedness of Süleymān Čelebi to Ḍarīr is known). Whereas the few literary works in Ḳipčaḳ Turkish produced in the Mamlūk lands, such as Sayf's *Gulistān* translation, are preserved in unique copies and had no traceable influence on other Turkish literatures, the importance of the much-copied Turkmen-O<u>gh</u>uz works produced in the Mamlūk state was considerable for Ottoman literature. The momentous events which led to the fall of the Mamlūk sultanate and the removal of the Mamlūk libraries to Istanbul soon after the Ottoman conquest (possibly by <u>Kh</u>ādim Süleymān Pa<u>sh</u>a [*q.v.*]), combined to make Mamlūk Turkmen-O<u>gh</u>uz literature shortlived in its country of origin, but a matter of widespread interest throughout the western Turkish world from the 15th century onwards.

Bibliography: Pioneer works in critical research are the studies of T. Halasi-Kun, Zajączkowski, Eckmann and Bodrogligeti. These writings are mentioned in J. Eckmann, *The Mamlūk-Kipchak literature*, in *CAJ*, viii, 304-19, and B. Flemming, *Zum Stand der mamlūk-türkischen Forschung*, in W. Voigt (ed.), *ZDMG. Supplement III, 2. XIX. 4. Turkish literature under the Ottomans.

In general, see ʿO<u>TH</u>MĀNLĪ. III. Literature; and for the *<u>gh</u>azel* specifically, see below.

The *<u>gh</u>azel* (literally "flirtation"), a lyrical form with the rhyme scheme *aa xa xa xa*, etc., is the most frequently used poetic form in Ottoman *dīwān* literature (which is consequently also called "*<u>gh</u>azel* literature"). Its formal conventions are those of the Persian *<u>gh</u>azal* [see <u>GH</u>AZAL. II], as are its aesthetic norms and rhetorical devices. What elements of Turkic folk poetry may have been blended into the assimilation process of the Persian model and what interaction between folk and *dīwān* poetry may have taken place during the approximately five hundred years of the Ottoman *<u>gh</u>azel*'s popularity is open to conjecture. Some such interaction is documented by certain folk poems by *dīwān* poets (e.g. by Me'ālī [*q.v.*] in the 10th/16th century) and *<u>gh</u>azels* (or forms derived therefrom) written by folk poets from the 11th/17th century onward.

The classical Ottoman *<u>gh</u>azel* has five to 15 verses (*<u>gh</u>azels* of only four verses occur too rarely to permit the conclusion that this was also an accepted length,

these possibly being fragments). *Ghazels* of more than 15 verses (*ghazel-i muṭawwel*) occur, though primarily in the early period (for example, by Aḥmedī [*q.v.*] in the 8th/14th century). A tendency to write *ghazels* containing an uneven number of verses can be observed, five and seven verses being the marked favourites. The length of five verses had become the general favourite by the 10th/16th century (cf. E.G. Ambros, *Osmanlı gazelinin uzunluğunda görülen gelişmeler. 16. yüzyılda durum*, in *Jnal. of Turkish Studies*, xx [1996], 1-8).

The *ghazel* is composed in accordance with the rules of the Arabo-Persian metrical system (*ʿarūḍ* [*q.v.*]). However, not all Arabic metres were used in the Ottoman *ghazel* and among those that were used, certain variants of *ramal, hazadj*, and *muḍāriʿ* occur by far most frequently. Each verse of a *ghazel* is usually a complete semantic entity by itself; more often than not the verses of a *ghazel* appear, at least at first glance, to be linked to each other mainly by the metre and the rhyme. The relatively rare *ghazels* with a pronounced thematic focus are called *ghazel-i yek āheng* (whereas *ghazels* deemed to be of equal quality from beginning to end are known as *ghazel-i yek āwāz*). The best verse of the *ghazel* is termed *beyt el-ghazel* or *shāh-beyt*.

Sometimes one of the hemistichs of the *maṭlaʿ* (the first verse, the two hemistichs of which rhyme with each other) is repeated in the last verse of the *ghazel* (*redd-i maṭlaʿ*). A few *ghazels* of later date even have two *maṭlaʿ*s. The pen-name (*makhlaṣ* [see TAKHALLUṢ. 2.]) of the poet occurs generally in the last verse (*maḳṭaʿ*), rarely in the penultimate verse (*ḥüsn-i maḳṭaʿ*) or not at all. In some *ghazels* one or more verses in praise of a person follow the verse containing the *makhlaṣ* of the poet (*ghazel-i müdheyyel*). Another variant is the *ghazel-i mülemmaʿ* that is written in alternating Turkish and Persian and/or Arabic hemistichs.

The occasional *ghazel-i musammaṭ* is a *ghazel* the verses of which, with the exception of the *maṭlaʿ*, have "inner rhyme" in that the middle and end of their first hemistich rhymes with the middle of their second hemistich (1st verse: *aa*; 2nd verse: *bbba*; 3rd verse: *ccca*; etc., which corresponds to the strophic form of the *murabbaʿ*). Such *ghazels* naturally require metres that can be divided into two equal sections, as for example the *aṣlī hezedj* metre of four *mefāʿīlün*.

Throughout the centuries, writing "parallels" to already existing *ghazels* was a very popular excercise. Such a "parallel", *naẓīre*, had to have the same metre and rhyme as its model. By means of it the poet tried to prove his equal or even greater excellence. However, due to the preponderance of some metres and to the fact that some rhymes are easy to apply and very hackneyed, determining whether a poem is a *naẓīre* or not in the absence of corroborative evidence is often fraught with uncertainty (cf. E.G. Ambros, *Naẓīre, the will-o'-the-wisp of Ottoman Dīvān poetry*, in *WZKM*, lxxix [1989], 57-83).

In an ordered (*müretteb*) collection of poetry (*dīwān*), the *ghazels* are arranged alphabetically according to the last letter of their rhyme and, as a rule the poet composes at least one *ghazel* using each letter of the Arabic alphabet as final rhyme letter.

The traditional subject matter of the Ottoman *ghazel* is love, of either mystical or profane nature (though the latter is often mystically inspired and generally couched in the mystical idiom), with concomitant elements such as wine and spring, personae such as the derwish and the cup-bearer, in settings such as the garden in spring, the tavern, etc. (all aspects to be found in the Persian model). Only from the 11th/17th century onward, was the thematic scope of the Ottoman *ghazel* progressively broadened to include other topics such as philosophic or didactic thoughts, laments on fate, etc. (Prior to this there were, however, some *ghazels* by sultans and princes expressing their feelings about events of the day quite clearly.)

The *dīwān* idiom, which over the centuries became saturated with Arabic and Persian vocabulary, was, of course, also that of the *ghazel*. The *ghazels* which Naẓmī of Edirne (d. 961/1554) wrote in pure simple Turkish (*türkī-yi basīṭ*) are the most notable exception to this rule.

The lyricism of the *ghazel* was not put to the service of pecuniary aims or personal advancement as was the *ḳaṣīde* [see ḲAṢĪDA. 3], but sometimes *ghazels* were set to music and sung.

The forerunners of the Ottoman *ghazel* go back to the 11th century in Central Asia. In Anatolia in the 7th/13th century, Djalāl al-Din Rūmī's [*q.v.*] Persian *ghazels* were very influential in preparing the ground for the Turkish *ghazels* of mystical purport. The first Turkic samples of this variety of *ghazel* were written by Rūmī's son Sulṭān Walad [*q.v.*]. Some also were written by the great mystic Yūnus Emre (d. 720/1320 [*q.v.*]). In the sphere of worldly love, the first *ghazels* are by Dehhānī in 7th/13th century Anatolia.

In the 8th/14th and 9th/15th centuries, Aḥmedī [*q.v.*] followed by Sheykhī [*q.v.*] and Aḥmed Pasha [*q.v.*], played an important role in the further development of the *ghazel*. The 9th/15th century then saw the maturity of the Ottoman *ghazel*, with Nedjātī Beg [*q.v.*] regarded as its grand master. Sultan Meḥemmed II and his son Djem were also reputed for their accomplishments in this field (as were so many of the Ottoman sultans and princes and one princess, namely, ʿĀdile Sulṭān, 1826-99, daughter of Sultan Maḥmūd II and authoress of a *dīwān*).

In the 10th/16th century, the apogee of the art of *ghazel*-writing was reached with masters like Dhātī [*q.v.*], Khayālī Beg [*q.v.*], Yaḥyā Beg (Ṭashlīdjalī [*q.v.*]), Baghdādlī Rūḥī [*q.v.*], Newʿī [*q.v.*] and Bāḳī [*q.v.*]. Fuḍūlī's [*q.v.*] *ghazels*, though reflecting his Ādharī origin, influenced the strictly Ottoman *ghazel* and enjoyed lasting popularity due to their sincere emotions. This, too, is the century that saw the production of the largest collection of Ottoman *ghazels* ever written, namely, that by Sultan Süleymān the Magnificent (his *dīwān* contains 2,801 *ghazels*, the next largest collection of "only" 1,825 being by Dhātī).

The popularity of the *ghazel* continued unabated in the 11th/17th century, flourishing with poets like Nefʿī [*q.v.*] (even though this poet is primarily renowned for his *ḳaṣīdes*), Nāʾilī-yi Ḳadīm [*q.v.*], the Sheykh el-Islām Yaḥyā Efendi [*q.v.*] and Nābi [*q.v.*].

In the 12th/18th century the *ghazel* continued to flourish, the luminaries of this century being Nedīm [*q.v.*], famous not only for his *ghazels* but also, and perhaps even more, for his *sharḳīs* [*q.v.*], and Sheykh Ghālib [*q.v.*].

The *ghazels* written in the 19th century no longer attained the former level of excellence. Finally, after the turn of the century the writing of *ghazels* fell into desuetude.

5. Modern Turkish literature.

The foundation of the Turkish Republic in 1923 may be taken as the beginning of modern Turkish literature because it is the beginning of a new era not only politically and historically but also culturally. The cultural policy introduced by the Republic aimed to cut the ties with the past and build a new culture which would be nationalist (in Kemalist terms), populist and "progressive". Language reform (1928) and various social and educational reforms were steps towards the realisation of this ideal. In a remarkably short time, the literature of the Turkish Republic became one of the most diverse literatures both in form and content, reflecting a variety of ideological and political stances, artistic beliefs and practices. It is possible to look at modern Turkish literature in four periods which are by no means sharply divided.

(a) 1923-38. The most prominent features of the period are nationalism, optimism and the pride of having won the War of Liberation. With the literacy campaign which followed the alphabet reform (1928) and the purification of the Turkish language, the opening of *Halkevleri* "People's Houses" [see KHALKEVI] whose activities included exhibitions, drama clubs, library services, community courses, and the import of new technologies for printing, the number of published materials and literacy increased dramatically. The state policy of forming and shaping a new culture was in full speed. In poetry, numerous revered poets such as Abdülhak Hamid Tarhan (1852-1937), Mehmet Emin Yurdakul (1869-1944 [see MEHMED EMĪN]), Ahmet Haşim (1885-1933), Mehmet Akif Ersoy (1873-1936 [see MEHMED ʿĀKIF]), Yahya Kemal Beyatlı (1884-1958), who had emerged during the Ottoman empire, continued to write, usually with *ʿarūḍ*. But there was also a new generation of poets who sometimes formed literary circles. For example, Faruk Nafiz Çamlıbel (1898-1973 [see ČAMLIBEL, in Suppl.]), Yusuf Ziya Ortaç (1913-75 [*q.v.*]), Orhan Seyfi Orhon (1890-1972), Halit Fahri Ozansoy (1891-1971), and Enis Behiç Koryürek (1891-1949 [*q.v.*]) are known as *Hece'nin beş şairi* "Five poets of the syllable". They divorced themselves from *ʿarūḍ* and promoted the syllabic metre. They were populists and romantic nationalists at heart. They wrote about nature, and in praise of Anatolia and its people. Another group, the *Yedi meşaleciler* "Seven torches", was composed of young poets in search of novelty as a reaction to the romantic nationalism of their aforementioned colleagues. Among them were Sabri Esat Siyavuşgil (1907-68), Ziya Osman Saba (1910-57), Yaşar Nabi Nayır (1908-81), and Cevdet Kudret Solok (1907-). They, too, wrote in syllabic metre but more under the influence of the French Parnassian school. During the same period, Ahmet Hamdi Tanpınar (1901-62), Ahmet Muhip Dıranas (1909-80), Ahmet Kutsi Tecer (1901-67) and Cahit Sıtkı Tarancı (1910-56) also became well-known names. The real revolutionary and modernising poet was Nazım Hikmet (1902-63 [*q.v.*]), who did away with the conventional moulds and wrote poems full of lyricism which damned social injustice. In fiction, Yakup Kadri Karaosmanoğlu (1889-1974), Refik Halit Karay (1888-1965 [*q.v.*]), Halide Edip Adivar (1884-1964 [see KHĀLIDE EDĪB]), Reşat Nuri Güntekin (1889-1956 [see RESHĀD NŪRĪ]), Hüseyin Rahmi Gürpınar (1864-1944), Peyami Safa (1899-1961), Halit Ziya Uşaklıgil (1866-1945 [see KHĀLID ḌIYĀʾ]) and Memduh Şevket Esendal (1883-1952 [*q.v.* in Suppl.]) depicted the disintegration of the Ottoman society, the immoral lives of religious sectarians, conflicts between urban and rural Anatolia, and also wrote sagas of the recent war.

(b) 1940-60. By the 1940s, the romantic nationalism of the previous era turned to social realism. Turkish intellectuals responded to diverse political and social trends and ideas. Meanwhile, the state encouraged and invested in the translation of literary works from the leading outside languages into Turkish. In poetry, with the *Garip* "Strange" or *Birinci yeni* "The First new ones" movement in the early 1940s, Orhan Veli Kanık (1914-50 [*q.v.*]), Oktay Rifat Horozcu (1914-88 [*q.v.*]), and Melih Cevdet Anday (1915-) launched poetic realism. They did away with rigid forms, metres and rhyme, and moved away from lyricism. In their poems they championed the little man as hero. During the same period, Fazıl Hüsnü Dağlarca (1914-), Behçet Necatigil (1916-79), Cahit Külebi (1917-) and others wrote on a variety of themes, developing their own styles. During the late 1950s, a strong reaction against realism in poetry emerged from a group of poets who called themselves *İkinci yeniler* "The Second new ones" and advocated "art for innovation's sake". Salah Birsel (1919-), İlhan Berk (1916-), Cevdet Süreyya (1931-), Tahir Uyar (1927-85) and Edip Cansever (1928-86) practised obscurantism and neo-surrealism. Their wild imaginations and dreams were expressed with distortions of language. More than anything, they tried to depict the experiences of the alienated individual in urban centres. In fiction, Sait Faik Abasıyanık (1906-54) combined in his short stories local colour with scenes from the everyday life of the little man. Harsh and not-so-happy realities of the Anatolian peasants and rural life found expression first in the writings of Sabahatin Ali (1906-48 [*q.v.*]) and then Mahmut Makal (1933-) in the 1940s. In the mid-1950s, the genre of the *Village novel* emerged, represented at its best by Yaşar Kemal (1922-), Orhan Kemal (1914-70) and Fakir Baykurt (1929-), and in drama by Cahit Atay (1925-) and Necati Cumalı (1921-). Tarık Buğra (1918-94) and Kemal Tahir (1910-73) reflected the interest of the literati in history through their novels, as did A. Turan Oflazoğlu (1932-) and Orhan Asena (1922-) through their plays. Ahmet Hamdi Tanpınar (1901-62) combined occidental and oriental values in his novels. During the same period, Nurullah Ataç (1898-1957) wrote belles-lettres and left a lasting impression with his innovative usage of Turkish syntax and lexicon. The search for something different to replace the *Village novel* genre is seen in the works of authors like Leyla Erbil (1931-), Vüs'at O. Bener (1922-) and Ferid Edgü (1936-), while Aziz Nesin (1915-95) began to excel as the most prolific satirist of modern times.

(c) 1960 onwards. During the 1960s and the 1970s, "art is for society" became the prominent approach. Thinking of the past and trying to come to terms with it was usually expressed in revolutionary themes. Social problems and different ideological and political solutions to them were reflected in literature, so much so that politics and literature became at times inseparable. In poetry, Ahmet Arif (1926-91), Ataol Behramoğlu (1942-) and İsmet Özel (1944-) called themselves the revolutionary young poets against the bourgeois writers. Later, Özel was to turn to Islam and Behramoğlu abandoned crude propaganda and his didactic style. Atilla İlhan (1925-) combined elements of classical and folk poetry, whilst Can Yücel (1926-) excelled as the lyrical satirist. Village poets continued to provide enlightenment and live entertain-

ment to their provinces, but at the same time most of the minstrels made appearances in the urban centres. While the poems of the blind minstrel Aşık Veysel (1894-1973) came to be known by everyone, new and old folk ballads became songs of protest in the 1970s. The village genre continued with Fakir Baykurt, Şevket Süreyya Aydemir (1897-1976), and Yaşar Kemal in novel and short story, but the majority of the authors began to shift to themes concerning the life of the individual and to more urban settings. Turkish workers and the problems associated with immigration, and the individual's alienation also became popular subjects. While Yusuf Atılgan (1921-89), Tahsin Yücel (1933-), Enis Batur (1952-), Orhan Pamuk (1952-), Nedim Gürsel (1951-), Selim İleri (1949-), Bilge Karasu (1930-95), Murathan Mungan (1955-), Füsun Akatlı (1944-) are among the prominent names of the era, a group of women writers such as Nezihe Meriç (1925-), Leyla Erbil, Adalet Ağaoğlu (1929-), Sevgi Soysal (1936-76), Füruzan (1935-), Tomris Uyar (1941-), Aysel Özakın (1942-), Pınar Kür (1943-), Nazlı Eray (1945-), Ayla Kutlu (1938-), Latife Tekin (1957-) and Erendüz Atasü (1947-), who emerged in the 1970s and 1980s, continue their success through the 1990s. In drama, Cahit Atay and Sermet Çağan (1929-70) are known for their plays which use Turkish themes and traditional forms with absurdist influences. The late 1980s saw the advent of "writers in prison", following the coup in 1980, and a group of "Islamic poets" such as Sezai Karakoç (1933-) and İsmet Özel (1944-) who write in the forms of current innovative Turkish poetry. Meanwhile, a Turkish diaspora literature is emerging with the works of second-generation Turkish settlers in Europe.

Turkish literature of the 1990s is more diversified and pluralistic than ever with a range of beliefs, settings, situations and ideologies; it is no longer a literature of the "type", but of the individual.

6. Literature in Turkic languages outside Turkey from 1400 to the present.

(a) Čag͟hatay literature in Central Asia and Uzbek literature

Poetry in Čag͟hatay, called also *Türkī*, had its climax in the 15th century with the works of Mīr ʿAlī S͟hīr Nawāʾī [*q.v.*]. Back in history, continuity of Turkic written literature presented itself in a different light than today. Towns and libraries were destroyed as the Mongols were advancing. The cultural centres had little time to flourish and consolidate, either before destruction, like Kās͟hg͟har, or after destruction, like Saray in the territory of the Golden Horde. Books were only very sporadically preserved and handed down. A great deal was lost for ever, and just by chance did this or that emerge centuries later.

Nawāʾī obviously did not know the *Ḳutadg͟hu bilig* by Yūsuf K͟hāṣṣ Ḥād͟jib [*q.v.*] of the 11th century. He knew the name of Aḥmad Yuknakī [*q.v.*], but had not read his *ʿAtabāt al-ḥaḳāʾiḳ*. Aḥmad Yasawī [*q.v.*], of whose poems he may have heard though it is very unlikely that they had been written down at that early time, was a holy man to him whom he mentioned in his *Nasāʾim al-maḥabba*. We know from his *tad͟hkira*, the *Mad͟jālis al-nafāʾis*, that he must have been very familiar both with the Persian and the Čag͟hatay literatures of the 9th/15th century.

Čag͟hatay poets living in Harāt were Luṭfī [*q.v.*] (*Lutfī s͟heʿriyātidan*, Tashkent 1985); Yūsuf Amīrī (first half 15th century), known as the author of the *mat͟hnawī Dah-nāma* (833/1429-30), a *dīwān*, and the *munāẓara Bang u čag͟hir*; and Yaḳīnī (first half 15th century), who wrote the *munāẓara Oḳ yayniñ munāẓarasi*. Ḥusayn Bāyḳara [*q.v.*], ruler of Harāt, contributed to the flourishing of literature, and he even wrote a *dīwān* himself under the *tak͟hallus* Ḥusaynī (K. Eraslan, *Hüseyn-i Baykara divânı'ndan seçmeler*, Ankara 1987; idem, *D͟jamāliñdin küzim rawshan*, Tas͟hkent 1991). The author of *g͟hazals* and *ḳaṣīdas*, Sakkākī (d. before 853/1449), lived in Samarḳand, and perhaps in Sawrān, since he wrote a *ḳaṣīda* for Amīr Arslan K͟hʷād͟ja Tark͟hān, military commander and governor of Ulug͟h Beg in Sawrān. The latter had a reputation as a friend of poetry: he had the *ʿAtabāt al-ḥaḳāʾiḳ* copied, writing some verses himself to complement it. Nawāʾī did not find Sakkākī's poems in Samarḳand around 872/1467, which may also be an indication that Sakkākī actually did not live in Samarḳand to the end of his life. (*Tanlangan at͟harlar*, Tashkent 1960; Russian tr., *Izbrannoe*, Tashkent 1961). Atāʾī was also one of the Samarḳand *g͟hazal* poets, though he came from Balk͟h and died in his home town in the middle of the 15th century. The Tīmūrid Sayyid Aḥmad, author of the *mat͟hnawī Taʿas͟hs͟huḳ-nāma* (839/1435-6), lived as governor in K͟hurāsān. K͟hud͟jandī, who around 802/1400 wrote the *mat͟hnawī Laṭafat-nāma* (ed. E.I. Fazilov, *K͟hodžandi. Latafat-name. Kniga o krasote*, Tashkent 1976), is likely to have written his works in K͟hʷārazm. It is, however, not yet known where Gadāʾī (*ca.* 807/1405-after 897/1491-2) lived, writer of *g͟hazals*, or Aḥmadī, author of the *munāẓara* about string instruments (Gadāʾī's poetry was edited in Tashkent on the basis of J. Eckmann's edition in *TDEY*, x [1960], 65-110: Gadāʾī, *S͟heʿrlar* 1965; further János Eckmann, *The Dīvān of Gadāʾī*, Bloomington 1971.) Neither do we know where Sayyid Ḳāsimī lived, of whom four *mat͟hnawīs* were found in the library of Rampur in the 1970s: *Mad͟jmaʿ al-ak͟hbār* dedicated to Tīmūr's grandson Abū Saʿīd, *Guls͟han-i rāz, Ḥaḳīḳāt-nāma, Ilāhī-nāma* (ed. B. Ḳāsimk͟hānov: *Sayyid Ḳāsimīniñ adabī-didaktik dāstānlari*, Tashkent 1987; idem, *Sayyid Ḳāsimī. Mat͟hnawīlar mad͟jmūʿasi*, Tashkent 1992).

S͟hīrāz should also be mentioned among the places where Čag͟hatay poetry evolved in the time of the Tīmūrids. Ḥāfiẓ K͟hʷārazmī, whose real name was probably ʿAbd al-Raḥīm, presumably lived here at the turn of the 14th to the 15th centuries. The only manuscript found of his voluminous *dīwān* is kept in the library of the Sālār D͟jang Museum in Ḥaydarābād,

ms. no. 4298 (ed. Ḥ. Sulaymān, *Ḥāfiẓ Khʷārazmī sheʿriyatidan*, Tashkent 1980; idem, *Dīwān*, 2 vols. Tashkent 1981; Russian tr. S. Ivanov, *Izbrannoe*, Tashkent 1981). Ḥaydar Khʷārazmī (d. after 850/1447) also found his new home in Shīrāz; he was the first Turkic poet who, stimulated by Niẓāmī's [*q.v.*] *Makhzan al-asrār*, wrote a brief *mathnawī* of the same title and metre (*sarīʿ*) (on him, cf. N. ʿAbdullaev, *Ḥaydar Khʷārazmī wa uniñ Makhzan al-asrār*, Tashkent 1976).

Balkh was the home of Ḥāmidī or Durbek, the author of the *mathnawī Yūsuf u Ẓalīkhā*, composed in 812/1409-10 or 874/1469-70 (cf. ʿAbd al-Raʾūf Fiṭrat, *Üzbek adabiyāti namūnalari*, Tashkent-Samarḳand 1928, 124-39).

Hence in the 15th century, Čaghatay literature was not only flourishing in Harāt and Samarḳand, widely known as cultural centres of the Tīmūrid era, but also in the southwest and in the northern regions bordering on the steppe. Well-known genres were *ghazal* and *ḳaṣīda*, *rubāʿī*, *tuyugh*, *muʿammā* and *mathnawī*, as well as *munāẓara*, the latter in verse or in prose interspersed with verses.

Though Nawāʾī himself had created an outstanding example, he feared for the further existence and development of Čaghatay poetry at the end of his life. In *Muḥākamat al-lughatayn*, he called upon the poets who spoke *Türkī* as their mother tongue, to write not only in Persian but also in *Türkī*. Actually, none of the poets in the centuries to come left behind such an extensive œuvre as Nawāʾī did, and none succeeded in arousing such a great interest among the Turkic poets of all regions and even among the Persian poets. But even though Čaghatay literature was never again as rich as in Nawāʾī's day, it did not die until the end of the 19th century. Then came the time when literatures started to be written in those languages which had, until that time, only existed in dialects and which therefore had been considered inappropriate for high-level literature.

Bibliography for the 15th century: The most important survey with references about manuscripts and editions of texts is J. Eckmann, *Die tschaghataische Literatur*, in *PTF*, ii, 304-61. Other works of a general character are: M. Fuad Köprülü, *Çağatay edebiyatı*, in *İA*, iii, 270-323; *Üzbek adabiyāti taʾrīkhi*, 5 vols., vols. i and ii, Tashkent 1978; *Istoriya uzbekskoy literaturî s drevneyshikh vremen do Velikoy Oktyabʾrskoy Sotsialističeskoy Revolyutsii*, 2 vols., Tashkent 1987-9. Further, a new edition of Mīr ʿAlī Shīr Nawāʾī's works should be mentioned: *Mukammal atharlar tüplami*, 20 vols., started in 1987. Trs. of his works: Alisher Navoï, *Gazels et autres poèmes. Trad. du turc et présenté par Hamid Ismaïlov*, Paris 1991; Russian tr. *Yazîk ptic, Izd. podgotovil S.N. Ivanov*, Petersburg 1993.—The texts of the 15th century were given in a number of anthologies in the 1980s.

Among the poets of the 10th/16th century are the two founders of states, Bābur [*q.v.*] and Shaybānī or Shībānī Khān [*q.v.*]. Only one manuscript each exists of Shaybānī Khān's *dīwān*, of his text *Baḥr al-hudā* and of his *risāla*, whereas Bābur's *ghazals*, *rubāʿīs* and *tuyughs* were widely spread, and his memoirs, *Waḳāʾiʿ* (the *Bābur-nāma*), were translated into Persian more than once, encouraged by his successors who were anxious to preserve them. For Shaybānī Khān, see A. Bodroligeti, *Muhammad Shaybānīs "Baḥru 'l-hudâ"*, in *UAJb*, liv (1982), 1-56; idem, *Muhammad Shaybānī Khān's apology to the Muslim clergy*, in *Archivum Ottomanicum*, xiii (1993-4), 85-100. For Bābur, see *Atharlar*, 3 vols., Tashkent 1965-6; S.A. Azimdžanova, *Indiyskiy divan Babura*, Tashkent 1966; *Baburname*, Istanbul 1970; Z.M. Bābur. *Traktat ob aruze*, ed. I.V. Stebleva, Moscow 1972; I.V. Stebleva, *Semantika gazeley Babura*, Moscow 1982; *Bābir sheʿriyātidan*, Tashkent 1982; P. Šamsiev, *Bābur-nāma*, Tashkent 1989; G.F. Blagova, *"Baburname"—yazîk, pragmatika teksta, stilʾ*, Moscow 1994; Bilâl Yücel, *Bâbür Dîvânı*, Ankara 1995; *The Baburnama, memoirs of Babur, prince and emperor*, tr., ed. and annot. by W.M. Thackston, New York 1996.

Bābur's poetry was a model for other Turkic poets living in India in the 16th century. Bābur's son Kāmrān (1509-57) was one of them (ed. Saʿīdbek Ḥasan, Tashkent 1993), as was Bayram Khān (1504-61), a descendant of the Turkmen *Bakhor* (*Saylanan eserler*, Ashkhabad 1970; *Dīwān of Bayram Khān*, Karachi 1971; G.Y. Aliev, *Bayramkhan-turkmenskiy poét*, Ashkhabad 1969). Čaghatay poetry did not, however, survive, compared with Persian poetry in India in the following centuries.

In the 16th century another genre was added to the existing ones, sc. historiographies, which had traditionally been written in Persian only. A first attempt to write briefer historical texts in the Čaghatay language was made by Nawāʾī (*Tārīkh-i mulūk-i ʿAdjam* and *Tārīkh-i anbiyāʾ wa ḥukamāʾ*), and the structure of Bābur's memoirs was already similar to that of a chronicle. Extensive chronicles were written in the time of the Shaybānids. Furthermore, translation from Persian into Čaghatay became popular and was to develop over the centuries to come. Muḥammad Ṣāliḥ (1455-1534 or 1535) wrote a chronicle in verse called *Shaybānī-nāme* arousing the interest of the European scholars in the 19th century and repeatedly published ever since (recent ed. N. Dawrān, Tashkent 1961; E. Shādīev, Tashkent 1989). At the demand of Shaybānī Khān and the Shaybānids, a number of historical works were written in prose about their descent and their deeds, among them the anonymous *Tawārīkh-i guzīda nuṣrat-nāma* (908-9/1502-4, ed. A.M. Akramov, Tashkent 1967). In the 16th century, the *Ẓafar-nāma* by Sharaf al-Dīn ʿAlī Yazdī [*q.v.*] was twice translated into Čaghatay and the *Tārīkh-i Ṭabarī* once (from Persian). Apart from the historical texts that were written in Čaghatay following the example of Persian historiography, a type of historical literature characterised by strong mythological elements developed from the genealogies of the nomads dating as far back as Čingiz Khān and Oghuz Kaghan, especially in the distinguished families. Examples are Abu 'l-Ghāzī Bahādur Khān's [*q.v.*] *Shadjara-yi Tarākima* (1070/1659) and *Shadjara-yi Türk* (1076/1665, finished by Anusha), which aroused great interest in Russia and Europe already in the 18th century (recent ed. Ḳ. Munīrov and Ḳ. Maḥmūdov, *Shadjara-yi Turk*, Tashkent 1992).

Among the poets of the 16th century the Khān of Bukhārā ʿUbayd Allāh, whose pen-names were ʿUbaydī and Ḳul ʿUbaydī (d. 1539), should be mentioned (selected poems: Ḳul ʿUbaydī, *Wafā ḳilsañ*, Tashkent 1994). While many of the poems which the Persian-writing *tadhkira* author Ḥasan Nithārī makes mention of seem to be lost, some *mathnawīs* of the 16th century have enjoyed great popularity almost continuously, e.g. Madjlīsī's *Ḳiṣṣa-yi Sayf al-mulūk*, the material of which was taken from the tales of *Thousand and One Nights*. Since 1807 it has been printed several times in Kazan (cf. *Üzbek adabiyāti taʾrīkhi*, iii, Tashkent 1978, 105-17; Gönül Tekin, *XVI yüzyıl Çağatay şairi Meclisî'nin Seyfelmülük adlı mesnevisi hakkında*, in *Journal of Turkish Studies*, xi [1987], 133-200). Of the *mathnawīs* by Pādshāh Khʷādja (1480-after 1565), the father of Nithārī, the *Maḳṣad al-aṭwār* has been handed down (extract in *ʿAṣrlar nidāsi*, Tashkent 1982, 93-117). His

didactic prose, following the example of Saʿdī's *Gulistān*, is entitled *Gulzār* (extracts ed. W. Zāhidov and S. Ghanīeva, *"Miftāḥ al-ʿadl" wa "Gulzar" dan*, Tashkent 1962; for the author, cf. M. Mirzaahmedova, *Khwādjā: ḥayāti wa idjādi*, Tashkent 1975). *Ṭāhir u Ẓuhra* by Ṣayyādī, in which the *mathnawī* verses alternate with four-line strophes, was probably composed in the 17th century (ed. Tashkent 1960).

Poetry of Central Asia in the 17th and 18th centuries was first of all religious poetry. It developed in two different directions. Bābā Raḥīm Mashrab (b. in the middle of the 17th century in Namangan, hanged 1711 in Balkh) represents the rebellious type of poetry that was bold enough to challenge all traditions and customs referring to God and to tell of passionate love, which recipients, depending on their individual views, were free to interpret either as love of God, or of the love of a woman or of a man. His *ghazals* and *mukhammas* were much read, and set to music they are also sympathetically received (recent ed. in Tashkent: *Tanlangan atharlar*, 1971; *Mashrab sheʿriyātidan*, 1979; *Shāh Mashrab ḳiṣṣasi*, n.p. n.d. [1991]; *Ḳiṣṣa-yi Mashrab*, 1992; *Mabdāʾ-i nūr*, 1994; Russian tr. *Izbrannoe*, 1980; new ed. of Russian tr. by N.S. Lykoshin (1910), *Dīwāna-yi Mashrab*, 1992). A quite different aim was followed by Ṣūfī Allāh Yār (*ca.* 1616-*ca.* 1706) from Yangi Ḳurghan, who intended to pass on the fundamental values of Islam by narrating vivid *mathnawīs* to the less educated people. Both his *Sirādj al-ʿādjizīn* and his *Thabāt al-ʿādjizīn* were very popular (*Thabāt al-ʿādjizīn*, Tashkent 1991). Also, the works of Ṣayḳalī from Ḥiṣār have been widely read since the 18th century: the *mathnawī Amīr-i Akhtam* (new ed. in *Ibrāhim Adham ḳiṣṣasi*, Tashkent 1991, 89-147), the *mathnawī Bahrām u Gulandām* (ed. Tashkent 1960), and *Wafāt-nāma-yi payghambar*, which is a translation of Ḥusayn Wāʾiẓ Kāshifī's *Rawḍat al-shuhadāʾ* and which is often cited under the titles *dīwān-i Ṣayḳalī* or *kitāb-i Ṣayḳalī*. Khwādja Naẓar from Osh, with the *takhalluṣ* Huwayda, who died *ca.* 1780-1, lived near Marghalān (Čimyān). The poems of his *dīwān* and his *mathnawī Rāḥat-i dil* (new ed. Tashkent 1994) also found him many readers. None of these religious poets sank into oblivion. Even in the 20th century, when only Mashrab, whose poems allowed a non-religious interpretation, was integrated into the official canon of literature, the poetry of his contemporaries was also transmitted because their texts provided a reservoir of material for arranging funeral rites, which play a great role in Uzbek life.

A poet outside religious poetry is Turdī, who lived until 1699 or 1700, at first near Bukhārā, later in Khudjand. In critical poems and in a syntax close to the language of the people, he expressed his disillusionment over all the struggles for the throne of Bukhārā and the battles devastating the country among the Beks, in which he was involved himself (*Sheʿrlar*, Tashkent 1971).

Though some of the poets changed their places of residence in the 18th and 19th centuries, hoping to find a Maecenas in one or the other khānate, relative stable circles of poets became established at the courts of the Khāns and outside them. For Čaghatay literature, it was first of all the courts in Khīwa and in Khoḳand that were of great importance. Most poets at the latter were bilingual.

Information of unique value about the Khoḳand poets is contained in the *tadhkira Madjmūʿa-i shāʿirān* (lith. Tashkent 1902), whose composition was headed by Faḍlī Namangānī (real name ʿAbd al-Karīm) and given to ʿUmar Khān in 1821. Yet in the 20th century, in many cases, Faḍlī's evaluation of the texts was no longer shared, so that poets he had criticised or disparaged were greatly acclaimed. The *tadhkira* in the *mutaḳārib* metre provides biographical details about 101 poets from Samarḳand to Kāshghar, including examples of poems in Čaghatay and Persian. Highly appreciated are the traditional *taṣawwuf* poets and those who praise ʿUmar Khān and his administration. Faḍlī, too, wrote a *dīwān*, the poems of which were set to music, a dialogue in verse (*mushāʿira*) together with the poetess Maḥzūna, and two so far unlocated historical works about the age of ʿUmar Khān, one in verse and one in prose. Muḥammad ʿUmar Khān (ruler of Khoḳand 1812-22) himself, under the pseudonyms Amīr and Amīrī, wrote a *dīwān* with Persian and Čaghatay poems, which was widely known. Also, his wife Māhilar (1792-1842) was a well-known poetess writing under the pseudonyms Nādira and Kāmila. Her poems are still read in the 20th century (ed. *Dīwān*, Tashkent 1963; the Persian poems alone, *Dīwān*, Dushanba 1967; *Atharlar*, 2 vols., Tashkent 1968-71; *Nādira sheʿriyatidan*, Tashkent 1979; *Ey sarw-i rawān*, Tashkent 1992, Russian tr. Tashkent 1979). Her poetess-friend Uwaysī (*ca.* 1780-*ca.* 1845) (her real name was Djahān ātin) enjoys the reputation of being not less talented. Besides her poems in the diverse classical forms, it is her riddles in verse, very likely created for her female disciples, that are notable, as are three *mathnawīs* with interspersed *ghazals* and *musaddas*, two of them dedicated to the death of Ḥasan and Ḥusayn, and one historical text (unfinished) dealing with Muḥammad ʿAlī Khān's (ruler of Khoḳand 1822-42) campaign to Kāshghar (ed. in Tashkent, *Dīwān*, 1959; *Uwaysī sheʿriyatidan*, 1980; *Uwaysī, Kūngil gulzāri*, 1983; *Uwaysī, Nādira*, 1993).

Whether the poet Ghāzī (d. between 1811 and 1821), who wrote poems in the traditional style and poems in which he fiercely criticised the morals of his contemporaries, and who was highly appreciated by Faḍlī, belonged to the court himself for a certain time, is not known (on him, see A. Ḳayūmov, *Ghāzī*, Tashkent 1959).

The critical line in poetry that began with Turdī was continued by the bilingual poets Makhmūr (d. 1844), Gulkhanī (b. *ca.* 1770), Muḳīmī (1850-1903) and Dhawḳī (1853-1921) in the 19th century in the Khoḳand Khānate, reaching as far as Ḥamza at the beginning of the 20th century. Makhmūr wrote narrative poems in the *mukhammas* and *tardjīʿ-band* forms, often interspersed with dialogues and occasionally close to the language of the people; in them he gave satirical portraits of his contemporaries. He liked alternating between Čaghatay and Persian within one poem. Faḍlī expressed his disdain for him in verses, and Makhmūr replied in the same way (Ḳayūmov, *Makhmūr*, Tashkent 1956). Gulkhanī was renowned for his animal tales in rhyming prose and verse called *Ḍarb al-mathal*, with critical allusions to his time. He partly referred to tales from *Kalila wa-Dimna*, but modified them. Already in the early years of the 20th century the poems of Muḥammad Amīn Muḳīmī were often included in anthologies and appeared in separate lithographies and prints. Both his love poetry and his socio-critical satirical verses were popular. Thanks to the latter type of poems and to the fact that a group of like-minded poets had gathered around him, Muḳīmī's poetry met with a great response in the 20th century (Gh. Karimov, *Muḳīmī. Hayāti wa idjādi*, Tashkent 1970; ʿA. ʿAbdughafurov, *Muḳīmī satirasi*, Tashkent 1976). The circle of poets included, among others, Nādim (1844-1910) from Namangan (*Tanlangan*

a<u>th</u>arlar, Tashkent 1964), <u>Dh</u>awḳī and <u>Dh</u>ākird<u>j</u>ān Furḳat (1859-1909), who integrated his ideas of popular education and of a Europeanised way of life into poetry and prose, sometimes in a journalistic style (ʿA. ʿAbdu<u>gh</u>afurov, *<u>Dh</u>ākird<u>j</u>ān Furḳat. Ḥayāti wa id<u>j</u>ādi*, Tashkent 1977; Russian tr. Muḳīmī, *Furḳat. Izbrannïe proizvedeniya*, Leningrad 1972.) The *<u>gh</u>azals* by Ḥazīnī (b. 1867), set to music by the author, were widely popular (cf. Ḥazīnī, *Taṣadduḳ yā rasūl Allāh*, Tashkent 1992).

To the historical literature on the <u>Kh</u>ānate of <u>Kh</u>oḳand belongs the *Muntak<u>h</u>ab al-tawārī<u>kh</u>* by Muḥammad Ḥakīm <u>Kh</u>ān (b. *ca.* 1802), written in Persian and translated into Čag<u>h</u>atay in the 19th century, which among other things, contains the author's impressions of his journey through Russia and the Middle East (cf. B. Amedov, *Istoriko-geografieskaya literatura Sredney Azii XVI-XVIII vv.*, Tashkent 1985, 126-7; A. <u>Kh</u>ur<u>sh</u>ut, *Ḥakīm <u>Kh</u>ānniñ ḥayāti wa sayāḥatlari*, Tashkent 1987). Another historical work from this region is the *Tārī<u>kh</u>-i Far<u>gh</u>āna* by Isḥāḳ <u>Kh</u>ān ʿIbrat (1862-1937).

Two poets were closely connected with the court of <u>Kh</u>īwa for a certain time: Pahlawān Ḳuli Rawnaḳ (*ca.* 1725-*ca.* 1805), whose *<u>gh</u>azals* were taken as bases for *mu<u>kh</u>ammas* already in his lifetime, and Na<u>sh</u>āṭī (also Ni<u>sh</u>āṭī), who renewed the genre of disputes (*munāẓara*) and wrote the *ma<u>th</u>nawī Ḥusn u Dil* (1778) and a *dīwān* (M. Ḳāsimova, *Muḥammadnaẓar Ni<u>sh</u>āṭī. Ḥayāti wa id<u>j</u>ādi*, Tashkent 1987). <u>Kh</u>ʷārazm was also the home of Rāḳim (*ca.* 1742-*ca.* 1814), whose striking abundance of *mar<u>th</u>iya*s may be an indication that he used to make a living by writing commissioned texts of this kind. The poet ʿAndalīb (*ca.* 1710-*ca.* 1770), popular among the Uzbeks and Turkmens in <u>Kh</u>ʷārazm, wrote his works (*Yūsuf u Ẓelī<u>kh</u>ā, Layla u Ma<u>dj</u>nūn, Ẓayn al-ʿarab, Saʿd Waḳḳāṣ*) in a form similar to anonymous *ḳiṣṣa* with its typical alternation between prose and verse, though he used the varying metres of the *ʿarūḍ*.

The <u>Kh</u>āns of <u>Kh</u>iwa promoted Čag<u>h</u>atay historiography in the 19th century and initiated the translation from Persian into Čag<u>h</u>atay of narrative works (*Ḳābūs-nāma*, ed. Tashkent 1992; *Laṭāʾif al-ṭawāʾif* by ʿAlī b. Ḥusayn al-Kā<u>sh</u>ifī; *Badaʾiʿ al-waḳaʾiʿ* by Zayn al-Dīn Maḥmūd Wāṣifī; etc.) and of historical texts. The best known historians were active as translators. Muʾnis (1778-1829) wrote the *Firdaws al-iḳbāl* and translated the *Ẓafar-nāma* of <u>Sh</u>araf al-Dīn ʿAlī Yazdī, as well as several chapters of the *Rawḍat al-ṣafā* by Mīr<u>kh</u>ʷānd [*q.v.*]. His nephew Āgahī (1809-74) finished the *Firdaws al-ikbāl*, continued the translation of *Rawḍat al-ṣafā*, created a five-volume history of <u>Kh</u>ʷārazm, translated the *Tārī<u>kh</u>-i Nādirī* by Mīrzā Mahdī <u>Kh</u>ān [*q.v.*], the *Gulistān* by Saʿdī [*q.v.*] and *Yūsuf wa Ẓelī<u>kh</u>ā* by <u>Dj</u>āmī [*q.v.*]. Both authors also wrote poems and compiled them into a *dīwān*. In Tashkent were published Muʾnis, *Tanlangan a<u>th</u>arlar*, 1957; *Saylanma*, 1980; Russian tr. *Izbrannoe*, 1981; Āgahī: *Taʿwīḍ al-ʿā<u>sh</u>iḳīn*, 1960; *A<u>th</u>arlar*, 6 vols. 1971-80; on Āgahī, see Ḳ. Munīrov, *Āgahī ʿilmī wa adabī faʿāliyati*, 1959; R. Ma<u>dj</u>īdī, *Āgahī lirikasi*, Tashkent 1963; *Āgahī. A<u>th</u>arlariniñ tawṣīfi*, Tashkent 1986. See further *<u>Sh</u>īr Muḥammad Mīrāb Mūnis and Muḥammad Riżā Mīrāb Āgahī, Firdaws al-Iqbāl, History of Khorezm*, ed. Y. Bregel, Leiden 1988.

The physician <u>Dj</u>unayd Allāh Ḥā<u>dh</u>iḳ (d. 1843), whose Persian *dīwān* contained a few Čag<u>h</u>atay verses, was also involved in the translation of the *Rawḍat al-ṣafā*. A successor to Āgahī in historiography was Muḥammad Yūsuf Bayānī (d. 1923), whose *<u>Sh</u>a<u>dj</u>ara-yi <u>Kh</u>ʷārazm<u>sh</u>āhī* included events until the year 1913 (partial ed. Tashkent 1994). His *<u>Kh</u>ʷārazm tārī<u>kh</u>i* is only partially preserved. Muḥammad Raḥīm <u>Kh</u>ān (1844-1910, reigning since 1863), a poet himself with the pen-name Fīrūz, gathered a great number of poets and musicians at his court (ed. *Ne bŭldi, yārim kelmadi*, Tashkent 1991; *Elga <u>sh</u>āh u i<u>sh</u>ḳka ḳul. Dīwān*, Tashkent 1994). He prompted the physician and poet Aḥmad Ṭabībī (1868-1910) to make up a collection of *<u>gh</u>azals* by 30 living poets (*Ma<u>dj</u>mūʿa-yi sī <u>sh</u>uʿarā-yi Fīrūz <u>Sh</u>āhī*, 1908) and of *mu<u>kh</u>ammas* and *musaddas*, whose basis was the *<u>gh</u>azals* by Fīrūz himself and by Āgahī (*Mu<u>kh</u>ammasāt-i ma<u>dj</u>mūʿat al-<u>sh</u>uʿarā-yi Fīrūz <u>Sh</u>āhī*, 1909). Ṭabībī dissociated himself from his disciple ʿIwaḍ (Awaz) Ŭtaru<u>gh</u>li (1884-1919), who introduced traits of a stronger social criticism into poetry, thus breaking with tradition (ʿAwaḍ Ŭtaru<u>gh</u>li, *Tanlangan a<u>th</u>arlar*, Tashkent 1951, 1956; W. Mīrzāev, *ʿAwaḍ Ŭtaru<u>gh</u>li: maʿrifatparwar wa revol<u>y</u>utsion-demokrat kuyči*, Tashkent 1961). Muḥammad Niyāz Kāmil (1825-99) is known as a poet, translator and a musical expert, applying European musical notation to the music of Central Asia. His *dīwān* appeared several times by lithography (<u>Kh</u>īwa 1881, 1895, Tashkent 1909), and in prints in Tashkent (*Tanlangan a<u>th</u>arlar*, 1961; *Dīwān*, 1975. On him, see M. Yunusov, *Kāmil <u>Kh</u>ʷārazmī*, 1960).

For literature from the 16th to 19th century, cf. Eckmann, *op. cit.*, 361-402.

In the second decade of the 20th century, the <u>Dj</u>adīdīs [see IṢLĀḤ. 5, in Suppl.] striving for the modernisation of life, profoundly renewed the canon of literature both thematically and formally. Their socio-political programme of overcoming the isolation of Central Asia, reducing the gap with Europe, putting an end to extravagancies and, instead, orientating life towards useful things and the establishment of new schools with modern teaching methods, found its expression in theatre plays, prose and poetry. The most important representatives were Maḥmūd <u>Kh</u>ʷā<u>dj</u>a Behbūdī (1875-1919), ʿAbd al-Raʾūf Fiṭrat (1886-1938 [*q.v.*]), ʿAbd al-Ḥamīd Sulaymān, pseudonym Čŭlpān (1897-1938), ʿAbd Allāh Ḳādirī (1894-1938) and Ḥamza Ḥakīmzāda Niyāzī (1889-1929). Some of them joined up in the *Čig<u>h</u>ātāy gurungi* (1918-22), supporting a reform of the Arabic alphabet and discussing the creation of a common standard language. None of them died a natural death. They were killed by opponents to any renewal who saw tradition in danger, or later by political figures to whom socialism meant terror. Behbūdī published the journal *Āyna*, wrote schoolbooks and the first theatrical play in Central Asia, *Padarku<u>sh</u>* (1913). ʿAbd Allāh Awlānī (1878-1934) between 1912 and 1917 wrote textbooks for new schools, poems in which he advocated the idea of renewal and a number of theatrical plays (*Advokatlik āsānmi?*, 1914; *Biz wa siz*, 1923, and others). In his fascination for European ways of life and in the biting criticism of his satires, Ḥamza resembled the poet Furḳat. He wrote poems that were easy to sing when set to folk-song tunes (*Millī a<u>sh</u>ulalar učun millī <u>sh</u>iʿrlar ma<u>dj</u>mūʿasi*, 1915-17) and theatrical plays that he put on stage directed by himself, for instance *Ẓaharli ḥayāt*, 1915, *Bāy ila <u>kh</u>i<u>dh</u>matči*, around 1917, and *Maysaraniñ i<u>sh</u>i*, 1926. ʿAbd al-Raʾūf Fiṭrat, the most important scholar and writer in his day, side-by-side with his activities in cultural politics (Minister of Education and Economics of the People's Republic of Bu<u>kh</u>ārā 1921-3) and his scholarly work on literature (e.g. about Bīdil [*q.v.*] and ʿUmar <u>Kh</u>ayyām [*q.v.*]), wrote disputative stories in which he addressed issues of the time (*Munāẓara*, 1909 in Persian, 1911 in Čag<u>h</u>atay; *Ḳiyāmat*, 1923), and plays (*Hind iḥtilālčilari*, 1923, *Şaytānniñ tañriga ʿiṣyāni*, 1924, and *Abu ʾl-Fayḍ <u>Kh</u>ān*, 1924). Čŭlpān was

actively involved in creating a theatre of Central Asia and wrote several plays, e.g. *Yārḳināy* (1926), remarkable stories and a novel (*Keča wa kunduz*, 1936) [see further, MASRAḤ. 5]. First of all, however, he should be recognised for his contribution to the renewal of poetry, bringing to it more individual forms of expression. His most important books of poetry are *Uyghānish* (1922), *Bulāḳlar* (1923) and *Tāñ sirlari* (1926). ʿAbd Allāh Ḳādirī with his *Ūtgan kunlar* (1923-6; German tr. *Die Liebenden von Taschkent*, Berlin 1968) and *Meḥrābdan Čayān* (1929), created the first much-read novels. The literary and political life of the 1920s and 1930s was also influenced by the writers Mashriḳ Yūnusuv, pseudonym Elbek (1898-1939), and Maḥmūd Hādiev, pseudonym Batu (1904-*ca.* 1940), who preferred both the syllabic verse and Mayakovski's free verse.

Bibliography for authors before 1940: On ʿAbd al-Raʾuf Fiṭrat: I. Baldauf, *Der Aufstand Satans gegen Gott*, in *Türkische Sprachen und Literaturen. Materialien der ersten deutschen Turkologenkonferenz*, Veröffentlichungen der Societas Uralo-Altaica, xxix, 1991, 39-74. ʿAbd Allāh Awlānī: *Tāshkent tāngi*, Tashkent 1979. Ḥamza Ḥakīmzāda Niyāzī: *Mukammal atharlar tūplami*, 4 vols., Tashkent 1979-81. ʿAbd Allāh Ḳādirī: *Kičik atharlar*, Tashkent 1969; *Ghirwānlik Mallawāy*, Tashkent 1987; on him, see Ḥabilulla Ḳādirī, *Ātam ḥakida*, Tashkent 1974, 1983. Čūlpān: *Yana āldim sāzimni. Roman, p'esa, sheʿrlar*, Tashkent 1991; *Atharlar*, 3 vols. Tashkent (i, *Sheʿrlar, dramalar, tardjima*, 1994, ii, *Roman, ḥikāyalar, safarnāma, tardjimalar*, 1993); on him, see O. Sharafiddīnov, *Čūlpān, shāʿir ḥakidagi riwāyatlar, wa ḥaḳiḳatlar*, Tashkent 1991; N. Karīmov, *ʿAbd al-Ḥamīd Sulaymān ūghli Čūlpān*, Tashkent 1991; *Čūlpān. Adabiyāt nādir. The efforts made to shape socialist ways of life in the 1930s were at first joined with enthusiasm by many writers (Ghafūr Ghulām, 1903-66; Ḥamīd ʿĀlimdjān, 1909-44; Zulfiya, 1915-96) but later looked at with critical distance and responded to in an amazing diversity of forms: humorous folk-song-like poems besides *ghazals* in *ʿarūḍ* by Erkin Wāhidov (b. 1936), short epigram-like poems together with moving texts by ʿAbd Allāh ʿĀripov (b. 1941), sonnets by Raʾūf Parfī (b. 1943), poems which combine personal confessions with original metaphors by Ḥalīma Khudāyberdieva (b. 1948), and the succinct poems by Muḥammad Ṣāliḥ which deliberately provoke the reader.

Beginning in the 1930s, great emphasis was placed on the development of prose. For one, there was the anecdotal form as derived from oral narration, e.g. that cultivated by Ghafūr Ghulām in *Shūm Bāla*, 1936. There were also the historical novels dedicated to personalities of the political and cultural life and aimed at marking off the borders of their cultural traditions, e.g. Mūsā Tāsh Muḥammadov, pseudonym Āybek (1905-68), *Nawāʾī*, 1944; ʿĀdil Yaʿḳūbov (b. 1926), *Ulughbek khazīnasi*, 1974; and Pīrimḳul Ḳādirov (b. 1928), *Yulduzli tunlar* (*Bābur*), 1978, *Awlādlar dīwāni* (*Humāyun wa Akbar*), 1988. In the 1980s, some writers began directly to address present-day social problems in their novels and stories, including Murād Muḥammad Dūst (b. 1949); Nūr ʿAlī Ḳābul (b. 1950); and Tāghay Murād (b. 1948), whose novels are remarkable for their song-like language.

Editions of the 20th century writers (especially the second half): Āybek: *Atharlar*, 10 vols., Tashkent 1968-75; *Mukammal atharlar tūplami*, 20 vols., Tashkent 1975-85; Ḥamīd ʿĀlimdjān: *Atharlar madjmūʿasi*, 5 vols., Tashkent 1970-2; *Mukammal atharlar tūplami*, 10 vols., Tashkent 1979-84; Ghafūr Ghulām: *Atharlar*, 10 vols., Tashkent 1970-8; *Mukammal atharlar tūplami*, 12 vols., Tashkent 1983-90; Zulfiya: *Atharlar*, 3 vols., Tashkent 1985-6; and Pīrimul Ḳādirov: *Saylanma*, 3 vols., Tashkent 1987-8.

Bibliography: In addition to the references in the text, a few works of a general character should be listed here: E. Allworth, *Uzbek literary politics*, The Hague 1964; *Ūzbek adabiyāti taʾrīkhi*, 3 vols. Tashkent 1964-6; *Pisateli sovetskogo Uzbekistana*, Tashkent 1977; *Ūzbek adabiyāti taʾrīkhi*, 5 vols., vols. iii-v, Tashkent 1978-80; *Istoriya uzbekskoy sovetskoy literaturî 1917-85*, 3 vols., Tashkent 1987-8; S. Mirwaliev, *Ūzbek adiblari*, Tashkent 1993.

(b) Čaghatay literature in Eastern Turkestan and New Uyghur literature

Though knowledge about culture in Eastern Turkestan (Moghulistan) in the 15th and 16th centuries is scarce, the existence of literary fiction in Čaghatay at that time is certain, especially in the towns Yarkand and Kāshghar, but also in Aḳsu, Ghuldja or Ḳuldja, Khotan and Turfan. Today it is seen as part of the heritage of the New Uyghur literature.

Saʿīd Khān of Yarkand (d. 1533) and his successor ʿAbd al-Rashīd Khān (*r.* 1533-69) are assumed to have been poets. Poetry and music were cultivated at the court of ʿAbd al-Rashīd. His wife Amān Nisāʾ Khān wrote poems under the pseudonym Nafasī, composed several *risāla*s and contributed, like Yūsuf Khidir Khān Yarkandī, to the refinement of the musical system of the *maḳām*. However, no *dīwān* has been transmitted, and ʿAbd al-Rashīd Khān is first of all known for the *Tārīkh-i Rashīdī* written in Persian by Mīrzā Muḥammad Ḥaydar Dughlāt (905-58/1500-51 [*q.v.*]).

The literature of the 17th century is better documented; many manuscripts have been preserved, though their study has only just begun. From the works by Muḥammad Amīn Khirḳatī, also known as Gumnām (1634-*ca.* 1724), the *mathnawī Muḥabbat-nāma wa maḥnatkāma* has been transmitted (ed. Urumqi 1982), but his *dīwān* seems to be lost; it was written—as some preserved *ghazal*s demonstrate—in the style of Mashrab, whom the author met at Apaḳ Khʷādja. In the 18th century, Muḥammad Abū Ṣalāḥī from Kāshghar, following the example of Khirḳatī, created the *mathnawī Gul u Bulbul*, whose symbolic figures were taken from his predecessor. The *mathnawī* by Muḥammad b. ʿAbd Allāh Kharabātī (1638-1730) from Aḳsu, completed in 1726, has been transmitted in several manuscripts (ed. ʿAzīz Ṣawut, Kāshghar 1985).

Muḥammad Ṣādiḳ Dhalīlī (*ca.* 1676-*ca.* 1746) from Yarkand, a devout travelling poet, wrote the *mathnawī Safar-nāma* and *Tadhkira-i Khʷādja Muḥammad Sharīf Buzrukwār*, and a *dīwān*. Khʷādja Djahān ʿArshī (1685-1756) from Khudjand, reigning in Yarkand 1736-56, encouraged translations from Persian, which had been much prized since the beginning of the century. In 1709 Mullā Muḥammad Tīmūr Kāshgharī translated into Čaghatay the *Akhlāḳ-i Muḥsinī* of Ḥusayn Wāʿiẓ al-Kāshifī [*q.v.*], and in 1717-18 the *Anwār-i Suhaylī* by the same author, entitled *Athar-i Imāmiyya* in the translated version (ed. by Niʿmat Allāh ʿAbd Allāh, Urumqi 1985). Khʷādja Djahān ʿArshī had the *Shāhnāma* of Firdawsī [*q.v.*] translated into Čaghatay prose and wrote himself a *dīwān* (ed. Muḥammad Tursun Bahāʾ al-Dīn, Urumqi 1995). Among his disciples was Muḥammad Ṣādiḳ Kāshgharī (1740-1849), a prolific writer in the didactic genre and author of the *Tadhkira-yi ʿazīzān* (ed. Kāshghar 1988). He produced one of the translations of the *Tārīkh-i Rashīdī* into Čaghatay, although the name of the translator from 1747 is not

known (cf. L.V. Dmitrieva *et alii*, *Opisanie tyurkskikh rukopisey instituta narodov Azii*, i, Moscow 1965, nos. 87-93). The *ghazals* of the *dīwān* completed in 1747 by Nawbatī (b. *ca.* 1697), who lived in Khotan, were widely spread, also as songs (the *dīwān*, ed. Muḥammad Tursun Bahā' al-Dīn, Urumqi 1995).

Like Mīrzā Muḥammad Ḥaydar Dughlāt, the historian Shāh Maḥmūd Čuras, who lived in the 17th century, wrote both his works, the *Tārīkh-i Rashīdī zeyli* (1686) and the *Tārīkh-i Shāh Maḥmūd Čuras*, in Persian (ed. and Russian tr. Akimushkin, Moscow 1976, New Uyghur tr. Ḥabīb Allāh ʿAlī: *Saʿīdiyya Khānlik tārīkhiga dā'ir materyallar*, Kāshghar 1988). The great interest of the *Tārīkh-i Shāh Maḥmūd Čuras* is reflected in its Čaghatay translation at the end of the 18th century under the title *Alti Shahar khānlariniñ tārīkhi*.

In the second half of the 19th century, the potentates Ẓuhūr al-Dīn Ḥākim Beg of Kāshghar and Afrīdūn Wañ of Turfan, did a lot to preserve and promote Čaghatay literature and they were apparently interested in a great diversity of forms and themes. From 1841 to 1843, the local ruler of Turfan had three poets from the chancellery of the Beg of Kāshghar at his court to establish and refine a collection of *mathnawīs*: ʿAbd al-Raḥīm Nizārī (1776-1848 or 1849), Nawrūz Ākhūn Ḍiyā'ī and Turdī Gharībī (1802-62). The result of their work was a collection of 18 *mathnawīs* and four tales in prose. In their own literary contributions they followed ʿAlī Shīr Nawā'ī. Nizārī's work *Dahr al-nadjāt*, written in 1843 in the form of a dialogue alternating between verse and prose, is dedicated to the art of ruling a state. His writer-friend Nawrūz Ākhūn Ḍiyā'ī created two pieces of love poetry in the form of *mathnawīs* and the didactic work *Maḥzūn al-waʿẓīn* (1843) about human virtues. The Čaghatay translation of *Čahār darwīsh* in verse is supposed to be from the pen of the two friends. From Turdī Gharībī, a love poem and a didactic *mathnawī* with numerous dialogues, entitled *Kitāb-i Gharīb* (1840-1), have come down; the latter is devoted to the arts and crafts established in the country (editions: *Nizārī dastānlari*, Urumqi 1985; ʿA. Nizārī, *Dahr al-nadjāt*, Kāshghar 1988).

Other genres seem to have evolved mainly thanks to Russian influence, and comprise epic poems about real events of the time and stories in prose. Examples are the works by Mulla Bilāl Nāẓim (1823-1900) from Ghuldja: *Ghazāt dar mulūk-i Čīn* in verse and prose (1875, ed. N.N. Pantusov 1880 at Kazan), the fictional satire *Čañmurza Yūsuf Khān* (1881) and the narration *Nuzugum* (about the woman singer of the same name in the uprising of 1826). Bilāl Nāẓim also wrote traditional *ghazals* (ed. *Ghazaliyyāt*, Urumqi 1987, Russian tr. of his works Tashkent 1982, Kazak tr. Alma Ata 1985).

In the 1920s and 1930s, educated people engaged in public activities in a number of towns that were comparable to what the Djadīdīs did in the western parts of Turkestan. They advocated a reform of general education; established theatres, being themselves actors and directors; wrote political poetry and socio-critical dramas, and engaged in journalism. Some of them died violently, such as ʿAbd al-Khāliḳ Uyghur (1901-33), Luṭf Allāh Muṭallib (1922-45) and ʿAbd Allāh (Ablay) Rūzī (1920-45). Editions: Luṭf Allāh Muṭallib: *Muhabbat wa nafrat*, 1956; *Atharlari*, Urumqi 1982. ʿAbd al-Khāliḳ Uyghur: *Shiʿrlari*, Urumqi 1986; see on him, *ʿAbd al-Khāliḳ Uyghur wa uniñ adabiyātimizdagi urni*, Urumqi 1988.

Writers of prose and drama were Dhu 'l-Nūn Ḳādirī (b. 1911) and Sayf al-Dīn ʿAzīzī (b. 1915). While the authors were at first devoted to social questions such as the need for education and the oppression of women, they later wrote historical dramas and novels, e.g. the musical drama *Amān Nisā' Khān* in 1980 and the historical novel *Satuḳ Bughra Khān* in 1987 by Sayf al-Dīn ʿAzīzī. Among prose writers of the following generation, the names Zordun Ṣābir (b. 1938) and Muḥammad Baghrash (b. 1952) should be mentioned.

The poets Alḳam Akhtam (b. 1922) and Turghun Almās (b. 1924) preferred writing syllabic verse, while Nīm Shahīd (1906-72), Aḥmad Ḍiyā'ī (b. 1913), ʿAbd al-Raḥīm Tilashev Ötkür (1923-95), and Tayibdjān ʿAlīev (Eliyop) (1930-89) wrote in *ʿarūḍ* as well. Editions: *Aḥmad Ḍiyā'ī atharlari*, Urumqi 1988; ʿAbd al-Raḥīm Tilashev Ötkür, *Tarim boylari*, 2 vols. Urumqi 1948.

While the Uyghurs of Eastern Turkestan after a short interim period (the Latin alphabet from 1965 to 1984) have gone back to using a (reformed) form of Arabic script, the Uyghurs in Kazakhstan and Uzbekistan, exiles or native-born, write their literary works in Cyrillic. Uyghur literature in Kazakhstan (still in Arabic script) began with ʿÖmür Muḥammadī (1906-31). In the second half of the 20th century this development was continued by the prose writers Ḍiyā' Ṣamadī (b. 1914) (*Tallanma atharlar*, Alma Ata 1975, Russian tr. *Izbrannoe*, 2 vols. Alma Ata 1986) and Djamāl al-Dīn Bosaḳov (b. 1918), and by the poets Khidhmat ʿAbdullin (b. 1925), Khalīl Hamrāev (b. 1928) and others.

Bibliography: ʿU. Muḥammad Ākhūn (Mamatākhunov), *Uyghur adabiyāti klassiklari*, Tashkent 1960; M.K. Khamraev, *Vekov neumirayushčee slovo*, Alma Ata 1969; *Uyghur klassik adabiyātidin namūnalar*, Urumqi 1980; Sharīf al-Dīn ʿÖmür, *Uyghur klassik adabiyāti tārīkhidin očerkler*, Urumqi 1981; *Uyghur adabiyātiniñ kiskiče tārīkhi*, Alma Ata 1983; *Ḳadīm uyghur yazma yādigārlikliridin tallanma*, Urumqi 1983; Nūr Muḥammad Zamān, *Uyghur ḥādirki zamān adabiyātidin lekciyalar*, Urumqi 1983; Muḥammad Pūlād, *Uyghur adabiyātida proza*, Urumqi 1985; *Uyghur sovet adabiyātiniñ tārīkhi*, Alma Ata 1986; Nūr Muḥammad Zamān, *Uyghur adabiyāti tārīkhi*, iv, *Uyghur ḥādirki zamān adabiyāti kismi*, Urumqi 1988; Sharīf al-Dīn ʿÖmür, *Uyghurlarda klassik adabiyāt*, Urumqi 1988; S. Mollaudov, *XVIII ʿaṣir uyghur poéziyasi*, Alma Ata 1990; *Uyghur adabiyāti tārīkhi*, ii-iii, Urumqi 1993; Amīndjān Aḥmadī, *Uyghur adabiyāti tārīkhidaki namāyandalar*, Urumqi 1996.

(c) Literature in Ādharī (second half of the 20th century; for its previous development, see ĀDHARĪ. ii. Literature)

The intensive debates in literature in the 19th and early 20th centuries about the social and intellectual development of Ādharbāydjān had come to an end by the late 1920s. Most of the issues that were now under discussion in all genres of literature had been raised earlier (educational problems, predominance of a conservative clergy, lack of rights for women, etc.). But now discussions were narrowed to an almost one-dimensional perspective without admitting any alternative. Literature undertook to explain, justify and illustrate the changes that were taking place in the society. Other representatives were anxious to visualise history by depicting outstanding personalities: Samed Wurgun, real name Wekīlov (1906-56), wrote a drama *Wāḳif* (1938) on the 18th century Ādharī poet Mulla Panāh Wāḳif. The renaissance of Shāmil (1798-1871 [*q.v.*]), who had become famous in the Caucasian wars, allowed Mehdī Ḥüseyn (1909-65) to write a historical drama about him in 1941. The 800th anniversary of the Persian poet Niẓāmī [*q.v.*] from Gandja prompted Mehdī Ḥüseyn to write the

drama *Niẓāmī* (1940), and S. Wurgun the drama *Ferhād we Shīrīn* (1941). Further examples are the verse drama *Khāḳānī* (1955) about the highly controversial 12th century Persian poet of the same name from Shirwān [*q.v.*] by Meḥemmed Raḥīm, real name Ḥüseynov (1907-77), or the epic poem *Nātewān* (1962) on the 19th century poetess by the same author. Ilyas Efendiyev (b. 1914), known for his lyrical prose and dramas, wrote *Khūrshīdbānū Nātewān*, a drama about the poetess (1982). The 14th century religious rebel-poet Nesīmī [*q.v.*] became an object of admiration in the 1970s. The writer Ḳābil (Gabil), real name Imāmwerdiyev (b. 1926), published a three-volume verse novel entitled *Nesīmī* (1970-4), and the prose writer ʿĪsā Ḥüseynov (b. 1928) dedicated his novel *Maḥsher* as well as a film script to the poet. Prose and drama of the famous literary reformer Feth ʿAlī Ākhūndzāde [*q.v.*] had never ceased being alive in the memory of the Ādharī intellectuals, who chose different ways of approaching him (ʿAbd al-Raḥīm Ḥaḳwerdiyev in the drama *Fantaziya* 1912, ʿAbd Allāh Shāʾiḳ in the drama *Aldanmish ulduzlar*). Chances and limits in history, the ruling powers and the poet's farsightedness, were the themes that in the 1970s aroused the authors' interest in Ākhūndzāde's fate and in his works, as e.g. in the long drama *Ulduzlar görüshünde* (1979) by Altay Memmedov (b. 1930) or in the novel *Feth ʿAlī (Feteli) fethi* (1986, German tr. 1986) by Čingiz Ḥüseynov (b. 1929).

Reception of the epic *Kitāb-i Dedem Ḳorḳud* was made difficult by the arguments that were raised against it in the highly-politicised discussion about epics of the 1950s. Interest in the epic figures was great in the 1970s and 1980s when the cultural-political climate allowed more liberal discussions. Nebī Khezrī, real name Babayev (b. 1924), composed a verse drama with the figures from *Kitāb-i Dedem Ḳorḳud*, and Altay Memmedov (b. 1930) wrote the comedy *Deli Domrul* (1981). In dramatic art, contemporary comedies, besides the historical theatre plays, were particularly popular, e.g. those by Thābit Raḥmān, real name Maḥmūdov (1910-70), and by Mīrzā Ibrāhīmov (b. 1911).

Nebī Khezrī dedicated his long poem *Heykelsiz abīde* (1980) to the problem of the original texts by the Ādharī poet Mīrzā Shafīʿ Wāḍiḥ (Wazeh), who gained renown as a poet through Friedrich Bodenstedt's free adaptations, being missing.

In the 1970s, prose in Ādharī was beginning to adopt various novelistic techniques of world literature and writers gradually took to choosing their themes freely. The inclusion of ancient, repeatedly-treated legendary materials in modern prose gives those stories and novels a deeper dimension. An example is the novel *Mahmud we Meryem* (1983, German tr. 1988) by Elčin, real name Efendiyev (b. 1942), about the love between a Christian woman and a Muslim man, a theme that is very often topicalised in Ādharī literature. Čingiz Ḥüseynov writes socio-critical novels in which the technique of interior monologues is used to regard things from different perspectives. Well-known story writers are Ekrem Eylisli, real name Nāʾibov (b. 1937), and Anar, real name Riḍāʾev (Rzayev, b. 1938).

(d) Turkmen literature

The first texts which the Turkmen claim as part of their tradition are written in Čaghatay and date back to the 15th century. In 1464 Wafāʾī (Wepāʾī) from the Yomud tribe put his poems together in the book *Rawnaḳ al-islām*. Yet the literary tradition was not extensive and continuous until the 18th century. Most poets of that time had enjoyed a *madrasa* education (at Khīwa and, more rarely, Bukhārā), but they were also familiar with popular poetry, so that they were in command of both the *ʿarūḍ* and the syllabic verse and created poetry in both manners. Many used to recite their poems singing to the *dutar*. Their works were partly handed down orally and partly as recently written manuscripts. Up to the 20th century, bibliographical data for the authors can only be taken as approximate.

The didactic poems by Āzādī, whose real name was Dawlat Muḥammad (Dövletmammet, 1700-60), were compiled in the volume *Waʿẓ-i āzād* (ed. Ashkhabad 1962, and more recently, *Saylanan eserler*, Ashkhabad 1982). His son Makhdūmḳulī [*q.v.*] (Magtïmgulï), pseudonym Firāḳī (Pïragï, 1733-82), whom the Turkmen see as one of the founders of their literature, wrote eschatological and socio-critical poems as well as love poems (recent ed., *Saylanan eserler*, 2 vols., Ashkhabad 1983; *Baghïshla bizni*, Ashkhabad 1990). Makhdūmḳulī's disciple Sayyidī (Seydī, 1775-1836, Russian tr. *Izbrannoe*, Moscow 1976), and his nephew Dhalīlī (Dhelīlī, 1795-1850, *Saylanan eserler*, Ashkhabad 1982), followed the kind of poetry of their teacher. In the eyes of the Turkmen, ʿAndalīb belongs to their literature as well (see section (a), above). In the 18th and 19th centuries some of the singers of epic poems (*dastān*), which until then were considered as anonymous, made themselves known as authors. The most famous among them are Shāhbende, real name ʿAbd Allāh (1720-1800) with *Shāh Bahrām* (ed. Ashkhabad 1943, 1966, 1978), *Gul u bulbul* (ed. Ashkhabad 1940, 1948), *Ṣayyād wa Hamrāh*; Maʿrūfī (Magrupī), real name Ḳurbān ʿAlī (1735-95), with *Yūsuf wa Aḥmad* (ed. Ashkhabad 1943, 1995), *Sayf al-Mulūk wa Madḥ al-Djamāl* (ed. Ashkhabad 1943, 1979) and other epic poems; Shaydāʾī (1730-1800) with *Gul u Ṣanawbar* (ed. 1943, 1978); Molla Nafas (Nepes, 1810-62) with *Ẓuhra wa Ṭāhir* (ed. Ashkhabad 1963). Strong satirical elements are contained in the poems by Kemīne, real name Maḥmūd Walī (1770-1840), who, in the course of time, became surrounded with anecdotes comparable to those about Khʷādja Naṣr al-Dīn (ed. *Eserler yïgïndïsï*, Ashkhabad 1971; *Saylanan eserler*, Ashkhabad 1991). His style was followed by Körmolla (1872-1934) and Mollamurd (1879-1930, ed. *Shïgïrlar*, Ashkhabad 1967, *Goshgular*, Ashkhabad 1986). At times, poets rose above the tribal feuds mourning the sacrifice of life, among them Makhdūmḳulī, Sayyidī and Miskīn Ḳïlïč (Misgingïlïč) (1850-1906).

Forms of literary reception remained for many decades in the 20th century almost the same as in the past, though attempts were made to find new

genres. For instance, authors continued to recite their poems themselves to the listeners, being even ready to modify their poems to meet the demands of their audiences for a "happy ending" instead of a sad one. Of the novel in verse *Söygi* (3 vols. 1945-61) by the poet Āmān Kekilov (1912-74), audiences are said to have learnt lengthy sections of the text by heart. The first stories and plays were written in the 1920s, and the first novels in the 1930s. The themes were related to those tasks that politicians declared as being acute and significant. Berdi Kerbabayev (1894-1974) and Khîḍîr Deryāyev (b. 1905) are among the first prose writers, Ata Gawshudov (1903-53) among the first playwrights. Both new and traditional materials were dealt with in the dramas, though the mythological elements tended to be weakened and what was open to realistic interpretation tended to be enhanced, because simplicity and educational effects were sought. The writers responded to the politically-minded literary standard by modifying their works, just as they used to respond to the demands from the audience. Thus Deryāyev worked on his novel *Ikbāl*, modifying and expanding it, from 1937 to 1970, and Kerbabayev on *Aygîtlî edim* during the years 1940 to 1954. In the 1940s, authors began to revive the figure of Makhdūmkulî and his poetry, like Nūr Murād Sarîkhānov (1906-44) in the story *Kitāb*, Kerbabayev in the drama *Khalk shā'iri* (*shakhîri*) (1943), and Kîlîč Kulîyev (Gîlîč Gulîyev, b. 1913) in the novel *Yowuz günleri* (1964). The writer Kemīne is the central figure of the story *Kîrk teñne* (1961) by Kurbāndurdî Kurbānṣaḥḥatov (Gurbandurdî Gurbansekhetov, b. 1919). It was only towards the end of the century that 'Andalīb, who used to write about religious subjects, became the central figure of the novel *'Andalīb* by Nūrî Altyev. A new figure is the peaceful singer, solely convincing by his art, in the stories *Shukūr Bakhshî* (1940) by Sarîkhānov and *Salančak mukāmî* (1978) by Atadjān Tagan (b. 1940).

In the literature of the 1970s, the short lyrical poem became popular, side-by-side with the epic poems full of action of the past decades.

Bibliography (A. = Ashkhabad): J. Benzing, *Die türkmenische Literatur*, in *PTF*, ii, 721-41. (e) Kirgiz literature

Until the 20th century, Kirgiz literature was orally narrated literature. In the 19th century, the types of poet *akîn* and *îrčî* composed laments about the loss of their free life, e.g. *Ẓār zamān* by Mulla (Moldo) Kîlîč (1866-1917); historical songs about the uprising in 1916 and its consequences were composed by Isḥāk (Isak) Shaybekov (1860-1957); songs about an earthquake, interpreted as sent by God, by Shaybekov and Khalk (Kalîk) Akîyev (1883-1953); laments of young women married against their will, and fables in verse by Togolok Moldo (1860-1942); didactic poems by Toktogul Satîlganov (1864-1933), and antiphones (*aytîsh*) about diverse themes. The texts of some of the singers were edited in Frunze: Togolok Moldo, *Čîgarmalar*, 2 vols. 1954-5, 1970; K. Akîyev, *Tandalgan îrlar*, 1954, 1958, *Tandalgan Čîgarmalar*, 1972; Isḥāk Shaybekov, *Isaktîn îrlarî*, 1955; Toktogul Satîlganov, *Toktogul, Čîgarmalar*, 2 vols. 1968.

Besides shorter epics, the long epic *Manas* [*q.v.*] plays a great role. It was recorded and published by W. Radloff (*Obraztsî narodnoy literaturî severnîkh tyurkskikh plemen, čast' v*, St. Petersburg 1985) and republished and commented by A. Hatto (*The Manas of Wilhelm Radloff*, Wiesbaden 1990). In the new versions by the *manasčîs* Sagîmbay Orozbakuulu (1867-1930), Sayakbay Karalayev (1894-1971) and others, the epic is said to consist of up to 500,000 lines.

In the 1920s and 1930s, many writers preferred those genres whose medium is the spoken word or singing, like poems, dramas and operas; among them was Kāsîm Tînîstanov (1901-38), poet and writer of textbooks, whose poems (*Kāsîm îrlarînîn djîynagî*, 1925) and dramatic scenes were never again published or staged in the 20th century after his execution. The poems and epics by 'Alī (Aalî) Tokombayev (1904-88) were closely associated with the political issues of the day. A prominent figure in his works is the old man, who was to play a great part in the prose of the coming years. Together with K. Malikov, Tokombayev wrote the libretto for the opera *Manas*, 1946. Kubanîčbek Malikov (1911-78) wrote poems and epics, and wrote libretti for several operas on the basis of the *Manas* epic: *Ayčürök*, 1939, in co-authorship with Djūmard (Djoomart) Bökönbayev (1910-44) and Yūsuf (Djusup) Turusbekov (1910-43); and *Seytek*, 1941. In 1958, on the basis of a previous version by Bökönbayev, he wrote a libretto about the well-known singer Toktogul. Episodes from the life of the singer are the material for the drama by K. Malikov, *Aylangan toonun bürkütü*, 1964.

Compared to epics, prose was seen as relatively open in content and style, hence authors began in the late 1920s to reflect in it the political and social changes of the century. Russian (Gorky, Sholokhov) and Kazak literatures were undeniable models, yet writers were trying to combine the familiar motivations and figures from the traditional oral literature with the new kind of narration. Ethnographic details were woven in a more or less artful manner. In a paradigmatic way, the story *Adjar* (1928) by Kāsim 'Alī (Kasîmalî) Bayalinov (1902-80) tells the destiny of those Kirgiz who took flight to Sinkiang (Xinjiang) when the uprising of 1916 was crushed, a topic that was later repeatedly dealt with (in the story *Azamattar* by K. Malikov, 1938 and in a new version of 1977, in the verse novel *Tañ aldinda* by 'A. Tokombayev, 1935-47 and in a new version of 1962). Notable as authors of prose are also Kāsim 'Alī Djāntöshev (1904-68), with the story *Eki djash* (1938) and the novel *Kanîbek* (ed. 4 vols. 1939-58), as well as Tügölbay Sîdîkbekov (b. 1912) with several novels, including *Bizdin zamandîn kishileri* (1952), *Too arasînda* (1955), *Ẓayptar* (1962-66) and the autobiographic novel *Djol* (1982). In the 1960s, new themes were adopted, to be shaped into historical stories. Kāsim Kā'imov (1926-89) wrote the novel *Atay* (1961) about the musician of the same name, and Tölögön Kāsimbekov (b. 1931), in the novel *Sîngan kîlîč* (1966), treated of the relationship between the Kirgiz and the Khānate of Khokand [*q.v.*] in the 19th century. The stories and novels by Čîñgîz Aytmatov (b. 1928), first in Kirgiz and later in Russian, were translated into many languages of the world. He had the power to win readers over because he abandoned the friend-enemy political cliché, daring to set

forth a critical view of fundamental decisions taken in the recent past, and creating strong poetical pictures of the ordinary and the extraordinary in everyday life, which he took from Kirgiz traditions, interpreting them in his own individual style. The best known are *Djamīla*, 1959; *Gülsarat*, 1966; *Ak keme*, 1970; *I dol'she veka dlitsya den'* ("The day lasts more than a hundred years"), 1982; and *Plakha*, 1986.

Following Aytmatov and building on experiences in film production, writers in the 1960s and 1970s put ordinary people, their histories and psychological motivations, at the centre of their tales, e.g. Ḳāsim Ḳā'imov, Āsānbek Stamov (b. 1938) and Mūsā Murād 'Alīyev (Murataliev) (b. 1940). Poetry freed itself only very slowly from the long monopoly of the forms of traditional oral poetry, which had been used to express a new content. When 'Alī Ḳul 'Uthmānov (Alikul Osmonov, 1915-1950, *Čigarmalar žiynagi*, 3 vols., Frunze 1964-7), trained by his studies of Russian poetry, created examples of free verse with previously unknown rhythms in his vernacular, the spectrum of poetical forms was clearly widening, as can be seen in works by Süyümbay Er 'Alīyev (Eraliyev, b. 1921), Sooronbay Djusuyev (b. 1925), Ramis Rïskulov (b. 1934), and others.

(f) Kazak literature

The epics of the Kazaks, written down in the 19th century, have their prose parts mostly in Čaghatay and the verse ones in Kazak. Moreover, the popular tales and anecdotes published at the end of the 19th century had the character of a hybrid language, since the editors were Tatars or had enjoyed a Tatar education. The same happened to the books written at that time by Tatars and Kazaks, in which the customs of the nomadised and not completely-Islamised Kazaks were criticised from the view of the settled population. Some of the historical songs of the Kazaks, e.g. by Bukhar Zhirau (*ca.* 1693-*ca.* 1787) and Nïsanbay (first half of the 19th century), were published in Kazan and Moscow. Simultaneously, a multitude of texts of popular religion in verse and prose, as well as fairy tales, were translated from Čaghatay and partly from Ottoman into Kazak and published in Kazan, Astrakhan, Orenbourg and Tashkent. The most prolific translators and freely-adapting poets were Sheykh al-Islāmulï Yūsuf Bek and Aḳïl Bek Molla Sabalulï (d. 1919).

A great number of poets (*aḳïn*) of the 19th century are still known today. Most of them were illiterate, yet their poetry was not devoid of an individual style and it was often recorded after decades of spreading by word of mouth. Few *aḳïn* had received a *medrese* education, as had for instance Akhan Seri Ḳoramsaulï (1843-1913). The intellectual development of other *aḳïn* is not known, though some of them hold a firm position in Kazak literature, like Shortanbay Ḳanayulï (*ca.* 1818-81), whose poem *Žār zamān* gave the name to a literary tendency of pessimism. This type of *aḳïn* continued to exist in the 20th century. The poets, like Zhambïl Zhumabay-ulï (1846-1945), sang the well-known verse epics, produced poems themselves and presented improvised poems (*aytïsu*) in poetical contests; scribes or scholars, however, wrote their texts down.

The same period saw poets who had both a good oriental and a Russian-European education. One of them was Ibrāhim (Ibray) Altïnsarin (1841-89), who designed a programme for school education where the language was Kazak and the alphabet Russian, and composed a text book that included translations from Russian, his own poems as well as didactic narrations (*Tañdamalï shïgharmalar*, Alma Ata 1955).

Abay Ḳunanbay-ulï (1845-1904) is seen as the great national poet of the Kazaks on account of his philosophical prose and poetry, in which he did not shrink from expressing individual emotions, this being new in Kazak poetry (Abay Ḳunanbayev, *Bibliografiyalïḳ körsetkish*, Alma Ata 1965; *Abay tili sözdigi*, Alma Ata 1968; *Shïgharmalarnïñ tolïḳ zhinaghï*, 2 vols., Alma Ata 1977; *Abay. Éntsiklopediya*, Alma Ata 1995).

The next generation educated in this way translated Krïlov, Pushkin, Lermontov and Tolstoy from Russian, edited Kazak epics, started up newspapers and targeted their political endeavours at the foundation of a national state of Kazaks. Among them were Shāh Kerīm (Shekerim, 1858-1931, *Shïgharmalar*, Alma Ata 1988), 'Alī Khān Bükeykhān-ulï (1869-1932), Aḥmad Baytursun-ulï (1873-1937), who also wrote a Kazak grammar, and Mīr Ya'ḳūb Dawlat (Mirzhaḳïp Dulat, 1885-1937). Two excellent poets of the first half of the 20th century are Maghzhān Zhumābayulï (1896-1937) and Ilyas Zhansügür-ulï (1894-1938). The European-born idea that literature could not exist without prose instigated particular efforts in this field. Without giving up the values of their own culture, the writers of literary prose looked very critically at the prevailing ways of life. Beyimbet Maylin (1894-1938) wrote socially-committed stories creating remarkable characters (*Shïgharmalar*, 2 vols., Alma Ata 1960; 5 vols., 1986-8), and Mukhtar Auezov (1897-1961) in his stories, plays and novels, turned to the conflicts of the nomads as they were faced with other cultures in 20th century (ed. *Shïgharmalar*, 12 vols., Alma Ata 1967-9, *Shïgharmalar žinaghï*, 20 vols., 1979-).

Auezov's experiences were quite legitimately exploited by the younger prose writers. Some of them, e.g. 'Abdizhamīl Nurpeisov (b. 1924), Mukhtar Magauin (b. 1940) and Dükenbay Doszhanov (b. 1942), preferred the historical genre because they found that the supposedly scientific description of their history was biassed. Others, e.g. Oralkhān Bökeyev (b. 1944), utilised the genre of animal stories to describe the harsh transition from a nomad's life to the socialist civilisation. Abish Kekilbayev (b. 1939) keeps showing the complicated nature of the human individual both in historical and in present-day circumstances.

In the second half of the century, Kazak poetry has related itself explicitly to world culture: Mukhaghali Maḳatayev (1931-76) did that in Kazak, and Olzhas Süleymenov (b. 1936) in Russian.

(g) Tatar literature

Twentieth-century scholars of culture and literature re-interpreted the Tatar heritage. They relate the origin of their literature to the Khwārazm-Turkic and Mamlūk-Ḳipčaḳ literatures of the 14th century. As the predecessor of present-day Tatar literature they acknowledge Muḥammad Yār (16th century), who wrote three *mathnawīs*; likewise Ḳādir ʿAlī Bek Djalayirī (1530-*ca.* 1605), who *ca.* 1602 translated parts of the *Djamiʿ al-tawārīkh* by Rashīd al-Dīn [*q.v.*] into Čaghatay, adding to it data from the history of the Khānate of Ḳāsimov [*q.v.*], the writers Mawlā Ḳolī as well as ʿAbdī (17th century) and others. In the 18th and 19th centuries, a number of Tatar writers and scholars displayed a certain independence from the religious dignitaries of Bukhārā, who had been dominating the spiritual life of the Muslims in Central Asia and Russia. Without denying Islam, they represented rationalistic positions. Among them was ʿAbd al-Raḥīm (Gabderæhim) Utiz Imānī (1754-1834), and ʿAbd al-Naṣīr (Gabdennasiyr) Ḳūrṣāwī (1776-1812), author of religious works, as well as the historian Shihāb al-Dīn Mardjānī (1818-89), who wrote most of his works in Arabic. Miftāḥ al-Dīn Aḳmulla (1820 or 1831-95), who wrote in Čaghatay, was a perceptive poet whom the Tatars, Bashkirs and Kazaks claim as one of their first literary representatives. In the 19th century, several authors, among them the prose writer Musa Akyegetzāde (1865-1923) and Fātih Kerimī (1870-1937), tended to write in a pure Ottoman Turkish or in a mixed language strongly influenced by Ottoman. On the basis of Ottoman Turkish, the Crimean Tatar Ismāʿīl Gasprali [*q.v.*], also known by the Russian form of his name Gasprinskiy, elaborated his programme of modernisation intended for all Turkic peoples. Ḳayyum Naṣīrī [*q.v.*] argued for the use of Tatar as the language of literature, but it was only as late as the 1930s that his intentions at last became true, and then in the context of the socialist literature.

For Ḳūrṣāwī, cf. Mahmud Tahır, *Abunnasir Qursavi*, in *CAS*, viii/2 [1989], 155-8; M. Kemper, *Entre Boukhara et la Moyenne-Volga: ʿAbd an-Naṣîr al-Qûrṣâwî (1776-1812) en conflit avec les oulémas traditionnalistes*, in *Le réformisme musulman en Asie Centrale. Du "premier renouveau" à la soviétisation 1788-1937*, Paris 1996, 41-52. For Mardjānī: Kemper, *Šihābaddīn al-Marǧānī als Religionsgelehrter*, in *Muslim culture in Russia and Central Asia from the 18th to the early 20th centuries*, Berlin 1996, 129-65. Recent ed. of Aḳmulla: *Shighirzar*, Ufa 1981; *Shighirlar*, Kazan 1981; on him, see E. Vildanov, *Akmulla, yaktilik yirsihi*, Ufa 1981. On Ismāʿīl Gasprali: E.J. Lazzerini, *Ismail Bey Gasprinskii and Muslim modernism in Russia, 1878-1914*, diss. University of Washington 1973; idem, *From Bakhchisarai to Bukhara in 1893: Ismail Bey Gasprinskii's journey to Central Asia*, in *CAS*, iii/4 [1984], 77-88. On Ḳayyum Naṣīrī: Chantal Lemercier-Quelquejay, *Abdul Kayum Al-Nasyri: a Tatar reformer of the 19th century*, in *CAS*, i/4 [1983], 109-32.

The Tatar dramas written at the beginning of the 20th century became widely known throughout Central Asia. They included works by ʿAbd al-Raḥmān (Gabdrahman) Ilyāsī (1856-95), ʿAyāḍ (Gayaz) Isḥāḳī (1878-1954), ʿAlī Askar (Galiæsgar) Kamāl (1879-1933), Saʿīd (Sægiyt) Ramīyev (1880-1926), Sharīf Kamāl (1884-1942) and Karīm Tinčurin (1887-1938). Since 1898, ʿAyāḍ Isḥāḳī had also been writing realistic stories. Living as an emigrant, he was active as a politician and a journalist in addition to his literary activities (ed. *Ul æle öylenmægæn idæ*, Kazan 1993; on him, see *Muhammad Ayaz Ishaki. Hayati ve faaliyeti*, Ankara 1979; M. Gosmanov, *Gayaz Ishakiy: "Ike yöz yeldan soñ inkiyraz" hæm patsha tsenzurasi*, in *Kazan utlari*, x [1995], 152-81). ʿAlī Askar Kamāl was also a committed journalist, editing journals and translating Ottoman-Turkish dramas, e.g. those of Nāmiḳ Kemāl [*q.v.*] and Aḥmed Wefīḳ Pasha (*Æsærlær*, 3 vols. 1978-82). Sharīf Kamāl is also known as prose writer (*Saylanma æsærlær*, 3 vols., Kazan 1974-6). Many dramatists were simultaneously active in the genres of prose, stories and novels intended for a wide audience which, like drama, were new in Tatar literature at the turn of the 19th to the 20th centuries. ʿĀlimdjān (Galimdjan) Ibrāhimov (1887-1938) was a prose writer, whose intellectual contribution to the development of the Tatar language and its writing system is also noteworthy (*Æsærlær*, 8 vols., Kazan 1974-87).

An outstanding literary representative at the turn of the century was the poet Dhākir Ramīyev (1859-1921), pseudonym Dærdmænd (*Æsærlære*, Kazan 1929, *Saylanma æsærlær*, Kazan 1959, *Isæ žillær*, Kazan 1980). Socio-critical poems were written by ʿAbd Allāh Tuḳay (1886-1913, *Æsærlær*, 5 vols., 1985-6; on him see R. Nafigov, *Tukay i ego okruženie*, Kazan 1986), esteemed in the 20th century as a classic of Tatar literature. Beginning in the 1920s, political poems expounding socialism were written by Hādī Taḳtash (1901-31), Ḥasan Tufan (1900-80), who turned to issues of man and nature in his poems written in the 1970s, and Aḥmad Fayḍī (Fayzī, 1903-58), who later wrote a drama about Tuḳay and an opera libretto on the poet Musā Djalīl (1906-44), who was executed in Germany. In the 1960s, epic poems and poem-cycles were the most preferred form of fiction, with their possibilities of expressing the controversial phenomena of life in a well balanced way. The increasingly open contrast between urban life and rural life was expressed in the poems by Ṣibghat Ḥakīm (1911-86), Anwār Dāwidov (1919-68) and Ildār Yuziyev (b. 1933). Towards the end of this decade, some authors succeeded in expanding themes and forms of literature by adopting and by resuming traditions of Tatar poetry from the beginning of the 20th century which had not been published for decades. Zākī Nūrī (b. 1921), Maḥmūd Ḥusayin (Khösæyen, b. 1923) and Renat Ḥāris (b. 1941) were distinguished in this respect.

Prose writers in the 1960s started to deal with historical issues, by depicting the life of their Tatar ancestors, in order to affirm the national consciousness of the Tatars under the geographical and political conditions as they had developed in the 20th century, e.g. Nūrīkhān Fattāḥ (b. 1928) with his novel *Etil suwi aka turur* (1969). The literary prose of some authors, among them Amīrkhān Yeniki (b. 1909) and ʿAyāḍ ʿIlādjev (Giylædjev, b. 1928), is characterised by a critical view of the world.

Bibliography: A. Battal-Taymas, *La littérature des Tatars de Kazan*, in *PTF*, ii, 762-79; Zs. Kakuk, *Kasantatarische Volkslieder, auf Grund der Sammlung von Ignácz Kúnos*, Budapest 1980. In addition to these, the following reference works and important articles have been published (K. = Kazan and M. = Moscow): M. Gajnullin, *Tatar ædæbiyāti, 19 jöz*, K. 1957, 1968; *Tatar sovet ædæbiyāti*, K. 1960; *Boringi tatar ædæbiyāti*, K. 1963; I. Nurullin, *20 jöz bashi tatar ædæbiyāti*, K. 1966; A. Miñnegülov, *Tatarskaya literatura i vostočnaya klassika*, K. 1993; I. Baldauf, *Prometheismus in der circumrevolutionären tatarischen Lyrik*, in *Bamberger Mittelasienstudien, Konferenzakten*, Berlin 1994, 25-66; M.A. Usmanov, *Zur Geschichte der tatarischen Handschriften*, in *Muslim culture in Russia and Central Asia from the 18th to the early 20th centuries*, Berlin 1996, 49-68.

In the 20th century, the literature of the Crimean Tatars has been regarded as a relatively independent one. ʿĀshik ʿUmar (Ömer, d. 1707), who may be Crimean by descent and who is among the best-known Ottoman-Turkish singers (*sāz shāʿiri*), is referred to by the Crimean Tatars as one of the initiators of their poetry (Āshîk Umer, *Shiʿirler, ghazeller*, Tashkent 1988). The concept of a common cultural ground shared by all Turkic peoples, which Ismāʿīl Gasprali, editor of *Tardjumān*, had elaborated, was adopted in the first decades of the 20th century by some intellectuals of the European and Asian Turkic peoples.

The poet and literary savant Bekir Čobanzāde (1893-1938) belonged to the first generation of authors in the 20th century. Some dramatists founded theatres in the Crimea in the 1920s, including ʿUmar Ipči (1897-1944, see on him I. Kerimov, *Terenlik*, Tashkent 1988). As a consequence of the deportations and relocation of the Crimean Tatars in 1944, the writers of the following generations spent most of their lives outside Crimea, many of them in Uzbekistan, whilst others were born in Central Asia. Prose writers were Yūsuf Bolat (b. 1909), Shāmil ʿAlāʾ al-Dīn (Aladin, b. 1912), who was chairman of the association of the writers of the Crimean Tatars in 1939, Čerkez-ʿAlī (real name Aḥmetov, b. 1925), Riḍāʾ Fāḍil (b. 1929) and Erwin ʿUmarov (b. 1940). Among the poets, mention should be made of Anwār Salāmat (1917-80), Saʿīd-ʿUmar Amīn (b. 1921) and Bilāl Mambet (b. 1935).

Bibliography: A. Battal-Taymas, *La littérature des Tatars de Crimée*, in *PTF*, ii, 785-92; Ghanī Murād, *Teatr sanʿatimîznîn ṣaḥîfelerinden*, Tashkent 1990; Safter Nagayev, *Yîlnāmelerdeki izler. Ḳrîmtatar edebiyātî akḳînda etyudlar*, Tashkent 1991; *Ḳrîmtatar ḫalk aghîz yaratîdjîlighî. Khrestomatiya*, Tashkent 1991.

(h) Karakalpak literature

The Karakalpaks esteem their singers (*zhîrau* and *baksî*) of epics, genealogies (*shadjara*, or *shezhire*) and songs of various kinds. The most famous epics are *Ḳîrk ḳîz* and *Maspatsha*. Besides these, there are the names of poets (*shayîr*) whose works used to be spread orally, and have only been printed since the late 1940s. Their names are: Zhiyen zhîrau from the 18th century, Ötesh Alshînbay-ulî (*ca.* 1788-1875), Kün Khʷādja (1799-1880), Ḥādjī Niyāz (Azhiniyaz, *ca.* 1824-78), Berdak (1827-1900) and ʿUmar Sügirimbet-ulî (1879-1922).

Editions of the works of the *shayîrs* at Nökis: Zhiyen zhîrau: *Poskan yel*, 1959, 1981, 1990; Ötesh Alshînbay-ulî: *Tañlamalî shîgharmalar*, 1962, 1978; *Kök özek* (*kosîklar*), 1989; Kün Khʷādja: *Tañlaulî kosîklar toplamî*, 1949; *Kosîklar*, 1960; *Yel menen*, 1975, 1984, 1989; Ḥādjī Niyāz: *Tañlaulî kosîklar toplamî*, 1949, *Tañlamalî shîgharmalarî*, 1960; Berdak: *Tañlamalî shîgharmalarî*, 1956, 2 vols., 1977; and ʿUmar Sügirimbet-ulî: *Tañlaulî shîgharmalar*, 1960.

Historical events of the 19th century, first of all the uprisings of the Karakalpaks against the Khānate of Khīwa, as well as episodes from the lives of the singers, provide a great deal of the material from which poetry and prose have been shaped in the 20th century. Karāmat al-Dīn (Karamatdin) Sulṭānov (b. 1924) wrote the novel *Azhiniyāz* (1967) about the famous singer of that name. Ṭālib Bergen Ghayb Bergen (Tölepbergen Ḳaypbergenov, b. 1929) wrote the novel *Maman Biy epsānasî* (1968), which he later extended to the work *Ḳaraḳalpaḳ destānî* (3 vols., 1973). Zhol Mirza Ay Mirza (Zholmurza Aymurzaev, b. 1910) wrote a novel in the style of orally-spread humorous adventure stories.

In the 1930s, Karakalpaks began to write theatrical pieces and, later, plays in several acts about the past which they had rejected. Epics were used as sources of material for theatrical plays, which were usually conceived and performed as musical dramas. Nadjim Dauḳaraev (1905-53) wrote the drama *Alpamîs* (1940). A very popular source is *Gharîb ʿĀshîk*. In the early 1930s, Mīrzā ʿAlī (Mîrzagali) Daribayev, 1909-42, wrote a drama called *Gharîb ʿĀshîk*. After various adaptations, it has been on the stage since 1954 in a version by T. Allah Naẓar (Allanazarov) and Āsān Begimov (1907-58), who is also known as a novelist. The 50th anniversary of the death of the singer Berdak was an occasion for Sadîḳ Nūrîmbetov (1900-72) to write an epic poem, and for Aymurzaev to write a drama (1958) of the same title.

Bibliography (N. stands for Nökis): In addition to N.A. Baskakov, *Karakalpakskiy yazîk I: Materialî po dialektologii (tekstî i slovarʾ)*, Moscow 1951, the following recent works should be mentioned: N. Zhapakov, *Revolyutsiyaga shekelgi karakalpak ædebiyātînda realizm mæselesi*, N. 1972; Ž. Narîmbetov, *Karakalpakskiy roman*, Tashkent 1974; M. Nurmukhamedov, *Karakalpakskaya poéziya*, Tashkent 1977; *Ḳaraḳalpaḳ sovet ædebiyātî*, Nökis 1979; *Istoriya karakalpakskoy sovetskoy literaturî*, Tashkent 1981; S. Aḥmetov and K. Khudaybergenov, *Pisateli sovetskoy Karakalpakii*, N. 1983.

(i) Bashkir literature

From the 1920s onwards, literature was also written in the Bashkir language. Among the first Bashkir writers were Madjīd Ghafūrī (1880-1934, ed. *Æsærzær*, 4 vols., Ufa 1978-9), Dāūd Yultîy (1893-1938) and Shaykhzāda Babič (1895-1919), who continued the socially-committed literature claimed to have been initiated by the Tatar poet Tuḳay. The resultant dissociation from the more intimate poetry of the Tatar Dærdmænd was maintained for decades after the death of the first Bashkir poets. None of the authors of the first novels in Bashkir who depicted the revolutionary events as a positive development survived the year 1938, or saw it in freedom: Dāūd Yultîy, Afḍal Ṭāhirov (1890-1938), Imay Naṣīrī (1898-1942) and Ghæynan Khayrī (1903-38).

From the 1920s until the 1970s, a theme of lasting attraction to literature was Pugatčev's rebellion in 1773-4 and the role played in it by the singer and leader Ṣalawāt (b. 1752, d. after 1797), for this was a chance to demonstrate what Bashkirs and Russians supposedly had in common or, by contrast, what was controversial. There are numerous dramas, epic poems and stories dealing with this event. Some writers travelled the path from direct political literature via novels in verse to pure prose fiction, which was not only a special challenge to the authors but also to the recipients. Sæyfī Ḳudash (1894-1993) succeeded in writing stories and memoirs (*Khaṭirda kalghan miuttar*, 1957). Mostay Kærīm (b. 1919) wrote a cycle of fairy-tale poems for adults, a number of dramas and the short novel *Ozon-ozaḳ balasaḳ* (1976).

Bibliography: *La literature Bašqort*, in *PTF*, ii, 778-9. Since the 1960s the following reference books have been published in Ufa and Moscow (U. = Ufa, M. = Moscow): R. Timergælina, *Bashkortostan yazïusïlarï*, U. 1968; R. Bikbaev and A. Kudasheva, *Bashkort æzæbiæte hæm æzæbiyæt ghileme buyïnsha bibliografiya*, U. 1969; M. Gaynullin and G. Khusainov, *Pisateli sovetskoy Bashkirii*, U. 1969; *Istoriya bashkirskoy sovetskoy literaturï*, M. 1977; A. Vahitov, *Bashkirskiy sovetskiy roman*, M. 1978; R. Timergelina, *Pisateli sovetskoy Bashkirii. Ukazatel' literaturï (1917-1978 gg.)*, U. 1980; G. Khusainov, *Bashkirskaya sovetskaya poéziya 1917-1980*, M. 1983; Gaynullin and Khusainov, *Sovet Bashkortostanï yazïusïlarï*, U. 1988.

(j) Čuwash literature

At the end of the 19th century, Čuwash writers started to collect popular poetry, and its motifs became the material for their own poems: M. Fedorov (1849-1904) with *Arsuri* (1908), Ya. Turkhan (1874-1938) with *Warussi* (1905), N. Polurussov-Shelepi (1881-1945) with *Saramsanna Khantarsa* (1915), K. Ivanov (1890-1915) with *Narspi* (1908). Poetry including stories and novels in verse used to be popular, e.g. *Khen-khur ayenče* (1931) by S. Elker (1894-1966, ed. *Sïrmsene pukhsa kalami*, 5 vols., Čeboksarï 1960-64), *Tu urla sul* (1952) by Ja. Ukhsay (1911-86), *Aptraman tawrash* (1946) by Peter Khusankay (1907-70), *Khamar'yalsem* (1956, 1983) by A. Alga (1913-77). Prose writers are V. Alager (1906-88), S. Aslan (1917-80), A. Artem'ev (b. 1924) and A. Emel'yanov (b. 1932).

Theatrical plays were often written on the basis of poetry, with its pictures of popular life and beliefs. The poet Mishshi Sespel (1899-1922), who introduced syllabic-tonic verse into Čuwash, and the poet Vasley Mitta (1908-57), who placed great value on the national characteristics in everyday life, were the declared examples, besides some European poets, for G. Aygi (b. 1934), whose poems have also been published in Europe (*Beginn der Lichtung*, Frankfurt/Main 1971; *Ditya i roza*, Paris 1990).

Bibliography (all works appeared in Čeboksarï/Shupashkar): G.Ja. Khlebnikov, *Sovremennaya čuvashskaya literatura*, 1971; *Čuwash sovet literaturi*, 1972; M. Jur'ev, *Pisateli sovetskoy Čuvashii*, 1975; *Čuvashskaya literatura*, 1983; *Aktual'nïe Problemï čuvashskoy literaturï*, 1983, P.N. Metin, *Čuvashskiy fol'klor*, 1986; M. Jur'ev and Z. Romanova, *Pisateli sovetskoy Čuvashii*, 1988; *Čuvashskoe literaturovedenie i kritika. Bibliografičeskiy ukazatel'*, 1993.

(k) Yakut literature

The first poets of Yakut written literature developed around the turn of the 20th century and were either singers of the epic *Oloñkho*, called *oloñkhosut*, like P. Oyunuskay, also Oyunskiy, real name Sleptsov (1893-1939, ed. *Ayïmn'ïlar*, 7 vols., 1958-62, Russian tr. *Izbrannoe*, Moscow 1963) and Künnük Urastïrov, real name V. Novikov (b. 1907), or they were collectors of popular poetry like A. Kulakovskay (1877-1926). Oyunuskay became known as a poet and dramatist. He introduced syllabic verse into Yakut poetry, which brought about a tremendous extension of the stylistic inventory for Yakut poetry, with its previous strict principle of alliteration. Further dramatists and comedy writers were A. Sofronov (1886-1935) and D. Neustroev (1895-1929). In the 1960s, the dramas by I. Gogolev (b. 1930), were remarkable because their figures combined concepts from popular poetry with those from 20th-century life.

The first pieces in prose were sketches and stories, e.g. by Erilik Eristin, real name S. Yakovlev (1892-1942), Oyunuskay and Afanasiy Fedorov (1926-59, ed. *Talïllïbït ayïmn'ïlar*, 2 vols. Yakutsk 1961-2). Novellists include Amma Aččïgïya, real name N. Mordinov (1906-94), N. Zolotarev-Yakutskay (b. 1908), A. Sïromyatnikova (b. 1915) writing about women's lives, Sofron Danilov (b. 1922) and V. Yakovlev (b. 1934) both of the latter looking critically at their own times.

Bibliography: St. Kałużyński, *Die jakutische Literatur*, in *PTF*, ii, 886-95; *Očerk istorii yakutskoy sovetskoy literaturï*, Moscow 1970; V. Protod'yakonov *et al.*, *Pisateli Yakutii*, Yakutsk 1972; A. Egorov *et al.*, *Pisateli Yakutii, Biobibliografičeskiy spravočnik*, Yakutsk 1981; A.A. Bilyukin, *Yakutskaya sovetskaya dramaturgiya*, Moscow 1988.

(l) Literature in other Turkic languages of Siberia

In the 1940s, written literature was born in some other Turkic languages of Siberia. With the very low population density in these regions (1979: 166,000 Tuvans; 70,800 Khakass; 60,000 Altaians) one cannot expect full-fledged and continuously-developing literatures there. Pavel Kučiyak (1897-1943) is recognised as one of the initiators of Altaic literature. Himself a poet, dramatist and story writer, he collected popular poetry and fairy tales (ed. *Yuunadïlgan sočinenieler*, Gornoaltaysk 1967). The poems and stories by Boris Ukačin (b. 1936), who published his first book of poems in 1961, e.g. *Eelü tuular* (1971), have aroused the interest of other peoples of Siberia, Central Asia and Russia.

The first author in the Khakass language was V. Kobyakov (1906-37); N. Domožakov (1916-76) is known as a novelist.

Stepan Sarïġ-ool (1908-83) and Sergey Pürbü (1913-75) are the authors of the first Tuvan poems to be written down. In Tuvan prose, autobiographical elements have been of major importance since the 1950s, as seen e.g. in the trilogy *Arattïñ sözü* by Salčak Toka (1901-73), composed between 1950 and 1954, and in the novel *Angïr-oola* (2 vols., 1961-6) by Sarïġ-ool. Other notable poets and story writers are Mongush Kenin-Lopsan (b. 1925), Juriy Künzegesh (b. 1927) and Kïzïl Enik Kudadjï (b. 1929).

Bibliography: G. Doerfer, *Die Literatur der Türken Südsibiriens*, in *PTF*, ii, 862-85. Altaian literature: *Altay literatura kereginde stat'yalar*, Gornoaltaysk 1962; *Pisateli Altaja. Biobibliografičeskiy spravočnik*, Barnaul 1967, *Očerki po istorii altayskoy literaturï*, Gornoaltaysk 1969; *Poétï gornogo Altaya*, Novosibirsk 1972; M.G. Vokhrïševa, *Pisateli Altaja. Bibliografičeskiy spravočnik*, Barnaul 1974; *Pisateli Gornogo Altaja. Biobibliografičeskiy spravočnik*, Gornualtaysk 1988. Khakass literature: *Literatura sovetskoy Khakassii*, Abakan 1962, P.A. Troyakov, *Očerki razvitiya khakasskoy literaturï*, Abakan 1963. Tuvan literature: Maria Chadachanie, *Tuvinskaya proza*, Kïzïl 1968; Dorzhu Kuular, *Tuvinskaya poéziya, očerk istorii*, Kïzïl 1970; *Pisateli Tuvï*, Kïzïl 1970, 1982.

Others: For literatures in the Gagauz, Karačay-Balkar and Kumuk languages, see *PTF*, ii, 779-85, 835-40.

General bibliographical note.

In addition to the references in the text, some works of a general character should be mentioned: W. Radloff, *Proben der Volksliteratur der türkischen Stämme*, 10 vols., St. Petersburg 1866-1907; Zeki Velidi Togan, *Zentralasiatische türkische Literatur. ii. Die Islamische Zeit*, Hdb d. Or. Erste Abteilung, Bd. 5, Leiden 1963, 229-49; H.F. Hofman, *Turkish literature. A bio-bibliographical survey*, Section III, Part 1, 2 vols. Utrecht 1969; Gy. Hazai and B. Kellner-Heinkele, *Bibliographisches Handbuch der Turkologie*, Bd. I, Budapest 1986.

For the cultural background of the reforms in writing systems and their effects on literature, see W. Fiermann, *Language planning and national development. The Uzbek experience*, Berlin and New York 1991; I. Baldauf, *Schriftreform und Schriftwechsel bei den muslimischen Rußland- und Sowjettürken (1850-1937)*, Budapest 1993.

Scholars from most Turkic peoples, consistently in co-operation with Russian scholars, have compiled three types of general works about their literatures: 1. histories of literature; 2. encyclopaedias of authors, often as bio-bibliographical sketch; 3. special bibliographies about literature and studies of literature besides the national bibliographies of the Turkic republics (for previous years, cf. especially Hazai and Kellner-Heinkele, 345-409). The recent editions are cited, in chronological order, in the respective sections.

Folk literature in several languages has been edited since the 1950s and 1960s in series with or without volume numbers. It includes fairy tales, epics, folk songs, riddles and others. The following should be mentioned: *Altay baatïrlar*, 6 vols., 1958-68; *Azarbāydjān edebiyyāti indjileri*, beginning in 1985; *Bashkort khalïk idjādï*, beginning in 1981; *Bashkirskoe narodnoe tvorčestvo*, beginning in 1987; *Čawas halah samahlahe*, 6 vols., 1976-87; *Karakalpak folklorï, köp tomlïk*, beginning in 1977; *Kazak khalïk edebiyeti, köp tomdïk*, beginning in 1988; *Bes ghasïr žïrlaydï*, 3 vols., 1984-5; 2 vols., 1989 (Kazak); *Tatar khalïk idjātï*, 13 vols., 1974-94; *Üzbek khalk idjādi*.

Some Turkic epics rendered into Russian and in vernaculars and with commentary are included in the serie *Épos narodov SSSR* (Moscow) beginning from 1971.

(Sigrid Kleinmichel)

IV. Music.

In order to appreciate the musical traditions of the Turkish world from a very general perspective, it is appropriate to start with the separation between the nomadic cultural base and the sedentary urban milieu. It could be said that the Turkish peoples of Siberia (Yakuts) and the Altaians, the Kïrghïz, Kazakhs, Karakalpaks, and Turkmens, as well as the last nomadic tribes of Anatolia, represent various states of an original "Turkicity", associated with the wide expanses of the steppe, the history of which has not been studied since the 19th century; on the other hand the Uyghurs, the Özbegs and the Ottomans, long organised into small kingdoms or as an empire, were in contact with the major sedentary traditions—Persian, Arab, Mediterranean, etc.—which had long been familiar with an apparatus of state and/or an imperial structure. This separation is more important than that between oral and written, since in both cases oral transmission remains predominant, except in the context of musical theory, which developed within "imperial" cultures.

1. *The music of the nomads*

It is perhaps among the Altaian Turks, or the Yakuts, that Turkish music is to be observed in its original state: calls and imitation of animals, playing on the jew's-harp, and techniques of diphonic chant. It may also be assumed that viols with horsehair strings (cf. *kil kobi* in Kazakh, *kil kiak* in Kïrghïz) were used for accompaniment by the Turko-Mongolian peoples from the earliest times (certainly since the domestication of the horse), as were certain lutes (known as *kopuz* in the epic of Dede Korkut [*q.v.*]).

(i) Bards and the shamanistic heritage

The bard is an essential figure in all the nomadic musical traditions of the Turks: his origin dates back to his pre-Islamic ancestor, the shaman, after whom he is known in some places by the name of *bakhshï*, and from whom he has inherited certain functions. Among the Kazakhs and the Karakalpaks, the *zhiraw* (*zhyr* = epic poetry) was always at the Khān's side, since the spirits revealed the future to him. The term *bakhshï*, which still denotes "shaman" for the Kazakhs, Kïrghïz, Özbegs and Tādjīks, signifies a professional singer among the Turkmens of the former USSR and of Persia. While he no longer has the role of a healer, he remains no less a "man of knowledge", an inspired repository of the memory and spiritual values of the people; in fact, the *bakhshï* master is called *khalīpe*, like the Ṣūfī *shaykhs*, which certainly suggests a religious authority, preserved *mutatis mutandis* in the framework of Islam. Finally, this shamanistic heritage is perceptible as far away as Anatolia, where the *ʿāshïks*, like the *dedes* of the Alevi communities, maintain this tradition of the Central Asian bard, in the sense that his specifically musical role is never devoid of a strong moral and sapiential, if not religious, aura. In all cases, the bard must attain a very high level of inspiration: the *zhiraw* should "boil" (*kaynamak*) and the *akïn* (see below) should have spirits "in his back".

It is usual to distinguish between two categories of bards, according to whether they sing epics (*destān, zhir*) or lyric pieces. Thus the Turkmen *bakhshï* are subdivided into two groups, namely, *destāndjï*, relater of epics, and *tirmedji*, who sing poems (*tirme*) on various themes. The Kazakh *zhiraw*, suppressed by Soviet ideology as symbolic of a feudal culture, has been replaced by the *zhirshi* who creates only minor epics, and by the *akïn* who, as in Kirghizia also, sings for his clan, and whose repertoire consists of extracts from epics arranged as songs, or poems adapted to the social circumstances of the performance.

(ii) Vocal techniques and instruments

An incontestable trait of the nomadic music of Central Asia is the use of a raucous, guttural voice, very rich in harmonics, sometimes approaching diphony, like the Mongolian *khöömei*, or the fundamental, heavy and "strangled" resonance in the phonetic apparatus when a narrow harmonic sound is produced. In Uzbekistan the voice of the *bakhshï* is called "interior", as opposed to the "exterior" (high-pitched) voices of learned and popular urban traditions.

Instruments accompanying the bards are lutes with two or three strings: *dombra* (Kaz.), *kopuz* and *komuz* (Kir.), *dotar* (Turkm.), *saz* in its various rural forms (Turkey) [see ṬUNBŪR]; viols: *kil kobuz* (Kaz.) *ghidjak, kiak*; and finally, flutes: *sibizghi* (Uzbek) or *tüdük* (Turkm.), are remarkable for their technique, related to that of the Persian *nay* or the Turkish *kaval*.

(iii) Performance and musical forms

Traditionally, the music of the bards is the art of soloists in the context of private invitations such as the *konakasi* (Kaz.), the *gap* (Uzb.), or the *söhbet* (Turkm.). At the collective level, it is the *toy*, festival of marriage or of circumcision throughout the Türk world (*düğün* in Turkey). Bardic contests are widespread throughout Central Asia, such as the contests of *ʿāshïks* in Azerbaijan and in Anatolia.

Alongside the major epic cycles, the Kazakhs and the Kirghiz have developed the principle of instrumental pieces called *kü*, inspired by the circumstances of the performance, and dependent on interaction with the audience. These may be of a descriptive or narrative nature; the *kü* evoke nature, according to a denotative function of the music which constitutes a distinctive trait of these cultures.

Can a case be made for speaking of a "nomadic" music at the level even of syntax? Certain traits common to the Turkmens and the Kazakhs, such as rhythms which are additive, not divisive, to the linear

development, through the combination of various metres, are to be found as far afield as the east of Turkey, among the *ʿās̲h̲iḳs*.

2. *"Imperial" music*

(i) The elaboration of classical traditions

The existence of learned musical systems in Central Asia from ancient times has been demonstrated by archaeology, in Sogdia and Bactria, which were inhabited by Indo-Iranian peoples before the waves of the Turco-Mongolian conquest. As a result of Islamisation, a vast area of cultural exchange was opened up, from Eastern Turkestan to the Middle East. Formal music was studied by numerous theoreticians of Central Asian origin, such as al-Fārābī and Ibn Sīnā [*q.vv.*]; in the 15th century, Samarḳand and Harāt were major musical centres, to be superseded by Buk̲h̲ārā which has retained its pre-eminence to the present day. Finally, Azerbaijan and Constantinople-Istanbul were to be other major crucibles of oriental musical learning. In this context, the same movement which led the nomadic Turks to adopt the imperial structures of the sedentary civilisations led them also to appropriate, appreciate and develop their musical traditions, from Central Asia to the Middle East—as was further the case in India under the Mug̲h̲als. As to the specifically Turkish contribution to these sedentary cultures, this is not easily defined, since such exchanges invariably operate in both directions: for example, the Chinese adopted the instruments of Eastern Turkestan, such as the *surnāy* (hautboy), and the *pipa* (Uyg̲h̲ur *barbap*) and *rabāb* lutes. Chinese sources also mention that the melodies of the "barbarians" of Turkestan were integrated, after adaptation, into the courtly music of the Han.

(ii) The concept of *maḳām* [*q.v.*]

Among the Uyg̲h̲urs and the Uzbeks, *maḳām* signifies "process of compositions" and has the related sense of "mode". Thus classical repertoires are found comprising *on iki maḳām* ("twelve *maḳāms*") from the region of Kās̲h̲g̲h̲ar and of Yarkand, of the Tād̲j̲īk-Uzbek *s̲h̲as̲h̲ maḳām* ("six *maḳāms*") of the *altî yarîm maḳām* ("six and a half *maḳāms*") of K̲h̲īva. In each case, what is involved is a combination of processes codified from a modal as from a rhythmic point of view, according to a structure which may be likened to the Arab-Andalusian *nawba*.

In Azerbaijan and in Ottoman Turkey, *maḳām* specifically denotes the "mode" in its Middle Eastern sense. The modes themselves, whilst known by the same names in all these erudite traditions, nevertheless display numerous local idioms within the great Arab-Turkish-Persian system.

(iii) Instruments and conditions of performance of formal music

Among the instruments here, first to be noted is the lute, *dutār*, with two silk strings, played without a plectrum, using very elaborate techniques of the right hand; the *ṭunbūr*, strings of metal, played with plectrum or with bow, and its variants, the Uyg̲h̲ur *satār*, Uzbek *satā*, and finally, the Ottoman *ṭunbūr* [*q.v.*], played with bow or with plectrum, particularly suited to reproducing delicate inflections of the voice and endowed with a range of harmonics created by the resonances of the sympathetic strings (this is the preferred instrument of the masters of *maḳām*); the *g̲h̲id̲j̲ak*, pointed viol and its *kemand̲j̲i* variant; and citherns *ḳalūn* (Uyg̲h̲ur), *ḳanūn* (Turkish), or cembalo (*čang*). Percussion was provided by drums (*dap, def* or *doyra*). All these constitute a vast family, with connections and relationships, well understood by the audience.

While these forms of music were linked to the courtly circles where they were protected, the 20th century, with the Sovietisation of Central Asia, with the imposition of Maoist China on the Uyg̲h̲urs and the installation of the Turkish Republic, has produced a profound upheaval in their conditions of composition and performance. The creation of "orchestral" ensembles in all these states has led to a loss of authenticity and tradition. However, in the Central Asian states of the former USSR, an intense revivalist movement has been visible since the early 1990s, both in the performance of ancient, "nomadic" forms of music and in the interpretation of the learned and formal tradition.

V. Folklore.

Now a scholarly study, founded on popular oral and written traditions, the genesis and evolution of folklore in Turkey closely follows the major stages of the mutation of Turkish culture and society since the mid-19th century, from the period of the *Tanẓīmāt* [*q.v.*] onwards.

The folklore of Turkey does not depend on a simple contrast between oral and written tradition, each register being divided in turn between the erudite and the popular. Certain items of folklore are rooted in the scholarly written tradition, such as the *manāḳib-nāme*; a substantial number are popular written versions of the scholarly genre, such as the lyrical epics (*ḥikāye*) *Leylā and Med̲j̲nūn, Kerem and Aṣlī*, and *ʿĀs̲h̲iḳ G̲h̲arīb*; or epics in the technical sense (*destān*): *Baṭṭāl G̲h̲āzī* and the *Book of Dede Ḳorḳut* [*q.v.*]. For the oral scholarly tradition, consideration may be given to the practice of the *meddāḥ* [see maddāḥ] or the *orta oyunu* [*q.v.*] theatre, which may be compared with the *commedia dell'arte*. All these forms of traditional expression of culture belong to folklore and were recognised as such throughout the 19th century.

The transition from the Ottoman Empire to a Turkish Republic in search of a national identity took place on the territory of Anatolia. This space was an area of transit and of immigration and a melting-pot for all the cultural diversity of the empire. Such a multi-ethnic, multi-lingual and multi-faith population basis favoured an abundance of practices, beliefs and forms of cultural expression, the genealogy of which is practically impossible to establish: those of Greeks, Turks, Kurds, Armenians, Arabs, Caucasians, South Slavs and Russia, Gypsies, etc.

Historically, Ziyā (Ḍiyā) Gökalp (1875-1924 [*q.v.*]) may be credited with the systematic effort to distinguish Turkish culture from Islamic civilisation on the one hand and with ethnography (*ḳawmiyyāt* = study of ethnic groups) from folklore (*k̲h̲alḳiyyāt* = studies at the popular level) on the other. Recourse to the term "folklore" is owed (1918) to Riza Tevfik Bölükbaşi (1869-1949 [*q.v.*]) who proposed the fact of the anonymity of authors as a legitimising condition for the objects and practices belonging to folklore, conceived as a collective creation.

The Turkish term which was rapidly adopted as the equivalent of "folklore" is *halk bilgisi* = science of the people, corresponding to *Volkskunde*. Folkloric studies and practices have been developed since 1928 with the creation of the Folklore Society = *Halk Bilgisi Derneği* (*HBD*). They have been pursued in two directions which have persisted to the present day.

First to be considered are the institutional, political and ideological paths which envisage the authentification of the Turkish national idea by means of researching its roots through the evidence and proofs supplied by folklore. Another path has emerged, initially with the genesis of a national literature which, as in the work of the poet Nâzim Hikmet [*q.v.*], integrates and reinterprets the themes of popular traditions, as well as their forms of expression. This literary action was to be relayed via the emergence of a national-progressive ideology of the Left, primarily derived from the experience of educational innovation of the Village Institutes (*Köy Enstitüleri*).

Simplifying considerably, these two tendencies may be contrasted, in their objectives and their methods, as two different strategies: on the one hand there is an *instrumental* approach followed in institutions created by the State (e.g. the *HBD*), the epigones of this association, and departments of Turkish Studies or Folklore in the Universities; on the other, there is a *functional* approach which assigns a predominant role to the peasantry in the alleged class struggle and which seeks to endow this peasantry with an authentic and vivid popular culture.

As regards institutional studies and research into folklore, from 1927 the Folklore Society (*HBD*), the majority of whose members were Kemalist innovators, was based in Ankara, before opening agencies in Istanbul, Izmir, Kayseri and Erzurum. It undertook to publish an annual volume of research in progress and a monthly journal (*Halk Bilgisi Haberleri* = *Folklore News*), as well as guides and compilations of folkloric data based on the work of authors such as Van Gennep and Hoffman Krayer. With the creation, in 1932, of "Peoples' Houses" or *Halk evleri* [see KHALḲEVI] under the aegis of the Republican People's Party, which was to install a single-party régime, this new institution incorporated the Folklore Society, its archives and its journal until 1952, the year after the closing down of the *Halk evleri*. A total of 143 issues of the journal, as well as some 500 thematic publications, today constitute an important corpus of work, of uneven quality, on the folklore of the country. The network of Peoples' Houses was to be revived in 1960.

One of the most successful aspects of these voluntary and charitable campaigns, aimed at the compilation of data of the folkloric heritage by teachers and other employees of the state, has been the inauguration of a major survey of lexicography and of popular speech throughout the country. The corpus compiled is immense and has been published under the title *Anadoluda halk ağzından söz derleme dergisi* "Collection of the popular speech of Anatolia". A document of incomparable wealth, this collection has been in the charge of the Turkish Language Society (*Türk Dil Kurumu*) since 1932. Constituted between 1932 and 1952, constantly re-issued, this body of six volumes makes it possible to establish the link with pre-Islamic and pre-Anatolian Turkish, using this repository of linguistic archaisms which were the rural and nomadic speech patterns of Anatolia. In the domain of musical traditions, it is the Municipal Conservatoire of Istanbul which has undertaken, since 1927, the compilation of data regarding musical folklore, through campaigns of enquiry on the ground (see IV. above). The composer Béla Bartok also participated in these efforts at research into musical folklore, subsequently exerting considerable influence on musical creativity in the country. Thirteen pamphlets of collected musical traditions were published in 1939. The Ankara Conservatoire has also established an important archive of popular musical traditions.

In museology, it was the Ankara Museum of Ethnography (1925) which accepted the role of collector of the objects of popular culture. Elsewhere, almost throughout the whole country, professional technical academies and institutes for girls generally included the traditional crafts of textiles, fabrics, etc. in their syllabi.

This "institutional folklorism" was the reflection of the political régime of the single party, and of the nationalist and secular populism of the state which characterised the reign of the People's Republican Party under Atatürk, then under İsmet Inönü. The Second World War, the Marshall Plan (1947) and the transition to multi-partyism with the accession to power of the Democratic Party, as well as the massive rural exodus, changed the scene completely. The élitist and secular Jacobinism of the state yielded its place to the traditionalist localism of the Democratic Party, which pledged to undertake the re-Islamisation of the country. Henceforward the identifying folklorism of the state largely lost its reason for being and its objective, and for this reason the domain of folklorism was devolved to local associations and to the universities. An Institute for Research into Turkish Culture (*Türk Kültürünü Araştırma Enstitüsü*) was created in 1961 and charged with supervision of this field.

One review, however, took on the task of perpetuating the spirit of the years 1930-40: *Türk Folklor Araştırmaları Dergisi* = *Turkish Review of Folkloric Studies*, taking the place of the *Folklor Postası* = *Folklore Courier* (1945). This was the fruit of private initiative which, despite very limited means and the lack of subsidies, continued to operate until 1972, the date of the death of its founding director.

As a counterweight to the state institutions, the approach which could be described as "functional" ascribed a determinant role to folklore and especially to rural traditions as the motive forces behind a popular culture in the context of what was viewed as a Marxist class struggle which, in pre-industrial Turkey, was necessary for mobilising the rural masses. The Anatolian peasant and peasant virtues had been celebrated by Atatürk as the foundation of national identity; they were to be revived and reinterpreted in a Marxist perspective by the intellectual and progressive élite of the nation. This peasant-based ideology was put into effect by the very active but short-lived Village Institutes (*Köy Enstitüleri*), the educational doctrine of which was inspired essentially by the work of the Swiss philanthropist Pestalozzi. What was involved in this functional approach was the re-appropriation, diffusion and re-interpretation of the popular traditions of the rural world by the *soi-disant* avant-garde of the social struggle: the peasantry first, then the wider masses, then the entire nation. Story-tellers, artisans and popular musicians were to see themselves as having an active instructional role in these institutions. A literary trend of peasant-based neo-realism was to be born from this experience; the same was to apply to the plastic arts, which were broadly inspired by Anatolian and rural themes, and especially to popular traditional music. The tradition of wandering bards (*âşık*) which is included in the specifically Turkish

genre of the *türkü* [*q.v.*] as opposed to the orientalising scholarly genre (*şarkı*, from *shark* "Orient") deriving from Ottoman classical music, was to be strongly encouraged. Aşık Veysel, a blind member of the Alevi community, was the figurehead of this tendency which was to develop in particular alongside the political and social conflicts of the years 1970-80 in an evolution comparable to that of the *rebetika* genre in Greece.

Caught in a vice between the folklorism of the state, instrumental and identificatory, and the political peasant folklorism of progressive ideology, ethnography and ethnology have not found favourable ground for endogenous development in Turkey. Worth noting, however, is the long career of a folklorist of the school of Arnold van Gennep, namely, Pertev Nâili Boratav, who was the holder of the first Chair of Popular Literary Traditions created in the Faculty of Languages, History and Geography of Ankara University (1942). This chair sponsored intense activity in theses and in lecturing on folklore, and an archive of popular literature was created, but being judged subversive, Boratav's teaching and the chair itself were suppressed in 1948.

Paradoxically, it was from France, where he had then settled and in the context of the Centre National de la Recherche Scientifique, that Boratav was to produce a work, without equivalent in Turkey, on the folklore of this country. Field notes and archives—including those salvaged from the abolished University chair—were to constitute in some 6,000 pages, divided into around 100 "dossiers", the basis of an archive of Turkish folklore. Collected since 1927 (especially between 1939-51), the texts of oral tradition (tales, songs, fables, proverbs) are the nucleus of this corpus, which also includes information on diverse rituals and customs, popular magic, divination, popular medicine, etc.

This corpus is divided by Boratav into fourteen categories: 1. Various; 2. Works of popular poets (signed texts); 3. Epics and tales; 4. Tales and anecdotes; 5. Legends; 6. Proverbs, riddles, formulae; 7. Popular poetry (songs, quatrains, canticles); 8. Popular music, popular dance; 9. Games (including sport, theatre); 10. Beliefs; 11. Rituals (from cradle to tomb); 12. Material traditions (popular art, craft, dress, customs); 13. Religious institutions; and 14. Popular sciences (magic, folk medicine, ethnobotany, astronomy). Within these categories, documents are classified according to the places where the information was collected; and the date and the name of the collector are specified.

(Altan Gökalp)

TÜRKÜ (< *türkī*), designates in Ottoman Turkish (a) the folksong in general (sometimes more explicitly *khalk türküsü*) as opposed to the song belonging to Turkish art music, *sharkī* [*q.v.*], and (b) a genre of folksong, primarily identified by the melodies proper to it, with heterogeneous formal characteristics and a very broad thematic scope.

I. The majority of the folksongs of the *türkü* genre are anonymous, the rest have lyrics by folk poets (*ʿāshik, sāz shāʿiri*) whose names occur in the text. Formally there are two groups of differing importance:

A. The main corpus of the *türkü* genre is composed according to the original Turkic method of versification *parmak hisābī* (*hedje wezni*) based on the number of syllables. The range is 5 to 16 syllables per line, the most common lengths being 7, 8, and 11 syllables. Frequently there is a refrain (*kavushtak, baghlama*) of one to six lines (sometimes consisting of two parts differing in syllabic lengths); the length of the refrain's lines need not be identical with that of the main lines. A feature of the syllabic metrical system is the caesura (*ölčüm, durak*), which is not placed at random (predominantly 4 + 3; 4 + 4; 6 + 5; 4 + 4 + 3) and may vary from line to line (e.g. 6 + 5 then 4 + 4 + 3). The rhyme (*kāfiye, ayak, uyak*) is generally constituted by suffixes (and therefore often polysyllabic) and frequently assonantal (*yarîm kāfiye*). The majority of these folksongs with a minimum of two and no specific maximum number of strophes fall into three main groups according to their rhyme patterns and the number of lines per strophe.

(1) Quatrains of the type *māni* [*q.v.*]: A "composition" may be a stringing-together of already existing *mānis* (resulting in the rhyme scheme aaxa, bbxb, ccxc, etc.) that are thematically linked to each other by means of a word or words at the beginning of each component and frequently by the addition of a refrain (-b, -bb, -bbb, -bbxb, -bbbxb, etc.) or it may be an original composition of the same form.

(2) Quatrains that are basically of the poetic type *koshma* (*q.v.*; not the folksong type called *koshma* which need not have the formal characteristics of the poetic type of the same name, the determining factor in naming a song *koshma* being the use of specific melodies) with the rhyme schemes aaab (abab; xaxa), cccb, dddb, etc., or other less common patterns. *Türküs* of this type also occur with a refrain or with their every fourth line being a refrain: aaab (abab; xaxa), cccb, dddb, etc.

(3) *Türküs* with strophes of three lines (aaa, bbb, ccc, etc.) and, less commonly, of two lines (aa, bb, cc, etc.), both types also occurring with refrains as in (1); these, or part of these, may be truncated quatrains.

B. The remaining *türküs* comply, albeit often imperfectly, with the rules of the quantitative Arabo-Persian metrical system *ʿarūḍ* [*q.v.*]. These make use of only very few metres. As a large number of these *türküs* are at the same time in accordance with syllabic metres, and as folk poets generally cannot be supposed to have been familiar with the *ʿarūḍ* rules, doubts have been raised as to whether they should be placed within this category. The forms used are those of *dīwān* poetry (*ghazel, murabbaʿ*, etc.) or adaptations of such. The various types are classified according to their specific metre and their individual melody and are mainly the *dīwān* (or *dīwānī*), *selīs, semāʿī, kalenderī, saṭrandj*, and *wezn-i ākher*.

II. The *sine qua non* of the *türkü* is the use of a *türkü* melody, as lyrics of various forms and content sung on a *türkü* melody are all given this name. These are anonymous melodies with characteristics pointing to a Turkic origin. Musically, the *türkü* genre can be divided into two main categories usually referred to (after Béla Bartók) as:

A. *Parlando* melodies (*uṣūlsüz türküler, uzun hawā*): Rhythmically free melodies of various types such as *kayabashî, khoyrat (khoryat), koshma (sic), bozlak, maya, aghît* (part of the last have characteristics which place them in-between these two main categories), etc. These melodies are also differentiated according to regional characteristics, e.g. *Eghin aghzî, Urfa aghzî*, etc.

B. *Tempo giusto* melodies (*uṣūllü türküler*, sometimes referred to as *ḳirïḳ hawā*, as in Urfa; *oṭuraḳ* in Konya): Melodies with fixed rhythms, mostly folkdance songs (*oyun hawālarï*) of various types such as *zeybek* (Aegean region), *horon* (Black Sea region), *shïḳïltïm* (Harput), etc.

There are certain correspondences between melody and form, such as the fact that almost only *uzun hawā* melodies are used for hendecasyllabic lyrics, whilst heptasyllablic lyrics are always sung to *ḳirïḳ hawā* melodies (and octosyllabic lyrics use both). Of the various musical instruments that may be used to accompany *türküs*, the lute, *baghlama*, is the instrument of preference for the *uzun hawā*.

III. The *türkü* genre encompasses all fields of common interest with the exception of religion (popular religious songs being referred to as *ilāhī*, *ḳaṣīde*, etc.). Thematically-defined subdivisions with special names are, e.g. *ninni* (lullaby), *ṭashlama* (satirical song), *düghün türküsü* (wedding song), *aghït* (mourning song), etc. Through adaptations to changing circumstances, some of the most popular *türküs* exist in many variants.

IV. The language of the *türküs* is generally popular Turkish, thus remarkably free of Arabic and Persian loanwords, and exhibits characteristics of the vernacular such as elision, apocope, contraction, etc., as well as dialectal traits and expressions. The diction is rich in stereotyped metaphors and symbolic images, the style strongly expressive. That the musical element is especially important is shown by the frequent inclusion of unessential words and interjections such as *aman, yār, bir dānem* to allow for melodic expansions, making the lyric more expressive at the same time.

TURS [see rank; silāḥ, in Suppl.].

ṬURSHĪZ (vars. Ṭurshīsh, Ṭurthīth, Ṭuraythīth), a town of the mediaeval region of Busht of Ḳuhistān [*q.v.*] in northeastern Persia. It lay to the southwest of Nīshāpūr. Its site was probably to the west of the present town of Kashmar.

The 4th/10th century geographers describe it as a flourishing town, and al-Muḳaddasī, 318, says that its Friday mosque recalled that of Damascus in its splendour, and that it was "the emporium of Fārs and Iṣfahān and the storehouse of Khurasan". At the end of the 5th/11th century, with Tūn [*q.v.*] and other places it became one of the centres for Ismāʿīlism in Ḳuhistān. It accordingly attracted punitive expeditions by the Saldjūḳ sultans, and counter-raids by the Ismāʿīlīs, who in 498/1104-5 penetrated from Ṭurshīz as far as al-Rayy (Ibn al-Athīr, ed. Beirut, x, 392-3). It was destroyed in 530/1136; its hereditary governor at that time was al-ʿAmīd Manṣūr (or Masʿūd) b. Manṣūr; an enemy to the Bāṭiniyya or Ismaʿīlīs, he summoned the Turks to aid him to defend his lands, bu the latter behaved with their usual greed so that, not being able to continue the struggle, he submitted to the Ismāʿīlīs. His son ʿAlāʾ al-Dīn Maḥmūd recognised the suzerainty of the ʿAbbāsid caliphs in 545/1150; but receiving no support from them, he fled to Nīshāpūr and the Ismāʿīlīs established their authority in this region. In 596/1200 the army of the Khwārazm Shāh Tekish attacked Ṭurshīz; the siege was cut short by the Shāh's death, but the town eventually agreed to pay tribute of over 100,000 dīnārs (Djuwaynī-Boyle, i, 314-15).

The town was besieged and taken by Tīmūr (784/1382); it was regarded as impregnable on account of its deep moat and high walls, but the water of the moat was pumped out and a mine made a breach in the wall. The garrison was spared and served in Turkestan under the conqueror. Here Tīmūr received an embassy from Shāh Shudjāʿ, the Muẓaffarid ruler of Fārs, from whom he asked a daughter in marriage for his grandson Pīr Muḥammad. During the campaign of the Ḳādjār ʿAbbās Mīrzā against Harāt, Ṭurshīz was taken by Khusraw Mīrzā in 1248/1832.

Celebrated natives were the poets Kātibī of Nīshāpūr, born in a village in the vicinity, Ahlī (d. 934/1527-8) and Ẓuhūrī (d. 1024/1615). In the vicinity was the village of Kashmar where, according to tradition, Zoroaster planted a cypress tree which became famous and was ordered to be destroyed by the caliph al-Mutawakkil (Firdawsī, *Shāh-nāma*, ed. Turner Macan, 1068, 6, ed. and tr. J. Mohl, iv, 364; Fr. Spiegel, *Ērān. Alterthumskunde*, i, 54 n. 2, 703; Mustawfī, *Nuzha*, 143, tr. 141-2).

(C.L. Huart-[C.E. Bosworth])

ṬŪRSŪN BEG, 9th/15th-century Ottoman historian.

What little is known about Ṭūrsūn Beg derives mainly from incidental references in his *History*. He was born probably in Bursa in the mid-1420s, to an already prominent *ümerāʾ* family. His uncle Djübbe ʿAlī had served as governor in Bursa, and his grandfather Fīrūz Beg in Iznik. Ṭūrsūn Beg was, while relatively young, the holder of a *tīmār* [*q.v.*], probably inherited from his father Ḥamza Beg (cf. Tursun Bey, *Târîh-i Ebü'l-feth*, ed. M. Tulum, Istanbul 1977, pp. xi-xii; H. İnalcik and R. Murphey, *The history of Mehmed the Conqueror by Tursun Beg*, Chicago 1978, 11). He was present at the siege of Istanbul in 1453 and was subsequently employed as secretary on several survey tasks. Promoted to *dīwān kātibi* by 865/1461, he acquired an intimate knowledge of government affairs and participated in most major military campaigns of Meḥemmed II's [*q.v.*] reign, especially those involving his principal patron, the Grand Vizier Maḥmūd Pasha (d. 879/1474 [*q.v.*]). A specialist in the financial bureaucracy, Ṭūrsūn Beg may have risen to the post of *defterdār* [*q.v.*] of Anatolia. He retired sometime after 885/1480 and settled in Bursa. His date of death is unknown, but it was certainly after 896/1491 (İnalcik and Murphey, *op. cit.*, 16).

Ṭūrsūn Beg wrote poetry under the *makhlaṣ* Lebībī, but is best known as an historian and prose stylist. His only known work, the *Taʾrīkh-i Ebu'l-feth* ("History

of [Meḥemmed] the Conqueror"), is a detailed and authoritative history of the campaigns of the reign (1451-81), continuing up to *ca.* 893/1488 in the reign of Bāyezīd II, to whom the work was dedicated. Although rarely referred to by later Ottoman historians, Ṭūrsūn Beg's *History* is significant, first as an insider's account of events of the later 15th century, and second for its substantial preface on the nature of Islamic-Ottoman statecraft, clearly stimulated by the political controversies of Meḥemmed II's reign. An edition was first published in 1330/1912 by Meḥmed ʿĀrif (Suppl. to *TOEM*), a modern critical edition in 1977 (see above) and a facsimile with English summary translation in 1978 by İnalcık and Murphey, see above.

ṬURSUN FAḲĪH, a figure, possibly legendary, whom Ottoman tradition credits with having performed in Ḳara Ḥiṣār/Ḳaradja Ḥiṣār, the first Friday Prayer in the name of the first Ottoman ruler, ʿOthmān I [*q.v.*]. The late-15th century Anonymous Chronicles and the Chronicle of Urudj are the first sources to record this story. They provide no more than a bare statement that Ṭursun Faḳīh was the first to perform the Friday Prayer in ʿOthmān's name, with some versions adding that he also performed the Festival Prayer (*bayram namāzî*) in the same town (F. Giese, *Die altosmanischen anonymen Chroniken*, Breslau 1922, 6). Some redactors also add a date to the event, sc. 687/1288 (Urudj b. ʿĀdil, ed. F. Babinger, *Tewārīkh-i āl-i ʿOthmān*, Hanover 1925, 12; F. Giese, *loc. cit.*) or 689/1290 (Urudj, *op. cit.*, 86), which presumably they derived from 15th-century Ottoman chronological lists (for which, see V.L. Ménage, *Neshrī's history of the Ottomans*, London 1964, 14-19).

Since, in Ottoman tradition, the performance of the Friday Prayer in Ḳaradja Ḥiṣār was a pivotal moment, marking the beginning of Ottoman political independence, Ṭursun Faḳīh became an important figure in Ottoman historiography, with successive writers adding "biographical" details to the bald statements in Urudj and the Anonymous Chronicles. ʿĀshiḳpashazāde [*q.v.*] (*Tewārīkh-i āl-i ʿOthmān*, ed. Atsız, in *Osmanlı tarihleri*, Istanbul 1949, 103), writing in *ca.* 889/1484, adds that he acted as "*imām* to the people", and that ʿOthmān made him both *khaṭīb* and *ḳāḍī* in Ḳaradja Ḥiṣār. Neshrī, in 890/1485, repeated ʿĀshiḳpashazāde in making him "*imām* to the people", omitted the detail that ʿOthmān appointed him *ḳāḍī*, but made the significant addition that he was an "intimate friend" (*āshinā*) of the holy dervish Edebali (F. Taeschner (ed.), *Ğihānnümā. Die altosmanische Chronik des Mevlana Mehemmed Neschri*, Leipzig 1951, 33), who in Ottoman tradition was father-in-law of ʿOthmān I. In the early 10th/16th century, Kemālpashazāde [*q.v.*] elaborated on this detail, making Ṭursun Faḳīh a saint (*ʿazīz*) and "guide to pious men", who "met and consulted with Edebali" on the question of the Friday Prayer (İbn-i Kemal, ed. Ş. Turan, *Tevarih-i al-i Osman*, i, Ankara 1970, 111-12).

In the mid-10th/16th century, Ṭashköprüzāde (*al-Shaḳāʾiḳ al-nuʿmāniyya fī ʿulamāʾ al-dawla al-ʿuthmāniyya*, Beirut 1975, 7) elaborated on the Edebali motif, stating that Ṭursun Faḳīh was Edebali's "relative by marriage" (*khatan*). This detail is important, since it linked Ṭursun Faḳīh through marriage to ʿOthmān I. Ṭashköprüzāde continues by stating that, like Edebali, Ṭursun Faḳīh came from Ḳaramān [*q.v.*]; that he studied *tafsīr, ḥadīth* and *uṣūl* with Edebali, who also maintained his pupil, and that after Edebali's death, Ṭursun Faḳīh succeeded him as *muftī*, and in "regulating the affairs of the Sultanate and in teaching the *sharʿī* sciences". Ṭashköprüzāde's 17th century translator and adaptor, Medjdī (*Terdjüme-yi Shaḳāʾiḳ*, Istanbul, 1269/1853) rendered the imprecise *khatan* ("relative by marriage") with *dāmād* ("son-in-law"). Medjdī also provides a slight variation on the original version of the Ṭursun Faḳīh story in the Anonymous Chronicles, by making him perform the first Festival Prayer, not in Ḳaradja Ḥiṣār, but in Eskishehir [*q.v.*].

It is above all the materials in Ṭashköprüzāde and Medjdī which have provided the materials for modern historians (see e.g. Babinger's *EI*[1] art. s.v.), who often add imaginative details of their own.

Bibliography: Given in the article.

(C. IMBER)

ṬURṬŪSHA, currently TORTOSA, a town situated on the Ebro in Spain, close to the estuary of this river on the Mediterranean, in the province of Tarragona in Catalonia (Spain), with today approximately 30,000 inhabitants, on the ancient Iberian site of Dertosa, where the Romans established their colony of Julia Augusta. Arab geographers refer occasionally to this "town" (*madīna*), noting its location in the eastern sector of the "Upper March" of al-Andalus (*al-thaghr al-aʿlā*), of which the regional centre (*ḥāḍira*) Saraḳusṭa (Saragossa) was "120 miles" from Tortosa (according to al-ʿUdhrī); however, the various relations—in particular administrative dependence—between these two towns were not constant, given the fact of the stronger "vertical" association between points on this eastern seaboard of al-Andalus, and especially between Tortosa and Valencia (Balansiya), situated some "110 miles" apart (according to al-Idrīsī) or "120 miles... 4 days' march" (according to al-Ḥimyarī). The town of Tortosa was the centre of its own *kūra* or jurisdiction (*madīnat Ṭurṭūsha wa-ʿamaluhā*, var. *wa-aḳālīmuhā*), according to Arab sources, and al-Idrīsī mentions several fortresses (*ḥuṣūn*) in the area in his time: [Alcala of] Chivert, Horta, Tivisa, Morella, Mequinenza, Ulldecona, Llobregat (= Torreblanca?) and Peniscola. Geographers also refer to its antiquity, its robust walls and citadel (*ḳaṣaba*), an open-air oratory, the stone rampart surrounding the open *madīna* with its four gates, suburbs, the great mosque, four baths, bazaars and agricultural hamlets.

Like Tarragona, Tortosa was definitively conquered by the Muslims around the year A.D. 714 and its territory placed under the jurisdiction of Narbonne, as is indicated by Ibn al-Ḳūṭiyya (*Iftitāḥ*, ed. Madrid 1968, 30), referring to the first years of the amīrate of ʿAbd al-Raḥmān I [*q.v.*]. The latter sent ʿAbd al-Raḥmān b. ʿUḳba to govern "the *wilāya* of Narbonne and its territory as far as Tortosa", in territory reduced by Christian conquests, leaving Tortosa, especially after the loss of Barcelona by the Andalusians in 801, as the most important "outlying" town (*ḳāṣiya*, as it is frequently called in the Arabic sources) of this frontier, often attacked by the Christians throughout the 3rd/9th century who even took Tarragona [*q.v.*] at this time.

This frontier territory oscillated during the Umayyad period between local and centralist political tendencies: on the one hand were the "rebel" Buhlūl (d. 186/802) who took possession of Saragossa and of Tortosa, and the enterprises of two local chiefs of the Upper March (Muḥammad of the Shabrīṭ family in 301/913 and Muḥammad b. Lubb of the Banū Ḳasī in 316/928),

according to indications from al-ʿUdhrī implying the autonomy at that time of Tortosa; on the other hand, it is known that three Cordovan individuals were appointed governors of Tortosa by the *amīr* ʿAbd Allāh in the last years of the 3rd/9th century. But central control was very much the hallmark of the caliphal policy of ʿAbd al-Raḥmān III. He is known to have appointed seven governors of Tortosa between 317/929 and 328/939-40, even visiting the town in 924, "improving the condition of its inhabitants" (Ibn Ḥayyān, *Muḳtabis*, v, 122), and encouraged maritime activity in its port (the foundation inscription of the naval construction workshop, commissioned by the caliph in 333/944-5, has been preserved, see Lévi-Provençal, *Inscriptions*, 83). Further attributable to this surge in activity is the [re-]construction in 345/956-7 of the Great Mosque of the town, with five naves. Tortosa remained under firm caliphal control during the 4th/10th century, although the place was "too distant to be visited" according to a verse of Abū Marwān al-Djazīrī, secretary and official poet of Ibn Abī ʿĀmir al-Manṣūr [*q.v.*], imprisoned by order of the Cordovan *ḥādjib* in the citadel of the town, "at the summit of a bare peak", according to another of his verses.

When civil war erupted, in Tortosa as in the rest of eastern al-Andalus, power was seized by commanders of the *Ṣaḳāliba* [*q.v.*]; from 1009, the taifa of Tortosa was dominated by the "king" (*malik*) Labīb, former *fatā* of al-Manṣūr (who also controlled the taifa of Valencia for a few months in 1018-19), and after him Muḳātil, another *fatā* of al-Manṣūr, who struck coinage at Tortosa, under his own name, from 431/1039-40 onward; after him came Yaʿlā, who also minted currency between 445/1053-4 and 450/1059, and finally Nabīl, with whom the "slave period" of the taifa of Tortosa came to an end in 452/1060. This was the year that the inhabitants of the town appealed to al-Muḳtadir of the Banū Hūd, ruler in Saragossa, and thus began the Hūdid dynasty which ruled Tortosa, initially through the same king of Saragossa and after 1081 through an autonomous branch of the family which also dominated Lerida (Lārida) and Denia (Dāniya), until the Almoravid conquest of Tortosa, at an unknown date, after their conquest of Valencia in 495/1102 and their occupation of Tarragona in 1114 (Ibn ʿIdhārī, section on the Almoravids). The Muslims succeeded in regaining Tortosa, after an initial Christian occupation in 512/1118, but as Almoravid power declined, the town was taken by Ramon Berenguer IV of Barcelona on 14 Shaʿbān 543/30 December 1148, the same year that Lerida and Fraga (Ifrāga) fell. The text of the "capitulations" given by the Christian prince to the Muslims has been preserved; those among them wbo stayed in the town had the status of Mudéjars [*q.v.*]. It is estimated that the population of Tortosa numbered 12,000 shortly before the Christian conquest.

The density of the Berber population of the territory of Tortosa, as early as the 8th century, has been remarked upon. The town enjoyed a sound cultural reputation, and the number of *ʿulamāʾ* and *fuḳahāʾ* born in Tortosa and mentioned by the sources amounts to 42 from between the first half of the 9th century and 1150, the best known of them being Abū Bakr al-Ṭurṭūshī (d. 520/1126 [*q.v.*]). Tortosa and its port were the scene of intense economic activity, specialising in farm produce and manufacture and especially in the construction of "large vessels from the wood produced by the pine-covered mountains which surround the place" (according to al-Idrīsī). It was also a centre of long-distance trade.

(MARIA J. VIGUERA)

AL-ṬURṬŪSHĪ, ABŪ BAKR MUḤAMMAD B. AL-WALĪD b. Muḥammad b. Khalaf b. Sulaymān b. Ayyūb al-Ḳurashī al-Fihrī al-Andalusī al-Mālikī, also known as Ibn Abī Randaḳa (Rundaḳa according to Ibn Farḥūn in *al-Dībādj*), Arabic writer born *ca.* 451/1059 at Tortosa [see ṬURṬŪSHA] on the Spanish Mediterranean coast, died probably in 520/1126 (see below). He studied in Saragossa where he was the disciple of the eminent theologian Abu 'l-Walīd al-Bādjī (d. 474/1081 [*q.v.*]). Subsequently, in Seville, he attended lectures given by Abū Muḥammad Ibn Ḥazm who specialised in the teaching of *adab*.

In 476/1084, al-Ṭurṭūshī made his way to the East, undertook the Pilgrimage, then visited, in the quest for knowledge, the majority of the great cultural centres of that time. He stayed for some time in Baghdād and although a Mālikī, attended classes there given by several eminent Shāfiʿī jurisconsults, including Abū Bakr al-Shāshī and Abū Muḥammad al-Djurdjānī. In Baṣra, he was the pupil of Abū ʿAlī al-Tustarī, and in the course of his extensive travels he studied incessantly, primarily *fiḳh* and *ḥadīth*. His wanderings led him, around 485/1092 to Syria, where he spent some time in studying and teaching and where he was visited, so it is said, by his compatriot, Abū Bakr al-Maʿāfirī al-Andalusī. He also visited Jerusalem with the intention of meeting there Abū Ḥāmid al-Ghazālī [*q.v.*], without success, probably because the latter was not often in residence there. After withdrawing for a time to Lebanon, leading an austere life dedicated to meditation and piety, he made his way to Egypt and visited Cairo before establishing himself definitively in Alexandria where he committed himself to the teaching of *fiḳh* and of *ḥadīth*. This gave him the opportunity to educate numerous disciples, some of whom were natives of Spain and of the Maghrib, the latter including Abū Bakr Ibn al-ʿArabī (468-543/1075-1149),

the eminent traditionist Abū ʿAlī al-Ṣafadī (d. 514/1120-1), the future Mahdī Ibn Tūmart (d. 524/1130 [*q.v.*]), and through *idjāza* [*q.v.*] alone, the Ḳāḍī ʿIyāḍ (d. 544/1149 [*q.v.*]). At the beginning of his stay in Alexandria, he married the aunt of his loyal companion Abu 'l-Ṭāhir Ibn ʿAwf. A pious woman with substantial property of her own, his wife brought him the material and familial support which he had lacked.

It was in Alexandria that al-Ṭurṭūshī died in 520/1126, but his biographers do not all concur with this date; he is said according to some to have died in Djumādā I 525/April 1131.

His most important work reflects his role as a traditionist and a rigorous *faḳīh*. Among the writings attributed to him, the best known are: (1) A summary of al-Thaʿlabī's Ḳur'ān commentary *al-Kashf wa 'l-bayān*; (2) *K. al-Fitan*; (3) *K. Sharḥ risālat Ibn Abī Zayd*; (4) A monumental work which aspired to be a response to the *Iḥyā' ʿulūm al-dīn* of al-Ghazālī, whose opinions were not always in accordance with the rigorous form of Mālikī orthodoxy preached by al-Ṭurṭūshī. In his *Bughya*, al-Ḍabbī recalls seeing a part of this work which has not, however, survived to the present day; (5) *K. Birr al-wālidayn* (a treatise on filial piety); (6) *K. al-Ḥawādith wa 'l-bidaʿ* (a book dealing with undesirable happenings and innovations, critical edition and notes by M. Talbi, Tunis 1959). This didactic work preaches scrupulous observation of religion as practised by the virtuous ancestors (*al-salaf al-ṣāliḥ*). Certain indications included in this book give the impression that it could have been written in Egypt, after 480/1088. *Birr al-wālidayn* and *al-Ḥawādith wa 'l-bidaʿ* exist in manuscript form in the National Library of Madrid, no. 5341. (7) *Sirādj al-mulūk* is, incontestably, al-Ṭurṭūshī's most important work. It is a huge compilation including a large number of anecdotes and moral statements, presented in 64 chapters. Throughout this work, the author attempts "to represent the governmental ideal of an Islamic state over and above its practical organisation", giving "above all, theoretical views concerning the general rules of the public law of Islam" and underlining "the qualities which any sovereign must possess in order to govern with success and equity". It is appropriate to note that the content of this book is almost exclusively oriental, and the place occupied by the author's native land is extremely limited. Having completed the composition of this work on 14 Radjab 516/19 September 1122 at Fusṭāṭ, al-Ṭurṭūshī dedicated it to his protector, the *wazīr* al-Ma'mūn Ibn al-Baṭā'iḥī. The *Sirādj al-mulūk*, of which numerous manuscripts exist, was published in Būlāḳ in 1289, in Alexandria in 1299 (with al-Ghazālī's *al-Tibr al-masbūk fī naṣīḥat al-mulūk* in the margins), in Cairo in 1311 (in the margins of Ibn Khaldūn's *Muḳaddima*) and in 1319. A Spanish translation was published by M. Alarcon (*Lámpara de los príncipes*, Madrid 1930-1), now replaced by Maribel Fierro's translation and study, Madrid 1993. In his *Muḳaddima*, Ibn Khaldūn criticises al-Ṭurṭūshī severely, stating that the latter has not attained his avowed object since, in his *Sirādj*, he has been content to raise numerous subjects, statements and edifying tales, without any effort to draw the least lesson therefrom. He accuses him in fact of being a simple compiler without originality.

Nevertheless, al-Ṭurṭūshī was not devoid of literary talent. Attributed to him are several pieces of verse dealing principally with asceticism, but also diverse subjects including eroticism. While residing in Damascus, he one day heard someone reciting love poems of al-Waʾwā' [*q.v.*]. He remarked, "Does this Damascene believe that no one other than he is capable of telling such lies. If we wished, we could compose poetry just as deceitful [as that which we have just heard]", and promptly improvised nine verses taking as their theme the *ghazal*, using the same metre and the same rhyme. However, the majority of biographers stress the asceticism and unworldliness of al-Ṭurṭūshī, "whose asceticism, in the words of al-Ḥimyarī (*al-Rawḍ al-miʿṭār*, 125), was more important to him than his knowledge".

(A. BEN ABDESSELEM)

TURUNDJĀN (A.), more commonly *Bādrundjubūya*; Balm, *Melissa officinalis* L., of the Labiatae, the Lemon balm or bee plant, its synonyms being *badhrundjubūya*, *turudjān*, *ḥabaḳ al-turundjānī*, *ḥashīshat al-naḥl* (Ghaleb, i, 201). It is about 2 ft high, with small white flowers; its leaves have a characteristic lemon scent. It has been cultivated since Antiquity, was known in Spain in the 10th century A.D., and was possibly introduced further north by Benedictine monks (Fournier, 499).

Concerning its medicinal uses, al-Ṭabarī calls it gentle, good for palpitations when drunk or sniffed, and according to Ibn al-Bayṭār, it is *mālissūfulun*, or *mālissūfān*, *rayḥān al-turundjān*, *bādhrundjūya* or *bādhrunbūya* (*Tafsīr*, 247). This is a Persian name meaning "lemon-scented", he says. It is a cordial, and good for stings and bites, whether drunk in *sharāb* or used as a bandage. The leaves, chewed, are good for the teeth (*Djāmiʿ*, i, 74-5). According to Ibn Sīnā, it is hot and dry in the second degree, recommended for the heart and stomach and to relieve palpitations (*Ḳānūn*, ii, 272).

Its many gentle qualities ensured continuity of use. Culpeper (1616-54) recommends it externally and internally, and quotes "the Arabian physicians" Serapion and Avicenna: for the heart, and to promote good spirits, help digestion, and expel melancholy vapours (*Herbal*, 36-7). Much later, P. Fournier also quotes these two, and mentions both Melissa itself and "l'Eau de Mélisse" as still "remèdes populaires d'un renom universel" (500). It is today a popular garden herb, mostly used in infusions and cold drinks.

(PENELOPE C. JOHNSTONE)

ṬŪS, a district in Khurāsān, original Persian form Tōs (also thus in the later 8th century Armenian geography, see Markwart-Messina, *A catalogue of the provincial capitals of Ērānshahr*, Rome 1931, 11, 47), which played a notable part in the medieval Islamic period of Persia's Islamic history.

1. History.

In early Islamic times, Ṭūs was the name of a district containing several towns. The town of Nawḳān flourished down to the end of the 3rd/9th century. The form Nawḳān < Nōḳan is confirmed by the present name of the Mas̲h̲had quarter Nawg̲h̲ān (where the diphthong *aw* corresponds to the old *wāw-i mad̲j̲hūl*, i.e. *ō*). At a later date, the other town Ṭābarān became more important and was considerably extended so that the original Ṭābarān seems to have become one of the suburbs of the new town which then became generally known as Ṭūs. The name Mas̲h̲had [*q.v.*], at first a simple sanctuary in the village of Sanābād, is already mentioned in al-Muḳaddasī. Mas̲h̲had first of all encroached upon the adjoining town of Nawḳān, the name of which disappears *ca.* 1330. In 791/1389 Ṭūs was destroyed and never rebuilt. The waters which supplied it were diverted to Mas̲h̲had. Under the Ṣafawids this, the sacred city of the S̲h̲īʿīs, became the capital of the old district of Ṭūs (the valley of the Kas̲h̲af-rūd) and of all K̲h̲urāsān.

Situation. Two ranges of mountains stretch along the north of K̲h̲urāsān. The one (Kopet Dag̲h̲, etc.) rises in the north of K̲h̲urāsān and runs through Transcaspiana. The other (which is a continuation of the Alburz) is parallel to it in the south. To the south of Ḳūčān, the two approach one another, and this narrowing forms the watershed. By the corridor which opens towards the northwest the Atrak descends to the Caspian. Through the plain in the southeast runs the river Kas̲h̲af Rūd "Tortoise river", a left-bank tributary of the Harī Rūd (river of Harāt). The district of Ṭūs lies on the upper part of it. The outer spurs of the southern range (Binālūd-kuh, with peaks of some 850 km/2,800 feet) separate it from Nīs̲h̲āpūr, and the river's waters lose themselves to the south in the central desert.

The toponymy of the region suggest ancient, even pre-Iranian origins. The name of the settlement Ṭābarān preserves the name of the *Tapyroi* or *Topeiroi* of Arrian, *Anabasis*, III. 8.4 and 11.4, and that of Tōs apparently preserves that of Sousia, the first city of the province of Areia reached by Alexander in his eastwards march, cf. Arrian, III. 25.1 (Markwart-Messina, *op. cit.*, 47-8). In the *S̲h̲āh-nāma*, Tōs-i Nōd̲h̲arān is represented as the hereditary commander-in-chief (*spāhbad̲h̲*) of the forces of Īrān during the reigns of Kay Kāwūs and Kay K̲h̲usraw.

We have very little information about Tōs in the Sāsānid period, but in the acts of the Nestorian Church for 497 there is first mentioned a bishop of Tōs and Abars̲h̲ahr (= Nīs̲h̲āpūr [*q.v.*]), indicating a significant Christian community there (I. Guidi, *Ostsyrische Bischöfe*, in *ZDMG*, xliii [1888], 410).

The Arab conquest. According to a story given by al-Balād̲h̲urī, *Futūḥ*, 334, *ca.* 29/649 the *marzbān* of Ṭūs wrote simultaneously to the governors of Kūfa and Baṣra, inviting them to K̲h̲urāsān, on condition that the conqueror should put him in possession of this province. K̲h̲urāsān was conquered under ʿUt̲h̲mān (in 29-31/649-61) by the governor of Baṣra, ʿAbd Allāh b. ʿĀmir b. Kurayz. The *marzbān* of Nīs̲h̲āpūr, after some resistance, agreed to pay a tribute (*waẓīfa*) of 1,000,000 dirhams (another version, 7,000,000 dirhams) while the *marzbān* of Ṭūs (Knāztk; read Kanārang) appeared before ʿAbd Allāh and made peace by paying 600,000 dirhams (al-Balād̲h̲urī, 405). One would think that the two *marzbān*s were different individuals, and al-Yaʿḳūbī, *Buldān*, 296, tr. Wiet, 114 also speaks of a letter from the *malik* of Ṭūs and of ʿAbd Allāh's reply which the descendants (? *walad*) of the *malik* still preserved in his time. According to al-Ṭabarī, i, 2886, however, when ʿAbd Allāh had established himself in Nīs̲h̲āpūr, the other half of the province, i.e. Nasā and Ṭūs, remained in the hands of the Kanārē, with whom ʿAbd Allāh had to make peace in order to be able to go on to Marw. As Marquart has shown, the title Kanārang (or Kanārē, in Greek Χαναράγγης, cf. Procopius, *De bello persico*, i, chs. 5, 7, 21, 23) was that of the hereditary governors of all the province of Abars̲h̲ahr (Nīs̲h̲āpūr, Ṭūs, Nasā and Abīward) probably descended from a pre-Sāsānid dynasty (cf. Marquart, *Ērānšahr*, 75; Christensen, *L'empire des Sasanides*[2], 108 n.). The intrigues to which al-Balād̲h̲urī and al-Yaʿḳūbī allude and which were to facilitate the conquest may have originated with some member of the family of the Kanārang, a rival of the lord of Nīs̲h̲āpūr.

In the period of Arab rule Ṭūs played no independent part, but its name is often mentioned in the records of civil wars. Under the Umayyad ʿAbd al-Malik (65-86/685-705), the citadel of Ṭūs was occupied by a body of the Banū Tamīm (al-Balād̲h̲urī, 415), who still held control in 125 (al-Ṭabarī, ii, 1771). In 130/747-8, Ḳaḥṭaba [*q.v.*], the lieutenant of Abū Muslim, inflicted a decisive defeat on the Umayyad governor Naṣr b. Sayyār [*q.v.*] near Ṭūs (al-Ṭabarī, ii, 2000; Ibn al-At̲h̲īr, v, 282, 292, 295). In 184/800 a certain Abu 'l-K̲h̲aṣīb of Nasā rebelled in K̲h̲urāsān and for a time seized Ṭūs, Nīs̲h̲āpūr, etc. On 3 D̲j̲umādā II 193/24 March 809, Hārūn al-Ras̲h̲īd, who was operating in K̲h̲urāsān against the rebel Rāfiʿ b. Layt̲h̲ b. Naṣr b. Sayyār, died at Ṭūs (al-Ṭabarī, iii, 733). On 1 Ṣafar 203/8 August 818 the ʿAlid ʿAlī b. Mūsā al-Riḍā died in the village of Sanābād of Ṭūs. According to Ibn al-At̲h̲īr, vi, 203, al-Maʾmūn prayed to God for the deceased and interred him near the tomb of his father ("in the garden of Ḥumayd b. Ḳaḥṭaba", following Abū Dulaf Misʿar b. Muhalhil quoted by Yāḳūt). Sanābād is the modern Mas̲h̲had. The tomb of Hārūn al-Ras̲h̲īd, now completely disappeared, was beside that of the Imām ʿAlī for, according to Ibn Baṭṭūṭa, iii, 79, tr. Gibb, iii, 583, the ʿAlid pilgrims who visited the latter used to kick the tomb of Hārūn (which, however, was still kept in good order in the 8th/14th century).

According to al-Idrīsī, Muḳān (read Nawḳān) was the capital of the Ṭāhirids, but "after the siege" the capital was moved to Nīs̲h̲āpūr (between 213/828 and 230/844-5; see ṬĀHIRIDS). The historical sources state that in 265/878 Ṭūs was destroyed (*uk̲h̲ribat*), evidently as a result of the rebellion of Aḥmad b. ʿAbd Allāh al-K̲h̲ud̲j̲istānī, an old retainer of Muḥammad b. Ṭāhir who had seized Nīs̲h̲āpūr in 262/875-6 (*ibid.*, iii, 1931; Ibn al-At̲h̲īr, vii, 227; cf. Defrémery, *Mémoire... sur Ahmad, fils d'Abd Allāh*, in *JA* [1845], 345-62). Al-Yaʿḳūbī (278/891) still mentions Nawḳān as the principal town of Ṭūs. In 283/896 the Ṣaffārid ʿAmr b. al-Layt̲h̲ [*q.v.*] reported to the caliph that his men had defeated near Ṭūs the Amīr Rāfiʿ b. Hart̲h̲ama who had been asserting his independence in K̲h̲urāsān from 271/884 (al-Ṭabarī, iii, 2160; Ibn al-At̲h̲īr, vii, 334).

The Sāmānids. In 309/921-2 Laylī b. Nuʿmān, one of the generals of the ʿAlid *dāʿī* al-Ḥasan b. Ḳāsim, came to Nīs̲h̲āpūr and had the *k̲h̲uṭba* read there in the name of his chief. By orders of the Sāmānid Nūḥ I, Ḥammūya b. ʿAlī left Buk̲h̲ārā against Laylī. He was at first defeated near Ṭūs, but Laylī later lost his life (Ibn al-At̲h̲īr, viii, 91). In 336/947, the governor of Ṭūs and its dependencies Abū Manṣūr Muḥammad b. ʿAbd al-Razzāḳ rebelled against Nūḥ b. Naṣr. The

latter sent Manṣūr b. Ḳaratigin to Khurāsān. Muḥammad went from Nīshāpūr to Ustuwā (= Kūčān). His brother Rāfiʿ was besieged in the fort of Sumaylān and later in the fort of Darak (3 farsakhs from Sumaylān). Sumaylān was dismantled, but Rāfiʿ succeeded in retaining what was left at Darak. Lastly, in 339/950-1, Muḥammad b. ʿAbd al-Razzāḳ, being pardoned by Nūḥ returned to Ṭūs (Ibn al-Athīr, viii, 353, 361). The personality of Abū Manṣūr is particularly interesting on account of his friendship with Firdawsī (cf. *Shāh-nāma*, ed. Mohl, i, 20, ed. Vullers, i, 10-11). Abū Manṣūr beautified the Friday mosque of the town of Ṭābarān, which henceforth was the first in Ṭūs (al-Muḳaddasī, 319). In 349/960 Abū Manṣūr was appointed *sipahsālār*, but immediately dismissed in favour of Alptigin [*q.v.*]. The latter settled in Nīshāpūr, and Abū Manṣūr retired to his fief of Ṭūs. In 350/961, after the accession of the Sāmānid Manṣūr, Alptigin fell into disgrace. Abū Manṣūr, who had sent troops from Ṭābarān and Nawḳān towards Čāha (on the road from Nīshāpūr to Marw; cf. Niẓāmī ʿArūḍī, *Čahār maḳāla*, ed. Browne, 51), did not succeed in stopping Alptigin. Fearing the wrath of his master, Abū Manṣūr rebelled and was ultimately poisoned (Gardīzī, *Ẓayn al-akhbār*, ed. Nazim, Berlin 1928, 41-4).

The geographers of the 4th/10th century place the district of Ṭūs on the Nīshāpūr-Sarakhs road (Ibn Khurradādhbih, 24; Ḳudāma, 201), Al-Yaʿḳūbī, *Buldān*, 277, tr. 83, states that Nawḳān was the largest town there and that the local people were mainly Persian but with some Arabs of Ṭayyiʾ and other tribes. This same author says that the land-tax of the district was included in that of Nīshāpūr, though Ibn Khurradādhbih estimated it separately at 740,860 dirhams. The *Ḥudūd al-ʿālam*, tr. Minorsky, 103, comm. 376, enumerates five settlements in the Ṭūs district and mentions the turquoise, copper, lead and antimony found in the nearby hills.

Al-Muḳaddasī, author of the most complete description of Khurāsān, emphasises the subordinate character of Ṭūs. "If some have said that Nīshāpūr has eclipsed Ṭūs, one would reply that Ṭūs has never been a large town to be eclipsed." Al-Muḳaddasī repeats several times that Ṭūs, like Nasā and Abīward, is only a *khizāna* ("granary, depot") of the *kūra* of Nīshāpūr (50, 295, 300, 301 n. *b*). Among the towns of the district of Ṭūs, he mentions al-Ṭābarān, al-Nawḳān, al-Rādkān, Djnābd, Ustūrḳān, Trūghbdh (the last three are uncertain). The largest of these at this time was al-Ṭābarān (375/985). It had a citadel and from the distance resembled Medina. Al-Muḳaddasī mentions its busy market in which there was the cathedral mosque which Muḥammad b. ʿAbd al-Razzāḳ had embellished (*zakhrafa*). The water ran in shallow subterranean canals; fruits and firewood were abundant and the prices of merchandise moderate. In spite of all this, al-Ṭābarān was a wretched little town (*bulayda*) the outskirts of which were in ruins, the water bad and the climate cold. The inhabitants professed the Shāfiʿī law school and were capable of being very troublesome in times of turmoil. Ṭūs produced stone cooking vessels (*birām*, sing. *burma*), mats and wheat, as well as striped materials and *tikak* (trouser cords) of good quality. Al-Nawḳān was below al-Ṭābarān (*dūna*, perhaps "lower down the river"). In Mashhad there was a citadel with houses and a market; the mosque built on the tomb by ʿAmīd al-Dawla Fāʾiḳ was the best in Khurāsān (*ibid.*, 319, 323, 324-5, 333).

The Ghaznawids. In 385/995, when Maḥmūd b. Sebüktigin [*q.v.*] was installed in Nīshāpūr by the Sāmānid Nūḥ II, Abū ʿAlī Sīmdjūrī and Fāʾiḳ (a former Sāmānid general, builder of the mosque of Mashhad; cf. al-Muḳaddasī, 333), refugees in Djurdjān, attempted to reconquer Khurāsān, but Sebüktigin defeated them near the village of Andarakh (?) of Ṭūs (Gardīzī, 56; Ibn al-Athīr, ix, 75; Barthold, *Turkestan down to the Mongol invasion*, 262). In 389/999, Maḥmūd sought to reassert his rights over Khurāsān. His rival Begtuzun was driven from Ṭūs and in his stead Maḥmūd appointed his chief *amīr* Arslan Djādhib, who is still mentioned as lord of Ṭūs in 401/1010-11 and 420/1029 (Ibn al-Athīr, ix, 103, 155, 267). In 397/1006-7, however, the Ḳara-Khānids of Transoxiana sent an expedition which took Ṭūs and Nīshāpūr; but the tables were soon turned when Maḥmūd returned from India (Barthold, *Turkestan*, 272). Ibn al-Athīr, ix, 283, without giving a date, records that Maḥmūd as a result of a dream rebuilt the sepulchral building of Ṭūs (i.e. Mashhad) which his father Sebüktigin had destroyed, and prevented the People of Ṭūs (i.e. the Shāfiʿīs ?) from harassing the pilgrims (ʿAlids).

The Saldjūḳs. In 421/1030 the Saldjūḳs, making short shrift of the attempts at conciliation made by the Ghaznawid Masʿūd, penetrated into Balkh, Nīshāpūr, Ṭūs and Djurdjān. In 425/1034 their strength increased, which had repercussions on the situation generally. Turbulent elements gathered round the people of Ṭūs, who declared war on Nīshāpūr. The governor of this town fled, but the *amīr* of Kirmān, who was on his way to Masʿūd, arrived with 300 horsemen. The people of Nīshāpūr defeated those of Ṭūs and Abīward. The *amīr* of Kirmān massacred 20,000 people of Ṭūs. He crucified them on trees and along the roads. The landlords of the villages (*zuʿamāʾ ḳurā Ṭūs*) had to give hostages.

In 428/1036-7 Masʿūd's commander-in-chief (*su-bashi*), defeated by the Saldjūḳs near Sarakhs, was driven back to Ṭūs. In 430/1038-9 Khurāsān became the arena of the struggle between Masʿūd and the Saldjūḳ Ṭoghrïl. The latter from Ustuwā (Ḳūčān) took refuge in "the inaccessible mountains and difficult passes" of Ṭūs. Since from there Ṭoghrïl went to Abīward, the reference is probably to the district of Kalāt. Some people of Ṭūs who had been intriguing with Ṭoghrïl entrenched themselves on an inaccessible summit, but in spite of the winter these positions were taken by Masʿūd, who personally directed the attack.

In 465/1072 Malik-Shāh conferred on Niẓām al-Mulk a number of fiefs including Ṭūs, the native city of the great vizier (Ibn al-Athīr, x, 54). Niẓām al-Mulk is said to have built there two Friday mosques, one at Ṭūs and the other at Nawḳān.

In 510/1116 a disputation at Ṭūs on ʿĀshūrāʾ day (10 Muḥarram) between an ʿAlawī and the Sunnī religious scholars ended in great riots. The Sunnī inhabitants laid siege to Mashhad and did great damage there. To protect Mashhad against such attacks again, a wall was built around the town in 515/1121 (*ibid.*, x, 366). In 548/1153 the Ghuzz, having captured Sultan Sandjar, invaded Ṭūs, this "mine of learned and pious men", slew the men, carried off the women and destroyed the mosques. Of all the *wilāyat* of Ṭūs, only the place (*balad*) where the Imām ʿAlī was buried was uninjured. Ibn al-Athīr gives a list of individuals of note slain on this occasion.

The family of al-Muʾayyid. In 548/1153 a slave of Sultan Sandjar, Ay-Aba al-Muʾayyid, carved out for himself a small principality including Nīshāpūr, Ṭūs, Nasā, Dāmghān, etc. Sandjar's successor, his nephew Maḥmūd b. Muḥammad the Ḳara-Khānid,

had to be content with the payment of tribute by Mu'ayyid. In 552/1157 Mu'ayyid's rival Aytāḳ devastated Ṭūs and its townships, after which the district was left waste (*ibid.*, xi, 150). In 553/1158 the Ghuzz, having defeated Mu'ayyid near Marw, pursued him and sacked Ṭūs. In the same period, a quarrel broke out in Khurāsān between the leader of the Shāfi'īs, al-Mu'ayyid b. Ḥusayn, and the 'Alawids. The people of Ṭūs, Isfarāyin and Djuwayn supported this other al-Mu'ayyid, but the Shāfi'īs were vanquished. These internecine struggles brought about fresh devastation (*ibid.*, xi, 155). In 555/1160, al-Mu'ayyid Ay-Aba, after a quarrel, had a reconciliation with Maḥmūd, and as soon as he was re-established in his post began to harass the 'Alawīs. In 556/1161, his suzerain Maḥmūd, who was dependent on the Ghuzz, quarrelled with them. The Ghuzz sacked Ṭūs violently (*nahb^{an} fāḥish^{an}*), including Mashhad, but did not touch the sanctuary. In 557/1161 Mu'ayyid blinded Sultan Maḥmūd and had the *khuṭba* said in his own name (*ibid.*, xi, 180; Barthold, *op. cit.*, 335). He laid siege to the fortress of Waskarah-Khūy (?) which belonged to Ṭūs, where a certain Abū Bakr Djāndār had installed himself. Mu'ayyid took the fortress and Karastān (?) also. In 558/1163, Mu'ayyid recognised the suzerainty of the Saldjūḳ sultan Arslan b. Ṭoghril. Ibn al-Athīr gives a list of his lands, which included Ḳūmis, Nīshāpūr and Ṭūs and extended from Nasā to Tabas-Knklī (?). In 568/1172-3 Mu'ayyid, who had taken the side of the Kh^{w}ārazmshāh Sulṭān Shāh Maḥmūd, was taken and executed by the latter's brother Tekish. Under Toghan Shāh, son and successor of Mu'ayyid, his slave Ḳara-Ḳush in 568/1172-3 took Ṭūs and Zām (= Djām; cf. Ibn al-Athīr, xi, 248). According to another source used by Ibn al-Athīr, xi, 253, the Kh^{w}ārazmshāh Tekish (in 568?), before his final struggle with Mu'ayyid, advanced as far as Ṭūs.

The Kh^{w}ārazmshāhs and the Ghūrids. In 594/1198 Tekish, who had risen against the Ghūrids with the help of the Ḳara-Khitay, went by Ṭūs to Harāt. In 597/1200-1 the Ghūrid Ghiyāth al-Dīn seized the lands of the Kh^{w}ārazmshāh in Khurāsān. Ṭūs surrendered after a siege of three days and was sacked (Djuwaynī, *Tārīkh-i Djahān-gushāy*, ii, 48).

The Mongols. At the beginning of Rabī' II 617/ May 1220, the generals of Čingiz Khān Yeme (Djebe) and Sübetey pursuing the Kh^{w}ārazmshāh came to Nīshāpūr. Sübetey left for Djām and Ṭūs. The eastern township of "Ṭūs-Nawḳān" submitted but the inhabitants of the town (i.e. Ṭūs-Ṭābarān) did not give a satisfactory reply and Sübetey ordered a great massacre (*katl-i ba-ifrāṭ*) in the town and vicinity (Djuwaynī, i, 114-15). After the two generals had gone, the people were able to breath again (*ibid.*, 117). The chief of the militia of Ṭūs (*hashariyān*) was bold enough to kill the Mongol *shiḥna*, but the Mongol general Ḳishtimur, hastening from Ustuwā (= Ḳūčān) arrested the culprit and began to dismantle the fortifications. In the meanwhile, the advance guards of the army of Toluy, son of Čingiz-Khān, had arrived in Khurāsān. The last forts of Ṭūs were occupied. Nawḳān (and Ḳār ?) resisted vigorously; but Nawḳān was taken on 28 Rabī' II 617. In the spring of 618/1221, Toluy himself arrived from Marw. At one stroke the army occupied all places in the district of Ṭūs and the last remnants of the population were put to death (*ibid.*, i, 136-8). The citadel of Ṭūs was occupied by an adventurer, Tādj al-Dīn Farīzana'ī, who submitted to Külbulat (?), who was sent by the Mongol governor of Khurāsān Khamīdbūr (Djuwaynī, ii, 220). In 637/1239 the Uyghur Buddhist Kürküz ("the Long") was appointed to Khurāsān and made Ṭūs his headquarters. In all the town (the old Ṭābarān) there were only 50 houses still inhabited. Kürküz began to build government offices (*'imārat*). "Contrary to the Mongol custom", he built a solid treasury (*khizāna*) in the centre of the citadel (*ḥiṣār*). The town began to recover rapidly, and the prices of municipal plots went up a hundredfold in a week (Djuwaynī, ii, 238, 240).

Kürküz was succeeded by the famous Oyrat *amīr* Arghūn. On returning from his journey to the *ordu* in 643/1245-6, he saw that the Manṣūriyya palace and the forts (*kuṣūr*) were completely in ruins, and gave orders to rebuild them (*ibid.*, ii, 245, 247). Confirmed in office by Möngke (649/1251-2), Arghūn entrusted the government of Nīshāpūr and Ṭūs to Malik Nāṣir al-Dīn 'Alī (*ibid.*, ii, 255). Arghūn then entered the service of Hülegü, and in the reign of Abaḳa died in 673/1275 at Rādkān of Ṭūs (Rashīd al-Dīn, ed. Blochet, 559). The place of death of Arghūn suggests that his own estates were in the district.

Christians in Ṭūs. Traces of Christianity must have survived in Ṭūs from the Sāsānid period (see above). In the biography of Shaykh Abū Sa'īd (967-1049), the *Asrār al-tawḥīd*, ed. Žukovski, 70, we have a curious story of his meeting with the child who was later to become Niẓām al-Mulk (born in 408/1017-18) at Ṭūs (= Ṭābarān) "at the beginning of the street of the Christians" (*bar sar-i kūy-i tarsāyān*). In the Mongol period, the Christians enjoyed greater freedom. When in 1278 the future patriarch Yahballāhā III was on his way from Mongolia to Jerusalem, he went to the monastery of Mār Ṣehyōn "near the town of Ṭūs" and there received the blessing of the bishop and of the monks. In the year 1590 of the Greeks (= 1279) the bishop of Ṭūs, Simeon, was ordained metropolitan of China (Bar Hebraeus, *Chron. eccl.*, ii, 449).

The geographers and travellers of the 7th-8th/13th-14th centuries. Yāḳūt, iii, 560, gives few details about Ṭūs and only reproduces the fables of Abū Dulaf about a powerful stronghold on the road between Ṭūs and Nīshāpūr built by a king of the South Arabian Tubba's. Under Ṭābarān (iii, 486) and Nawḳān (iv, 824) Yāḳūt says, "Ṭūs consists of two towns of which the larger is Ṭābarān". At Nawḳān Yāḳūt mentions the manufacture of pots and cauldrons of stone (cf. *LA*, xiv, 311 on the stone pots which the pilgrims bring from Mashhad).

According to Ibn Baṭṭūṭa, iii, 77-8, tr. Gibb, iii, 582 Ṭūs (= Ṭābarān), which he reached from Djām, was one of the largest towns in Khurāsān. From Ṭūs he went to Mashhad, which at this time must have encroached upon Nawḳān for of the latter the traveller says nothing and from this time the name disappears completely.

The Djūn-Ghurbān. These rulers were the direct descendants of Nawrūz b. Arghun. Their name, which was probably that of one of the sections of the Mongol tribe of Oyrat (**dzunghurban* = "the three [detachments] of the left [wing]"), was later given a Persian dress as Djānḳurbān ("those who sacrifice their souls"). After the extinction of the Il-Khānid Mongol dynasty of Persia, the son of Nawrūz, called Arghun Shāh, won for himself a kingdom in Khurāsān which, according to Ḥāfiẓ Abrū (quoted in Barthold, *An historical geography of Iran*, Princeton 1984, 103), included Ṭūs, Ḳūčān, Kalāt, Abīward, Nasā and Marw. Dawlat-Shāh (Bombay 1887, 121) calls Arghun Shāh "*pādshāh* of Nīshāpūr and Ṭūs" but in 738/1337-8 Nīshāpūr was taken from him by the Sarbadār Mas'ūd. Arghun Shāh played a considerable part in the election of Togha Temür [*q.v.*]. After the latter's death (754/1353),

his possessions were divided among the Sarbadārs, the Karts and Arghun Shāh, but the Sarbadār Karābī at some time took Ṭūs from Arghun Shāh [see SARBADĀRIDS].

The successors of Arghun Shāh were his sons Muḥammad Beg and ʿAlī Beg. When at the beginning of 783/1381 Tīmūr came to Ṭūs, ʿAlī Beg went to pay homage to him, but in the winter of 1381 he shut himself up in the fortress of Kalāt. After many vicissitudes, ʿAlī Beg surrendered to Shaykh ʿAlī Bahādur in 784/1382. As a reward, Tīmūr gave the latter Rādkān. ʿAlī Beg was deported to Andidjān and executed there towards the end of the year. Others of the Djūn-Ghurbānīs were exiled to Tashkent (Sharaf al-Dīn Yazdī, *Ẓafar-nāma*, i, 324, 335, 351, 385). But in 791/1389 a rising took place in Khurāsān which was joined by the Sarbadārs, Ḥādjdjī Beg (younger brother of ʿAlī Beg), and the troops of Kalāt and Ṭūs. The *Ẓafar-nāma* briefly records the suppression of the rising by Mīrān-Shāh (i, 468-9). A much more detailed account is quoted by Ṣanīʿ al-Dawla, *Maṭlaʿ al-shams*, i, 208-9. Tīmūr is said himself to have appointed Ḥādjdjī Beg to Ṭūs (in 789/1388?), where he amassed great wealth. The rumours of Tokhtamish's successes turned Ḥādjdjī Beg's head, and he stopped the *khuṭba* for Tīmūr and proclaimed his desire for independence. He fought for several months with the *amīr* Aḳ Buḳa, who remained faithful to Tīmūr. On the arrival of Mīrān Shāh, Ḥādjdjī Beg fled but was captured and put to death. The town was taken in Radjab 791/July 1389; 10,000 men were killed and towers of skulls (*manāra*) erected at the gate of the city. "No trace was left of Ṭūs." In 807/1404-5 again, Tīmūr had executed near ʿIshḳābād (Ashkhābād) the Djūn-Ghurbānīs Aḳ Buḳa and Ḳara Buḳa, who had been plotting in his absence (*Ẓafar-nāma*, ii, 592). At the present day, the country north of Mashhad (from Čolay-khāna to Ḳalʿa-yi-Yūsuf Khān which is 4 farsakhs north of Ḳūčān) is called the encampment (*yurt*) of the Djūnī-Ghurbānī tribe (Ṣanīʿ al-Dawla, *op. cit.*, i, 158).

The end of Ṭūs. Ṭūs (i.e. Ṭābarān) was never able to recover from the events of 791/1389. It is true that Shāhrukh after his accession to the throne of Khurāsān in 807/1404-5 sent to Ṭūs the *amīr* Sayyid Khʷādja with orders to rebuild the town. In 809/1406-7, Ṭūs, Ḳūčān, Kalāt, etc., were given to prince Ulugh Beg. In the period of the decline of Tīmūr's line, some members of it exercised more or less independent power at Ṭūs: in 862/1458 Mīrzā Shāh Maḥmūd and in 905/1494-1500 Mīrzā Muḥammad Ḥusayn (son of Sultan Ḥusayn Bayḳara).

In 918/1512 ʿUbayd Allāh Khān Özbeg, having raised the siege of Harāt, came to Ṭūs and Isfarāyin, but after some months evacuated Khurāsān on the approach of Shāh Ismāʿīl. In 927/1521 the *Ḥabīb al-siyar* mentions a governor "of Ṭūs and Mashhad". Khanikov found at Ṭūs a funerary inscription of a *shāh-zāda* Ibrāhīm dated 983. The argument of the same traveller from the fact that the name Ṭūs does not disappear from Persian astrolabes till the 12th century A.H. is by no means conclusive; the tenaciousness of geographical memories is well known. Amīn Aḥmad Rāzī in his *Haft iḳlīm* no longer mentions Ṭūs; in speaking of Mashhad he says "this *wilāyat* was at one time called Ṭūs". At the beginning of the 19th century, Zayn al-ʿĀbidīn Shīrwānī, *Bustān al-siyāḥa*, Tehran 1315/1897-8, 354, says: "This was a well-known town in Khurāsān. Destiny has so destroyed it that all that remains is a village of 30 houses."

Two causes have contributed to the disappearance of Ṭābarān-Ṭūs: the weakness of its geographical situation in the plain, open to every invader, and the popularity of Mashhad which is protected by the renown and sanctity of its sanctuary, and attracts crowds of pilgrims. The Indian traveller ʿAbd al-Karīm, who visited Mashhad with Nādir Shāh in 1153/1741, rightly observed that the splendour of this town caused the ruin of Ṭūs (tr. Langlès, Paris 1797, 74).

(V. MINORSKY*)

2. Monuments.

The surface remains of the urban site and surviving buildings were noted by Western travellers in Persia from the time of J.B. Fraser (1821-2) and were subsequently described by Ṣanīʿ al-Dawla (see *Bibl.* to 1. above) and by such visitors as O'Donovan, Curzon, Yate, Žukovski and Williams Jackson, with the Hārūniyya (see below) described in detail by Diez together with a plan and sectional drawing.

The surface remains of Ṭūs include the mud-brick city walls, forming an irregular circle enclosing an area some 1 km/two-thirds of a mile across, with remains of over 100 towers and nine gates. On the north side of this area is the *arg* or citadel, a square fortress each side of which is some 180 m/600 feet long with twelve towers and a protective ditch. Within this *arg*, on an artificial mound, is an oblong-shaped fort with nine towers.

The site of the poet Firdawsī's [*q.v.*] tomb has traditionally been located at Ṭūs, shown within the town's ruins near the northeastern part of the wall. Niẓāmī ʿArūḍī Samarḳandī, *Čahār maḳāla*, ed. Browne, 51, visited it in 510/1116-17 and located it in a garden which had belonged to Firdawsī "inside" (*darūn*) the Rizān Gate. Ḥamd Allāh Mustawfī, *Nuzha*, ed. Le Strange, 151, tr. 149, located the tomb on the *ḳiblī*, i.e. southwestern side of Ṭūs. It is still a popular resort of Persians, now with a modern mausoleum constructed in the Pahlavī period at the expense of a Zoroastrian deputy to the Tehran *Madjlis*, Arbāb Kay Khusraw.

In the midst of the ruins stands the building popularly known as the Hārūniyya, since local people consider it to be the mausoleum of Hārūn al-Rashīd [*q.v.*] (though Ibn Baṭṭūṭa, *Riḥla*, iii, 79, tr. Gibb and Beckingham, iii, 583, noted that the caliph's tomb was actually in the shrine of Mashhad al-Riḍā [see MASHHAD. i], where Shīʿī pilgrims could conveniently kick and curse it). First studied by Diez, it is a rectangular structure with vaulted portal, square dome chamber (probably once double), a dome of fired brick and three auxiliary rooms. There is stucco decoration but no surviving dated or named inscription. It was once considered to stem from the 8th/14th century, but a mid-6th/12th century date for its construction now seems more probable, on the comparative evidence of other Central Asian and Khurāsānian mausolea, e.g. that of Sandjar at Marw. Whether the tomb marked is that of the Imām Abū Ḥāmid al-Ghazālī [*q.v.*] (a tomb of his at Ṭūs, outside Ṭabarān, is mentioned by Yāḳūt, *Buldān*, ed. Beirut, iv, 49, and Ibn Baṭṭūṭa, iii, 77, tr. 582) is undetermined.

TŪSĀN, a village in the oasis of Marw in Khurāsān, according to al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, ix, 94-5 (who names various *ʿulamāʾ* from it; cf. also Yāḳūt, *Buldān*, ed. Beirut, iv, 49), two farsakhs from the chef-lieu Marw al-Shāhidjān [*q.v.*]. Its chief fame is that, at the time of the ʿAbbāsid Revolution, in 130/747-8, the Umayyad governor of Khurāsān, Naṣr b. Sayyār [*q.v.*], threatened by the rising under Abū Muslim, appointed his commander Abu 'l-Dhayyāl over Tūsān; but the latter's oppressive behaviour prompted Abū Muslim to send a force which defeated Abu 'l-Dhayyāl (al-Ṭabarī, ii, 1970; Ibn al-Athīr, ed. Beirut, v, 370).

Bibliography: Given in the article. (ED.)

AL-ṬŪSĪ, MUḤAMMAD B. AL-ḤASAN b. ʿAlī Abū Djaʿfar, Imāmī Shīʿī scholar, b. Ramaḍān 385/995 in Ṭūs, d. 459 or 460/1066-7 in Nadjaf.

After completing his preliminary studies, in 408/1017 he left Khurāsān, fundamentally Shāfiʿī and to an increasing degree controlled by the Ghaznawid Maḥmūd, in favour of Baghdād, where the Shīʿī Buwayhids were dominant. There, he studied under leading Imāmī masters including Abu 'l-Ḥasan Ibn Abī Djūd, Aḥmad b. Muḥammad b. Mūsā al-Ahwāzī, al-Ghaḍāʾirī, Ibn ʿAbdūn, and, in particular, the powerful doyen of Imāmī rationalists permeated by Muʿtazilī dialectic, al-Shaykh al-Mufīd [*q.v.*], of whom he quickly became, in spite of his youth, one of the favourite pupils (on the rationalist evolution of Imāmism, see Amir Moezzi, 1992, 15-48). On the death of al-Mufīd in 413/1022, his disciple al-Sharīf al-Murtaḍā ʿAlam al-Hudā [*q.v.*], who had also studied under the Muʿtazilī ʿAbd al-Djabbār [*q.v.*], took over the leadership of the Imāmīs of the capital. Al-Ṭūsī subsequently became his principal disciple. Eminent scholars and former pupils of al-Mufīd, such as al-Nadjāshī, al-Karādjakī or Abū Yaʿlā al-Djaʿfarī, were still living in Baghdād, but on the death of al-Murtaḍā in 436/1044 he was succeeded by al-Ṭūsī. In fact, by this time he had already amassed an impressive bibliography and had succeeded in gaining the support of numerous Buwayhids and of the caliph al-Ḳāʾim (422-67/1031-75), who appointed him to the principal chair of theology, the most prestigious of the capital. Heir to a substantial proportion of the great Imāmī libraries of the time, that of the *dār al-ʿilm* founded by Sābūr b. Ardashīr (more than 100,000 works) and that of al-Murtaḍā (almost 80,000 works), al-Ṭūsī composed some fifty books and his house, in the Shīʿī quarter of Karkh [*q.v.*], became for a period of more than ten years the virtual intellectual centre of Imāmism.

Under the Buwayhids, numerous religious riots had caused bloodshed in the capital. In 447-8/1056-7, after the al-Basāsīrī episode, the invasion of Baghdād by the Saldjūḳ Ṭoghrïl and the end of the Buwayhids, the anti-Shīʿī coalition, led by Ḥanbalī traditionalists, sacked the quarters of Karkh and of Bāb al-Ṭāḳ. Al-Ṭūsī's home and library were burnt and he himself took refuge in Nadjaf. There he remained until his death, continuing to teach a limited circle of disciples, including his own son Abū ʿAlī al-Ḥasan who succeeded him. Also worthy of mention among his disciples were Sulaymān al-Ṣahrashtī, al-Ḥasan b. al-Ḥusayn b. Bābawayh (nephew of Ibn Bābawayh al-Ṣadūḳ), Isḥāḳ b. Muḥammad al-Ḳummī (grandson of al-Ṣadūḳ), Shahrāshūb al-Māzandarānī (grandfather of the famous author of the *Manāḳib*) and also al-Fattāl al-Nīsābūrī.

In his work, al-Ṭūsī attempts to modify the radically rationalist and pragmatic positions of al-Murtaḍā (positions already present in embryonic form in the work of al-Mufīd): rehabilitation of the first traditionists, validity of traditions attested by a single authority so long as these are conveyed by reliable sources and conditional validity of traditions conveyed by transmitters professing "deviant" doctrines. In politics, serving an unlawful government (in this instance, the ʿAbbāsid caliphate) is in certain circumstances desirable, and collaboration with a power claiming that its authority derives from the Hidden Imām (a clear reference to the Buwayhids) can be commendable, but neither the one nor the other is ever obligatory (as was apparently advocated by al-Murtaḍā). At the same time, al-Ṭūsī has constant recourse to reasoned argumentation based on *idjtihād* and he begins to sketch the notion of the "general representation" (*al-niyāba al-ʿāmma*) of the Hidden Imām entrusted to jurist-theologians who may, if the need arises, exercise the prerogatives traditionally reserved for the historical Imāms. In completing and modifying the work of al-Mufīd and of al-Murtaḍā, al-Ṭūsī succeeded in endowing Imāmī law with a structure and a scope of activity practically independent of the figure of the Imām. Thus his work was to provide rationalist Imāmism, known from the following century onward as *al-uṣūliyya*, with solid intellectual bases, enabling it to experience a lengthy evolution which would lead ultimately to an ever-increasing assumption of power by Imāmī *mudjtahids* in the economic, social and political fields. The immense and lasting influence of the work of al-Ṭūsī earned him the honorific nickname of *Shaykh al-Ṭāʾifa [al-Imāmiyya]* or simply *al-Shaykh*.

In his *Fihrist*, al-Ṭūsī gives a list of 43 of his own works; later he would have composed several more (Ṭihrānī, introd. to *Tibyān*). They are devoted to exegesis (3 titles), law (11), the foundations of law (2), *ḥadīth* (3), *ridjāl* (3), theology and heresiography (16), prayers and Imāmī piety (5), historiography (2), replies to the questions of disciples (3) [introd. by Wāʿiẓ-zāda to *al-Djumal wa 'l-ʿuḳūd*]. The following list is confined to the best known of these works (and the most widely available editions): *al-Istibṣār* and *Tahdhīb al-aḥkām*, ed. al-Kharsān, Nadjaf, respectively 1375-6 and 1378-82, which form with the *Kāfī* of al-Kulaynī (329/949-1) and the *Kitāb man lā yaḥḍuruhu 'l-faḳīh* of Ibn Bābawayh al-Ṣadūḳ (381/991), the Four Canonical Books (*al-kutub al-arbaʿa*) of Imāmī *ḥadīth*; *al-Tibyān fī tafsīr al-Ḳurʾān* (first great Imāmī rationalist commentary; ed. Shawkī and ʿĀmilī, Nadjaf 1376-83, 10 vols., with introd. by Āghā Buzurg al-Ṭihrānī); *Fihrist kutub al-shīʿa* (ed. Sprenger and ʿAbd al-Ḥaḳḳ, Calcutta 1848, repr. Mashhad 1972); *Kitāb al-Ghayba* (on the occultation of the Twelfth Imām, ed. Nadjaf 1385); *Ridjāl* (revised summary of al-Kashshī's *Maʿrifat al-nāḳilīn*, Nadjaf

1381); *al-Iktiṣād fīmā yataʿallak bi 'l-iʿtikād*, Beirut 1406; *al-Amālī*, Nadjaf 1384; *ʿUddat al-uṣūl*, Nadjaf 1403 (these three last works concern *ḥadīth* and dogma); *al-Mabsūṭ fi 'l-fikh*, ed. Bihbūdī, repr. Tehran 1387-8; *al-Nihāya fī mudjarrad al-fikh wa 'l-fatāwā*, Beirut 1390; *al-Djumal wa 'l-ʿukūd fi 'l-ʿibādāt* (with introd. and Persian tr. by Wāʿiẓ-zāda, Mashhad 1374; *Miṣbāḥ al-mutahadjdjid* (in two versions—*al-kabīr* and *al-ṣaghīr*—on Imāmī piety, Tehran 1398; (the two works entitled *Duʿāʾ al-djawshan al-kabīr* and *al-djawshan al-ṣaghīr*, mentioned by Hidayet Hosain in *EI*[1], are not al-Ṭūsī's and are probably drawn from the *Miṣbāḥ* of al-Kafʿamī [9th/15th century]).

Bibliography: Since the biographical dictionaries are compiled in alphabetical order, it will be sufficient to refer to these *s.n.* Ṭūsī or Muḥammad b. al-Ḥasan al-Ṭūsī; see among others Ibn Shahrāshūb, *Maʿālim al-ʿulamāʾ*, Tehran 1934; ʿĀmilī, *Aʿyān al-shīʿa*, Damascus-Beirut 1935-63; Ardabīlī, *Djāmiʿ al-ruwāt*, Kumm 1953; Ḥillī, *Ridjāl*, Nadjaf 1961; Baḥr al-ʿUlūm, *al-Fawāʾid al-ridjāliyya*, Nadjaf n.d. Among the Sunnī dictionaries, see e.g. Ibn Ḥadjar, *Lisān al-mīzān*; Ziriklī, *Aʿlām*; Kātib Celebī, *Kashf al-ẓunūn*; [Subkī, *Ṭabakāt al-shāfiʿiyya*, iii/51 (al-Ṭūsī is regarded here as a Shāfiʿī; one wonders whether this was a tactical dissimulation on his part, from the period when he was still living in Khurāsān]). Among historiographical works, see *sub anno* 448 (flight of al-Ṭūsī to Nadjaf) or 460 (year of his death), e.g. Ibn al-Athīr, *Kāmil*; Ibn al-Djawzī, *Muntaẓam*; Ibn Kathīr, *Bidāya*; Ibn Khallikān, *Wafayāt*; Ibn al-ʿImād, *Shadharāt*. See also Ibn al-Nadīm, *Fihrist*, Tehran 1971, index, s.v.; al-Khaṭīb, *Taʾrīkh Baghdād*, ii, 184-217.

Among modern studies, see the 102-page introd. by al-Ṭihrānī to al-Ṭūsī's *Tibyān*, in *Yād-nāma-yi Shaykh al-Ṭāʾifa . . . Ṭūsī*, Mashhad 1348/1970; R. Brunschvig, *Les uṣūl al-fiqh imâmites à leur stade ancien*, in *Le shîisme imâmite*, Colloque de Strasbourg, Paris 1970; M. Ramyar, *Al-Shaikh al-Tusi, his life and works*, Ph.D. thesis, Univ. of London 1971, unpubl.; H. Löschner, *Die dogmatischen Grundlagen des schiʿitischen Rechts*, Erlangen-Nuremburg-Cologne 1971, index, s.n.; M.J. McDermott, *The theology of al-Shaikh al-Mufīd*, Beirut 1978, index; S.A. Arjomand, *The Shadow of God and the Hidden Imam*, Chicago-London 1984, 32-65; H. Halm, *Die Schia*, Darmstadt 1988, 62-73, Eng. tr. *Shiism*, Edinburgh 1991, 56-8; E. Kohlberg, *A medieval Muslim scholar at work. (MOHAMMAD ALI AMIR-MOEZZI)

AL-ṬŪSĪ, NAṢĪR AL-DĪN, ABŪ DJAʿFAR MUḤAMMAD b. Muḥammad b. al-Ḥasan, also called Muḥakkik-i Ṭūsī, Khwādja-i Ṭūsī or Khwādja Naṣīr al-Dīn, the most important and influential Shīʿī scholar in the fields of mathematics, geometry, astronomy, philosophy and theology, styled in later times *al-muʿallim al-thālith* "the third teacher" (i.e. after Aristotle and al-Fārābī).

1. Life.

He was born on 11 Djumādā I 597/17 February 1201 in Ṭūs, in the neighbourhood of Mashhad, into a family who, according to al-Khwānsārī (*Rawḍāt al-djannāt*, vi, 300, l. 11) originated from Djahrūd Sāwa near Kum(m). He received his Imāmī education in Ṭūs and died in Baghdād on 18 Dhu 'l-Ḥidjdja 672/25 June 1274.

Under the guidance of his father Wadjīh al-Dīn Muḥammad b. al-Ḥasan al-Ṭūsī, a respected jurist, al-Ṭūsī enjoyed his first education in Arabic, Kurʾān, *Ḥadīth*, and above all, in jurisprudence following the doctrine of the Shīʿī ʿAlam al-Hudā al-Sharīf al-Murtaḍā (d. 436/1044), an adversary of the Muʿtazilī ʿAbd al-Djabbār. His father's wide range of interests stimulated al-Ṭūsī to study the various sciences and doctrines, including philosophy and the Ismāʿīlī doctrine. He continued his studies first at Nīshāpūr, between 610/1213 and 618/1221. Here Kuṭb al-Dīn al-Miṣrī and Farīd Dāmād, both pupils of Fakhr al-Dīn al-Rāzī, were his teachers in mathematics, natural sciences, Ibn Sīnā's philosophy and medicine. Leaving Nīshāpūr, al-Ṭūsī went to ʿIrāk, where he studied jurisprudence with the Shīʿī scholar Muʿīn al-Dīn Sālim b. Badrān al-Māzinī. Later he studied at Mawṣil with the mathematician and astronomer Kamāl al-Dīn Yūnus (551-639/1156-1242; Brockelmann, S I, 859), who had himself been a pupil of the scholar Bābā Afḍal [*q.v.*].

In 630/1233, after finishing his studies, al-Ṭūsī found in Sartakht, in the province of Kūhistān, a patron in the Ismāʿīlī governor Muḥtasham Nāṣir al-Dīn ʿAbd al-Raḥīm b. Abī Manṣūr. He had been studying the *Fuṣūl-i mukaddas* of the Nizārī Ismāʿīlī Imām Ḥasan *ʿalā* Dhikrihi al-Salām (d. 561/1166) and had then turned to the Ismāʿīlī faith. During this period, he wrote the *Akhlāk-i Nāṣirī* (see below), a work on ethics named after the governor Nāṣir al-Dīn. The first version was finished in 633/1245. Shortly afterwards, *ca.* 644/1246 he published his spiritual autobiography, *Sayr wa-sulūk*, in which he describes how he came to turn away from exoteric *kalām* and to profess Ismāʿīlī esoteric philosophy. In *ca.* 644/1246 we find al-Ṭūsī in Alamūt [*q.v.*], the fortress of the Assassins. It is unclear whether he travelled there only as companion of Nāṣir al-Dīn (so Badakhchānī, 5, cf. Dabashi, *The philosopher/vizier*), or whether he had incurred the disgrace of Nāṣir al-Dīn and had been banned to Alamūt. It may be that, in the face of the uncertain political situation, and perhaps also out of dissatisfaction with his Ismāʿīlī surroundings, he had the ambition of getting admission to the court of the last ʿAbbāsid caliph al-Mustaʿṣim bi'llāh [*q.v.*] (*r.* 640-56/1247-58) in Baghdād. In any case, al-Ṭūsī stayed for about twenty years in Alamūt and Maymūndiz [*q.vv.*]. During these long years, he was able to use the rich library there for his scientific works. In 653/1255 the Ismāʿīlīs sent him as negotiator to Hülegü, the khān of the Mongols who was preparing the conquest of Persia. In the face of the hopeless situation of the Ismāʿīlīs *vis-à-vis* the Mongol superiority, al-Ṭūsī convinced the Ismāʿīlī ruler Rukn al-Dīn Khurshāh [*q.v.*] that he should submit to the Mongols; in 654/1256 Alamūt fell into their hands anyway. The shattering of the Ismāʿīlī movement was followed by the conquest of Baghdād, which al-Ṭūsī could not prevent (the accounts about his role are not unequivocal, cf. Hairi), and by the fall of the caliphate, detested by the Shīʿīs. Al-Ṭūsī accompanied Hülegü on his conquests in the west, and witnessed both the fall of Baghdād on 3 Ṣafar 656/10 February 1258 and the murder of the caliph. Owing to al-Ṭūsī, and probably also to Ibn al-ʿAlkamī, the Shīʿī vizier of the last ʿAbbāsid caliph, upon their occupation of Mesopotamia, the Mongols spared to a large extent the Shīʿī sanctuaries. It is possible that Hülegü, already before the conquest of Baghdād, entrusted al-Ṭūsī with important duties, such as the administration of all religious foundations (*wakf*) and of the finances. In 1259, almost sixty years old, he

began in Marāgha, near Tabrīz, the construction of an observatory whose director he became; and he also prepared the astronomical tables (*al-Zīdj al-Īlkhānī*), which he finished at the age of about seventy under Hülegü's successor, the Īl-khānid Abaḳa (663-80/1265-82) (see 3, below). During this period, al-Ṭūsī was in contact with a great number of scholars who came to Marāgha, not least because of the rich library which was being built there since Hülegü had begun to carry off the stores of libraries in Mesopotamia, Baghdād and Syria. In some biographies, the following names of scholars are mentioned who, among others, are said to have been to Marāgha: Barhebraeus (Abu 'l-Faradj Ibn al-ʿIbrī), Fakhr al-Dīn al-Khi/alāṭī from Tiflis, Fakhr al-Dīn al-Marāghī al-Mawṣilī, Ibn al-Fuwaṭī (ʿAbd al-Razzāḳ b. Aḥmad b. Muḥammad al-Shaybānī), Mu'ayyad al-Dīn al-ʿUrḍī al-Dimashḳī, Muḥyī al-Dīn al-Maghribī (Ibn Abi 'l-Shukr), and Nadjm al-Dīn Dabīrān al-Ḳazwīnī al-Kātibī (who held a scholarly discussion with al-Ṭūsī on metaphysical questions, on *wādjib wa-wudjūd* [see WUDJŪD] and on logic; see the *Muṭāraḥāt* in the bibliography of al-Ṭūsī's works). In this list, the name of Ḳuṭb al-Dīn al-Shīrāzī, the most important commentator of the *Tadhkira*, al-Ṭūsī's astronomical work, is missing, perhaps because he had criticised al-Ṭūsī's work, in particular in the field of philosophy, and because he is said to have denounced him to Hülegü (Wiedemann, 711). For an unknown reason al-Ṭūsī, shortly before his death, left Marāgha "with many of his pupils and followers" and went to Baghdād, where he died some months later (al-Kutubī, iii, 251, 12-13). He is said to have been buried there, according to his testament, near the tomb of Mūsā al-Kāẓim.

2. As theologian and philosopher.

Al-Ṭūsī was an extraordinarily prolific scholar. The list of his extensive oeuvre shows titles on astronomy, astrology, geomancy, mathematics, physics, mineralogy, medicine, jurisprudence, philosophy including logic, mysticism and theology (a first survey in Wiedemann, 707-27; Brockelmann, see *Bibl.*; Mudarrisī Zandjānī, *Sargudhasht*; Raḍawī, *Aḥwāl*; and Muʿīn, *Naṣīr al-Dīn Ṭūsī*). Al-Ṭūsī wrote the greater part of his philosophical works in an Ismāʿīlī environment. His first patron, the above-mentioned Ismāʿīlī governor Muḥtasham Nāṣir al-Dīn ʿAbd al-Raḥīm, was particularly interested in ethics. On his behalf, al-Ṭūsī translated into Persian *al-Adab al-wadjīz li'l-walad al-ṣaghīr* of Ibn al-Muḳaffaʿ [*q.v.*], a small treatise on the correct behaviour of children (its authenticity is doubtful, see Brockelmann, S I, 236 no. 6; ed. Dānishpazūh in his edition of the *Aḥlāk-i Muḥtashamī*; see the table of contents in Dabashi, 561-2). Muḥtasham also requested al-Ṭūsī to finish a draft of practical ethics, which he had conceived and begun. This *Akhlāḳ-i Muḥtashamī*, based on Muḥtasham's concept and notes, composed around 630/1233 and published under al-Ṭūsī's name, exists in an Arabic version (ed. Beirut 1981), to which in the original a Persian translation is attached, published by Dānishpazhūh, Tehran 1960, 1982. It consists of forty chapters, dealing first with the knowledge of God, with prophecy and imāmate, then mainly with the virtues of the pious and the Ṣūfī, described in each chapter one after the other with references from Ḳur'ān, *Ḥadīth* and Sunna, from poetry and the sayings of "wise people/philosophers and Ismāʿīlī propagandists" (*al-ḥukamā' wa 'l-duʿāt*) (cf. Dabashi, *Khwājah*, 559-61). It has been surmised that the work was composed as a guide for preachers and teachers (Badakhchani, 57-8). Al-Ṭūsī's ethical work *Akhlāḳ-i Nāṣirī*, written two years later for Muḥtasham Nāṣir al-Dīn, has a more philosophical character. Two decades later, after the rupture with the Ismāʿīlīs, al-Ṭūsī published it again with a different beginning and different conclusions, and without the dedication to Muḥtasham Nāṣir al-Dīn (cf. Badakhchani, 61, n. 30). Just like the lesser-known *Gushāyish-nāma*, which deals with the esoterical aspects of ethical virtues, the *Akhlāḳ-i Nāṣirī* is written in the spirit of Ismāʿīlī ideology. The first part is based on Miskawayh's ethical work *Tahdhīb al-akhlāḳ*, which in turn is marked by Aristotle's Nicomachian ethics, but also by Platonic and Neo-Platonic teachings (Fakhry, 107-30). The first part is followed by two sections on domestic economy (*tadbīr al-manzil*) and politics (*siyāsat al-mudun*), in which al-Ṭūsī each time mainly used Ibn Sīnā's *K. al-Siyāsa*, Bryson's *Oikonomikos*, al-Fārābī's *al-Siyāsa al-madaniyya*, the latter's *Fuṣūl al-madanī*, and Miskawayh's *al-Ḥikma al-khālida* (cf. Madelung, *Naṣīr ad-Dīn*; the analytical table of contents in Donaldson, 169-82; Fakhry, 131-42; Dabashi, 562-8). Because of its practical orientation, his work has had a lasting influence and has increasingly been popularised: al-Dawwānī [*q.v.*], *Akhlāḳ-i Djalālī* (= *Lawāmiʿ al-ishrāḳ fī makārim al-akhlāḳ*); al-Īdjī [*q.v.*], *Risālat al-akhlāḳ* (unpublished; *EIr*, i/2, 1985, 722-3); al-Kāshifī [*q.v.*]; *Akhlāḳ-i Muḥsinī*; Aḥmad b. Muḥammad Mahdī al-Narāḳī [*q.v.*], *Miʿrādj al-saʿāda* (lith. Tehran 1883, new ed. n.p. 1993) (on the contents of this work, which is a slightly revised Persian tr. of his father's *Djāmiʿ al-saʿādāt*, ed. Sayyid Muḥammad Kalantar, i-iii, Beirut 1985, see Donaldson, 190-2); S. Jalal al-Din Mojtabavi (who translated the *Djāmiʿ al-saʿādāt* into Persian), *Religious ethics and Naraqi's innovations in his moral book, Jāmiʿ al-Saʿādāt (The collection of felicities)*, in *Contacts between cultures. Selected papers from the 33rd International Congress of Asian and North African Studies, Toronto, August 15-25, 1990*, i, ed. A. Harrak, Lewiston, Queenston and Lampeter 1992, 351-2; Cole, 7 ff.; ʿUbayd al-Zākānī, *Akhlāḳ al-ashrāf* (composed in 740/1340-1; *EIr* i/2, 1985, 723).

Probably the most important testimony to al-Ṭūsī's Ismāʿīlī-oriented philosophy is his *Rawḍat al-taslīm yā taṣawwurāt*, an ethico-eschatological guide for travelling from the physical to the spiritual world. Following the Neo-Platonic doctrine of emanation, the work contains a description of Ismāʿīlī cosmology; the will of the unknowable Divinity, His command (*amr*) and word (*kalima*), embodied in the Imām or in the latter's prototype ʿAlī b. Abī Ṭālib, communicate themselves through emanation (*fayḍ*) to the first intellect, to the *ʿaḳl al-faʿʿāl* or to the *ḥudjdja*, whose prototype is Salmān al-Fārisī; from this emanates the universal soul (*nafs-i kullī*), the *dāʿī*, i.e. the Prophet Muḥammad, followed by the human soul. Linked to this cosmology appears the Ismāʿīlī theory of the imāmate, the doctrine of *satr*, the period of concealment of *ḥaḳīḳa* in the *bāṭin* and *ḳiyāma*, the period of the *ḳā'im* who possesses truth (cf. Daftary, *The Ismāʿīlīs*, 409 ff.). The fact that the Imām necessarily possesses complete knowledge renders both his existence and the total self-surrender to him compulsory. A prerequisite is the observation of the religious duties, not only by following the *Sharīʿa*, but also in an esoteric way and in the ascent of the soul from the position of potentiality to "the perfection of the ascertainment of the reasoned knowledge" (*kamāl-i taḥḳīḳ ʿilm-i ʿaḳlī*) (cf. *Rawḍa, taṣawwuf*, no. xxvi).

In *ca.* 664/1264 al-Ṭūsī expressed his views on the theme of ethics for the last time, now in the spirit of the Ṣūfīs, whose movement became popular in the period of the Mongols. At the request of the vizier Shams al-Dīn Muḥammad Djuwaynī, he composed

the treatise *Awṣāf al-ashrāf*, a guide for the Ṣūfī on the path from belief (*īmān*) to union (*waḥda*) and extinction (*fanā'*) of the self into God (Madelung, *Naṣīr ad-Dīn*, 98-101; Dabashi, 568-9; Strothmann, 68-77). The approach to God results here from the behaviour of the Ṣūfī, whereas the correspondence (*murāsalāt*) between Ṣadr al-Dīn al-Ḳūnawī [*q.v.*] and al-Ṭūsī (ed. Schubert) deals with the relation between philosophical and mystical knowledge of God.

In this correspondence, which perhaps took place during al-Ṭūsī's stay in Marāgha and which was criticised by the Ḥanbalī theologian Ibn Taymiyya [*q.v.*] (see Michel, 12), al-Ṭūsī, among other things, goes into Ṣadr al-Dīn al-Ḳūnawī's question about how out of one thing many things can emerge, whereas from one thing only one thing can emerge (Schubert, 31-2; Chittick; Heer). Al-Ṭūsī's arguments are based on the Neo-Platonic doctrine of emanation, according to which plurality is the result of many causes which presuppose one another, but which therefore in the end go back to only one cause. This problem, which al-Ṭūsī treated in different ways in the course of his life (cf. Siddiqi, 577-8), is already found in his commentary on Ibn Sīnā's *al-Ishārat wa 'l-tanbīhāt*, in which he defends Ibn Sīnā against Fakhr al-Dīn al-Rāzī [*q.v.*], that is to say in his *Ḥall mushkilāt al-Ishārāt* (iii, 244-5; cf. Heer), composed around 644/1246 at the request of Muḥtasham Shihāb al-Dīn. It is also found in his *Risāla fi 'l-ʿilal wa 'l-maʿlūlāt*, again extensively in a letter written in Dhu'l-Ḳaʿda 666/July 1268 and addressed to the judge of Harāt (ed. Dānishpazhūh, *Sih guftār*, 6-13), and finally in his *Maṣāriʿ al-muṣāriʿ*, a refutation of al-Shahrastānī's *al-Muṣāraʿa*, in which al-Shahrastānī had criticised Ibn Sīnā's notion of God and his ontology. Among other things, he had attacked Ibn Sīnā's thesis according to which only one being can emerge from the absolute unique one (cf. Madelung, *Aš-Šahrastānīs Streitschrift*, esp. 254-5; idem, *Aspects*; Hartmann, 199-200). Al-Ṭūsī must have written this refutation of al-Shahrastānī's Ismāʿīlī doctrine at a later stage of his life, when he had turned away from the Ismāʿīliyya, that is to say, after 254/1256 when Alamūt fell into the hands of the Mongols. Ibn Sīnā's metaphysics come to the fore, taking the place of the Ismāʿīlī norm of the prophets; they form the basis of al-Ṭūsī's theology (cf. Dabashi, *Khwājah*, 555-7), namely of the *Ḳawāʿid al-ʿaḳā'id*, and of the *Tadjrīd al-iʿtiḳād*. The latter work has become authoritative in Twelver Shīʿa circles and has been commented upon several times (see *Bibl.*). In this context, it is important to note that al-Ṭūsī, notwithstanding his growing sympathy for the Twelver Shīʿa (cf. also his *Iʿtiḳādiyya*, a summary of undisputed Shīʿī doctrines (see for this Dabashi, *Khwājah*, 557), remained faithful to many Ismāʿīlī doctrines. This is shown e.g. by the *Ḳawāʿid al-ʿaḳā'id*, partly a rendering into Arabic of what he had said earlier in his Ismāʿīlī-influenced autobiography *Sayr wa-sulūk*. Yet, even al-Ṭūsī's last work, the *Talkhīṣ al-muḥaṣṣal* written in 669/1271, an epitomising commentary on Fakhr al-Dīn al-Rāzī's *Muḥaṣṣal afkār al-mutaḳaddimīn wa 'l-muta'akhkhirīn min al-ʿulamā' wa 'l-ḥukamā' wa 'l-mutakallimīn*, still defends the Ismāʿīlī doctrine of *taʿlīm* and rejects the Shīʿī doctrine according to which the *naṣṣ* (designation) of the Imām can be cancelled by *badā'* (changeability of God's will). The Ismāʿīlī and Shīʿī inheritance does not obscure the fact that al-Ṭūsī has become an important pioneer for Ibn Sīnā's philosophy; modifications in details can be detected here (cf. Qarā'ī, 29-30, where al-Ṭūsī's sympathies for the Shaykh al-Ishrāḳ al-Suhrawardī are mentioned). As witnesses of Ibn Sīnā's influence may be mentioned his *Maṣāriʿ al-muṣāriʿ*, *Tadjrīd al-ʿaḳā'id*, *Ḳawāʿid al-ʿaḳā'id* and, above all, *Ḥall mushkilāt al-Ishārāt*; furthermore, al-Ṭūsī's Persian representation of Porphyry's *Isagoge* and of Aristotle's logic, the *Asās al-iḳtibās* (for the concept of substance in this work, see Morewedge, *Analysis of "Substance"*). Fourteen years later, al-Ṭūsī composed in Arabic a considerably shortened version under the title *Tadjrīd al-manṭiḳ*. It is therefore not surprising that the Ḥanbalī theologian Ibn Ḳayyim al-Djawziyya [*q.v.*] followed the criticism of his teacher Ibn Taymiyya (see above) and that he, in his *Ighāthat al-lahfān min maṣāyid al-shayṭān*, considered al-Ṭūsī as the most pernicious hidden atheist, for whom the Ḳur'ān is said to have been "the scripture of the masses (*Ḳur'ān al-ʿawāmm*) but Ibn Sīnā's works the scripture of the élite" (*Ḳur'ān al-khawāṣṣ*) (Perlmann 334; cf. Madelung, *Aš-Šahrastānīs Streitschrift*, 258 n. 8).

(H. DAIBER)

3. As scientist.

Al-Ṭūsī was one of the major intellectual figures of 7th/13th century Islam, and his works, in fields ranging over the religious sciences, philosophy, and the mathematical sciences of Antiquity continued to have a significant effect upon the intellectual traditions of Eastern Islam well into the modern period. His influence and prestige are fittingly recorded in the titles, honorifics, and nicknames applied to him: *khwādja* (distinguished scholar and teacher), *ustādh al-bashar* (teacher of mankind), and *al-muʿallim al-thālith* (the third teacher).

He tells us in his autobiography, written in his forties, that in addition to his religious education, his father encouraged him to pursue the teachings of other sects as well as the ancient fields of learning represented by the philosophical and mathematical sci-

ences. He began studying philosophy (*ḥikma* [*q.v.*]) and mathematics with a certain Kamāl al-Dīn Muḥammad al-Ḥāsib in Ṭūs; later, he travelled widely to continue his education. He first went to nearby Nīs̲h̲āpūr to study with the noted physician Ḳuṭb al-Dīn al-Miṣrī and with the polymath Farīd al-Dīn Dāmād̲h̲. Among other things, he studied there the works of his famous Persian predecessor Ibn Sīnā [*q.v.*] (Avicenna), who was undoubtedly one of his most important formative influences. Later he journeyed to ʿIrāḳ to read under the S̲h̲īʿī legal scholar Muʿīn al-Dīn Sālim b. Badrān al-Miṣrī and study with Kamāl al-Dīn b. Yūnus (551-639/1156-1242 [see MASĀʾIL WA-AD̲J̲WIBA, at Vol. VI, 638a]), a renowned S̲h̲āfiʿī legal scholar who was also noted for his expertise in astronomy and mathematics; being a S̲h̲īʿī did not prevent him from studying with persons of different sectarian affiliations.

After completing his formal education, Naṣīr al-Dīn found patrons at the Ismāʿīlī courts in Persia [see ISMĀʿĪLIYYA] beginning sometime in the early 630s/1230s. He would spend some 25 years in Ḳāʾin (in Ḳūhistān and at Alamūt) until the fall of the latter to the Mongols in 654/1256 (see above, 1.). Whether al-Ṭūsī was a willing convert to Ismāʿīlism, as he stated in his early autobiography *Sayr wa-sulūk* (Tehran 1335 *s̲h̲*./1956), or whether this was a necessary pretence brought about by his need for patronage and protection, was, and continues to be, a matter of dispute. In any event, during this period of his life al-Ṭūsī found a refuge from the disruptions of the Mongol invasions and produced some of his most important work.

With the fall of Alamūt, al-Ṭūsī, who had already gained considerable fame, joined the entourage of Hülegü/Hūlāgū [*q.v.*], becoming court astrologer as well as director of religious endowments (*awḳāf*). In the former capacity, he accompanied the Il-K̲h̲ān on the campaign against Bag̲h̲dād and witnessed the end of the ʿAbbāsid caliphate. Later he oversaw the construction of an astronomical observatory [see MARṢAD] and its instruments in the town of Marāg̲h̲a [*q.v.*], the Mongol headquarters in Ād̲h̲arbāyd̲j̲ān, and became its first director. Because of the substantial resources placed at his disposal (including religious endowments), this observatory, which also comprised a large library and school, was one of the most ambitious scientific institutions established up to that time. It attracted many famous and talented scientists and students (including, it is reported, Chinese astronomers), and, despite lasting only fifty years, its intellectual legacy had repercussions from China to Europe for centuries to come.

Al-Ṭūsī's prose writings, which number over 150 works, represent one of the largest collections by a single Islamic author. Writing in both Arabic and Persian, Naṣīr al-Dīn dealt with both religious ("Islamic") topics and non-religious or secular subjects ("the ancient sciences"). He was especially attracted to the exact mathematical sciences (especially astronomy and pure mathematics). Beyond their utilitarian value (and astrology in particular was considered immensely useful by al-Ṭūsī's patrons), their certitude was seen by him and others as an important means to the truth of God's creation; indeed, some Islamic scientists argued that it was a surer means than natural philosophy or theology. In this they followed the Alexandrian tradition of ancient Hellenistic mathematical science, represented most conspicuously by Claudius Ptolemy (2nd century A.D.) [see BAṬLAMIYŪS], who had argued against Aristotle's [see ARISṬŪṬĀLĪS] philosophical view and for the superiority of the mathematical sciences.

Among al-Ṭūsī's most important and enduring contributions to the mathematical sciences were his recensions (*taḥārīr*) of Greek and early Islamic scientific works, which in many ways revitalised the translation movement of 3rd/9th century Bag̲h̲dād. These included Euclid's *Elements*, Ptolemy's *Almagest*, and the so-called *mutawassiṭāt* (the "Intermediate books" to be studied between the former and latter) with treatises by Euclid, Theodosius, Hypsicles, Autolycus, Aristarchus, Archimedes, Menelaus, T̲h̲ābit b. Ḳurra and the Banū Mūsā. Al-Ṭūsī's re-editions, in which he often included insightful and original commentary, provided an opportunity for generations of students of late mediaeval Islam to study and absorb the Greek scientific tradition, either with or without a teacher. This latter point takes on added significance in view of the absence of an ongoing institutional structure for teaching the ancient sciences.

Al-Ṭūsī's monumental role as synthesiser and rejuvenator of the ancient sciences and mathematics was complemented by his original work. His attempt to prove Euclid's parallels postulate was one of the more sophisticated approaches in a long tradition of such attempts. In the 19th century, it was recognised that such "proofs" were not possible and that consistent geometries other than the Euclidian could be constructed. In another field of mathematics, al-Ṭūsī's *al-S̲h̲akl al-ḳaṭṭāʿ* marked a significant step in treating trigonometry as a discipline independent of astronomy, which in many ways was similar to what was accomplished later in Europe by Regiomontanus (1436-76).

However, al-Ṭūsī gained his greatest fame in astronomy. He wrote several elementary treatises on practical astronomy (*taḳwīm*), instruments, astrology, and cosmography (*ʿilm al-hayʾa* [*q.v.*]). In the main, these seem to have been meant for students. In addition, he compiled a major astronomical handbook in Persian for his Mongol patrons in Marāg̲h̲a, which he entitled *Zīd̲j̲-i Īlk̲h̲ānī*. There are indications that it was written in haste, and it seems not to have incorporated the Marāg̲h̲a observations; nevertheless, it was used extensively for several centuries.

Al-Ṭūsī's most original scientific achievement was in planetary theory. Many Islamic astronomers were disturbed by inconsistencies in the Ptolemaic system; in particular, they objected to the violation of the fundamental physical principle of uniform circular motion in the heavens. Among al-Ṭūsī's contributions toward resolving these "difficulties" (*is̲h̲kālāt*) was to devise an astronomical model consisting of two spheres, the smaller of which was internally tangent to the other that was twice as large. Al-Ṭūsī had the smaller rotate twice as fast as the larger and in the opposite direction; he could then prove that a given point on the smaller sphere would oscillate along a straight line. Incorporating this device into his lunar and planetary models, and exploiting the linear oscillation, he was able to reproduce Ptolemaic accuracy while preserving uniform circular motion. These models were first found in his Persian treatise *Ḥall-i mus̲h̲kilāt-i Muʿīniyya*, written for his Ismāʿīlī patrons, and were incorporated and further developed in his Arabic work *al-Tad̲h̲kira fī ʿilm al-hayʾa*, written during his years with the Mongols. Al-Ṭūsī's new models were quite influential on late mediaeval Islamic astronomy, and for at least another three or four centuries encouraged many other attempts to reform the Ptolemaic system. The "al-Ṭūsī couple", as his device is now known, also had an effect in other cultural contexts, finding its way into Sanskrit and Byzantine texts as well as the works of several Renaissance astronomers, including Copernicus.

TUSTAR [see SHUSHTAR].

AL-**TUSTARĪ** [see SAHL AL-TUSTARĪ].

TŪT (A.), the mulberry, *Morus* spp., of the Moraceae; also *tūth*, said by the lexicographers to be Persian while *firṣād* is the Arabic synonym. *Tūt al-arḍ* is the strawberry and *tūt al-ʿullayḳ* the raspberry.

The tree is known for its fruit and its leaves. Both *M. nigra* and *M. alba* have been cultivated in southern Europe and the Near East for many centuries. *M. alba*, originating from China, first reached Europe in the 12th century. Its leaves are the preferred food of the silkworm (*dūd al-ḳazz*), larvae of moths of the Bombyx family, whose cocoons produce silk (*ḥarīr* [*q.v.*]). *M. nigra* is best known for its fruit. Concerning its medicinal uses, *tūt aswad* is cold and moist; its juice is made into a robb, for swellings of the mouth and for angina (al-Ṭabarī, 382, 482).

Ibn al-Bayṭār equates *tūt* with *mūrā* and *firṣād* (*Tafsīr*, 155) and its robb as *diyāmīrūn*. He quotes from (a) Galen: when ripe, it loosens the belly, but unripe and dried, is very costive and even useful for ulceration of the intestines and diarrhoea, and its juice for ailments of the mouth; and from (b) Dioscorides, who calls it laxative, and when cooked in water, effective against the poison of *aḳūnīṭūn* [*q.v.*]. Its leaf, crushed and mixed with oil, is good for burns (*Djāmiʿ*, i, 142-3). The juice of the raw fruit can relieve toothache (al-Bīrūnī, 96-7). Today, the fruit is eaten raw, and used for conserves and drinks.

TUTAK, a plain in eastern Anatolia through which the Murad Su, sc. the more southerly of the two upper arms of the Euphrates, flows in one part of its course between Malazgird and Muş, hence now in the modern Turkish *il* or province of Muş; see further, AL-FURĀT. (ED.)

TUṬĪLA, the Spanish town of Tudela, situated at the confluence of the Ebro and its affluent the Queiles (Kālash), now in the Comunidad Autónoma de Navarra and with a population of 26,500.

The Arabic geographers give some details on this *madīna* of al-Andalus, stressing its frontier position against the Christians and its role as chef-lieu of a *kūra*, with other towns, fortresses and villages (such as Alfaro, Arnedo, Borja, Calahorra, Nájera, Tarazone and Viguera) in the "Upper March" [see AL-THUGHŪR. 2], whose capital (*ḥāḍira*) Saraḳusṭa [*q.v.*] or Saragossa was "50 miles" (*ca.* 75 km/46 miles) from Tuṭīla. Some geographers and chroniclers further mention that its foundation as a *madīna* was ordered by the Umayyad *amīr* al-Ḥakam I [*q.v.*], but from recent archaeological finds, it appears that the place has been inhabited since prehistoric times. Tuṭīla, with a sector of the 9th century and another added in the 10th century, extended over 22 ha.

At that time (sc. end of the 8th century and opening of the 9th one), it was made into a centre for Umayyad control over the northeast of the Upper March against the Christians of Pampeluna and also against the *muwallad* Banū Ḳasī [*q.v.*], who succeeded in seizing Tuṭīla *ca.* 198/813 and in establishing there one of the main bastions of their intermittent autonomy from the Umayyads. This lasted till the time of ʿAbd al-Raḥmān III, who in 312/924 gave the town to Muḥammad b. al-Anḳar, governor of Saragossa and from the originally Arab family of the Tudjībids [*q.v.*], whose direct descendants held the town, also with periodic autonomy from the central power of al-Andalus, until 400/1009-10, the date when a collateral descendant of Muḥammad b. al-Anḳar, the Tudjībid al-Mundhir, governor of Tuṭīla in 396/1005-6, constituted the *ṭāʾifa* of Saragossa, including the rest of the Upper March and also Tuṭīla. In 430/1038, this *ṭāʾifa* was dominated by the Banū Hūd [*q.v.*] until the conquest of Saragossa by the Almoravids in 503/1110, who were not, however, able to defend this territory from the Christians; in 1119 Alfonso I of Aragon conquered Tuṭīla. The Muslim inhabitants remained there after the conquest as Mudéjars [*q.v.*] and as Moriscos [*q.v.*] until their expulsion in 1614.

As an urban centre, Tuṭīla developed a cultural life, if only modest, under the Arabs, with the first manifestations of this in the 3rd/9th century, consol-

idated in the next century, around the families involved with the Islamic cult such as the Banu 'l-Imām; the sources have reference to 22 scholars of Tuṭīla before 961, eight between 961 and 1008, and two between 1008 and 1058. The poet al-Aʿmā al-Tuṭīlī (d. 525/1130-1 [*q.v.*]) stands out. Tuṭīla was one of the judicial centres of al-Andalus. The sources mention some agricultural and commercial activity there. Modern archaeological investigation has brought some information on the towns's Great Mosque and on ceramics, with some high-quality pieces of the latter.

(Maria J. Viguera)

TUTUN, tobacco, more specifically, pipe tobacco. *Tutun, tütün* in Turkish, may derive from the Brazilian-Portuguese *petun* (Comes, 228). Other terms used are *dukhān* and *tibgh* (Ar.), and, for water-pipe tobacco, *tunbāk* and *tambākū* (Pers.).

According to an 18th-century belief, tobacco did not originate exclusively in the Americas but was also indigenous to various parts of Asia and Africa; it was also believed that people in the Middle East used tobacco before Europeans sighted the New World. Since the 19th century, however, the prevailing opinion has been that the Old World, including the Middle East, was introduced to tobacco from the Caribbean and Brazil by the early European discoverers.

The first tobacco to reach the Old World was brought back by Columbus in 1493. The weed initially aroused mostly botanical interest, and for the next half century the knowledge and sporadic use of tobacco remained mostly limited to the (northern) Mediterranean world. Contrary to conventional wisdom, however, tobacco seems also to have been known in Persia and India by the early 16th century. Tobacco is said to have been introduced to India in 914/1508-9 (Dihlawī, 105), and the first references to smoking in Persian poetry occur in the work of an anonymous poet from Shīrāz who died in 942/1535-6 (Simsar 1963, 15). Yet, as in Europe, tobacco in the Middle East did not become popular until much later, and many parts of the Islamic world apparently only became acquainted with smoking at the turn of the 17th century. The people of the southern shores of the Arabian peninsula were familiar with the weed in the 1590s. Syria and Morocco learned about tobacco at about the same time, while smoking was introduced to Egypt in 1603-4. Portuguese sailors were probably the ones who initially introduced tobacco to port cities and coastal areas, after which merchants and soldiers spread the habit throughout the Ottoman lands. Tobacco penetrated into the Sahel and parts of Sub-Saharan Africa via the Arab caravan trade. From Persia, smoking passed into Central Asia, where tobacco was known and cultivated by the late 17th century (McChesney, 184).

The Portuguese were responsible for introducing tobacco in other parts of Muslim Asia as well, ranging from India and many parts of southeast Asia to the Indonesian archipelago, all around 1600. The Philippines seems to have received its first tobacco from Spanish imports from Mexico as early as 1575. From China, tobacco spread westward into Inner Asia and Siberia, where it converged with an influence from Persia and Russia.

Early tobacco came from the Americas via England, as is suggested by the appellation in Persian, *Inglīs tanbākū*, noted by Olearius in 1637 (Olearius, 597). An indigenous tobacco cultivation emerged in Persia in the 1620s or 30s, was in existence in Central Asia by the late 17th century, and may have existed in Yemen at an early stage as well. Over the course of time, tobacco cultivation spread to many parts of the Islamic world, including Anatolia, North Africa and India.

While in much of the Western world smoking was long deemed unbecoming for the female members of polite society, no such social stigma seems to have existed in the Middle East. Many descriptions of the Ottoman lands and Persia, as well as a number of illustrations, indicate that women smoked as avidly as men, at least in the private sphere (Tavernier, i, 705; Kaempfer, *Reisetagebücher*, 79; illustr. in Rogers, *The Topkapı Saray Museum*, 124, Loukonine and Ivanov, 206, *Treasures of Islam*, 119, and Kasrawī, *Tārīkhča*, 6, 15).

Until the 20th century, a smoking device that was widely used in the Middle East was the regular tobacco pipe, whose long stem and small bowl made it quite similar to the ones used at the same time in England and Holland. Originally made of clay, and later also of wood, these pipes were known as *čupuḳ* or *čapuḳ* in Turkish and Persian (a cognate of the Persian word for wood, *čūb*), rendered in English as *chibouk* and in French as *chibouque* (illustr. in Neander, 243, Simsar 1963, 24, and idem 1971, 92). Such pipes are observable in the Ottoman Empire as well as Persia in the early 17th century. With the exception of the Lurs in the western part of the country, Persians never took to pipe smoking as eagerly as the inhabitants of the Ottoman Empire, but instead preferred the water pipe. Lane observed similar pipes, called *shibuk* or *ʿūd*, in early 19th-century Egypt, but also much longer

ones of between four and five feet (Lane, 149). One 19th-century traveller noted how among the Turkmen of Khurāsān, some used a sheep's shinbone emptied of its marrow and filled with tobacco as a pipe (O'Donovan, i, 440).

Snuff (standard Arabic *suʿūṭ*, Egyptian colloquial *nushūk*, Pers. *anfiya*, Tkish. *enfiye*) was adopted in places like Yemen and in the Ottoman Empire at times when regular smoking was proscribed, and became especially popular among Berbers and the Bedouin peoples of North Africa, and in parts of the Arab Middle East such as Syria and Palestine. Snuff has also long been common in Afghānistān, where it is called *naswar*. Moroccans preferred finely powdered snuff, while others in North Africa took to chewing tobacco, a habit which continues to be popular in Algeria, Tunisia and Libya. Chewing tobacco also became common in Malaysia and Sumatra.

Snuff, which in the West was taken up by members of the élite as a way of differentiating themselves from the common people, never acquired the status attached to it in 18th-century Europe. Class distinctions in the Islamic world seem to have expressed themselves less in the choice between different forms of smoking than in the degree of refinement and decoration of the implements used, in the type of tobacco that was smoked, and the elaborateness of the smoking ritual. Whereas the water pipes of the poor in Persia and Egypt were constructed from a coconut shell (Arabic *nardjīla* "water pipe" comes from Persian *nāgīl* "coconut, water pipe") or a gourd, the rich had their *kalyāns* made of porcelain and painted glass, and encrusted with precious stones. When Lane visited Egypt, the lowest orders smoked the *gōza* (Classical Ar. *djawza*, which also means "coconut"), which differed from the *nardjīla* in having a short, fixed cane for a mouth piece (nowadays, poor Egyptians sometimes make used spray cans into the vessel of the *gōza*). The rich smoked mild and fragrant tobacco from Latakiyya, while people from the middle classes used a heavier grade named after the town of Ṣūr or Tyre (Lane, 150). People of rank took to employing a water-pipe carrier, or *kalyandār*, who would follow his master either on foot or on horseback with the various accoutrements (Chardin, iv, 25; Lane, 150). In Afghānistān, such class distinctions were less pronounced, and the local water pipe simpler than its Persian counterpart. One traveller in 19th-century Afghānistān reports that travellers who did not carry the device would dig two communicating holes in the ground, fill one with water and the other with tobacco, put a reed in the former, and smoke lying down (Ferrier, 383). In Ṣafawid Persia, *mullās* used long stems that allowed them to sit up straight and maintain their dignity (illustr. in Chardin, atlas, pl. XIX).

In keeping with traditional humoral pathology, some Muslim physicians and pharmacologists considered tobacco to be dry and cold, though most followed European practice by placing tobacco in the category of dry and hot substances. Controversy surrounded the alleged effects of smoking on the body. While it was held to be salutary for people with a humid disposition, some believed that it weakened the brain (Seligmann, 41). Similar to European beliefs, tobacco smoke was thought to repel pestilence (Khurāsānī, 275). Overall, however, tobacco in the Islamic world never gained the medicinal reputation it enjoyed in early modern Europe. Smoking was rather integrated immediately into social life, in a process that was no doubt facilitated by the prior existence and popularity of using other narcotics, such as opium and hashish [see BANDJ; HASHĪSH] (the former being eaten rather than smoked until the 18th century). As almost everywhere else, tobacco also became intertwined with the consumption of another newly-introduced psychoactive stimulant, coffee [see KAHWA], and it became a standard item in the coffeehouses that emerged all over the Ottoman Empire and Ṣafawid Persia at the turn of the 17th century.

The water pipe is (Muslim) Asia's original contribution to the array of smoking devices. Called *ḥukka* (or *hookah*, which denotes the vessel containing the water) in India, *kalyān* in Persia, *čilim* (the bowl on top of the pipe) in Afghānistān, and *narghīla* or *gōza* or *shīsha* in the Arab world, the water pipe originated either in Persia or India, where it was noted in the early 17th century (the first known illustr. of the water pipe is found in Neander, 247). It is not likely to have existed before the introduction of tobacco—though tobacco and *bang* (hashish) were often jointly smoked, no real evidence exists for the claim that the water pipe was used to smoke hashish *before* the introduction of tobacco. Soon, the water pipe spread westward, until it was known and used throughout the Middle East. Water pipes were ubiquitous in Persia until modern times. Persian cavalry officers at the turn of the 19th century even smoked the water pipe in the saddle (Freygang, 287). The device was noted in Yemen as early as 1618-19, and found its way to North and East Africa, parts of Inner Asia and the Balkans as well. The northern, Muslim regions of the Indian subcontinent also took to the water pipe. The Persian connotation of the water pipe in 18th-century Egypt is suggested by the fact that the most fashionable pipes were called *Karīm Khān*, after the Persian ruler of the Zand dynasty (Niebuhr, i, 127).

Cigars, which became popular in the 19th-century West, never appealed to the smoking public of Islamic countries, except for the westernised élite. Cigarettes everywhere were rare until modern times; Europeans did not adopt cigarettes until the 1880s, and cigarette smoking found a place in the repertoire of the Islamic world only in the 20th century.

As in many places around the world, tobacco in the early stage of its introduction in the Middle East aroused suspicion on the part of clerics and bureaucrats alike. Muslim scholars, unable to find references to tobacco in the Ḳur'ān, resorted to analogical reasoning to determine whether smoking was permitted or should be condemned and banned as contrary to religion. As tobacco did not resemble any of the forbidden substances mentioned in the Ḳur'ān, proscribing it was not a simple matter. Nor was it easy to "prove" that tobacco in itself was bad, or harmful to one's health. One way of arguing for proscription, therefore, was to equate tobacco with the foul things that sūra VII, 157, declares forbidden, to associate it with the "avoidance of things evil" (*nahy ʿan al-munkar*) contained in III, 104, or to argue that the Prophet who, according to a *Ḥadīth*, appreciated sweet odours, would certainly have loathed tobacco's foul smell. An attempt was even made to associate smoking with the smoke and fire that is held to precede the Last Judgement. Proponents of smoking invoked II, 28, which refers to the benefits of everything that God has created on this earth (Klein-Franke). Some religious scholars argued that smoking was a wasteful habit, while others urged moderation (Djaʿfariyān, *ʿIlal*, 351-4). Arguments for and against tobacco were often made in the context of the controversy between the representatives of orthodoxy, who rejected tobacco, and members of Ṣūfī orders, who took to smoking.

In Shīʿī Persia, those who opposed tobacco tended to be followers of the Akhbārī doctrine (*ibid.*, 352; a list of Shīʿī anti-smoking tracts appears in Ṭihrānī, ix, 173-75). Yet the influential anti-Ṣūfī and Akhbārī cleric Muḥammad Bāḳir Madjlisī (d. 1111/1699 [*q.v.*]), who was *Shaykh al-Islām* of Iṣfahān, considered smoking permissible. Like many who sanctioned tobacco, he was a fervent smoker himself (Pampus, 45).

Governments in the Islamic world tended to present and articulate prohibitive measures as a "return to the true faith", even if the real motives lay elsewhere. Shāh ʿAbbās I of Persia (995-1038/1587-1629 [*q.v.*]) outlawed the use of tobacco in the early 1600s, apparently because his soldiers spent too much of their pay on smoking, and punished offenders by slitting their nose and lips (Olearius, 645). His successor, Shāh Ṣafī I (1038-52/1629-42), repeated the ban when he acceded to the throne (Tavernier, i, 599; Ḳazwīnī, *Fawāʾid*, 48). The Mughal Emperor Djahāngīr (1014-37/1605-27) banned smoking in 1617. In the Ottoman Empire, tobacco was first proscribed in the reign of Sultan Aḥmed I (1012-26/1604-17), who issued numerous bans on tobacco and the places where it was smoked. Of his successors, Murād IV (1033-50/1623-40) was most vehement in waging war on smoking. His aversion to tobacco derived as much from its religious status as innovation, *bidʿa* [*q.v.*], as from a concern with order and discipline, thought to be undermined by those who frequented tobacco shops, and his fear of political opposition by the Janissaries, who owned many of these establishments (Saraçgil). In 1627 a ban was issued on tobacco cultivation in Ottoman territory. Six years later the sultan, possibly persuaded by Ḳāḍī-zāde Meḥmed Efendi, used a huge fire that destroyed thousands of houses in Istanbul as a pretext to outlaw smoking and to close all coffee shops (Naʿīmā, iii, 1216-20). Many who were found smoking are said to have been executed. Nothing could, however, stop tobacco's march. Faced with this growing popularity, Murād's successors were more ambivalent. The *Shaykh al-Islām* Bahāʾ al-Dīn Efendi in the 1650s declared smoking lawful, and, though tobacco was forbidden a few more times by the Ottoman authorities, both the state and the clergy ultimately resigned themselves to its spread. The 18th-century Arabian Wahhābī movement included tobacco in its list of religiously proscribed substances. In Morocco, the *ʿulamāʾ* sought to ban smoking as late as 1887, with a similar lack of success.

Moralists and preachers continued to inveigh against the satanic origin or the debilitating effect of tobacco, but in time lost ground to bureaucrats who realised that tobacco, far from just draining bullion, might actually be turned into a source of profit. As was true in Europe, Middle Eastern states, burdened by ever growing military and administrative expenditure, saw tobacco as a welcome opportunity to expand their tax base. As early as the mid-17th century, the Ṣafawid government derived considerable revenue from taxing tobacco (Chardin, x, 408, 413). In the mid-19th century, tobacco was one of Persia's leading export products, being sent to India, the Ottoman Empire, and Russia. The Iṣfahān area alone exported between 1700 and 1900 tons of *tambaku* via Baghdād in the 1860s (Rochechouart, 60), and Burton claimed that, in the Ḥidjāz, everyone smoked it. *Tutun*, which was grown in the western regions, was exported as well; exports continued to grow throughout the remainder of the century. A *Régie* was established in 1890, but had to be repealed after strong protests on the part of the *ʿulamāʾ*. In 1909 tobacco was turned into a state monopoly, which was revised in 1929 and again in 1931.

In the Ottoman Empire, a Tobacco *Régie* came into being in 1884. A tobacco company founded with European capital was given the monopoly for the administration of tobacco cultivation, its purchase and exportation, as well as for the manufacturing of cigarettes for domestic consumption. In the late Ottoman Empire, as in Persia, tobacco became one of the most significant export commodities. In India, the English East India Company established a monopoly over tobacco cultivation in the regions which it directly controlled. Muḥammad ʿAlī [*q.v.*] in 1810 instituted a tobacco government monopoly in Egypt, yet in 1890 tobacco cultivation was prohibited in the country. After occupying Algeria, the French encouraged the colonists to cultivate large quantities of dark leaf for use by the French state monopoly.

Today, tobacco is cultivated and cigarettes are manufactured in many parts of the Middle East, North Africa and Muslim Asia, but only Turkey ranks among the world's top fifteen tobacco-producing countries (sixth place with 222,000 tons in 1976-9) (Tucker, 177). Though many early modern reports claim that the people of Persia and the Ottoman Empire consumed prodigious amounts of tobacco, actual consumption seems to have been less than in most parts of Europe. Indeed, even today the per capita consumption in Middle Eastern countries is only about one-half of that in the West. In 1979 only Kuwait, with some 2,000 cigarettes smoked per person per annum, came close to the western average; Turkey and Lebanon averaged around 1,600, Egyptians, Moroccans, Algerians, Syrians, Jordanians and Saudis smoked anywhere between 600 and 800 cigarettes, while people in poor Islamic countries such as Sudan and Bangladesh consumed a mere 100-200 (Tucker, 183, 187). In many countries, most people smoke cheap, locally-produced cigarettes, but in modern times more expensive import brands have become increasingly popular almost everywhere, either directly imported or manufactured under licence.

(R. Matthee)

TUTUSH (I) b. ALP ARSLAN, Abū Sa'īd Tādj al-Dawla (458-88/1066-95), Saldjūḳ ruler in Syria 471-88/1078-95. The name, < Tkish. *tut-*, "he who grasps, seizes", was already familiar as a personal name to Kāshgharī, tr. Atalay, i, 367.

During his brother Malik Shāh's [*q.v.*] lifetime, the youthful Tutush was given Syria in 471/1078 or 472/1079 as his appanage. The Turkmen commander Atsïz b. Uvak [*q.v.*], who had overrun southern Syria and Palestine and had seized Jerusalem from the Fāṭimids, had been swept out of these temporary conquests by the returning armies of al-Mustanṣir and besieged in Damascus. He appealed to Tutush for help, but the latter simply had Atsïz killed in order to secure the Syrian capital for himself (471/1079). He was not, however, able to assert his power in the second greatest city of Syria, Aleppo. This had briefly been taken over by the Saldjūḳ vassal, the 'Uḳaylid ruler of Mawṣil Sharaf al-Dawla Muslim b. Ḳuraysh, and Tutush now became involved in warfare with him, being even besieged in Damascus by the 'Uḳaylid in 476/1083 until Sharaf al-Dawla's death in battle fighting against the Saldjūḳ prince Sulaymān b. Ḳutalmïsh (479/1086) relieved him of this threat.

The Great Sultan Malik Shāh was not disposed to increase the power of his younger brother and potential rival, and sought to extend his own direct control over al-Djazīra and Syria. He appointed Turkmen commanders from his army as governors of the cities there, including Aḳ Ṣonḳor in Aleppo, Yaghï-basan at Antioch and Bozan at Edessa. These commanders and Tutush extended Turkish control in Syria as far south as Ḥimṣ, but stopped short of Tyre and Tripoli, in the latter of which the local ruler of the Banū 'Ammār [*q.v.*], Djalāl al-Mulk 'Alī, maintained himself by conciliating Aḳ Ṣonḳor.

Malik Shāh's death in 485/1092 threw the situation in the Saldjūḳ lands into confusion. In the absence of any clear principle of succession, and with older Turkish tribal ideas concerning the importance of seniority within the ruling house still influential, Tutush regarded his own claim to the Great Saldjūḳ sultanate as superior to that of the dead ruler's eldest son Berk-yaruḳ [see BARKYĀRŪḲ]. Tutush secured the towns of al-Djazīra as far east as Mawṣil and was even proclaimed sultan at Baghdād in 486/1093. But fear of Tutush's ascendancy led Aḳ Ṣonḳor and Bozan to join Berk-yaruḳ's supporter, the *amīr* Kirbuḳa. Nevertheless, through energetic campaigning in northern Syria, Tutush defeated the Turkmen *amīrs* at Tall al-Sulṭān to the south of Aleppo, killing Aḳ Ṣonḳor and then Bozan, and, after fifteen years of effort, at last occupying and proclaiming his power at Aleppo (in
Early image of a waterpipe, taken from J. Neander, *Tabacologia medico-cheururgico pharmaceutica* (Leiden 1622). Source: Koninklijke Bibliotheek, The Hague.

fact, this dominion was to last for only six months). Elated by his successes, Tutus̲h̲ now invaded western Persia, penetrating to Hamad̲h̲ān and compelling Berk-yaruḳ, whose forces were inferior in numbers, to retire to Iṣfahān. Yet the latter was able to rally support amongst the Turkish *amīrs* in western Persia and to assemble a large army (30,000 according to the sources), which was victorious over Tutus̲h̲ at Dās̲h̲īlwā near Rayy (see on this name, Yāḳūt, *Buldān*, ed. Beirut, ii, 433; Schwarz, *Iran im Mittelalter*, 802) on 17 Ṣafar 488/26 February 1095. Tutus̲h̲ was killed, and the remnants of his army fled to Syria. Berk-yaruḳ thus became the Great Sald̲j̲ūḳ sultan, although he was never secure and strong enough to assert his authority in a peripheral region like Syria and had to leave Tutus̲h̲'s sons Duḳāḳ and Riḍwān [*q.v.*] in Damascus and Aleppo respectively as vassal rulers.

Bibliography: 1. Sources. See those for the history of Syria at this time, above all Ibn al-Ḳalānisī and Ibn ʿAsākir for Damascus and Ibn al-ʿAdīm for Aleppo, plus information from general historians like Ibn al-D̲j̲awzī and Ibn al-At̲h̲īr and the specialised histories of e.g. ʿAẓīmī and ʿImād al-Dīn. There is an entry on Tutus̲h̲ in Ibn K̲h̲allikān, ed. ʿAbbās, i, 295-7, tr. de Slane, i, 273-5.

(C.E. Bosworth)

TUWĀT, conventionally Touat, a region of the southwest of Algeria little known to the Mag̲h̲ribī historians. Ibn Baṭṭūṭa mentions laconically his passing through Tuwāt in 754/1353 (*Riḥla*, iv, 444-7, tr. Gibb and Beckingham, iv, 975-7), and Ibn K̲h̲aldūn mentions it in his *K. al-ʿIbar* (tr. de Slane, *Hist. des Berbères*, i), but these pieces of information are meagre. The spread of colonial power in Algeria brought little alteration, and until its colonisation in 1900, Tuwāt remained very little known. The etymology of the name is uncertain, but would seem to be Berber; suggestions have been that *t-wa-t* has the meaning "oasis" (A.G.P. Martin, *Quatre siècles d'histoire marocaine*, Paris 1923), or that it is the plural of the Zenāta Berber word *tīṭ* "spring" (N. Marouf, *Lecture de l'espace oasien*, Paris 1980).

Tuwāt is situated between lats. 26° 7' and 28° 5' N. and longs. 1° W. and 1° E. It is a vast depression, with the Grand Western Erg on the north, the Erg Chech on the west, Tanezrouft on the southwest and the plateau of Tadmaït on the southeast. Being *ca.* 1,500 km from the Atlantic and *ca.* 1,200 km from the Mediterranean, influences from the seas are nil. It is really a band of territory 600 km long according to E.F. Gauthier, but most authors make it 200 km long, comprising twelve groups of *ḳṣūr*. Within independent Algeria, some of these have been grouped into a *dāʾira* (sub-prefecture) and others made into communes. Tuwāt comes at the present time within the *wilāya* or province of Adrar. In 1996, some 224,000 people lived in the 16 communes making up Tuwāt, out of the 28 communes of the whole province.

Environment and local economy. Rainfall is negligible (11 mm p.a.), evaporation is fierce and vegetation sparse. It is a region of sand dunes, with denuded areas (hamadas and ergs) and, here and there, some alluvial soils. The flora is what one would expect from such a harsh environment: acacias (*ṭalḥ*), tamarisk (*tlāy*), colocynth, etc. Water is rare, with, except for the Wād Masʿūd, the *dāyas*, *s̲h̲aṭṭs* and *sabk̲h̲as* [*q.vv.*] being normally dry. But an immense reservoir of subterranean water (800 to 1,200 m below ground) is utilised by the people of the Sahara through an ingenious system of *foggaras* [see ḳanāt. II]. Together with Gurāra [see gourara, in Suppl.] and Tidikelt, Tuwāt is the region par excellence of *foggaras*, with a network of over 1,700 of these. The water raised up is sold and has to be divided very carefully.

Tuwāt is not therefore total desert, but a region of *ḳṣūr*, 248 of which are still inhabited. The *ḳsar* (locally *gṣar*) is an administrative area with a populated sector and lands, and usually has 100 to 200 inhabitants. A group of these *ḳṣūr* forms an entity with a single name only (Timmi, Bouda, Tamenṭīṭ, Tsabit, etc.). It is what we would call an oasis, although, paradoxically, there is no local term for this. Resources are protected in granaries and silos, justifying the building of *ḳaṣbas* or strongholds. Formerly, Tuwāt served as an entrepôt for trafficking tribes, and certain *ḳṣūr* served as depots in the caravan trade. The second vital element of a *ḳṣar* is its date-palm groves, here called *al-d̲j̲anna* (as a local pl. of *d̲j̲nān* "garden"). Small plots of land are planted with food-producing plants in tiers, in the shade of the palm trees; 7,200 ha are thus exploited in the traditional way, and 10,000 ha have been brought into production by modern means, notably water pumps.

Political and economic history. Tuwāt has been involved in the various vicissitudes of the powers and dynasties of North Africa. The Maʿḳil, Mag̲h̲rāwa and Banū Īfran [*q.vv.*] sought refuge there from the Almohads. Abū ʿAlī, son of the Marīnid ʿUt̲h̲mān II, conquered Tuwāt at the opening of the 8th/14th century, and two centuries later, the Moroccan sultan Aḥmad al-Manṣūr [*q.v.*] made the region subject. The interest of Moroccan rulers is explicable through Tuwāt's special position in trans-Saharan trade, the most important "product" being black slaves, brought from the south and concentrated on Tuwāt before being sent northwards.

Decline set in from the 16th to the 20th centuries, notably through the rise of maritime trade and the growth of a money economy.

Demography and social structure. Tuwāt's position as a meeting-place led to a long-established co-existence there of Zenāta Berbers, Jews, Arabs and black Africans. The Zenāta were possibly descendants of Pliny's Getulae, and the toponomy of the region shows that they form the most ancient stratum of inhabitants. The Jews form the second oldest group; today, the name of Mhād̲j̲riyya designates those considered to be of Jewish origin. They are popularly said to descend from the diaspora of the Cyrenaican community expelled by the emperor Trajan in A.D. 118, and they lived peacefully at Tuwāt until the arrival there of the *faḳīh* of Tlemcen Maḥammad b. ʿAbd al-Karīm al-Mag̲h̲īlī [*q.v.*] who, *ca.* 895/1490, persecuted them, despite the disapproval of the local *fuḳahāʾ*, and incited a local Muslim mob to destroy the synagogue of Tuwāt. The latest group are the Arabs. Certain sources would like to trace their appearance back to the 4th/10th century, but in fact it was not until the 7th/13th century that pastoralists from the South Arabian tribe of Maʿḳil reached Tuwāt.

To the ethnic distinguishing factor was now added a social one. Other categories became added to the

Berbers and the Jews: (a) the Shurfā (*shurafā'*) of Tuwāt, who, as in all the Maghrib, are said to be Ḥasanīs; (b) the Mrābṭīn (*murābiṭūn*), who, together with the Shurfā, ended up by becoming the dominant class, owning water, land and palm-groves, and being exempted from taxation; (c) the Ḥrār (*aḥrār* "free men"), those Arabs and Berbers who were neither masters nor serfs; (d) the Mhādjriyya, perceived as of Judaeo-Berber origin and as being neither masters nor serfs, sometimes having their own cemeteries; (e) the 'Abīd or "slaves", whose legal status gave way to that of (f) the Ḥarṭānīs [*q.v.*], applied to freedmen. The Ḥrāṭīn formed, and still in large measure form, the basis of the workforce in Tuwāt's economic life; according to the French census of 1906, they formed almost 40% of the total population of 50,000.

The ṣaff *as a socio-political structure.* The *ṣaff* [*q.v.*] (local pronunciation, *ṣoff*) like the *laff* [*q.v.*], is a kind of permanent and exclusive league grouping together clans, families or tribes of diverse origins; it always involves collective confrontation between groups in each other's presence. Two *ṣaffs* used to share out influence in Tuwāt, although reconciled today: the Yaḥmad, to which belong almost all the people of Arab origin, and the Sufyān, in which the Zenāta Berbers are above all represented. Similarly, at Tamentīt, there were the opposing factions of the Mrābṭīn and the Dāreb.

The Ṣūfī brotherhoods and the zāwiyas. The *ṭuruḳ* have spread throughout Tuwāt since the 9th/15th century. The most widespread are the Ṭayyibiyya of Ouezzane (Wazzān), but the Ḳādiriyya and one of their branches, the Bakkā'iyya founded by Shaykh Aḥmad al-Bakkā'ī, are also found. Other local brotherhoods have developed: in the north, the Karzāziyya, a Shādhilī branch founded by Aḥmad b. Mūsā al-Karzāzī (d. 1062/1652); in the lower part of Tuwāt, the Raggāniyya, founded by Mawlāy 'Abd Allāh al-Raggānī, is ubiquitous. The *zāwiya* of Kunta, founded by Aḥmad b. Muḥammad al-Raggād, remains one of the most famed, together with that of the Bakriyya founded by the Shaykh al-Bakrī b. 'Abd al-Karīm (d. 528/1133).

Almost all the *ḳṣūr* possess a *zāwiya*, and certain *ḳṣūr* still bear the name of the saints who founded them (Ūlād al-Ḥādjdj, Sī 'Abd al-Ḳādar, Sīdī Yūsaf, Bū 'Lī, etc.). It is thanks to these that some fragments of local history and culture have been preserved; a certain number of mss. there are preserved in *zāwiyas* like that of the Kunta. At the present day, the *zāwiya* of Shaykh Sīd al-Ḥādjdj Muḥammad al-Kabīr has over 1,500 pupils from all over the region.

Saints and scholars. Scholars educated in *zāwiyas* have often founded new ones. Some came to Tuwāt from outside, but most were natives of Tuwāt and Gurāra. Although largely ignored in the books of *ṭabaḳāt* and *tarādjim*, certain of them achieved some fame. More than twenty are cited by al-Ḥafnawī (*T. al-Khalaf bi-ridjāl al-salaf*, Algiers 1907-9); Ibn Maryam (*al-Bustān fī dhikr al-awliyā' wa 'l-'ulamā' bi-Tilimsān*, Algiers 1908) names some of them well known at Fās; and Aḥmad Bābā mentions those who became distinguished in Takrūr. A recent ms. by al-Baḥḥāwī, *Nasīm al-nafaḥāt fī dhikr djawānib min akhbār Tawāt* (private coll.) mentions some fifty scholars of Tuwāt, including 'Abd al-Karīm b. Muḥammad al-Tuwātī (d. 1042/1632), called 'Ālim Tuwāt; Muḥammad al-Ṭayyib, called Bābā Hīda, author of *al-Ḳawl al-basīṭ fī akhbār Tamanṭīṭ* (B.N. arabe 6399); and the *ḳāḍī* of Tuwāt 'Abd al-Ḥaḳḳ al-Bakrī (d. 1210/1796) and Sīdī Muḥammad al-Bakrī (d. 1133/1720), both representatives of an old family whose *zāwiya* still exists today near Tamenṭīṭ. In the present century, one might mention Sīd al-Ḥādjdj Muḥammad al-Badawī al-'Uthmānī, called Bel Kbīr, who has enjoyed a reputation beyond his own region, being *imām* of the Great Mosque of Adrar since 1370/1950, founding there a great *madrasa* and a *zāwiya*.

Linguistic situation. Tuwāt is now almost entirely Arabophone, and Zenāta Berber has virtually disappeared, in contrast to the situation in adjacent Gurāra, where it still flourishes. The Berber of Tuwāt did, however, survive long enough for French and Algerian linguistic scholars to record it. Also, numerous Tifinagh [*q.v.*] inscriptions have been found in the region. See R. Basset, *Notes de lexicographie berbère. Vocabulaire du Touat et du Gourara, argot du Mzab, dialecte des Touaregs Aouelimmiden*, in *JA*, ser. 8, vol. x (1887), 365-464; idem, *Loqman berbère*, Paris 1890 (incs. some fables in Touat Berber); M. Mammeri and C. Brahimi, *Les activités du CRAPE durant l'année 1970*, in *Lybica*, xviii (1970), 289-95 (incs. some songs from the last woman knowing the Berber speech of Tamenṭīt); J.-C. Echallier, *Villages désertés et structures agraires anciennes du Touat-Gourara* (*Sahara algérien*), Paris 1972 (Tifinagh inscriptions); M. Rouvillois-Brigol, C. Messon and J. Vallet, *Oasis du Sahara algérien*, Paris 1973 (items of Berber vocabulary); Mammeri, *Le dernier document en berbère de Tamentit*, in *Awal*, i, 176-7.

(ABDERRAHMANE MOUSSAOUI)

AL-ṬUWAYḲ, DJABAL, a range of hills in central Arabia, running in a flattened crescent shape roughly north-south for some 800 km/480 miles between lats. 27° 20' N. and 17° 30'. It begins at al-Zulfī north of al-Riyāḍ and ends in the western part of the Empty Quarter [see AL-RUB' AL-KHĀLĪ]. The central part comprises the district of Nadjd known as al-'Āriḍ [*q.v.*]. With a westwards-facing scarp, the Djabal Ṭuwayḳ rises to an average height of *ca.* 920 m/3,000 feet from a general level of *ca.* 610 km/2,000 feet, and varies in width between *ca.* 20 km/12 miles in the central part to an irregular *ca.* 10 km/6 miles at the two extremities. It dominates central Arabia both topographically and stratigraphically, and is basically a sandstone escarpment topped by a slightly tilted roof of Jurassic limestone; the whole range is highly fossil-bearing. It is extremely dissected by wadis,

the main ones being those of Ḥanīfa, al-Luḥā, al-Nuʿaydja and al-ʿAyn. There are several oases and settlements near it, including the present capital of Saudi Arabia, al-Riyāḍ, al-Khardj, al-Aflādj [*q.vv.*] (the last two with celebrated pools) and al-Sulayyil. The extensive ruins of the site of al-Fāw [*q.v.*] lie at its southern end.

In pre- and early Islamic times, caravans passed along the route of the Djabal to eastern Nadjd and the Gulf or to ʿIrāḳ, and there are archaeological sites, rock-carvings and inscriptions all along the ridge. It does not seem to be recorded under the name al-Ṭuwayḳ in the early Islamic sources on the geography of Arabia, although sites along it such as al-Aflādj and al-Khardj are certainly mentioned in these texts and in early poetry (see e.g. U. Thilo, *Die Ortsnamen in der altarabischen Poesie*, Wiesbaden 1958, 25, 58-9).

(S.A. AL-RASHID)

ṬUWAYS ("little peacock"), ABŪ ʿABD AL-MUNʿIM ʿĪSĀ b. ʿAbd Allāh al-Dhāʾib, born probably 11/632 in Medina, died 92/711 in Suwaydāʾ, the first great singer in the days of Islam. He was a *mawlā* of the Banū Makhzūm, being in the service of Arwā bt. Kurayz, the mother of the caliph ʿUthmān b. ʿAffān. He first attracted attention by singing melodies that he had learned from Persian captives, and rose to fame as a musician in the reign of ʿUthmān. About this time, a new style of music was introduced which was known as *al-ghināʾ al-raḳīḳ* or *al-ghināʾ al-mutḳan*, its especial feature being the application of a "modern" set of musical metrics (*īḳāʿ*) [*q.v.*] to the songs. Ṭuways was one of the first to sing this "new music" in Medina. He was considered the best exponent of *hazadj* songs. When singing these, he acted in the traditional way of walking around and beating the metre on a square framed drum (*duff murabbaʿ*). Like other musicians in Medina, Ṭuways was a *mukhannath*, and the proverb arose "[Nobody is] more effeminate (*akhnath*) than Ṭuways". Whilst Abān b. ʿUthmān [*q.v.*] was governor of Medina, he was favoured by the *amīr*, but when Muʿāwiya I became caliph, and Marwān b. al-Ḥakam was appointed governor (41-8/661-8 and 54-7/674-7), the *mukhannathūn* were suppressed, and Ṭuways fled to al-Suwaydāʾ, a two days' journey on the road to Syria. Among his pupils were Ibn Suraydj [*q.v.*], al-Dalāl [*q.v.* in Suppl.], Nawmat al-Ḍuḥā and Find Abū Zayd. Isḥāḳ al-Mawṣilī [*q.v.*] wrote his biography (*Akhbār Ṭuways*), which was quoted by Abu 'l-Faradj al-Iṣbahānī [*q.v.*] in the *Aghānī*. Some of his songs were still known in the 3rd/9th century.

(H.G. FARMER-[E. NEUBAUER])

TUZ GÖLÜ, an inland salt lake of central Turkey. With an area of 1,500 km², it lies in the midst of a treeless cereal steppe in the Anatolian upland at an altitude of 905 m. It occupies the greater part of an internal drainage Tertiary depression, filled with thick young sediments and rimmed by karstified steppe platforms. The eastern delimination is formed by the 200 m high fault scarp.

During the Tertiary period, this basin subsided about 5,000 feet into the Anatolian continental plate. It has been shown that, during the rainy phases of the Ice Age, the lake surface was 110 m higher and that the lake was filled with freshwater because of its run-off to the Kızılırmak [see ḲIZIL-IRMĀḲ] river. During the last 15,000 years the lake has shrunk permanently. Currently, it scarcely has a depth of 2 m and its extent alters considerably with the seasonal variations in precipitation.

The high salinity (23%) of the lake results rather from the salt-bearing Tertiary sediments of the underground than from the lack of basin drainage. During years almost free from rain, high summer temperatures of about 40°C make water vaporise in abundance, so that a pan of nearly pure sodium chloride up to 30 cm thick is deposited. With an annual output of 150,000 tons, two state-owned saltworks yield one-fourth of Turkish native salt production, sufficient for the entire home demand.

TŪZAR, conventional French form Touzeur, a town of southern Tunisia (lat. 33° 55' N., lat. 8° 07' E.), built on the site of the ancient *Tusurus*. The form Tawzar reflects a tendency towards fitting it into an Arabic form, a tendency visible throughout the Maghrib. The written evidence has many gaps, and one can only glean disparate pieces of information from the chroniclers and travellers (al-Yaʿḳūbī, Ibn Ḥawḳal, al-Bakrī, Ibn al-Shubbāṭ, al-Tidjānī, etc.). The history of the place is mixed up with that of the Djarīd [*q.v.*].

Tūzar is part of the great province of Ḳasṭīliya, which, between the Nafzāwa and the Djarīd, takes in the region of Gafsa. It is edged with salt flats to the northwest (Shaṭṭ al-Gharsa) and to the south (Shaṭṭ al-Djarīd and Shaṭṭ Takmart), whose moving sand dunes lay in wait for travellers who strayed from the ways marked out by palm trunks, as between Bishrī and Tūzar.

Tūzar has always been the chef-lieu of the Djarīd, a vast depression situated to the south of the parallel with Gafsa, in the peripheral region of southwestern Tunisia, characterised by a hot and arid climate. Like others of the Djarīd (al-Ḥāmma, the ancient *Aquae*, Takiyūs, modern Oudiane-Dégache, Nafṭa and the ancient, abandoned oasis of Firshāna) or of the Nafzāwa further south, the Tūzar oasis (*wāḥa*) belongs to a continental oasis type of habitat in which permanent and terraced cultivation is only possible through a hydraulic system which taps underground springs from a water-level which is not far below the surface and abundant. The system may briefly be described thus. The wadi derives its sources from heights above

the level of the oasis. These springs ooze out of the sands and come together on the fringes of the palm groves before receiving branches which are in turn subdivided into numerous water channels running in the open. There are water clocks filling up 192 times each 24-hour cycle and measuring out the period of irrigation water to each person with such a right in return for a fee. Officials in charge (*amīn*, pl. *umanā'*) watch over the smooth functioning of the system day and night.

In the first place denoting this hydraulic entity, Tūzar also denotes collectively the group of seven villages (Bayt al-Sharī'a = the *zāwiya* of the Shābbiyya; Blād al-Ḥaḍar, built on the site of the Ancient *Tusurus*; Zāwiyat al-Ṣaḥrāwī; Djaḥīm; Zāwiyat Sīdī Bū Līfa; and Zāwiyat al-Tawāniza) divided into shaykhdoms. The population is a mixture of diverse strains, but must basically be of Arabised Berbers. Some claim to be of Jewish origin (Awlād al-Hādif), others of Yemeni origin (Zebda, Masghūna, etc.) or Ḥidjāzī (Ḳuṭba, Tebābsa, etc.) or yet again from the Sūf (Hebaïla). The myth of these origins bears witness to Berbero-Arabo-Muslim contributions superimposed on an ancient Judaeo-Christian substratum, apparently still present in the 18th century.

As elsewhere, the Tūzar oasis lived above all on the caravan traffic heading for Ifrīḳiya, the Aurès, the Sūf, the Mzāb and the Great Eastern Erg, as well as on an intensive agriculture at three levels: market gardening, cultivation of shrubs and palm groves. The first count of this last resource goes back to 1860-4, when 75% of the date palms of the Shaṭṭ region came within the Djarīd (598,000 trees), almost a half of this figure within Tūzar. Private ownership (*milk*) predominated (88%), with only 4% being habous or *wakf* land. The economy was traditionally one of peasant villagers, but there was also an artisanal sector dominated by textile production, notably of blankets and coverings. Society was very clearly divided; out of *ca.* 7,700 inhabitants in 1885, only 3% were actual landowners, meaning that manual labour was the dominant factor there.

The town itself was ringed by ramparts and had four gates. In mediaeval times it had two *djāmi*'s and a *ḥammām* as well as *sūḳ*s and suburbs. The Banū Yamlūl were the dominating name in the town's history, long controlling, with varying fortunes, the local administration and still influential in the Zīrid period. They submitted to Ḳayrawān or Tunis only under constraint. At other times, control of the town varied between autonomy, dissidence or a negotiated, hence precarious, allegiance. The Ibāḍī Khāridjites found fertile ground there, but declined after the 6th/12th century. It was 'Uthmān Dey (in power 1598-1611) who secured Turkish control there after sacking Tūzar in 1608. But the central power in Tunis could never dispense with the support of some strong local authority there if it was to be able to derive any taxation from it.

Tūzar was not spared the general crisis which gripped the whole country after 1840. But the clan of the Awlād al-Hādif, who had taken over control from the Banū Yamlūl in the 16th century, had a strong economic position, acquired through trade, and was accordingly able to impose its supremacy in the council of notables and to function as tax collectors for the Beylik before falling into decline, it seems, in the Reform period of Tunis's history. In mid-20th century Tūzar had 12,000 inhabitants. After 1919 a railway linked it with Sfax. Its economy still remains essentially based on the production of the *deglat al-nūr* date.

(T. BACHROUCH)

TŪZŪK (T.), from *tuzük*, from the verb *tüz-* "to arrange, set in order," borrowed into Persian and naturalized as *tuzuk* and *tūzūk*. The word refers to a ruler's or military commander's "arrangement," or the order in which he keeps his soldiers and establishment. In his memoirs Bābur refers to the *tüzük* (military order and hierarchy) left by Čingiz Khān as having lasted among the Mughals down to his own time (fol. 100b). *Tūzūk* is often coupled with the words *ḳā'ida*, *maḍbūṭ*, and *ḍabṭ u rabṭ*, all of which are synonymous in these contexts.

It is clear that from the post-Tīmūrid period on, the word became a generic title for memoirs or biographies of rulers. The title *tūzūk(āt)* has been applied to a number of works, all of which are, or purport to be, memoirs or dicta of Turco-Mongolian rulers of Central Asia and/or Mughal India. The (spurious) memoirs of Amīr Temür or Tīmūr (Tamerlane) called *Malfūẓāt-i Tīmūrī* have an appendix called *Tūzūk(āt)-i Tīmūrī*, which has been translated as "Institutes". Bābur's memoirs have been called *Tūzūk-i Bāburī*; the Mughal emperor Djahāngīr's memoirs are often called *Tūzūk-i Djahāngīrī*, even though the author calls them the *Djahāngīr-nāma* several times in the work itself; a late 18th-century history of the Niẓāms of Ḥaydarābād is called *Tuzuk-i Āṣafī*; the Urdu translation (Agra 1902) of the life of the Amīr 'Abd al-Raḥmān Khān of Afghānistān (d. 1901) is called *Tuzuk-i 'Abd al-Raḥmān*.

TYRE [see ṢŪR].

U

'UBĀDA B. **MĀ'** AL-**SAMĀ'** [see IBN MĀ' AL-SAMĀ'].

UBĀGH, 'AYN UBĀGH, the name of a spring or watercourse on the eastern, sc. 'Irāḳī, fringes of the Syrian Desert which was the scene of a pre-Islamic *yawm* or battle of the Arabs.

The confused Arabic sources take this as being the battle of A.D. 554 in which the Lakhmid al-Mundhir III b. al-Nu'mān II was killed fighting the Ghassānid al-Ḥārith b. Djabala [*q.v.*], in fact, the *yawm al-Ḥalīma* (see e.g. al-Bakrī, *Mu'djam mā 'sta'djama*, i, 95; Yāḳūt, *Buldān*, ed. Beirut, iv, 175. Cf. A.P. Caussin de Perceval, *Essai sur l'histoire des arabes avant l'Islamisme*, Paris 1847-8, ii, 133; A. Musil, *Palmyrene, a topographical itinerary*, New York 1928, 144 n. 38; and GHASSĀNIDS). However, Nöldeke, in his *Die ghassânischen Fürsten aus dem Hause Gafna's*, 23-4, followed by G. Rothstein, *Die Laḥmiden*, 103, identified 'Ayn Ubāgh with a later Ghassānid-Lakhmid encounter, one during the campaign of 569 when al-Mundhir b. al-Ḥārith defeated the Lakhmid Ḳābūs b. al-Mundhir III and advanced on the latter's capital of al-Ḥīra [*q.v.*] to within three *mansiones* or stages of it. Al-Mundhir's encampment would obviously be at a watering-place, and the location of 'Ayn Ubāgh would correspond well to this, as noted by I. Shahîd, *Byzantium and the Arabs in the sixth century*, Washington D.C. 1995, i, 342-3.

Bibliography: Given in the article.

'UBAYD ALLĀH [see AL-MAHDĪ 'UBAYD ALLĀH].

'UBAYD ALLĀH B. AL-**'ABBĀS** B. 'ABD AL-MUṬṬALIB, Abū Muḥammad, Companion and paternal cousin of the Prophet Muḥammad and younger brother of the famed scholar and reciter of traditions 'Abd Allāh b. al-'Abbās [*q.v.*], born in the year of the *Hidjra*, died in the reign of Yazīd b. Mu'āwiya or in 85/704 or in 87/706. He was further related to the Prophet in that his mother Umm al-Faḍl bt. al-Ḥārith al-Hilāliyya was the sister of Muḥammad's wife Maymūna [*q.v.*] (Ibn Ḳutayba, *Ma'ārif*, ed. 'Ukāsha, 121, 367; al-Balādhurī, *Ansāb al-ashrāf*, iii, ed. al-Dūrī, 447). Unlike his brother, he handed down few traditions, but was famed for his hospitality.

He was a strong partisan of his nephew 'Alī b. Abī Ṭālib, and during the latter's caliphate acted as 'Alī's governor over Yemen, leading the Pilgrimage in 37/658 and again in 39/660 when he had to confront in Mecca the rival Pilgrimage leader sent by Mu'āwiya, Yazīd b. Shadjara al-Ruhāwī (al-Ṭabarī, i, 3390, 3443, 3448, 3474). When Mu'āwiya's commander Busr b. Arṭāt [*q.v.*] approached Yemen in 40/660-1, 'Ubayd Allāh fled, eventually to Kūfa, leaving behind two of his sons to be killed by Busr. He was a supporter of al-Ḥasan's claims to succeed to the caliphate after 'Alī's assassination, but when Mu'āwiya advanced into the Sawād, was bought off by the Umayyad for a million dirhams [see (AL-)ḤASAN B. 'ALĪ]. The remainder of his life was spent at Medina, where he died at an advanced age.

Bibliography: The main sources are Balādhurī, *Ansāb al-ashrāf*, iii, 55-65, and Ibn al-Athīr, *Usd al-ghāba*, iii, 340-1. See also Ziriklī, *A'lām*, iv, 349.

(C.E. BOSWORTH)

'UBAYD ALLĀH B. **'ABD ALLĀH** AL-**HUDHALĪ** [see FUḲAHĀ' AL-MADĪNA AL-SAB'A. V., in Suppl.].

'UBAYD ALLĀH B. **ABĪ BAKRA**, Abū Ḥātim, Arab commander of the Umayyads and governor in Sīstān, d. 79/698.

The Abū Bakra family were of *mawlā* origin, Abū Bakra's father being apparently an Abyssinian slave. Although he married a free Arab wife from the Banū 'Idjl, 'Ubayd Allāh himself retained a dark and swarthy complexion, being described as *adgham*; an attempted filiation of the family to al-Ḥārith b. Kalada [*q.v.* in Suppl.], the so-called "Physician of the Arabs", was later disallowed by the caliph al-Mahdī. The family prospered in Baṣra as partisans of the Umayyads and through the patronage of the governor of 'Irāḳ Ziyād b. Abīhi [*q.v.*]. 'Ubayd Allāh was governor of Sīstān 51-3/671-3, and early in 'Abd al-Malik's reign he was prominent amongst the pro-Umayyad forces in Baṣra against Muṣ'ab b. al-Zubayr [*q.v.*].

He again became governor of Sīstān in 78/697-8 under al-Ḥadjdjādj, with the task of raiding into the region of eastern Afghānistān and recalling the local ruler, the Zunbīl, to his obligation of paying tribute. But the Arab expedition of summer 79/698 proved a disaster; the retrospectively-styled "Army of Destruction" (*Djaysh al-Fanā'*) was largely destroyed by starvation and by attacks of the Zunbīl's followers, and 'Ubayd Allāh died at Bust on the way back with the army's remnants.

Bibliography: On the Abū Bakra family, see the section in al-Balādhurī, *Ansāb al-ashrāf*, i, ed. Ḥamīdallāh, 489-505. The episode of the "Army of Destruction" is described above all in idem, *Futūḥ*, 399, and *Ansāb*, ed. Ahlwardt as *Anonyme arabische Chronik*, 311-18; in Ṭabarī, ii, 1036-9, tr. E.K. Rowson, 183-6; and in the anonymous locl history, *Ta'rīkh-i Sīstān*, 110-12, tr. M. Gold, 89-90 (confused). These and other sources are utilised in C.E. Bosworth, *'Ubaidallāh b. Abī Bakra and the "Army of Destruction" in Zābulistān (79/698)*, in *Isl.*, 1 (1973), 268-83; for 'Ubayd Allāh's earlier career, see idem, *Sīstān under the Arabs . . .*, Rome 1968, 21, 24.

(C.E. BOSWORTH)

'UBAYD ALLĀH B. **AḤMAD** B. **ABĪ ṬĀHIR**, Abu 'l-Ḥusayn, son of the historian, littérateur and bookman Ibn Abī Ṭāhir (d. 280/893 [*q.v.*]), and a historian and author in his own right. Ibn al-Nadīm describes the father as a superior author (*Fihrist*, 147) but al-Ḳifṭī considers him equally "assiduous in [his] reporting" (*Ḥukamā'*, 111). He died in his home town, Baghdād, in 313/925; his date of birth is unknown.

The mention of 'Ubayd Allāh in the biographical literature rests on the fact that he is his father's son and that he wrote a continuation of his father's *K. Baghdād*, a history, properly a regnally-organised *akhbār* collection, on Baghdād and its caliphs; consequently, he is mentioned in the principal notices devoted to Ibn Abī Ṭāhir. The only extant biographical notices devoted exclusively to him are in *Ta'rīkh Baghdād* (iv, 211, x, 348) and in the *Fihrist* (147). However, neither provides much information

about his life, focusing rather on the supplement to *K. Baghdād*. Ibn Abī Ṭāhir wrote until the end of al-Muhtadī's reign, and ʿUbayd Allāh added *akhbār* about al-Muʿtamid, al-Muʿtaḍid and al-Muktafī; he did not complete the section on al-Muḳtadir. He also wrote works entitled *al-Sikbādj wa-faḍāʾiluhā* ("The virtues of Sikbādj" [*q.v.*]) and *al-Mutaẓarrifāt wa 'l-mutaẓarrifūn* ("Women and men who affect elegance").

Extracts from ʿUbayd Allāh's history survive. The *Fihrist* quotes one dealing with the later life, capture, and execution of the mystic al-Ḥallādj (d. 309/922 [*q.v.*]). Ibn Khallikān quotes a section on the Ṣaffārids, but in an abridged version because of "ʿUbayd Allāh's prolixity" (Ibn Khallikān, *Wafayāt*, ed. ʿAbbās, vi, 416), an example of which may be found in the long extract on al-Muʿtaḍid preserved by al-Maḳrīzī (*Khiṭaṭ*, i, 263-70). See also al-Dhahabī, *Siyar*, xiii, 200, xiv, 55, and Ibn Ḥadjar, *Lisān*, i, 190, 373.

Prominent students include ʿAlī b. Hārūn al-Munadjdjim (d. 352/963) and Abū ʿUmar b. Ḥayyawayh (295-381/907-91). Contact with the former comes as no surprise, as Abū Aḥmad Yaḥyā b. ʿAlī al-Munadjdjim (241-300/855-913 [*q.v.*]) is recorded in extant *isnād*s as a primary transmitter to ʿUbayd Allāh (e.g. al-Azdī, *Badāʾiʿ*, 69-70, 79-80).

Like his father, or perhaps because of him, ʿUbayd Allāh also came into contact with prominent literary personalities such as al-Buḥturī [*q.v.*], as attested in an anecdote where al-Buḥturī declaims seven verses to him (al-Tanūkhī, *Nishwār*, vi, 145, and al-Sarrādj, *Maṣāriʿ al-ʿushshāḳ*, ii, 195).

Bibliography (in addition to references in the text): *Fihrist*, 210; Elijah of Nisibis, *History*, 132-5; Ibn al-Kāzarūnī, *Mukhtaṣar al-taʾrīkh min awwal al-zamān ilā muntahā 'l-dawla al-ʿAbbāsiyya*, Baghdād, 1390/1970, 148; al-Rashīd b. al-Zubayr, *Dhakhāʾir*, 53; Yāḳūt, *Irshād*, i, 610, iii, 3-8, v, 102; idem, *Buldān*, i, 153, ii, 788; Maḳrīzī, *Khiṭaṭ*, Cairo 1270, i, 273; Azdī, *Badāʾiʿ*, 89; K. ʿAwwād, *Fihrist makhṭūṭāt khizānat Yaʿḳūb Sirkīs*, Baghdād 1385/1966, 17, no. 47; Rosenthal, *Historiography*, 81-3.

(Shawkat M. Toorawa)

ʿUBAYD ALLĀH b. **BASHĪR** (or Bushayr) b. al-Māḥūz, leader of the Azāriḳa [*q.v.*] sect of the Khāridjites.

(Al-)Māḥūz was the nickname of Yazīd b. Musāḥiḳ of the Banū Salīṭ b. al-Ḥārith b. Yarbūʿ of Tamīm. Several of the Banu 'l-Māḥūz, among them ʿUbayd Allāh, were among the Baṣran Khāridjites who went to Mecca to support ʿAbd Allāh b. al-Zubayr [*q.v.*] in 64/683 but deserted him when he would not denounce the caliph ʿUthmān. They returned to Baṣra together with Nāfiʿ b. al-Azraḳ [*q.v.*] and then joined his revolt. After Nāfiʿ was killed during fighting at Dūlāb (Djumādā II 65/Dec.-Jan. 684-5), he was first succeeded by ʿUbayd Allāh's brother ʿAbd Allāh, who was also killed in the battle, and then by ʿUbayd Allāh. The latter defeated the Baṣran army and was confirmed as caliph and *amīr al-muʾminīn* by the rebels. In Dhu 'l-Ḳaʿda 65/June-July 685 he routed a Baṣran army under ʿUthmān b. ʿUbayd Allāh b. ʿUmar, brother of the Zubayrid governor of Baṣra, at Dāris on the Dudjayl; ʿUthmān was killed in the battle. ʿUbayd Allāh was able to establish himself at Nahr Tīrā, and Azraḳī horsemen raided the Tigris bank near Baṣra. Al-Muhallab b. Abī Ṣufra [*q.v.*] was now put in charge of the war against the Azāriḳa. After initially slow progress, he decisively defeated them at Sillabrā east of the Dudjayl in Shawwāl 66/May 686, and ʿUbayd Allāh was killed. His head was carried by a man of the Azd to Baṣra, but on his way he accidentally met three of ʿUbayd Allāh's brothers, who killed him and buried their brother's head. ʿUbayd Allāh was succeeded as leader of the Azāriḳa by his cousin (not brother) al-Zubayr b. ʿAlī b. al-Māḥūz.

(W. Madelung)

ʿUBAYD ALLĀH b. **ḤABḤĀB**, Umayyad governor of Egypt, Ifrīḳiya and al-Andalus, b. at an unknown date, d. after 123/741.

He was chief of the tribe of Salūl of northern ʿIrāḳ and famed for his talent as an orator. Beginning a career in the administration, he was first appointed head of taxation in Egypt, and as such, told the caliph Hishām that the land of Egypt could yield more money, thereby provoking a revolt of the Copts in several districts. His links with the caliph seem to have been close, since at his request, Hishām dismissed the governor of Egypt al-Ḥurr b. Yūsuf in 108/728 and likewise his successor Ḥafṣ b. al-Walīd (who was only in post for two weeks) and entrusted to ʿUbayd Allāh the choice of successor. The caliph then nominated ʿUbayd Allāh himself to the governorship of Egypt, at a date not exactly known, and gave him carte blanche to install several other groups of Ḳays there, thus raising the number of Ḳaysīs in Egypt to several thousands.

Then in Rabīʿ II 116/May-June 734 he appointed him successor to ʿUbayda b. ʿAbd al-Raḥmān in Ifrīḳiya and al-Andalus. As soon as ʿUbayd Allāh arrived there, he brought al-Mustanīr b. al-Ḥārith out of prison and gave him rule over Tunis, and his own son Ismāʿīl rule over the Sūs, leaving a further son, al-Ḳāsim, over Egypt. In Spain he appointed ʿUḳba b. al-Ḥadjdjādj and, on the latter's death, restored to office ʿAbd al-Malik b. Ḳaṭan whom he had earlier dismissed. ʿUbayd Allāh launched several campaigns against the Sūs and other Berber areas, which were sealed by a great victory and an enormous booty. The Berbers, headed by Maysara al-Faḳīr, then raised a revolt against him at Tangier and killed his representative there. Maysara claimed the title of caliph, headed towards the Sūs, killed ʿUbayd Allāh's son and thus brought about a general uprising in Ifrīḳiya. ʿUbayd Allāh deputed Ḥabīb b. Abī ʿUbayda to quell this and himself attacked the ruler of Tlemcen, after which the sources record the end of his governorship in Ifrīḳiya, since Hishām recalled him in Djumādā I 123/March-April 741.

'UBAYD ALLĀH b. 'UMAR, a son of the second caliph and Companion of the Prophet, d. 37/657.

'Ubayd Allāh was the son of 'Umar b. al-Khaṭṭāb by his wife Umm Kulthūm Mulayka bt. Djarwal of the Khuzā'a, who, divorced by 'Umar after he converted to Islam, married a kinsman and remained pagan in Mecca. 'Ubayd Allāh is known principally for having avenged his father's death in Dhu 'l-Ḥidjdja/23 November 644 at the hands of Abū Lu'lu'a, a Persian slave of al-Mughīra b. Shu'ba [*q.v.*]. According to most accounts, once captured, Abū Lu'lu'a killed himself, so 'Ubayd Allāh turned his wrath on his unidentified daughter, on al-Hurmuzān [*q.v.*], a former Sāsānid commander who had converted to Islam, and finally on the Christian Djufayna, killing all three; according to al-Ya'ḳūbī (*Ta'rīkh*, ii, 185), 'Ubayd Allāh killed Abū Lu'lu'a, his wife, and daughter. Various sources also have him railing against the presence in Medina of *'adjamī* slaves, and even against some of the *muhādjirūn* (see e.g. Ibn Sa'd, *Ṭabaḳāt*, v, 8-9; al-Mas'ūdī, *Murūdj*, ed. Pellat, iii, 125). The sources thus give the impression that he was at least slightly unhinged, and the family's *bête noir* (it is said that he was beaten by 'Umar for drinking, al-Ṭabarī, i, 2388); his political motives (see e.g. al-Dīnawarī, *al-Akhbār al-ṭiwāl*, 180, where he later claims to avenge 'Uthmān's murder) are generally given short shrift. Be this as it may, the killing was considered unlawful, and 'Ubayd Allāh was held by Sa'd b. Abī Waḳḳāṣ in his *dār*; he was soon granted a pardon by 'Uthmān, a decision that was grist for the anti-'Uthmān mill. Fearing 'Alī, who swore to hold him accountable for the murder, 'Ubayd Allāh fled to Mu'āwiya in Syria. He was one of Mu'āwiya's commanders at the battle of Ṣiffīn [*q.v.*], where he was killed in 37/657.

'UBAYD ALLĀH b. ZIYĀD, Umayyad governor of Baṣra, Kūfa and the East, d. 67/686.

The son of Ziyād b. Abīhi [*q.v.*], 'Ubayd Allāh seems to have been groomed by his father for a successful life in politics, and in both policy and style, father and son are frequently paired by the sources. Some accounts explicitly connect 'Ubayd Allāh's appointment as governor of Khurāsān to his father's death (thus al-Ya'ḳūbī, *Ta'rīkh*, ii, 281; al-Balādhurī, *Futūḥ al-buldān*, 410), but a precise chronology is elusive. According to Khalīfa b. Khayyāṭ, Mu'āwiya appointed 'Ubayd Allāh over Khurāsān in 53/672-3, and over Baṣra in 55/674-5 (*Ta'rīkh*, 135 ff.); but according to al-Ṭabarī's sources, his rule in Khurāsān began in 54/673-4, and that in Baṣra a year later (ii, 166-7, 172). Ideally, these and similar problems of chronology would be solved by the relatively voluminous—and dated—silver coinage that bears 'Ubayd Allāh's name; unfortunately, the earliest issues are problematic, and at present, the most one can say is that he was ruling in the east from 54/674 onwards and in Baṣra from 56/675-6 onwards. At this point the numismatic evidence improves, and can throw some light on administration and cultural style. Baṣra enjoys pride of place among the eastern mints that struck his coins; Dārābdjird, Dast-i Maysān, Narmāshīr, and Djayy also appear frequently, while Kūfa, which was added to his governorship of Baṣra in 60/679-80, appears very infrequently. All the coins are of the Arab-Sāsānid type; the language is Pahlavi, and dating is occasionally based on the era of Yazdagird. In the 50s/670s one would expect a Sāsānid-Persian cultural milieu for 'Ubayd Allāh's administration, and in fact the literary sources suggest the same (M. Morony, *Iraq after the Muslim conquest*, passim). The series ends in 64/683-4, when the *ashrāf* of Baṣra ejected him from the city—an event reported in great detail by our sources (e.g. al-Ṭabarī, ii, 432 ff.; al-Balādhurī, *Ansāb al-ashrāf*, iv B, 97 ff.). In the confused aftermath of the death of Yazīd b. Mu'āwiya, 'Ubayd Allāh at first temporised, and even managed for a short time to secure the *bay'a* of the Baṣran *ashrāf*; but he could not outlive for long the Sufyānid system of rule in which both father and son had prospered. Forced to flee the city, he went to Syria where he threw his support behind Marwān b. al-Ḥakam. He fought for Marwān in the battle of Mardj Rāhiṭ [*q.v.*] and commanded armies in the Djazīra for Marwān and his son and successor 'Abd al-Malik; it was on his watch in Djumādā I 65/January 685 that Sulaymān b. Ṣurad [*q.v.*], and his men were massacred in Ra's al-'Ayn ('Ayn al-Warda). His death on the Khāzir river early in 67/686, where he was defeated by al-Mukhtār's commander Ibrāhīm b. al-Ashtar, is described in some detail by the Arabic sources (thus al-Balādhurī, *Ansāb al-ashrāf*, v, 247 ff.; Ibn A'tham, *Futūḥ*, vi, 139 ff.; al-Ṭabarī, ii, 707 ff.). Syriac sources are also familiar with al-Mukhtār's defeat of 'Ubayd Allāh. A Nestorian historian, who was probably writing in or near Sindjār in the last decade of the 7th century, knew of 'Ubayd Allāh as a commander of the "Westerners" (i.e., Syrians), and describes how he curried favour in Nisibis with John, a candidate for the patriarchate; he mistakenly calls him 'Abd al-Raḥmān (see Brock, *North Mesopotamia in the late seventh century. Book XV of John Bar Penkāyē's Rīš Mellē*, 64 ff.). Whereas this author numbers al-Mukhtār's men at 13,000, Michael the Syrian (*Chronique*, xi-xv) supplies the fantastic figure of 400,000 dead at the battle.

It is largely as suppressor of Khāridjites and oppressor of Shī'īs that 'Ubayd Allāh is described by our sources. According to some, 'Ubayd Allāh's increasingly harsh policies towards the former dated from 58/677-8 (al-Ṭabarī, ii, 185-6); one report has it that 'Ubayd Allāh and his father Ziyād together killed 13,000 Khāridjites, and 'Ubayd Allāh himself is said to have imprisoned 4,000 (*ibid.*, ii, 459-60). Al-Mubarrad states that 'Ubayd Allāh would sometimes imprison Khāridjites and sometimes kill them, but usually the latter (*al-Kāmil*, 594). His infamy among Shī'īs rests principally, but not exclusively, on his suppression of al-Ḥusayn b. 'Alī's rebellion in Muḥarram 61/October 680; according to some accounts, 'Ubayd Allāh abused the slain 'Alid's severed head.

'UBAYD B. SHARYA [see IBN SHARYA].

'UBAYD-I ZĀKĀNĪ, or Niẓām al-Dīn 'Ubayd Allāh al-Zākānī, Persian poet of the Mongol period who became especially famous for his satires and parodies. He was born into a family of scholars and state officials descending from Arabs of the Banū Khafādja [*q.v.*] settled in the area of Ḳazwīn since early Islamic times. In 730/1329-30 the historian Ḥamd Allāh Mustawfī described him as a talented poet and a writer of learned treatises. A collection of Arabic sayings by prophets and wise men, entitled *Nawādir al-amthāl*, belongs to this early period. When later in the same decade the central government of the Īl-Khāns collapsed, 'Ubayd found a refuge in Shīrāz at the court of Abū Isḥāḳ Īndjū [see INDJŪ] whose death in 758/1357 he commemorated in an elegy. A few years earlier his patron had been ousted from Shīrāz by Mubāriz al-Dīn Muḥammad of the Muẓaffarids [*q.v.*]. This probably forced 'Ubayd to leave the town for some time, but he must have returned during the reign of Shāh Shudjā' (765-86/1364-84). 'Ubayd addressed panegyrics to the rulers of Fārs as well as to Sultan Uways I (757-76/1356-74) of the Djalāyirids [*q.v.*], who resided in Baghdād and Tabrīz. According to later sources, he is said to have died in 771/1369-70 (Ṣādiḳ Iṣfahānī in *Shāhid-i Ṣādiḳ*) or 772/1370-1 (Taḳī al-Dīn Kāshī in the anthology *Khulāṣat al-ash'ār*). The fact that, in the latter year, his son inherited a manuscript copied by 'Ubayd in 768/1366-7 confirms both datings (cf. 'Abbās Iḳbāl, *Kulliyyāt*, Introd., pp. *hā'* ff.).

The collected works of 'Ubayd-i Zākānī comprise in the first place a *Dīwān* with his serious court poetry, mainly *ḳaṣīdas* and *ghazals*. The latter poems are remarkable, in particular because many of them must have been written in Shīrāz when Ḥāfiẓ [*q.v.*] was active there as well. To the non-satirical works further belongs the *'Ushshāḳ-nāma*, a treatise on the theory of secular love in *mathnawī* interspersed with *ghazals*, dedicated in 752/1350 to Abū Isḥāḳ. This part of his poetry was published separately by 'Abbās Iḳbāl (Tehran 1321 *sh*./1942) and S.A. Usha (Madras 1952).

His satirical works are written both in prose and poetry, and usually in a combination of the two. Several of these texts are parodies of conventional genres of moralising literature. In *Akhlāḳ al-ashrāf* ("The morals of the noble"), written in 740/1339-40, the "abolished doctrine" (*madhhab-i mansūkh*) of commonly accepted virtues is mockingly replaced by a more up-to-date "preferred doctrine" (*madhhab-i mukhtār*) prescribing the exact opposites of the same virtues. This short treatise was partially translated by E.G. Browne and H. Javadi; the chapter on chastity, bowdlerised by both, was newly edited and translated by P. Sprachman, *Suppressed Persian*, 55-61. In a similar vein, 'Ubayd gave satirical definitions of items belonging to the sphere of religion, politics and social life in his *Risāla-yi ta'rīfāt*, also known as *Kitāb-i dah faṣl*, and presented cynical maxims in the *Risāla-yi ṣad pand*. The *Risāla-yi dilgushā* is a collection of funny, and often bawdy, tales and anecdotes in Arabic and Persian. An interesting specimen of literary satire is the *Rīsh-nāma* ("The book of the beard"), in which a personification of the beard defends its virtues in a dispute with the poet. The main topic is the first appearance of the beard on a young boy's cheeks, a well-known motif of erotic poetry. An Italian translation of the *Rīsh-nāma* was made by A. Bausani (*Il Libro della barba* in *A Francesco Gabrieli*, Rome 1964, 1-19); Sprachman edited and translated the same text in *Suppressed Persian*, 61-75. The other satirical texts also contain several passages with jokes of a homo- or heterosexual nature. In three short *fāl-nāmas* 'Ubayd made fun of the practice of taking auguries. In 1303/1885-6 the satirical works were printed at Constantinople with introductions by Mīrzā Ḥabīb Iṣfahānī and the French consul M. Ferté (reprinted in *Kulliyyāt*, ed. 'A. Iḳbāl).

His most popular work is a *ḳaṣīda* entitled *Ḳiṣṣa-yi mūsh-u gurba* ("The story of the mice and the cat"). This fable, denouncing the brutality and hypocrisy of a tyrant, is sometimes taken to criticise the harsh rule of Mubāriz al-Dīn under which both 'Ubayd and his contemporary Ḥāfiẓ had to suffer. As the poem does not occur in the earliest manuscripts of 'Ubayd's collected works, the attribution to him is not entirely certain (cf. Ateş, 269). Among the many translations, those by Mas'ūd Farzād (London 1945) and Omar Pound (London 1972), both into English, and by Herbert W. Duda into German (Salzburg 1947) are noteworthy.

Bibliography: The edition of the *Kulliyyāt* by 'A. Iḳbāl (Tehran 1331-2 *sh*./1953) does not provide adequate texts of the satirical works; for recent work on a new edition, cf. Dj. Mahdjūb, in *Īrānshināsī*, vi (1994), 139-59, 287-304, as well as the specimens published by Sprachman. See further Browne, ii, 230-57; A. Christensen, *En persisk satiriker fra Mongolertiden*, Copenhagen 1924; A.J. Arberry, *Classical Persian literature*, London 1958, 289-300; A. Bausani, in A. Pagliaro and A. Bausani, *Storia della letteratura persiana*, Milan 1960, 450-63; J. Rypka, *History of Iranian literature*, Dordrecht 1968, 272-3; A. Sprachman, in E. Yarshater (ed.), *Persian literature*, Albany 1988, 227-34; idem, *Suppressed Persian. An anthology of forbidden literature*, Costa Mesa, Cal. 1995, 44-75. (J.T.P. DE BRUIJN)

UBAYY B. KA'B al-Anṣārī al-Madanī, a member of the Banū Ḥudayla of the Medinan clan of al-Nadjdjār, secretary to Muḥammad in Medina and early collector of the Ḳur'ān; his date of death may have been anywhere between 19/640 and 35/656, according to Ibn al-Djazarī, *Ṭabaḳāt*, no. 131. Known as *sayyid al-ḳurrā'* and renowned for his memory (he was able to recite the entire Ḳur'ān in 8 nights), Ubayy is said to have collected his own copy of the Ḳur'ān prior to the collection commanded by 'Uthmān, while also having been involved in the latter's collection. Both the contents and the *sūra* order of his text are reported to have been different to

some extent from the later authoritative version (e.g. *Fihrist*, 27; al-Suyūṭī, *al-Itḳān fī ʿulūm al-Ḳurʾān*, ed. M. Abu 'l-Faḍl Ibrāhīm, Cairo 1967, i, 181-2); al-Bukhārī cites ʿUmar as declaring Ubayy's text to be defective (*Faḍāʾil al-Ḳurʾān, bāb* 8). Ubayy's version was accepted by the Syrians until it was displaced by the ʿUthmānic text [see KUR'ĀN, 3 b]. As secretary to Muḥammad, he is said to have memorised portions of the Ḳurʾān upon their revelation in order to recite them back to Muḥammad "for guidance and instruction", as well as to have written out various treaties according to various reports in Ibn Saʿd.

AL-**UBAYYIḌ**, conventionally EL OBEID, the administrative centre of the Northern Kordofan Province in the modern Republic of the Sudan and the main town of the whole region of Kordofan (lat. 13° 10' N., long. 30° 14' E.). For its part in the history of the region, see KORDOFĀN.

UBBADHA, UBBADHAT/UBBADAT AL-ʿARAB, modern Úbeda in Spain, a small town, in the province of Jaén, some 12 km/7 miles from Bayyāsa/Baeza, said to have been founded in the time of ʿAbd al-Raḥmān II (206-38/822-52) and completed under his son Muḥammad I by the governor of Jaén, Hāshim b. ʿAbd al-ʿAzīz. The designation "of the Arabs" allegedly distinguished it from Ubbadhat Farwa in the *kūra* of Ilbīra/Elvira. Despite its supposedly new foundation, recent archaeological excavations have revealed material from the Late Empire in the vicinity of the Santa Maria church, itself probably the main mosque of the Islamic town, leading one to think that there was in reality a refortification of an existing settlement or its raising to the level of a *madīna*.

As a town of only moderate or small importance, it was famed for the richness of its agricultural lands, producing vines and corn, and for its dancing girls. A certain Ibn Maymūn was amongst the rebels of Baeza and Úbeda against the *amīr* ʿAbd Allāh (275-300/888-912). Early in his reign, ʿAbd al-Raḥmān III reduced the rebels of Jaén, but in 304/916-17 Sulaymān, a son of Ibn Ḥafṣūn [*q.v.*], seized control of Úbeda, and though he submitted in the next year, it was clearly some time before the region returned to normality.

In the period of the Taifas, Úbeda probably passed, with Jaén and Baeza, to al-Maʾmūn b. Dhi 'l-Nūn, ruler of Toledo during the time of his great extension of power southwards to include Cordova and just before his death in 467/1075, before the ʿAbbādids [*q.v.*] of Seville gained control of the whole valley of the Guadalquivir. This last passed to the Almoravids in 484/1091, and Úbeda remained in their dominions, despite its exposure to Christian raids, till the end of their presence in the Iberian Peninsula, except perhaps for a brief occupation *ca.* 539/1144 by Zafadola (Sayf al-Dawla Ibn Hūd), the ally of Alfonso VII of Castile. The last Almoravid Yaḥyā Ibn Ghāniya had to cede Úbeda and Baeza to Alfonso in 542/1147, until the Almohads regained these two towns and Almeria ten years later. But the North African incomers had also to face local Muslim resistance; Muḥammad b. Mardanīsh [see IBN MARDANĪSH] and his father-in-law Ibrāhīm b. Hamushk seized Úbeda and Baeza in 554/1159, but the latter's rallying to Abū Yaʿḳūb Yūsuf ten years later delivered the two towns to the Almohads.

The battle of Las Navas de Tolosa/al-ʿUḳāb (609/1212 [*q.v.*]) is known in Christian sources as that of Úbeda. After the battle, the victors took Úbeda, whose inhabitants, unlike those of Baeza, had not evacuated the town; many were killed or made captive, including amongst these last the *ḳāḍī* of the town, Abu 'l-Ḥasan ʿAlī b. Ḳaṭrāl, later freed to exercise the same office in other towns of al-Andalus and the Maghrib before dying at Marrakesh. But the town was then evacuated, for reasons which remain obscure, by the Christians, allowing a few years more of Islamic occupation. With the definitive fall of Baeza, probably at the end of 1226, Úbeda was besieged on 6 January 1233 by Ferdinand III, who had three years earlier united the crowns of León and Castile. With no possibility of help from the Hūdids, it surrendered in July, with the Muslim inhabitants required to evacuate the town but allowed to take with them their belongings to a chosen point.

It does not seem to have retained any Mudéjar population, probably because of its frontier position facing the amīrate of Granada. In 674/1275 the Marīnid Abū Yūsuf passed by its walls and captured or killed large numbers of Christians. In 769-70/1367-8, during the civil war between Pedro the Cruel of Castile and his half-brother Henry of Trastamare, Muḥammad V of Granada temporarily seized and pillaged Jaén and Úbeda; in the reverse direction, expeditions starting from Úbeda ravaged Granada. After 1492, the Christian town acquired the monuments which make up its present splendour.

AL-**UBULLA**, a town of mediaeval ʿIrāḳ situated in the Euphrates-Tigris delta region at the head of the Persian Gulf and famed as the terminal for commerce from India and further east.

It lay to the east of al-Baṣra [*q.v.*] on the right bank of the Tigris and on the north side of the large canal called Nahr al-Ubulla, which was the main waterway from al-Baṣra in a southeastern direction to

the Tigris and further to ʿAbbādān and the sea. The length of this canal is generally given as four *farsakhs* or two *barīds* (al-Muḳaddasī). Al-Ubulla can be identified with Ἀπολόγου Ἐμπόριον, mentioned in the *Periplus maris Erythraei* (*Geogr. graeci minores*, i, 285) as lying near the coast. In a story told by al-Masʿūdī (*Murūdj*, iii, 164 = § 1016) there is still a reminiscence of the period before the foundation of al-Baṣra, when al-Ubulla was the only seaport in the Tigris estuary. The earlier Arab authors, in discusing the ancient administrative division of lower Babylonia in Sāsānid times and the foundations of towns by the Sāsānid kings, identify al-Ubulla with other places, such as Dast Maysān (Ibn Khurradādhbih, 7) or Bahman Ardashīr (al-Ṭabarī, i, 687), although these provinces must be sought on the opposite bank of the Tigris; Eutychius (in Migne, *Patrologia graeca*, iii, 911) likewise makes al-Ubulla a foundation of Ardashīr I (see on this question, H.H. Schaeder, in *Isl.*, xiv, 27 ff.). Ibn Khurradādhbih, 7, quotes an Arabic poem of a contemporary of Muḥammad where al-Ubulla is mentioned.

In the story of the conquests, the town is reported to have been captured from a garrison of 500 Persian *asāwira* or cavalrymen by ʿUtba b. Ghazwān in the year 12/633, and this conqueror described it to the caliph ʿUmar as the "port of al-Baḥrayn, ʿUmān, al-Hind and al-Ṣīn" (al-Balādhurī, *Futūḥ*, 341; al-Ṭabarī, i, 2384). This conquest enabled the Arabs to seize the opposite bank of the river (Dast Maysān) and the so-called Euphrates country. After the rise of al-Baṣra, al-Ubulla became of secondary importance, but throughout the ʿAbbāsid caliphate it remained a large town. It was further from the sea than it had been, but still the effects of the tide were perceptible even above al-Ubulla. All the great geographical authors of the 4th-6th/10th-12th centuries give a longer or shorter notice of this place. Its environs are described in very laudatory terms (cf. Yāḳūt, i, 97); the borders of the Nahr al-Ubulla were one large garden (Ibn Ḥawḳal, 160). The part of the Tigris opposite al-Ubulla was important for navigation; in earlier ʿAbbāsid times there had been here a dangerous whirlpool, which had been eliminated by sinking a large quantity of stones in the water, the cost of this being borne by an ʿAbbāsid princess. Here was erected a beacon light which is described by al-Idrīsī (ed. Jaubert, i, 364 and see AL-KHASHABĀT). Al-Ubulla was in this period even larger than al-Baṣra, according to al-Muḳaddasī, 118; fresh water was taken thence by boats to al-Baṣra (*ibid.*, 129), and the place was noted for linen goods and also, as appears from al-Yaʿḳūbī (*Buldān*, 360), for its shipbuilding. Nāṣir-i Khusraw, who visited the place in 443/1051, gives likewise a vivid description of its beautiful surroundings (*Safar-nāma*, ed. Dabīr-Siyāḳī, Tehran 1335/1956, 118-19, Eng. tr. Thackston, Albany 1986, 95). On the other hand, al-Ubulla does not seem to have been an important strategic point; occasionally it was occupied, as in 331/942 by the governor of ʿUmān in his action against the Barīdī brothers in Baṣra (cf. Miskawayh, ed. Amedroz, ii, 46), but as the events showed it was far from being an important bulwark of that city. After the 7th/13th century the general decline of those regions seems to have brought about the gradual disappearance of the palace; Ibn Baṭṭūṭa (ii, 17-18, tr. Gibb, ii, 280-1) calls it only a village, and Mustawfī's *Nuzhat al-ḳulūb* (38) mentions only the Nahr al-Ubulla, but not the place itself. About this time it must have disappeared; later mentions (as late as the *Djihān-gushā* of Ḥādjdjī Khalīfa, 453) reproduce only obsolete geographical traditions. It is the modern city of al-Baṣra which has now grown up on its site.

(J.H. KRAMERS)

UBYKH, the name of one of three closely related peoples that inhabited the Northwest Caucasus, the other two being the Abkhāz [*q.v.*] and Circassians [see ČERKES].

The Ubykh, self-designation *a-Tpakh*, lived between the Black Sea shore and the watershed of the Great Caucasus near present-day Sochi; in the south they bordered on Abkhāzians, elsewhere on Circassians. The Ubykh, Sunnī Muslims, were at least bilingual, also speaking Circassian and/or Abkhāz. Their language, originally closer to Abkhāz, moved towards Circassian, due to intimate relations. They also shared most of their customary law with the Circassians. The Ubykh were the last of all mountain peoples of the Caucasus to surrender to Russia (March 1864), after which they had to migrate to the Ottoman Empire. Their numbers were already reduced to *ca.* 25,000 before the hardships of deportation. All Ubykh, and at least half of the Abkhāz and Circassians, ended up in Anatolia. In the early 20th century there were Ubykh villages in at least four regions: (1) east of Izmit, near Lake Sapanca; (2) near Bandirma, south of Lake Manyas; (3) near Maraş; and (4) near Samsun. The Ubykh in western Anatolia suffered greatly during the Greco-Turkish war (1919-22). The remaining Ubykh lived dispersed among communities of Circassian émigrés. The Ubykh language ceased to exist in 1992 with the death of its famous last speaker, Tewfik Esenç. Most descendants of the Ubykh nowadays identify as belonging to the Ubykh tribe of the Circassian people. The first data on the Ubykh and their language were noted in the 11th/17th century by Ewliyā Čelebi; the language, while dying, attracted many scholars, such as the Russians of German origin Uslar and Dirr, the Hungarian von Mészáros, the Norwegian Vogt, and, most importantly, the Frenchman Georges Dumézil who, in co-operation with T. Esenç, saved much of the Ubykh language and folklore. His pupil G. Charachidzé is preparing a dictionary.

UČČH, an ancient Indian, and then mediaeval Indo-Muslim town of the southwestern Pandjab, subsequently coming within the Bahāwalpūr [*q.v.*] Native State and now in Pākistān. It is situated some 56 km/35 miles to the west of Bahāwalpūr town and not far from the junction of the Indus and Chenab-Jhelum rivers (lat. 27° 18' N., long. 71° 12' E.).

1. History

Alexander the Great seems to have founded a city called in the Greek sources Ussa-Alexandria. Uččh

was certainly an ancient Hindu centre, known up to the 12th century as Dēōgaṙh "stronghold of the gods", and it is only thereafter that the actual name Uččh appears in the Muslim sources. It was taken by the Ghūrid Muʿizz al-Dīn Muḥammad in 572/1176, according to Firishta, and subsequently governed by the sultan's commander, Nāṣir al-Dīn Ḳubāča, but sacked by the fugitive Khwārazm-Shāh Djalāl al-Dīn in 620/1223, and then retaken from Ḳubāča by the Dihlī Sultan Iltutmush [*q.v.*] in 625/1228. The historian Djūzdjānī was made director of the Fīrūzī *madrasa* there and *ḳāḍī* of the army by Ḳubāča in 624/1227, and in the next year preached before Iltutmush before going on to Dihlī (Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, ed. Ḥabībī, i, 420, 447, tr. Raverty, i, 541, 615).

Uččh subsequently became famed for its many Muslim mystics and their shrines. Sayyid Djalāl al-Dīn Surkh Bukhārī (*fl.* early 8th/14th century) settled at Uččh from Multān and began spreading the principles of the Suhrawardiyya [*q.v.*] Ṣūfī order from there, and his son Djalāl al-Dīn Ḥusayn Makhdūm-i Djahāniyān (d. 785/1384 [*q.v.*]) made the Uččh branch of the order a major force in the religious and political life of Upper Sind. Because of its association with these two saints and the location of their tombs there, the town became known as Uččh-i Djalālī (see K.A. Nizami, *Some aspects of religion and politics in India during the thirteenth century*, [2]Delhi 1974, 224-5). The town also acquired several shrines and tombs of Ismāʿīlī *pīrs*, including those of Ṣadr al-Dīn (d. early 9th/15th century?) and his son Ḥasan Kabīr al-Dīn [see KHODJA, at Vol. V, 26].

Uččh continued to play a significant role in Dihlī Sultanate history. It acquired a tradition of Ḳādiriyya Ṣūfī order scholarship, and ʿAbd al-Ḥaḳḳ Dihlawī (d. 1052/1642 [*q.v.*]) received Ḳādirī instruction there. Under the Mughal emperor Akbar it came within the *ṣūba* of Multān. Subsequent changes in the courses of the adjacent rivers affected its strategic importance, and reduced it by the early 19th century to a group of seven villages. It has, however, revived somewhat and has become a fair-sized town in the 20th century.

2. Monuments

Tombs and mosques are the only two types of building which have precariously survived numerous floods and the ravages of time. The most important shrine with its attached mosque remaining today is that of Djalāl al-Dīn Surkh Bukhārī. Both buildings are typical of the traditional flat-roofed timber construction, with square pillars, beams and brackets mostly carved with geometric patterns except for bell shapes, reminiscent of Hindu ornament. The wood ceilings are divided by rafters which enclose series of star-patterned squares. These have been repainted in bright red, green, white and blue. Geometrical carved wooden screens hide airing vents below the ceilings. Glazed tiles with geometric patterns decorate the outer walls. The square tomb of Ḳāḍī Abū Ḥanīfa Uččhī and the shrines of Radjan Ḳattāl and Djalāl al-Dīn Ḥusayn seem to belong to the 8th/14th century. Only in the next century were domed mausolea, similar to the mighty constructions in Multān [see MULTĀN. 2], erected on the old fort mound: these are the tombs of Bahāʾ al-Dīn, known as Bahāʾ al-Ḥalīm, the supposed master of Djalāl al-Dīn Ḥusayn, and of Bībī Djāwandī, his own great-granddaughter who died in 805/1402. The tomb is attributed to 900/1493. Despite uncertainty over dating, it is obvious that the tombs—even though only half of their fabric has survived—derive from the original type at Multān. The lesser size of the monuments and their squat domes, at a time when in Transoxania double-domes were the rule, underline the provincial character of the buildings. Apart from the use of tile mosaics and glazed moulded tiles, underglaze painted tiles in both monuments allow for a mid-century dating similar to examples in Bīdar [*q.v.*]. On the other hand, the simple colour scheme of blue, turquoise and white with plain terra cotta elements harks back to 8th/14th century Persia. As in other parts of the Subcontinent, the use of plain earthenware for glazed tiles makes for a poor finish. The composite body of Persian origin would bond better with the glaze, but this technique is seldom found on monuments in Sind.

(YOLANDE CROWE)

ʿŪD (A.) means basically "wood, piece of wood, plank, spar" (pls. *aʿwād, ʿīdān*).

I. IN DAILY LIFE

1. *ʿŪd* as perfume and incense and as a medicament

In the Arabic materia medica it indicates the so-called "aloe wood". This designation, used in trade, is conventional but incorrect because aloe wood is called *ṣabr* [*q.v.*]. *ʿŪd* has to do with certain kinds of resinous, dark-coloured woods with a high specific weight and a strong aromatic scent, which were used in medicine as perfume and incense (*ʿūd al-bakhūr*) and were highly coveted because of their rarity and value. The main suppliers of these woods are *Aquilaria agallocha* [Lour.] Roxb. (*Aloexylon agallochum* Lour.) and *Aquilaria malaccensis* Lam., *Thymelaeaceae*. Agallocha wood therefore is the better term. It was already correctly described by Dioscurides under ἀγάλ(λ)οχον (ed. Wellmann, i, 23), in the Arabic Dioscurides translation, *aghālūkhun* (ed. Dubler-Terés, i, 19).

There are many names of plants composed with *ʿūd* which belong to quite different families of plants. *Al-ʿūd al-hindī* is mostly synonymous with the above-mentioned Agallocha; *ʿūd al-rīḥ* ("fragrant wood"), e.g., is *Berberia vulgaris* L., *Berberidaceae; ʿūd al-ṣalīb* ("cross wood", so-named because the drug, if put "cross-wise" on the breast, is said to cure epilepsy) is *Paeonia officinalis* L., *Ranunculaceae; ʿūd al-ḳarḥ* ("active against ulcers") is *Anacyclus pyrethrum* D.C., *Compositae; ʿūd al-ʿuṭās* ("sneezing wood") is *Schoenocaulon officinale, Liliaceae*, etc. A long list is given by Dozy, *Suppl.*, s.v. *ʿūd*, with some thirty names, many of which in turn can indicate various plants.

The designation derived from the place of origin was also usual. According to most authors, *al-ʿūd al-mandalī* (from India) seems to rank as the most valuable wood, after that *al-ʿūd al-samandūrī* (also from India), the best kind of which is the blue one with much water, then the heavy, hard, compact one which does not contain water. Then follows *al-ʿūd al-ḳimārī*, and after that *al-ʿūd al-ṣanfī* and many others (see on these, 2. below). The most comprehensive description, the extraction, the classification and the use of *ʿūd* are found in al-Nuwayrī, *Nihāya*, xii, 23-38 (tr.

Wiedemann and found in the collected *Aufsätze zur arabischen Wissenschaftsgeschichte*, ed. W. Fischer, 1970, ii, 247-54).

For the medicinal use of the Agallochon, see above all, Ibn Samadjūn (see *Bibl.*): it opens obstructions of the spleen and the liver, fortifies the heart and gives the mouth a pleasant smell, alerts the senses, fortifies the nerves, strengthens the gums and absorbs the moisture of the stomach (*billat al-maʿida*).

Bibliography: Ibn Samadjūn, *Djāmiʿ al-adwiya al-mufrada*, Frankfurt 1992, iii, 123-30; Ibn al-Bayṭār, *al-Djāmiʿ li-mufradāt al-adwiya wa-'l-aghdhiya*, Būlāḳ 1291, iii, 143 (tr. Leclerc, nos. 1603-10); *Tuḥfat al-aḥbāb*, ed. Renaud and Colin, Paris 1934, nos. 280, 308, 318; M.A.H. Ducros, *Essai sur le droguier populaire arabe*, Cairo 1930, nos. 77, 164-7, 224; A. Dietrich, *Dioscurides triumphans*, Göttingen 1988, i, 19.

(A. Dietrich)

2. *ʿŪd* wood in mediaeval Islamic economic and social history

The terms used to qualify various kinds of *ʿūd*, the fragrant heartwood of the lign-aloe (Lat. *lignum-aloe*) or eagle-wood (both misnomers, in that the tree has no connection with the aloes-plant, see below, or with eagles, see 1. above), sc. *al-ʿūd al-hindī, al-ʿūd al-ḳimārī, al-ʿūd al-ṣanfī*, etc., indicate the place of origin of these products, i.e. India, Southeast Asia and the islands beyond. Ḳimār corresponds to Khmer or Cambodia (see ḳimār, with note of the ambiguities surrounding the exact nature of the aloes tree). Ṣanf [*q.v.*] is Čampa, Cambodia and the adjacent parts of what is now southern Vietnam [see čam]. Ḳimār and Ṣanf being tropical forest regions. Hence Arabic geographical literature stresses the importance of Further India for aloes wood: see e.g. al-Thaʿālibī, *Laṭāʾif al-maʿārif*, tr. C.E. Bosworth, *The Book of curious and entertaining information*, Edinburgh 1968, 139, 146; al-Marwazī, in V. Minorsky (ed. and tr.), *Sharaf al-Zamān Ṭāhir Marvazī on China, the Turks and India*, London 1942, text *39, tr. 51. The East Indian islands, now making up modern Indonesia, were likewise celebrated as sources of aloes-wood, and Marco Polo mentions both Chamba and Java the Lesser (sc. Sumatra) as sources for it, whilst Abu 'l-Faḍl ʿAllāmī's *Āʾīn-i Akbarī* gives Atčeh in Sumatra [see atjèh] and Tenasserim, the coastland of southern Burma [see mergui], as the sources of imports of *ʿūd-i djāwī* into Mughal India during the 16th century (Yule and Cordier, *The Book of Ser Marco Polo*, ²London 1903, ii, 268, 271-2, 284, 287; cf. also Ibn Baṭṭūṭa, *Riḥla*, iii, 228, tr. Gibb and Beckingham, iii, 876).

ʿŪd wood was early regarded as a luxury item in mediaeval Islam, and its uses included those for fine wood-carving and for furniture-making. The anonymous 5th/11th century author of the *K. al-Dhakhāʾir wa 'l-tuḥaf* (often attributed to the Ḳāḍī Ibn al-Zubayr) frequently mentions it amongst lists of presents given by potentates who had military or commercial connections with the Indian subcontinent or the Indian Ocean fringes, e.g. the Ṣaffārid Yaʿḳūb b. al-Layth [*q.v.*] and the Ziyādid ruler of Yemen Isḥāḳ b. Ibrāhīm (d. 371/981) (ed. M. Hamidullah, Kuwayt 1959, §§ 47, 76, 223, Eng. tr. Ghāda al-Qaddūmī, *Book of gifts and rarities*, Cambridge, Mass. 1996), and specifies that stools or chairs or stands, *karāsī* [see kursī], were made from it (§ 239).

Bibliography: Given in the article.

(C.E. Bosworth)

II. In music

The lute (*al-ʿūd*, from the usage of wood for its sound-chest and neck, see above) has been the most important musical instrument of Islamic peoples from the Atlantic shores to the Persian lands, with its use extending in pre-modern times into the Iranian world, Central Asia and Muslim India. The Arabic term has passed into European languages as Span. *alaude*, Port. *alaud*, Ital. *liuto*, Fr. *luth*, Eng. *lute*, Ger. *Laute*, etc.

1. The pre-modern history of the instrument and its usage

Arabic authors do not discriminate between the *barbaṭ* and the *ʿūd*, but there seems to have been a fundamental distinction between them. The *barbaṭ* had its sound-chest and neck constructed in one graduated piece, whereas in the *ʿūd* proper the sound-chest and neck were separate. Al-Masʿūdī says (*Murūdj*, viii, 88) that the lute was "invented" by Lamak [*q.v.*] (Lamech of *Genesis*, iv), but elsewhere (viii, 99) he tells us that it was generally acknowledged that the Greeks were the inventors. Pythagoras, Plato, Euclid and Ptolemy are also given the credit of its invention, although in his *Tanbīh*, 129, al-Masʿūdī says that, since Ptolemy does not mention the lute, the Greeks evidently did not know of it. The instrument was certainly of ancient origin. Whether the terra-cotta figure found at Goshen in Egypt, and attributed to the XIX-XX dynasties, shows a lute or not, we see undoubted examples of it in India from the 2nd century B.C. (sculpture from Bharhut in the Indian Museum, Calcutta).

We are told that the lute (*ʿūd*) was known in Persia at the time of the Sāsānid Shāpūr I (A.D. 241-72) during whose reign it is said to have been invented. It is more likely, however, that this instrument was the *barbaṭ*, and that the reference is rather to an improvement, possibly the substitution of a belly of wood instead of skin. In folk etymology, the Persians called the instrument the *barbaṭ* because it resembled the breast (*bar*) of a duck (*baṭ*) (al-Khʷārazmī, *Mafātīḥ al-ʿulūm*, 238). J.P.N. Land was of the opinion that the Persian lute referred to by Arabic authors was actually a two-stringed *ṭunbūr*, but several specimens of Sāsānid art (4th-7th centuries) have preserved designs of the Persian lute showing four strings, and the number of strings is confirmed from other sources (*JRAS* [1899], 59). That a two-stringed lute (*ʿūd*) existed at the end of the 7th century in ʿIrāḳ we know from *al-ʿIḳd al-farīd* (iii, 181), and the design of a two-stringed lute (*barbaṭ*) of the 8th-9th century has been preserved. The *barbaṭ* was the chief instrument of the Arab Ghassānids in pre-Islamic times (*Aghānī*¹, xvi, 15) and also of the Syrians in early Islamic times (*ibid.*, iii, 84). The Greek βαρβιτος would appear to have been borrowed from the Orient, and Strabo remarks on its barbaric name (*Geography*, x. iii, 17).

The Arabs of pre-Islamic times had certain types of the lute, known as the *mizhar, kirān* and *muwattar*. These would appear to have been identical with the *barbaṭ* but with skin bellies. The *mizhar* is unanimously identified with the lute (*ʿūd*) by the Arabic lexicographers (see also al-Masʿūdī, *Murūdj*, viii, 93; *al-ʿIḳd al-farīd*, iii, 186). In the 11th-century *Glossarium Latino-Arabicum* edited by Seybold, however, the *mazhar* (562) or *mizhar* (508) equates with *tympanum*, and the modern *mazhar* is a tambourine. Indeed, the identification by the older Arabic lexicographers is suspect. The praises of the *mizhar* are sung by the 6th-century poets Imruʾ al-Ḳays and ʿAlḳama. The *kirān*, according to al-Ḥarbī (d. 285/898), was also a lute (*ʿūd*), and this author says that it was so called because it was placed [in playing] against the breast. This instrument is also mentioned by Imruʾ al-Ḳays. The *muwattar* is referred to by the *mukhaḍram* poet Labīd and is generally consid-

ered to be a lute (*ʿūd*). About the close of the 6th century, al-Naḍr b. al-Ḥārith is said to have introduced the *ʿūd* from ʿIrāḳ into Mecca (al-Masʿūdī, *Murūdj*, viii, 93-4), the probable special feature of the instrument being its wooden belly. Al-Kalbī (d. 763) records (*Aghānī*[1], vii, 188) that the first to play the lute (*ʿūd*) in Medina was Sāʾib Khāthir (d. 683). In *ca.* 684, Ibn Suraydj [*q.v.*] played on a lute (*ʿūd*) constructed after the Persian manner (*Aghānī*[1], i, 98) (see the lute delineated in E. Herzfeld, *Die Malereien von Samarra*, Berlin 1927). This Persian type of lute continued to be favoured by the Arabs until Zalzal [*q.v.*] invented his "perfect lute" or *ʿūd shabbūṭ* (*Aghānī*[1], v, 24). The Persian lute, i.e. the *barbaṭ*, continued, however, to be favoured, side-by-side with the *ʿūd* proper.

Two other instruments of this type that we know of are the *pīpā* and *ḳabūs*. The *pīpā* is the so-called "balloon guitar" of the Chinese (Van Aalst, *Chinese music*, Shanghai 1884, 64), who are said to have possessed it since the days of the Han dynasty. It was introduced into ʿIrāḳ by the Mongols in the 13th century—Ibn Ghaybī (d. 838/1435) describes it—and may be found in the paintings of the Mughal-Persian school. Al-Muṭarrizī (d. 613/1216) refers to an instrument which he calls the *miʿzaf* [*q.v.*] and describes it as "a sort of *ṭunbūr*" made by the people of al-Yaman. According to the author of the *Tādj al-ʿarūs*, this was the instrument now known as the *ḳabūs*. The *ḳabūs* (al-Ḥidjāz), *ḳabbūṣ* (ʿUmān), *ḳanbūs* (Ḥaḍramawt), *ḳupūz* or *ḳūpūz* (Turkey) is a very old instrument. Ewliyā Čelebi [*q.v.*] says that the *ḳūpūz* was invented by a vizier of Meḥemmed II (d. 886/1481) named Aḥmed Pasha Hersek Oghlu. He describes it as being a hollow instrument, smaller than the *shashtār*, and mounted with three strings (*Travels*, i/2, 235). On the other hand, Ibn Ghaybī says that the *ḳūpūz rūmī* had five double strings. The instrument is no longer used by the Turks, although it has survived under the name of *kobza, koboz*, in Poland, Russia, and the Balkans, but here it is the lute proper and not a *barbaṭ* type. In Central Asia, a rather primitive bowed instrument is known as the *ḳūbūz* (ʿAbd al-Raʾūf Fiṭrat, *Uzbīk kilāssiḳ mūsiḳāsī*, Tashkent 1927, 43).

The *ʿūd* or lute proper, as introduced by Zalzal [*q.v.*] in the 8th century, had, apparently, a separate neck like the modern instrument, whereas the *barbaṭ* or Persian lute, which the Arabs had used until then, had no separate neck, the whole instrument from the head downwards being in one graduated piece, perhaps hollow throughout like the *ḳabūs*. Zalzal's *ʿūd al-shabbūṭ* was so named because it resembled the fish called the *shabbūṭ*. The description of the *shabbūṭ* given by the Arabic lexicographers leads to the inference that the sound-chest of Zalzal's lute was ovoid rather than pear-shaped (cf. the Spanish *machête* in Engel's *Catalogue of the musical instruments in the South Kensington Museum*, London 1874, pl. facing 248, which is in the form of a fish). We see the form of the *ʿūd al-shabbūṭ* persisting in Islamic art for centuries, but the pear-shaped sound-chest, upon which the *barbaṭ* was founded, eventually became the more popular type. Ziryāb (8th century [*q.v.*]), the famous Andalusī musician, is claimed to have improved the *ʿūd* at Baghdād, and in al-Andalus he introduced a plectrum of quill instead of the one of wood that had hitherto been used (al-Maḳḳarī, *Analectes*, ii, 86-7). He is also said to have introduced a fifth string, a device dealt with by both al-Kindī and al-Fārābī. For a full statement of the influence (*taʾthīr*, cf. ἦθος) of the strings of the *ʿūd* on man, see Farmer, *The influence of music: from Arabic sources*, London 1926.

At this period, the names of the various parts of the *ʿūd* were: *raʾs* (head, scroll), *malāwī* (tuning pegs), *anf* (nut), *ibrīḳ* or *ʿunḳ* (neck), *awtār* (strings), *dasātīn* (frets), *musht* (bridge-tailpiece), *wadjh* (belly), *ʿayn* (sound-hole) and *miḍrāb* (plectrum). For the particular names of the strings and frets, see MŪSĪḲĪ.

By the time of Ṣafī al-Dīn al-Urmawī (d. 692/1293 [*q.v.*]), the *ʿūd* had five strings (Carra de Vaux, *Le traité des rapports musicaux... par Safi ed-Dīn ʿAbd al-Mumin*, Paris 1891, 52), and this continued up to the 16th century in the East. This instrument, called the *ʿūd kāmil*, was slightly larger than the older classical lute (*ʿūd ḳadīm*) of four strings. A Persian treatise on music, the *Kanz al-tuḥaf* (14th century), and a Turkish imitation of the same by Aḥmed Oghlu Shukrullāh (15th century) give full details of the construction of the *ʿūd*. Unlike the mediaeval lute, the modern lute is not fretted. The seven double-stringed instrument is figured and fully described by Villoteau in the *Description de l'Égypte*, Paris 1809-26, fol. ed., i, 847, and in Lane's *Modern Egyptians* (1836). The Egyptian *ʿūd* of modern times has five double strings (Darwīsh Muḥammad, *Ṣafāʾ al-awḳāt*, Cairo 1910, 11; Muḥammad Kāmil al-Khulaʿī, *al-Mūsīḳī al-sharḳī*, Cairo 1904), although occasionally six double strings may be found. In Syria and Palestine, a seven double-stringed instrument was in use (Mīkhāʾīl Mushāḳa, *al-Risāla al-shihābiyya*) in the early 19th century, but this has now fallen into desuetude in favour of the five double-stringed instrument. Turkey has come to favour a six-stringed *ʿūd* with five double and one single string (Fakhrī Bey, *Naẓarī we-ʿilmī ʿūd dersleri*, Istanbul). Specimens of the *ʿūd* may be found in most museums of the world.

Among other types of the lute are the *tuḥfat al-ʿūd, kuwītra, lawṭa, rūd, shahrūd, ṭarab al-futuḥ, ṭarab zūr, awzān, rubāb, mughnī, shidirghū* and *rūḥ afzā*. The *tuḥfat al-ʿūd* is described by Ibn Ghaybī as a half-sized lute. The *ḳuwītra* or *ḳuwīthra* is a lute with a smaller and shallower sound-chest, its head being fixed obliquely rather than at a right angle as in the *ʿūd*. It is common to the whole of the Maghrib and has four double strings. The name is a colloquial diminutive of *ḳitāra* or *ḳithāra*, an instrument used in Muslim Spain as early as the 10th century (*al-ʿIḳd al-farīd*; see further ḲITHĀRA). The *lawṭa* is somewhat similar to the *ḳuwītra*. It has four double strings, and is very popular in Turkey. It appears to have been borrowed, together with its name, from Italy, and is certainly of comparatively modern adoption since it is not mentioned by Ewliyā Čelebi. The *rūd* is of Persian origin and the world, like *tār*, means a string. It was also an instrument of the lute family. Ibn Ghaybī mentions a *rūd khāṭī* or *rūd khānī*. The *rūdak* and *rūḍa* are also mentioned. Ewliyā Čelebi describes a *rūḍa* which had "recently" been invented by a certain Shukrullāh Beg. He likens it to the *čārtār*. Al-Maḳḳarī (*Analectes*, ii, 143-4), quoting al-Shaḳundī (d. 628/1231), mentions the *rūṭa* in al-Andalus. This may have been identical with the Latin *ruta, ruda, rote*. The *shahrūd* or *shāhrūdh* was allegedly invented in 299/912 by Ḥakīm b. Aḥwaṣ al-Ṣughdī (*Mafātīḥ al-ʿulūm*, 237). In al-Fārābī's day it had a compass of three octaves (d'Erlanger, *La musique arabe*, i, Paris 1930, 42). Ibn Ghaybī says that it had ten double strings and that it was twice the length of the ordinary *ʿūd*. The *ṭarab al-futuḥ* and *ṭarab zūr* are described by him. The first named had six double strings. The name *ṭarab* is still to be found in an instrument of India. The *ṭarab* was probably the original of the European *tiorba* (Farmer, *Historical facts for the Arabian musical influence*, 44). The *awzān* is also described by Ibn Ghaybī. It was a Turkish instrument

popular with the Mamlūk sultans of Egypt (al-Maḳrīzī, *Hist. des sultans Mamlouks*, i/1, 136). It was certainly not a drum as Quatremère thought, since Ibn Ghaybī places it among the lutes of three strings, and says that it was played with a wooden plectrum by Turkish minstrels. The *rubāb* (a lute) is to be distinguished from the *rabāb* (a viol). The former is a Persian and Eastern Turkish instrument with a vaulted sound-chest and incurvations at the waist. It is described at length in the *Kanz al-tuḥaf*. The lower part of the belly was of skin, and three double strings were mounted on it. Ibn Ghaybī says that sometimes four or five double strings were adopted. In Persia it has fallen into disuse. In Turkestan, however, it still continues to be favoured, but here it is strung with three single strings together with twelve sympathetic strings. It has found its way into India and China. The *mughnī* or *mūghnī* is said to have been invented by Ṣafī al-Dīn al-Urmawī. It was a sort of arch-lute and is described in the *Kanz al-tuḥaf* and by Ibn Ghaybī and Ewliyā Čelebi. The *shidirghū*, as it is written by Ibn Ghaybī, was a long instrument with half of its belly covered with skin. It had four strings but was mostly used, he says, in China. The *rūḥ afzā* had a hemispherical sound-chest with six double strings of silk and metal. Many instruments with a hemispherical sound-chest like this are to be found depicted in Persian art.

2. Usage in the 20th century

Although less prized by the Turks and set aside by the Persians, the *'ūd* has in the 20th century become popular amongst the Arabs as an instrument of accompaniment.

At the end of the 19th century, despite the supremacy of singing over instrumental sound, a taste for instrumental recitals re-appeared. In the 20th century, Egypt has produced Muḥammad 'Abd al-Wahhāb and Riyāḍ Sunbāṭī. In Syria, Farīd al-Aṭrash has stayed within the Egyptian taste but 'Umar Naḳshbandī, using an *'ūd* made by Anṭūn Naḥḥāṭ, has made use of Damascene themes in a talented fashion.

The great revival began in Istanbul towards the close of the Ottoman empire. Two lute makers, the Greek Manol (Adelfion Veniou) and the Armenian Onnik (Garipyan) made refined instruments with six courses, adapted for musical shifts, vibrato, nuances of dynamics and playing with four fingers of the left hand. The two finest interpreters have been Udi Hrant and Yorgo Bacanos, followed by a host of excellent soloists. Amongst these Istanbulis, Şerif Muhyieddin Haydar Haşimî Targan, faithful to the Ottoman cause, left Kemalist Turkey and settled in New York before becoming director of the Institute of Music in Baghdād from 1937 to 1948. Distinguished and reserved, he trained several brilliant pupils who are to be grouped together with the lute makers Ustā 'Alī and Muḥammad Fāḍil as the "lutenist school of Baghdād". They have included Salmān Shukūr and Ghānim Ḥaddād, faithful disciples, Munīr Bashīr, the sole one to achieve a reputation in the West (d. 1997), and Djamīl Ghānim, a Yemeni with a voluptuous style, also now dead. 'Alī Imām, Nāṣir Shamma and 'Umar Bashīr are taking their places. But the most dazzling of all was the Syrian Orthodox from Upper Mesopotamia, Djamīl Bashīr (d. 1977), who became the ideal interpreter of the anguish and poetry of the 'Irāḳī soul, and will always remain "the immortal of the lute".

(J.-CL. CHABRIER)

3. Musical language of the classical lute

[N.B. Abbreviations are indicated on the table "Realisation": cent = °; Holderian comma = h. Measurements. All these have been made on a Manol *'ūd* with strings of 585 mm and are related in the text of the article to strings normalised at 600 mm, hence an octave: 300 mm, a fifth: 200 mm, a fourth: 150 mm, and a major Pythagorean tone: 66.66 mm.]

I. *Organology and tuning.*

The classical lute is a short-necked instrument with strings which are plucked. The bulging, half-pear-shaped sound box is made from wooden ribs (up to 29). It is covered with a flat belly of wood pierced with a rosette and often with two sound holes. The neck comprises a flat, polished extension of the main body for fingering. A peg board, at an obtuse angle to the neck, holds ten to fourteen pegs. The strings come from a holder attached to the belly (and sometimes from the body with a bridge) passing along the belly and the finger-board to a nut situated at an angle to the neck and the peg board. The vibrating length of the open strings is about 600 mm (400 mm along the belly and 200 mm along the fingering-board). It allows one to play over a range of a fifth, apart from shifts. The strings are placed in five courses in groups of two. The classical mode of playing, in retreat since the golden age, uses only two fingers of the left hand without nuances and a stiff plectrum. But the more refined *'ūds* which evolved at Baghdād and Istanbul, with shorter open strings of 585 mm, are meant for playing with four fingers on six courses, with expressiveness, nuances of dynamics, vibrato and shifting of the hand, and with a supple, eagle's feather quill plectrum.

Tuning. Maintaining intervals of fourths between the courses, tuning is elaborated around the courses 2, *'ashīrān*, 3, *dūgāh*, 4, *nawā* and 5, *gardān* (with the Mediterranean equivalence *la*1-*ré*2-*sol*2-*do*3 when the "key-tone" *rāst* is in *do*2). For tuning by perfect fourths, the first course can be tuned in *ḳarār-būsalik* (*mi* 1), a sharp course 6 in *djawāb-čahārgāh* (*fa*3). But by tuning course 1 in *yegāh* (*sol*1) one achieves the *yekgāh*, a historical degree of course 1 with open string and the basis of the "perfect system" of the ancients; and *yegāh* (*sol*1) is one octave lower than *nawā* (*sol*2). The sonority of the lute is then improved. The refined *'ūds* of Istanbul and Baghdād adopt a succession of fourths on the courses 2-5. In academic tuning, course 1 is in *yegāh* and course 6, bass pitched, a fifth or a fourth under course 1, hence in *ḳarār-rāst* (*do*1) or *ḳarār-dūgāh* (*ré*1). But these schools adopt different "key-tone" *rāsts*, either *ré*2 in Turkey, *fa*2 or *sol*2 in 'Irāḳ and Iran; and they place course 6 at the side of course 1 or course 5. There are thus open-string tunings like *ré*1-*la*1-*si*1-*mi*2-*la*2-*ré*3 (Şerif Muhiddin Haydar Haşimī Tangan), *do*2-*ré*2-*sol*2-*do*3-*fa*3-*fa*1 (Munīr Bashīr, Djamīl Ghānim), *ré*2-*mi*2-*la*2-*ré*3-*sol*3-*sol*1 (Djamīl Bashīr), *si*0 (or *do*1)-*fa*1-*si*1-*mi*2-*la*2-*ré*3 (tuning used today in Turkey).

II. *The standard of acoustic systems; the realisation of a chromatic, Pythagorean scale on the strings.* (See the table "Realisation", Fig. 1, and the lower part of the main table, Fig. 2, lower band "Scala" making explicit this scale on the lute string.)

As a monochord, the *'ūd* has been the standard for acoustic, scaling, modal and instrumental languages, perpetuated within the Arabo-Islamic civilisation since

Fig. 1. Table ("Realisation") of the chromatic Pythagorean scale on the lute's strings.

'Abbāsid times. Most of the acoustic systems of this culture were Pythagorean, despite the addition of new, derived degrees. It is thus indispensable at the outset to realise a chromatic Pythagorean scale with 31 marks to the octave. This density will allow the generation and analysis of complex expressions. (See the table "Realisation", which also shows the abbreviations used for the intervals).

The actualisation of this chromatic Pythagorean scale on the lute's strings must take into account the peculiarities of the scale of sounds of the civilisation in question. One may note at the outset from the bass to the treble, the arrangement of the seven "diatonic" degrees designated successively by their indication of "code JCC", by the interval formed with the tonic "key-tone" *rāst* (supposedly in *do*2) and by their "oriental" name (of Persian origin, here "normalised"): 0.A: tonic: *rāst*: do; 4.E: 2am: *dūgāh: ré*; 7.H: 3an: *segāh: mi*d; 10.K: 4aJ: *čahārgāh: fa*; 14.0: 5aJ: *nawā: sol*; 18.S: 6aM: *ḥusaynī: la* 21.V: 7an: *awdj* (*evc*): *si*d; 24.Z: 8aJ: *gardaniyya* (*kardān*): *do*.

In order to pass from this "diatonic" scale to a "chromatic" one with 24 degrees, each major tone has to be marked out with the limma, apotome and dilimma intervals. In order to arrive at 30 degrees, one has to add the degrees a comma above the diatonic degrees. The 31st degree 19-T: minor seventh less a comma: *la*𝄳 is a peculiarity outside this scale. (See the lower band of the main table (*scala*).)

It should be noted that the degrees of this Pythagorean scale are not acoustically equidistant. Inversely, if one looks at the upper "teeth" of the *scala* band designated "quart" and illustrating a scale of 24 quarter-tones, one can note the "acoustic equidistance" of the intervals. One may also note the differences in the pitches of the intervals between the Pythagorean scale and that of quarter-tones, especially the pitches of the neutral degrees *segāh* and *awdj*, respectively 7.H:3an: *segāh:mi*d; and 21.V:7an: *awdj: si*d. (See the lower band of the main table (*scala*).)

III. *Evolution of the acoustic systems on the* 'ūd.

(1) *The system of Pythagoras in Islam* (main table, register 1) (al-Kindī, Banu 'l-Munadjdjim on the *'ūd*, al-Fārābī on the *čang* or harp, 8th-10th centuries).

This is a ditonic Pythagorean system defining the following intervals: 2a m (limma), 2a M (tone), 3a m, a 3a M (ditone), 4a J, 4a A (tritone), 5a J (for the values, see the table "Realisation").

(2) *The system of equidistant divisions on the string* (main table, upper register 2) (Manṣūr Zalzal, Baghdād, 8th century).

This probably refers to intervals maintained in authochthonous musical systems. Starting from the Pythagorean degrees, Zalzāl conceived intervals defined by the equidistances on the strings, thus in the order of elaboration (if the empty string sounds in *do*):

1. Equidistance between 2a M and 3a M: defines the Persian 3a m (Persian medius finger) (*mi*.♭; 96.30 mm; 81/68; 303°; 13,4 h;)

2. Equidistance between nut and Persian 3a m: defines the Persian 2a n (neighbour of the index finger) *ré*.𝄳; 48.15 mm; 162/149; 145°; 6,4 h;)

3. Equidistance between Persian 3a m and 3a M: defines the 3a n of Zalzal (medius finger of Zalzal) (*mi*.𝄳, 111.11 mm; 27/22; 355°; 15,7 h;)

4. Equidistance between nut and 3a n of Zalzal: defines the 2a n of Zalzal (neighbour of the index finger) (*ré*.𝄳; 55.55 mm; 54/49; 168°; 7,4 h;)

(3) *The para-Pythagorean system of al-Fārābī* (main table, upper register 3) (al-Fārābī, 10th century)

Al-Fārābī recommends the division of the fourth into 10 degrees which will serve to make up the modes. He takes up all the intervals mentioned above and concerns himself with the division of the tone:

1. The equidistance nut-2aM: Semitone: (*ré*.♭; 33,33 mm; 18/17; 98°; 4,33 h)

2. The equidistance nut-semitone: Quarter: (*do*‡; 16.66 mm; 36/35; 49°; 2,17 h)

3. The equidistance semitone-tone: Three quarters: (*ré*𝄳; 50 mm; 12/11; 151°, 6,68 h)

(4) *The para-Pythagorean system of Ibn Sīnā* (main table upper register 4) (Ibn Sīnā, 11th century).

By division and subtraction, he defines low neutral intervals:

1. The equidistance 2a M—4a J: 3a n (*mi*𝄳; 107,69 mm; 39/32; 343°; 15,17 h)

2. Subtraction of one major tone: 2a n: (*ré*𝄳; 46.15 mm; 13/12 139°; 6,15 h)

3. Subtraction of one maxim tone (8/7): 2a m (*ré*%; 37.36 mm; 273/256; 112°; 5 h)

(5) *The para-harmonic system of al-Fārābī* (main table, upper register 5)

This system concerning the *rabāba* figures for comparative purposes (p.m.)

(6), (7) *Pythagoro-commatic systems* (main table, upper registers 6,7)

(al-Fārābi on the *ṭumbūr*, Ṣafī al-Dīn, 13th century on the *'ūd*)

Starting from Zalzal's system, scholars were preoccupied with the placing needed to give to the neutral intervals (2a n and 3a n). The first of these two scholars, then the second, aimed at "ennobling" these neutral degrees by giving them Pythagorean definitions (3 a diminished and 4a diminished).

1. Starting from the 5a diminished (*sol*♭; 172.85 mm; 1024/729; 588°3; 26 h). Subtraction of a major tone, giving: (neutral third): 4a diminished: (*mi*d; 119.46 mm; 8192/6561; 384°4; 17 h)

2. Starting from the 4a diminished (*mi*d; 119.46 mm; 8192/6561; 384°4; 17 h). Subtraction of a major tone, giving; (neutral second): 3a diminished: (*ré*d; 59.39 mm; 65536/59049; 180°5; 8 h-)

Separated from the consecutive treble-pitched intervals by a Pythagorean comma, these neutral marks are very close to two intervals of the harmonic system, respectively the 3a Major (120 mm; 5/4; 386°3; 17 h) and the harmonic "minor tone" (60 mm; 10/9; 182°4; 8 h+).

Nevertheless, these Pythagoro-commatic systems, dividing the tone into two limmas and a comma, or three intervals to a major tone, involve only 17 degrees to the octave.

(8) *Pythagoro-commatic systems with 24 or 31 degrees* (main table, upper register 8) (Turkey, the Baghdād lutenists, Middle Eastern churches, Aleppo, etc.)

By adding to the three degrees marking out the tone, the Pythagorean comma (8.07 mm; 531441/524288; 23°5; 1,04 h), the apotome (38.13 mm; 2187/2048; 113°7; 5 h) and the 7a minor less a comma (257.8 mm; 8388608/4782969; 972°; 43 h), one can define systems with 24 or 31 degrees.

(9), (10) *Division of the octave into 24 quartertones (17 to 24 degrees)* (main table, upper registers 9, 10) (La Borde, 18th century, Mushāḳa, Ellis, 19th century, 1932 Cairo Congress).

This does not involve an acoustic system, but an equal temperament with 24 intervals to the octave, dividing the major tone into four quartertones theoretically equal. The neutral degrees are respectively worth, the 2a n: 3 quarters and the 3a n: 7 quarters, the 4a J: 10 quarters, the 5a J: 14 quarters. The equalising of the intervals makes the system transposable.

D̲jamīl Bas̲h̲īr on the lute. Photo Jean-Claude Chabrier.

One can equally reduce it to a system of 17 degrees by suppressing the degrees situated a quartertone above the diatonic marks. Such a system with 17 degrees is found on popular instruments (*buzuk, tanbūra*), in Iran, etc.

IV. *The* ʿūd *as bearer of a scaling system. The theoretical, basic scale of virtually available sounds or degrees: "ton system".*

(1) *Evolution of the scaling terminology.*

As the bearer and the standard of successive acoustic systems, the *ʿūd* is also the bearer of the scaling system (theoretical, basic scale of virtually available sounds or degrees: "ton system") whose intervals are defined by the acoustic system adopted.

At the outset, with the simple Pythagorean system (main table, upper register 1), the intervals and the genres were defined by the theory of "fingering degrees" (*aṣābiʿ*): open string (*muṭlaḳ*); index finger (*sabbāba*) for the 2a; medius finger (*wusṭā*) for the 3a m or 3a n; ring finger (*binṣir*) for the 3a M; and little finger (*khinṣir*) for the fourths. In practice, the first position of the lutenists gives a tighter form of play with index finger = 2a m; medius finger = 2a M; ring finger = 3a m; and little finger = 3a M.

With the proliferation of degrees, scholars have designated the degrees by the letters of the alphabet. Then the Persian term *gāh* ("position") appeared, preceded by a number (*yek, do, sē, čahār, shēsh, haft*) for defining the diatonic heptatonic system starting from the bass, open string *yek-gāh* (first position).

Finally, there is formed, as with the Greeks, a "perfect system" of two octaves with 48 names of degrees, varying little from one country to another. In the midst of names of diatonic degrees are inserted names of intermediate degrees which may be preceded by the suffixs *nīm* denoting the bass intermediate degree and *tik/dik* denoting the treble intermediate degree. Thus one has the succession from bass to treble *rāst/nīm-zirgula/zirgula/tik-zirgula/dūgāh* . . .

The homophones of the octave are denoted by the prefixes *ḳarār/kaba* "homophone of the lower octave" and *djawāb/cevap* "homophone of the upper octave" (e.g. *ḳarār/rāst* or *djawāb-awdj*).

Clearly, there exist differences of terminology, not only from one country to another but also between the Arabic forms and the Turkish forms. In the Arabic manuals, the succession is as follows: *nīm-ʿadjam-ʿushayrān/ʿadjam-ʿushayrān* . . . . . . *nīm-kurdī/kurdī* . . . In the Turkish manuals, this becomes for the same degrees *acem-aşiran/dik-acem-aşiran* . . . . . . *kürdi/dik-kürdi.*

The Persian terms *čahārgāh* and *gardaniyya* become in Turkish *çarigah* and *gerdaniye* and in Arabic *djahārkāh* and *kardān* or *kurdān.*

(2) *Codification of the 24 intervals of the octave. "JCC code".*

The "perfect system" of two octaves thus gives a name to each "fingering degree". To make this scale more adaptable to the various acoustic systems or pitches of playing, the author has elaborated a "JCC code" denoting the 24 degrees of the octave by a number (from 0 to 24) and a letter (from A to Z omitting W). The median octave of the "perfect system" is thus denoted a "0.A" *rāst* to "24.Z" *gardān.* This also allows one to note the equivalence with the quartertones or rapidly to designate the tuning with open strings of a lute (example in the table A-O-S-E-O-A) or briefly to denote the degrees of a musical mode (example in the lower part of the table A-E-H-K-O-S-V-Z, these seven diatonic degrees denoting the *Rāst* mode independently of the system's pitch). It can further be utilised for the intervals of a system of 17 degrees (main table. register 10: A-C-D-E-G-H-I-K-M-N-O-Q-R-S-U-V-X).

Hence, with the "JCC code", the 24 degrees of the median octave with equivalences for a key-tone *rāst* in *do*, are as follows: 0.A: *RĀST* (*do*); 1.B: *nīm-zirgula*: 2.C: *zirgula*; 3.D: *tik-zirgula*; 4.E: *DŪGĀH* (*ré*); 5.F: *(nīm) kurdī*; 6.G: *(dik) kurdī*; 7.H: *SEGĀH* (*mi*d); 8.I *būsalik*; 9.J: *tik-būsalik*; 10.K: *ČAHĀRGĀH/DJAHĀRKĀH* (*fa*); 11.L: *nīm-ḥidjāz*; 12.M: *ḥidjāz*; 13.N: *tik-ḥidjāz*; 14.O: *NAWĀ* (*sol*); 15.P: *nīm-ḥiṣār*; 16.Q: *ḥiṣar*, 17.R: *tik-ḥiṣar*; 18.S: *ḤUSAYNĪ* (*la*); 19.T: *(nīm) ʿadjam-ḥusaynī*; 20.U: *(dik) ʿadjam-ḥusaynī*; 21.V: *AWDJ* (*si*d); 22.X: *(nīm) nihuft*; 23.Y: *(dik) nihuft*; 24.Z: *GARDANIYYA/KARDĀN* (*do*). N.B. One also finds 22.X: *(nīm) māhūr*; 23.Y: *(dik) māhūr*; and other terms.

(3) *Fingerboard with representation of the degrees by linear segments.*

In order to safeguard the invariability of the terminology and the variability of the pitch of the degrees as functions of the acoustic systems, representation by fixed points has to be abandoned and replaced by a fingering-system for the *ʿūd* of linear segments of about two Holderian commas length, i.e. almost a quartertone. The invariable name of the variable degree is written on the linear segment. Then one sees that degrees of the different acoustic systems converge on this linear segment. This can be verified at the level of the neutral diatonic degrees like *segāh.* In the Pythagorean system, *segāh* is played with the ratio 8192/6561, i.e. at 17 Holderian commas, at the end of the "*segāh*" segment. In quartertones, or in the "Zalzalian" system, it is played with the ratio 27/22, i.e. 15,7 Holderian commas, at the beginning of the "*segāh*" segment. One may note this flexibility in the invariability at the level of the *awdj* and all the other intermediate degrees (cf. fingering, and the band "*scala*").

V. *The* ʿūd *as bearer of the modal and instrumental languages.*

The elaboration of the heptatonic musical modes is achieved, once the acoustic system has been defined, by the deduction or the selection of seven degrees on the basic theoretical scale of virtually available sounds. In effect, the majority of the modes within this civilisation are heptatonic.

Already, on the occasion of the evocation of the Pythogorean chromatic scale, a mode was formed on the lute's string. The succession 0.A: *rāst*; 4.E: *dūgāh*; 7.H: *segāh*; 10.K: *čahārgāh*; 14.0: *nawā*; 18.S: *ḥusaynī*; 21.V: *awdj*; 24.Z: *gardaniyya*. . . . forms, with its finalis *rāst*, the *Rāst* mode, an academic mode which uses the "diatonic" degrees of the "scale" and is characterised by its neutral 3a (*segāh*) and by its neutral 7a (*awdj*).

But here the *ʿūd* has been used as a monochord. In reality, the succession of courses of strings by fourths and the internal structure of the modes come in. The *Rāst* mode is made up of a *Rāst* pentachord in *rāst* and a *Rāst* tetrachord in *nawā*. It will then be necessary to give value to the *nawā* "pivot" by inserting it on an open course. Finally, this *Rāst* mode may be played on four courses. The finalis *rāst* has its place on the lute's scale on the course "2" *ʿashīrān.* The *dūgāh, segāh* and *čahārgāh* degrees are on the course "3" *dūgāh.* The *nawā, ḥusaynī* and *awdj* degrees are on the course "4" *nawā.* Finally, the octave of the finalis *gardaniyya* is on the course "5" of the same name. Inserted in this way, the *Rāst* mode expresses the modal language of the *ʿūd* and every transposition on the lute's scale will change its sound characteristics. This is the reason why the transposition of a mode

gives it a new name, because this transposition displaces the degrees played on open strings and thereby changes the sonority of the modal scale. Thus a precise modal scale including two augmented seconds takes on a name which is different according to its insertion: *s̲h̲add-ʿarabān* in *yegāh*, *sūzdīl* in *ʿas̲h̲īrān*, *ḥid̲j̲āz-kār* in *rāst* and *s̲h̲ēnāz* in *dūgāh*.

On the other hand, if the transpositions safeguards the placing of the pivots on the open strings, it respects the internal sonority of the mode. This is the case with the transposition of modes of the *Bayātī* and *Kurdī* family, or the *Lāmī* mode, between the *ʿas̲h̲īrān*, *dūgāh* and *nawā* open courses, because it is a question of transpositions of a fourth by transferring the intervals of one course's group to the adjacent course. The *ʿūd* is thus the generator of a modal and an instrumental language. Because of this, the omission by the 1932 Congress in Cairo of any reference to the *ʿūd* language is an irreparable loss [see MAḲĀM].

AL-ʿ**UDAYD**, a small settlement on the K̲h̲awr al-ʿUdayd, a creek on the southeastern coast of the Ḳaṭar [*q.v.*] peninsula on the southern Gulf shores (lat. 24° 33' N., long. 51° 30' E.). It lies in the area of the undefined frontier between Ḳaṭar and Abū Ẓaby [*q.v.*], one of the constituent shaykhdoms of the United Arab Emirates [see AL-IMĀRĀT AL-ʿARABIYYA AL-MUTTAḤIDA, in Suppl.].

Bibliography: See those to ABŪ ẒABY and ḲAṬAR. (ED.)

UDAYPŪR, UDAIPUR, the usual more recent name for the region in southwestern Rād̲j̲āsthān known in Islamic Indian times as Mēwāŕ, and the name also of its main town, actually founded in 966/1599. For this Rād̲j̲pūt state, which strenuously opposed the Muslims from the 8th/14th century onwards until its conquest by the Mug̲h̲al Akbar in the later 10th/16th century, see MĒWĀŔ. The subsequent Native State of Udaypūr in British India became part of the first Rajasthan Union in April 1948, and is now a District of the Rajasthan State of the Indian Union.

UDFU [see ADFŪ].

UDGĪR, a small town in South India (lat. 18° 26' N., long. 77° 11' E.), in British Indian times the chef-lieu of a *taluk* in the Bīdar District of Ḥaydarābād State [*q.v.*], now coming within the Maharashtra State of the Indian Union. It has a fort dating back to the end of the 9th/15th century. It was part of the lands of the Barīd S̲h̲āhs of Bīdar [*q.vv.*], and then of their successors the ʿĀdil S̲h̲āhs of Bīd̲j̲apur [*q.vv.*] until it was besieged by S̲h̲āh D̲j̲ahān's army in 1044/1635 and then incorporated into the Mug̲h̲al empire. Its chief fame stems from the fiercely-fought battle for Udgīr when the Marāthās [*q.v.*] defeated the Niẓām Ṣalābat D̲j̲ang of Ḥaydarābād in 1173/1760, causing the (temporary, as it proved) loss of the northern and western parts of Ḥaydarābād to the Marāthās.

ʿ**UD̲H̲RA**, BANŪ, a nomadic Arabian tribe of the Ḳuḍāʿa [*q.v.*] federation. Its pedigree is: ʿUd̲h̲ra b. Saʿd Hud̲h̲aym b. Zayd b. Layt̲h̲ b. Sūd b. Aslum b. al-Ḥāf b. Ḳuḍāʿa. The ʿUd̲h̲ra were the central group among the descendants of Saʿd Hud̲h̲aym, and they incorporated several brother-clans such as the Ḥārit̲h̲ b. Saʿd Hud̲h̲aym and Salāmān b. Saʿd Hud̲h̲aym. These ʿUd̲h̲ra are not to be confused with the ʿUd̲h̲ra of the Kalb b. Wabara [*q.v.*], i.e. ʿUd̲h̲ra b. Zayd Allāt b. Rufayda b. T̲h̲awr b. Kalb. One of the latter ʿUd̲h̲ra was the famous genealogist, Ibn al-Kalbī [see AL-KALBĪ, II], who described his tribe at length in his *Nasab Maʿadd wa 'l-Yaman al-kabīr* (ed. Ḥasan, Beirut 1408/1988, ii, 558-635).

The ʿUd̲h̲ra were known for their passionate love and tender-heartedness. ʿUd̲h̲rite love (*ḥubb ʿud̲h̲rī* [see ʿUD̲H̲RĪ]), resembling Platonic love, was called after them. The famous D̲j̲amīl (d. 82/701 [*q.v.*]) and his female friend But̲h̲ayna belonged to a subdivision of the ʿUd̲h̲ra called Ḥunn b. Rabīʿa. The Ḥunn and

their brothers, the Rizāḥ b. Rabī'a, were in the early Islamic period the two most important tribal groups among the 'Udhra (*ḳabīlatā 'Udhra*).

On the eve of Islam, the 'Udhra may have been penetrated by Christianity, but there is clear evidence of idol worship among them. Some 'Udhrīs worshipped an idol called Shams (al-Ya'ḳūbī, *Ta'rīkh*, i, 296), and an idol called al-Ḥumām (Yāḳūt, s.v.) figures in the story about the conversion to Islam of Ziml b. 'Amr al-'Udhri. It belonged to Ziml's group, the Hind b. Ḥarām b. Ḍinna b. 'Abd b. Kabīr b. 'Udhra, and had a custodian (*sādin*). Interestingly, the descendants of Ḍinna, who also included the above-mentioned Ḥunn and Rabī'a, were originally of the Bakr b. Wā'il [*q.v.*] and were later incorporated into the 'Udhra, claiming that Ḍinna was 'Udhra's great-grandson.

The 'Udhra lived in the area of Ashrāf/Mashārif al-Shām. In particular, they were linked with the Wādī 'l-Ḳurā [*q.v.*], where they had before Islam an alliance with the Jewish agriculturalists. It assured the 'Udhra of an annual share in the crops in return for protection from attacks by other Bedouin (al-Bakrī, *Mu'djam mā 'sta'djam*, ed. al-Saḳḳā, Cairo 1364/1945 ff., i, 43-4), especially of the Ḳuḍā'a federation. Their association with the Wādī 'l-Ḳurā continued in the Islamic period, and many of those known by the relative adjective al-Wādiyy^{u} were no doubt 'Udhrīs. Some 'Udhrī groups emigrated to Syria, probably already before Islam, while other groups emigrated to Egypt and al-Andalus.

Some claimed that the mother of the Aws and Khazradj was Ḳayla bt. Kāhil b. 'Udhra, which may point to a pre-Islamic link between the 'Udhra and the inhabitants of Yathrib. But far more is known about 'Udhra's links with the Ḳuraysh. The main theme in this regard is Rizāḥ b. Rabī'a's reported help to Ḳuṣayy [*q.v.*] b. Kilāb in his takeover of the Ka'ba and Mecca. It was said that Rizāḥ's father Rabī'a, while on pilgrimage to Mecca, married the widow of Kilāb b. Murra. He returned home with his wife and her little son Ḳuṣayy, while her other son Zuhra remained in Mecca. Ḳuṣayy later returned to Mecca (sometime in the first half of the 6th century) and fought against the Khuzā'a [*q.v.*], the lords of the Ka'ba and Mecca, who were assisted by their Kinānī allies. He received aid from his half-brother Rizāḥ b. Rabī'a, who had become the leader and commander of the Ḳuḍā'a. (Rizāḥ later pursued an aggressive policy against several brother-clans of the Ḳuḍā'a, forcing them out of Ḳuḍā'a's territory and genealogical bond.) 'Udhra's delegation to the Prophet is supposed to have mentioned that they were Ḳuṣayy's maternal uncles and that they had expelled from Mecca the Khuzā'a and the Bakr b. 'Abd Manāt b. Kināna.

The relations between some 'Udhrīs (of the Kāhil b. 'Udhra branch) and the Banū Zuhra b. Kilāb of the Ḳuraysh were particularly close. A family link was already established in the lifetime of Zuhra, Ḳuṣayy's brother; the above-mentioned Rizāḥ was a half-brother not only of Ḳuṣayy, but also of Zuhra. Many years later, Khālid b. 'Urfuṭa b. Ṣu'ayr al-'Udhrī (d. 61/681) came to Mecca as a young boy and became an ally (*ḥalīf*) of the Zuhra. In another report, it was already his grandfather Ṣu'ayr who came to Mecca and formed an alliance with the Makhzūm [*q.v.*], which he later abandoned for an alliance with the Banū 'Abd Manāf b. Zuhra. Khālid accompanied Sa'd b. Abī Waḳḳāṣ [*q.v.*] al-Zuhrī during the conquest of 'Irāḳ and the latter made him his deputy in Kūfa. Moreover, there are reports (which cannot be verified) claiming that Sa'd was himself of 'Udhrī origin. In his *Kitāb al-Mathālib* Ibn al-Kalbī quotes unidentified descendants of Khālid who asserted that Khālid and Sa'd's father, Abū Waḳḳāṣ/Mālik, who were both 'Udhrīs, came to Mecca, and the latter made an alliance with the Zuhra, adopting their genealogy. Ibn al-Kalbī also quotes from an anonymous Zuhrī source an alleged bitter exchange between the caliph 'Uthmān b. 'Affān and Sa'd's nephew, Hāshim b. 'Utba b. Abī Waḳḳāṣ, in which the former is supposed to have said that he recognised in the latter the peculiar heavy walk of the 'Udhra (*inkhizāl banī 'Udhra*). Some Shī'īs took this even further, claiming that Sa'd was an illegal son of an 'Udhrī man.

Also, Khālid b. 'Urfuṭa's cousin (or more remote relative), 'Abd Allāh b. Tha'laba b. Ṣu'ayr (d. 87/706 or 89/708), was an ally of the Zuhra and a son of a Zuhrī mother. 'Abd Allāh was an expert on genealogy—not of the 'Udhra, but of the Zuhra. Ibn Shihāb al-Zuhrī [*q.v.*], according to his own testimony, studied from him the genealogy of the Zuhra. It is worthy of note that al-Zuhrī owned an estate in the Shaghb and Badā area (north-west of the Wādī 'l-Ḳurā) which was inhabited by the 'Udhra (M. Lecker, *Biographical notes on Ibn Shihāb al-Zuhrī*, in *JSS*, xli [1996], 21-63, at 54, 59).

The 'Udhra tenaciously kept to the memory of their contacts with the Prophet. Typically, both reports on 'Udhra's delegation to the Prophet in Ibn Sa'd's *Ṭabaḳāt* are family reports by 'Udhrī informants. One of them quotes "the book of his ancestors" (*kitāb ābā'ī*); the other is the grandson of the above-mentioned Ziml b. 'Amr [see ṢIFFĪN, at Vol. IX, 554b]. Two 'Udhrīs are said to have received grants from the Prophet. Djamīl b. Ridām received a waterplace called al-Ramd or al-Ramdā'. Djamra b. al-Nu'mān, the *sayyid* of the 'Udhra (more precisely, of the Banū Kāhil b. 'Udhra) was the first to bring the Prophet the *ṣadaḳa* of the 'Udhra. Furthermore, he was the first Ḥidjāzī leader to bring the Prophet the *ṣadaḳa* of his people. The Prophet assigned Djamra in the Wādī 'l-Ḳurā "the extent of his horse's run and a single shot of his whip".

Before being incorporated in specialised monographs during the 2nd/8th century, the knowledge about tribal genealogy and history was preserved by tribal experts. An early authority on 'Udhra's genealogy was al-Nakhkhār b. Aws b. Ubayr al-'Udhrī, a contemporary of Mu'āwiya I [*q.v.*]. (In fact, he belonged to 'Udhra's brothers, the Ḥārith b. Sa'd Hudhaym.)

'Udhra's role in the administration of the early Islamic state was humble. Ziml b. 'Amr was in command of Mu'āwiya I's *shurṭa* [*q.v.*] and later he was in charge of Yazīd I b. Mu'āwiya's [*q.v.*] *khātam* [see KHĀTAM, at Vol. IV, 1105]. 'Umar II seems to have favoured the 'Udhra: his governor in Damascus was 'Uthmān b. Sa'd (or Sa'īd) al-'Udhrī and his *ḳāḍī* there was 'Abd al-Raḥmān b. al-Khashkhāsh al-'Udhrī.

(M. LECKER)

'UDHRĪ, *nisba* of the Arabian tribe 'Udhra [*q.v.*] inhabiting the northern part of al-Ḥidjāz [*q.v.*]

in the region of Wādī 'l-Ḳurā. In the Umayyad period an elegiac amatory genre emerged among poets of the tribe, who expressed passionate desire for an unattainable beloved, chastity and faithfulness until death. 'Udhrī love (*al-ḥubb al-ʿudhrī*) is a favourite theme in classical Arabic poetry and prose, and influenced Islamic philosophy and mysticism. The "Benou-Azra", who, "when loving, die", became known in European literature through Stendhal's treatise *De l'amour* (1822) and inspired the Romantics, e.g. Heine's poem *Der Asra*, set to music by Carl Löwe.

The *ʿudhrī* phenomenon, which has been associated and even identified with "platonic" or "courtly" love, presents several problems, both from a literary and a philosophical aspect. In the early 'Abbāsid period 'Udhrī poets and their beloved were transformed into heroes of romantic stories, and their concept of love was imbued with a "courtly" flavour and projected back into an idealised Bedouin past. As a consequence, the biographies of poets reckoned among the 'Udhrīs are embellished with legendary details, and their poetry contains spurious verses or must be regarded in its entirety of 'Abbāsid origin. It further appears that traditions about 'Udhrī lovers reported in treatises on profane love reflect intellectual trends of later periods. As a first step to clarify these complicated issues, it is essential to distinguish between *al-ḥubb al-ʿudhrī* as an authentic manifestation of Umayyad Bedouin society and its subsequent transformations in the urban centres of mediaeval Islam.

1. *ʿUdhrī* poetry in the Umayyad period

Two poets of the Banū 'Udhra are commonly regarded as representing the new ideal of love, 'Urwa b. Ḥizām (d. *ca.* 29/650 [*q.v.*]), of whom only a few verses are preserved, and Djamīl b. Maʿmar (d. 82/701 [*q.v.*]), whose *dīwān*, although not without interpolations, constitutes the main basis for studying the *ʿudhrī ghazal* [*q.v.*]. His life and his unfulfilled love for Buthayna, a woman of his tribe, are comparatively well documented (cf. F. Gabrieli, *Ǧamīl al-ʿUḏrī. Studio critico e raccolta dei frammenti*, in *RSO*, xvii [1937] 40-71, 132-72). Poets of other tribes reckoned among the 'Udhrites are Kuthayyir b. 'Abd al-Raḥmān (d. 105/723 [*q.v.*]), Djamīl's *rāwī*; Ḳays b. Dharīḥ (d. 68/687 [*q.v.*]), whose historicity is not undisputed, however; and Ḳays b. al-Mulawwaḥ, called Madjnūn [see MADJNŪN LAYLĀ], a fictional character, whose fame as a lover is unsurpassed in Islamic literatures (cf. A.E. Khayrallah, *Love, madness and poetry. An interpretation of the Maǧnūn legend*, Beirut 1980).

The *ʿudhrī ghazal* continues the tradition of the pre-Islamic *nasīb* [*q.v.*] in its melancholy mood and strong emotional appeal and prepares the way for the 'Abbāsid "courtly" *ghazal*, in that it manifests an absorbing passion for a unique beloved. Its Bedouin origin is evidenced by conventional motifs and techniques of composition, and by a preference for traditional metres, in contrast to the urban *ghazal* of 'Umar b. Abī Rabīʿa [*q.v.*] and his school. In spite of these differences, the two variants of Umayyad *ghazal* poetry hardly developed independently, as suggested by R. Blachère (*HLA*, 711). The main traits of *ʿudhrī* poetry may be sketched as follows: whereas the poet of the *Djāhiliyya* [*q.v.*] abandons a futile love-affair of the past, the *ʿudhrī* poet perseveres in the face of hopelessness and despair. His love is pre-ordained by fate and transcends death. Djamīl wants to die when Buthayna dies (*Dīwān*, ed. Kh. Naṣṣār, [2]Cairo 1967, 51), and he assures her that his "soul bird" (*ṣadā*) will follow her "soul bird" among the graves (*op. cit.*, 109). The platonic concept of a spiritual union before creation (*op. cit.*, 77) is hardly compatible with this and other Bedouin elements of his *dīwān*. The *ʿudhrī* beloved is adored and her beauty praised, but she still seems the poet's equal, in contrast to the superiority, despotism and hypostasation of the lady in the 'Abbāsid "courtly" *ghazal*. Religious allusions are frequent, e.g. Djamīl's statement that every lover "killed" is a "martyr" (*op. cit.*, 64), which may have inspired the famous apocryphal *ḥadīth* of the Prophet first quoted by Ibn Dāwūd (d. 297/910 [*q.v.*]) in his *Kitāb al-Zahra* (ed. A.R. Nykl, Chicago 1932, 66): He who loves, chaste and discrete, and dies, is a martyr (*man ʿashika fa-ʿaffa fa-katamahū fa-māta fa-huwa shahīd*). For further references cf. S. Leder, *Ibn al-Ǧauzī und seine Kompilation wider die Leidenschaft*, Beirut 1984, 270 ff.

'Udhrī lovers are chaste, i.e. they refrain from illicit love. Renouncement of physical union, as it would destroy true love, a notion later attributed to the 'Udhrīs, is not supported by Umayyad verses. In view of the evidence, we are forced to conclude that *ʿudhrī* love in the 7th century is neither "platonic" nor "courtly" not even sentimental. "I wish we could live together," says Djamīl, "and when we die, my grave would be beside her grave among the dead" (*op. cit.* 51). Nothing could be more human, straightforward and sincere.

Several theories have been advanced to explain *al-ḥubb al-ʿudhrī* within the context of Umayyad society. Ṭāhā Ḥusayn stressed the contrast between Bedouin and urban conditions (*Ḥadīth al-arbiʿāʾ*, [12]Cairo 1972, i, 187 ff., ii, 18), whereas A.Kh. Kinany associates *al-ḥubb al-ʿudhri* with Islamic monotheism, eschatology and ethics (*The development of Gazal in Arabic literature*, Damascus 1951, 260 ff.). T.L. Djedidi also relates monotheism and *dame unique*, but places more emphasis on socio-economic factors. He views the Banū 'Udhra as impoverished semi-nomads, deprived of participation in the affluence of the pilgrim towns, and suggests a "*homologie*" between economic privation and loss and frustration on the sexual plane (*La poésie amoureuse des Arabes. Le cas des ʿUdrites*, Algiers 1974). It is evident that the 'Udhrīs must be correlated with social and economic tensions at a time of instability, when traditional norms and attitudes had to be replaced by a different system of values. 'Udhrī love, which sets an individual relationship above the demands of the clan, is anti-social and ultimately self-destructive. Thus it seems to be a phenomenon analogous to the revolt of the Khāridjites [*q.v.*], who, like the 'Udhrīs, are preoccupied with death in their verses, and advocate a new social order, in accordance with the teaching of Islam.

2. *Al-ḥubb al-ʿudhrī* in later poetry and prose

Stories about *ʿudhrī* poets and their beloved, e.g. 'Urwa and 'Afrā', Djamīl and Buthayna, Kuthayyir and 'Azza, Ḳays and Lubnā, Madjnūn and Laylā, probably circulated from the end of the 7th century and were collected by scholars of the early 'Abbāsid period (cf. Blachère, *HLA*, 760-3). They must have developed into a literary topos at an early date, since most of them follow a common pattern: the poet and his beloved grow up together, fall in love and seek marriage. This is denied them, however, or it is promised and the promise is broken, the woman being married to a richer man. The lovers remain faithful and even meet, preserving the rules of chastity and propriety, and eventually die of sorrow. According to a variant, the lovers marry, but the woman remains barren, and her husband is forced by his family to divorce her (Ḳays and Lubnā). Legends about lovers

from the *Djāhiliyya* were added, e.g. the two Murakkish [*q.v.*], and with the growing popularity of the genre, collections of stories about unhappy lovers from all layers of society were offered to the public, e.g. the *Maṣāri' al-'ushshāk* by al-Sarrādj (2 vols., Beirut 1378/1958).

'Udhrī love is commonly identified with *'ishk* (passion), a term first defined by al-Djāḥiẓ (d. 255/869 [*q.v.*]) in his *Risālat al-Kiyān* (*The Epistle on singing-girls of Jāḥiẓ*, ed. with tr. and comm. by A.F.L. Beeston, Warminster 1980, 15). Its transformations in 'Abbāsid literature reveal two different strands, although they cannot perhaps be clearly separated. One line of development is apparent in the legend of Madjnūn and the poetry attributed to him, as also in certain poems by al-'Abbās b. al-Aḥnaf (d. between 188/803 and 195/810 [*q.v.*]), the most "courtly" of 'Abbāsid poets, who sees himself in the *'udhrī* tradition (cf. S. Enderwitz, *Liebe als Beruf. Al-'Abbās ibn al-Aḥnaf und das Gazal*, Beirut 1995, 23, 188). It is also manifest in the verses of al-Ḥallādj (d. 309/922 [*q.v.*]), and other Ṣūfīs, and figures prominently in later Islamic mysticism. The main characteristics of this strand are introspectiveness and total absorption in the object of love. The lover turns away from reality towards an idealised form of his imagination, which occupies his mind to such an extent that even the presence of his real beloved cannot gain his attention. He prefers death to fulfillment (cf. Leder, *op. cit.*, 280). The intimate relation of love and death, a further element of this strand, appears to be a genuine continuation of the original concept.

In the second, more realistic strand, *'udhrī* love is not so much an emotion or state of mind, but a code of behaviour among lovers. It can be associated with the literary and social ideal of *ẓarīf* [*q.v.*] (refinement), described in detail by al-Washshā' (d. 325/936 [*q.v.*]) in his *Kitāb al-Muwashshā* (ed. R.E. Brünnow, Leiden 1886, German tr. D. Bellmann, *Das Buch des buntbestickten Kleides*, Leipzig and Weimar 1984). There are further numerous stories about men or women of the Banū 'Udhra, often anonymous, which fit in this concept. The gist of these traditions seems to be that lovers "among Bedouin" are allowed to mix freely, to converse and even to exchange caresses, provided they refrain from sexual intercourse, as it would destroy passion and desire. The idea is already expressed by al-Djāḥiẓ (*op. cit.*, 4) and amply documented in later treatises on love and women, as the *Dhamm al-hawā* (Cairo 1381/1962; cf. Leder, *op. cit.*, 258 ff.) of Ibn al-Djawzī (d. 597/1201 [*q.v.*]) and the *Akhbār al-nisā'* (Cairo 1319, 39, German tr. Bellmann, *Über die Frauen*, Munich 1986, 62) of Ibn Kayyim al-Djawziyya (d. 751/1350 [*q.v.*]).

However variegated the transformations of *al-ḥubb al-'udhrī* in later periods have been, it is always identified with Bedouin as contrasted to urban love. Initially, this may have been a tendency to idealise the Arabic past, connected with the Shu'ūbiyya movement [*q.v.*], but there must be more to it than that. For *'udhrī* traditions not only exemplify high moral standards, they also manifest the longing for a kind of society where the segregation of the sexes is not strictly observed.

AL-'**UDHRĪ**, ABU 'L-'ABBĀS AḤMAD b. 'Umar b. Anas, Ibn al-Dalā'ī, traditionist and geographer, who was born at Almeria [see AL-MARIYYA] in 393/1003, and who died in the same town in 478/1085. Shortly after the Muslim conquest, his family had settled in the village of Dalias, from where the *nisba* of Dalā'ī comes.

It is in fact thanks to al-'Udhrī that information is available on one of his predecessors, Zughayba b. Kuṭba, who supported the claim to the throne of Sulaymān, the son of 'Abd al-Raḥmān I, against his brother Hishām. He was very young when he undertook the *riḥla*, seizing the opportunity of the pilgrimage of his parents. His stay in Mecca was prolonged for ten years from 407/1016 to 416/1025. During these years, he had the opportunity to study with famous teachers, such as Abū Dharr al-Harawī. When he returned to al-Andalus, he became the pupil of Abū 'Umar Ibn 'Abd al-Barr [*q.v.*] and of Ibn Ḥazm [*q.v.*] among others, but at the same time he transmitted to these authors many of the traditions gleaned from his *riḥla*. He also had as pupils al-Ḥumaydī and Abū 'Alī al-Ṣadafī, but in fact, as a specialist in *ḥadīth*, he was preoccupied with transmitting the traditions that he had received in the course of his stay in Mecca, notably those of the *Ṣaḥīḥ* of Muslim and of that of al-Bukhārī (M. Fierro, *Obras y transmisiones de* ḥadīṯ, in *Ibn al-Abbār. Politic i excriptor àrab valencià*, Valencia 1990, 207-22; M. Marín, *La actividad intelectual*, in *Los Reinos de Taifas = Historia de España de Menendez Pidal*, viii, Madrid 1994, 516).

The many biographical dictionaries that tell us about his life pay much attention to this "traditionist" aspect, but say little about his role as a geographer, though this is how he is best known today. It is thanks to this that some fragments of vol. vii of his work (ed. 'A.'A. al-Ahwānī, *Nuṣūṣ 'an al-Andalus min "Kitāb Tarṣī' al-akhbār"*, Madrid 1965), have been preserved. Although these fragments are only poorly representative of the whole collection, it is possible to form an approximate idea of the content, at least for those chapters devoted to al-Andalus. As for the other regions, there are only three remaining folios on Egypt, two on Syria, and one on Persia. Al-'Udhrī based his writings on the geographical work of Aḥmad al-Rāzī, preserving its structure though not always keeping the order of presentation of the *kūras*. Using this scheme as a basis, the author enriches the original text with a considerable amount of information of every kind, to the extent that the *Geography* of al-'Udhrī could be considered the most important of those devoted to Andalusia. Within its pages are detailed descriptions of the most important provinces and localities, administrative, economic and fiscal data, all so precise that they seem to have been taken directly from official archives. These are all supported by reflections on natural phenomena and minutely detailed descriptions of itineraries, etc.

Although al-'Udhrī is the most important of the Andalusī geographers, his work is, however, also memorable as a rich source of historical information. Indeed, in every chapter the author includes several pages devoted to the history of the province, almost always revolving around whatever rebellions were taking place within that region at any given time; but there are also notes on pre-Islamic history, and an astonishing but unfortunately incomplete narrative of the military campaigns of al-Manṣūr [*q.v.*]. Many of these details are unedited, and when they are already known from other sources the richness of detail in the version of al-'Udhrī is seen to be far superior to that of those other sources.

The title which appears in the *unicum* kept in a

private library in Jerusalem is *Tarṣīʿ al-akhbār*; this is referred to by several later sources but others call it *Niẓām al-murdjān*. Perhaps the explanation is that there are two versions of the work, one preserved in the *unicum* of Jerusalem, while the other, entitled *Niẓām*, was able to be used copiously by later authors such as al-Ḳazwīnī, al-Ḥimyarī and the compiler of the *Dhikr bilād al-Andalus* (L. Molina, *Las dos versiones de la* Geografía *de al-ʿUdrī*, in *Al-Qanṭara*, iii [1982], 249-60).

(L. MOLINA)

UDJ, a Turkish word equivalent to the ancient Greek/Byzantine ἄκρον, and meaning the frontier districts or marches. The borderlands between the Christian and the Muslim mediaeval worlds influenced historical developments considerably. In mediaeval Eastern Anatolia, those entrusted with the defence of the marches, in which they were established, were called ἀκρῖται on the Byzantine side and *ghāzī*s [*q.v.*] on the Muslim one. The inhabitants of these districts were obliged to be continuously in readiness to confront an attack or to organise a raid themselves penetrating into the enemy territory. Their way of life inspired folk poets who composed the epic of the Byzantine ἀκρῖται and that of the famous Muslim hero Ghāzī Sayyid al-Baṭṭāl [*q.v.*]. On both sides, the population of the frontier zones presented peculiarities as it constituted a mixture of ethnic, religious and cultural elements. Changing sides was not unusual for the warriors; women abducted from the enemy side and prisoners taken facilitated some assimilation, while adventurers who aspired to a brilliant military carrier, sheer bandits seeking legitimacy and persecuted heretical elements took refuge in them.

After the Oghuz migration and the battle of Malāzgird [*q.v.*] or Mantzikert (1071), Turkmen nomads were established on the marches; they increased in number during the Mongol advance of the 13th century which caused a second Turkmen migration into Anatolia. The Byzantine historian Akropolites, writing around 1250, described those nomads as a people living on the very frontiers of the Turks, filled with implacable hatred against the Byzantines, delighting in the plunder seized from them and rejoicing in their spoils of war. During the gradual disintegration of the Rūm Saldjūḳ state [see SALDJŪḲIDS. III. 5] the frontier Turkmen acquired new strength and determined political developments by offering their support to Saldjūḳ princes against the Mongols. Turkmen chieftains of the borderlands struggled to win independence, and they eventually established their own petty states (emirates or *beyliks*) one of which seems to have been that of Osman [see ʿOTHMĀN I], the nucleus of the later Ottoman Empire.

The term *Udj-bey* designated the military lord of a district zone carrying out war against the neighbouring Christians. The continuous military expansion of the early Ottoman State, especially in Rumelia, was largely due to these lords, who acted at the head of their own warrior clans with a certain independence and who gradually established their own family dynasties. Nevertheless, in crucial moments, e.g. during the interregnum, none of them aspired to real independence and all of them remained faithful to the Ottoman dynasty. The best known among these *Udj-beys* included Ewrenos [*q.v.*], the conqueror of Thrace and Macedonia, Pasha-Yigit established in Scopia since 1392, and his son Turakhān [*q.v.*], later established in Thessaly. The vast territories conquered by the *Udj-beys* were officially recognised by the sultans as their full properties and later turned into *waḳf*s administered by their descendants.

(ELIZABETH A. ZACHARIADOU)

UDJ-BEY [see UDJ].

ʿŪDJ, also ʿĀDJ B. ʿANAḲ or ʿANĀḲ, the Arabic name of the Biblical ʿŌg, the giant king of Bashan. The Ḳurʾān does not mention him. Al-Ṭabarī tells of his great stature and death: Moses was ten cubits in height, his staff ten cubits long, he jumped ten cubits high and smote ʿŪdj in the heel; the body of the fallen giant served as a bridge across the Nile.

Al-Thaʿlabī gives more details: ʿŪdj was 23,333 cubits high, drank from the clouds, could reach to the bottom of the sea and pull out a whale which he roasted on the sun. Noah drove him in front of the ark but the Flood only reached his knees. He lived for 3,000 years. When Moses sent out the twelve spies, ʿŪdj put them into the bundle of wood on his head and wanted to trample on them, but on the advice of his wife he sent them back so that they might put fear by their report into the heart of those that sent them. When ʿŪdj saw the camp of Israel, he broke from the mountain a rock large enough to crush the camp at one blow, but God sent the *hudhud* (hoopoe) and other birds who made a hole in the rock so that it fell like a collar on ʿŪdj. Moses overthrew him in one leap.

Al-Kisāʾī expands the story and increases the marvellous element in it. ʿŪdj was the son of Ḳābīl (Cain) [see HĀBĪL WA-ḲĀBĪL] banished by Adam and of his

sister 'Anāḳ ('Anāḳ thus becomes a woman's name). Although chastised by his mother, 'Ūdj caught the stone with which Iblīs tried to kill her. She therefore blessed him with strength and longevity. When he waded through the sea, it reached to his knees; when he walked, the earth trembled; when he wept, rivers flowed from his eyes; he used to eat two elephants at a meal. He slept twice a year. In Nimrod's time, he boasted that he controlled the heavens. He worked on the Ark with Noah. He was sitting on Pharaoh's council when Yūska', sent by Moses, demanded that he worship God. In order to win Pharaoh's daughter, he was going to destroy the camp of Israel with the gigantic rock, but was slain by Moses.

The sources of these legends are to be found in the Bible and in the Haggadah. The Bible mentions 'Ōg's great size (Deut., iii. 11) and his fall (Num., xxi. 33-5). E. Jōḥanan describes 'Ōg as a fugitive who had escaped the Flood (*B. Nidda*, 61a). Sometimes he is said to be the fugitive who brought Abraham the news of Lot's capture (Gen., xiv. 13). As a reward for this, he was given long life (*Gen. Rabba*, xlii. 8). Like al-Kisā'ī, *Deut. Rabba*, i. 25 puts him at the court of Pharaoh. *B. Berachōt*, 54b, Palest. *Targum* on Num., xxi. 35, records how Moses slew him in one leap. It is in keeping with Muslim legend that in place of the ants or worm which eat away 'Ōg's rock we have the *hudhud*, celebrated in the legend of Solomon.

(B. Heller-[S.M. Wasserstrom])

'UDJAYF b. 'ANBASA, 'Abbāsid army commander who served al-Ma'mūn and al-Mu'taṣim in the first half of the 3rd/9th century, d. 223/838.

Nothing is recorded of his antecedents, but he seems to have been of Khurāsānian or Transoxanian Arab stock; at the height of his career, he had a grant of the revenues of the market at Ishtīkhān [*q.v.* in Suppl.] near Samarḳand (Yāḳūt, *Buldān*, ed. Beirut, i, 196). He was originally a partisan of the rebel in Transoxania Rāfi' b. al-Layth [*q.v.*], during the latter part of Hārūn al-Rashīd's reign, but went over to the caliphal side in 192/807-8 (al-Ṭabarī, iii, 732). Subsequently, he became one of al-Ma'mūn's leading generals, leading campaigns in northern Persia and against the Khāridjite leader Bilāl al-Ḍibābī (214/829) (*ibid.*, 1093, 1101-2). He continued in high favour under al-Mu'taṣim, directing operations against the Zuṭṭ [*q.v.*] in Lower 'Irāḳ (219/834) and participating in several campaigns into Byzantine Anatolia (*ibid.*, 1103, 1109, 1166-8). It was during the course of al-Mu'taṣim's Amorion expedition of 223/838 that 'Udjayf fell out with the caliph, ostensibly over the financing and the commissariat arrangements of the 'Abbāsid army; he was accused of complicity in a plot to kill al-Mu'taṣim and replace him by his nephew al-'Abbās b. al-Ma'mūn, and killed (*ibid.*, 1254, 1256-7, 1264-6).

Bibliography: Given in the article.

UDJDA [see wadjda].

UDJDJAYN, a town of Central India in what was the mediaeval Islamic sultanate of Mālwā [*q.v.*] and at times its capital. It is now a fair-sized town in the westernmost part of Madhya Pradesh State in the Indian Union (lat. 23° 11' N., long. 75° 50' E.).

Renowned since Mauryan and Gupta times as a sacred site for Hindus, it also played a leading role in Indian astronomy, since the ancient Indians came to calculate longitudes from the meridian of Udjdjayn [see al-ḳubba]. Hence the town appears in Ptolemy's *Geography* as Ozēnē, in the geographical section of Ibn Rusta's encyclopaedia as *'dh.y.n* for Uzzayn (22, tr. Wiet, 19), in al-Bīrūnī's *India* and *al-Ḳānūn al-Mas'ūdī* as *'w.dj.y.n, 'z.y.n, 'w.dh.y.n*, and in mediaeval European sources misread as *medius locus terrae dictus Arin* (see *Ḥudūd al-'ālam*, tr. Minorsky, comm. 189, 245). Its ruler was one of the coalition of Indian princes which strenuously resisted the raids of Maḥmūd of Ghazna in the early 5th/11th century, but it was sacked in 632/1234 by the Dihlī Sultan Iltutmush [*q.v.*], who demolished the temple of Mahākālī; later it became part of Mālwā, until in 969/1562 it passed to Akbar and became the chef-lieu of the Mughal *ṣūba* of Mālwā. In the period of Mughal decline, however, the Rādjpūt ruler of Djāypūr, Mahārādjā Djāy Singh, became governor of Udjdjayn for the emperor Muḥammad Shāh [*q.v.*]. It was this ruler who *ca.* 1730 built at Udjdjayn one of his five observatories, reviving the above-mentioned ancient importance of the town for Indian astronomical studies [see marṣad]. After *ca.* 1750 it passed under Marāṭhā [*q.v.*] control, until the advent of the British in 1818, after which it came within the Central India Agency.

al-**UFRĀNĪ** [see al-ifrānī].

UGANDA, Muslims in.

1. *The pre-colonial period*

Originally, Islam came into Uganda from three directions, i.e. the east and south along the established caravan routes of what is today Tanzania and Kenya [*q.vv.*] and from the north, along the Nile in what is today Sudan [see sūdān]. Later, Indian Muslims came into Uganda. Initially the contacts were almost exclusively with the kingdom of Buganda around the north-western end of Lake Victoria.

Muslim traders who had established themselves in the Tabora region of present-day Tanzania by 1825 were trading at Koki in southern Buganda sometime before 1832. However, the earliest recorded Islamic influence in Uganda began during the reign of Kabaka Suna II (*ca.* 1825-56) with the northward advance of Muslim traders from Karagwe, in northwestern Tanzania. One Isa ibn Husain, a pioneer Muslim trader, said to have been a Baluchi, who at one time acted as Suna's bodyguard, was made a chief under Kabaka Suna II. The first Muslim settlements were at Buddu, Kibibi and Kibuga. Two of the most important of the earliest traders were Ahmad ibn Ibrahim and Snay ibn Amir (d. 1861). Tradition has it that some time before his death Suna had learnt some chapters of the Ḳur'ān. He was also told about the Islamic faith in one God. He showed particular interest in the concepts of the resurrection and life after death. The first

Muslims also seem to have left a copy of the Ḳur'ān with him. This was passed on to his son Mutesa I (1856-84).

The importance of the Muslim influence in this early period was limited and lay primarily in its novelty. The traders opened up new horizons to the Baganda and introduced such things as cloth and weapons. It was marked by peaceful penetration and the integration of foreign Muslims into the socio-political system of Buganda.

The number of Muslims in Buganda fluctuated depending on the security of the trade routes. Between 1859-65 the conflict between Muslims and the local chief of Unyamwezi, Mwana Sera, hindered caravans from getting through. By 1862 Islam was not a noticeable factor, but by 1867, partly due to the victory of the Muslims in Unyamwezi and partly due to the exodus of Muslims from Zanzibar as the result of a conflict between the Sultan and the Harthi clan, the number and influence of Muslims in Buganda had increased and a local Muslim nucleus had been established. As in the early history of Islam in West Africa, the Muslim traders were allocated a special area outside the palace in the village of Natete. Mutesa received some Islamic instruction in the early years of his reign. From 1867 with the arrival of one Khamis ibn Abdallah who, like Snay ibn Amir, traced his ancestry to ʿUmān, Islam took root. Instrumental in this process were people like Choli (Toli, Tori), Khamis's cook, who became Mutesa's *factotum*; Idi, from Ngazija in the Comoros, who was Mutesa's Arabic teacher and spiritual guide; and Masudi, all of whom were appointed to various chieftainships. Mutesa learnt Arabic, read the Ḳur'ān and commanded that his subjects should study and accept Islam. An instrument in this process was the *bwe bubawo abuwawulire*—the polished writing and reading boards which became external marks of Muslims. Islamic religious terms became an integral part of Luganda, such as *esula* "*sūra*" *misafu ekyakulani* "Ḳur'ān", *muzikiti* "mosque", *mujasi* "army commander", etc. Mutesa together with some of his chiefs and courtiers were able to converse with such visitors as Charles Chaillé-Long and Emin Pasha in Arabic in 1874 and 1876 respectively. The Islamic calendar was introduced and the records indicate that Mutesa first observed Ramaḍān in 1867 and enforced its observations throughout Buganda over a ten-year period. Mosques were built, officials appointed and remunerated. A custom connected with ablutions (*tayammum* [*q.v.*]) was to place a big stone (*mayinja*) before a mosque. This practice has lingered on in Buganda. At the entrance of mosques and the courtyards of some *s̲h̲uyūk̲h̲*, big stones can be found on which Muslims rub and clean their feet before entering the place of prayer.

Mutesa introduced ritual slaughter. Slaughter in Ugandan abattoirs is still in the hands of Muslims. He also introduced Muslim burial practices. Hunting with dogs was prohibited (though this is perfectly legal), as was the general usage of local beer. The latter probition was more difficult to enforce as it was part and parcel of social custom. Rice was introduced as the appropriate food for festivals, as was the separation of men and women during meals and ceremonies. The *subḥa* also became part of Ganda Muslim usage as was the wearing of a skull cap, *kūfiyya*. Circumcision, however, never became a general practice among Ganda Muslims.

Mutesa had clearly grasped some major concepts of Islam. He sent a delegation to the neighbouring kingdom of Bunyoro inviting its king Kabarega (1870-99) to Islam. When he turned down the invitation, Mutesa began to plan a *d̲j̲ihād* against him.

Muslim influence reached its peak in Buganda around 1875, when it was estimated that there were around 1,500 "Zanzibaris" in the capital. In spite of this, the position of Islam in the country was weak, partly because it had been imposed by the ruler, partly because of the distance of Buganda from other Muslim centres. Added to this were what the Baganda considered difficult Muslim rites, e.g. circumcision, fasting, etc. The lack of well-qualified teachers and the primary interest of its representatives in commerce all contributed to this weakness.

A few coastal traders reached Busoga from 1853 onwards from the east via Masailand, but they did not teach Islam to the local people during their brief stay. There is no indication of contact with Ankole before 1852. Muslims visited Bunyoro before 1864.

Contacts with Muslims coming down the Nile go back to the 1850s and 1860s, when traders plundered in Acholi and Lango. By 1862 Muslim ivory traders had established themselves at Fakaro near present-day Gulu. A number of Muslims accompanied Samuel Baker on his first visit to Bunyoro in 1864. Some traders from the north had established themselves at Faloro (Madi) by the beginning of the 1870s. The *Batuluki* (Turks) under Samuel Baker reached Fatiko in Acholi in early 1872, where a fort was established, and Buganda in 1873. Samuel Baker was succeeded as the Egyptian Khedive's representative by Charles Gordon in 1874. Under him, a number of expeditions were dispatched to the south between 1874 and 1878. Mutesa, on his part, sent missions to the north. One of these was led by one ʿAlī Yūsuf, a native of the Red Sea coast.

These expeditions did not enhance Egypt's political or religious influence in the country. The high-handed methods of the Muslims from the north and their contemptuous attitude towards Mutesa's observance of Islam, as well as the insolence of the *batuluki*, did not help matters. However, some of them stayed. By 1879 it was estimated that Mutesa had about 20 Egyptian irregulars, known as *khotarias*, in his bodyguard. The same seems to have been the case with Kabarega in Bunyoro, where they were referred to as *banassura*.

A further reason for the negative Islamic influence from the north is likely to have been the fact that the *batuluki* represented political interests and belonged to the Mālikī *mad̲h̲hab*. They were more rigid in their religious attitudes than the "Zanzibaris", representing the S̲h̲āfiʿī *mad̲h̲hab*, who had come as traders and whose business interests were an incentive towards compromise and accommodation. The Egyptian involvement in Bunyoro and the perceived threat of annexation by Egypt increasingly drove Mutesa to develop contacts with Zanzibar.

From 1875-80, Islam suffered some setbacks that reduced its influence. It began to re-assert itself during the last four years of Mutesa's reign (1880-4). From 1884 to 1889, Islam found itself in competition with Christianity, which ultimately led to religious wars in which the latter gained the upper hand. Under Mutesa's successor Mwanga (1884-8), the balance was somewhat redressed. A general dissatisfaction among the people led to a united Christian-Muslim rebellion against Mwanga led by the Muslims. He was replaced by *kabaka* Mutebi, who was inclined towards Islam. When the alliance between Christians and Muslims broke up, the Muslims (referred to as *abawadi*) installed Nuhu Kalema as *kabaka* in the hope that Islam would be re-introduced fully. These expectations did not

materialise, partly because the Baganda objected to fasting, daily prayers and abstention from their traditional beer, and feared circumcision, and partly because the Christians took up arms and defeated the Muslims in 1889. Ganda Muslims were persecuted and dispersed and Muslims from the coast were burnt. Mwanga, who had now declared his support for the Christian cause, was reinstated. With the death of Kalema in 1890 and the arrival of the Imperial British East Africa Company's agents and their treaty with the Christian authorities, the tide had turned against the Muslims.

2. *The colonial period*

Under the new administration, the Muslims in Buganda were forced to live in confined and poor regions. Their leaders, Mbogo, Alamanzane and Ndaula were imprisoned. In 1893 a persecution of the Muslims broke out and Muslims were hunted down, many fleeing to neighbouring countries. The reason for this persecution was that some Muslims, indignant at their situation, had approached the Sudanese soldiers known locally as Nubians, who had been brought in by Frederick Lugard, asking for help against the Christians.

Contacts with Muslims outside Uganda, however, continued. Thus Kabarega in Bunyoro sent an embassy to the Mahdists in Khartoum in 1897 when under attack from a Ganda-British force. The Nubians posted to strategic places contributed to the dissemination of Islam, as did the petty traders in various communities. In spite of this, they were isolated, as can be seen by the fact that one of the first Ugandans to undertake the *ḥadjdj* was Abdallah Sekimwanyi, who did so in 1920.

Although Mutesa had appealed both to the Sultan of Zanzibar and the Khedive Ismā'īl to send him teachers, it was only at the beginning of the 20th century that Muslim teachers, such as Shaykh Khalfan bin Mubaraka and Shaykh Abd al-Samad bin Najimi began to influence the character and spread of Islam in Uganda by training local *bawalimu*.

Crucial to the Muslim community in Uganda at this time was the recognition by the authorities of Nuhu Mbogo (d. 1921) (son of Suna and Mutesa's brother and father of Haji Prince Badiru Kakungulu) as the leader of the Muslims in the country. He was one of the signatories of the 1900 Uganda Agreement and was allocated a substantial piece of land for himself and his followers. Although Mbogo had obtained plots to build mosques, these were never utilised because the Muslims were divided. One conflict was the so-called *Juma-Ẕukuli* dispute which first erupted in 1911 concerning whether the *ṣalāt al-ẓuhr* should be omitted on Fridays or should be prayed in addition to *ṣalāt al-djum'a* [see ṢALĀT]. Due to Mbogo's influence and prestige, the matter quietened down. After his death personal rivalries and religious conflicts continued to weaken the community. The *Juma-Ẕukuli* issue re-appeared, and was only settled in 1948 when it was agreed to observe only the *Juma* prayer. A small splinter group continued to combine the two prayers. Disputes also arose concerning the use of *matari*, i.e. drums at religious ceremonies, and the proper way to determine the date of Ramaḍān. From 1926 onwards, the progress of Islam slowed considerably.

The religious élite within the main Muslim body resented the personal rule of Prince Badiru Kakungulu and wanted a say in the administration of the community. They were also critical of their leader for encouraging Western rather than Ḳur'ānic education, fearing that this would lead to young people leaving the faith. In 1933 a section of the religious leaders broke away and formed the *Jamat al-Islam*.

Most of the Muslim leadership throughout this period were products of Ḳur'ān schools which did not equip their students to tackle issues in contemporary society. The lack of educated and sophisticated leaders forced the community in the 1940s and 1950s to bring issues of a religious nature to the public courts, as the Muslims had failed to devise a mechanism for conflict resolution within the community.

From the early 1950s and through the 1960s, Muslims began to influence society as a whole. Those who had received a Western education began to play an important role in business. The establishment of the Uganda Muslim Education Association (UMEA) and the East African Muslim Welfare Society (EAMWS), which had been set up by the Aga Khan in 1937, also contributed to the strengthening of their position, while Muslims employed in such key sectors of the administration as the police and as interpreters' were also influential.

3. *The independence period*

In connection with the 1962 election to prepare for independence, Muslims had become a political factor, which contributed to the victory of the alliance between the Uganda People's Congress (UPC) and Kabaka Yekka over the Democratic Party.

Up to 1965 the Uganda Muslim Association (UMA) was led by Prince Badiru Kakungulu. In that year, a politically-based split occurred among Muslims as a result of the formation of the National Association for the Advancement of Muslims (NAAM). One of its leaders, Shaykh Abdu Kamulegeya, an al-Azhar graduate, had attended a meeting of the Muslim World League and on his return wanted to open an office for the League in Kampala. This was refused by the UMA. He then turned to the government, which granted him permission. The Uganda People's Party (UPP) realised that it could use the split among the Ganda Muslims to enter the Buganda political scene. NAAM was dominated from behind the scene by Obote's Muslim cousin Abubaker Adoko Nekyon. Its main mosque was at Wandegeya, near Makerere in north Kampala. The aim of the new organisation was to recruit the support of the Muslims in Uganda for government policies and to oppose Prince Badiru Kakungulu, whose group represented the majority of Ganda Muslims and became known as the Kibuli faction after their centre in Kampala. This group was registered as the Uganda Muslim Community (UMC). Under the UPP, their activities were increasingly limited and the leaders arrested.

Around 1968, the NAAM, with government backing, assumed the position of sole representative body for all Muslims in Uganda. Their constitution provided for a *muftī* who was to be the only government-recognised Muslim leader. By appointing Muslims as chiefs, and by ousting non-NAAM guardians from mosques, the government manipulated divisions in the community in their own interest. The sharp divisions within the community led to the development of schools and hospitals being neglected. By 1960 there were few Muslim primary schools and only one secondary school for African Muslims at Kibuli. There were three for Indian Muslims which as a general rule, however, did not accept African Muslim pupils.

The situation was totally reversed during the Idi Amin period (1971-9). NAAM was accused of mixing religion and politics and outlawed. The amicable relations between Amin and the Ganda Muslims deteriorated within the year. Amin tried to win the support of other Muslims by emphasising his devotion to Islam. Thus in 1972 he established the Uganda Muslim Sup-

reme Council (UMSC) and a Chief Ḳāḍī was appointed. Amin laid the cornerstone of the organisation's headquarters in Uganda. He also sought to develop relations with Islamic states, leading in 1974 to Uganda's membership in the Organization of Islamic Conference (OIC). New mosques were constructed, hospitals extended or built, businesses acquired and plans were made for the translation of the Ḳur'ān into Luganda, part of which had been undertaken by the Aḥmadiyya community. A certain increase in the Muslim community took place because of the new status it conferred, since being a Muslim no longer implied being a second-class citizen. The creation of the Uganda Muslim Students Association (UMSA) to coordinate the activities of Muslim youth laid the foundation for the future involvement of Muslims in the affairs of the nation. In spite of this, lack of clarity in the UMSC constitution and its relation to the government led to direct intervention by Amin. The development of services for the community was held up, in spite of Amin's Public Holidays Act (Amendment) Decree of 1978 formalising the addition of the *ʿīd al-aḍḥā*, the Prophet's birthday on 12 Rabīʿ I and Friday as a day of rest.

A negative impact on the Muslim community in Uganda was the expulsion of the Asians in 1972, a number of whom, as Muslims, had contributed to the improvement of the indigenous Muslims. The first Asians to come to Uganda belonged to the troops which accompanied Lugard in 1891. During the early period about half of the British Indian troops were Punjabi Muslims. The pioneer of the business community was Allidina Visram (1863-1916) who first started operations in 1898, opening stores at Jinja, Kisumu and along the Nile, appointing mainly Muslims as his agents. Allidina encouraged local business by buying animal skins and agricultural produce. With the completion of the Uganda railway in 1901 his role increased greatly. Most of the early Indian traders were Muslims, especially Ismāʿīlīs. Punjabi Muslims formed the majority of the labour recruited for the construction of the Uganda Railway. They were principally artisans, but were also recruited into the local police force. By 1948 there were 11,172 Indian Muslims in Uganda. Strained relations with the indigenous people led in 1958-9 led to a successful boycott of their shops.

Since independence a growing number of Muslims have undertaken the Pilgrimage. Many read the Ḳur'ān either in the original or in its Luganda rendering. Other major tenets of Islam such as prayers, fasting and festivals are observed. Muslims tend to adopt the dress code of coastal Muslims as well as other cultural aspects. Circumcision, which earlier was a barrier, is generally observed.

The successive post-Amin governments from 1979 until the establishment of Museveni's National Resistance Movement (NRM) government in 1986 were politically and economically unstable and did not improve the situation of the Muslims. With the NRM's ten-point programme the situation began to change. Islamic education, besides continuing in mosque schools, has been boosted with the establishment of an Islamic University in Mbale funded by the Islamic Development Bank in Jeddah. Some students from this university are now at other universities around the Muslim world. Asian Muslim businessmen have returned and have assisted the indigenous Muslim community in various ways.

Although UMSC has continued to function, a number of Muslims and Muslim groupings have been reluctant to integrate with it as it is seen to be a state-related, if not controlled, council. The council's authority is weakened by a lack of influence in religious matters. Secular law entitles the council to organise the Pilgrimage and *ʿīd* celebrations, but has no authority over religious issues. Its leaders are seen to be more concerned with private business than spiritual affairs. The council continues to be funded by Saudi Arabia and Kuwait. Its role has been somewhat strengthened through its involvement with visiting heads of state from Muslim countries such as Iran and Pakistan. Although Muslims have more access to the media, their spokesmen tend to identify with the government rather than the *umma*. This has led to the Ṣūfī *ṭuruḳ*, some of which like the Ḳādiriyya were established in Buganda before 1888 by Sulaiman bin Zahir al-Jabir, becoming, because of their international links and spiritual leadership, more powerful than the council. Access to Muslim radio stations from the Middle East, and audio and video cassettes have also helped the community. In the 1996 election one of the three candidates for the presidency was a Muslim, Muhammad Mayanja, whose father Abubaker Mayanja had been a minister in previous governments.

(S. von Sicard)

UḤAYḤA b. **al-DJULĀḤ**, al-Awsī, semi-legendary pre-Islamic hero and poet of Yat̲h̲rib (the later Medina). The memory of him probably stems from the fact that it was said that his wife had a second marriage connection with the clan of ʿAbd Manāf in Mecca, hence with the Prophet's grandfather ʿAbd al-Muṭṭalib, making the putative date of his birth *ca.* 550, and with a date of death, according to certain sources, before Muḥammad's own birth.

Some verses of his are cited in such collections as the *Aṣmaʿiyyāt*, the *Ḥamāsa* of Abū Tammām, the works of al-Djāḥiẓ, the *ʿUyūn al-ak̲h̲bār* of Ibn Ḳutayba, the *Ag̲h̲ānī* and the *Djamharat as̲h̲ʿār al-ʿarab* of al-Ḳuras̲h̲ī. They give some biographical details, of his role as chief of the clan of Aws and his leadership at various *ayyām* or "days" of his people, and mention his wealth as possessor of various estates and strongpoints (*āṭām*) in the oasis of Yat̲h̲rib and as a usurer, combined with his avarice. Of older authors, only Ibn K̲h̲ayr mentions in his *Fahrasa*, 397, Uḥayḥa's *dīwān* as being introduced into al-Andalus in the 4th/10th century; but no trace of a *dīwān* exists today.

What now remains comprises 22 pieces amounting to about 100 verses, mostly—apart from two fragments apparently from *ḳaṣīdas*—short fragments. The *nasīb*s of certain pieces show the poet's regard for this aspect of the classical ode. Notable is the fact that he hardly uses the *ṭawīl* metre beloved of other ancient poets. His language, little affected by Bedouin features, shows him essentially as an urban poet, with the two main themes of *fak̲h̲r* and of *ḥikma* or wisdom. Blachère's verdict was that the verses attributed to Uḥayḥa cannot be taken seriously, but that he may be viewed as the hypothetical representative of a poetic circle in Yat̲h̲rib in the middle years of the 6th century (*HLA*, ii, 310). Certainly, his memory remained alive for later generations, and he seems to have played a role, alongside earlier bards like Imruʾ al-Ḳays and Muhalhil b. Rabīʿa, in the genesis of ancient Arabic poetry.

Bibliography: Uḥayḥa's verses have been studied and gathered together by ʿAbd al-Ḳādir al-Mag̲h̲ribī, in *RAAD* (1922), 8-17; Ḥasan Muḥammad Bādjūda, *Dīwān Uḥayḥa b. al-Djulāḥ al-Awsī al-Djāhilī*, Ṭāʾif 1979; Ṣāliḥ al-Bakkārī and Ṭayyib al-ʿAs̲h̲s̲h̲ās̲h̲, *Uḥayḥa b. al-Djulāḥ, ak̲h̲bāruhu wa-as̲h̲ʿāruhu*, in *Ḥawliyyāt Djāmiʿat Tūnis*, no. 26 (1987); and ʿĀdil al-Farīdjāt in his book *al-S̲h̲uʿarāʾ al-djāhiliyyūn al-awāʾil*, Beirut 1994. (Taïeb El Achèche)

ʿUHDA [see ḍarība. 4].

UḤUD, a rocky, plateau-topped mountain that lies about 5 km/3 miles north of Medina, and the site of an important battle between Muḥammad and the Meccans.

Traditional accounts date the event to S̲h̲awwāl of year 3, and see the origins of Uḥud in the aftermath of Badr; variant traditions date it to year 4. Under the leadership of Abū Sufyān b. Ḥarb, and incited not only by tribesmen and tribeswomen who had lost relations at Badr (e.g. his wife Hind b. ʿUtba), but also by those whose goods had been plundered, the Meccans resolved to avenge their defeat. A large force (often numbered at 3,000 horsemen) was assembled, and moved north towards Medina; the sequence and chronology of the Meccans' movements around Uḥud are a matter of some confusion, but according to most authorities they encamped north of the city, grazing their mounts on the ripening fields. At least in part, it was this provocation that moved the Prophet, against the advice of several Companions, to muster a large force of his own (Ibn Isḥāḳ's sources put it at 1,000), and move out of Medina. Although they were outnumbered by the Meccans, the Muslims are said to have carried the early part of the battle, perhaps because the topography favoured them. Things then turned for the worse with the fateful decision of the Muslim archers, sometimes numbered at 50 and sometimes at 100, to abandon their position protecting the flank or rear, apparently in order to join fellow Muslims in despoiling the Meccans' camp. K̲h̲ālid b. al-Walīd, commanding the right flank of the Meccan cavalry, exploited the break in Muslim lines and overran Muḥammad's men. In the confused rout that followed, a large number of Muslims were killed, perhaps as many as 65 to 70; among these was the Prophet's uncle Ḥamza b. ʿAbd al-Muṭṭalib, whose death grieved Muḥammad enormously. Rumours even flew about that Muḥammad himself had been killed; in the event, he was apparently only wounded, and the news that he was alive buoyed Muslim spirits enough that they managed to regroup higher up on mount Uḥud. Abū Sufyān did not press his advantage, and towards the end of the day he withdrew towards Mecca; the number of Meccans killed is usually put in the low 20s.

The preceding is a synopsis of events as they are described in the material that was deposited in the *sīra-mag̲h̲āzī* tradition of the 2nd and early 3rd centuries, and which came to dominate (if not quite monopolise) the tradition in general throughout the classical period. Already in Ibn Isḥāḳ (d. *ca.* 150/767) a general consensus had clearly emerged around the sequence of events, even if al-Wāḳidī, writing two generations later, was still piecing together his account from a variety of sources, as had Ibn Isḥāḳ himself (*al-Sīra al-nabawiyya*, ed. M. al-Saḳḳā, ii, 60; al-Ṭabarī, i, 1383-4; al-Wāḳidī, *al-Mag̲h̲āzī*, Beirut 1984 repr. of ed. Jones, i, 199). Judging the reliability of this material is very difficult. That the Muslims suffered a disheartening defeat is clear enough, at least if one accepts that several verses of Ḳurʾān, III (*Āl ʿImrān*), allude to actual historical events (see Nöldeke-Schwally, *Geschichte des Qorāns*, i, 192 ff.; W.M. Watt, *Bell's Introduction to the Qurʾān*, 100, *et passim*). Moreover, inasmuch as the tradition's reconstruction of the basic sequence and chronology of events of the Medinan period inspires confidence, the date of Uḥud is fairly certain, particularly since it occasionally is used to date other events (see, for example, al-Zuhrī, cited by al-Balād̲h̲urī, *Futūḥ al-buldān*, 18). This said, because the Ḳurʾān only alludes to Uḥud—and this not so much to describe or record, but rather to exemplify—full reconstructions of the battle presume the essential historicity of the *sīra* in matters of detail.

How the *sīra* tradition emerged is not yet clear; there is no reason to think that Uḥud accounts were exceptional. Accounts of the battle, probably at this point only very fragmentary, were presumably transmitted principally by the descendants of those who participated or were martyred; and these generated fairly prosaic lists on the one hand (see, for examples, Ibn Isḥāḳ, *Sīra*, ii, 122 ff.; and Ibn Saʿd, *Ṭabaḳāt*, ii/1, 29 ff.), and well-finished legends on the other (such as that of the Ethiopian slave Waḥs̲h̲ī, who killed Ḥamza). Much of the poetry embedded in the accounts also reflects an interest in the experience of tribesmen, both individually and collectively, in the mêlée; and although the authenticity of this too can be doubted—some is clearly exegetical in nature—much may be authentic. Meanwhile, exegetes were concerned to historicise the Ḳurʾānic echoes of Uḥud.

To take only two of the many potential examples: the "two groups" of Ḳur'ān, III, 118 (*idh hammat ṭā'ifatāni minkum an tafshalā*) are not infrequently identified as the Banū Ḥāritha and Banū Salima at Uḥud (thus the commentary ascribed to Mudjāhid b. Djabr [d. 104/722], *Tafsīr*, Ḳaṭar, 1976, 134-5; al-Ṭabarī, *Djāmi' al-bayān*, Cairo 1955-69, vii, 166); and the beginning of Ḳur'ān, III, 121 (*balā in taṣbirū wa-tattaḳū wa-ya'tūkum min fawrihim hādhā*) is glossed by Mudjāhid as *ya'nī min ghaḍabihim hādhā... fa-lam yuḳātilūhum tilka al-sā'a wa-dhālika yawm Uḥud* (thus Mudjāhid, *Tafsīr*, 135; cf. al-Ṭabrisī, *Madjma' al-bayān*, Ḳum 1983, i, 499; al-Ṭabarī, *Djāmi' al-bayān*, vii, 179-80). In general, it seems that early Muslims did not doubt that some of Ḳur'ān, III, alluded to Uḥud; they may have questioned how much, however. Ibn Isḥāḳ is quoted to the effect that *Āl 'Imrān* contains 60 verses, "in which there is a description of their battle, and blame for those whom he rebuked" (*Sīra*, ii, 106). Aside from *Āl 'Imrān*, other verses were connected to the battle as well (e.g. Ḳur'ān, XXXIII, 23: *man ḳaḍā naḥbahu*).

The tradition having emerged when and why it did, it cannot offer convincing answers to many of the questions that modern historians might be inclined to ask. We shall probably never know precisely why Muḥammad was persuaded to leave Medina by the hot-headed "young men who had not fought at Badr" (al-Wāḳidī, i, 210), nor the precise circumstances and scale of the Muslims' defeat (seventy, which is most frequently given for the number of Muslim dead, is manifestly topological). What we can discern, however, is how the narratives expressed a variety of interests and controversies. Among some Shī'īs, 'Alī's bravery is much discussed: he kills a great host of prominent Meccans; Abū Bakr and 'Umar fled, and 'Uthmān only appeared after the battle ended, but he held firm (al-Shaykh al-Mufīd, *al-Irshād*, ed. Beirut 1979, 43 ff.; on 'Uthmān's absence, see also Ibn Isḥāḳ, in N. Abbott, *Studies in literary Arabic papyri. I. Historical texts*, Chicago 1957, 81-2). Less controversial, and fairly ubiquitous, is the elaboration of Muḥammad's role. Thus the Prophet is endowed with the power to heal miraculously (thus Ibn Isḥāḳ, *Sīra*, ii, 82); in a vision he foretells his injuries on the battlefield (thus Ibn Sa'd, *Ṭabaḳāt*, ii/1, 36); and in his stern warning that the archers hold their ground he clearly anticipates their eventual failure to do so (thus al-Wāḳidī, i, 224). In the frequently-cited judgment that Uḥud was a "trial" and "test", in the confusion of which Muslim killed Muslim, and when true believers were distinguished from hypocrites, Uḥud accounts both narrated history and taught enduring lessons, perhaps especially to those Muslims familiar with the first *fitna*.

'UḲĀB (A.), pls. *a'ḳub, 'iḳbān, 'uḳbān, 'aḳābīn*, a fem. noun denoting the eagle in all its species.

The eagle has the tecnonyms of *Abu 'l-ashyam* "father of the one with the mole or beauty spot"; *Abu 'l-ḥudjdjādj* "the man with the pilgrims", i.e. of Mecca, since it follows the caravans making their way there in order to feed on the remains of corpses, of humans and their mounts, left en-route; *Abu 'l-ḥasan* "the fine one"; *Abu 'l-dahr* "the long-lived one"; *Abu 'l-haytham* "the eaglet's father"; and *Abu 'l-kāsir* "the breaker of bones". The female is called *Umm al-hawār* "mother of ill-fortune"; *Umm al-shu'ūr* "the hairy one"; *Umm al-ṭulba* "the one travelling afar"; *Umm al-lūḥ* "mother of the winds"; and *Umm al-haytham* "the eaglet's mother". The female eagle is further called *laḳwa, liḳwa*. As for the young male and female eaglet, as well as *haytham*, these are called *ḍarim, tuladj* and *tulad*.

Amongst the day-hunting raptors (*kawāsir*), out of the nine known species of Aquilae, seven are known in the Arab-speaking lands:

(a) The golden eagle (*Aquila chrysaëtos*), with two subspecied *Hemeyri* and *Daphanea*. It is called *'uḳāb al-ṣayd* "the hunting eagle", *abrash al-dhanab* "having a speckled tail" and *lammā'a* "shining brightly".

(b) The imperial eagle (*A. heliaca heliaca*), called *shaylamī* "white the colour of darnel weeds", *sha'īrī* "white the colour of barley", *khāṭiya, khā'iṭa* "the striped one", and *abyaḍ* "the white one".

(c) The tawny eagle (*A. rapax orientalis*), called *khudāriyya* "the wholly black one", *mukallaf* "brownish-black" and *'uḳāb al-arnab* "eagle with a rabbit".

(d) The greater spotted eagle (*A. clanga*), called *zanbūrī* "wasp-like".

(e) The lesser spotted eagle (*A. pomarina*) which, in Arabic, is confused with the preceding.

(f) Bonelli's eagle (*Hieraaëtus fasciatus*), called *zummadj* "irascible".

(g) The booted eagle (*H. pennatus*), called *musarwala* "having trousers", *āfa, dāhiya* "calamity", *ḳaḍā'* "fate", *sahm* "arrow" and *mandjanīḳ* "ballista".

Arabic writers on natural history such as al-Djāḥiẓ, al-Damīrī and al-Ḳazwīnī (see *Bibl.*) speak at length of the eagle and its ethology. Thus they state that the female lays two or three eggs, only two of which are nestled for a period of 30 days. A naive belief has it that there are no male eagles but only females, so that another bird, or even a fox, is supposed to impregnate it. The eagle can cover immense distances, such as leaving 'Irāḳ in the morning and arriving in Yemen by the evening. It is a true "lion of the air", in view of its strength, its hunting instincts, its rapid flight and its keen sight, hence was early tamed, initially in the Maghrib, for hunting by air for large, furred game like foxes, wolves, jackals, gazelles, oryx and wild asses. The imperial eagle was prized for its swooping on cranes, bustards, wild geese and hares. A falconer after small game would not release his bird whilst there was an eagle around, lest the eagle kill it. In view of the eagle's weight, the hunter with eagles (*'aḳḳāb*) supported his arm bearing the eagle on a forked stick (Pers. *du shākh*) supported on the saddle-bow, as the Ḳirghiz still do when flying their "birkouts".

According to one historical tale, Caesar sent Kisrā an eagle tamed for hunting, but when it reached the emperor's court, it killed a child. In exchange, Kisrā sent back to Caesar a leopard trained for coursing, but this animal devoured a page boy.

In the eagle's eyrie can be found a stone-like substance called *ḥadjar al-'uḳāb* "eagle stone" which, when sucked, cures stammering.

From an Islamic legal point of view, it is allowable to kill an eagle but not to eat its flesh. Nevertheless, the eagle has certain medical and pharmacological uses. Its gall smeared in the form of collyrium over the eyes combats blindness and cures cataracts. It can also be used as an unguent for the breasts of a pregnant woman in order to stimulate the flow of milk. Its fat melted down and mixed with oil is an efficacious unguent for gout and stiff limbs; mixed with honey, it makes an excellent ointment for anal fistulas (*nāṣūr, nāsūr*) and haemorrhoids (*bāsūr*, pl. *bawāsīr*).

In the interpretation of dreams, seeing an eagle in a dream is a sign of success, victory over an enemy and the achievement of power.

In astronomy, *al-'Uḳāb* "The Eagle" is the name of the 17th boreal constellation, yielding, in ancient Latin texts, such deformations as *elaocab, aloocab, alaucab, alocab, alhucab* and *alancab*. This constellation also has the Latin names of *Jovis nutrix* "nourisher of Jupiter", *Raptrix Ganymedis* "the ravisher of Ganymede", *Promethei aquila* "Prometheus's eagle" and *Vultur volans* "flying vulture". It comprises three stars: (1) α (alpha) *Aquilae*, mag. 0.9, called *Altair, Altayr, Althair*, from *al-Nasr al-ṭā'ir* "flying vulture"; (2) β (beta) *Aquilae*, mag. 3.09, called *Alshain*, from Perso-Arabic *shāhīn* "gerfalcon"; and (3) γ (gamma) *Aquilae*, mag. 2.8, called *Tarazed* (Pers., predatory gerfalcon).

UKAYDIR b. **'ABD** al-**MALIK** al-Kindī al-Sakūnī, a contemporary of the Prophet Muḥammad, the Christian king of the oasis and fortified town of Dūmat al-Djandal [*q.v.*] (modern Djawf).

Dūmat al-Djandal was an important caravan station and its annual market took place in the month of Rabī' I. Muḥammad is supposed to have raided it in 5/626, following complaints by Arab merchants about Ukaydir's oppression. Control of the market was contested between the 'Ibādiyyūn (or the 'Ibād, sc. of al-Ḥīra [*q.v.*]) and the Ghassāniyyūn [see GHASSĀN]; when the former ruled over it, Ukaydir held sway. Considering the association of the 'Ibād with al-Ḥīra, the contest would seem to have been one between the vassals of the Sāsānids [*q.v.*] and those of the Byzantines. But elsewhere Ukaydir is specifically said to have been in allegiance to Heraclius (al-Mas'ūdī, *Tanbīh*, 248, l. 17).

For several generations after Ukaydir's time, his descendants lived in Dūmat al-Djandal. These or other descendants of his were no doubt behind some of the reports about him. For example, a report about Ukaydir found in a dictionary of Companions (for a fragment, see Ibn 'Asākir, *Ta'rīkh madīnat Dimashḳ*, ed. al-'Amrawī, Beirut 1415/1995 ff., ix, 199) goes back to Ukaydir's great-great-great-grandson, who is quoting his forefathers.

Ukaydir's brother, Ḥurayth, embraced Islam and in due course, the Umayyad caliph, Yazīd b. Mu'āwiya, married his daughter; many of Ḥurayth's offspring were still living in Dūmat al-Djandal in the latter half of the 2nd/8th century. Ukaydir's elder brother Bishr married before Islam a sister of Abū Sufyān [*q.v.*]. Bishr and his father-in-law, Ḥarb b. Umayya, are said to have played a role in the alleged transfer of Arabic script from al-Ḥīra to Arabia.

The reports about Ukaydir are often conflicting. Significantly, a Shī'ī source reports that before the Tabūk expedition (9/630), Ukaydir threatened to attack Muḥammad and exchanged letters with the Medinan *munāfiḳūn* [*q.v.*], who invited him to joint action against Muḥammad (al-Madjlisī, *Biḥār al-anwār*, Tehran 1376/1957 ff., xxi, 257-8; cf. M. Lecker, *Muslims, Jews and pagans*, Leiden 1995, 86 n.). Ukaydir was killed by Khālid b. al-Walīd [*q.v.*] during the lifetime of Muḥammad (Ḥassān b. Thābit, *Dīwān*, ed. Arafat, ii, 78), or was brought to Muḥammad unharmed having been captured outside his fortress by Khālid's cavalry, or came to Muḥammad voluntarily. According to some, after Muḥammad's death, Ukaydir left his stronghold and went to al-Ḥīra. Yāḳūt says that the compilers of the *Futūḥ* books unanimously agreed that Khālid raided Ukaydir in the days of Abū Bakr and killed him; however, elsewhere Ukaydir is said to have been expelled by 'Umar b. al-Khaṭṭāb.

(M. Lecker)

'UḲAYL, an old Arab tribe and in recent usage, until the motor age, in the pronunciation 'Agēl, the name for caravan-leaders and camel-dealers.

1. The tribe.

Its genealogy is 'Uḳayl b. Ka'b b. Rabī'a b. 'Āmir b. Ṣa'ṣa'a of the Hawāzin branch of the Ḳays-'Aylān [*q.v.*]; among the larger sections are the 'Ubāda and Rabī'a b. 'Uḳayl as well as the Khafādja [*q.v.*] b. 'Amr and al-Muntafiḳ [*q.v.*] b. 'Āmir b. 'Uḳayl. Al-Muḳallad b. Dja'far, the ancestor of the dynasty of the 'Uḳaylids [*q.v.*], traced his descent directly from Ḥazn b. 'Ubāda. Al-Ḳalḳashandī (*Nihāya*, 297) besides these knows of a clan of the Asad b. Khuzayma, called 'Uḳayl (not in Wüstenfeld).

The 'Uḳayl were settled in southern Nadjd and the adjoining western part of al-Yamāma. Their habitat is more accurately defined by a number of districts, waters, hills and villages, which the geographers describe as lying in their territory. The list given by Wüstenfeld, *Register*, 362, based on al-Bakrī's *Mu'djam*, can be completed from Yāḳūt. It is worthy of note that a number of mines were in their possession, including the gold-mine of al-'Aḳīḳ, said to be the most productive in all Arabia; with reference to this, the Prophet is alleged to have said; "The land of 'Uḳayl rains gold" (al-Hamdānī, *Ṣifa*, 153-4, 177). This "'Aḳīḳ of the Banū 'Uḳayl" is also called "'Aḳīḳ Tamra" and lies in the vicinity of Ranya, Bīsha [*q.v.*] and Tathlīth, which all belong to the 'Uḳayl (Yāḳūt, ii, 826, iii, 700-1; A. Sprenger, *Die alte Geogr.*, 52-3, 237 n., 240 n.). Among other places belonging to them, the watering-place of Hubāla is better known from the encounter there with the Ghanm (al-Bakrī, 826; Dhu 'l-Rumma, *Dīwān*, ed. Macartney, 231).

Their best-known battles date only from the 2nd/8th century and show that the conditions of the *Djāhiliyya* survived for a long time into Islam.

There are two different stories of the conversion of the ʿUḳayl to Islam (both in Ibn Saʿd). According to one, three delegates from the ʿUḳayl brought the homage of their people to the Prophet, who gave them al-ʿAḳīḳ and a document confirming this. According to the other version, Muḥammad endeavoured to win over Abū Ḥarb b. Khuwaylid b. ʿĀmir b. ʿUḳayl to his teaching, but the latter first consulted divining arrows to see what he should do. Perplexed by the remarkable chance that the arrow indicating unbelief came out three times, he asked his brother ʿIḳāl (ʿUḳāl) for advice and told him that Muḥammad had promised him al-ʿAḳīḳ if he adopted Islam. ʿIḳāl at once hastened to al-ʿAḳīḳ and took formal possession for himself and his brother of this rich stretch of country, and after his adoption of Islam, Muḥammad confirmed him in it (for the story in Sprenger, *Mohammad*, iii, 512-14, which combines the two stories without justification, see Caetani, *Annali*, Year 9, § 74). Just as Muḥammad on this occasion permitted the old Arab method of divination, so also he allowed the Ruʾās b. Kilāb b. Rabīʿa b. ʿĀmir b. Ṣaʿṣaʿa before their adoption of Islam to avenge an earlier razzia on their already-Muslim neighbours the ʿUḳayl (Ibn Saʿd, §§ 86-7, in Wellhausen, *Skizzen*, iv, 94, 143-5). During the second *ridda* in Yemen begun by Ḳays b. ʿAbd Yaghūth b. Makshūḥ after Muḥammad's death, the ʿUḳayl and ʿAkk joined Fīrūz al-Daylamī, governor of Ṣanʿāʾ, who defeated the Ḳays with their help and re-entered the town (al-Ṭabarī, i, 1989-94; Ibn al-Athīr, ii, 287-9).

About 100 years later, Djaʿfar b. ʿUlba al-Ḥārithī, a poet like his great-grandfather Abū ʿAbd Yaghūth, the famous leader of the Madhhidj [*q.v.*] on the second day of al-Kulāb, following the ancient custom began raids of plunder upon the ʿUḳayl; for the blood shed by him in the Wādī Saḥbal, he was taken prisoner by the governor of Mecca and executed (*Aghānī*[1], xi, 146-52; Yāḳūt, iii, 48; C.J. Lyall, *Translations of ancient Arabian poetry*, 10-12, 84-9). After the death of al-Walīd II (126/743-4) the ʿUḳayl together with the Ḳushayr, Djaʿda and Numayr waged a bitter war on the Ḥanīfa [*q.v.*] and their vassals, the Banu ʾl-Duʾil. The defeat of the Ḥanīfa in the battle of al-Nashāsh (in Yāḳūt, ii, 117, al-Nashnāsh; it was preceded by the first and second battles of al-Faladj) resulted in the appointment of a Ḳaysī as governor of al-Yamāma (Ibn al-Athīr, v, 225-8). About the same time, a branch of the ʿUḳayl took part in the civil war in Spain and in the creation of the Umayyad amīrate of Cordova (see R. Dozy, *Hist. des Musulmans d'Espagne*, ed. Lévi-Provençal, i, 185 ff.).

In the early years of ʿAbbāsid rule, the tribes of the great branch of ʿĀmir b. Ṣaʿṣaʿa migrated from Arabia to Syria and it was only when they reached ʿIrāḳ that the ʿUḳayl began to attain their great importance in history (Ibn Khaldūn, *ʿIbar*, vi, 11). In the civil wars which followed on the death of Hārūn al-Rashīd, the ʿUḳaylid Naṣr b. Sayyār b. Shabath [*q.v.*] fought for al-Amīn, and from his fortress of Kaysūm north of Aleppo raided the surrounding country. He was able to resist al-Maʾmūn's general Ṭāhir Dhu ʾl-Yamīnayn [*q.v.*] sent against him and was only forced at the end of 209 (beginning of 825) by ʿAbd Allāh b. Ṭāhir, to surrender, but only on the caliph's promise of pardon (Ibn al-Athīr, vi, 208-9, 274-5). Around the middle of the 3rd/9th century, the town of Ḳarḳīsiyā [*q.v.*] was in the possession of an ʿUḳaylid, Ṣafwān (presumably the son of the ruler of Diyār Muḍar, who, according to al-Masʿūdī, *Murūdj*, vii, 396 = § 3095, died in 253/867), in whose place Luʾluʾ, Aḥmad b. Ṭūlūn's freedman, placed Aḥmad b. Mālik b. Ṭawḳ (al-Ṭabarī, iii, 2028-9 = Ibn al-Athīr, vii, 276). The latter was driven out by Ibn Abi ʾl-Sādj, who in turn lost his possessions to Isḥāḳ b. Kundādj(īḳ) [see AL-RAḤBA and TAGHLIB]. *Ca.* 286/899, the ʿUḳayl and other Ḳays tribes recognised the spiritual and secular leadership of Abū Saʿīd al-Djannābī [*q.v.*], the founder of Ḳarmaṭī power in Arabia. With their help, he conquered Hadjar, then al-Ḳaṭīf and the whole of Baḥrayn and established a power here which became the terror of the whole Muslim world but very quickly fell to pieces. Before this in 251/865, the *wālī* of Mecca Djaʿfar b. al-Faḍl Bashāshāt was fighting with the rebel ʿUḳayl, who cut the road to Djidda so that the price of provisions rose in Mecca (al-Ṭabarī, iii, 1644 = Ibn al-Athīr, vii, III). At the instigation of the ʿAbbāsids, the Taghlibī leader Abu ʾl-Ḥasan al-Aṣfar in 378/988-9 subdued the Ḳarmaṭīs and forced the Sulaym and ʿUḳayl in succession to leave Baḥrayn [see TAGHLIB]. The ʿUḳayl went to ʿIrāḳ, from which they presumably co-operated with their brethren in al-Djazīra who in the meanwhile had laid the foundations of ʿUḳaylid rule in al-Mawṣil. For the further history of the ʿUḳaylids, see the articles ḤAMDĀNIDS; ʿUḲAYLIDS; AL-GHAḌANFAR; AL-MUḲALLAD; KHAFĀDJA; and also AL-MAWṢIL and AL-RAḤBA.

After their return to Baḥrayn, the ʿUḳayl subjected the Taghlib there and took a part of al-Yamāma from the Kilāb. The government of this region was in the hands of the Banū ʿUṣfūr [see ʿUṢFŪRIDS], who belonged to the ʿUḳayl and who, according to people from Baḥrayn, were still in al-Aḥsāʾ in 651/1253 (Ibn Khaldūn, *ʿIbar*, ii, 313; al-Ḳalḳashandī, 298 = al-Suwaydī, *Sabāʾik*, 44).

As evidence of the very early wide distribution of the ʿUḳayl a story in al-Masʿūdī (*Murūdj*, ii, 67-8 = § 499) is of particular interest. He describes the population of the kingdom of the Ṣanāriyya in the Caucasus as Christians, who claim descent from a branch of the ʿUḳayl, have lived there from early times and made many peoples their subjects. Al-Masʿūdī says he himself saw in Mārib in Yemen ʿUḳaylids who in their mode of life did not differ from their brethren in the Caucasus. The Ṣanāriyya also asserted that they had separated from these ʿUḳayl in Yemen long ago. Here as elsewhere Christianity had found its way among the ʿUḳayl, probably through the influence of partly Christian neighbouring tribes (such as e.g. the Taghlib) (cf. L. Cheikho, *al-Naṣrāniyya wa-ādābuhā bayna ʿArab al-Djāhiliyya*, Beirut 1912-23, 99, 136).

Of celebrated poets of the tribe of ʿUḳayl may be mentioned: Tawba b. al-Ḥumayyir of the clan of Khafādja [*q.v.*] and his beloved, the poetess Laylā al-Akhyaliyya [*q.v.*] of the ʿUbāda. According to one view, al-Madjnūn, so celebrated from the love-story of Laylā and Madjnūn, belonged to the ʿUḳayl; Bashshār b. Burd was also a client (*mawlā*) of them (Ibn Ḳutayba, *al-Shiʿr wa ʾl-shuʿarāʾ*, ed. de Goeje, 269, 271, 355, 476; for Bashshār, see esp. *Aghānī*[1], iii, 20-3, 54; for Tawba, *ibid.*, x, 72-5, 82).

Not only lexical but also grammatical peculiarities of the language of the ʿUḳayl are recorded; e.g. after *laʿalla* "perhaps" they put the genitive (S. de Sacy, *Anthol. gramm.*, 78 and 196, no. 52: for *laʿalla* they also said *laʿalli*, *ʿalla* and *ʿalli*), and used *lammā* with the meaning of *illā* (which some adopt for the explanation of sūra LXXXVI, 4: see *ibid.*, 81 and 202-3,

no. 66); finally, they also had the *taltala*, which, otherwise mentioned as peculiar to the Bahrā', is described as a feature of the language of Laylā al-Akhyaliyya. It consists in the prefix of the imperfect changing its *fatha* to *kasra*, e.g. *anta ti'lam"* for *ta'lam"* (al-Ḥarīrī, *Durrat al-ghawwāṣ*, ed. Thorbecke, 184; cf. also G.W. Freytag, *Einleitung*. . . ., 89).

2. The 'Agēl caravan leaders

The first substantial account of them was given by J.L. Burckhardt (*Notes on the Bedouins and Wahábys*, London 1831, ii, 28-9). He says that the once powerful Ageyl, descended from the Beni Helál (a confusion with the other great branch of the 'Āmir b. Ṣa'ṣa'a), now live scattered among the villages of al-Nadjd, while since the reign of Sultan Murād another tribe also called Beni Ageyl has sprung up. All the Arabs who settle in Baghdād from al-Nadjd, whatever their real origin, join the tribe of Ageyl, and they are the Pasha's strongest support in his wars with the Bedouin or rebels. The chief of these Ageyls of Baghdād is always a native of Derayeh (al-Dar'iyya; according to *A handbook of Arabia*, i, 94, from Burayda), whom they elect themselves and whose appointment is confirmed by the Pasha. These Ageyls, he continues, are famous for their bravery. They lead the caravans from Baghdād to Syria and have frequently repulsed far superior forces of Wahhābīs. Burckhardt distinguished two classes in Baghdād: 1. the *Zogorty* (*Dogortī*), poorer individuals, hawkers and daily labourers; and 2. the *Djemamyl* (*Djamāmīl*), caravan leaders. These two kinds of Ageyls include people of very different tribes and countries, who come e.g. from al-Ḥasā, al-'Āriḍ, al-Ḳaṣīm and the Djabal Shammar; but people from al-Sudayr and the Wādī Dawāsir are not admitted.

From this it is clear that the 'Agēl were not a proper tribe but a combination of heterogeneous elements under the leadership of one man for common commercial interests. These naturally prevented the admission of members of tribes at enmity with one another (e.g. the Ḥarb and 'Atayba ['UTAYBA]), so that the community of the 'Agēl remained neutral as far as possible. Arabs from the centre of the peninsula, especially settled Tamīm and Khālid from al-Nadjd and al-Ḳaṣīm, were the most suitable (although even foreigners such as Turks, Egyptians and Kurds were not excluded: Doughty, ii, 80); they were known in Mesopotamia and Syria as Ageyl, and called *el-Ageylāt* by the Bedouin (*ibid.*, i, II). The latter name (along with *al-'Akeylāt, 'Ukaylāt*) was also applied to a clan of the Banī 'Aṭiyya, whose members were mainly carriers of goods between Ma'ān and Tabūk (*Handbook*, i, 62; Musil, *Northern Ḥeǧâz*, 235; Fu'ād Ḥamza, *Ḳalb Djazīrat al-'Arab*, Mecca 1352, 182). In Doughty's time, the *shaykh* of the Syrian Ageyl in Damascus, Sleymān Abū Dāwūd, belonged to an 'Anayzī family and, like his predecessor from Burayda, was a camel-dealer. According to M. von Oppenheim, *Vom Mittelmeer zum Persischen Golf*, ii, 74, the bulk of the 'Agēl (200,000 *bēt*) lived in al-Nadjd, while they had only about 300 houses in Baghdād (he described them as among other things post-riders between Baghdād and Damascus and called attention to the peculiar nature of their caravans, in which the camels were tied together by ropes: i, 255, 325-6, ii, 9).

The 'Agēl were important in several ways. For the Bedouin they were the indispensable traders of the desert, who, as a result of their neutral position as professional caravan-leaders and agents of the great merchants resident in Baghdād and Damascus, purchased camels among the tribes and took them away; on their return they brought back with them the goods required in Central Arabia (a very good description of this activity of the 'Agēl is in Musil, *Manners and customs*, 278-81, who compared them with the 'Ibād of al-Ḥīra, see his *Northern Neǧd*, 179 n.). In addition to acting as auxiliaries to the government's military forces, forming under the Ottomans an irregular cavalry, they also served as escort to the *ḥadjdj* and guarded the halting-places on the pilgrim route. Almost all European travellers of the pre-modern period used their services, and many travel accounts contain references to them.

It would be of great interest to learn—as Nöldeke pointed out in *ZDMG*, xl (1886), 182 n. 4—in what relation these 'Agēl considered themselves to stand to the old 'Uḳayl and, on the other hand, to the Muntafiḳ descended from the latter.

(H. KINDERMANN)

'UḲAYLIDS, an Arab dynasty of northern 'Irāḳ and al-Djazīra which flourished from *ca.* 380/990 to 564/1169.

The family stemmed from the North Arab tribe of 'Uḳayl [*q.v.*]. In the 4th/10th century, the 'Uḳayl in Syria and northern 'Irāḳ were dependents of the Ḥamdānids [*q.v.*] of Mawṣil and Aleppo. When the last Ḥamdānids of Mawṣil, Abū 'Abd Allāh al-Ḥusayn and Abū Ṭāhir Ibrāhīm, were threatened by the Kurdish chief Bādh, founder of the Marwānid line [see MARWĀNIDS] in Diyār Bakr, they appealed for help to the 'Uḳaylid chief Abu 'l-Dhawwād Muḥammad b. al-Musayyab. But after defeating Bādh and acquiring the towns of Djazīrat Ibn 'Umar, Niṣībīn and Balad, Abu 'l-Dhawwād was able to set aside the Ḥamdānids and take possession of Mawṣil for himself *ca.* 380/990, nominally as a vassal of the Būyid Amīr Bahā' al-Dawla [*q.v.* in Suppl.].

After Abu 'l-Dhawwād's death in 386/996, there were struggles for power amongst his sons until his

nephew Mu'tamid al-Dawla Ḳirwāsh b. al-Muḳallad b. al-Musayyab emerged as victor and began a fifty years' reign (391-442/1001-50), controlling Mawṣil and several other fortresses and towns of al-Djazīra. The main threat to Ḳirwāsh's power in the second half of his reign proved to be that from bands of Turkmens who were moving westwards from Persia, taking advantage of the enfeebled state of the Būyids in 'Irāḳ. Ḳirwāsh and his allies the Mazyadids [*q.v.*] of al-Ḥilla did defeat the Oghuz in 435/1044, but Ḳirwāsh lost his power as a result of disputes among the 'Uḳaylid family members [see art. *Karwāsh*, in *EI*[1]].

With the reign of Ḳirwāsh's great-nephew Sharaf al-Dawla Muslim b. Ḳuraysh b. Badrān (453-78/1061-85 [*q.v.*]), the 'Uḳaylid dominions reached their greatest extent and stretched almost from Baghdād to northern Syria and Aleppo. Careful to ally himself with what was now the dominant power in the Middle Eastern lands, the Saldjūḳs under Alp Arslan and Malik Shāh, he was able to occupy Ḥarrān, Edessa and, in 472/1079, Aleppo. However, he coveted control of Damascus also, so now switched sides to the Saldjūḳs' enemies in Syria, the Fāṭimids [*q.v.*], in the hope of receiving Fāṭimid military support for the conquest of Damascus. This proved a disastrous decision, and a Saldjūḳ army appeared at Mawṣil. Muslim turned westwards to attack the Saldjūḳ chief in Asia Minor, Sulaymān b. Ḳutulmish [*q.v.*], but was defeated near Antioch by the latter and killed in 478/1085.

'Uḳaylid chiefs, including Muslim's brother Ibrāhīm and his own sons 'Alī and Muḥammad, now became involved in internecine strife over control of Mawṣil, with their Saldjūḳ suzerains intervening at various junctures; but Ibrāhīm was killed in 486/1093 and 'Alī forced finally to yield the city to the Saldjūḳs in 489/1096.

There were also several local lines of 'Uḳaylid governors in towns of northern 'Irāḳ and Diyār Muḍar, including Takrīt, Hīt, 'Ukbarā, Āna, al-Ḥadītha and Ḳal'at Dja'bar, and some of these persisted into the 6th/12th century; a branch at Ḳal'at Dja'bar and al-Raḳḳa lasted until 564/1169 under a descendant of Badrān b. al-Muḳallad until ended by the Zangids.

There are indications that the 'Uḳaylids were something more than predatory Bedouin chiefs and that they introduced certain administrative techniques into their lands. Thus Muslim b. Ḳuraysh is said to have installed a *ṣāḥib al-khabar* or intelligence agent in each one of his villages; and several 'Uḳaylids achieved fame as poets. The subjection of the 'Uḳaylids and then of the Mazyadids to Saldjūḳ power marks the end of purely Arab control over the countryside of 'Irāḳ and al-Djazīra, which now became politically dominated by Turkish potentates, whilst the land acquired an increasing element of Turkish and Kurdish nomads.

(C.E. Bosworth)

AL-UḲAYSHIR, the appellative of the Umayyad poet al-Mughīra b. 'Abd Allāh b. al-Aswad b. Wahb b. Nā'idj b. Ḳays b. Mu'riḍ of the 'Amr b. Asad b. Khuzayma (Ibn Ḥazm, *Djamharat ansāb al-'Arab*, Cairo 1391/1971, 191, and not as is commonly acknowledged after the *Aghānī*). He owed this appellative "red face" to a skin disease which ancient sources denoted by the generic term *baraṣ*, leprosy (al-Djāḥiẓ, *al-Burṣān wa 'l-'urdjān*, Beirut 1401/1981, 68, 74, referring to al-Uḳayshir by name). This must have made him repulsive to look at, and he attacked anyone at all who called him by this nickname.

Born and raised within Islam, he arrived in Kūfa at a very early age and settled there until his death *ca.* 80/699 (Ibn Shākir al-Kutubī, fol. 13a, records the date of his death as 84/703). His fate was no different from that of a good number of poets of his generation. For his subsistence he hired out his services to the factions who were squabbling for power; this former 'Uthmānī took up the Zubayrid and the Marwānid cause in turn with every new reversal of fortune. Two episodes stand out clearly in his disordered, pleasure-seeking life. He was conscripted into the Zubayrid army raised by the governor of the city, but turned back hardly having set foot in Syria. On this occasion, he composed a piece of writing describing his desertion, his refusal to let himself be killed and his preference for the joys of life (*Dīwān*, no. XL). The second concerns his assassination by the followers of Muḥammad b. al-Ash'ath al-Kindī (*ibid.*, no. XXXVII) or of 'Abd Allāh b. Isḥāḳ b. Ṭalḥa (al-Zubayrī, *Nasab Ḳuraysh*, 287), both members of the aristocracy of Kūfa, whom he had praised profusely during his career as a laudatory poet.

The rare vestiges of his poetry which survive (48 pieces and fragments which amount to 184 verses) show that he can in no way be regarded as a minor poet. In the classical period his work had two recensions. The first one was made by Muḥammad b. Ḥabīb, and was therefore prior to 245/859. Of the second, nothing is known, but it was cited by several anthologists. His poetry looks in a determined way to new horizons, breaking free from the poetic and the secular conventions and constraints. The poetry which he composed was libertine in its language and motifs. There are short poems which hold religion and its practices up to ridicule; the tone is astonishingly insolent. In his spirited and nimbly drawn parodies, he portrays drunken *imāms* professing cynical views, irreverent men who come close to the borders of heresy (*Dīwān*, nos. XIII, XXI). In some respects, the sexual dimensions of libertinism and profligacy are less acceptable; such fragments here flow readily into pornography (nos. X, XLV). His *hidjā'*, which was very much feared in that period and seems to have been the cause of his assassination, exploited the subject of dissolute sexual mores. Without doubt he is the herald of the epigrams of the modernist mainstream poets of the 2nd/8th century. The best of his poetic contribution is, however, his bacchanalian verse. In his poems devoted to this theme the poet succeeds in conveying his enthusiasm and his love for wine. He manages this by means of sketches which kindle the imagination in a particularly fascinating way as comical situations are drawn: such is the image of the pipe stretched out by the drinkers across the door of the tavern to pour out wine for the soldiers (*ibid.*, no. II); and also the hybrid faun frequenting the taverns (Ḥunayn al-Ḥīrī, Dawma, Abu 'l-Ḍaḥḥāk, Umm Ḥunayn) which seems here to come alive before our very eyes.

In the history of Arab literature, al-Uḳayshir is a representative of the urban poet. In an urban civilisation, the poet who is abandoned by his tribe must become laudatory. Patrons soon tire of incessant

entreaties; they begin to grumble and refuse to play the role of financial backers; and then the artist begins to practise blackmail and to resort to diatribes; and then comes the clash. The case of al-Uḳay<u>sh</u>ir is one example of this. Yet on the other hand he constitutes a link in the long chain of the Asadī poets from Kūfa (Ṭu<u>kh</u>aym, ʿAbd Allāh b. al-Zabīr, al-Ḥakam b. ʿAbdal, Abū Dulāma and Wāliba b. al-Ḥubāb) who played a decisive role in the emergence of mainstream innovative poetry in the 2nd/8th century.

(A. ARAZI)

AL-**UḲAYṢIR**, an idol of the tribes of Ḳuḍāʿa, La<u>kh</u>m, <u>D</u>ju<u>dh</u>ām, ʿĀmila and <u>Gh</u>aṭafān [*q.vv.*], venerated in northern Arabia, across which these tribes ranged, as far as the Syrian borders (Ibn al-Kalbī, 24, 30). Pilgrimage was made to it by devotees with shaven heads; with each lock of hair, a handful of meal was offered, all this thrown into a large trench or a dried-up well (*ḥafr*). The Hawāzin, neighbours of the Ḳuḍāʿa, used to come and collect the meal, either at the time of the offering or after it was mixed with the hair.

The deity seems to have been embodied in several betyles. The poet Zuhayr "swore faithfully by the shaped stones (*anṣāb*) of al-Uḳayṣir and by the place where the tufts of hair with their lice were cut off" (*ibid.*, 24; Yāḳūt, *Buldān*, i, 340). The victims' blood was poured over the sacred stones (Ibn al-Aʿrābī, in *TA*, iii, 506 ll. 27-8), and ritual processions were made round it to the chanting of praises and joyfulness (Rabīʿ b. Ḍubayʿ/Ḍabuʿ al-Fazārī, in Ibn al-Kalbī and Yāḳūt, *loc. cit.*). The stones could even be covered with sacred cloths on which oaths could be taken. These stones must have represented the tribes that were grouped around al-Uḳayṣir and who regarded the place as the bond of their tribal union. They may have stemmed from some great sanctuaries of the Arabs and have formed the kernel of a primitive pantheon.

It might be doubted whether al-Uḳayṣir was a very old deity, given the absence of any mention in the Liḥyānite and <u>Th</u>amūdic inscriptions in the vast lands occupied in the 6th century by the tribes venerating it. As the focus of a rudimentary cult, its sanctuary might well have passed unnoticed by the traders, travellers and caravans traversing the region, since these were more evolved, semi-sedentarised, with better-organised cults; but this last mode of life, which crystallised around the urban centres, was not necessarily opposed to the long-range movements of pastoralist tribes who ranged as far as the limits of the Syrian desert.

The great antiquity of al-Uḳayṣir, considered to be Syrian in origin, may only be deducible from scattered, fragile pointers, it is true, but these are not negligible and allow the deity to be connected with the ancient Canaanite deity Katar (T. Bauer, *Die Ostkanaanäer*, Leipzig 1926, 91 l. 26; G. Hoffmann, in *ZA*, xi [1896], 253-8) or Kaw<u>th</u>ar (Ugar. *k<u>th</u>r*), whose name was variously pronounced in later times (cf. M. Dahood, in S. Moscati *et alii* (eds.), *Le antiche divinità semitiche*, Rome 1958, 81-2). The link could be justified from Kaw<u>th</u>ar's being linked with music and singing; in Ugaritic there is mentioned a group of professional singers, *k<u>th</u>rat* (cf. Hebr. *kō<u>sh</u>ārōt*, in Ps. lxviii. 7). In the verses of Rabīʿ b. Ḍubayʿ mentioned above, al-Uḳayṣir figures as the originator of all melodies, *na<u>gh</u>am*, around whom the poet circles the stone or sanctuary of al-Uḳayṣir to songs of praise and joyfulness.

The link between al-Uḳayṣir and Kaw<u>th</u>ar, father of Tammūz, in Aramaic mythology, the equivalent of Cinyras, father of Adonis, in Cypriot mythology, also has in its favour the possibility of a foreign origin for the name, one deformed as it became Arabised. No Arabic etymology of *ḳ-ṣ-r* yields a satisfactory divine name. The facts that, morphologically, it would be the diminutive of *aḳṣar* "the shortest", and that one might derive it from *ḳaṣr* "torticollis", as Wellhausen translated (*Reste*², 63), or from *ḳaṣra* "base of the neck", get us no further. But the consonant skeletons of Uḳayṣir and Kaw<u>th</u>ar could conceivably have been originally the same, with dialectal change of the *kāf* into the uvular *ḳāf*, entailing that also of *tāʾ* (in Katar) and *<u>th</u>āʾ* (in Kaw<u>th</u>ar) into *ṣād*. The Aramaic form of this name may have lingered on in Arabic in the divine name Kat<u>h</u>rā, idol of the Ṭasm and <u>D</u>jadīs [*q.v.*], probably representing the solar disc (cf. Fahd, *Le panthéon*, 109).

The offering of meal (*daḳīḳ*) made to al-Uḳayṣir does not seem to have any connection with the divination by means of flour practised by the Greeks and known amongst the Semites (see refs. in *ibid.*, 161). Could it have been originally a question of a gift to the *sādin* [*q.v.*] or custodian of the shrine, who probably cut the hair of pilgrims as a mark of their sacralisation? This would explain the fact that to each lock of hair there corresponded a handful of meal, which looks like either an equivalent or a payment. With the disintegration of the cult and the absence of a *sādin*, the offering of meal nevertheless continued, with the meal rendered useless by being mixed with hair. Such an offering does seem strange in the nomadic milieu, and may point to a Canaanite-Aramaean, hence agricultural, origin of this deity. Also, the cutting of hair as a sign of *iḥrām* was usual in Arabian cults, notably at Minā during the Meccan pilgrimage, surviving there till today, and at al-Mu<u>sh</u>allal, at the shrine of Manāt. Herodotus, iii. 8, links it with Dionysius, and Plutarch, *De Iside*, ch. 4, mentions that the Egyptians cut their hair at the celebration of mourning for Osiris. This places right away al-Uḳayṣir in the mythic context of the dying god, of which Tammūz, Adonis and Osiris are clearly similar manifestations.

Bibliography: This article is based primarily on T. Fahd, *Le panthéon de l'Arabie centrale à la veille de l'Hégire*, Paris 1968, 157-63, where full references are given. (T. FAHD)

ʿUKĀẒ, the most famous and important of all the annual fairs (*sūḳ* [*q.v.*], pl. *aswāḳ*) of the Arabs in pre-Islamic times. It was situated to the southeast of Mecca between Nakhla and al-Ṭāʾif in the territory of the tribal group Hawāzin [*q.v.*]. It shared with two other fairs, Madjanna and Dhu 'l-Madjāz, proximity to Mecca and its being held during the Sacred Months. But it was the most important of the three, and was held in the month of Dhu 'l-Kaʿda, just before the start of the pilgrimage to ʿArafāt and Mecca. The *sūḳ* was strategically located in the middle of the Spice Route of Western Arabia and it especially flourished in the 6th century, owing to the Byzantine-Persian wars, which diverted trade from the Mesopotamian to the West-Arabian route on the eve of the rise of Islam and redounded to the great advantage of Mecca and Ḳuraysh. The tribe of Tamīm controlled some of ʿUkāẓ's important functions.

Although it was principally a fair for buying, selling and the exchange of various commodities, ʿUkāẓ was of great significance in other non-material aspects of Arab life in pre-Islamic times, not unlike the national festival of Classical Greece, the πανήγυρις. And it was, like other Arabian *aswāḳ*, a unifying force among the Arab tribes, where the Arabic literary *koinē* received some development, where contests, literary and other, were held, and where covenants and contracts were struck, hallowed by proximity to ʿArafāt and the sanctity of the Sacred Months. The later Islamic sources speak of arbitration conducted by the poet al-Nābigha al-Dhubyānī [*q.v.*].

The *sūḳ* with its environs was the scene of some important historical events, such as the Fidjār war involving Ḳuraysh and Hawāzin. It also witnessed some historic visits, the most important of which was that of the Prophet Muḥammad and the Christian Ḳuss b. Sāʿida [*q.v.*], said to have been the bishop of Nadjrān, both of whom preached their respective faiths at the *sūḳ*.

It was only natural that ʿUkāẓ should have declined after the rise of Islam, which brought about a fundamental change in the relative importance of the trade routes and the role of Arabian tribes, now the sinews of the Arab conquests. Its actual demise took place in 127/745, when the Ḥarūriyya or Khāridjites sacked it and thus consigned it to oblivion.

Bibliography: References to ʿUkāẓ are scattered in the various sources such as Ibn Ḥabīb, *K. al-Muḥabbar*, ed. Ilse Lichtenstädter, Ḥaydarābād 1942, 263-8, and al-Marzūḳī, *K. al-Azmina wa 'l-amkina*, Ḥaydarābād, 1332/1914, i, 165-70; the best modern work is Saʿīd al-Afghānī, *Aswāḳ al-ʿArab*, Damascus 1960, 277-343. For an archaeological survey of the site, see Kh.I. al-Muaikel, *Sūq ʿUkāẓ in al-Ṭaʾif*, in *al-ʿUṣūr al-Wusṭā*, Chicago, vii/1 (1995), 1-4. (IRFAN SHAHÎD)

ʿUKBA B. NĀFIʿ b. ʿAbd al-Ḳays al-Ḳurashī al-Fihrī (d. 63/683), one of the most prominent Arab commanders of the Islamic conquests period, above all in North Africa, where he was responsible for the foundation of al-Ḳayrawān [*q.v.*].

He was born towards the end of the Prophet's life, hence was accounted a Companion, and was through his mother a nephew of ʿAmr b. al-ʿĀṣ [*q.v.*], the conqueror of Egypt, who shortly before his death in 43/663 was to give him command over the lands to the west of Egypt. It seems that ʿUḳba had already played a role in ʿAmr's first raid towards North Africa in 21/642, when ʿAmr reached as far as Barḳa [*q.v.*], and his aide ʿUḳba penetrated into Fezzan [see FAZZĀN] and as far as its town of Zawīla [*q.v.*], though this last was not yet the important link in the trade across the Sahara to the Bilād al-Sūdān [*q.v.*] which it subsequently became. The result of these operations seems certainly to have left Barḳa in Arab hands. How long ʿUḳba remained in Zawīla is unclear, but by some date between 25-7/646-8 he took part in ʿAbd Allāh b. Saʿd b. Abī Sarḥ's [*q.v.*] campaign against the Byzantine exarch Gregorius (see al-Balādhurī, *Futūḥ*, 224-5; al-Bakrī, ed. and tr. de Slane, *Description de l'Afrique septentrionale*, 10; V. Christides, *The conquest of Libya by the Arabs and the thrust of Islam into the Berber land*, forthcoming).

It should, however, be noted in regard to this campaign and to ʿUḳba's subsequent ones that much of what the historians have preserved concerning ʿUḳba's career in North Africa comes from later traditions of eastern origin, e.g. preserved in the Egyptian authors Ibn ʿAbd al-Ḥakam and al-Nuwayrī and in Ibn al-Athīr. The only authority from a North African tradition seems to be ʿUbayd Allāh b. Ṣāliḥ b. ʿAbd al-Ḥalīm and his father Abū ʿAlī Ṣāliḥ (*flor. ca.* 700/1300), preserved in the later Moroccan historian Ibn al-ʿIdhārī's *Bayān al-mughrib* (in the fuller text ed. G.S. Colin and E. Lévi-Provençal, i, Leiden 1948; see Lévi-Provençal, *Un nouveau récit de la conquête de l'Afrique du Nord par les Arabes*, in *Arabica*, i [1954], 17-43). The accounts of ʿUḳba's expedition to the Fezzan are undoubtedly tinted with mythological elements, such as the comparison of his epic journey through the scorching Sahara with the journeyings of Alexander the Great. On the tendentiousness of these later traditions, see W. Marçais, *Le passé de l'Algérie musulmane*, in *Histoire et historiens de l'Algérie*, Paris 1931, 150.

ʿUḳba appeared again in an expedition against the tribes south of Tripoli which some of the sources place in 42/662-3 or 46/666-7, when it seems that Arab links with Zawīla and Fezzan were reinforced. In this last region, he captured the capital of the Garamantes, Djarma (Ibn ʿAbd al-Ḥakam, *Futūḥ Miṣr*, ed. C.C. Torrey, New Haven 1922, 194) and several other fortresses, whose existence seems to be confirmed by archaeological and epigraphic evidence (C.M. Daniels, *The Garamantes of Fezzan*, in F.F. Gadallah (ed.), *Libya in history*, Benghazi 1971, 261-81; idem, *Excavations and fieldwork amongst the Garamantes*, in *Libyan Studies*, xx [1989], 45-62). According to Ibn ʿAbd al-Ḥakam and others, ʿUḳba proceeded beyond Libya to the land of the blacks and conquered Kawār [*q.v.*], halfway between Fezzan and Lake Chad; possibly he was aided by the inhabitants of Fezzan, said by Ibn Saʿīd to be in constant feud with the black peoples of Kawār (see on the importance of Kawār in mediaeval times, K.S. Vikor, *The oasis of salt*, Bergen 1979, and on this expedition, Ph. Lefrang, *L'expédition d'ʿUqba ibn Nāfiʿ à Kawar (46 H./666 J.-C.)*, in *Bull. Archéologique du Comité des Travaux historiques et scientifiques*, N.S., xix/B [1985], 412).

The expedition of 50/670 took ʿUḳba into Ifrīḳiya, where he conquered Ghadāmis (Ghadamès), Ḳafṣa (Gafsa) and Ḳasṭīliya [*q.vv.*]. Byzantine sources, without mentioning the Arab leader by name, state that, about this time, in the reign of Constantine Pogonatus IV (d. 668), the Arabs invaded Africa and took 80,000 captives (Theophanes, ed. de Boor, 352). For this expedition, ʿUḳba had a force of 10,000 cavalry, which was gradually increased as the local Berbers acceded to Islam. It was at this time, according to the accepted

dating for its foundation, that ʿUḳba decided to establish a military encampment, on the lines of the *amṣār* of the East [see MIṢR. B.] at al-Ḳayrawān on an elevated plateau in the Ḳasṭīliya region, in the Byzantine province of Byzacene, rejecting the one previously built by the governor of Egypt Muʿāwiya b. Ḥudaydj on the nearby al-Ḳarn mountain [see AL-ḲAYRAWĀN, at Vol. IV, 826a; and note that there is at least one plausible Arab tradition for an earlier foundation date]. This inland site gave him a secure base for military expansion and missionary work amongst the Berbers, since the Byzantines still had control of the seas around Ifrīḳiya, and he now stationed himself in his new capital for the remaining years of his governorship.

ʿUḳba was not, however, to enjoy the fruits of this process, for he was dismissed from Ifrīḳiya by the Umayyad caliph Muʿāwiya I in 53/673. ʿUḳba may have been dismissed because the caliph wished to link Egypt and Ifrīḳiya closely for the naval war against the Byzantines (as suggested by A.D. Taha, *The Muslim conquest and settlement of North Africa and Spain*, London and New York 1989, 62 ff.), but more probably because of Muʿāwiya's fear of ʿUḳba's growing power and the possibility of the latter's pretensions to independent authority in the rich province of North Africa. Ifrīḳiya remained a dependency of Egypt, and the governor there, Maslama b. Makhlad al-Anṣārī, replaced him by one of his own freedmen, Abu 'l-Muhādjir Dīnār, who imprisoned ʿUḳba and then undertook raids into what later became Algeria, penetrating as far as Tlemcen, according to Ibn Khaldūn, and skilfully seeking a rapprochement with the Berbers in the struggle against the *Afāriḳa*, the Romanised Africans and incomers from other parts of the Byzantine empire who made up the population of the Greek-held coastal cities; thus after defeating the Berber leader of the Awrāba, Kusayla or Kasīla [*q.v.*], Abu 'l-Muhādjir accepted his conversion to Islam and incorporated his Barānis followers into his own forces. On Muʿāwiya's death in 60/680, the new caliph Yazīd I restored ʿUḳba to the governorship of Ifrīḳiya. ʿUḳba now turned the tables, and put Abu 'l-Muhādjir and Kusayla in fetters and carried them round with him.

He then embarked, in 61/681, on a much larger-scale expedition than before which was to take him to the shores of the Atlantic. This expedition is not mentioned in the Byzantine sources, and R. Brunschwig was doubtful whether ʿUḳba actually got any farther than what is now central Algeria (*Ibn ʿAbdalh'akam et la conquête de l'Afrique du Nord par les Arabes: étude critique*, in *AIEO Alger*, vi [1942-7], 138); but the text published by Lévi-Provençal (*Un nouveau récit*, with tr. of the passage in question in Appx. 1, pp. 35-42, and map of ʿUḳba's campaigns during his second governorship at p. 28) seems nevertheless to confirm it. Accepting this latter view, the stages of ʿUḳba's campaign can be traced in the narrative of Ibn al-ʿIdhārī, Ibn Khaldūn and other Arabic texts, though in some sources much tinted with folkloristic elements (see H.T. Norris, *Saharan myth and saga*, Oxford 1972, 150 ff.). Preceded by an advance guard under Zuhayr b. Ḳays al-Balawī, ʿUḳba's army advanced from al-Ḳayrawān into the central Maghrib, defeating Berber and Byzantine elements at the Zāb and at Tāhart [*q.v.*] and exacting tribute from them, and reached Tangiers [see ṬANDJA], which a local Ghumāra leader, Ilyān (? Julianus) surrendered to him. The latter is said to have dissuaded ʿUḳba from crossing into the Iberian peninsula. Instead, he turned southwards into Morocco, occupying the Zarhūn massif, capturing Volubilis or Walīla [*q.v.*], crossed the middle Atlas and marched through the Dra (Darʿa) into the Sūs [see AL-SŪS AL-AḲṢĀ]. Then he turned towards the Atlantic coast and attacked the lands of the Maṣmūda Berbers in the Atlas and Anti-Atlas as far as Tarudant [*q.v.*].

This was a brilliant campaign, but ʿUḳba had achieved nothing towards the permanent subjection of these lands, which had to be undertaken later. Kusayla escaped and, in concert with the Byzantines, began organising Berber resistance. On his return to al-Ḳayrawān, ʿUḳba reached the central Maghrib, where his army became restive from being continuously in the field. At Thubunae or Ṭubna [*q.v.*] on the Zāb he unwisely divided his army and sent off successive units towards al-Ḳayrawān, when he himself set out from Ṭubna for the Aurès or Awrās [*q.v.*] region. At Tahūdha or Thabudeos, to the south-east of Biskra, his small force of Arabs was overwhelmed by a Byzantine-Berber army under Kusayla, and he and 300 of his followers killed (63/683). His grave, with its *ḳubba*, and the graves of his companions, are still pointed out and visited by devotees at the village which bears his name, Sīdī ʿUḳba.

ʿUḳba had shown himself as a bold and dashing commander, but he lacked the ability properly to take into account the importance of the local people, the Berbers, who played a key role in the Arab-Byzantine struggles for North Africa, and it was to be others who were to secure North Africa firmly for Islam. It must also be admitted that the legendary accretions which attached themselves to his person make it difficult to discern the historical ʿUḳba.

Bibliography: The Arabic sources are detailed in E. Lévi-Provençal's *EI*[1] art. *ʿOḳba b. Nāfiʿ*. For more studies, see Ch.A. Julien, *Histoire de l'Afrique du Nord*, Paris 1931, 319 ff., Eng. tr. ed. R. Letourneau, *History of North Africa from the Arab conquest to 1830*, London 1970, 20-1; E.F. Gautier, *Le passé de l'Afrique du Nord: les siècles obscurs*, Paris 1937, 269-70; G. Abun-Nasr, *A history of the Maghrib*, Cambridge 1971, 40-2. See also the bibls. to AL-KĀHINA; AL-ḲAYRAWĀN; KUSAYLA. (V. CHRISTIDES)

AL-ʿUKBARĪ, ʿABD ALLĀH B. AL-ḤUSAYN, Abu 'l-Baḳāʾ, Muḥibb al-Dīn, Ḥanbalī grammarian, philologist and *faḳīh* of Baghdād (*ca.* 538-66/*ca.* 1143-1219).

Life. Born of parents originally from ʿUkbarā [*q.v.*], on the left bank of the Tigris and to the north of Baghdād, nothing is known of his background or ethnicity. Afflicted by blindness at an early age, he spent his life in study in the ʿAbbāsid capital and never seems to have left it. He studied with several famous scholars, such as the grammarian Ibn al-Khashshāb [*q.v.*], and with experts on *fiḳh* and the *ḳirāʾāt*, and seems to have served as a *muʿīd* or répétiteur to the great preacher Ibn al-Djawzī (d. 597/1200 [*q.v.*]). These scholars moulded him into a faithful and convinced Ḥanbalī, to the point that he refused elevated posts offered to him by the rival Shāfiʿīs on condition that he adhered to their school. He seems to have held no office save that of *imām* and lecturer at a small mosque in the Rayḥāniyyūn quarter.

His reputation as a grammarian and commentator attracted pupils from distant parts, who at times acted as a reader for him, a function normally undertaken by his wife. Amongst his disciples were e.g. Ibn Abi 'l-Ḥadīd (d. 655/1256 [*q.v.*]), commentator on the *Nahdj al-balāgha*, the biographer al-Mundhirī (d. 656/1257), and the historians Ibn al-Nadjdjār (d. 643/1245)

and al-Dubaythī (d. 637/1239). He died in Baghdād on 8 Rabīʿ II 616/23 June 1219 and was buried in the Bāb Ḥarb cemetery, where the Imām Ibn Ḥanbal also lay.

Works. Al-ʿUkbarī's reputation as a grammarian, philologist and commentator on texts, eclipsed that of Ḥanbalī *faḳīh*, logician and specialist on the *farāʾiḍ* [*q.v.*], and biographers like Ibn Khallikān and al-Ṣafadī stress above all his role as a grammarian and expert on the *ʿArabiyya*.

Out of some 60 titles attributed to him, the greater part are opuscula of grammatical teaching (many probably forming parts of larger works) and of philological glosses on texts: the Ḳurʾān, *ḥadīth*, ancient poets and poetry like Ruʾba and the *Ḥamāsa*, Sībawayh's *shawāhid*, the sermons of Ibn Nubāta and the *maḳāmāt* of al-Ḥarīrī. There are also many commentaries on well-known works: Ibn al-Sikkīt's [*q.v.*] *Iṣlāḥ al-manṭiḳ*; the *K. al-Faṣīḥ*, probably Thaʿlab's [*q.v.*] lexicon; the *Uṣūl al-naḥw* of Ibn al-Sarrādj [*q.v.*]; the *K. al-Īḍāḥ* (*al-Miṣbāḥ*) of Abū ʿAlī al-Fārisī [*q.v.*], his *Takmila* and perhaps his *Masāʾil Ḥalabiyya* (*al-Adjwiba*); Ibn al-Djinnī's [*q.v.*] *K. al-Lumaʿ*, *K. al-Muḥtasab* on the extra-canonical *ḳirāʾāt* and *Tanbīh* on the *Ḥamāsa*; and *al-Muḥaṣṣal fī īḍāḥ al-Mufaṣṣal*, on al-Zamakhsharī's [*q.v.*] famous grammar (although this may actually be by one of his pupils, the Andalusī ʿAlam al-Dīn al-Lūrḳī).

It is not surprising that the only works of his so far published are in the fields of philology and grammar. These comprise:

1. *Imlāʾ mā manna bihi al-Raḥmān* (or *al-Tibyān fī iʿrāb al-Ḳurʾān*), many uncritical eds. since 1859.
2. *Sharḥ Dīwān al-Mutanabbī*, first published Calcutta 1261/1845, then at Būlāḳ and at Cairo 1938 (possibly to be attributed to al-ʿUkbarī's pupil Ibn ʿIdlān al-Mawṣilī, d. 666/1267).
3. *Iʿrāb al-ḥadīth al-nabawī*, with traditions classified by alphabetical order of the transmitting Companions, ed. ʿAbd al-Ilāh al-Nabhān, Damascus 1975.
4. *Masāʾil khilāfiyya fī 'l-naḥw*, Aleppo n.d. (but this seems to be only an extract from no. 5 below, according to the editor Muḥ. Ḥusayn al-Ḥulwānī).
5. *al-Tabyīn ʿan madhāhib al-naḥwiyyīn*, on the divergencies between the two schools of Baṣra and Kūfa, with a substantial introduction which seems to show the author's adherence to the former school (ed. ʿAbd al-Raḥmān al-ʿUthaymīn, Beirut 1986).
6. *al-Mashūf al-muʿlam*, an alphabetical order classification of Ibn al-Sikkīt's glossary (ed. Yāsīn Muḥ. al-Sawwās, Damascus 1983, who also announces impending publication, without any details, of four other works by al-ʿUkbarī).

Others of his works comprise short treatises on prosody, on the terminology of *fiḳh* and the methodology of logic; manuals on the division of inheritances and their calculation (*al-Nāhidh*, *al-Bulgha*, *al-Istīʿāb fī 'l-ḥisāb*, etc.); and on Ḥanbalī law, notably a commentary on the *Hidāya* of Abu 'l-Khaṭṭāb [*q.v.*].

(MOHAMMED YALAOUI)

AL-UKHAYḌIR, a castle situated in the western desert of ʿIrāḳ 50 km/28 miles south-west of Karbalāʾ, and 19 km/11 miles east of ʿAyn al-Tamr. The name is modern, and means "the little green one", referring to a relatively verdant spot in the desert, or perhaps to the colour of the building (Mehdi).

First visited by Pietro della Valle in 1625, and rediscovered in 1908 by Massignon, it was visited by Gertrude Bell in 1909 and Musil in 1912, then described in plan form by the German architect Reuther in 1910. Excavations were conducted by the Directorate-General of Antiquities from 1964, and since then it has been extensively restored in several phases up to 1990.

The complex is composed of a large pisé enclosure adjacent to the Wādī al-Abyaḍ, inside which is a rectangular castle, built of rough stone and gypsum mortar, with some construction in fired brick. There is a rectangular annex of stone and mortar on the north side. Before restoration, the building was preserved to its original full height, but some vaults and arcades had fallen. The castle, measuring 175 by 163 m, has a fortified outer wall 21 m high with half-round towers, and a rectangular inner building 80 by 112 m attached to the north wall. The plan of the inner building is composed of a central courtyard with a closed tunnel-vaulted hall and an *īwān* placed symmetrically opposite to one another. Surrounding the central elements are a mosque, bath and residential units composed of a courtyard with two *īwāns*. The north side has two further storeys, and the central courtyard is ornamented with two registers of niches with brick decorations on the north side, which once continued around the whole, but only one register is preserved elsewhere.

The building shows no sign of reconstruction and probably had a brief occupation. Excavations inside have revealed pottery from the mid-late 2nd/8th century, and a copper *fals* of the ʿAbbāsid caliph al-Manṣūr, dated 157/773-4. Further away, in the outermost enclosure, two *dirhams* of al-Manṣūr and al-Mahdī were found.

Diverse opinions have been suggested for the date, ranging between the Sāsānid period and the 4th/10th century (Musil, *Arabia Deserta*, 366). However, the archaeological evidence concords with the architectural parallels of the plan, which is close to those of two late Umayyad buildings in Jordan, Ḳaṣr Mshattā [*q.v.*] and the palace in the ʿAmmān Citadel. Creswell thought that it was the residence of the ʿAbbāsid ʿĪsā b. Mūsā, governor of al-Kūfa, who retired to his estate in 159/775-6 after his deposition from the succession by al-Mahdī (al-Ṭabarī, iii, 467). While the location of ʿĪsā's estate does not correspond with that of al-Ukhayḍir (Yāḳūt, s.v. Ruḥba), Caskel and al-ʿAlī have proposed an identification with Ḳaṣr Banī Muḳātil, which the sources locate in the vicinity of ʿAyn al-Tamr. Ḳaṣr Muḳātil having a pre-Islamic origin (al-Ṭabarī, i, 2350), Mehdi suggested that a more likely founder may have been ʿĪsā b. ʿAlī, the uncle of al-Manṣūr, who demolished Ḳaṣr Muḳātil and then rebuilt it (Yāḳūt, s.v. Ḳaṣr Muḳātil). Finster and Schmidt have excavated an Umayyad castle with a pillared *īwān* 3 km/2 miles to the north at Tulūl al-Ukhayḍir. While such a distance is compatible with a replacement building, excavation has not yet confirmed Sāsānid occupation at Tulūl al-Ukhayḍir.

AL-UKHAYḌIR, BANŪ, an ʿAlid dynasty ruling in al-Yamāma, i.e. in Eastern Arabia, from 253/867 until at least the middle of the 5th/11th century.

The founder was Muḥammad b. Yūsuf al-Ukhayḍir b. Ibrāhīm b. Mūsā al-Djawn b. ʿAbd Allāh b. al-Ḥasan b. al-Ḥasan b. ʿAlī b. Abī Ṭālib, born in 210/825-6. His brother Ismāʿīl led a rebellion in the Ḥidjāz and took possession of Mecca in 251/865. He died in Rabīʿ I 252/March-April 866 of smallpox and was succeeded by Muḥammad. The latter was defeated by an army under Abu 'l-Sādj al-Ushrūsanī sent by the caliph al-Muʿtazz and fled to al-Yamāma. He established himself as an independent *amīr* in the fortress and town of al-Khiḍrima which became the seat of the dynasty. Few details are known about the nature of their reign and the dates of individual *amīrs*. The rule of the Banu 'l-Ukhayḍir has been seen as responsible for the exodus of a large part of the local inhabitants, especially the Banū Ḥanīfa, from al-Yamāma. According to Ibn Ḥawḳal (53, tr. 51), the oppressive rule of Muḥammad b. Yūsuf caused thousands of the populace of al-Yamāma to emigrate to Upper Egypt. The reliability of this report is doubtful, however, since Ibn Ḥawḳal describes the emigration as taking place already in 238/852-3 during the caliphate of al-Mutawakkil, long before the arrival of Muḥammad b. Yūsuf in al-Yamāma. In 310/922-3 the inhabitants of Ḳurʾān in al-Yamāma left their town for Baṣra, partly because of the harsh taxation of their land by *muḳāsama* [*q.v.*] (Yāḳūt, iv, 50-1).

The first *amīr* was succeeded by his son Yūsuf b. Muḥammad and then by his grandson Ismāʿīl b. Yūsuf. The latter's relations with the Ḳarmaṭīs of al-Baḥrayn seem to have been good at first. He participated in the Ḳarmaṭī capture of Kūfa in 313/925 and was left by the Ḳarmaṭī leader Abū Ṭāhir in charge of the town (al-Masʿūdī, *Tanbīh*, 381). In 316/928, however, Ismāʿīl was killed, together with his uncle Muḥammad and three of his brothers, in a battle with the Ḳarmaṭīs. Ismāʿīl was succeeded as *amīr* by his brother al-Ḥasan who continued to rule, perhaps under a protectorate of the Ḳarmaṭīs, and was succeeded by his son Aḥmad. Thereafter the succession is uncertain. The later *amīrs* were descendants of Abu 'l-Muḳallid Djaʿfar b. Aḥmad b. al-Ḥasan, but some of them were murdered by rivals within the ruling family. When Nāṣir-i Khusraw visited al-Yamāma in 443/1051, the Banu 'l-Ukhayḍir, with 300-400 horsemen at their disposal, were still firmly in control of the country. He describes them as Zaydī Shīʿīs who used the Shīʿī form of the call to prayer. However, there does not seem to have been a tradition of religious learning in al-Yamāma, and Zaydīs elsewhere took little notice of them. Thereafter, the rule of the Banu 'l-Ukhayḍir declined, and the Banū Kilāb at an unknown date took control of al-Yamāma. Descendants of al-Ukhayḍir, known as Banū Yūsuf, formed a local tribe which is mentioned still at the turn of the 8th/14th century as consisting of about 1,000 horsemen in alliance with the tribes of ʿĀmir and ʿĀyid. They still maintained their nobility, not admitting outsiders into their ranks, but had no knowledge of their exact lineages.

(W. MADELUNG)

UḲIYĀNŪS [see AL-BAḤR AL-MUḤĪṬ].

UḲLĪDIS, the Arabic form for the name of the Greek scholar Euclid.

Euclid probably lived around 300 B.C. in Alexandria. His works, genuine or spurious, encompass the four ancient mathematical sciences (geometry, arithmetic, astronomy, music—the authorship of the known works on music is disputed in modern literature) and some of their branches (optics, catoptrics, mechanics—the authorship of the works belonging to the latter two is likewise now disputed): the *Elements*, the *Data*, *On divisions* (*of figures*), the *Porisms*, the *Conics*, the *Surface loci*, the *(Book of) Fallacies*, the *Phaenomena*, the *Optica*, the *Catoptrica*, the *Elements of music*, the *Sectio canonis*, the *Book on the heavy and the light*, the *Book on the balance*, and the *Book on the weights according to the circle of the limits*.

At least 9 of these texts (*Elements, Data, On divisions, Porisms, Phaenomena, Optica, Sectio canonis, Book on the heavy and the light, Book on the balance*) have been translated into Arabic. Titles of three more works unknown in Greek are attributed to Euclid in Arabic sources (Ibn al-Nadīm). In several cases, more than one Arabic translation was produced. Al-Ḥadjdjādj b. Yūsuf b. Maṭar [*q.v.*] is said to have translated the *Elements* first for Hārūn al-Rashīd's vizier Yaḥyā b. Khālid [see AL-BARĀMIKA]. Under the reign of al-Maʾmūn, he produced a second version. Mediaeval and modern authors differ as to whether this second version is a new translation, whether al-Ḥadjdjādj indeed was its author or whether he used Greek or Syriac manuscripts (Furlani, Sezgin, Brentjes). Isḥāḳ b. Ḥunayn [*q.v.*] made a new translation of the *Elements*, presumably during the last third of the 3rd/9th century. The relations between his translation and al-Ḥadjdjādj's versions is also debated because of three issues: (1) Does the preserved Arabic fragment of a commentary on the *Elements* composed by Abu 'l-Faḍl al-Nayrīzī [*q.v.*] embody the second version of al-Ḥadjdjādj? (2) How does al-Ḥadjdjādj's style differ from that of Isḥāḳ? and (3) What text is contained in the preserved Arabic manuscripts of the *Elements* and the Arabic-Latin versions produced in the 12th century by Adelard of Bath, Hermann of Carinthia, and Gerard of Cremona (Brentjes, Busard, Codex Leidensis 399.1, De Young, Engroff, Klamroth, Kunitzsch, Lorch)?

That Isḥāḳ's translation was revised by Thābit b. Ḳurra [*q.v.*] enhances the complexity and interpretative difficulty of the textual history of the mediaeval *Elements*. The text as transmitted in al-Nayrīzī's commentary is now regarded as al-Nayrīzī's own work based on both Arabic traditions. Although most of the Arabic manuscripts are ascribed to the Isḥāḳ/Thābit tradition, some of the books actually come from the Ḥadjdjādj tradition. Similarly, the Arabic-Latin versions either derive from such Arabic compilations of the two traditions (Adelard of Bath and Gerard of Cremona) or from later Arabic recensions (Hermann of Carinthia). According to Ibn al-Nadīm [*q.v.*], there was another, at least partial Arabic trans-

lation of the *Elements* made by Abū ʿUthmān al-Dimashkī (3rd-4th/9th-10th centuries). No traces of it are known. Some theorems of Book X were translated from additional Greek sources by Nazīf b. Yumn (d. *ca.* 380/990) (Woepcke, Matvievskaya).

Another major unsolved issue is the relation between the Greek transmission of the *Elements* and the Arabic versions, in particular whether the latter preserve material older than the preserved Greek manuscripts (Heiberg, Klamroth, Knorr, Matvievskaya, Thaer). Books XIV and XV of the *Elements* were added by later Greek scholars. Their Arabic translation is ascribed to Kusṭā b. Lūkā [*q.v.*]. However, al-Ḥadjdjādj may also have translated these two books.

The *Data* were translated by Isḥāk b. Ḥunayn and revised by Thābit. Like the *Phaenomena* and the *Optica*, they were considered to belong to the so-called *mutawassiṭāt* (the "middle books") to be studied after the *Elements* and before Ptolemy's [see BAṬLAMYŪS] *Almagest* [see AL-MADJISṬĪ]. They form part of Naṣīr al-Dīn al-Ṭūsī's [*q.v.*] influential edition of the *mutawassiṭāt* completed in 651/1253. No modern edition exists of the extant manuscripts. According to Ibn al-Nadīm, Thābit b. Kurra also revised *On divisions* and according to modern scholarship perhaps even the *Book on the heavy and the light*. The translators of these texts are unknown. Extracts of *On divisions* are preserved in a 10th-century treatise composed by Aḥmad b. Muḥammad b. ʿAbd al-Djalīl al-Sidjzī (*fl. ca.* 360/970) (Hogendijk 1993).

The *Optica* [see ʿILM AL-MANĀẒIR] was translated by Hiliyā b. Sardjūn, a figure whose identity is little known beyond possible association with translations of other Greek scientific texts (Kheirandish 1991). The extant early Arabic texts differ slightly, but enough to suggest a revision or restoration effort at work. Kheirandish, in her study of the linguistic peculiarities of these texts, has argued convincingly that the specific choices made in the Arabic translation played an important role in the successive transformations of the Euclidean visual theory by such scholars as Yaʿkūb b. Isḥāk al-Kindī [*q.v.*] or Ibn al-Haytham [*q.v.*] (Kheirandish 1996). The translators of the remaining works of Euclid are unknown. Material related to Book I of the lost *Porisms* is contained in the *Selected problems* of Thābit's grandson Ibrāhīm b. Sinān (d. 335/946) and in the *Geometrical annotations* of al-Sidjzī (Hogendijk 1987).

The *Elements* were the most influential of Euclid's works and represented a highly esteemed epistemic model. Not only mathematicians but also religious scholars such as al-Ghazālī [*q.v.*] took its results to be certain and true human knowledge. The Muʿtazila [*q.v.*] employed theorems and definitions of the *Elements* defending their atomistic model of the created world (Dhanani 1996). Other *mutakallimūn* [see KALĀM] such as Fakhr al-Dīn al-Rāzī [*q.v.*] rejected atomistic theories partly on ground of Euclidean propositions (Baffioni 1982). The most influential subjects of the *Elements* were the parallels postulate (Book I), the theory of the application of surfaces (Books II and VI), the geometrical theory of proportion (Book V), the theorem on perfect numbers (Book IX), the geometrical theory of quadratic "irrationalities" (Book X), and the theorems on polygons and polyedra (Books IV, XIV, and XV). Almost all of the major mathematicians and philosophers between the 3rd/9th and the 8th/14th centuries either composed recensions of the *Elements* or commentaries on certain books or particular problems. Biographies of scholars mainly renowned for their activities in the religious and legal disciplines as well as *wakf* documents of Ṣafawid or Mughal *madāris* [see MADRASA] demonstrate the inclusion of the *Elements* into Muslim education.

AL-UḲLĪDISĪ, Abu 'l-Ḥasan [see ʿilm al-ḥisāb].

UḲLĪSH, the modern Spanish town of Uclés in the province of Cuenca, in mediaeval Islamic times in the *kūra* of Santaver (Shantabariyya [*q.v.*]), a region settled by Berbers (Ibn Ḥazm, *Djamhara*, 499-500). The Muslim settlement was on a Roman site of the *pagus oculensis*, which gave its name to the town and fortress. This last had a strongly-marked military and strategic role during its history, seen in the siege of 1108 by Muslim armies and the accompanying Castilian defeat there and the installation in the 12th century of the Military Order of Santiago within its fortress.

The rise of Uḳlīsh was linked with the important Berber family of the Dhu 'l-Nūnids [*q.v.*], whose florescence dates from the second half of the 3rd/9th century and who were to become the *ṭāʾifa* of Toledo [see ṭulayṭila] of the 5th/11th century. Al-Fatḥ b. Mūsā b. Dhi 'l-Nūn is said to have built Uḳlīsh at the end of the 3rd/9th century (al-Ḥimyarī, *Rawḍ*, 28, tr. 35, but with an erroneous date), having inherited the fortress of Uḳlīsh upon his father's death in 295/908. His brothers received the neighbouring fortresses of Huete and Huélamo, thus strengthening the family's control of this region, which was an outlying one of the amīrate and then caliphate of Cordova. From his base, al-Fatḥ launched numerous attacks on the Toledans. But after his death, internecine family divisions allowed ʿAbd al-Raḥmān III to impose direct, central control on Uḳlīsh in 324/936 (Ibn Ḥayyān, *Muḳtabis*, 310, tr. 344). Nevertheless, the Banū Dhu 'l-Nūn retained some power, and this allowed them to recover control of Uḳlīsh in 409/1018 and to extend their control to Santaver and Toledo in the age of the Taifas.

The Muslim geographers Yāḳūt (*Buldān*, i, 339, ed. Beirut, i, 237) and al-Ḥimyarī describe Uḳlīsh as the chef-lieu of the *kūra* of Santaver and as having a central nave to its great mosque whieh was a marvel (see also al-Maḳḳarī, *Nafḥ*, i, 99, 140). The town seems to have acquired a certain importance during the 9th-11th centuries. Yāḳūt in fact gives the names of two scholars from there, Abu 'l-ʿAbbās Aḥmad b. Ḳāsim al-Uḳlīshī and Abu 'l-ʿAbbās Aḥmad b. Maʿrūf al-Tudjībī al-Uḳlīshī (d. 550/1155).

With Alfonso VI of Castile's capture of Toledo in 478/1085 and the Almoravid intervention in the Iberian peninsula, Uḳlīsh passed into Christian hands and became a frontier post and the chief Christian fortress south of the Tagus. At the opening of ʿAlī b. Yūsuf b. Tāshufīn's reign, Uḳlīsh was besieged by Almoravid troops under the Amīr's brother, Abū Ṭāhir Tamīm, governor of Granada (who has left us a letter describing the event, ed. and tr. Huici Miranda, *Las grandes batallas*, 120-33), finally capturing it in Ramaḍān-Shawwāl 501/May 1108 after routing a Castilian army sent from Toledo (Ibn ʿIdhārī, *Bayān*, 49-50; Ibn Abī Zarʿ, in Huici Miranda, *op. cit.*, 119-20; Ibn al-Ḳaṭṭān, *Naẓm al-djumān*, ed. and tr. in *ibid.*, 118-19). Although this victory was followed by the captures of Huete and Ocaña, thus threatening the capital Toledo, its impact on the Christian-Muslim frontier was slight. The Almoravids tried in vain to profit from their victory and to seize Toledo. However, the Castilian defeat had considerable consequences for the Christian kingdoms, since the Infante Sancho's death in battle deprived the crown of Castile of its sole male heir. The succession crisis which began in 1109 and extended to 1126, involving Alfonso VI's two daughters Urraca and Teresa, favoured the independence of the kingdom of Portugal.

Uḳlīsh remained in the hands of the Almoravids until the crumbling of their power in the mid-12th century. It then passed for a few years under the control of Ibn Mardanīsh [*q.v.*], the "Rey Lobo" of the Christians. Under a treaty of 1157 between him and Alfonso VII, he became a dependent of Castile-Leon and exchanged Uḳlīsh for Alicún. Now definitively Christian, Uclés continued to be of military and strategic importance. In 1174 Alfonso VIII gave the town and its fortress to the Military Order of Santiago, who had just lost their seat of Cáceres to the Almohads. The Order made Uclés their main centre for Castile, and accorded it a *fuero* favourable to the Muslim population which remained. This Mudéjar community did not disappear till 1502, when a decree expelled from Castile all male Moriscos over 14 years old and females over 12, with such conditions attached that emigration was virtually impossible; the only possibility was conversion, hence from this time onwards all trace of a Muslim presence was lost at Uclés.

UKSHŪNUBA, a region of the southwest of al-Andalus (the modern Algarve) and also the town of Ocsonoba (Faro), its chef-lieu until the 4th/10th century. The name (with varying orthographies, e.g. Ukshūnya in Ibn Muzayn in the 5th/11th century, Akhshanba in Yāḳūt) derives from the earlier *Ossonoba*. The correspondance in name of region and chef-lieu goes back to the Arab administrative tradition in which the *kūra* was often known by the name of its capital. When the town changed its name

in the 5th/11th century to Shantamariyyat al-Gharb, Ukshūnuba mostly denoted the province.

From the Arab conquest in 94/713, the Yemeni tribe of Yaḥṣub dominated the region until ʿAbd al-Raḥmān I eliminated them in 157/774, when they fell back, together with Arabs from Lakhm and *muwallad* converts, on Silves, the most important town of the Gharb al-Andalus, and this last became, in the course of the 4th/10th century, the capital of the region. In other places, *muwalladūn*, such as the Banū Bakr b. Zadlafa, masters of Faro at the end of the 3rd/9th century, had an important role. With the pilgrimages to Cape St. Vincent and Faro, Christianity remained significant.

The urban pattern became changed in the course of five and a half centuries' Muslim domination; certain Roman sites like Milreu, occupied by the Muslims, as funeral inscriptions attest, declined in the caliphal period. On the other hand, in addition to the growth of Silves [see SHILB], several places on the coast grew into important centres, such as Tavira (Ṭabīra) or Lagos (Ḥalk al-Zāwiya) as part of the economic growth, and others in the interior, like Salir or Paderna, which were defensive sites. Arabic authors describe the region as one of the richest in al-Andalus. See further SHANTAMARIYYAT AL-GHARB.

Bibliography: The fundamental work remains that of J.G. Domingues, *Ossonoba na época árabe*, in *Anais do Município de Faro*, Faro 1972, with the sources on Ukshūnuba gathered together. See also Ch. AL-**UKṢUR**, Luxor, the present site of ancient Thebes, the capital of the New Kingdom on the eastern bank of the Nile in Upper Egypt.

In the mediaeval Arabic geographical sources we find side-by-side the following renderings of the name of the city: (a) al-Akṣur "castles" (in the *pluralis paucitatis* as is explained by Yāḳūt, *Muʿdjam*, Beirut, i, 237a); the vocalisation with *fatḥa* is explicitly stated by Abu 'l-Fidāʾ, *Taḳwīm*, 110. (b) al-Ukṣur, the colloquial equivalent to al-Akṣur with *ḍamma*, as given by al-Ḳalḳashandī, *Ṣubḥ*, iii, 380, only a few decades after Abu 'l-Fidāʾ. (c) The dual of this plural form, al-Akṣurayn/al-Ukṣurayn (e.g. two Christian sources: Abū Ṣāliḥ al-Armanī, *Taʾrīkh*, 132 ll. 9-12, Eng. tr. 284, and the *Synaxary*, as given in Maspéro-Wiet, *Matériaux pour servir à la géographie de l'Egypte*, Cairo 1919, 23; Ibn Mammātī, *Ḳawānīn*, 108; al-Ḳalḳashandī, iii, 380). The dual refers to the "twin fortresses", the huge temples (*birbā*) of Luxor and Karnak (cf. among others Ramzī, *al-Ḳāmūs al-djughrāfī li 'l-bilād al-miṣriyya*, Cairo 1963, ii/4, 161), i.e. not to modern Luxor on the east and modern Ḳurna on the west bank of the Nile, as E. Reitemeyer, *Beschreibung Ägyptens im Mittelalter*, Leipzig 1903, 126, suggested. In only one source so far, Abū Djaʿfar al-Idrīsī's book on the pyramids (*Anwār ʿulwiyy al-adjrām*, Beirut 1991, 45 l. 11), the Karnak temple is specified as *birbā al-Uḳṣur al-baḥriyya* "the temple of northern Luxor", suggesting that the Amun temple in Luxor proper must have been known conversely as *birbā al-Uḳṣur al-ḳibliyya* in al-Idrīsī's time, the 7th/13th century. In this context, it is deeply to be regretted that al-Idrīsī's two tracts devoted specifically to the monuments of Pharaonic Egypt (*al-Djawhara al-yatīma fī ʿadjāʾib Miṣr al-ḳadīma*) and to the history of Upper Egypt (*Maṭlaʿ al-ṭāliʿ al-saʿīd fī akhbār al-Ṣaʿīd*) are no longer extant.

Al-Ukṣur/Akṣur, which is listed as a toponym by numerous authors (e.g. Ibn al-Faḳīh, *Buldān*, 73 l. 12; Ibn Khurradādhbih, *al-Masālik wa-'l-mamālik*, 247 l. 7; al-Udfuwwī, *al-Ṭāliʿ al-saʿīd*, 16; al-Maḳrīzī, *Khiṭaṭ*, Būlāḳ, i, 203) was the centre of a subdistrict in Islamic times. Ibn Khurradādhbih of the 3rd/9th century (81 ll. 7-8) and al-Ḳalḳashandī of the 9th/15th century (*Ṣubḥ*, iii, 379 l. 15) both speak of the joint *kūra* of Ḳifṭ wa 'l-Uḳṣur; the latter author (who counts it as the seventeenth among the Eygptian provinces), however, when citing al-Ḳuḍāʿī, is surprised about this combination because one of the two cities, Ḳifṭ, lies north, the other, al-Uḳṣur, south of Ḳūṣ which forms a *kūra* of its own. Otherwise we find al-Uḳṣur classified as subordinate to Ḳūṣ, the capital of the Egyptian far south (e.g. Ibn Mammātī, *Ḳawānīn*, 108). Other authors speak of an independent *kūra* in Luxor (Yāḳūt, *Muʿdjam*, i, 237a); al-Waṭwāṭ, e.g., speaks of four (unnamed) villages as constituting the *kūrat al-Uḳṣur* (*Manāhidj al-fikar*, facs. ed., Frankfurt 1410/1990, i, 369 ll. 16 ff.). The mediaeval town is described as having been founded next to the ruinous site of Pharaonic times (al-Ḳalḳashandī iii, 380); al-Yaʿḳūbī (*Buldān*, 333 l. 18) strangely even goes so far as to identify the *kharāb* of ancient Luxor with the site of modern Ḳūṣ. Ibn Duḳmāḳ, who provides us with one of the most substantial entries on al-Uḳṣur (*Intiṣār*, v, 30-1), as well as Ibn al-Djīʿān (*Tuḥfa*, 192, Fr. tr. S. de Sacy, *Relation de l'Egypte par Abd-allatif, médecin arabe de Bagdad*, Paris 1810, 702), present the town as consisting of the "two *akṣur*" and of the Nile islands belonging to them (*al-Akṣurān wa-djazāʾiruhumā*).

The latter two authors are also important because they inform us on the juridical and economic status of al-Uḳṣur in Mamlūk times, presenting the size and quality of its arable land, its tax-yield (*ʿibra*), as well as the names and military status of its *muḳṭaʿ*s in the three years 777/1376 (a certain Ḳuṭluḳtamur Djarkas, tentatively identified by J.Cl. Garcin, *Un centre musulman de la Haute-Egypte médiévale: Qūṣ*, Cairo 1976, 239 n. 1, with Ḳuṭluḳ Tamur al-ʿAlāʾī al-Ṭawīl), 798-801/1396-9 (Arghūn min Ḳushbughā) and (approximately) 885/1480 (Timrāz al-Shamsī, identified by H. Halm, *Ägypten nach den mamlukischen Lehensregistern*, Wiesbaden 1979, i, 77). Al-Uḳṣur was known for its agricultural produce, not the least its huge grapes (Ibn Duḳmāḳ, *Intiṣār*, v, 31), but especially for its pottery which was exported far afield (cf. Abu 'l-Fidāʾ, *Taḳwīm*, 111); Abu 'l-Fidāʾs contemporary of the early 8th/14th century, al-Dimashḳī, qualifies it, however, as far inferior, both in its manufacturing and in its clay, to the refined pottery of Ḥimṣ (*Nukhbat al-dahr*, 233 l. 10).

The age-old Pharaonic remains of Luxor and Karnak captivated the curiosity also of many of the mediaeval Arab travellers, even though the predominance of the temple of Ikhmīm further north (on the much frequented pilgrim route from Cairo to the Red Sea harbour of ʿAydhāb) among the pagan sites of Upper Egypt in their writings remains remarkable. In only one text so far full homage is paid to Luxor's old glory as the seat of the Pharaohs. This is al-Tudjībī al-Sabtī's late 7th/13th century travelogue (*Mustafād al-riḥla wa 'l-ightirāb*, ed. ʿAbd al-Ḥafīẓ Manṣūr, Libya and Tunis n.d., 171 ll. 5-13, German tr. U. Haarmann, *Krokodile aus Holz und Krokodile aus Marmor. Altägyptisches in einem marokkanischen Pilgerbericht des vierzehnten Jahrhunderts*, in *Meilenstein. Festgabe für Herbert Donner* [Ägypten und Altes Testament, vol. 30], Wiesbaden

1995, 70, a tradition presented interestingly enough in the context of the description of the temple of Ikhmīm). According to this author, who cites one of his masters without giving his name, a certain King Uk(k)/Ak(k), who erected the temples of Egypt as repositories for all kinds of treasures, must have resided in Luxor, a city whose original name is said to have been Ṣūr which was then amplified—in a nominal composition familiar from the *aʿādjim*, i.e. Indo-European languages—by the king's own name Uk(k)/Ak(k) into the present U/Akṣur.

The most detailed report of Karnak is presented by Abū Djaʿfar al-Idrīsī (d. 649/1251), who visited, together with his father, the huge temple of Karnak on their way to the west bank of the Nile. Al-Idrīsī laments the damage done to the magnificent building as well as to its reliefs by stupid and irresponsible contemporaries (*Anwār*, 45 l. 11-47 l. 3, Ger. tr. in Haarmann, *Luxor und Heliopolis. Ein Aufruf zum Denkmalschutz aus dem 13. Jahrhundert n.Chr.*, in *Mitteilungen des Deutschen Archäologischen Instituts Abteilung Kairo*, xl [1984], 153-7). Also Abū Ṣāliḥ al-Armanī (*Taʾrīkh*, 132, Eng. tr. 284) must be speaking of Karnak and its Sphinx causeway when he mentions "idols standing like castles, some of which have the forms of lions or rams, and are standing upon their feet in two rows, on the right and on the left".

In the case of the temple of Luxor, however, the interest of mediaeval Muslim observers, from the mid-7th/13th century onwards, is concentrated not so much on the vestiges of the Pharaonic past—al-Ḳalḳashandī iii, 324 ll. 11-16 (Ger. tr. Reitemeyer, 125) mentions "a huge idol of black, firm and smooth stone"—but rather on the tomb of Sīdī Abu 'l-Ḥadjdjādj Yūsuf b. ʿAbd al-Raḥīm al-Ḳurashī al-Ukṣurī (d. 642/1244, cf. al-Udfuwwī, *al-Ṭāliʿ al-saʿīd*, 722-4, vita no. 574; Garcin, 165-7) which was built into the ruins of this temple. Sīdī Abu 'l-Ḥadjdjādj, who had begun his career as a state functionary (*mushārif al-dīwān*), was a disciple of Shaykh ʿAbd al-Raḥīm al-Ḳināʾī al-Maghribī (d. 592/1195, cf. al-Udfuwwī, 297-303 no. 230) who had come to Egypt from Sabta or Ceuta in the far west and had actively promoted the return of Upper Egypt to Sunnī orthodoxy after the Fāṭimid interlude. Abu 'l-Ḥadjdjādj acquired so much fame in the region for his miraculous and saintly deeds that soon a popular cult sprang up around his personality which aroused the deep scepticism of a judicious later chronicler such as al-Udfuwwī (d. 748/1347-8; see his *al-Ṭāliʿ al-saʿīd*, 724 ll. 6 ff.). People flocked to Luxor from all directions and went so far as to claim Abu 'l-Ḥadjdjādj's ascent into heaven in the night of mid-Shaʿbān, until in the end "the popular magician had replaced the restorer of the Sunnī city" in the consciousness of the contemporaries (G. Legrain, *Louxor sans les Pharaons*, Brussels 1914, 47-91, quoted by Garcin, 562). Abu 'l-Ḥadjdjādj's son Aḥmad (d. 685/1286-7, cf. al-Udfuwwī, 154, vita no. 81; Garcin, 312) erected the tomb for his father right within the Pharaonic temple. The small mausoleum in which both father and son are interred has remained an important Muslim local sanctuary in a region still largely dominated by Coptic Christianity. Other sons left the region for Cairo (al-Sakhāwī, *Tuḥfat al-aḥbāb*, Cairo 1356/1937, 359). The processions performed annually on the occasion of Sīdī Abu 'l-Ḥadjdjādj's *ʿīd* in Luxor have been seen as vestiges or reminiscences of Old Egyptian rituals.

Luxor had a *madrasa* of its own, of which we have no further information (see, however, Ibn Duḳmāḳ, 31; Garcin, 304). Al-Udfuwwī mentions a total of ten learned Ukṣurīs of the 6th/12th to 8th/14th centuries in his biographical dictionary of prominent Ṣaʿīdīs, some of whom migrated to Cairo. One of them, Muḥammad b. Muslim al-Ukṣurī (no. 480, cf. 632), also served as judge of remote ʿAydhāb; "although he knew very little, he was still deemed competent enough to serve the people in this region". Ibn Baṭṭūṭa twice came through Luxor, where he not only visited the tomb of Abu 'l-Ḥadjdjādj al-Ukṣurī (*Riḥla*, Beirut 1400/1980, 52 l. 15, and 282 l. 16), but also a *zāwiya* devoted to him; it may refer to a different building in the vicinity of the tomb.

The famous archeological sites on the west bank of the Nile are not covered by Muslim geographers, with the notable exception of the two colossuses of Memnon, rendered in Arabic as *Shāma wa-Ṭāma*. On them see al-ʿUmarī, *Masālik*, i, 239 l. 11; Ibn Duḳmāḳ, *Intiṣār*, v, 31, Ger. tr. Reitemeyer, *Beschreibung*, 126; see also Wiet, *L'Egypte de Murtadi*, introd., 112-13. Special attention should be given to al-Dimashḳī, *Nukhba*, 233 l. 2, because he speaks of the "temple [*birbā*] of Shāma wa-Ṭāma", perhaps referring to the Ramesseum or possibly to the temple of al-Dayr al-Baḥrī.

Bibliography: Given in the text.

(U. HAARMANN)

UKṢŪṢA (A.), a term of modern Arabic literary criticism and usage.

1. Terminology

Within the still variable context of technical terms used to identify fictional genres in the Arab world—a natural consequence, one might suggest, of the multiple sources of its cultural influence, *ukṣūṣa* is one of the equivalents of the fictional genre known in English as "short story" (the French "conte, histoire", and the German "Erzählung" and—an apparent translation of the English—"Kurzgeschichte"). While the term *ukṣūṣa* is favoured by some significant Arab critics and possesses the virtue of being a single term (as opposed to the problematic English "short story"), it enjoys less currency than "*ḳiṣṣa ḳaṣīra*", the Arabic literal translation of the English term. While this distinction in terms may have originally arisen along the divide of French and English influence, such is no longer the case.

2. Early developments

Of the fictional genres, the short story is the youngest. The processes of its development have revealed a genre that is extremely aware of the dimensions of its own artifice and of the immediacy of its impact, not only through its intrinsic qualities but also as a result of a heavy reliance on the press and specialised journals as its primary mode of publication. These reasons may help to account for the fact that, while developments in Arabic literature during the 19th century show the novel genre as an initial favourite within the translation movement (with serialisation as a regular mode of circulation, as in the analogous phases of the Western tradition), it was the short story that made a more rapid and concentrated use of the same opportunities to attract a readership and to achieve a genuine maturity. The ability of the short story, and particularly its manifestation as a vignette devoted to representative characters and situations, to probe some of the prominent social issues of the day—the status of women being prime among them—provided an impetus for a generation of pioneers to develop their craft in the early decades of the 20th century.

The structural logic of the short story—with its concern for linkage between an immediately attractive opening (including title) and the drive towards a clo-

sure that, by the nature of the genre, impinges upon its structural logic from the outset—clearly breaks away from the tradition of earlier narrative types in Arabic, many of them modeled on the *khabar* (anecdote) with its insistence on an immediate identification of the source of the story. Along with such structural transformations there were also others, not least of which was the need for not merely a new kind of language but also new attitudes towards levels of language. Making use of the lively and expanding press tradition in Egypt, ʿAbd Allāh Nadīm (d. 1896) and Muṣṭafā Luṭfī al-Manfalūṭī (d. 1924) [*q.vv.*] sought to effect such changes: Nadīm wrote sarcastic vignettes, with dialogue often couched in the colloquial dialect, in order to poke fun at current fads, while al-Manfalūṭī developed a more simplified style in order to produce highly homiletic and sentimental narratives that painted moral dilemmas in shades of black and white, a feature that has continued to endear his collections, *al-Naẓarāt* ("Essays", 1910, 1912) and *al-ʿAbarāt* ("Tears", 1915) to adolescents. Equally homiletic in tone were the stories that Djubrān Khalīl Djubrān (d. 1931 [*q.v.*]) published after his emigration to the United States. In collections like *ʿArāʾis al-murūdj* (1906: *Nymphs of the valley*, 1948) and *al-Arwāḥ al-mutamarrida* (1908: *Spirits rebellious*, 1947) he uses an image-laden romantic style to create a nostalgic vision of his native Lebanon, a world that is shown to be often disrupted by the treatment it accords to women and by the hypocritical practices of the Maronite clergy. The stories of Mīkhāʾīl Nuʿayma (d. 1989 [*q.v.*]), Djubrān's colleague in exile in America, reflect his readings of the Russian masters of the short story whose works he had read during his schooling and show a distinct advance in technique. Situations, actions, and the characters who are involved in them are now allowed to transmit their own message without homiletic intrusions; the resulting tales of Lebanon and especially its rural society—later gathered in collections such as *Kān mā kān* ("Once upon a time", 1937), *Akābir* ("Notables", 1956), and *Abū Baṭṭa* ("The man with thick calves", 1959) manage to convey a tone that is at turns sardonic and tragic.

The development of the short story genre in Egypt owes a great deal to Muḥammad Taymūr, who began publishing stories in the journal *al-Sufūr* following his return from France in 1914. However, his early death in 1921 cut short a promising career in both fiction and drama, and a group of his contemporaries, including his brother, Maḥmūd (d. 1973), carried on his work. The group, which became known as *djamāʿat al-madrasa al-ḥadītha* ("The New School Group"), was to make major contributions to the development of the short story in Arabic. While the many collections of Maḥmūd Taymūr may have made him the most renowned of the group, it is in the works of two less prolific members that advances in technique are most noticeable. Yaḥyā Ḥakkī (d. 1993) used a superbly honed stylistic craft to create unforgettable portraits that provide genuine insight in the character of Egyptians in both city and provinces. Maḥmūd Ṭāhir Lāshīn (d. 1954), a yet more self-critical writer, also makes use of the placement of a particular societal figure into a typical (and carefully drawn) environment in order to lead his readers to pass comment on the processes of change.

Analogous with these early developments in Lebanon, Egypt, and the United States, are parallel, if asynchronous, ones in other regions of the Arabic-speaking world where differing patterns in the balance of traditional culture and imported trends result in varying chronologies of change. Among many names and regions that might be mentioned are Maḥmūd al-Sayyid (d. 1937) and Dhu 'l-Nūn Ayyūb (d. 1988) in ʿIrāḳ, Khalīl Baydas (d. 1949) in Palestine, and ʿAlī al-Duʿādjī (d. 1949) in Tunisia. While the more romantic spirit that had characterised earlier developments continued on its popular path, culminating in the immensely successful story collections of the Egyptian writer Iḥsān ʿAbd al-Ḳuddūs (d. 1990), a second generation of writers set about the less tangible but more demanding task of improving the genre's artistry and expanding its topical repertoire yet further; among the more prominent figures we would cite ʿAbd al-Salām al-ʿUdjaylī (b. 1919) in Syria, Tawfīḳ Yūsuf ʿAwwād (d. 1989) in Lebanon, Muḥammad Marzūḳī in Tunisia (d. 1981), and Yūsuf al-Shārūnī (b. 1924) and Maḥmūd al-Badawī (d. 1985) in Egypt. Women writers, following the example of their own pioneers like Labība Hāshim (d. 1947), also contribute to this process of expanding the purview and technique of the genre by furnishing it with the vision and voice of the female artist: among significant contributors we would mention Suhayr al-Ḳalamāwī (b. 1911) in Egypt, Ulfat Idlibī (b. 1912) in Syria, Samīra ʿAzzām (d. 1967) in Palestine, and Nadjiyya Thāmir (b. 1926) in Tunisia.

3. Modern trends

Following the Second World War and the series of revolutions that occurred during the 1950s as a result of the new international configurations that it engendered, creative writers in the Arab world found themselves serving as literary outlets for the hopes and anxieties of a society confronting new and urgent political and social realities. Fiction was clearly a powerful tool through which such societal agenda could be discussed and advocated. The processes of change—the miseries of poverty among the poor in both countryside and city and the continuing migration of populace from the former to the latter, the emergence of a middle class and its aspirations, the challenge presented by women's education and employment outside the bounds of the home to traditional roles within the family, the clash of generations and classes—these themes and others have given fiction a major role in debates on the essence of modernity and change in contemporary Arab societies. The continuing vigour of the press tradition and the immense popularity of such media as television, film, and video (as venues for adaptations), have only served to enhance its immense popularity. Since creative writing is not a full-time profession in the region (although the more famous writers may occupy administrative posts that permit generous amounts of time for writing), the production of short stories, published initially in the plethora of available newspapers and periodicals, is considerably more prolific than that of the novel.

Many of the writers whom we have already mentioned have, needless to say, continued to make notable contributions to the genre during the latter half of the 20th century. However, an illustration of the vivid contrast between the more romanticised images of poverty and rural life created by some of these pioneers and the demands of the post-revolutionary society is provided by the prolific output of the Egyptian writer, Yūsuf Idrīs (d. 1991), widely recognised in retrospect as one of Arabic's instinctive geniuses in this genre. In a steady stream of collections that were published during the 1950s and 1960s beginning with *Arkhaṣ layālī* ("The cheapest nights", 1954). Idrīs was to bring the Arabic short story to new levels of technical achievement. Stories such as *Naẓra* ("A stare") and *Mārsh al-ghurūb* ("Sunset march") provide subtly-observed insights into the life of typical urban types:

the former that of a little girl carrying a heavy tray-load of food across a street, the latter a juice-seller peddling his wares to passers-by. Alongside these are a large group of stories that depict the characters and mores of the countryside with which Idrīs was so familiar from his childhood: in the famous title story of the first collection, *Arkhaṣ layālī*, a villager wending his way homeward from evening prayers in the mosque ploughs a path through waves of children, cursing them as he goes, in order to find consolation and warmth in the body of his wife when he reaches his house. Sketches, scenes, and incidents like these were all captured by Idrīs's wayward imagination in a style that forged new paths in its blend of the cadences of both the literary and spoken languages; it is this feature of his writing that, while lending his stories an almost tactile quality of realism, also earned him the opprobrium of upholders of the *echt* literary language such as Ṭāhā Ḥusayn (d. 1973 [*q.v.*]). By the 1960s the "realities" of the new political order had revealed a darker side, and Idrīs (who had been imprisoned for his political beliefs in 1959) was one among many writers who expressed an increasing sense of alienation in stories of a sinister symbolism. Stories such as *Lughat al-āy-āy* ("Language of screams" and *al-Aūrṭā* ("The aorta") are disturbing portraits of mankind's callousness and indifference.

Another master of the short story in Arabic, the Syrian writer, Zakariyyā' Tāmir (b. 1931), has also resorted to symbolism as a means of couching in fictional form his critical view of the society in which he has lived (he now resides in England). A favourite topic is, once again, the status of women and the function of traditional sexual mores; *Wadjh al-ḳamar* ("The face of the moon") describes the complexes of a young woman raped as a child and brought up by a strict father who finds the abrupt transition to passionate wife, as societal expectations and her husband demand, difficult to achieve; *al-Thaldj ākhir al-layl* ("Snow at night's end") transfers the perspective to the male side of the family as a brother contemplates the murder of his errant sister until he recalls memories of their childhood together. Alongside these more obviously-focused social commentaries, Tāmir uses the short-story genre to create anonymous, Kafka-esque worlds in which oppression, alienation, and illogicality appear to be the only organising principles. *Djū'* ("Hunger") is a nightmarish vision of a man on a quest initially for food and then for a doctor, neither of which he appears to find. *Radjul ghāḍib* ("An angry man") and *al-Bāb al-ḳadīm* ("The old gate") both involve seemingly ordinary people in confrontations with forces of violence and oppression; both stories end with death by gunfire in circumstances of utterly dehumanised indifference. Tāmir's disturbingly illogical fictional universe, depicted in a finely crafted style that is at times terse and at others strikingly image-laden, expands from its relatively economic modes of expression to become an expression of a brilliant, if deeply cynical, voice recording the general condition of modern humanity.

Idrīs and Tāmir merit particular mention because of the high quality and size of their output in short fictional form. There is, however, a plethora of other authors who need to be identified for the ways in which they have advanced the technique and purview of the genre. (It should be noted in passing that regional variations in chronology that were noted above with regard to the earlier period have now levelled out, to the extent that, at the turn of the 20th century, the critic is presented with a wealth of creativity across the breadth of the Arab World—Nasser's "Ocean to the Gulf"—that, as with other literary genres, is increasingly difficult to subsume under a single rubric.) Among authors who have made major contributions to the development of the genre in their country or region we would list Fu'ād al-Tikirlī (b. 1927) from 'Irāḳ; Ghassān Kanafānī (d. 1972) from Palestine, Edwār al-Kharrāṭ (b. 1926), Madjīd Ṭūbiyā (b. 1938), and Yaḥyā al-Ṭāhir 'Abd Allāh (d. 1981) from Egypt, 'Izz al-Dīn al-Madanī (b. 1938) from Tunisia, and Muḥammad Barrāda (b. 1938) and Muḥammad Shukrī (b. 1935) from Morocco.

Women short story writers have also played an important role in the development of the short story. Building on the work of the pioneers already mentioned, a generation of women writers, of whom the most prominent were Laylā Ba'albakkī (b. 1936), Colette Khūrī (b. 1936), and Ghāda al-Sammān (b. 1942) set out to break down many of the taboos regarding the discussion of gender roles and especially sexuality in fictional works. The stories in which they explored the tensions evoked by such infractions against traditional values earned them not a little notoriety; in Ba'albakkī's case, a trial for obscenity was involved. However, while the enduring literary value of their contributions to the short story genre may be open to question, there is no doubt that writers of both genders have been the beneficiaries of the newly-opened space for the exploration of gender, marriage, sex and women's changing role in society that these writers have created. A younger generation of women writers has taken up the challenge presented by this broadened spectrum with both artistry and insight, exploring the complexities of their familial (and sometimes professional) life in voices that vary in tone from the humorous and ironic to the angry. In Lebanon Emily Naṣr Allāh (b. 1938) begins her writing career by recording in a somewhat romantic vein the lives of village families, but the civil war in her homeland (1975-88) has found her galvanised into more pointed depictions of the dark underside of her nation's societal fabric and its disastrous consequences. Ḥanān al-Shaykh (b. 1945) uses her stories to introduce the reader to more intimate aspects of the women's world and its particular configurations; in *Ḥammām al-niswān* ("Women's swimming-bath"), for example, which explores in charming detail the grandmother-granddaughter relationship. The Egyptian writer Salwā Bakr (b. *ca.* 1950) casts an ironic and often sardonic eye on the lives and foibles of her fellow Egyptians; *'An al-rūḥ allatī suriḳat tadrīdjiyy*[an] ("On the spirit that was gradually stolen") is a wonderful portrait of a married couple whose life slowly degenerates into a routine governed by modern media and the norms they establish. One of the most astute users of the short story craft in the Arab world today is the Kuwaytī writer, Laylā al-'Uthmān (b. 1945), who exploits with relish the many potential ambiguities of the narrative voice in supplying her readers with situations in which the anticipated gender roles of narrator and character are challenged (as in, for example, *Fī 'l-layl ta'tī al-'uyūn* ("The eyes come at night") and *al-Maḳhā* ("The café")). Each of these writers uses a blend of theme and venue to create a unique microcosm through the style and technique of the short story.

A particular structural feature of the later phases in the genre's development has been a move away from the more obvious aspects of closure seen in earlier periods—typified by the sketch of an unusual person who is described in some detail and then shown participating in a single event that illustrates the impact

of that person's traits. In place of endings that are increasingly seen as artificial, there is a tendency to leave matters open-euded. Such is the structural logic of many modern short stories that readers find themselves invited, indeed often compelled, to return to the beginning in order to continue the process of discovery that the story has initiated. It is this realisation, for example, that greets the main character (and the reader) of Nadjīb Maḥfūẓ's renowned story *Ẓaʿbalāwī*; while the quest that makes up the story has led to a change in the character's understanding of his plight, the inevitable consequence is the need to start all over again—the beginning is the end, and vice versa.

Such is the popularity and wide availability of the short story genre in the Arab world today that any list of prominent contributors would be extremely lengthy. What follows is thus a highly selective list of writers who have achieved prominence within their own national traditions: in ʿIrāḳ, Daisy al-Amīr (b. 1935), Mūsā Kuraydī (b. 1940), and Muḥammad Khuḍayyir (b. 1940); in the Gulf States, Ismāʿīl Fahd Ismāʿīl (b. 19??) and Muḥammad al-Murr (b. 1955); in Lebanon, Yūsuf Ḥabashī al-Ashkar (b. 19??) and Ilyās Khūrī (b. 1944?); in Syria, Walīd Ikhlāṣī (b. 1935), Ḥaydar Ḥaydar (b. 1936), and Hānī al-Rāhib (b. 1939); in Palestine, Yūsuf Shrūrū (b. 1940), Liyāna Badr (b. 1950), and Rashād Abū Shāwir (b. 1942); in Jordan, Ghālib Halasā (d. 1989) and Mu'nis al-Razzāz (b. 19??); in Egypt (among a host of names), Djamāl al-Ghīṭānī (b. 1945), Bahā' Ṭāhir (b. 1935), Iʿtidāl ʿUthmān (b. 1942), and Ibrāhīm Aṣlān (b. 1939); in Saudi Arabia, Khayriyya al-Saḳḳāf, Muḥammad ʿUlwān (b. 1948), and ʿAbd Allāh Mannāʿ (b. 1938); in Tunisia, Ḥasan Naṣr (b. 1937), Maḥmūd Balʿīd (b. 19??), and ʿArūsiyya Nālūtī (b. 1950); and in Morocco, Muḥammad Zifzāf (b. 1945), Khanātha Bannūna (b. 1943), and Mubārak Rabīʿ (b. 1935).

ʿUḲŪBA (A.) a term of Islamic law meaning punishment in all its forms, encompassing both discretionary punishments and those designated by a text as *ḥadd* [*q.v.*]. The root meaning of the word, from *ʿaḳaba*, indicates a following or consequential object or action. The word itself took on the meaning of punishment that follows from a crime or prohibition (*LʿA*, i, 611-24). Frequently it is confused with *djazā'* which, unlike *ʿuḳūba*, can be both punishment or reward. The rationale behind the Islamic legal theory of punishment seems to oscillate between two contrasting schools of thought, with one preferring the interests (*maṣāliḥ*) of the individual and the other that of the public.

From a legislative point of view there can be two basic types of *ʿuḳūba*:

(1) Fixed punishments (*ʿuḳūbāt al-ḥudūd*). These include the punishments for fornication (*zinā'*), 100 lashes or stoning; slander (*ḳadhf* [*q.v.*]), 80 lashes; drinking alcohol (*shurb al-khamr*), 80 lashes; theft (*sariḳa* [*q.v.*]), amputation of the hand; highway robbery (*ḥirāba*), death; apostasy (*ridda* [*q.v.* in Suppl.]), death; and public disorder (*baghy*), death. Retaliation penalties (*ḳiṣāṣ*) and blood money punishments (*diya* [*q.v.*]) may also came under this category. The latter encompasses all punishments that legislate for partial or total bodily harm whether deliberate (*ʿamd*), undeliberate (*shibh al-ʿamd*), or by error (*khaṭa'*). These punishments are tightly controlled, with a judge not able to replace or reduce the punishments. All he may offer is the choice between inflicting *ḳiṣāṣ* and offering *diya* to the relatives in the case of deliberate actions, and offering *diya* when injury resulted from undeliberate actions.

The well-publicised case of the two British nurses accused of murder in Saudi Arabia in 1997 seems to have suffered from this "no judge option" stalemate. The case did not progress until after the victim's brother accepted the proffered compensation in lieu of the death penalty. This restriction seems to justify classifying *ḳiṣāṣ* and *diya* among the textually-fixed punishments. However, some scholars like ʿAbd al-Ḳādir ʿAwda considers them to be different in type from that of *ḥudūd*. The difference in the classification of the two punishment may be said to arise from the proximity and the personal effect that crimes involving bodily harm can impose on individuals. Despite this, the classification of punishment remains concerned with textual definition and not with criminal psychology, and as a result it appears to fit most convincingly among *ḥudūd* crimes.

In all the punishments described above, the tendency is to protect society and to ignore completely the interests of the individual criminal. On the grounds of combating social corruption (*shuyūʿ al-fasād*), punishments were made fixed and incapable of alteration, even by the ruling political authority.

(2) The tendency towards the protection of individual interest seems to be more apparent in the second basic form of *ʿuḳūba*, which are those punishments which are not legislated or specified by a text. These include all punishments which are left to the judge's discretion (*taʿzīr* [*q.v.*]). Any offence or violation of individual or public rights, be it by word, action or even sign, can be dealt with under *taʿzīr*. This kind of *ʿuḳūba* also governs all acts that might affect the social and religious norms of the society. It represented a practical and effective tool in the hands of minor judges and *muḥtasibs* [see ḤISBA]. Ibn Taymiyya underlines the informal and casual nature of *taʿzīr* when he states that there is no lower limit and it can be as simple as not greeting the offender (*tark al-salām*). This informality seems to have been lost because of an inclination among some legal systems that apply Islamic law to codify *taʿzīr*. The *sharīʿa* courts in Malaysia are an example which illustrate this tendency. Although there is no apparent legal bar preventing this, it seems

likely that the codification of *taʿzīr* would conflict with its spirit as a functional form of Islamic penal law. This could lead to *taʿzīr* eventually becoming a rigid set of rules and not an actual *ʿuḳūba*.

(Mawil Y. Izzi Dien)

AL-ʿULĀ, a town of the Ḥid̲j̲āz in north-western Arabia, lying in what was the early Islamic Wādī ʾl-Ḳurā, at the southeastern end of the Ḥarrat al-ʿUwayriḍ and below a hill called Umm Nāṣir (lat. 26° 38' N., long. 37° 57' E., altitude 674 m/2,210 feet).

The area is extremely rich archaeologically, and clearly flourished in pre-Islamic times as a major centre along the caravan route southwards from Syria, with ancient Dedan at the base of the D̲j̲abal al-K̲h̲urayba, to the south of what was al-Ḥid̲j̲r [*q.v.*] and is now Madāʾin Ṣāliḥ some 18 km/12 miles north of al-ʿUlā. The mediaeval Islamic town of (al-)Ḳurḥ was also located at al-Mābiyāt or al-Mibyāt at a similar distance to the southeast of al-ʿUlā, in the identification of ʿAbd Allāh al-Naṣīf [see ḲURḤ]. Large numbers of Dedanite, Lihyanite [see LIḤYĀN], Thamudic [*q.v.*], Minaean and Nabataean inscriptions have been found in the region.

The early Islamic al-ʿUlā must have been only a small place; the Prophet is said to have prayed there en route from Medina to Tabūk. Al-Ḥasan al-Iṣfahānī (4th/10th century) mentions it as al-ʿAwālī (*Bilād al-ʿArab*, ed. Ḥamad al-D̲j̲āsir and Ṣāliḥ al-ʿAlī, Riyāḍ 1388/1968, 397). Yāḳūt (*Buldān*, ed. Beirut, iv, 144) has only a brief and uninformative entry on it, but his younger contemporary Ibrāhīm b. S̲h̲ud̲j̲āʿ al-Ḥanafī more explicitly states that it was a small town with a *ḳalʿa* and its own *amīr*, whilst Ibn Baṭṭūṭa (*Riḥla*, i, 260-1, tr. Gibb, i, 162-3) describes it as a flourishing place where the pilgrims bound for Medina halt for refreshment. The fort was restored by the Ottoman governor of Damascus in the 11th/17th century as a protection against marauding Bedouin.

Doughty was there in 1876 (*Travels in Arabia Deserta*, ch. VI), followed by other Western travellers and scholars such as Huber and Euting, up to Jaussen and Sauvignac's survey of the al-ʿUlā and al-Ḥid̲j̲r region 1907-10. The Ḥid̲j̲āz railway [*q.v.*] passed near to al-ʿUlā, with a (long derelict) station. The present-day population of al-ʿUlā (now the administrative centre of the distinct) seems to originate from the Ḥid̲j̲āzī tribe of Ḥarb.

(C.E. Bosworth)

ULAḲ (T.), a term applied to the post-Mongol state courier system in large parts of western Asia, and particularly in the Ottoman empire (for the comparable system in the ʿAbbāsid caliphate, see BARĪD; and for the Mongol institution, YAM). This noun form *ulaḳ* stems from Tkish. *ula-* "to fasten securely, tether", and as a technical term appears e.g. in the decrees and documents of the Golden Horde Khans. It spread widely, from Ottoman usage to the Balkan languages and Greek, and from eastern Turkish usage as far as Mongolian and Chinese; see G. Doerfer, *Türkische und Mongolische Elemente im Neupersischen*, ii, Wiesbaden 1965, 102-7 no. 521.

The *ulaḳ*, the official courier service of the Ottoman empire, developed in an *ad hoc* and piecemeal way during the first centuries of the empire's existence, having much in common with the comparable institutions of the Mongol and ʿAbbāsid periods. The Ottomans, with some reason, believed that their *ulaḳ* system derived from the Mongols (cf. the historical excursus of the Ottoman Grand Vizier and reformer of the *ulaḳ*, Luṭfī Pas̲h̲a, *Tewārīk̲h̲-i āl-i ʿOt̲h̲mān*, Istanbul 1341, 371-80). Down to the era of Meḥemmed II, state couriers (also termed *ulaḳ*) were issued with simply-phrased courier orders (*biti; ulaḳ ḥükmi*) empowering them to travel on state business over (specified or unspecified) routes, implicitly by commandeering remounts as necessary at places en route. Thereafter, the phraseology of these orders becomes greatly developed, down to the 12th/18th century (cf. J.H. Mordtmann, in *MSOS*, xxxii/2 [1929], and, in greater detail, a still unpublished study by the present author). The system was obviously open to considerable abuse, particularly of the *reʿāyā* at the hands of the couriers, and reforms of their "shameless tyranny" (*nāhemwār ẓülm*), undertaken in particular by Luṭfī Pas̲h̲a (see R. Tschudi (ed.), *Das Âṣafnâme des Luṭfī Pascha*, Berlin 1910, text, 11), saw the gradual introduction from the middle years of Süleymān's reign of a network of staffed posting-stations (*menzil-k̲h̲āne*) on the major routes (*ulu yollar*) of the empire. The system, as it reached maturity, was based on the six major roads (*ṣag̲h̲, orta* and *ṣol ḳollar*, the "Routes of the Right, Middle and Left [Hands]") which radiated from Istanbul to the frontiers of the empire. In Rumeli these were, respectively, to the lower Danube and, ultimately, to Özü (Očakov), the Crimea and Azaḳ (Azov); to Belgrade and, ultimately, to Hungary; and to Thessaloniki and either the Morea or the Adriatic (see, on the *ṣol ḳol*, the important collection of studies in Elizabeth Zachariadou (ed.), *The Via Egnatia in the Ottoman period (1389-1699)*, Rethymnon 1996). In Anatolia, the three *ḳollar*, in their final versions, projected east and south from Istanbul to Erzurum and the Caucasus; to Diyār Bakr and ʿIrāḳ; and to Aleppo, Damascus and Cairo. "Branch routes" linked the *ulu yollar* with administrative centres which lay to one side or other of the main routes, or provided occasional radial connections between two adjacent *ḳollar*. Along the main routes, the maintenance and upkeep of which was an ever-present concern of the state, *menzil-k̲h̲ānes* were established at intervals of between six and twelve hours' riding, i.e. at distances of between 20 and 70 km, depending on the terrain. In frontier districts, or in thinly-populated steppe and semi-desert areas, the distances between *menzil-k̲h̲ānes* was often greater and they could be up to 24 hours' riding or *ca.* 150 km apart (see, for a listing of the *ḳollar* and their individual *menzil-k̲h̲ānes*, the brochure by Rıza Bozkurt, *Osmanlı imparatorluğunda kollar, ulak ve iaşe menzilleri*, Ankara 1966). Horses and labour service for these post-stations were provided often by *menzil-kes̲h̲* villages in their vicinity or by locally-levied taxes.

Along these routes, and making full use of the

menzil-khānes and the remount and accommodation services which they provided, passed the courier, military and diplomatic traffic of the state; in time of war, the same routes were followed by the armies of the sultan, en route to a particular front. Exemption of "privileged" *re'āyā* from *ulaḳ* service, either quartering of couriers or the provision of remounts, is characteristic of Ottoman *mu'āf-nāmes* ("letters of exemption") from an early period (cf. R. Anhegger and H. İnalcık, *Ḳānūnnāme-i sulṭānī ber müceb-i 'örf-i 'osmānī*, Ankara 1956).

The abuses to which Luṭfī Pasha drew attention in the mid-10th/16th century: the forcible requisitioning of posthorses for the courier service; the supply of posthorses to unauthorised individuals; and the excesses and depredations committed by high officials and their extensive retinues when using the *ulaḳ*, seem to have been equally widespread in later centuries, to judge by the large numbers of *'arḍuḥāls* submitted to the Porte by the *ḳāḍīs* of localities situated on the various *ḳollar* and the resulting sultanic orders addressed to them (cf. Bistra Cvetkova, *Obściazenie podatkowe rai w Bulgarii w czasie niewoli tureckiej, zwiazane z utrzymaniem zajazdow (menzili)*, in *Przegląd Orientalisticzny*, ii/26 [1958], 193-8). In time of war, pressure on strategic sections of the system became greatly increased; accordingly, in the latter stages of the war with Austria and the Sacra Liga powers (1683-99), particularly significant and long-lasting financial and administrative reforms of the *ulaḳ* system were made by the later Köprülü [*q.v.*] Grand Viziers; on these see C.J. Heywood, *The Ottoman menzilhane and ulak system in Rumeli in the eighteenth century*, in Osman Okyar and Halil İnalcık (eds.), *Türkiye'nin sosyal ve ekonomik tarihi (1071-1920)*, Ankara 1980, 179-84; specific fiscal illustrations for particular *menzil-khānes* in idem, *The Via Egnatia in the Ottoman period: the menzilḫānes of the ṣol ḳol in the late 17th/early 18th century*, in E. Zachariadou, *The Via Egnatia under Ottoman rule*, 129-44; for the Anatolian *ulaḳ* network, see Yücel Özkaya, *XVIII yüzyılda menzil sorunu*, in *AÜDTCFD*, xxviii/3-4 [1970 (1977)], 339-68. Thereafter, the system continued more or less unaltered until the reforms of the *Tanẓīmāt* [*q.v.*] and, ultimately, the invention later in the 19th century of the electric telegraph. Already by the late 18th century the term *ulaḳ* itself seems to have passed into desuetude, being replaced by the imported appellation *ḳūrīr*. It is perhaps worth mentioning that the forms of the classical post-Mongol courier institution lingered on in use in e.g. the former lands of Moghulistān until the later 19th century: for the text and translation of an Eastern Turkī courier order issued in A.H. 1291 from Kāshghar by Muḥammad Ya'ḳūb Beg (*Copy of passport issued at Kashghar*), which has many features in common with Ottoman *ulaḳ ḥükmīs* of an earlier era, cf. R.B. Shaw, *A grammar of the language of Eastern Turkistan*, in *JRASB* (1877), no. 3, 321-3.

Bibliography (apart from references in the text): There are numerous incidental references to and descriptions of the Ottoman *ulaḳ* system in the vast literature of European descriptive writing on the Ottoman empire, from Chalcocondyles in the mid-15th century onwards; see J.H. Mordtmann, *Die jüdischen Kira im Serai der Sultane*, in *MSOS*, xxxii/2 (1929), 1-38, at 23-5. For the oldest Ottoman *ulaḳ ḥükmī* so far published, see Fr. von Kraelitz/Greifenhorst, *Osmanische Urkunden in türkische Sprache aus der zweiten Hälfte des 15. Jahrhunderts*, in *SBWAW, Phil.-Hist. Kl.*, cxcvii/3 (1921), 106-7 (document dated 903/1497). An older courier order, dated 887/1482, survives in the archives of the Top Kapı Sarayı Müzesi in Istanbul (TKS E.5568). References to the administration of the *ulaḳ* are plentiful in the surviving volumes of the *Mühimme Defterleri*, from the mid-10th/16th century onwards and have been utilised, with reference to the Palestinian section of the Anatolian *ṣagh ḳol*, by U. Heyd, *Ottoman documents on Palestine*, Oxford 1960, 28, 101, 124-7. The surviving detailed records of the Ottoman *ulaḳ* and *menzil-khāne* administration, preserved in the Prime Minister's Archive (Bashbakanlik Arshivi [see BASHVEKĀLET ARSHIVI]), Istanbul, date only from inception of the reforms of the system introduced at the very end of the 11th/17th century. Thereafter, both the records of individual provincial *menzil-khānes* (cf., especially, the Mu'allim Djewdet (Cevdet)—Nāfi'a and Kāmil Kepedji (Kepeci) *taṣnīfs*) and of the central administration and record keeping of the service (the *aḥkām defterleri-menzil*, or records of *ulaḳ ḥükmīs* issued, and the smaller number of *niẓām defterleri*, recording the early 12th/late 17th-early 18th century reforms) are both plentiful and informative. There are also large numbers of single documents (*awrāḳ*) scattered throughout the archive's holdings (for a brief survey of this material, see C.J. Heywood, *Some Turkish archival sources for the history of the Menzilhane network in Rumeli during the eighteenth century (Notes and documents on the Ottoman Ulak, I)*, in *Boğaziçi Üniversitesi Dergisi, Beşeri Bilimler*, iv-v [1976-7], 39-55).

(C.J. HEYWOOD)

'ULAMĀ' (A.), pl. of *'ālim*, active participle of *'alima*, "to know, to be aware of", denotes scholars of almost all disciplines (*lugha, bayān, ḥisāb*, etc. [*q.vv.*]). However, the term refers more specifically to the scholars of the religious sciences (*faḳīh, mufassir, muftī, muḥaddith, mutakallim, ḳāri'*, etc. [*q.vv.*]), considered here exclusively in the context of Sunnism, where they are regarded as the guardians, transmitters and interpreters of religious knowledge, of Islamic doctrine and law; the term also embraces those who fulfil religious functions in the community that require a certain level of expertise in religious and judicial issues, such as judges and preachers (*ḳāḍī, khaṭīb* [*q.vv.*]), the imāms of mosques, etc. The *'ālim* is often seen as opposed to the *adīb*, just as religious knowledge (*'ilm* [*q.v.*]) is clearly distinguished from the practice of "profane literature" (*adab* [*q.v.*]).

1. In the Arab world.
2. In Persia [see MUDJTAHID, and ĀYATULLĀH, in Suppl.].
3. In Ottoman Turkey.
4. In Muslim India.
5. In South-East Asia.
6. Amongst the Han Chinese, Chinese-speaking Muslims.
7. In West Africa.

1. In the Arab world.

(a) *"Knowledge" and the scholars.*

While the verb *'alima* is well attested in pre-Islamic poetry, *'ālim* is not employed there as a participial substantive denoting a category of people who possess a particular knowledge, unlike *'arrāf, ḥāzī, kāhin, khaṭīb* and *shā'ir* [*q.vv.*]. The frequency with which the root *'-l-m* occurs in the Ḳur'ān and the equivalence encountered there between practical knowledge and religious knowledge, or indeed between knowledge and faith (LVIII, 11; II, 26; VI, 97-9), could not but be significant for the development of religious thought in Islam (Rosenthal, *Knowledge*, 12-32).

In fact, a general tendency was to be observed among practitioners of the religious sciences to consider as certain knowledge only that inherited from

the Prophet, albeit with nuances conditioned by their theological orientation. Thus the Baghdādī Mālikī Ibn Khuwayzmandād (d. 390/999) went so far as to demand the burning of books of *kalām*, of poetry and of grammar, as being unreliable disciplines, inferior to the traditions transmitted from the Prophet (Ibn Hadjar al-Haytamī, *al-Fatāwā al-ḥadīthiyya*, Cairo 1970, 207). For Ibn Taymiyya [*q.v.*], the science *par excellence* is that which derives from the Prophet; all the rest is either useless, or does not deserve to be called science. The jurist of Mu'tazilī tendency al-Māwardī [*q.v.*] comments that numerous prophetic traditions on "the study of science" concern only religious knowledge (*Adab*, 36-49). For Ibn Rushd, on the other hand, certain verses of the Ḳur'ān are an inducement to the study of philosophy (*Faṣl al-maḳāl, init.*)

(b) *Identity-consciousness and hierarchisation.*

The *'ulamā'* have long been seen as a very distinct group, a regulated and structured body, expressing the popular voice, constituting the "solid framework of permanent government behind these changing dynasties" (Macdonald). In fact, during the first two centuries of Islam, they consisted of a relatively small number of people, engaged in the elaboration of *fiḳh* and concentrated at Medina, in the south of 'Irāḳ and in the caliphal capitals, and general lines of informal consensus were more easily established than was subsequently to be the case. This consensus (*idjmā'* [*q.v.*]) gave them weight, but did not transform them into an institution comparable to a legislative body (Mottahedeh, 138-9). However, they had a consciousness of their identity which marked them as a distinct group (Berkey, 13-14).

Furthermore, traditions were attributed to the Prophet which emphasised the precedence and preeminence of knowledge and of the *'ulamā'*, most of them probably dating from a period in which the influence and the prestige of the latter was not yet well established (Marlow, 25). To a man from Medina, visiting him in Damascus with the object of collecting traditions, Abu 'l-Dardā' conveyed the following tradition, attributed to Muḥammad: "Scholars are the heirs of the prophets who have endowed them with knowledge as a legacy. He who has chosen knowledge has taken a generous share, and he who has taken a path towards the acquisition of knowledge, for him God will smooth a path to Paradise" (*Concordance*, iv, 321a; cf. Ibn Ḥanbal, *Musnad*, v, 196/xvi, ed. Shākir and al-Zayn, Cairo 1995, 71, nos. 21612-3: al-Bayhaḳī, *Shu'ab al-īmān*, ed. M.S.B. Zaghlūl, Beirut 1990, ii, 262-4, nos. 1696-8; Ibn 'Abd al-Barr, *Djāmi'*, i, 37). This tradition, absent from Mālik's *al-Muwaṭṭa'*, was apparently unknown at Medina. Also attributed to the Prophet are statements that scholars are superior to "martyrs" (Ibn 'Abd al-Barr, i, 30-2), that the best members of his community are the scholars and that among the latter the best are the *fuḳahā'* (al-Māwardi, *Adab*, 39), that knowledge is superior to cultic practices (Ibn 'Abd al-Barr, i, 21-7; *Concordance*, iv, 320a). In the second half of the 3rd/10th century, the conviction was established that prophets are only superior to accredited scholars (*al-faḳīh al-'ālim*) in terms of their prophetic mission (Gilliot, *Le Commentaire coranique de Hūd b. Muḥakkam*, in *Arabica*, xliv [1997], 204-5).

It is true that the *'ulamā'* were progressively constituted as such by the study and practice of *fiḳh* [*q.v.*], but their essential characteristic was definitely the knowledge of *ḥadīth* [*q.v.*], this being the "science" *par excellence* in this religious context, all the more so in that its mode of transmission was reckoned to associate them with the first Muslim generations and with the Prophet (al-Rāmahurmuzī, 161-2; Mottahedeh, 141). This link created by the transmission of *ḥadīth* contributed more than any other factor to the awareness which scholars of the religious sciences had of the dignity of their mission, as is demonstrated, in particular, by the favour enjoyed by those traditionists who had "high" chains of authority (*'uluww al-ḥadīth*) (al-Nawawī, *Taḳrīb*, ch. 29; Marçais, 193-9; Mottahedeh, 141-2). This insistence on *ḥadīth* is not surprising; indeed, all scholars studied the Ḳur'ān and the *sunna*, but not all were specialists in law, and those engaged in theology were fewer still (Mez, 162-3).

The practice of "wandering in search of knowledge" facilitated contacts between students and masters of the diverse regions of the Muslim world, and gave an "international" cachet to the community of scholars (Gilbert, *passim*) which contributed not a little to a consciousness of identity among the scholars and to the standardisation of knowledge and of its transmission. Numerous major scholars were also engaged in the composition of poetry (see, however, R. Drory, *The Abbassid construction of the Jahiliyya*, in *SI*, lxxxiii [1996], 33-49, on the rivalry between poets, transmitters of poetry and scholars), or produced works of *adab*. In addition, universal and local histories and their continuations (*ta'rīkh*, *ṣila* [*q.v.*]), the books on classes or generations of scholars (*ṭabaḳāt* [*q.v.*]), were most often written by *'ulamā'*, especially traditionists, which endowed the latter with major influence in the codification of knowledge and of ethics (Gilbert, 110-11). Those who were engaged in a more specialised fashion in the study of *ḥadīth* shared a kind of communal identity which often gave rise to a kind of "leadership", a "primacy" (*ri'āsa; ra'īs al-muḥaddithīn, riyāsat al-'ulamā'*; Chamberlain, 154-6), which depended to a great extent on the number and quality of licences of transmission (*idjāza* [*q.v.*]) obtained from accredited masters. This primacy also existed in more specialised disciplines, such as law and theology. It is thus that Abu 'l-'Abbās Ibn Suraydj [*q.v.*]), one of the "renovators" (*mudjaddid* [*q.v.*]) of the early 3rd/9th century, is considered the one "to whom fell the primacy of the Shāfi'īs (in Baghdad)" (*intahat ilayhi riyāsat aṣḥāb al-Shāfi'ī*; Ibn al-Djawzī, *Muntaẓam*, year 306/918-19). This same primacy in law was devolved to Abū Bakr al-Abharī (d. 375/986; *op. cit., sub anno*), for the Mālikīs of Baghdād, among whom he held precedence (*al-muḳaddam fīhi*); to Abū Bakr al-Khwārazmī (d. 403/1012; *op. cit., sub anno*), among the Ḥanafīs. As for the *ḳāḍī* al-Ḥusayn al-Ḥalīmī (d. 403/1012), he found himself endowed with a double primacy in Transoxania, that of the traditionists and that of the dialectical theologians (*ra'īs al-muḥaddithīn wa 'l-mutakallimīn*; al-Dhahabī, *Siyar*, xvii, 231). On the basis of the example of the Ḥanafī Abū Bakr al-Rāzī (d. 370/981; *Muntaẓam, sub anno*), such a "prime figure" is sometimes called "the best of his age" (*imām 'aṣrihi*), or the *shaykh* of his region or of his city. Primacy in the domain of the religious sciences was sometimes combined with primacy in "piety" (*taḳwā*), in the exercise of ritual practices (*'ibāda*), or in asceticism (*zuhd*), or in Ṣūfism (Mottahedeh, 145-50).

(c) *Genesis and evolution.*

Muslim tradition was anxious to establish uninterrupted continuity between the knowledge of the Prophet and that of later generations, by way of the Companions and the Followers. In this scheme of things, numbers are employed in an apparently meticulous fashion: knowledge of the Companions, that of the principles of transmission, that of narratives, that of exegesis, were seen as the inheritance, respectively,

of six Companions, Followers, or Followers of Followers (according to al-ʿAbbās al-Durī, d. 271/884; al-Daladjī, 47-8, *Falaka*, quoting al-Ḥākim al-Nīsābūrī, 43-4). Similarly, reference is made to the six or the twelve *fuḳahā'* of Medina (al-Ḥākim al-Nīsābūrī, 43-4). Or furthermore, according to ʿAlī b. al-Madīnī (d. 234/849): "The knowledge of the Companions of the Prophet concerning the prescriptions of the law fell to three [Companions], by whom it was acquired": Ibn Masʿūd, Zayd b. Thābit and Ibn ʿAbbās; then it passed to the generation of Mālik b. Anas, by way of al-Shaʿbī (d. 94/713), Ibrāhīm al-Nakhaʿī (d. 96/715), al-Zuhrī (d. 124/742), al-Aʿmash (d. 148/765), Sufyān al-Thawrī (d. 161/778) [*q.vv.*], etc. (Ibn al-Djawzi, *Talḳīḥ*, 458-9).

In the early years of Islam, even though *ʿālim* can have the adjectival sense of "erudite" in general, or in religious subjects in particular (*ʿālim bi*), it is most often associated with the knowledge and the transmission of traditions and of *ḥadīth*; furthermore, it is not often that the qualities of *ʿālim* and of *faḳīh* [*q.v.*] are attributed to the same individual, the latter expressing in particular "personal" ideas of the way religion should be practised, the former referring rather to precedents, conclusions reached by others in the past (Juynboll, 74, and ch. 2 on the *ḳāḍīs*). It is stressed, however, that such-and-such a person was not only *ʿālim* and *faḳīh*, but also *ḳāri'* and *mufassir*, thus Ibn Djuraydj (d. 150/767 [*q.v.*]; Motzki, 246).

The ʿAbbāsids, with the exception of al-Ma'mūn [*q.v.*] (see MIḤNA; Crone and Hinds, *God's caliph*, 58-96, on the transition from the caliphal *sunna* to the Prophetic *sunna*, under the Umayyads and the ʿAbbāsids) preferred to have the *ʿulamā'* and the army on their side, rather than the bureaucracy (Marlow, 104; for the *ʿālim/kātib* [*q.v.*] antagonism, Mottahedeh, 143; Petry, 205, 209). They had begun with all the necessary apparatus: troops, secretaries, theologians and religious prestige, and Ibn al-Muḳaffaʿ, in his *Risāla fī 'l-ṣaḥāba*, composed at the outset of the caliphate of al-Manṣūr, proposed, among other things, a trial of strength with the *ʿulamā'*, urging the caliph to use his authority to impose legal and religious uniformity (Goitein, *Turning point*, 161-4; Crone, *Slaves*, 69-70; van Ess, *TG*, ii, 24-5; Marlow, 99-104). Ultimately the *ʿulamā'* were not suppressed, and it was indeed the *zindīḳs* [*q.v.*] (Manicheans and their associates) who were victims of the inquisition of al-Mahdī.

During the first five centuries of Islam, the *ʿulamā'* developed their own practices and organisations independently of the state (Gilbert, 113). It is a fact that the Umayyads (an exemplary case being that of al-Zuhrī [*q.v.*]; M. Lecker, *Biographical notes on Ibn Shihāb al-Zuhrī*, in *JSS*, xli [1996], 21-61), and then the ʿAbbāsids, had recourse to scholars, counsellors and ambassadors, and employed the *ʿulamā'* as judges, but they did not found lasting institutions with personnel dedicated to the study of religion and of law (Gilbert, 113-14). It also happened that benefactors acted as the patrons of scholars or of educational projects and institutions, but it was primarily through the efforts of independent *ʿulamā'* and a minority among them who enjoyed the support of individuals or of the state that codified practices and an "international" structure took shape among scholars during the first centuries of Islam (Gilbert, 114).

The political traumas of the 4th/10th and 5th/11th centuries contributed not a little to the consolidation of the power of the *ʿulamā'*, who, together with other urban élites, played an important role in the life of Muslim cities. Towards the mid-5th/11th century, whereas hitherto they had been essentially a religious élite, they now also became a social and political élite. In many cities, families of *ʿulamā'* united with families of landowners, bureaucrats and merchants, guaranteeing the stable guidance of these cities for several generations (Lapidus, 22-9).

On the one hand, with the disintegration of the ʿAbbāsid state, a kind of divorce took place between religion and power. The state was no longer capable of enforcing its claims in matters of religious authority. While in the ʿAbbāsid metropolises the *ʿulamā'* had needed to deploy considerable energy to maintain their position in relation to institutions of political power, in the cities of the Būyid dominions they were more free to assert themselves (Crone, *Slaves*, 85).

Yet on the other hand, the former order of scholarly activity evolved with the institutionalisation of the international network of contacts between scholars and with their professionalisation. This phenomenon first developed as a result of the foundation of colleges and pious foundations (*madrasa*, *waḳf* [*q.vv.*]; Makdisi, *Humanism*, 24-38), although this did not in essence affect the system of instruction (*tarbiya* [*q.v.*]; Makdisi, *Humanism*, 97-117; Gilliot, *Théologie et littérature*) in Islam, which remained much as it had been before, i.e. largely informal and based on the relationship between masters and disciples (Berkey, 18, 85-94; Gilliot, *Transmission*).

However, while in the first centuries scholars had been obliged to earn their living through the exercise of secular occupations (Cohen, 35-45), or by reliance on individual patronage, the new institutions of education and transmission of knowledge and the places offering accommodation to students or teachers (*madrasa*, *dār al-ḥadīth*, *khānaḳāh*, *ribāṭ*, *zāwiya* [*q.vv.*] assisted the latter financially and materially (Gilbert, 118-9; Makdisi, *Humanism*, 232-8; Chamberlain, 61-66). This did not prevent some scholars from continuing to pursue professions in crafts or in commerce (Petry, 241-4).

The professionalisation of the *ʿulamā'* proceeded apace, for example, in Cairo in the second half of the 8th/13th century. Between this period and the beginning of the 11th/16th century, appointments to posts in education were often controlled by the Mamlūks or by the intellectual élite itself (Berkey, ch. iv). Among the *ʿulamā'* of Cairo during this period, there was seen the emergence of a kind of "intermediate" class (Lapidus); while there was no real separation between the various circles, this élite was not particularly interested in the problems of the masses, nor in the pursuit of power, although there were occasions when it intervened on behalf of the populace, and the latter felt a special empathy for those among the scholars in whom commonly-held values were believed to be discernible.

Despite the evidence of social mobility, this scholarly élite also experienced certain forms of self-reproduction, if not in-breeding, and this led to the emergence of veritable dynasties of scholars (Bulliet, 55-60; Mottahedeh, 135, *passim*; Berkey, 126-7; A.K.S. Lambton, in *SI*, v [1956], 134, for quasi-hereditary posts of *ḳāḍī*): the Ibn ʿAsākir, al-Bulukīnī, Ibn Djamāʿa, Ibn Ḳudāma, Ibn Ṣaṣrā [*q.vv.*]; for the latter, see Petry, 232-40), the Bakrīs in Egypt in the 10th/16th century (M.T. al-Bakrī, *Bayt al-Ṣiddīḳ*, Cairo 1905; Winter, 222-3), the al-ʿAdjamīs in Aleppo (Eddé), the ʿĀṣim al-Thaḳafīs in al-Andalus (Fierro), the Ibn Abī ʿĪsās in Cordova (Marin, 291, n. 1-2, with other references).

Personal relations between scholars also played a role in appointments, as is evident from the favours enjoyed by Walī al-Dīn Ibn al-ʿIrāḳī (d. 826/1423)

on the part of the friends of his father Zayn al-Dīn (Berkey, 120-1). Some were anxious to guarantee lucrative posts for their children (Makdisi, *Colleges*, 170-1).

Evolution towards professionalism reached its culminating point under the Ottomans, who established a hierarchy of *muftīs*, presided over by the senior *muftī* of Istanbul, the *shaykh al-islām* [*q.v.*] (see further on the Ottoman religious institution, section 3. below, and 'ILMIYYE). As regards the intellectual situation of the *'ulamā'* towards the end of the so-called "classical" period, from the 7th/13th and especially from the 8th/14th century onward, the preliminary symptoms of stagnation or of sclerosis become evident. Thus Ibn Khaldūn (d. 808/1406), in his survey of the religious sciences (*Muḳaddima*, ch. vi, ii, 364-iii, 80, tr. Rosenthal, ii, 411-iii, 103), in numerous instances deplores the decadence of theology in his time. But long before this, the incompetence of scholars who preferred appearance to knowledge had been a widespread theme, sometimes inspired, admittedly, by pride or envy (Berkey, 183-8). It could be said that sclerosis set in during the 9th/15th century, if by this it is meant that few original works were produced, and that the decline in creativity, already perceptible during the two preceding centuries, became an established fact. It is appropriate, however, to show caution in this regard, since some talented polygraphers, of whom the best example is al-Suyūṭī (d. 911/1505 [*q.v.*]), made worthwhile contributions to the religious sciences at this time (Gilliot, *Evolution*).

For the *'ulamā'* of al-Andalus, see Monès and Urvoy. For the rivalries of scholars of the different *madhhabs* or persuasions, see Laoust, *Pluralismes*, 1-133; Makdisi, *Ibn 'Aqīl*, 293-383; Chamberlain, 92-107; Pouzet, *Damas*, 108-12. For various positions in regard to Ṣūfism, see TAṢAWWUF.

2. In Persia [see MUDJTAHID, and ĀYATULLĀH, in Suppl.].

3. In Ottoman Turkey.

While the early Ottoman *ʿulamāʾ*, in particular, broadly shared the formation, functions and outlook of their counterparts in other Islamic societies, by far their most distinctive feature came to be the formalisation of their role in the state through the development under successive sultans, beginning with Meḥemmed II (1451-81 [*q.v.*]), of an (eventually) thoroughgoing and highly elaborated *cursus honorum* of learned offices—the so-called *ʿilmiyye* [*q.v.*]—on a scale quite unprecedented in Islam. (It should be observed that so striking is this feature of the Ottoman scene that the existence of *ʿulamāʾ* who chose to stand outside the learned hierarchy, or at the least refused to be fully drawn into it, tends to go unremarked.) If this arguably purposeful, certainly large-scale incorporation of the *ʿulamāʾ* by the state into its service led to sometimes fruitful collaboration with the secular authorities (as in the case, for example, of Kemāl Pasha-zāde and Abu 'l-Suʿūd Efendi [*q.vv.*] in the reign of Süleymān I (1520-66 [*q.v.*]), the creation and elaboration of the *ʿilmiyye* may be said also to have had the ultimately subversive effect of closely defining a class and providing it with a clearly defined set of material goals. As a result, by the 18th century a virtually closed aristocracy of the *ʿulamāʾ* had come into being which had little to do with the traditional roles of the *ʿulamāʾ* as transmitters of Islamic learning, as exemplars of piety, or as mediators between the rulers and the ruled. Deprived of many of their sources of power and wealth by the reforms of Maḥmūd II (1808-39 [*q.v.*]) and of the Tanẓīmāt (1839-76 [*q.v.*]), the *ʿulamāʾ* lived in uneasy coexistence with new structures in the fields of, for example, education and the administration of justice throughout the remainder of the 19th and the early 20th centuries until their corporate existence was brought to an end in the early years of the Republic, with the reforms following the abolition of the Caliphate in March 1924.

Bibliography: Both the structure and (briefly) the history of the Ottoman learned institution are discussed in the article ʿILMIYYE. In addition to it, and the sources there cited, reference should be made, *inter alia*, to the articles FATWĀ. ii. Ottoman Empire; ḲĀḌĪ; ḲĀḌĪ ʿASKAR; and SHAYKH AL-ISLĀM. For further information on the *ʿulamāʾ* and the *ʿilmiyye* to the end of the 16th century, see H. İnalcık, *The Ottoman Empire, the classical age 1300-1600*, London 1973, 165-202; R.C. Repp, *The Müfti of Istanbul*, London 1986, esp. 27-72. For the 17th and 18th centuries, see M.C. Zilfi, *The politics of piety: the Ottoman Ulama in the postclassical age (1600-1800)*, Minneapolis 1988. For an overview of the *ʿulamāʾ* during the reform period, see R.L. Chambers, *The Ottoman Ulema and the Tanzimat*, in N.R. Keddie (ed.) *Scholars, saints, and Sufis*, Berkeley, etc. 1972, 32-46; and for references to the role of the *ʿulamāʾ* in the post-Tanẓīmāt period, see E.J. Zürcher, *Turkey, a modern history*, London 1993, index *s.vv.*

(R.C. REPP)

4. In Muslim India.

Here the *ʿulamāʾ* occupied a prestigious position and were actively involved in promoting the religious sciences, so much so that Rashīd Riḍāʾ [*q.v.*] remarked that when the science of *ḥadīth* was on the decline in the Islamic lands, the Indian *ʿulamāʾ* resuscitated it (*Miftāḥ kunūz al-sunna*, Beirut 1985, 12). The author of the *Tādj al-maʾāthir* called them "a gem in the ring of *sharīʿat*", while Fakhr-i Mudabbir assigned them a place below the prophets but above the rulers, and quoted the following three sayings of the Prophet to highlight their position: (i) "The *ʿulamāʾ* are the heirs of the Prophets". (ii) "If there were no *ʿulamāʾ* the people would have loitered about in the world like wild animals". (iii) "The best rulers are those who go to the door of the *ʿulamāʾ* and the worst *ʿulamāʾ* are those who go to the door of the rulers" (*Tārīkh-i Fakhr al-Dīn Mubārak Shāh*, London 1927, 9-12).

In popular parlance, the phrase *ʿulamāʾ-o-mashāyikh* was used for two distinct types of men of religion, one looking after the external and the other after the spiritual aspect of religion. The *ʿulamāʾ* were categorised as *ʿulamāʾ-i ākhirat* and *ʿulamāʾ-i dunyā* (Baranī, *Tārīkh*, 154-5). The former led an abstemious life of pious devotion to religious learning and kept away from courts; the *ʿulamāʾ-i dunyā* involved themselves in material pursuits and consorted with kings. Niẓām al-Dīn Awliyāʾ [*q.v.*] once remarked about them: "Knowledge is in itself a noble thing, but when it is used for earning money and the scholars go about from door to door, respect for it vanishes" (*Fawāʾid al-fuʾād*, 182). Aḥmad Sirhindī [*q.v.*] called such scholars *ʿulamāʾ-i sūʾ* and held them responsible for the misery of the community and the religious confusion that prevailed in his day (*Maktūbāt*, Lucknow 1877, i, 46-7, 70). Anxious to win royal favours, such *ʿulamāʾ* gave *fatwās* to justify their actions. The *ʿulamāʾ* of the Slave King Kayḳubād's court gave a *fatwā* which rendered as obligatory prayers and fasts for the sultan (Baranī, *Tārīkh*, 154). Miyān Muṣṭafā, a Mahdawī *ʿālim* of the 16th century, treated such *ʿulamāʾ* as *rahzan* (bandits) (*Djawāhir al-taṣdīḳ*, Ḥaydarābād 1367/1948, 25, 53, 61). However, the *ʿulamāʾ* who spent their lives in imparting religious knowledge and kept away from the courts were held in high esteem. They dedicated themselves to producing religious works and led lives of penitence and poverty.

As specialists in the Islamic sciences. The *ʿulamāʾ* of the higher category specialised in some branch of Ḳurʾān, *ḥadīth*, *fiḳh* or *kalām*—and gained fame as *mufassir*,

muḥaddith or *muftī*. 'Alā' al-Dīn Mahā'imī (author of the *Tabṣīr al-Raḥmān wa-taysīr al-Mannān*), Shihāb al-Dīn Dawlatābādī (author of the *Baḥr-i mawwādj*), Shāh Walī Allāh Dihlawī [*q.v.*] (author of *Fatḥ al-khabīr bi-mā lā budda min ḥifẓihi fī 'ilm al-tafsīr* and translator of the Ḳur'ān into Persian), Thanā' Allāh Pānīpatī (author of the *Tafsīr-i Maẓharī*) and others were known for their exegetical studies.

Among the *muḥaddithūn* the names of Raḍī al-Dīn Ṣaghānī (author of the *Mashāriḳ al-anwār*), 'Abd al-Ḥaḳḳ Dihlawī (author of *Lama'āt al-tanḳīḥ 'alā Mishkāt al-maṣābīḥ*), 'Alī Muttaḳī (author of the *Kanz al-'ummāl*), Ṭāhir Pattanī (author of the *Madjma' biḥār al-anwār fī gharā'ib al-tanzīl wa-laṭā'if al-akhbār*), Shāh Walī Allāh (author of *al-Musawwā*, *al-Muḥallā* and the *Sharḥ Tarādjim abwāb al-Bukhārī*) were famous for their contribution to *ḥadīth* studies.

In the sphere of law, the contemporary *'ulamā'* of Fīrūz Shāh Tughluḳ and, three centuries later, Awrangzīb, made notable contributions. The *Fatāwā-yi Tatār-Khāniyya* of 'Ālim b. 'Alā' (ed. Ḳāḍī Sadjdjād Ḥusayn, 5 vols. Ḥaydarābād 1984-9) and the *Fatāwā-yi 'Ālamgīriyya* (Kānpūr 1350/1931-2) by a group of distinguished *'ulamā'* under the direct supervision of Awrangzīb, are works of great importance. Though works on *fiḳh* had appeared during the time of Balban (e.g. the *Fatāwā al-Ghiyāthiyya*) and the Khaldjī sultans (the *Fatāwā Ḳara-Khāniyya*), it was during the time of Fīrūz Shāh Tughluḳ that legal studies developed. Of the various problems investigated by the *'ulamā'*, the question of the ownership of land in India examined by Shaykh Djalāl al-Dīn Thānesarī (*Taḥaḳḳuḳ-i arāḍī-yi Hind*, ed. Sa'īd Ashraf Ḥasanī, Karachi) deserves special mention.

In the sphere of *kalām*, Shāh Walī Allāh's *Ḥudjdjat Allāh al-bāligha* reflects the author's understanding of the problems of the 18th century. (For his distinctly original sociological concepts, see Nizami, *The historical role of three Auliya of South Asia*, Karachi 1987, 35-60, and also idem, *Shah Wali Allah of Delhi. His thought and contribution*, in *IC* [1980], 141-52.)

The teaching institutions of some *'ulamā'* became famous for the study of some specific branch of religious learning, like the *madrasa-yi Raḥīmiyya* of Shāh Walī Allāh for *ḥadīth* studies and the *Farangī Maḥal* [*q.v.* in Suppl.] one for *fiḳh* studies. Some scholars devoted themselves to specific classics of their field of study; thus Shaykh 'Abd al-Ḥaḳḳ concentrated on the *Mishkāt*, and Shāh Walī Allāh on the *Muwaṭṭa'*, and scholars from different regions turned to them for instruction in these works.

Considered in the broad perspective of their studies, the *'ulamā'* of the first phase in Muslim India were in general involved mostly in preparing commentaries and summaries of classical works; in the next phase they were concerned with legal studies and combatting sectarianism; in the third phase they concentrated on *ḥadīth* studies; while in the 18th century scholastic theology (*'ilm-i kalām*) was their main concern. Each trend was inspired by the specific needs of Muslim society at the particular times.

As modest-living and ascetic teachers. There were *'ulamā'*, like Mawlānā 'Alā' al-Dīn Uṣūlī and Mawlānā Kamāl al-Dīn Zāhid, both teachers of Niẓām al-Dīn Awliyā', who rejected court life and turned to giving instruction in their own mud houses. Uṣūlī carried on teaching even when starving (*Fawā'id al-fu'ād*, 165-6; *Khayr al-madjālis*, 180, 190-1). Balban summoned Mawlānā Zāhid and requested him to serve as his personal *imām*. "Our prayer is all that is left to us, does the sultan want to take that also from us?", replied the Mawlānā (*Siyar al-awliyā'*, 106). *'Ulamā'* of this category tended to be more respected by the people.

At rulers' courts. Many Muslim rulers kept round themselves *'ulamā'* as a sign of their dignity and prestige. Iltutmish spent one crore (? of *tankas*) on them (Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, 165). Balban, Sikandar Lōdī and many other sultans in Dihlī and the provinces visited the houses of the *'ulamā'* and heard their sermons. Sayyid Nūr al-Dīn Mubārak Ghaznawī criticised at the court of Iltutmish some customs and practices of the sultans. Muḥammad b. Tughluḳ kept a team of *'ulamā'* by his side and obtained their concurrence before executing anybody. According to 'Iṣāmī, other *'ulamā'* had issued a *fatwā* legalising rebellion against this ruler.

There were some posts in the administration like those of *Ṣadr-i Djahān*, *Shaykh al-Islām*, *muḥtasib*, *ḳāḍī*, *khaṭīb*, and teachers in government *madrasas*, which were the exclusive province of the *'ulamā'*.

International contacts. It appears that *'ulamā'* of Indian origin gained wider recognition in Muslim lands elsewhere quite early. In the 6th/12th century, al-Sam'ānī gave (*Ansāb*, facs. ed., 237, 313, 497, 543) several *nisbas* of scholars such as Daybulī, Sindhī, Lāhūrī and Manṣūrī. After the Mongol invasion, many *'ulamā'* migrated from Central Asia and Persia to India. Referring to scholars in Lahore, Ḥasan Niẓāmī says that "out of every hundred persons ninety were *'ālim* and out of every ten, nine were *mufassir* of the Ḳur'ān" (*Tādj al-ma'āthir*, ms.; see also 'Iṣāmī, *Futūḥ al-salāṭīn*, ed. Madras, 114-15). During the time of 'Alā' al-Dīn Khaldjī, some scholars of Dihlī had, according to Baranī, attained a stature equal to that of Abū Yūsuf, Muḥammad al-Shaybānī, al-Ghazālī and Fakhr al-Dīn Rāzī, and scholars from different parts of the Islamic world came to study at their feet. Conversely, the Indian *'ulamā'* kept in contact with Islamic centres of learning elsewhere, and Shaykh 'Alī Muttaḳī, Shaykh 'Abd al-Ḥaḳḳ Muḥaddith, Shāh Walī Allāh and others visited the Ḥidjāz.

Political involvement. From the time of Shāh Walī Allāh, who wrote political letters to Aḥmad Shāh Durrānī [*q.v.*] and Indian potentates to strive for the resurrection of Muslim political authority in India, the *'ulamā'* became deeply involved in political struggles. Shāh 'Abd al-'Azīz declared against the British government of India; Sayyid Aḥmad Brēlwī [*q.v.*] approached the Rādjā of Gwāliyār [*q.v.*] to join hands in the struggle against foreign domination. In the Sepoy Mutiny of 1857-8 many *'ulamā'* were active, and subsequently, in the conspiracy trials of Ambala, Patna and other places, many *'ulamā'* were convicted, and some of them exiled to the Andaman Islands or Malta (see *IC* [1990], 29-63).

As organisers of religious debates (*munāẓarāt*). During the Sultanate and the Mughal periods some *'ulamā'* had involved themselves in Islamic sectarian controversies, but during the 19th century they were drawn into *munāẓaras* with the Hindus and the Christian missionaries. *'Ulamā'* like Raḥmat Allāh Kayrānwī, Thanā' Allāh Pānīpatī, Ḥāfiẓ 'Alī Farrukhābādī and others were involved in these, and a profuse literature arose on such controversies.

Responses to Western science and education. Since these had come with British rule, the *'ulamā'* for long hesitated to accept them. However, Shāh 'Abd al-'Azīz Dihlawī, who had declared India to be *dār al-ḥarb*, did not hesitate to praise British achievements in science and technology. The *fatāwā* of 'Abd al-Ḥayy Farangī Maḥallī show the reaction of *'ulamā'* to new circumstances of resulting from the spread of Western ways of life (see Nizami, *Socio-religious movements in Indian Islam 1763-1898*, in *IC* [1970], 131-46).

5. In South-East Asia.

As in other parts of the Muslim world, this general term encompasses a variety of specific functions, including judge, scholar and publisher and teacher and instructor at all intellectual and social levels. As possessors of knowledge in the widest sense the *ʿulamāʾ* might be government functionaries or they might be active outside government. It is not uncommon in South-East Asia for the individual *ʿālim* to act in both spheres throughout his life. The *ʿulamāʾ* always represented a possible alternative locus of authority to the organs of state. While there is no general history of *ʿulamāʾ* in South-East Asia, the following topics seem to be crucial in any account of their function.

(a) *The pre-modern and colonial Muslim world.*

First, in the field of literature we have extensive text traditions in all genres [see INDONESIA; MALAYSIA; PATANI]. From the late 18th and particularly in the 19th century, the materials are especially strong in *fiḳh* and local *fatāwā*. Much yet remains to be studied in these areas. Second, in the field of education (and by extension publication) the *ʿulamāʾ* established extensive networks of schools and publication houses right through Muslim South-East Asia. They maintained strong internal links and also had links to Mecca, Medina and, later to al-Azhar. The profession was commonly exercised as a family affair. Third, and especially important as to the *ʿulamāʾ* being an alternative locus of authority, is their political function. In the pre-European period, the *ʿulamāʾ* were instrumental in providing an alternative (West Asian-Muslim) model for kingship and rule. In addition, they insisted on the primacy of Islam as the only proper source of authority in the Malay and Javanese kingdoms. These demands did not always sit easily with the political realities of the time. In the colonial period, the *ʿulamāʾ* were a focus for resistance to European rule [see PADRI for an example; generally, see INDONESIA].

(b) *The post-colonial and modern Muslim world.*

The position and status of Islam has been immeasurably improved with the demise of colonialism. For the first time since the pre-modern Sultanates, Islamic political parties and activities are no longer proscribed and have a real chance of exercising political power. However, the *ʿulamāʾ*, because they interpret Islam and express it in political terms, are all the more an alternative source of authority. Malaysia and Indonesia are secular states, and the tension between this fact and the Islamic imperative has been and will remain a consistent feature of modern politics. The state has reacted in two ways. First, by attempting to co-opt the *ʿulamāʾ* into state service, as in appointments to teaching institutions, and to government advisory bodies such as "Councils of Ulama", or "Councils of Religion" which have specific advice and regulatory functions. In addition, Departments/Offices of Religion have been established in Malaysia, Singapore, Brunei, Indonesia and the Philippines, which all provide considerable career opportunities for *ʿulamāʾ*. Second, the states have permitted overt political activity by Islamic groups. The Islamic political parties (PMIP, and later PAS in Malaysia and the NU, Masjumi and later PPP in Indonesia) have never held outright power. Instead, they fulfill the historical role of *ʿulamāʾ* in offering the Islamic political, intellectual and moral alternative, often now in Western-derived forms, in which many of them have recently been educated.

6. Amongst the Han Chinese, Chinese-speaking Muslims.

Generally speaking, learned Chinese Muslims, though many of them were Confucian literati, are usually called *ʿālim* (or A-lin in Chinese) distinguished from the Islamic clergy title *imām* or *ahung*. Because of their long assimilation into the host Han culture in a non-Islamic environment, Muslims in China have never fully developed their institutions such as *madrasas*, *ḳāḍīs* and *muftīs*, as in other Islamic lands, and Islam has been confined to personal religious practice. As a result of assimilation, Chinese Muslims usually acquired a Confucian education and adopted its ethics in order to survive in the majority Han society. Chinese Muslims were probably not aware of the formation of a body of *ʿulamāʾ* existing outside China, as the term did not appear in Chinese Islamic works until the

beginning of the 20th century. After several centuries of assimilation, most Han-speaking Muslims were becoming ignorant of their religion. Hence some Muslim intellectuals became worried about the decline of Islam, and launched the so-called "Renaissance Movement" or "Islamic revival". Amongst the Muslim literati, Wang Tai-yü (d. 1657 or 1658), Ma Chu (1640-1710?), Liu Chih (1662-1736) and Ma Fu-ch'u (1794?-1874) are regarded as the leading figures in the history of Chinese Islam, being extolled as "The Four Grand *'Ulamā'*". They began translating Islamic works from Persian into Chinese, and tried to encourage writing on Islamic subjects in Chinese.

Wang Tai-yü was apparently the pioneer here. Wang indicated in his books that his writings were aimed at bringing true religion to his fellow Muslims and at clarifying Islam to the Chinese Confucianists who were usually biased against other faiths. His most important works are: (1) *Chêng-chiao Chên-chuen* ("The true interpretation of Islam"), an interpretation of the *S̲h̲arī'a* and basic doctrines of Islam, and defence of Islam against the Confucianists, Taoists and Buddhists' attacks; and (2) *Ch'ing-chên Ta-shue* ("The advanced knowledge of Islam"), focussing on the doctrine of *tawḥīd* and Islamic cosmology.

According to his biography, Ma Chu was especially active in the movement, seeking to revive Islam through politics. He wrote a few books mainly on Confucian politics, but only one on Islam: *Ch'ing-chên Chih-nan* ("The compass-guide to Islam"). In this, Ma Chu tried to prove that Islam is superior to other Chinese religions by comparing Islamic doctrines and ethics in these faiths. He spent four years travelling around China proper preaching Islam to Muslims and to Han literati, so that his book became widely circulated and praised. He even tried to seek an audience with the Emperor so that he could make Islam known to him, and secure the raising of Islam to the status of Confucianism, but failed.

Liu Chih has been reckoned by modern scholars as the inaugurator of the Islamic sciences in China. He has even been revered as the spiritual founder of the Chinese native Ṣūfī order, Hsi-tao-tang. It is said that he wrote more than 500 *chüan* (volumes) on Islamic subjects, but only three books have survived: (1) *T'ien-fang Hsing-li* ("The philosophy of Islam"); (2) *T'ien-fang Tien-li* ("Islamic law and traditions"); (3) *T'ien-fang Chih-sheng Shih-lu* ("Biography of the Islamic Prophet"). The first book was compiled from various Arabic and Persian sources, mainly Ṣūfī and S̲h̲ī'ī works, and was popular amongst the Han élites, since Liu's theories coincided with the cosmology of neo-Confucianism. The second book is more a comprehensive manual for Chinese Muslim life. The third one may be a translation from *Tard̲j̲ama-i Mawlūd-i Muṣṭafā* (probably a translation of Sa'īd al-Dīn Muḥammad b. Mas'ūd b. Muḥammad al-Kāzarūnī's Arabic work).

Unlike the other three, Yūsuf Ma Fu-ch'u (or Ma Te-hsing) was an *imām-'ālim*, and the founder of the Yunnan school of Islamic education (the other two are those of Shantung and Shen-hsi). He studied Islam first in Shen-hsi, then went to Mecca on pilgrimage and for learning the "true Islamic sciences". Unlike the other three, who absorbed Confucian education in childhood and then turned to Islam, Ma Fu-ch'u studied Confucianism at the age of 40. As a syncretist, Ma Fu-ch'u tried to harmonise Islamic and Confucian ethics in his teachings, because he thought this was the only way of survival in the *Dār al-Ḥarb*. Nevertheless, he insisted that Muslims should observe strictly Islamic duties while adopting Confucian traditions. He is regarded the most prolific scholar in the late 19th century, and about 40 of his works have survived. He was probably the first ever to try to translate the Ḳur'ān into Chinese, but this was abandoned when he was executed by the Manchu-Ch'ing government during the Panthay [*q.v.*] rebellion. The *Sü-tien Yao-hui* ("The abridgement of four Islamic classics") is probably his masterpiece, and provides the best evidence of his religious and scholarly accomplishments, presenting his syncretism and Islamic apologia. Ma Fu-chu's achievement in Chinese Islam was outstanding; before him, the qualifications of *'ālim* and *imām* had never been combined in one person. One might suggest that he tried to turn the *'ulamā'* into a more cohesive body.

The works of these four scholars have become Chinese Islamic classics from which later generations have drawn their thought. Because of Ma Fu-ch'u's initiation, the institution of *'ulamā'* thus came partially into being. When global travelling grew in the 20th century, more frequent contacts with Muslims in other Islamic lands made Chinese Muslims place more emphasis on *'ulamā'*, but trends of secularisation and westernisation in modern China have meant that traditional *madrasa* education has been replaced by a modern Western one, so that the enthusiasm was never fully given shape. In any case, the modern Chinese state is unlikely to allow Muslims to set up their own religio-political or religio-educational systems, as being potential centres of political challenge.

7. In West Africa.

In West Africa, although ancient centres such as Dia in Masina, Takidda [*q.v.*], and Tādmakkat in the Adrar-n-Ifoghas had older traditions of Islamic learning, it is only in 9th/15th century Timbuktu [*q.v.*] that a recognisable body of *'ulamā'* first emerges, dominated by two prominent Ṣanhād̲j̲a families: the descendants of Muḥammad Aḳīt, and those of Anda Ag̲h̲-Muḥammad. Between them they filled the offices of *ḳāḍī* of the city and *imām* of the Sankore mosque for close to two centuries. During this period, Timbuktu emerged as the major Islamic teaching centre of West Africa, leading some to speak of a Sankore university. However, although much of the teaching took place in the Sankore quarter, there is no indication of an organisational structure, officially-appointed teachers or student hostels. The institution of *waḳf* or *ḥubus*

which allowed the establishment of public teaching institutions in other areas of the Islamic world seems to have been unused in West Africa. Scholars held classes in their houses or in the mosque, references to *madrasas* (*Ta'rīkh al-Sūdān*, 34, 78-9) apparently referring to private classes rather than to public institutions.

The formational curriculum of the aspiring *ʿālim* in Timbuktu, and to a large extent elsewhere in West Africa, was grounded in the study of Mālikī *fikh*: the *Muwaṭṭaʾ* of Mālik, the *Mudawwana* of Saḥnūn, the *Risāla* of Ibn Abī Zayd al-Ḳayrawānī, the *Mukhtaṣar farʿī* of Ibn al-Ḥādjib with the *Tawḍīḥ*, a commentary by Khalīl b. Isḥāḳ, whose *Mukhtaṣar* was the principal work of reference in the field in much of the *bilād al-Sūdān* down to the 20th century. These were supplemented by *Tuḥfat al-ḥukkām* of Ibn ʿĀṣim on judicial procedure, the *Madkhal* of Ibn al-Ḥādjdj on normative conduct, and *al-Miʿyār al-mughrib*, the great collection of Mālikī *fatāwā* by al-Wansharīsī; *uṣūl al-fikh* was studied from the Shāfiʿī text *Djāmiʿ al-ummahāt* of Tādj al-Dīn al-Subkī. *Tawḥīd* was studied from the various *ʿaḳāʾid* of Muḥammad b. Yūsuf al-Sanūsī and the *manẓūma* of Aḥmad al-Djazāʾirī; *ḥadīth* comprised the collections of al-Bukhārī and Muslim and the *Alfiyya* of al-ʿIrāḳī on the technicalities of transmission. The chief work of Arabic grammar was the *Alfiyya* of Ibn Mālik; of prosody, the *Khazradjiyya* of ʿAbd Allāh al-Khazradjī; of Ṣūfism, the *Ḥikam* of Ibn ʿAṭāʾ Allāh al-Iskandarī; of prophetic piety, the *Shifāʾ* of *Ḳāḍī* ʿIyāḍ; of logic, the *Djumal* of al-Khūnadjī; and of astronomy as related to the calendar, the *naẓm* of Abū Muḳriʿ. Many of these works could also be found in the curriculum of Fulbe teachers two centuries later, such as that pursued by ʿAbd Allāh b. Muḥammad Fodiye (1178-1245/1764-1829) in north-western Hausaland, though the list of works which he studied in Arabic grammar is considerably larger (see M. Hiskett, *Material relating to the state of learning among the Fulani before their jihād*, in *BSOAS*, xix [1957], 550-78). In southern Mauritania, a contemporary of his, Ṣāliḥ b. Muḥammad al-Fullānī of Futa Djallon (1166-1218/1753-1803), pursued a curriculum of *fikh* which included the above works and many more, as well as a wide range of works of *tafsīr* (al-Bayḍāwī, al-Zamakhsharī, al-Rāzī, al-Ḳurṭubī, al-Baghawī, Ibn Djuzayy, Ibn ʿAṭiyya), a very extensive curriculum of *ḥadīth* including numerous commentaries, and a curriculum in Arabic language which included such fundamental texts as the book of Sībawayhi, the *K. al-ʿAyn* of Khalīl b. Aḥmad, and the *Ḳāmūs* of al-Fīrūzābādī; and in literary studies, the *Kāmil* of al-Mubarrad and the *Āmālī* of al-Ḳālī (Ṣāliḥ al-Fullānī, *Ḳaṭf al-thamar*, Ḥaydarābād 1328/1910).

Such an extensive training was probably uncommon, but until further research is done, we cannot be sure just how uncommon. Ṣāliḥ al-Fullānī was unusual in that he left West Africa at the age of twenty and took up residence in Medina, where he became a prominent teacher in the *ḥadīth* movement which denounced the authority of the *madhāhib*, decrying *taḳlīd* and calling for following (*ittibāʿ*) of the Prophet's practice through individual scrutiny of the *ḥadīth* literature to determine the legitimacy of actions (see his *Īḳāẓ ulī 'l-himam wa 'l-abṣār li 'l-iḳtidāʾ bi-sayyid al-muhādjirīn wa 'l-anṣār*, Beirut 1398/1978). His writings were taken to India, where protagonists of the Ahl-i Ḥadīth movement proclaimed him the co-*mudjaddid* of the 12th century of the *hidjra* along with Murtaḍā al-Zabīdī (see Muḥammad Ashraf al-Ṣiddīḳī al-ʿAẓīmābādī, *ʿAwn al-maʿbūd ʿalā sunan Abī Dāwūd*, Dihlī 1323/1909, iv, 181). He was not the only West African *ʿālim* to settle and teach in the Middle East: Muḥammad b. Muhammad al-Kashnāwī (d. 1154/1741-2) taught in Mecca and died in the Djabartī household in Cairo; in the 20th century the Tidjānī scholar Alfa Hāshim (d. 1349/1931) made *hidjra* from French occupation to settle and teach in Mecca. Many others, over the centuries, studied with scholars in the Ḥidjāz or Egypt whilst making the pilgrimage to Mecca; Djalāl al-Dīn al-Suyūṭī received many in the 9th/15th century, and maintained written contact with others (see E.M. Sartain, *Jalāl al-Dīn al-Suyūṭī's relations with the people of Takrūr*, in *JSS*, xv [1971], 193-8); Murtaḍā al-Zabīdī likewise maintained West African links.

West African *ʿulamāʾ*, especially before the 20th century, were much concerned with distinguishing believers from unbelievers [see TAKFĪR. In West Africa] and preventing backsliding. A constant theme of their writings is that of *tadjdīd*, regeneration of the faith. The notion first appears in the replies which the North African scholar Muḥammad b. ʿAbd al-Karīm al-Maghīlī (d. 909/1503-4 or 910/1504-5 [*q.v.*]) wrote for Askiya *al-ḥādjdj* Muḥammad of Songhay. Dyula *ʿulamāʾ* of the Suwarian tradition (deriving from the 9th/15th century teacher *al-ḥādjdj* Sālim Suwari) made *tadjdīd* an ongoing obligation for their communities. The reformist scholar ʿUthmān b. Muḥammad Fodiye (d. 1232/1817 [*q.v.*]) styled himself a *mudjaddid*, and wrote extensively on distinctions between believers and unbelievers, and the eradication of beliefs and actions contrary to the Sunna (see, for example, his *Iḥyāʾ al-sunna wa-ikhmād al-bidaʿ*, Cairo n.d. [*ca.* 1962]). Al-Suyūṭī's *urdjūza* on the *mudjaddidūn* was known in West Africa, and scholars of the Kunta clan [*q.v.*] extended it to include West African scholars for the 10th and 11th centuries of the *hidjra*. An anonymous *urdjūza* of the 13th/19th century entitled *Tuḥfat al-mustarshid fī dhikr mā li 'l-dīn min mudjaddid* (B.N., Paris, ms. arabe 5615, fols. 100a-103b), and probably written in southern Mauritania, includes a number of West African names beginning with Aḥmad Bābā (d. 1036/1627 [*q.v.*]) for the 10th century of the *hidjra* and ending with al-Mukhtār al-Kuntī (d. 1226/1811).

Relations between the *ʿulamāʾ* and the holders of political power were until the 18th century generally circumspect and at times cordial. In Songhay, after the discordant relationship between Sunni ʿAlī (r. 1464-92) and the *ʿulamāʾ*, the rulers of the 10th/16th century (the Askiya dynasty) showed marks of respect, sometimes visiting the *ʿulamāʾ* of Timbuktu and making gifts to a wide range of holy men. In Bornū under the Sayfawa rulers, the office of Chief Imām (*al-imām al-kabīr*) was evidently a state office from the 10th/16th century. Gifts of land and exemption from taxation and harrassment by the ruler's agents were sometimes granted in royal charters (*maḥram*), as they were farther east in Dār Fūr and the Fundj state of Sinnār on the Blue Nile. In the 18th century, West African *ʿulamāʾ* became more actively involved in the political sphere. They were instrumental in establishing Islamic polities in Futa Djallon and Futa Toro at this time, while in the 19th century *ʿulamāʾ* such as ʿUthmān b. Muḥammad Fodiye, Aḥmadu Lobbo (d. 1844 [*q.v.*]) of Masina and *al-ḥādjdj* ʿUmar b. Saʿīd (d. 1864), themselves assumed leadership of states whose creation they had fostered through *djihād*, adopting in all three cases the caliphal title *amīr al-muʾminīn*.

In the 20th century, West African *ʿulamāʾ* adopted various positions vis-à-vis colonial rule, some avoiding direct contact with colonial institutions and personnel, others working closely with them; in either case motivations for such positions were complex, but

the stands the *'ulamā'* took were generally supported, explicitly or implicitly, by reference to *sharī'a* norms. While older teaching traditions have not yet completely died out, many aspiring scholars in the second half of the present century have gone for study to al-Azhar, or more recently to institutions of higher learning in Saudi Arabia and elsewhere in the Arab world. In the new nation-states, the roles of the *'ulamā'* have been considerably restricted, especially in the legal sphere, though they can still make their voices heard through national Islamic bodies such as the Supreme Council on Islamic Affairs (Nigeria), the Association Malienne pour l'Unité et le Progrès de l'Islam (Mali), and the Conseil Supérieur des Chefs Religieux (Senegal).

AL-'ULAYMĪ [see mudjīr al-dīn al-'ulaymī].

'ULAYYA bt. al-Mahdī, a daughter of the caliph, gifted musician and a poet. She was born in 160/777 and died in 210/825. Her mother Maknūna had been a *djāriya* and professional singer in the service of the Marwānids in Medina before she was sold to the 'Abbāsid prince in Baghdād. Ibrāhīm b. al-Mahdī [*q.v.*] and the later caliph Hārūn al-Rashīd were 'Ulayya's half-brothers. In her youth, she was married to one of her 'Abbāsid relatives, Mūsā b. 'Īsā, who had served as a governor in different places before settling in Baghdād, three years before he died in 183/799. Her intelligence and wit, as well as her taste and elegance (*ẓarf*), were much admired at court, where she was held in the highest esteem by al-Rashīd. She also trained female singers for his palace and had her own disciples. When the caliph died in 193/809, she reduced her artistic activities, and only rarely is she mentioned in the company of the succeeding caliphs al-Amīn and al-Ma'mūn. Seventy-two of her songs were still known to the singer 'Arīb in the reign of al-Mutawakkil. A small *dīwān* of her poetry is mentioned by Ibn al-Nadīm. More than 200 verses attributed to 'Ulayya, mostly treating of courtly love and wine, have been preserved by al-Ṣūlī and by Abu 'l-Faradj al-Iṣbahānī in the *Aghānī*. A collection of her song texts was also quoted by the latter.

'ULDJAYTŪ KHUDĀBANDA [see öldjeytü].

ULEMA [see 'ulamā'].

ULU DĀGH, modern Turkish Ulu Dağ, a small but imposing mountain range in northwestern Anatolia, to the south-east of Bursa [*q.v.*] and now in the *il* or province of Bursa. It is some 32 km/20 miles by 13 km/8 miles in extent, and its forest-clad slopes rise to a peak of 2,493 m/8,170 feet (lat. 40° 05' N., long. 28° 58' E.), the highest point of western Anatolia. It is the classical Mysian Olympus, but its more modern fame is as a winter ski resort.

'ULŪDJ 'ALĪ, Mediterranean corsair, Ottoman administrator and Grand Admiral of the Turkish fleet (*Ḳapudan Pasha* [*q.v.*]; b. *ca.* 926/1520 in Calabria, d. 995/1587 in Istanbul). In western literature, his name has been routinely distorted or Italianised, the most frequent form being Occhiali. The name Ḳilidj 'Alī ("'Alī the Sword"), preferred by modern Turkish historiography, was conferred on him in the aftermath of the Battle of Lepanto [see 'aynabakhtī], together with the post of Ḳapudan Pasha, as a reward for scoring a partial victory in the otherwise disastrous defeat.

Like many other North African corsairs, 'Ulūdj 'Alī began his career as a convert to Islam after being taken prisoner, at the age of 16, and serving as a rower on a galley. His original name, Giovan Dionigi Galeni, was at that point changed to 'Ulūdj 'Alī (Ar. *'ulūdj*, pl. of *'ildj* "barbarian", possibly in this context with the connotation of being of Christian or non-Arab origin). The fame and wealth he gained in running down Christian shipping propelled him to the ranks of the Turkish naval élite, a step symbolised by his attachment, from 955/1548 onwards, to Turghud Re'īs [*q.v.*]. His official career was launched with that of his sponsor, when in 958/1551 he accompanied him to Istanbul and received a salary together with the right to carry one *fener* (lantern, as a sign of imperial service) on his ship. From then on, 'Ulūdj 'Alī participated in the principal naval campaigns, such as the victory at Djerba (967/1560) and the siege of Malta (Shawwāl 972-Ṣafar 973/May-September 1565). Later that year, he was given the important post of *beylerbeyi* of Algiers, a function that soon included the challenge of helping the Muslims of Spain and dealing with Spanish presence and influence in Tunisia. He successfully intervened in the latter country by overcoming the Spanish garrison at Goletta [see ḤALḲ AL-WĀDĪ] and installing an Ottoman governor in Tunis; he could offer only token help, however, to the coreligionists in Spain who had risen against Christian rule. These events, gaining momentum in 1569, happened to coincide with the Ottoman plans for the conquest of Cyprus, and 'Ulūdj 'Alī was one of those summoned to join that campaign.

'Ulūdj 'Alī, with his contingent of Algerian ships, commanded the left (seaward) wing of the fleet at the Battle of Lepanto (7 October 1571). While the Turkish defeat may be partly attributed to the mediocre leadership of the Ḳapudan Pasha Mu'adhdhin-zāde 'Alī Pasha, 'Ulūdj 'Alī's brilliant manoeuvres not only saved his ships but even mauled the galley of Gianandrea Doria, commander of the Christian fleet's right wing. As Ḳapudan Pasha, 'Ulūdj 'Alī then undertook a vigorous rebuilding of the Ottoman fleet and led successful naval campaigns in the following years. The recovery culminated in 982/1574 when the Turks retook Tunis, captured a year earlier by the Spanish under the command of Don Juan of Austria.

'Ulūdj 'Alī retained the post of Ḳapudan Pasha until his death. He endeavoured to expand the arsenal at Ḳāsimpasha in Istanbul [see TERSĀNE], and like many other members of the Ottoman ruling class, used some of his acquired wealth to sponsor the construction of religious or civic buildings. A noteworthy remaining event of his active life was his sailing to the Crimea in 990/1582 with the task of installing Islām Giray as Khān on the throne of this vassal state. He is buried in a *türbe* near the Tophane *iskele* on the Bosphorus by the side of a mosque whose construction, financed by him, was reportedly entrusted to the famous architect Sinān.

'Ulūdj 'Alī typifies the special brand of Ottoman mariners who, having first proved their worth as independent *ghāzī*-corsairs, were recruited into the Ottoman navy and played a catalytic role in its triumphs. His name figures in the roster of the most illustrious captains, from the 15th up to the 18th century: Kemāl Re'īs, Khayr al-Dīn Barbarossa, Turghud Re'īs, Selman Re'īs, Ḥusayn Pasha Mezzomorto and Djezā'irli Ghāzī Ḥasan Pasha [*q.v.*]. They are, however, only the tip of the iceberg, since behind them were hosts of other captains of similar provenance. Most had another feature in common, that of training in the waters off North Africa, the area of maritime *ghazā'* par excellence.

(S. SOUCEK)

'ULŪFE (A., T.), a term of Ottoman financial and military organisation.

The Ottoman military classes can be divided, according to methods used for their remuneration, into two broad categories: possessors of *dirlik* [*q.v.*] residing in the provinces who received land grants with revenues expressed as an annual sum; and members of the imperial household (*ḳapu ḳulu* [see GHULĀM. iv; ḲUL]. The latters' wages (*'ulūfe* < *'alaf* "provender or grain rations for mounts") were denominated as a daily amount (*yewmiyye*) and distributed according to three-monthly pay periods (each set, for accounting purposes, as a fixed term of 85 days, see Djewād, *Tārīkh-i 'Askerī*, 84). This basic pay for members of standing military regiments at the Porte was continuous in both peace and war and was separate from special campaign allowances (*ḳumanya*) and sultanic largesse (*bakhshīsh* [*q.v.*]) used to mark times of celebration such as accessions to the throne or campaign victories. Use of the term *'ulūfe* for salary also separated military from administrative personnel, since the latters' wages were usually termed *waẓīfe* (pl. *waẓā'if*). The difference between soldiers and others was further reinforced by the terms of payment: three-monthly for the former group (called also *mewādjib-khwarān*) and monthly for those assigned to clerical and administrative tasks, called *müshāhare-khwarān* (for this distinction, see 'Ayn-i 'Alī, *Risāle*, 97, 99 *et passim*).

A detailed guide to how the system worked in practice is provided in an anonymous treatise of the early 11th/17th century called the *Ḳawānīn-i Yeñičeriyān*. According to this source, all Janissaries at their induction into the corps (*be-dergāh*) received the basic rate of pay for new recruits of 3 *aḳčes* per day (fol. 39b, ll. 1-2). Subsequent pay raises (called *teraḳḳī*) were awarded based on length of service and exceptional merit. The maximum pay award for Janissaries in the mid-11th/17th century was 12 *aḳčes* per day (see the second *Risāle* [of *ca.* 1050/1640] by Ḳoči Bey, 84). Pay rates at levels above 7 *aḳčes* per day were traditionally left to the discretion of the Janissary commander, but oversight of the initial registration, and of replacement to fill vacancies (*maḥlūl*) of rank-and-file Janissaries paid between 3 and 7 *aḳčes* per day, remained a treasury prerogative (*Ḳawānīn*, fol. 128a, ll. 2-3). Despite such measures, however, the explosive growth of the Janissaries and the six standing cavalry regiments at the Porte (*altî bölük sipahileri*) in the 11th/17th century left considerable scope for abuse and corruption (for figures showing their growth between 982-1070/1574-1660, see 'Azīz Efendi, 46).

Controlling the expansion in the ranks of the higher-paid cavalrymen (their base pay at the time of induction ranged between 10 and 15 *aḳčes* per day as compared with the Janissaries' 3 to 7, see *Ḳawānīn*, fol. 77a, ll. 1-6) remained a consistent government objective in the 11th/17th century. For example, on a single occasion in 1068/1658 the administration struck 7,000 *altî bölük sipahīs* from the rolls [see KÖPRÜLÜ, at Vol. IV, 258]. Such cost containment

measures could not, however, halt the general trend, apparent also among the Ottomans' European contemporaries, towards central funding for technically proficient, regularly paid, standing professional armies. By the time of the Tarkhundju "budget" of 1064/1653-4 (text in the *Münsheʾāt-i selāṭīn* of Aḥmed Ferīdūn, ii, 304-7) the Ottomans were devoting 56% (368.3 out of 656 million *aḳčes*) of regular state treasury expenditure to the payment of salaries (*mewādjib*) (composed of both *ʿulūfe* and *waẓāʾif*, see above). Contemporary geo-political realities made it inevitable that a large proportion (roughly 3/4) of this 56% was allocated to the two principal military services: 154.6 million *aḳčes* (23.6%) to the Janissaries and 124.6 millions (19%) to the six cavalry regiments.

ULUGH BEG, Muḥammad Ṭaraghāy b. Shāhrukh b. Tīmūr (796-853/1394-1449), Tīmūrid governor of Transoxiana, briefly Tīmūrid sultan, and patron of mathematics and astronomy. He was born near Sulṭāniyya on 19 Djumādā I 796/22 March 1394, apparently the eldest son of Shāhrukh [*q.v.*] and his wife Gawharshād, and, although not in line for succession, was called Ulugh Beg, the Turkic equivalent of Tīmūr's title *Amīr-i Kabīr*. Like other young princes, Ulugh Beg was brought up among Tīmūr's wives, probably by Sarāy Malik.

1. The early course of historical events.

In Rabīʿ I 807/Sept-Oct. 1404, Tīmūr held a wedding for several grandsons, including Ulugh Beg, who married his cousin Agha Bīkī bt. Muḥammad Sulṭān, a Čingisid on her mother's side. On his departure for China, Tīmūr appointed Ulugh Beg governor of the northern Syr Darya and "Moghulistān up to Khitāy", whose conquest he was presumably to complete. Andīdjān and Kāshghar were assigned to Ibrāhīm Sulṭān b. Shāhrukh.

After Tīmūr died on 17 Shaʿbān 807/18 February 1405, Samarḳand was taken over by his grandson Khalīl Sulṭān. Ulugh Beg joined Shāhrukh in Khurāsān where he and Shāhrukh's *amīr* Shāhmalik were appointed to aid Tīmūr's designated successor, Pīr Muḥammad b. Djahāngīr, take the throne. In late 811/spring 1409, after Khalīl Sulṭān had been defeated by some of Tīmūr's *amīrs* on the northern borderlands, Shāhrukh took Transoxiana. Pīr Muḥammad was now dead, and Shāhrukh took the capital for himself, then returned to Harāt, leaving Ulugh Beg as governor of Transoxiana and Turkestan under the tutelage of Shāhmalik. In Dhu 'l-Ḥidjdja 812/April-May 1410, they were defeated by the *amīrs* of the northern marches. Shāhrukh came and routed the enemies, but more troops and several campaigns were necessary to render the region secure. Ulugh Beg had begun to chafe under Shāhmalik's tutelage, and once peace was restored in autumn 814/1411, Shāhrukh took Shāhmalik back to Harāt.

Ulugh Beg remained governor in Samarḳand until Shāhrukh's death in 850/1447. Ḥiṣār-i Shādmān in southern Transoxiana was a separate province, as was Khwārazm. Badakhshān remained under its own princes, responsible to Harāt. The disaffected princely governor of Andīdjān, Mīrak Aḥmad, allied with the Moghuls; through a mixture of military action and persuasion, Ulugh Beg and Shāhrukh succeeded in stationing direct agents of Ulugh Beg in Kāshghar and Andīdjān in Rabīʿ I 819/May 1416.

Ulugh Beg's borders were threatened by the Djočids to the north and the Moghuls to the east. These powers suffered from frequent internal strife, inviting interference from the Tīmūrids; they were likewise quick to support Tīmūrid dissidents. With the Moghuls, Ulugh Beg was moderately successful. He helped several pretenders to power, and in Dhu 'l-Ḥidjdja 827/November 1424 began a successful campaign against Shīr Muḥammad Khān, his former protegé, who had refused to extradite the rebellious governor of Kāshghar. On this campaign, Ulugh Beg acquired the nephrite used for Tīmūr's grave cover and left a triumphant inscription at Djīzak commemorating the expedition.

Ulugh Beg was less fortunate with the Djočids. In Rabīʿ II 822/May 1419, he received Borāḳ, a fugitive pretender to the throne of the White (or Blue) Horde, and set off in Shaʿbān/August-September to help him to the throne, but turned back. Borāḳ failed to gain the throne then, but by 1425 had established himself securely. In 829/1426 he laid claim to Sighnāḳ [*q.v.*], the former capital of the Horde, now in Tīmūrid hands. Shāhrukh did not allow Ulugh Beg independent action against Borāḳ, but sent additional troops under his brother, Muḥammad Djūkī, in Rabīʿ II 830/February 1427. The princes were defeated by Borāḳ and fled in panic. Shāhrukh investigated the defeat and temporarily removed Ulugh Beg from his post. After this, Ulugh Beg ceased campaigning in person.

Borāḳ died *ca.* 832/1428-9; shortly thereafter, Abu 'l-Khayr Khān rose to power over the Uzbek confederation, and in 833 or 834/1430-1, the Uzbeks took northern Khwārazm. The Tīmūrids expelled them but in 839/1435 they retook and kept northern Khwārazm, and by 1440 were entrenched on the Syr Darya raiding Tīmūrid territories. By the end of Ulugh Beg's governorship, they were pillaging regularly almost to Samarḳand and Bukhārā. About 838/1434-5 Ulugh Beg lost Kāshghar to the Moghuls.

2. The government of Transoxiana under Ulugh Beg, and his death.

We know little about the administration of Ulugh Beg's province. He spent his winters usually in Bukhārā, primarily in hunting, which he loved, and other seasons in Samarḳand. Like other governors in Khwārazm, Fārs and Yazd, he kept the *khuṭba* and coinage in Shāhrukh's name. Bartol'd's judgement that Ulugh Beg was essentially independent is probably an exaggeration. His powers were comparable to those of other governors, limited by controls from the centre. Shāhrukh's name appeared on internal decrees and appointments; Shāhrukh and his wives brought up young princes, arranging their education and marriages. Governors undertook the defence and expansion of their frontiers, but required permission for major campaigns. They accompanied Shāhrukh on his own campaigns, or contributed troops. The splendour of Samarḳand and other regional courts suggests that a good portion of revenue remained within the province, but we know very little about tax administration. Later sources report very modest land taxes under Ulugh Beg, but this probably refers to a temporary reduction. Ulugh Beg levied the *tamgha* [*q.v.*] or Turco-Mongolian tax on trade.

Ulugh Beg had several Čingisid wives, of different lines, and regularly used the title *Güregen* ("royal son-in-law"). According to the *Tārīkh-i Rashīdī*, he maintained a Čingisid puppet *khān* in Samarḳand. Contemporary histories, documents and coins do not substantiate this. Lists of Čingisid *khāns* of the Tīmūrids end with Tīmūr's last puppet *khān*. During Ulugh Beg's brief rule as sultan, he put only Tīmūr's name on coins together with his own. Some Tīmūrid historians suggest that Ulugh Beg honoured Turco-Mongolian customs contrary to Islam, but he was also knowledgeable about the Ḳur'ān and the Islamic sciences, and maintained good relations with the *ʿulamāʾ*. The power of the Naḳshbandī Ṣūfī order [see NAKSHBANDIYYA] was growing; there is evidence of friction between its *shaykhs* and Ulugh Beg's functionaries, but we know little about Ulugh Beg's own relations with the order (J. Paul, *Die politische und soziale Bedeutung der Naqšbandiyya in Mittelasien im 15. Jahrhundert*, Berlin-New York 1991, 240-2).

When Shāhrukh died in 850/1447, he had been ill for several years and competition for succession had begun. Ulugh Beg, the only surviving son, heard of the death from his own son ʿAbd al-Laṭīf, in Shāhrukh's suite; he hastened to Khurāsān, but was unable to establish control. In summer 851/1447 Ulugh Beg made peace, acquiring only Balkh, where he stationed ʿAbd al-Laṭīf. In spring 852/1448, Ulugh Beg and ʿAbd al-Laṭīf took Harāt, which was soon attacked by the Turkmen prince Yār ʿAlī, earlier in Shāhrukh's suite. Ulugh Beg relieved the city, but in late Ramaḍān 852/late November 1448 permitted his army to plunder the outskirts because some of the population had co-operated with the enemy. He then learned that Abu 'l-Khayr Khān had attacked the region of Samarḳand, destroying several of his palaces, and departed, leaving ʿAbd al-Laṭīf in charge. Within a few months, Ulugh Beg lost Khurāsān.

ʿAbd al-Laṭīf became angry with his father, who had slighted him in favour of his younger brother ʿAbd al-ʿAzīz. From Balkh, he openly defied Ulugh Beg, who entrusted Samarḳand to ʿAbd al-ʿAzīz and advanced to the Oxus. The armies faced each other for some time, until Ulugh Beg was recalled to Samarḳand by an attack from Abū Saʿīd [*q.v.*] and disorders within the city due to ʿAbd al-ʿAzīz's treatment of his *amīrs*. ʿAbd al-Laṭīf took Tirmidh and Kish, and advanced on Samarḳand. In Shaʿbān 853/Sept.-Oct. 1449, ʿAbd al-Laṭīf defeated Ulugh Beg near the Dimashḳ suburb of Samarḳand; when Ulugh Beg tried to return to the city, he was locked out by his commander. He retreated to his border fortress Shāhrukhiyya, but here his governor threatened to seize him, so he returned to Samarḳand.

ʿAbd al-Laṭīf appointed a Čingisid puppet *khān* and had him judge Ulugh Beg, acquiring a *fatwā* against him from most of the *ʿulamāʾ*. The *khān* found Ulugh Beg guilty of contravening the *Sharīʿa*; ʿAbd al-Laṭīf allowed him to depart on the Pilgrimage, but had him killed. Dawlatshāh dates Ulugh Beg's death to 8 Ramaḍān 853/25 October 1449, but it is inscribed on his tombstone as 10 Ramaḍān. His body was later returned to Samarḳand and buried in the Gūr-i Amīr. After a brief rule, ʿAbd al-Laṭīf was killed by Ulugh Beg's *amīrs*, and soon thereafter, Abū Saʿīd seized power in Transoxiana.

3. Ulugh Beg as patron.

Tīmūr took pains with the education of his children and grandchildren, and the latter became knowledgeable patrons. Ulugh Beg attracted a coterie of poets in Čaghatay and Persian, including the well-known ʿIṣmat Allāh Bukhārāʾī. At his court, as in Yazd and Harāt, there was a revival of earlier Turkic literature. In calligraphy, miniature painting and historical writing Ulugh Beg's patronage seems to have been limited. The *Tārīkh-i arbaʿ ulūs*, a general history emphasising the Čingisid houses, is sometimes attributed to Ulugh Beg, but was probably simply written at Ulugh Beg's court. The original is lost; excerpts remaining in the *Ḥabīb al-siyar* and a later anonymous work suggest that it was short but otherwise similar to the histories produced in several Tīmūrid courts.

Ulugh Beg was an active architectural patron. In *ca.* 820/1417-18 he began building two *madrasas* which still stand, in Bukhārā and on the Rīgistān of Samarḳand, both supported by large *waḳfs*. About the same time, he built other structures now gone: a *khānaḳāh* and bath by the Rigistān and two gardens with palaces. In 823/1420 he began work on his observatory, the most advanced of its age in the Middle East, furnished with a huge stone arc as a sextant. Ulugh Beg also added to the tomb complexes patronised by Tīmūr. He built a gallery in the Gūr-i Amīr and re-oriented the Shāh-i Zinda, adding a monumental portal in the south towards the city. In Shahr-i Sabz, he constructed a mosque and a mausoleum intended for his own descendants.

Ulugh Beg was a talented practitioner of mathematics and astronomy, able to judge the quality of scholarly work. He collected a group of sixty or seventy scholars engaged in the design of instruments and the discussion of astronomical and mathematical problems, including the theories produced by Naṣīr al-Dīn al-Ṭūsī [*q.v.*] at Marāgha. The senior scholar was Salāḥ al-Dīn Mūsā b. Maḥmud Ḳāḍīzāda Rūmī, head professor in Ulugh Beg's *madrasa*, and probably responsible for introducing the teaching of astronomy and mathematics there. The most outstanding was Ghiyāth al-Dīn al-Kāshī [*q.v.*] who came from Kāshān in *ca.* 823/1420. He soon became a leading figure and invented several instruments for the observatory, most notably a planetary equatorium.

Under the active directorship of Ulugh Beg, al-Kāshī and Ḳāḍīzāda led the astronomical observations until al-Kāshī died in 832/1429; Ḳāḍīzāda soon died thereafter. The observations were continued by ʿAlī Ḳūshči, a student of Ḳāḍīzāda and Ulugh Beg. Ulugh Beg completed the astronomical tables, the *Zīdj al-Sulṭānaʾī* or *Zīdj-i Ulugh Beg* (among other names), probably *ca.* 1441. Based largely on new observations, these became the standard star tables, widely used throughout the Islamic world and translated into Latin.

Ulugh Beg was famous for his remarkable memory and active intellect. As a military commander, he was indecisive, abandoning many projected campaigns at his borders and failing to protect his realm from nomad depredations. This cost him popularity: when he returned to Samarḳand after his defeat by Borāḳ in 830/1427, some people suggested that the gates be closed against him, and his followers quickly abandoned him when he was defeated by ʿAbd al-Laṭīf.

ULUGH KHĀN (Tk. "Great Khan"), a title borne by various of the ethnically Turkish Dihlī Sultans in 7th-8th/13th-14th century Muslim India, including the Slave King Ghiyāth al-Dīn Balban (664-86/1266-87 [*q.v.* in Suppl.] and then, as a prince, Sultan Muḥammad b. Tughluḳ (724 or 725-52/1324 or 1325-51 [*q.v.*]. It was further borne by non-Turks, including several Ḥabshīs, hence of servile black East African origin, above all in the sultanate of Gudjarāt [see ḤABSHĪ, at Vol. III, 16a]. (Ed.)

ULUS, a word in Turkic languages and Mongolian with several related meanings.

Written *ulush* in ancient (pre-Mongolian empire) Turkic, it originally had a geographic connotation, meaning "country" (and later even "district", "town" or "village") as opposed to the term *el* "people". When the term came into Mongolian, changing its phonetics to *ulus* in the process, it acquired the latter meaning. As such, it is found in *The secret history of the Mongols*, referring to both the Mongol peoples themselves (§ 272) and neighbouring nations who were absorbed by them (§§ 110, 196). Essentially, a more exact translation would be "the people subject to a certain ruler" (E. Haenisch, *Wörterbuch zu Mangholun Niuca Tobach'an*..., Leipzig 1939, 163). A more comprehensive and imperial variant is the later expression *yeke mongghol ulus*, "the great Mongol nation", found first on the seal of Güyük in 1246 (*ulus* here has been translated as "empire" by some scholars, but see I. de Rachelwitz, *Qan, qa'an and the seal of Güyüg*, in *Documenta Barbarorum*, ed. K. Sagaster and M. Weiers, Wiesbaden 1983, 274-5). A Turkish variant of this formula exists on a coin minted at Tiflīs in 622/1244, during the regency of Töregene Khātūn [*q.v.*], within the following phrase: *ulugh monkol ulūsh bek* "commander of the great Mongol nation" (D.M. Lang, *Studies in the numismatics of Georgia in Transcaucasia*, ANS Numismatic Notes and Monographs no. 130, New York 1955, 35-7; but cf. his translation). It was also applied to the various appanages given to the sons of Čingiz Khān [*q.v.*], but the intended reference again was not to geographic entities *per se* but to the nomads controlled by each house. These *uluses* became increasingly autonomous of the Great Khān, and expressions such as *ulus-i Djočī* and *ulus-i Čaghatay* became the way that these essentially independent states were known by the Mongols (and their historians) (e.g. Rashīd al-Dīn, *Djami el-Tevarikh*, ed. E. Blochet, Leiden and London 1911, 111, 184). Thus the term *ulus* can often be translated henceforth as "state" and this meaning remains in modern Mongolian, along with "people", "empire", "country" and "dynasty" (F. Lessing, *Mongolian-English dictionary*, Berkeley 1960, 873). The word returned to some of the Turkic languages in the post-Mongol imperial period with the Mongolian spelling and usage.

(R. Amitai)

ʿULYĀʾIYYA, a name applied to a sect of Shīʿī extremists (*ghulāt* [*q.v.*]), founded by the Kūfan heretic Bashshār al-Shaʿīrī [*q.v.*], a contemporary of the Imām Djaʿfar al-Ṣādiḳ (d. 148/765 [*q.v.*]). According to the Twelver Shīʿī (Imāmī) heresiographers, this man was repudiated by Djaʿfar al-Ṣādiḳ because he deified ʿAlī and assigned to Muḥammad the rôle of ʿAlī's messenger; he was also accused of preaching libertinism, the denial of divine attributes, and metempsychosis (Saʿd b. ʿAbd Allāh al-Ḳummī, *al-Maḳālāt wa 'l-firaḳ*, ed. M.Dj. Mashkūr, Tehran 1963, 59-60, 63; al-Kashshī, *Ridjāl*, ed. Ḥ. al-Muṣṭafawī, Mashhad 1969, 398-400). In the Sunnī sources (al-Ashʿarī, *Maḳālāt*, ed. H. Ritter, Wiesbaden 1963, 14-15; al-Baghdādī, *Farḳ*, ed. M.M. ʿAbd al-Ḥamīd, Cairo n.d., 252; al-Shahrastānī, 134) names and details concerning the doctrine of the sect are partly confused. The spelling of the name of the sect is doubtful (ʿUlyāʾiyya, ʿUlyāniyya; ʿAlyāʾiyya, ʿIlbāʾiyya) and its meaning is obscure. According to al-Ḳummī, 60, the sect owes its name to that of a sea bird into which Bashshār was changed as a punishment for his heresy. Probably the name should be connected with that of the deified ʿAlī, perhaps through an Aramaic link (*ʿAlyā*) or the like. As far as the doctrines are concerned, the sect seems to have been the forerunner of the later sects of the Isḥāḳiyya and Nuṣayriyya [*q.v.*]; this is confirmed by the fact that Isḥāḳ al-Aḥmar and Muḥammad b. Nuṣayr, the respective eponyms of these sects, both were qualified as "ʿUlyāʾīs" (al-Masʿūdī, *Murūdj*, ii, 258; al-Baghdādī, *Farḳ, loc. cit.*).

(H. Halm)

ʿUMĀN, conventionally Oman, a sultanate situated in the south-eastern corner of the Arabian Peninsula, with a second area, separated from the first by parts of the United Arab Emirates, at the tip of the Musandam peninsula. The country, with a population of some 2,000,000 inhabitants, occupies some 312,000 km^2 in all, and has a coastline along the Gulf of Oman and the Indian Ocean of about 1,700 km/1,060 miles in length. The head of state is Sultan Ḳābūs b. Saʿīd, the fourteenth ruler of the Āl Bū Saʿīd dynasty [*q.v.*]. The country is divided ethnically and culturally into two: the Ibāḍī north, comprising the capital area, the Bāṭina coast and the Ḥadjar region; and the Shāfiʿī/Sunnī southern region of Ẓafār [*q.v.*] (conventionally Dhofar), including the islands of Maṣīra and those of Kuria-Muria/Khūriyā Mūriyā off the southern coast. The official state language is Arabic, although in the south-

ern region Djibbālī and Mahrī [*q.v.*] (Mehri) are very widely spoken, and Ḥarsūsī [see ḤARĀSĪS], in Djiddat al-Ḥarāsīs, Baṯharī, on the southern coast, and Hobyōt, in the mountains bordering the Republic of Yemen, are also spoken. (G.R. SMITH)

1. Geography.

The cultural and religious divide mentioned above is reflected also in the geography of the modern Sultanate of Oman.

The orography of ʿUmān proper is dominated by a chain from Raʾs Musandam or Ruʾūs al-Djabal in the northwest and running through the Western Hadjar mountains, with their highest section forming to Djabal Akhḍar, then through the Eastern Hadjar mountains and the small, semi-detached outlier of the Djabal Khamīs and the Djaʿalān district at the southeastern tip of ʿUmān, ending in the promontory of Raʾs al-Ḥadd.

These mountains, made up of dark limestone of the Jurassic and lower Cretaceous periods overlying a core of serpentine, would appear at first sight to represent a broken fragment of an outer arc of the Zagros [*q.v.*] range of southern Persia. But the trend of the mountains of ʿUmān does not accord with the west-east trend of the mountains of Persian and Pakistani Balūčistān on the other side of the Gulf of Oman, and if they do belong to the same system, they must have been thrown up at an earlier period than the mountains of Persia. The ʿUmān mountains fall steeply to the coast or the coastal plain and are broken up into distinct massif formations by transverse rifts. One such cleft separates the Djabal Akhḍar from the Eastern Hadjar range, and this passage, drained to the south by the Wādī Ḥanīfayn and to the north by the Wādī Samāʾil, carries the main route from Muscat/Masḳaṭ [*q.v.*] to Nizwa [*q.v.*] and the interior. The Djabal Akhḍar, some 80 km/50 miles long, comprises the highest part of the whole Hadjar range, with several peaks over 2,000 m/6,560 feet high, including the highest one, the Djabal Shamm, to the west of al-Rustāḳ [*q.v.*] at 3,018 m/9,900 feet. As its name ("Green Mountain") implies, the Djabal Akhḍar is the best-watered part of the range, and spots with favoured exposure to precipitation, brought in winter by occasional cyclones, may get up to 50 cm/20 inches of rain and even snow. There are juniper woodlands, and valleys irrigated by water conveyed in subterranean channels (*aflādj*, sing. *faldj*), analogous to the *kārīz*s or *ḳanāt*s [*q.v.*] of Persia, thereby permitting the cultivation of cereals, apricots, figs, pomegranates and, above all, dates.

The coastal plain is known as the Bāṭina "inner region", i.e. that lying between the Gulf of Oman and the mountains, a tract of sand and gravel extending from Khōr Fakkār in the northwest to the vicinity of Sīb just to the west of Masḳaṭ. At its widest, where the Western Hadjar mountains swing away from the coast, it is 35 km/21 miles wide and 10 km/6 miles wide at each end. This strip is heavily cultivated for virtually its entire length, with water obtained from the slopes by means of *aflādj*. It is here, on the coast, that such important centres of population as al-Rustāḳ, Ṣuḥār [*q.v.*], al-Khābūra and Masḳaṭ are situated. There are many drowned valleys, such as indent the coasts around Raʾs Musandam and at Masḳaṭ, providing excellent harbours (the Elphinstone inlet in Raʾs Musandam extends inland for 16 km/10 miles). It is harbours like these that have for long facilitated ʿUmān's flourishing maritime trade connections with lands as far afield as India and East Africa.

The landward slopes of the mountain range are gentler in relief than the edges facing the Bāṭina, but get scantier rain and are less favourable for human habitation and activities. The stretch of some 160 km/100 miles along the landward slopes of the Western Hadjar mountains and the Djabal Akhḍar is known as the Ẓāhira "back region". This is a piedmont region of sand and gravel, with some cultivation along the upper courses of the wadis coming down from the mountains, but most of it is suitable only for camel and goat grazing. Hence there is no continuous series of oases, as on the eastern face of the Yemeni mountains in southwestern Arabia, and only a few towns such as Nizwa and Ibrī. The region merges imperceptibly on its west with the "Empty Quarter" [see AL-RUBʿ AL-KHĀLĪ]. To the southeast of the Ẓāhira, and inland from the Eastern Hadjar mountains, is the Sharḳiyya or "eastern province", with sandy plains and gravel hills, and, to its south, the dunes of the Ramlat al-Wahiba.

The other great region of the modern Sultanate of Oman is that of Ẓafār [*q.v.*], conventionally Dhofar, now the Southern Province (al-Djanūbiyya) of the Sultanate. This is an extensive plateau, at its northwestern edges running into the "Empty Quarter". At its southwestern end, adjacent to the political frontier with the modern Yemen Arab Republic and merging into the Ḥadramawt [*q.v.*], Ẓafār includes the densely-wooded Djabal Ḳāra or Qara mountains, which rise to 1,500 m/4,900 feet, and, straddling the frontier with the Y.A.R., the Djabal al-Ḳamar. The coastal region, up to 25 to 30 km/15 to 19 miles wide, catches rain during the months of June to September from the Southwest Monsoon, and the alluvial soil of the Salāla [*q.v.*] area is particularly fertile, with extensive date groves; here, at Salāla, is situated the administrative capital of the Province. Off the coast lies, at the northeastern end of this Southern Province, the quite large island of Maṣīra [*q.v.*], and further south, the group of the smaller Kuria-Muria islands [see KHŪRYĀN-MŪRYĀN].

BOSWORTH)

2. History.

The following is an historical survey of ʿUmān. The history of Ẓafār, quite different, will be dealt with under that entry. Although the Graeco-Roman accounts call the country by the name Omana (e.g. G.W.B. Huntingford (ed. and tr.), *The Periplus of the Erythraean Sea*, London 1980, chs. 32, 38, 106), that of Magan is frequently mentioned in the context of Mesopotamia-India trade. Archaeology would appear to confirm Magan as ʿUmān, a maritime power and an important supplier of timber, copper and diorite in the third millennium B.C.

Legend speaks of migrations eastwards from the Yemen during the first millennium and of Ḥimyar control of south-east Arabia down to the 6th century B.C. when the area fell under the authority of dynasties centred on the Persian side of the Gulf. The history of ʿUmān becomes clearer with the large-scale

migration, mainly of the Azd, from the Sarāt and Tihāma [*q.v.*] in the Yemen across the southern Peninsula to the south-east. The migration movements are usually in tradition associated with Mālik b. Fahm, an individual who may or may not have been a genuine historical figure. The first waves may have firstly settled in the Dja'lān in the south-east of the country and on up the coast to Ḳalhāt [*q.v.*]. Later they came into contact with the Persian occupiers of the north of the country and the Bāṭina coast with their centre at Ṣuḥār [*q.v.*] and battle between the Arabs and the Persians was joined at Salūt in the southern Djawf (see Wilkinson, *Water and tribal settlement*, map on 14). The defeated Persians were given one year in which to withdraw completely to the coast and evacuate 'Umān once and for all. It might be suggested that the first migrations took place in the first century A.D. and that the complete Arabisation of 'Umān was finally achieved by about the time of the advent of Islam.

After some Azd delegations to Medina, the famous conqueror of Egypt, 'Amr b. al-Āṣ, is reported to have visited 'Umān and met the two Djulandā kings, 'Abd and Djayfar, sometime between 6-10/627-32 in Ṣuḥār, and this as much as anything else is said to have persuaded the Omanis to accept Islam. The early Islamic history of 'Umān is far from clearly defined. The country seems to have been controlled by members of the Djulandā family and/or by governors despatched from the caliphs in the Holy Cities and Damascus.

Before 80/700 'Umān had already become a place of refuge for different groups opposed to the Umayyad caliphate, in particular the Khawāridj [see KHĀRIDJITES], including many following the Ibāḍiyya [*q.v.*], and the situation deteriorated to such an extent in the opinion of the Umayyads that the famous al-Ḥadjdjādj b. Yūsuf al-Thaḳafī [*q.v.*] invaded 'Umān, probably about 86/705. A tough régime followed, and the Umayyads considered they had sufficient hold on the country to use it as a place of exile; other members of the young Ibāḍī movement were sent thither and they lost no time in spreading their message among the 'Umānīs. The movement was further strengthened in 'Umān by the practice of sending out from Baṣra the so-called *ḥamalat al-'ilm* ("carriers of knowledge"), all 'Umānīs in origin and fully versed in the increasingly sophisticated doctrines of the Ibāḍiyya. The movement took hold more firmly in 'Umān and remains the predominant religious doctrine in the north of the country.

In the confusion which followed the ousting of the Umayyads from the caliphate by the 'Abbāsids and after the failure of an Ibāḍī imāmate in Ḥaḍramawt in 131/748, the 'Umānīs established such an imāmate in 'Umān and elected al-Djulandā b. Mas'ūd as *imām* in 132/749-50. A declaration of independence followed which immediately caused a radical change of policy towards 'Umān on the part of the 'Abbāsids in Baghdād. Early on the governors of the latter in 'Umān had been benign and tolerant of the local population and their Ibāḍī ways; but they could not tolerate an independent state so close to home. Khāzim b. Khuzayma, a Tamīmī, was chosen by the caliph to lead the military expedition which was supposed to deal both with the Khawāridj of Ibn Kāwān Island in the Gulf and also with the Ibāḍīs of 'Umān. The Imām al-Djulandā was killed in battle by Khāzim's army (possibly by the hand of Khāzim himself) at Djulfār (modern Ra's al-Khayma [*q.v.*], then part of 'Umān) in 134/752 and the First Ibāḍī Imāmate collapsed after only two years.

The period after the collapse of the First Imāmate in 'Umān is one of confusion and intense tribal conflict, with the 'Abbāsids trying as far as they were able to keep the country within their control. From the Yaḥmadī clan of the Azd, who, unlike the leaders of the First Imāmate, contained most of the leading Ibāḍīs and scholars, there arose in Nizwā [*q.v.*] in 177/793 a new *imām*, Muḥammad b. Abī 'Affān, the first *imām* of the Second Ibāḍī Imāmate in 'Umān which was to endure for a century. However, keeping the imāmate within Yaḥmad aroused much tribal resentment outside it. As time went on, the chosen *imāms* were of worse quality, often weak from old age. The Nizārī tribes of northern origin fought the southern ones, Yemenis, creating at one stage two different *imāms*; all this time, trade was curtailed by the troubles and the economy of the country suffered. In 280/893, the 'Abbāsid governor of Baḥrayn, Muḥammad b. Nūr, was sent to bring 'Umān back under the caliph's control. In savage fighting, Nizwā was taken and the country became once more a province of the caliphate.

For some four centuries, 'Umān was subjected to a number of invasions from outside, including further interventions on the part of the caliphate, while the imāmate struggled to retain as much of the interior as possible. The position in the 9th/15th century appears, for example, to have been a Nabhānī ruler in the north of the country, an *imām* with his capital in Nizwā, and the Persians controlling the coastal areas.

The arrival of the Portuguese in the area in the 10th/16th century dramatically changed the situation. The Portuguese took such strategic coastal towns as Masḳaṭ [*q.v.*] (Muscat), where they built the twin forts of Djalālī (996/1587) and Marānī (997/1588) overlooking the harbour, Ṣuḥār and Ḳalhāt. In 1026/1617, the imāmate fell into the hands of Nāṣir b. Murshid of the Ya'āriba who established his capital at al-Rustāḳ and a new dynasty, set to pacify the interior of the country and to fight, with some success, against the Portuguese. It took until 1060/1650, however, to rid 'Umān of the latter when Imām Sulṭān b. Sayf, the cousin and successor of Nāṣir b. Murshid, expelled the Portuguese from the Masḳaṭ area where they had fortified themselves. Imām Sulṭān went on to build up the 'Umānī navy and greatly encouraged sea trade. It was he, too, who, mainly in order to make life difficult for the Portuguese, embarked on naval expeditions to India and East Africa. It was during the imāmate of a successor, Sayf (1104-23/1692-1711), that 'Umānī sea power reached its zenith and that the Portuguese were constantly harassed wherever they could be found. Successful naval operations under Sayf were undertaken to India and Persia, and an expedition was made in 1110/1698 to East Africa, including Mombasa [*q.v.*], where 'Umānī authority was established, Pemba, Zanzibar and Kilwa [*q.vv.*]. Imām Sayf's death in 1123/1711 in a sense was the beginning of the end of the Ya'rubī dynasty. Internecine family strife and a massive civil war among the tribes, the Hināwīs versus the Ghāfirīs of Nizār, finally brought an end to the dynasty in 1164/1749.

The election of Imām Aḥmad b. Sa'īd ushers in the dynasty of the Āl Bū Sa'īd [*q.v.*], the family which continues to rule 'Umān to the present day. His reign was marked by further commercial activities and naval expeditions to East Africa where Mombasa, Kilwa and Zanzibar were placed under governors from 'Umān. After Aḥmad's death in 1199/1783, his second son Sa'īd retained the title of *imām* and his reli-

gious leadership, but his son Ḥamad ruled in Masḳaṭ until he died in 1207/1792. In 1213/1798 ʿUmān signed a political agreement with Britain in order to exclude French warships during the French Revolution and in order to establish the East India Company at Bandar ʿAbbās which, with the neighbouring coastal region of Persia, belonged at the time to ʿUmān. In 1811, Imām Saʿīd b. Aḥmad died and it is about this time that the title of *imām* was dropped.

It was under the rule of Saʿīd b. Sulṭān (1804-56 [*q.v.*]) that ʿUmānī overseas possessions reached their most extensive, with parts of southern Persia as well as Zanzibar under Masḳaṭ's control. Commerce prospered and Masḳaṭ became a major Gulf trading centre. After Saʿīd's death in 1856, however, ʿUmān proper was ruled over by Thuwaynī and East Africa by Madjīd, both his sons. It was in fact to be a whole line of direct descendants of Thuwaynī who ruled in Zanzibar, right down to 1964 when the dynasty lost its East African possessions. The loss of much of the wealth to an independent Bū Saʿīdī state in East Africa and the constant pressure on the part of the British to suppress the slave trade, culminating in an agreement in 1873 for the abolition of the trade throughout ʿUmānī dominions, brought discontent within the country. The Ibāḍī religious leaders were unhappy with the tolerant policies of the Āl Bū Saʿīd and several insurrections took place in the late 19th and the early 20th century which on occasions required British intervention on the side of the sultan.

In 1932 Sulṭan Saʿīd b. Taymūr succeeded to the sultanate. The interior remained under the religious rule of *imām*s still centred on Nizwā, although in 1955 the sultan took over full control of central ʿUmān and the *imām* was forced into retirement. A revolt in 1957, said to be with the help of Saudi-trained forces, was crushed with British help in Firḳ, and by early 1959 Sultanate and British forces were in occupation of al-Djabal al-Akhḍar. This led to a steady build-up of British forces in the Sultanate, financed from Britain until 1967 when the first oil shipments left ʿUmān for export. Although Sultan Saʿīd did attempt to develop the country, his moves were too slow for the public demand. He retired to Ṣalāla [*q.v.*] in Ẓafār and never returned to Masḳaṭ. In July 1970, Sultān Ḳābūs acceded to the throne and instigated widespread plans for the development of the country with the aid of the oil revenues now coming in. The Sultanate was recognised as a fully independent country and in 1971 was admitted to the Arab League and the United Nations. It is widely recognised that the development plans have been largely successful.

Bibliography: For the basic statistics concerning ʿUmān, see Ministry of Information, *Sultanate of Oman throughout twenty years*, Muscat n.d. An authoritative general history of ʿUmān is Nūr al-Dīn ʿAbd Allāh b. Ḥamīd al-Sālimī, *Tuḥfat al-aʿyān bi-sīrat ahl ʿUmān*, 5th ed. Kuwait 1974; useful general surveys are the brief *A short history of Oman from the earliest times*, Muscat 1972 (weak on pre-10th/16th century history) and D. Hawley, *Oman and its renaissance*, London 1977, 13-51 (with an extremely valuable genealogical chart of the Āl Bū Saʿīd on p. 40). J.C. Wilkinson, *Water and tribal settlement in South-East Arabia, a study of the* Aflāj *of Oman*, Oxford 1977 has some excellent historical material, in particular at 122-36. For the early Islamic history see the excellent, though as yet unpublished, dissertation, ʿIṣām ʿAlī Aḥmad al-Rawwās, *Early Islamic Oman (ca. 622-280/893), a political history*, University of Durham 1990; Wilkinson, *The Julanda of Oman*, in *Jnal. of Oman Studies*, i (1975), 97-109. Other specialist histories are ʿAbd Allāh b. Khalfān b. Ḳayṣar, *Sīrat al-Imām Nāṣir b. Murshid*, ed. ʿAbd Allāh Ḥasīb al-Ḳaysī, Muscat 1977, for the imāmate of the Yaʿrubī Nāṣir b. Murshid in the early 11th/17th century; Sirḥān b. Saʿīd b. Sirḥān, *Annals of Oman to 1728*, ed. and tr. E.C. Ross, repr. from the Calcutta 1874 ed., Cambridge 1984, for 18th and 19th century history; Ḥamīd b. Muḥammad b. Ruzayk, *al-Fatḥ al-mubīn fī sīrat al-sāda Ālbūsaʿīdiyyīn*, ed. ʿAbd al-Munʿim ʿĀmir and Muḥammad Mursī ʿAbd Allāh, Muscat 1977, for the history of the Bū Saʿīdī dynasty. (G.R. SMITH)

3. Social structure [see Suppl.].

4. The modern Arabic dialects.

The modern Arabic dialects of ʿUmān form a structurally coherent group, distinguishable from those of the Gulf littoral on the one hand, and central Arabia on the other. None the less, ʿUmānī dialects can still be clearly sub-divided into two basic types: "sedentary" (S) and "bedouin" (B). This ancient bedouin-sedentary socio-economic distinction is now virtually defunct in the rest of the Arab world, but is still dialectally salient in ʿUmān. The ʿUmānī S dialects are spoken in the towns and villages of the mountainous north of the country (e.g. Nizwā, ʿIbrī, Bahlā, Rustāḳ, Izkī), while the B dialects are spoken in the western and southern deserts, and in some of the associated coastal towns (e.g. Ṣūr, in Djaʿlān). There are also areas where centuries of social (and therefore dialectal) contact have resulted in a "mixed" dialect which has both S and B elements: the coastal towns of the Bāṭina *par excellence* (e.g. Saḥam, Ṣuḥār, Khābūra and Muscat itself), and Sharḳiyya towns such as Ibrā' and al-Ḳābil lying on the main east-west road in the hinterland of the Ḥadjar mountains, which forms a border between the sown and the desert. The dialect of Ṣalāla in Ẓafār again appears to be mixed, although there are no recent reliable studies available. The chart below illustrates some of the main phonological and morphological features shared by all (or virtually all) ʿUmānī dialects, and those which distinguish the B and S subgroups:

Shared features:

1. Interdental consonants *th*, *dh*, *ẓ* retained (like most Arabian dialects).
2. 2nd f.s. suffix is *-š*, as in much of southern Yemen, and the Baḥārna dialects (not *-č* or *-ć* as in the rest of central, northern and eastern Arabia).
3. *-in(n)-* infix in suffixed participial structures, e.g. *kātbinnuh*, f. *kātbatinnuh* "I/you/he/she has written it" (as in southern Yemen, the Baḥārna dialects, and parts of southern ʿIrāḳ).
4. Absence of resyllabification of closed CaG non-final syllables, e.g. *ḳahwa* "coffee" (as in most of southern Yemen, not *ghawa* as in most of central northern and eastern Arabia).
5. Feminine plural forms occur regularly (unlike eastern Arabia, but like central Arabia).
6. Internal passive forms occur commonly (unlike eastern Arabia, but like central Arabia).
7. *Tanwīn* (usually *-in*) common (unlike eastern Arabia but like central Arabia).
8. Survival of certain vocabulary items lost in other modern dialects, e.g. *rā* "to see", *tā* "to come", *sār* "to go".

Distinguishing features:

	S	B	Example
9. *ḳ*	*ḳ*	*g*	*ḳatal*/ *gital* "he killed"

10. *dj*	*g*	*y*	*gār/yār* "neighbour"
11. CvCvCv(C)	CvCvCv(C)	CCvCv(C)	*raḳaba/rguba* "neck"
12. imperfect verbs m. pl.	*-ū*	*-ūn*	*yikitbū/yikitbūn* "they write"
f.s.	*-ī*	*-īn*	*tikitbī/tikitbīn* "you write"
13. 3rd m.s. suffix	*-uh*	*-ah*	*trisuh/trisah* "fill it!"
14. prefix, hamzated verbs	*yō-*	*yā-*	*yōkil/yākil* "he eats"
15. prefix, V and VI themes	*yit-/tit-/nit-*	*yti-/tti-/nti-*	*nitʿallam/ntiʿallam* "we learn"
16. question marker	ə	-	*fi l-bētə?* "in the house?"

The S dialects of the mountainous north (the group to which the dialect described by Reinhardt at the end of the last century belongs) bear a strong typological resemblance, at least in some major features of phonology and morphology, to those of other ancient sedentary groups living on the periphery of the peninsula (Ḥaḍramawt and Dathīna, as described by Landberg, the Shīʿī Baḥārna of eastern Arabia). The ʿUmānī S reflexes of Classical *ḳ, k* and *dj* (= *ḳ, k, g*) probably represent the oldest dialectal development of the Old Arabic phonology. Broadly speaking, the ʿUmānī B dialects have much in common with those of the central Arabian desert and the eastern Arabian groups which have emigrated from there to the coast over the last 200 years (most of the present-day Sunnī populations of Kuwait, Bahrain and the UAE). Thus the geographical distribution of dialect features probably reflects ancient patterns of settlement in Arabia overlaid by more recent population movements. In particular, the *-š* 2nd f.s. suffix (the *kashkasha* of the mediaeval grammarians), widespread throughout the southern half of Arabia, seems to be a very ancient feature which originated in Yemen, possibly originally as a common substrate feature of a number of ancient south Arabian languages (which now only survive with a few hundred speakers each), whence it was exported to Bahrain and ʿUmān. The survival of feminine plural forms, internal passives and *tanwīn* in both the S and B dialects, rare outside Arabia, provides further evidence of the extreme linguistic conservatism of the ʿUmānī dialects.

The occupational changes which have occurred since the change of régime in 1970 (especially the drift of the young male population away from the land to employment in industry, the service sector and the military); the effective reunification of the coast with the interior; and the increasingly close political and communication links with other Gulf states—all these factors have tended to blur the dialectal distinctions sketched above and led to the spread of a form of dialect based on the educated speech of the Capital Area, which itself had already long been a linguistic mélange formed out of diverse elements (including Indian languages and Swahili). This "national" dialect is an ʿUmānī-influenced variety of the educated Gulf koinè now increasingly heard in the states of the Gulf Co-operation Council.

(C. HOLES)

ʿUMAR (I) B. AL-KHAṬṬĀB, the second caliph (*r.* 13/634-23/644), one of the great figures of early Islam, a driving force behind the early conquests and the creation of the early Islamic empire.

There is some contradiction among the historical and biographical traditions on ʿUmar b. al-Khaṭṭāb, and many of these contain exaggerated or legendary details. However, a consistent character emerges out of this material: stern, strong-willed, prone to anger, devoted to Muḥammad, the Ḳurʾān and Islam, ʿUmar seems to have had a coherent political programme during and even before his caliphate.

ʿUmar reportedly began as an enemy of the cause which he later supported with all his might. Once, upon hearing his sister Fāṭima and her husband Saʿīd b. Zayd reciting verses of the Ḳurʾān, he fell (as often) into a rage, which was soon followed by his conversion to Islam. This sudden reversal, together with his later position in the history of Islam, has led to ʿUmar's being known as "the St. Paul of Islam" (see Lazarus-Yafeh in *Bibl.* below), though the two seem actually to have had little in common other than their stubborn energy in championing the cause against which they had originally fought. ʿUmar's conversion is often placed in his 26th year, four years before the *hidjra* [*q.v.*] in 1/622; the resulting figure of 30 for the beginning of the new age may have its own significance (Conrad, *Abraha and Muhammad*). As a member of the ʿAdī b. Kaʿb, a minor clan of Ḳuraysh [*q.v.*], and the son of a Makhzūmī mother, ʿUmar could not assert much influence, though he may have tried to do so (Watt, *Muhammad at Mecca*, 7, 91-2). It was only after the migration to Yathrib/Medina that ʿUmar emerged as a principal organiser of the new theocratic state. He played the part of counsellor more than that of soldier; although he took part in Badr, Uḥud [*q.vv.*] and later battles, little is recorded of his military exploits, unlike the cases of ʿAlī b. Abī Ṭālib [*q.v.*] and other Companions. He is said to have claimed that at least three Ḳurʾānic verses were revealed at his request (II, 125; XXXIII, 53; and LXVI, 6), and everything indicates that he had the Prophet's ear. Despite the differences in their characters, harmony prevailed between ʿUmar and Abū Bakr [*q.v.*] during this period. Even ʿUmar's becoming, like Abū Bakr, father-in-law to the Prophet through the marriage of his daughter Ḥafṣa, provoked no jealousy between them. ʿUmar was unquestionably the superior intellect in the circle around the Prophet, and he avoided the limelight both during Muḥam-

mad's lifetime and during the brief caliphate of Abū Bakr. However, Lammens' theory of a "triumvirate" of Abū Bakr, ʿUmar and Abū ʿUbayda b. al-Djarrāḥ [*q.v.*] which would have dominated the Prophet and monopolised his authority, either directly or through his wives ʿĀʾisha bt. Abī Bakr and Ḥafṣa bt. ʿUmar [*q.vv.*], has not been generally accepted. Meanwhile, ʿUmar greatly extended his influence through strategic marriages (Lecker).

Upon the death of the Prophet in 11/632, ʿUmar played a central role in the events leading to the acclamation of Abū Bakr as caliph [see AL-SAKĪFA]. During Abū Bakr's caliphate, ʿUmar remained close to the centre of power, advocating hard-line positions which the caliph did not always adopt. Upon Abū Bakr's death in 13/634 he achieved the caliphate in his own right. The question of whether or not the dying Abū Bakr designated ʿUmar as his successor has been much discussed by jurists and historians. Caetani (*Annali*, iii, 128) and Levi Della Vida (in the *EI*[1] version of this article) stated that ʿUmar easily assumed power *de facto* and immediately received the recognition of a majority of the Companions, in a manner similar to the nomination of a leader according to old Arab custom. Caetani also saw ʿUmar, both before and during his caliphate, as favouring the old Meccan aristocracy of Ḳuraysh (the Umayyads). Against this view, Madelung (*Succession*, 55) has pointed to resistance against ʿUmar's elevation to the caliphate on the part of members of Ḳuraysh, including field commanders such as Khālid b. al-Walīd [*q.v.*], upon whom Abū Bakr had depended; Abū Bakr would have had no choice but to designate ʿUmar in order to guarantee his succession.

When ʿUmar became caliph, the movement of conquest was already well under way. The decade of his rule saw the extension of this movement over Syria, Egypt, ʿIrāḳ and al-Djazīra, and far into Persia and other countries. The Arabic sources tend to ascribe a greater degree of central control to the caliph than was technically and perhaps even politically feasible at the time (Caetani, v, 32; Noth, *Tradition*, 12, 55-7, *passim*; idem, *Früher Islam*, 80-100). ʿUmar was nonetheless a strategic and political genius. He showed his harsher side in demoting Khālid b. al-Walīd, as he had done previously during Abū Bakr's caliphate with Khālid b. Saʿīd b. al-ʿĀṣ [*q.v.*]. He appointed able commanders such as Abū ʿUbayd b. Masʿūd and Saʿd b. Abī Waḳḳāṣ [*q.v.*], whose relatively weak tribal and local affiliations made it impossible for them to set up as independent rulers in the new territories. In other instances, ʿUmar allowed members of the Meccan aristocracy to hold important positions, as when Muʿāwiya b. Abī Sufyān [*q.v.*] succeeded his own brother Yazīd as governor in Damascus in 18/639, and when ʿAmr b. al-ʿĀṣ [*q.v.*] took the initiative in the conquest of Egypt. Here ʿUmar recognised the limits of his own power, a sign of political aptitude; and he also sent an old Companion, al-Zubayr b. al-ʿAwwām [*q.v.*], to keep an eye on ʿAmr. But for the most part, ʿUmar did not appoint respected Companions to high commands but preferred to keep an eye on them from close by, while granting them the revenues from the conquered royal domains of ʿIrāḳ and Syria [see ḌAYʿA; IḲṬĀʿ; ṬALḤA].

As the conquests proceeded, ʿUmar mostly remained in Medina. An exception to this was a journey to Syria, dated to various times between 15/636 and 17/638. There is much divergence in the sources regarding this journey (or journeys). ʿUmar apparently stopped at al-Djābiya [*q.v.*], where he consulted his commanders and then, according to some versions, received a delegation from Jerusalem, who would agree to a treaty with the Muslims only if ʿUmar guaranteed it; or else, according to other accounts, he went on to Jerusalem and there received the submission of the city. Busse has shown, however, that Jerusalem had probably surrendered at least a year before, and that divergent accounts of ʿUmar's stay in Jerusalem may be related to stages in the Islamisation of the city's holy places (see AL-ḲUDS). A text, existing in a number of versions, in which ʿUmar receives the submission of the inhabitants of Jerusalem to the Muslims and formally sets out the rights and obligations of both parties, became known as the Pact or Covenant of ʿUmar (*ʿahd ʿUmar*), a foundational text of the *dhimma* [*q.v.*]. Much of the Pact has been shown to have originated in later times; here, as elsewhere, developments extending over generations have been concentrated into idealised pictures associated with the revered figure of the second caliph. For indeed, ʿUmar's caliphate has traditionally been regarded as the time in which nearly all the major political institutions of Islam had their origin, which cannot have been so in every instance.

Yet the Muslim state and the lives of its inhabitants did undergo profound changes during ʿUmar's reign. As before, the conquerors adapted (often with little change) the existing administrative structures in the new territories, as well as coinage, personnel, languages of administration and so on. But now came the institution of a register (*dīwān* [*q.v.*]; Puin, *Der Dīwān*) containing the names of all those entitled to military pensions or stipends (*ʿaṭāʾ* [*q.v.*]; see also DAFTAR; DJAYSH). In drawing up the *dīwān* and dividing revenues among the Muslims the principle of *sābiḳa*, precedence in Islam (length of adherence to the cause) was observed, together with (and partly in contradiction to) tribal and family affiliations. The institution of the *dīwān* is almost universally ascribed to ʿUmar, as is a deliberate policy—for the Sawād of ʿIrāḳ but arguably elsewhere as well—of preventing the Muslim Arabs from dispersing and settling as a landed aristocracy in the newly-conquered regions. ʿUmar intended instead that they should cluster together in towns, remaining available for further military expeditions and retaining a distinct identity as Muslim warriors. Meanwhile, they would receive stipends (*ʿaṭāʾ*) from the proceeds of taxation on the conquered peoples. Thus, while the conquered peoples enjoyed protection in their persons and property, together with the right to practise their religions, the conquered lands as a whole became a kind of trust in perpetuity for the benefit of future generations of Muslims. The land-ownership theory behind all this is complex (see FAYʾ; Schmucker, *Untersuchungen*), but there is no reason to doubt that its original impetus came during ʿUmar's caliphate. ʿUmar is likewise given credit for founding the new garrison towns, the *amṣār* which quickly grew into flourishing urban centres [see AL-BAṢRA; AL-KŪFA; AL-FUSṬĀṬ; MIṢR. B]. Subsequent generations of jurists and administrators added to this complex but conceptually unified system of military service, taxation and land tenure, but they continued to view it as ʿUmar's creation.

ʿUmar's other accomplishments are said to have included the creation of the office of *ḳāḍī* [*q.v.*], the new calendar which dated from the *hidjra* [see TAʾRĪKH. I. 1. iii], and a great number of religious and civil ordinances regarding prayer, pilgrimage, fasting (see ḤADJDJ; RAMAḌĀN; ṢALĀT; ṢAWM; TARĀWĪḤ), penal law and indeed nearly every conceivable area. We cannot know how much of this is historically accurate,

but certainly ʿUmar has always figured as an authority of the first rank. His role in the collection of the Ḳurʾān has been debated, but was certainly important. ʿUmar also ordered the expulsion of the Christian and Jewish communities of Nadjrān and Khaybar [*q.vv.*], and forbade non-Muslims to reside in the Ḥidjāz for longer than three days.

Under ʿUmar the office of caliph (see KHALĪFA) gained in solidity and prestige. Abū Bakr had styled himself *khalīfa* in the sense of successor to the Prophet (though see Crone-Hinds, 19-20, 111-12); this title remained, of course, but ʿUmar also assumed the title *amīr al-muʾminīn* [*q.v.*] "Commander of the Faithful". On occasion, the sources convey a sense that ʿUmar held more prestige and authority than a strict Islamic understanding of the matter would really have allowed; or to put it differently, at times his role seems less that of a St. Paul and more that of a St. John the Baptist, in danger of encroaching on the unique authority of the Founder. Uneasiness over such a role may possibly lie behind the *ḥadīth* "If God had wished for there to be another prophet after me, it would have been ʿUmar" (Ibn Ḥanbal, *Musnad* i, 29, iv, 154; al-Muḥibb, *Manāḳib*, i, 259; cf. Lazarus-Yafeh, 7). Similarly, the epithet often associated with ʿUmar, *al-Fārūḳ*, is generally understood to mean "the one who distinguishes truth from falsehood" or "the true faith from the false," but Sachau and Levi Della Vida (in *RSO*, iv, 1074-6) already detected an association between Arabic *fārūḳ* and Syriac *pārōḳā*, "saviour, redeemer" and related words in Semitic languages denoting a messianic element. Traditions on ʿUmar as al-Fārūḳ are indeed connected with the *ahl al-kitāb*, especially the Jews, though the epithet is also said to have been given him by the Prophet; and some of the accounts of ʿUmar's entry into Jerusalem have a messianic flavour (see Cook-Crone, 5-6; Bashear).

As caliph, ʿUmar was only *primus inter pares*, and numerous anecdotes illustrate his accessibility. He nonetheless enjoyed a vast authority deriving from the respect and awe in which people held him. A stern, uncompromising character—in many anecdotes he chastises with a whip—he was no doubt more feared than loved. He was certainly famous for his temper, as in the story of his conversion, mentioned above, and in the episode of his throwing stones at the Muslim commanders at al-Djābiya when they appeared before him clad in silks and brocades (see Busse, *ʿOmar as conqueror*, 59, for a possible messianic aspect of some versions of this story). To the extent that ʿAlī and others opposed him, they did so quietly.

Apparently, ʿUmar gave little thought to the succession. He may have had Abū ʿUbayda in mind, but the latter died in any case of the plague in the year 18/639. ʿUmar was assassinated, at the height of his powers (his age is given variously as 53, 55, 60, 61 and 63), on 26 Dhu ʾl-Ḥidjdja 23/3 November 644, by Abū Luʾluʾa, a Christian slave of al-Mughīra b. Shuʿba [*q.v.*], then governor of Baṣra. The sources give as Abū Luʾluʾa's motive a tax against which he had appealed in vain to the caliph. Caetani (v, 40-51) thought that Abū Luʾluʾa was the instrument of a conspiracy of Companions which included ʿAlī, Ṭalḥa and al-Zubayr. One of ʿUmar's sons, ʿUbayd Allāh (who died at Ṣiffīn in 37), believed in such a conspiracy, but he seems to have gone insane, and Levi Della Vida and Madelung (*Succession*, 69-70) have shown that the suspicion was unfounded.

On his deathbed, ʿUmar called for a council or *shūrā* [*q.v.*] to choose a successor, though this too has been disputed, as has the question of whether he actually proposed ʿUthmān b. ʿAffān [*q.v.*], the council's eventual choice. At any rate, it is consistent with all that we know regarding ʿUmar that he would have insisted on the principle of *shūrā*, together with that of *sābiḳa*, already mentioned. Throughout his caliphate ʿUmar adhered to these two principles (Madelung, 58-9, 76-7), and yet there was contradiction between them. Thus we find ʿUmar advocating the equality of all believers before God (*fī dhāt Allāh*, al-Ṭabarī, i, 2217), while at the same time favouring particular groups in the allocation of offices and revenues.

ʿUmar did much to provide—if not as completely as is sometimes thought—a social and political framework for the religious edifice which had begun to rise in the days of Muḥammad. But the rapid expansion of Islam which occurred during ʿUmar's caliphate put that same framework at risk. Major questions remained unresolved, including that of relations between the early converts and the first Helpers (*Anṣār* [*q.v.*]) on the one hand, and the ambitious Meccan aristocracy on the other; emerging jealousies between the first Arab conquerors in the newly-conquered lands and the waves of immigrants who came after them; and the general question of whether the Arab forces scattered throughout the immense territories would accept subordination to the central authority in Medina. Modern discussions of these questions see the ruling élite as largely unified and concerned with maintaining its power over the tribesmen (Donner), or else as deeply divided (Madelung). Either way, severe tensions remained for which ʿUmar's successor, ʿUthmān, would later pay the price.

Shīʿī tradition has never concealed its antipathy to ʿUmar for having thwarted the claims of ʿAlī and the House of the Prophet. Sunnī tradition, however, reveres ʿUmar not only as a great ruler but also as one of the supreme models for all the Islamic virtues. He appears often in Sunnī *ḥadīth*, both transmitting from the Prophet and as an authority on his own, and sometimes in association with his son ʿAbd Allāh b. ʿUmar [*q.v.*], a great jurist in his own right. In many *ḥadīth*s and in the speeches and sermons attributed to ʿUmar in biographies and chronicles, he expresses concern with intention, *niyya* [*q.v.*]—a theological topic much discussed in later ages, and perhaps an instance of later retrojection upon ʿUmar—and in general with what we might call the internalisation of norms. Probably less anachronistic on the whole are ʿUmar's exhortations to his fellow-Muslims to follow the simple, rough style of living which he himself practised (*shiddat al-ʿaysh*, Ibn Saʿd, iii/1, 199-200). This stopped short of self-deprivation: himself an active and vigorous man, ʿUmar is said to have denounced extreme ascetics and *mutawakkilūn* (another likely anachronism) for their weakness and dependence, and he was quoted as saying that he preferred to die while travelling in search of legitimate gain (*abtaghī min faḍli ʾllāhi*, cf. Ḳurʾān, II, 198, LXII, 10, LXXIII, 20), rather than in the *djihād* (al-Shaybānī, *Iktisāb*, Cairo 1938, 14, 37; *Kasb*, Damascus 1980, 40-1, 61; on ʿUmar's engaging in commerce while caliph, see Ibn Saʿd, iii/1, 199, ll. 19-20). A distinctive type of symbolic poverty may be associated with ʿUmar, different from that of other Islamic rulers, including the other Rāshidūn (I. Mattson) [see AL-KHULAFĀʾ AL-RĀSHIDŪN, in Suppl.].

Always the paradigmatic just ruler for Sunnīs, ʿUmar appears in some 20th-century works as a model for democratic leadership and other modern values. Thus in greatly different circumstances, this austere, majestic figure continues to inspire respect and awe in the community of believers.

Bibliography: Materials relating to 'Umar were collected and analysed by Caetani, *Annali*, iii-v, index in vol. vi. These include Ibn Sa'd, iii/1, 190-274; the section of Ṭabarī's chronicle covering 'Umar's caliphate is now translated in *The history of al-Ṭabarī*, xi, tr. Kh.Y. Blankinship, Albany 1993; xii, tr. Y. Friedmann, Albany 1992; xiii, tr. G.H.A. Juynboll, Albany 1989; xiv, tr. G.R. Smith, Albany 1994. (G. LEVI DELLA VIDA-[M. BONNER])

'UMAR (II) B. 'ABD AL-'AZĪZ b. Marwān b. al-Ḥakam, Abū Ḥafṣ al-Ashadjdj, fifth caliph of the Marwānid branch of the Umayyad dynasty [*q.v.*], reigned 99/717 to 101/720.

'Umar was probably born in Medina, around 60/680, although some sources say that he was born in Egypt. He spent his early years in both places, especially in Ḥulwān in Egypt, where his father resided as governor in the years 65-86/686-705. Nevertheless, it was in Medina that 'Umar was educated, and it was there that he allegedly first associated with prominent pious figures and *muḥaddithūn*. After 'Umar's father died, his uncle, the caliph 'Abd al-Malik [*q.v.*], summoned 'Umar to Damascus to confirm a marriage between 'Umar and the caliph's daughter Fāṭima. Shortly thereafter, 'Abd al-Malik's son and successor al-Walīd I [*q.v.*] named 'Umar as governor of Medina. Both of these acts may be seen as propitiatory gestures designed to soften relations between two rival branches of the Marwānid family.

'Umar arrived at his new post in Medina in Rabī' I 87/February-March 706; his jurisdiction later included Mecca and Ṭā'if as well. Little is known of his activities as governor, but it is said that he immediately set out to govern in close association with the *fuḳahā'* of the Prophet's city. Most accounts depict 'Umar as a just governor, often leading the pilgrimage, and being especially reverent to pious figures like Sa'īd b. al-Musayyab [see FUḲAHĀ' AL-MADĪNA AL-SAB'A. VI, in Suppl.], although others describe the young 'Umar as worldly and over-indulgent. In 88/707, 'Umar oversaw the expansion of the Mosque of the Prophet at al-Walīd's request. However, Umar's lenient government in the Ḥidjāz may well have been his undoing there. It was to the Ḥidjāz that some 'Irāḳīs fled to avoid the harsher treatment of al-Ḥadjdjādj b. Yūsuf [*q.v.*], the powerful and irascible governor of 'Irāḳ, and it was under pressure from al-Ḥadjdjādj that 'Umar was recalled from his post in Sha'bān 93/May-June 712.

'Umar appears to have spent the next years of his life attached to the Umayyad court in Damascus, where, with the influential Radjā' b. Ḥaywa al-Kindī [*q.v.* in Suppl.], he was an unofficial counsellor to the caliph Sulaymān b. 'Abd al-Malik [*q.v.*]. In 97/716, for example, he accompanied Sulaymān on his pilgrimage to Mecca, stopping in Jerusalem on their return. When Sulaymān became ill at Dābiḳ [*q.v.*] in northern Syria while on campaign in 98/716, Radjā' was able to persuade him to name 'Umar as his successor with Yazīd b. 'Abd al-Malik [*q.v.*] to follow, in contradiction to 'Abd al-Malik's earlier wish that the succession remain solely among his own descendants. Although this sudden change evoked some opposition from the line of 'Abd al-Malik, the oath of allegiance to 'Umar was secured, and 'Umar was proclaimed caliph on 10 Ṣafar 99/22 September 717.

During his short reign as caliph, 'Umar's activities involved both military matters and domestic concerns. 'Umar has often been portrayed as a pacifist caliph, but it was more likely his concern over the dwindling caliphal treasury that dictated his stance on military affairs. Thus, in 99/717, 'Umar did order the armies engaged in the costly and probably fruitless siege of Constantinople to be lifted, and the frontier with Byzantium to be withdrawn to the region of Malaṭya. However, he was still willing to send troops in that same year against the Turks, who had launched destructive attacks into Ādharbāydjān, and the traditional summer raids continued unabated. Similarly, in 100/718, he ordered first an 'Irāḳī and then a Syrian army to be sent against Khawāridj rebels under Shawdhab (or Bisṭām) al-Yashkurī in 'Irāḳ, although some sources relate that the rebels were placated through diplomatic means.

'Umar was also active in the internal affairs of the caliphate. Like other caliphs, he appointed and removed provincial governors as he saw fit. The most famous example is 'Umar's removal and imprisonment of the Azdī notable Yazīd b. al-Muhallab [see MUHALLABIDS], who had evidently reneged on promises of revenues that he had raised as Sulaymān's governor of 'Irāḳ and the East. But 'Umar is best known for his fiscal policies, although these policies still remain unclear. His famous "fiscal rescript" is not a document, but a text preserved in Ibn 'Abd al Ḥakam's

[*q.v.*] later biography of the caliph, and the details of this text remain open to different interpretations. However, it seems clear that, in this rescript as in other fiscal matters, ʿUmar was concerned with increasing the revenues accruing to the state while also ensuring that new converts to Islam would be granted the same lenient fiscal status of other Muslims. In any event, ʿUmar's successors did not pursue his policies further, and their long-term significance for the fiscal régime of the caliphate was small.

En route from Damascus to Aleppo, perhaps heading for his nearby estate at K͟hunāṣira [*q.v.*], ʿUmar took ill, some sources alleging that he was poisoned by the family of ʿAbd al-Malik. He died on 20 or 25 Rad͟jab 101/5 or 10 February 720 in the village of Dayr Simʿān (near Maʿarrat al-Nuʿmān), where he was buried in a plot that he himself had purchased. The ruins of his tomb, of uncertain date, can still be seen today.

ʿUmar's significance lies as much in the complexity of his later image as it does in his accomplishments as caliph. On the one hand, to later generations, ʿUmar was an exemplar of the Muslim virtues of piety, equity and humility. The fact that his mother, Umm ʿĀṣim, was the granddaughter of the Rightly-Guided caliph ʿUmar b. al-K͟haṭṭāb [*q.v.*] was frequently stressed. The links and similarities between the Umayyad caliph and his revered namesake were often mentioned and elaborated, to the point that some commentators included him among the ranks of the caliphs designated as Rightly-Guided [see AL-K͟HULAFĀʾ AL-RĀS͟HIDŪN, in Suppl.]; indeed, there is some evidence suggesting that ʿUmar viewed himself as the redeeming Mahdī [*q.v.*] and a renewer (*mud͟jaddid*) of Islam as the community approached the end of the first Islamic century (see P. Crone and M. Hinds, *God's caliph*, Cambridge 1986, 114 and index).

On the other hand, anecdotal evidence abounds which depicts ʿUmar, especially the youthful ʿUmar, as a typical Umayyad prince of his day, fond of pomp and luxury. These latter accounts, however, may be a mere counterpoint to the image of the mature ʿUmar, serving to further heighten the image of the virtuous caliph. ʿUmar's reputation for piety and his interest in religious affairs also extended beyond Muslim audiences, and it is this image of ʿUmar that certainly accounts for the Christian polemical pseudo-correspondence that was attributed to him and the Byzantine emperor Leo III. To the belles-lettrists and historians of the ʿAbbāsid era and later, ʿUmar was something of an enigma: a prince of the despised Umayyad house, and yet a pious statesman worthy of nostalgia and imitation. As such, he is one of the few early historical personages who became the subject of discrete biographical works early on.

Bibliography: 1. Sources. The main narrative sources for early Islam all contain relevant material. See especially Yaʿḳūbī, *Taʾrīk͟h*, ii, 361-63 and index; Ṭabarī, ii, 1340-72 and index; Kindī, *Wulāt Miṣr*, ed. (P.M. COBB)

ʿUMAR (B. ʿABD ALLĀH) B. **ABĪ RABĪʿA** AL-MAK͟HZŪMĪ, an Umayyad *g͟hazal* [*q.v.*] poet of renown, reputedly a member of the Meccan aristocracy whose paternal uncle, according to Ibn Ḳutayba (*al-S͟hiʿr*, 348), was Abū D͟jahl ʿAmr b. His͟hām b. al-Mug͟hīra [*q.v.*]. His father and brother held administrative posts in South Arabia (whence his family's wealth is said to have derived) and Baṣra respectively. In his verse, ʿUmar usually refers to himself as ʿUmar, Abu 'l-K͟haṭṭāb or al-Mug͟hīrī and once as Ibn ʿAbd Allāh (P. Schwarz, *Der Diwan des ʿUmar Ibn Abi Rebiʿa*, Leipzig 1901-9, i, 189, poem 278, v. 4), although he seems to have preferred to be known by the name of his grandfather. Schwarz (*op. cit.*, iv, 5-7) sees in his name a connection between him and the second caliph ʿUmar b. al-K͟haṭṭāb [*q.v.*]: tradition, which Schwarz broadly supports, held that the poet was born on the day on which the caliph was assassinated, i.e. in 23/644.

Poem 1 in the *dīwān* is said to have been composed by the young ʿUmar at the instigation of ʿAbd Allāh b. al-ʿAbbās [*q.v.*]: it is a *rāʾiyya* of seventy-three verses, heavily indebted to the *nasīb* of the *Muʿallaḳa* of Imruʾ al-Ḳays, in which characteristic features of ʿUmar's *g͟hazal* are in evidence; the seductive prowess of the proud poet (an object of adoration for both poet and beloved), the desert *mise-en-scène* (even for municipal dramas), the blend of all-consuming ardour (similar in spirit to the love known as *ʿUd͟hrī* [*q.v.*]) and the performative, physical love known as Ḥid͟jāzī, the dialogue of beloved with companion(s), the nocturnal invasion of the woman's tent (here very reminiscent of Imruʾ al-Ḳays's poem), combined in the manner of a bipartite, polythematic *ḳaṣīda* [*q.v.*] to conclude with a desert *raḥīl* [*q.v.*], identified by Th. Bauer (*Altarabische Dichtkunst. Eine Untersuchung ihrer Struktur und Entwicklung am Beispiel der Onagerepisode*, Wiesbaden 1992, i, 71) as structurally valid and not lacunose. This was the self-professedly artistic format (focused on animal portraits) of the pre-Islamic poets. A further characteristic of ʿUmar's poetry is parody, of both tradition and self: the travel-hardened Bedouin hero of vv. 14-16 needs the help of his beloved and her sisters to escape—in one version, dressed as a woman; his concluding desert-journey (in which animal portraits do not appear) is, by implication, to keep his tryst with Nuʿm at ʿAzwar (v. 41). See D. Cowell, *Narrative art in ʿUmar Ibn Abī Rabīʿa*, in G. de Lama (ed.), *Middle East 1*, Colegio de México 1982 (30th International Congress of Human Sciences in Asia and North America 1976), 78-93, and J.E. Montgomery and J.N. Mattock, *The metaphysical ʿUmar?*, in *JAL*, xx (1989), 12-13. Typical also of this parody is poem 195, v. 10, in which a rival for the attentions of Nuʿm (herself a gazelle) is described, as he deprives the poet of his kill, in language appropriate to the hunter in traditional animal portraits.

Little is known about ʿUmar's life. He reputedly passed much of it in either Medina or Mecca: the

account in the *K. al-Aghānī* concentrates on the latter, though this information may be derived from an over-literal reading of poems in which these places and their environs are mentioned (for a list, see Schwarz, iv, 13-16), on the assumption that the locutor of the poem (if authentic) and ʿUmar are one and the same. The same strictures apply to other toponyms in ʿUmar's poetry (*ibid.*, iv, 15): they do not in themselves constitute proof that the poet visited them. Indeed, the encounter with Djamīl [*q.v.*] in Syria is patently legendary. ʿUmar died in either 93/712 or 103/721. One tradition has him repent of his mis-spent youth and devote the latter part of his life to Islam. The sources, indeed, do not question his devotion to Islam, which features prominently in much of his *ghazal*.
